DEAR UNCLE MARK:—The RURAL has been a welcome visitor in our house this long time, and it is a splendid paper. I love to read the "Reading for the Young" and the letters from the cousins are interesting. If you will accept me as a member of your Horticultural Club, I will write again, and speak about my plants. I hope this will not find the waste-basket. Yours truly,

Prospect, Ohio. MILO GAST.

UNCLE MARK:—I thank you for the seeds you sent me, some grew and some did not. The Asters are splendid. The melons, beets and lettuce were all nice. The weather was too dry here in May for anything to grow well. I have a number of plants, some are very nice. Farewell, Uncle Mark, may the Lord bless you in this world and in the next.

Mont. Co., Ohio. DANIEL WAGNER.

DEAR UNCLE MARK AND RURAL COUSINS:—I am very much interested in the boys' and the girls' letters. I have been reading them this morning and I thought I would write one. I like to tend the flowers and the vegetables. I would like to join the Horticultural Club if you will accept me.

Wash. Co., Oregon. ORIN GOULD.

DEAR UNCLE MARK:—I should like to join the Horticultural Club, if you will put my name down. I have a few plants, one is a Castor Oil plant. I like to read the cousins' letters. Yours truly,

Norfolk Co., Mass. ALBERT THORPE.

DEAR UNCLE MARK:—I received the book last Monday and return many thanks. I have read it nearly through and am *very* well pleased with it.

Your nephew, SAM. SHULL.

The Puzzler.

HIDDEN PARTS OF A FLOWER.

1. That rasca-ly Xerxes shot a sick man.
2. Ico Rolland is very sick.
3. My pet, a lie is a sin.
4. This tame Nanny goat.
5. Philip, I still love him.
6. Poll enticed me to play truant.
7. Don't bunny jump oddly?
8. Eric Otyle done a mean trick.
9. See the caps Ulen wears.
10. Pet, Io left us in rage.
11. The peri car passed fairyland.
12. The race Meta won.
13. Make it teped, uncle.
14. Can't her word suffice?
15. Who "R. L." is, I wonder.

☞Answer in two weeks. LITTLE ONE.

GEOGRAPHICAL DECAPITATIONS AND CURTAILMENTS.

1. Behead an English river, and leave a ridge in cloth. 2. Curtail a town near Minneapolis, and leave a military cap. 3. Behead and curtail a New England city, and leave a kind of liquor. 4. Behead a Scottish lake, and leave to assert. 5. Curtail a river in South America, and leave raw herbs cut and dried. 6. Behead and curtail a Spanish town, and leave a luminary.

☞Answer in two weeks. UNCLE WILL.

DROP LETTER PUZZLE.

.W-e- t-o -l-k-d -a- t-r-e-h -w-y -r-m -i- w-c-e-n-s-w-i-h h- h-t- c-m-i-t-d -n- d-e-h -h-t -h-c- l- l-w-u-a-d -i-h-, h- s-a-l -a-e -i- s-u- a-i-e. Fill the blanks and find a text of Scripture.

☞Answer in two weeks. L.

DIAGONAL PUZZLE.

1. A consonant. 2. The ending of many words. 3. Even (apostrophied). 4. A metal (reversed). 5. A style of architecture. 6. A Scottish dukedom. Primals and diagonals form two European cities.

☞Answer in two weeks. L. O.

PUZZLER ANSWERS.—Sept. 27.

ENIGMA.—["Alice A. Harrison." To find the answer, take the letter of each line corresponding in number to the number of the line—thus: the first letter of the first line, the second of the second, and so on to the fourteenth.]

ACROSTICAL ENIGMA.—FAITH RIPLEY.

HIDDEN CHANNELS.—1. Kennedy; 2. Wellington; 3. Cockburn; 4. Bahama; 5. Owen; 6. Egripo; 7. Talanti; 8. Trikiri; 9. Meleda.

PUZZLER.—July, August, September, October, November.

Sabbath Reading.

THE PERSONAL APPEARANCE OF CHRIST.

THE following item is circulating through the papers, and it has inspired the comments which accompany it:

"M. Meziere's doubt of the authenticity of M. Renan's description of the personal appearance of St. Paul appears to have set the Paris bookworms at work delving among the works of the early church fathers. The result is not only the justification of Renan, but a good many curious discoveries of which the following are perhaps the most notable. St. Clement of Alexandria, thus sketches the Saviour: "Jesus had no beauty of face; his person offered no physical attractions; he only possessed beauty of soul, which is the true beauty." "St. Irenæus, a disciple of St. Polycarp, who was a disciple of St. John, wrote that his master had often heard the beloved disciple say that the hair of Jesus had already turned white when he began his mission."

To us, the last sentence of this stray waif floating upon the sea of newspaper comment is extremely touching. We have read nothing for a long time which we have thought of so often. It expresses what we had not conceived before seeing it in this form. The condemnation of the Jews and their cry of "crucify him," the arraignment before Pilate, the buffetings of the Roman soldiery, the last utterances upon the cross and the dying cry, are tearfully familiar to us all; but that the weight of his great mission bore upon him with such magnitude that he became prematurely gray, awakens a new thrill of compassion within us.

It is plain to understand from so many discrepancies in the testimony of those who wrote on the subject that there is no authentic description of Christ as he appeared on earth, in spite of the last comments of a sympathizing commentator. That of Lenticulas is plainly made up from imagination, credible as it may seem. Still it is singular that there should be no written description preserved by one who must have known him face to face and who seemed to have failed to have written out, for preservation, the characteristics of so wonderful a being. The fact of existence is authenticated in profane history, but his appearance is nowhere described so as to be reliable. Irenæus wrote from hearsay. The gospels are silent, also the apostolic fathers. A hundred years had elapsed before the discussion arose as to his fairness or ugliness. Justin Martyr, Tertullien and Cyril took the homely side of the argument, because of the passage in Isaiah which reads that he had no form of comeliness and no beauty that we should desire him. Ambrose, Jerome and their coterie declared the opposite, that he was beautiful. Reasoning from analogy the artistic and moral world have pronounced him the most beautiful type of a human being, and there it seems the matter must rest, until some stone tablet, like the Rosetta stone, shall be unearthed to tell us the truth. But for some cause the real physical appearance of Christ bids fair not to be known to his most devoted followers.—*Christian Advocate.*

"WHAT MEANEST THOU?"

"WHAT meanest thou?" were the words addressed to Jonah, when, under the displeasure of God, he was sleeping in the midst of the storm. He was a Christian, but a Christian asleep. Duty called him, danger threatened him, but the apathy of sleep was upon him. He was not awake to either the duty or the danger. The fact that he was inert and sleepy did not remove the duty, nor in the least diminish the danger. He was sleeping when any sane man should have been awake and putting forth all his efforts to save lives in such a storm.

What wonder that, in astonishment, they shake and arouse him, crying to him, "What meanest thou?" None but God and his own heart then knew the story of his disobedience to God's commands; and yet these people seem intuitively to have concluded that sleep, under such circumstances, was in itself evidence of criminality. They tried the lot, and the lot fell on guilty Jonah.

Alas! how many Christians sleep! Worldly people regard them with astonishment. If their faith is no fiction, how can such a stupor rest upon them? The duty of active service to God is a reality, the danger to impenitent souls is imminent, and to such poor, apathetic Christians, who cannot realize either of these facts, God will send some voice, in his providence, which shall startle them from out their stupor with the call, "What meanest thou?"

So Jonah saw great and sore trouble; but "when his soul fainted within him," then he remembered the Lord, and said, "I will pay what I have vowed."

Disciplinary trials await drowsy Christians. They are sent by a loving Father to recall us to a sense of our duty; and an aroused Christian conscience can only respond in this one way, and in penitence for past failure in duty cry with Jonah, "I will pay what I have vowed."—*American Messenger.*

A WRITER in the Evangelist has called attention to a small but very common error which older people as well as children make in repeating the familiar little prayer, "And now I lay me down to sleep." Probably there are few persons who do not use the definite article "the" before the word "Lord" in the second and fourth lines. By so doing they simply make an affirmation and not an invocation. This writer with very good reason holds that the prayer should be given as follows:

And now I lay me down to sleep,
I pray *Thee*, Lord, my soul to keep:
If I should die before I wake,
I pray *Thee*, Lord, my soul to take.

No man can be provident of his time who is not prudent in the choice of his company.

PERSONAL ITEMS.

Samuel J. Tilden Vanarsdell is the load which a Kentucky baby has thrust upon it at the very start.

Ex-Secretary of State McLinn, of Florida, one of the members of the famous Returning Board of that State is dead.

There is a report in San Francisco that Ulysses S. Grant, Jr., is affianced to a daughter of Colonel James C. Flood, the bonanza millionaire.

Mr. Archibald Forbes who has made so much reputation as a war correspondent, is going to Afghanistan to write up the expected war there.

A Chinaman in Paris committed suicide because his tormentors had cut off his queue. He fastened the cherished braid with pins to the place where it ought to grow, and jumped into the river.

In Paris, for a long time, Plon-Plon endeavored to live the life of a Roman. Hence his Pompeian villa of Diomede; but it failed. The Prince attempted baths after the Roman fashion, and they made the house too damp to live in. Gradually he got tired of being a Roman, and the villa Diomede was abandoned.

A commercial traveler at Marseilles having refused leave to his maid servant to take his daughter to the skating rink, they did not appear next morning, and on the bedroom begin burst open both were found suffocated. A note in the maid's writing said: "You shall no longer have your daughter; I take her to a better world." The ages were 26 and 14.

M. Kidiger, a Spiritualist, summoned before a St. Petersburg magistrate a few days ago M. Faustint, an Italian conjurer, on the charge of falsely representing himself as a medium. The magistrate, without entering into the merits of the case, dismissed it, on the grounds that the law recognizes no difference between spiritualism and conjuring.

Willie White was the three-year-old pet of a farmer's family at Fulton, Wis., and George Baumgartner, aged 16, was the drudge. George contrasted his own hard usage with the tender treatment of his employer's child until violent envy and hatred were the result. One day Willie was found hanged by the neck, his throat cut from ear to ear, and George was missing.

George P. Sickles, the father of General Sickles, is hale and hearty at the age of 81 years. He is a Spiritualist, and enjoys a matinee by the old masters every afternoon. He has only to rap on his table, when Beethoven, Mozart or Mendelssohn will appear and direct an invisible orchestra. The old gentleman frequently expresses surprise that his visitors do not hear the music as well as himself.

An appeal has been heartily responded to in England in favor of Buckstone, who was represented as in "absolute want." The veteran actor takes $300 a year from the theatrical fund, and John S. Clarke generously allows him $75 a month. The Queen has sent him $250, the Prince of Wales $125, and a knot of aristocratic patrons good sums making the subscription started by George Agustus Sala, very handsome.

The Rev. Albert Whiting, an American missionary in China, died of famine fever while ministering to the starving natives. The Governor of the province offered to defray the expense of sending the body home, and when it was explained to him that Americans did not share in the Chinese horror of being buried in a foreign country, he gave a plot of ground in which to make a grave, and deputed twelve Chinamen to worship the dead clergyman's spirit.

On the day Cardinal Manning assisted at the baptism in London of the Duke of Norfolk's son and heir, he celebrated mass and breakfasted at early morn in Liverpool, reached Norfolk House, St. James's Square, by 2 o'clock, paid a visit to the Archepiscopal residence at 4 P. M., caught the Liverpool express by 5 P. M, and addressed a large meeting of Roman Catholics on temperance in St. George's hall Liverpool at 10 the same evening. This is ecclesiastical activity for one over seventy.

At the carnival in San Francisco in honor of General and Mrs. Grant on Thursday evening, Mrs. Grant was presented with a bouquet composed of the flowers indigenous to the various countries she had passed through in her tour round the world. The flowers were placed in regular order, starting from Philadelphia and ending with San Francisco. The bouquet-holder, five inches long, was of pure California gold and inlaid with quartz and a collection of other metals found on the Pacific coast.

It was Prince Napoleon's speech in the Senate in 1861 which suddenly undeceived the world of its opinion of his stupidity. His splendid eloquence and powerful defence of democratic liberty took the world by surprise. If some actor who had played the part of clown for years had suddenly leaped into fame in one night as the greatest tragic actor of his time the effect could not be more startling and *bizarre* than the revolution which converted the Cloten of the Palais Royal into one of France's greatest orators. The fierce attack on the Orleanists called forth from the Duc D'Aumale a pamphlet and a challenge. The Prince read the pamphlet of *Egalite petit fils* and declined his challenge.

The late novelist, Charles Lever, being once in London with his daughter, absent from his Consuate at Trieste without leave, was invited to dinner by Lord Lytton. "Ah, Lever," said his brother novelist, as he came in, "glad you are come. You will meet your chief, Clarendon (then Foreign Minister)." "I fear I must retire, my nose is bleeding," he replied, making for the door, which at that instant opened, Lord Clarendon being announced. After shaking hands with the host, his lordship espied Lever. "Ah, Mr. Lever, didn't know you were in England; didn't even know you had asked for leave." "N-o-o, my lord," answered the witty novelist, "I thought it would be more respectfu to your lordship to come and ask for it in person."

Virgil James was dying at Little Rock, Ark. It was known that he had $5,000 hidden somewhere, and he was asked to divulge the secret before it was too late. "No," said James; "I will tell my sister when she comes." When he was nearly gone an old negro man, who formerly belonged to the family, went to the dying man, and, leaning over, said: "Mark Virgil, you can't live but a few moments longer. Tell me where your money is, and I'll tell her when she comes." "No," replied James; "I will feel better after a while. My sister will be here pretty soon." Thus, from time to time, he refused. His sister did not arrive. Faster and faster his life ebbed away. Bending over again, they entreated him to disclose his secret, but he died with it buried in his bosom, almost his last motion being a slight negative shake of the head.

American Fruit-Preserving Powder

AND LIQUID is the Cheapest, Most Reliable and Best-Known Method of preserving all kinds of **Fruits, Tomatoes, etc. Strawberries, Raspberries,** and all high-colored Fruits retain their rich color as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.

Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruits, Tomatoes, etc.,** and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, *without sealing air-tight.* Simply corked or tied down with a strong paper is all that is needed.

The fruit will keep *without sugar,* or any quantity of sugar may be added as desired.

Warranted to be as healthful as table salt.

The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.

One package will preserve 256 pounds of Fruit, Tomatoes, etc., or 2 bbls Cider. Price **ONE DOLLAR** per package. Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of the Rocky Mountains for $1.25 per package. **Local and General Agents Wanted.**

Various.

PORK-PRODUCING VALUE OF CORN.

J. W. SANBORN.

In an article from Professor E. W. Stewart, in the RURAL of August 23, entitled "Pig and Corn Exports," the following sentence occurs: "When this corn is judiciously fed, it will make from nine to ten pounds of pork to the bushel." This estimate is a modest one, and quite within the limits of safety when fed under the conditions named by the writer. The estimate of ten pounds of pork for a bushel of corn is a common one, and seems to have been formed from reported results of good management with good animals. If this basis was a true one for good averages for the pig of the past, it is certainly a strong tribute to the skill of the modern feeder and breeder, for clearly it is not now a worthy product for a bushel of corn.

I say this in no spirit of criticism, for I am aware that there are but few reliable data before the public, upon which to base an estimate. It is in no spirit of presumption, therefore, that I offer, from personal experiments, a few facts that I believe to be of importance, because, in conjunction with the outcome of the experiments of others, they will aid in giving definite information in regard in the pork-producing capacity of a bushel of corn.

In the course of three years of food-weighing for pigs, I find that there are other foods that have a higher feeding value for pork-production than corn, and that they are also cheaper; but as corn only is under consideration, I will confine my figures to this food. The corn given in the experiment was fed only to pigs, and I may say that the pig should be fed only for profit. It is a well known, but indifferently observed, fact, that it is a law of animal growth that a young animal will make a pound of growth on very much less food than an older one. In feeding experiments I am constantly noting corroborating facts, yet farmers ignore in practice this law both in pork and beef production, entailing a great loss upon our agriculture. Making a specialty of early pork and beef production will do much to restore these industries to favor in the East. I will not give the details of the many weighings of food and of pigs, as the condensed results will cover the point of inquiry.

Several lots of Chester White grade pigs of two in a lot, have been fed from the time of weaning until they would weigh, dressed, in round numbers, 200 pounds each. These pigs have been put in pens, from which everything that they would consume was excluded, and their food consisted of weighed corn meal moistened with water—and nothing else. The first year, 1877, 100 pounds of meal made 24.8 pounds of growth. The second year 100 pounds of meal made 24.8 pounds of growth. This year's results are not completed, but are more favorable than heretofore. They will dress when fed and fattened thus: 82 pounds per 100 pounds of live weight; or, one bushel of corn would give 11.38 pounds of pork. It would be proper to say that I do not think this method of feeding is calculated to give the best results that may be gained from corn meal. The experiments in question were comparative, and were not designed entirely with reference to economy. It is perfectly safe to assume that one bushel of corn will make 12 pounds of pork. In fact, I find among my records instances where results far exceeding those given, have been realized.

I have stated what I believe may be an average result from a well bred pig judiciously fed.

Agricultural College, Hanover, N. H.

AN ABORTIVE INSURANCE LAW.

We asked of our Legislature a good law for the organization of mutual insurance companies. What have we got? A law which prohibits the insurance of any building that is not detached one hundred feet from any other building, which practically shuts out nineteen-twentieths of all the farm buildings in the State of New York; a law that authorizes the president of any company organized under it, to sue and collect any assessment of any member, but fails to give the latter in return any power to sue and collect of the company, if it fails to perform its part of the contract. It limits the territory of any company to a single county, thereby making it impossible to build up any strong mutual companies, and impossible—even if it were advisable—for at least three large companies, now doing business in two or more counties, on the honor plan, and carrying six or seven million dollars at risk, in the aggregate, to organize under it. It attempts to go into details of bye-laws and rules, which had much better be left to each company to regulate for itself. In fact, it is a perfect failure, and we want the Legislature to wipe it out and try again.

Meanwhile, let every farmer in the State of New York, when he goes to the polls next November, see to it that his ballot has the names of men on it who will *honestly* try and give us a good Mutual Insurance Law, as well as relief from unequal taxation and unequal freight discriminations, whether he can vote a straight party ticket to do so or not. Attend your primary caucuses and get such men nominated, and then go to work and elect them. If you have not got a co-operative mutual company already organized on the honor plan in your locality, go right to work and organize one. Don't wait for any law, or deceive yourselves with attempting to organize under the present "bastard" statute. A good law will come in due time, if we all work with a will.

G. L. P.

Ridgeway, N. Y., Sept. 11, 1879.

FORBEARANCE.

Young Lady.—"JOHN, how long shall you be, as I want to practice?"
Gallant young Gardener.—"Oh, go ye on Miss AMY,—go ye on! I shan't mind your noise."

WHAT OTHERS SAY.

PRESIDENT T. T. LYON, speaking in the Mich. Farmer of new grapes shown at the meeting of the American Pomological Society at Rochester, says: "The committee on new native fruits had an arduous task to perform, and they felt compelled to be very conservative in their decisions, in consideration of the very high character and the close competition of the new seedlings. The committee, judging, of course, only from what they saw before them, awarded the meed of superior quality to the Duchesse. The others would, in our estimation, judging from flavor, texture, size of bunch and general appearance, rank about in the following order 1st. Niagara, 2nd, Prentiss. 3rd. Pocklington. The last, however, was not fully ripe, hence our estimate of it might under more favorable circumstances undergo a change. The Pocklington and Niagara are very large and showy in both bunch and berry; the Duchesse rather small in berry, but with a good-sized, rather loose bunch. All are claimed to be satisfactory growers, with strong, healthy foliage. The Prentiss is well up to the best in quality, with a compact, medium-sized bunch, and a large berry. It is sure to prove an excellent keeper.

FAIR NOTES.

PRESIDENT WILDER, in reviewing his life-long work in the cause, and his present inability for active labor, urged upon the American Pomological Society the acceptance of his resignation. The Society, however, by a unanimous and standing vote, decided to continue his presidency.

Notes from Broome Co. Fair.

ON September 23d, 24th, 25th and 26th, the Broome Co. Agricultural Society held its ninth annual fair at Whitney's Point. The weather, with the exception of the second day which was rainy, was all that could be desired. The exhibits in all classes were larger than ever before, the total number of entries being about 1,500. It was estimated that there were about 8,000 people on the grounds during the third day, and about 10,000 the last day. The entries of pure-bred stock were large. E. C. Holden, of McGrawville, led in the pure-bred Ayrshires, which numbered seventeen in one class. A. P. Baldwin, of Pitcher, took the lead in Devons. In Holsteins, George S. Blodgett made the finest display, taking six premiums. In Jersey's, Dr. E. G. Crafts had the most entries. The displays of sheep and swine were the largest ever made here. The poultry show was immense. There were twenty-eight coops from East Scott, Cortland Co. There were about 130 entries of hogs made. Bradly & Co., of Syracuse made the best show of farm machinery. There were 800 entries in Floral Hall, consisting of flowers, fruits vegetables, canned goods, needle-work, etc. The display was a third greater than usual.

M. B. D.

Premiums for Swine.

At one of our principal fairs recently, the writer overheard a conversation between several prominent swine breeders in regard to premiums for swine. Said one:—"I have found it useless to exhibit anything but a Poland-China for a sweepstakes premium, for the largest hog always takes the premium, though, for my part, I prefer some of the smaller breeds, the Berkshires, for instance. The Berkshire makes better pork than almost any other breed, and its hams are the finest in the world." Said another; "My experience has been the same. Now the Essex is one of the finest hogs that there is; but it stands no show for a premium in competition with other larger breeds."

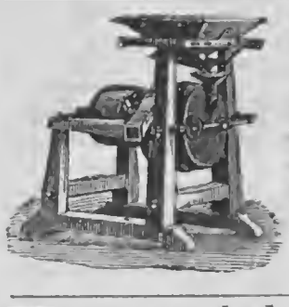
The above forcibly shows the fact that size is the principal thing taken into consideration in awarding premiums to swine, instead of quality, and I think that the experience of nearly every breeder will confirm the statements of the gentlemen quoted. Is this as it should be?

Is there nothing so desirable in a hog as size? Are not fineness, ease of keeping and fattening, quiet disposition, and early maturity as desirable as size? If not, then the present method of giving awards is just; but if they are, is it not time for a change to be made?

Henry Co., Ohio. V. J. EMERY.

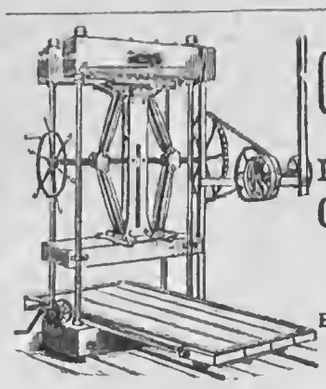
The Venomous Breath of Malaria

Does not infect the systems of those who use Hostetter's Stomach Bitters as a precaution against it. Nor is it less useful as a remedy where intermittent and remittent fever has fully established itself, in consequence of a neglect of preventive measures. It checks the paroxysms with astonishing certainty, and eradicates this type of disease, even in its most inveterate form. This medicine is an especial boon to the emigrant population of the far West, where fevers of a malarial type are particularly prevalent, but the recognition of its merits is so far from being limited, that it is known and appraised at its true value throughout the length and breadth of America. Travelers by land and sea, miners and sojourners in unhealthy localities, esteem it highly and are its most constant purchasers, and in many a rural household far and wide it is the chosen family specific.

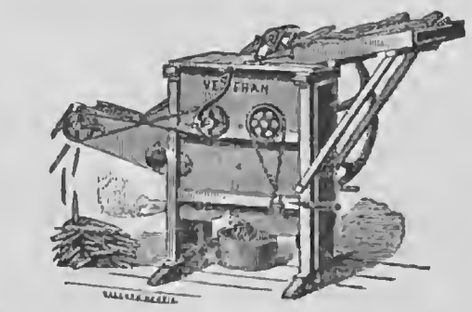


Mill Manufactory
Established 1851.
Grist Mills
OF
FRENCH BUHR STONE
Portable Mills for Farmers, Saw Mill Owners, etc. Price from $60 up. Complete Mill and Sheller $96. A boy can grind and keep in order. Adapted to any kind of suitable power. Complete Flouring and Corn Mill very cheap.
NORDYKE & MARMON CO.
Indianapolis, Ind.

Farm Grist Mills
And Corn-Shellers.
Over 25,000 Now in Use.
Every machine is guaranteed to give satisfaction or no pay. Price of Mill, $12. Shellers, $5. Every Farmer should have them. Send for Illustrated Circulars and terms to agents. Address,
LIVINGSTON & CO.,
Pittsburgh, Pa.



POWER
Cider Press
WITH
Double Platform
GRATER, $40
SEND FOR CIRCULAR.
BOOMER & BOSCHERT PRESS CO.,
SYRACUSE, N. Y.



Veteran Corn Sheller
FOR HAND OR POWER.
Just the Thing for Mill, Farm or Plantation.
Power and Hand Corn Shellers of all sizes and to suit all wants.
HORSE POWERS, JACKS, &c.
Write for Descriptive Circulars and prices. Address SANDWICH MANUF'G CO., Sandwich, Illinois.

CARPETS.
WE HAVE NOW OPEN A LARGE ASSORTMENT OF
NOVELTIES.
MANUFACTURED BY OURSELVES
Expressly for Our Retail Trade,
CONSISTING OF
AXMINSTERS, MOQUETTES, WILTONS, VELVETS, BRUSSELS, TAPESTRYS, THREE-PLYS, AND INGRAINS
of a SUPERIOR QUALITY,
INCLUDING MANY EXCLUSIVE DESIGNS,
which we are offering at
VERY LOW PRICES.
WE ALSO OFFER A LARGE SELECTION OF
TURKISH, SMYRNA, AND EAST INDIA RUGS AND MATS,
IN NEW AND CHOICE DESIGNS OF OUR OWN IMPORTATION,
ALSO,
OIL-CLOTHS, LINOLEUM, LIGNUM, &c.,
AT LOW RATES.

Field Crops.

Potato Number.

COMPOSITION, MANURING AND FEEDING QUALITIES OF THE POTATO.

PROFESSOR G. C. CALDWELL.

Composition of the Potato.

THE results of seventy analyses of the tuber, by various chemists, embracing a great many varieties and modes of culture, are summed up in the following table:

	Minimum.	Maximum.	Average.
Water	68.29	82.88	75.77
Nitrogenous substance	0.50	3.60	1.70
Crude fat	0.05	0.8	0.16
Non-nitrogenous extractive substances (starch, sugar etc.)	12.05	26.57	20.56
Fiber	0.27	1.40	0.75
Ash	0.42	1.46	0.97

As the result of fifty-three analyses of the ash of the tuber, we have the following:

	Minimum.	Maximum.	Average.
Potash	43.97	73.61	60.37
Soda	0.00	16.93	2.62
Lime	0.51	6.23	2.57
Magnesia	1.32	13.58	4.69
Ferric oxide	0.04	7.18	1.18
Phosphoric acid	8.39	27.14	17.33
Sulphuric acid	0.44	14.89	6.49
Silica	0.00	8.11	2.13
Chlorine	0.85	10.75	3.11

Six analyses of the tops give the following average results: Potash, 21.78; soda, 2.31; lime, 32.65; magnesia, 16.51; ferric oxide, 2.86; phosphoric acid, 7.89; sulphuric acid, 6.32; silica, 4.32; chlorine, 5 78. Potash and phosphoric acid are therefore the predominating ingredients of the ash of the tuber, and soda and silica are evidently quite unessential since they may be entirely absent; soda may also be entirely wanting in the tops.

From these figures it may be estimated that in a crop of 150 bushels weighing 9,000 pounds, and 600 pounds of tops, we should remove, of the three most valuable ingredients of plant-food, the quantities per acre given in the following table, omitting fractions. For the purpose of comparison, I shall give also the quantities of these three substances gathered by a crop of wheat, 25 bushels, and straw, 2,500 pounds; and of Indian corn, 50 bushels, stover 4,500 pounds, and cobs 600 pounds.

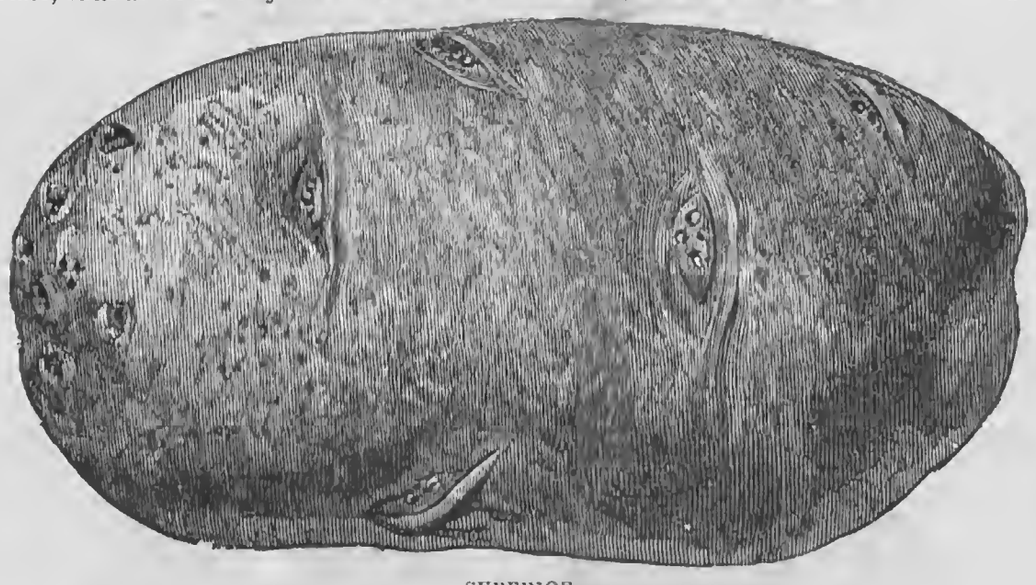
	Nitrogen.	Phos. Acid.	Potash.
Potatoes: tubers	26	15	53
tops	—	4	11
Total	26	19	64
Wheat: grain	30	13	8
straw	12	6	17
Total	42	19	25
Indian corn: grain	48	20	12
stover	22	23	41
cobs	2	—	4
Total	72	43	57

Manuring.

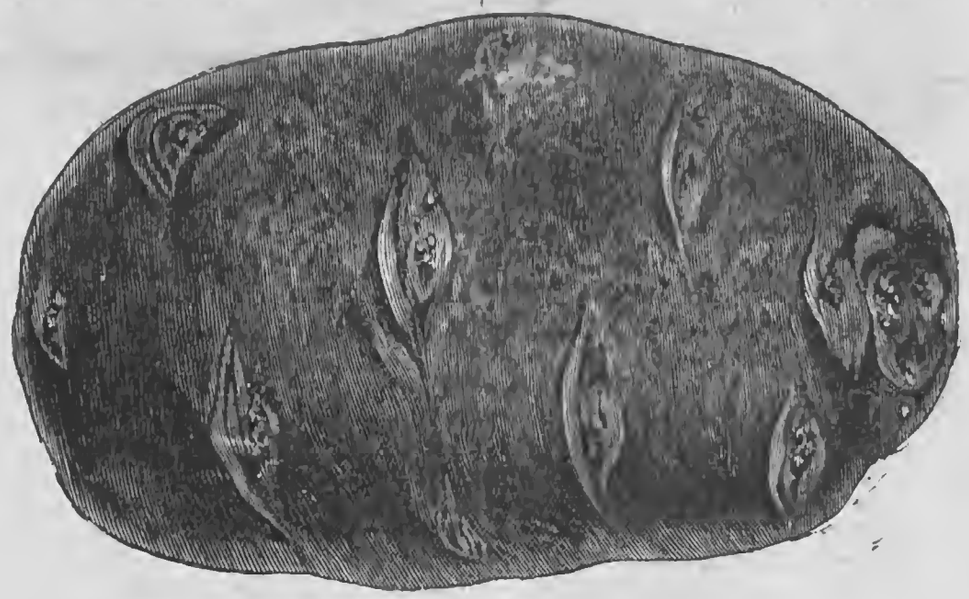
From these figures it appears that to produce the potato crop, potash is required in larger proportion than either nitrogen or phosphoric acid, and that more is required for this crop than for either wheat or corn, notwithstanding that the latter is such a gross feeder. When we come to consider the comparative exhaustion of the soil by the two crops, remembering that of the corn crop only the grain with 12 pounds of potash, is liable to leave the farm, while of the potato crop the tubers, with 53 pounds of potash from every acre, are usually exported, the usefulness of potash manures in potato culture would appear to be very plainly indicated. To the quantity of nitrogen gathered by the potato crop, as given in the table, something must be added for the tops, with reference to which we find no determinations of this element. Making due allowance for this, the best manure for the potato would seem to be a complete one; that is to say, one containing all three of these substances—nitrogen, phosphoric acid and potash, with a large proportion of the last.

No long and careful series of experiments have been tried with various manures and the potato, such as we have by Lawes and Gilbert with the cereals; but the general tenor of the results of such scattered field experiments as have been tried, supports this conclusion:—potash salts added to other manures, have, in most cases, increased the crop to a profitable extent, and, in some cases, very considerably. Of the two potash salts used for agricultural purposes in Germany, and brought over here, the sulphate and the chloride, the former gave decidedly better results in Grouven's experiment extending over three years; but refined Peruvian guano—guano treated with sulphuric acid—gave the best yield, much better than was obtained with stable manure. Bretschneider obtained excellent results on a good soil with potash salts alone, applied broadcast just before furrowing out for planting and harrowing in. Voelcker, as the result of field experiments conducted under his direction by several farmers, concluded that, for light land, 400 pounds of superphosphate, 200 of potash salts and 200 of sulphate of ammonia would be the most profitable manure, and that on heavy land the ammonia salts might be omitted, and a small quantity of nitrate of soda used. Other experiments, in Germany, have obtained the best results with sheep manure to which about one-tenth of potash salts had been added. Lawes and Gilbert have given the results of experiments for two years, which show much better yields with 400 pounds of ammonia salts (or 550 of nitrate of soda), 350 of superphosphate, 300 of sulphate of potash, 100 of sulphate of soda and 100 of sulphate of magnesia, than with 14 tons of stable manure. In the experiments conducted in New England under Atwater's direction, the most uniformly good results were obtained with a complete manure containing a liberal proportion of potash salts, 150 pounds of nitrate of soda, 300 of dissolved bone-black and 200 of chloride of potassium, costing $15.38 per acre, and yielding, in all but one of the experiments, from 40 to 130 bushels increase. But in a small majority of the same series of experiments, profitable results were obtained with either potash salts alone, applied at a cost of $4.50 per acre, or with superphosphate and nitrate of soda costing $10.58 per acre; that is, the increased crop would, at any ordinary prices, more than pay for the manure.

From a general review of all the results, it appears that on ordinary soils only complete manures are the safest, and that manures containing nitrogen alone, and no phosphoric acid or potash, are the most unlikely to yield profitable returns. The larger yield and the better quality of potatoes obtained by so many experimenters with commercial fertilizers than with stable manure, will suggest to the progressive farmer experiments on his own farm with these manures. Salt on potatoes, while it may occasionally somewhat increase the crop, impairs its quality by diminishing the proportion of starch.



SUPERIOR.



RUBY.

MANHATTAN.

Feeding Quality.

The first table given above shows how widely the potato may vary in composition, especially with reference to the albuminous substance, which is taken to represent the proportion of albuminoids. A share of this variation may be due to differences in variety, but it is caused also by different modes of culture. In one experiment illustrative of this, while in the potatoes from the manured plot the nutritive ratio was 1:9, in potatoes manured with stable manure and nitrate of soda, it was 1:6.5. But, although generally the richer an article of fodder is in nitrogenous substance, just in that proportion it is more valuable, this is not always necessarily so, for, as recent investigations have shown, this substance is made up partly of compounds of nitrogen that cannot in any sense discharge the important functions in the animal economy that belong to the albuminoids. In the potato but little more than half of the nitrogenous matter is albuminous. We do not yet know what variations there may be in the proportion of real albuminous matter, whether induced by different modes of cultivation, or the result of difference in variety.

The nutritive ratio of the potato, or the ratio of the albuminoids to the non-nitrogenous extractive matters, plus 2½ times the fat, is given in the books at 1:10.6; this is based on the assumption that all the nitrogenous substance consists only of albuminoids; this reduction in the proportion of albuminoids to about 53 per cent. of the total nitrogenous substance, makes still greater the already wide nutritive ratio of the potato, and increases the necessity of supplementing it, when used for fodder, with other materials, like bran or oil-cake, rich in nitrogen, it being desirable that this ratio should be 1:5 to 7 in all ordinary feeding.

POTATO CULTURE IN OHIO.

W. I. CHAMBERLAIN.

CERTAIN counties or parts of counties in northern Ohio seem specially adapted in soil and climate to the culture of potatoes. Such are portions of Lake, Cuyahoga, Portage and Summit counties. The "potato regions" lie chiefly on, or near, the bank of the lake or of the Cuyahoga River where the soil is a sandy or gravelly loam, where local showers are

frequent, and where drought seldom occurs. Showers seem, as we all know, to follow the water-courses, so that a strip two or three miles wide along the margin of lake or river, is often well watered when severe drought exists through the rest of the neighboring regions. Such favored localities are those mentioned above, and here the potato crop is almost sure. For even excessive rains in a wet season on the soil found there, do not rot the potatoes as in heavier soil. In these localities, therefore, potato culture is, wisely we think, made a speciality, many farmers raising twenty or thirty acres a year, or even more. And in fall and spring hundreds of carloads are shipped from the various railroad stations here to points all over the country. Of course, when the cultivation is on so large a scale, the most convenient tools and implements are used.

The Best Soil for the Potato,

as intimated, is considered to be a rich, sandy loam, sufficiently up from the bed of lake or river, if possible, to make it clear from early autumn frosts. On the lake shore, however, the large body of water, cooling more slowly at night than the land, is of itself considerable protection against frost. This matter is of great importance in case of the Peachblows and other late varieties; for, on low ground, they are often cut off by frost before maturity.

Manuring

in the hill is always objectionable. It is too much work, for one thing; but the main point is that it injures the quality of the potatoes to have manure directly in contact with them while they are growing. Broadcast manuring is not so bad, but even then the manure will get in contact with the tubers, more or less, as they form. A better way is to have the ground sufficiently enriched with a previous crop. A common and much approved practice here is to turn under a rich clover sod late in May, and plant about the first of June. There is by that time a heavy growth of clover, but if it be rolled with a heavy roller in the direction it is to be plowed, and then plowed with a good jointer plow, such as the "Oliver" or "Syracuse" or "Gale," with a heavy chain from end of evener to plow beam, in case of a very heavy crop, the clover will disappear entirely, and never interfere with the planting or cultivation of the crop, but will remain beneath the surface, a constant source of fertility and moisture through the entire season. Potatoes on such ground will stand quite a severe drought. Late

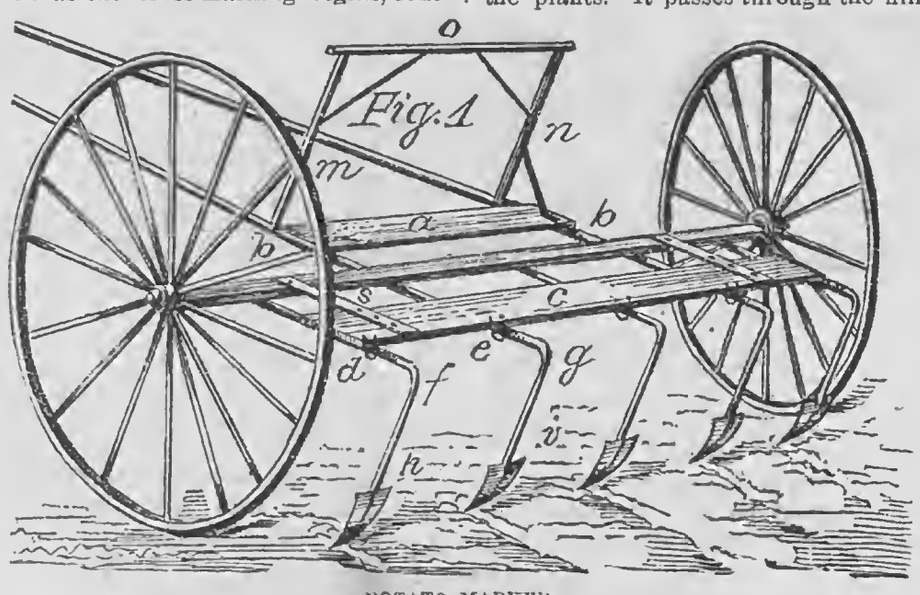
Planting

has come much into vogue here, especially since the advent of the Colorado beetles. It saves the fighting of one crop of bugs, which is quite an item on a forty-acre field. Late varieties, especially Peachblows, do not form much until the cool nights come, in late August and September, so that it is found that when planted late, they mature about as soon as when planted a month or even six weeks earlier. They come up more quickly and grow far more rapidly at first; the ground remains more mellow, and six weeks' extra cultivation of the ground and fighting of weeds are avoided. I have known Peachblows planted as late as June 15, on high ground, to mature a splendid crop before frost. Another advantage in late planting is that it permits the planting and sowing of oats, corn, barley and other spring crops to be entirely finished and out of the way before we begin on the potatoes.

But if the work is deferred so long, it must be done promptly and rapidly when once begun. The cultivator and harrow must follow closely upon the plow, and the marker closely upon the harrow, so that almost as soon as the last furrow is turned, the marking is done one way. Then the marker is started crosswise and the planting at once begins. The horse-power dropper and coverer is not used because it does not do the work with sufficient accuracy for hill culture. The marker most approved here is a home-made one on wheels, which makes three, four, or even five deep, plain marks. It is arranged somewhat like the two old-fashioned, stand-up, steel-tooth dump-rake.

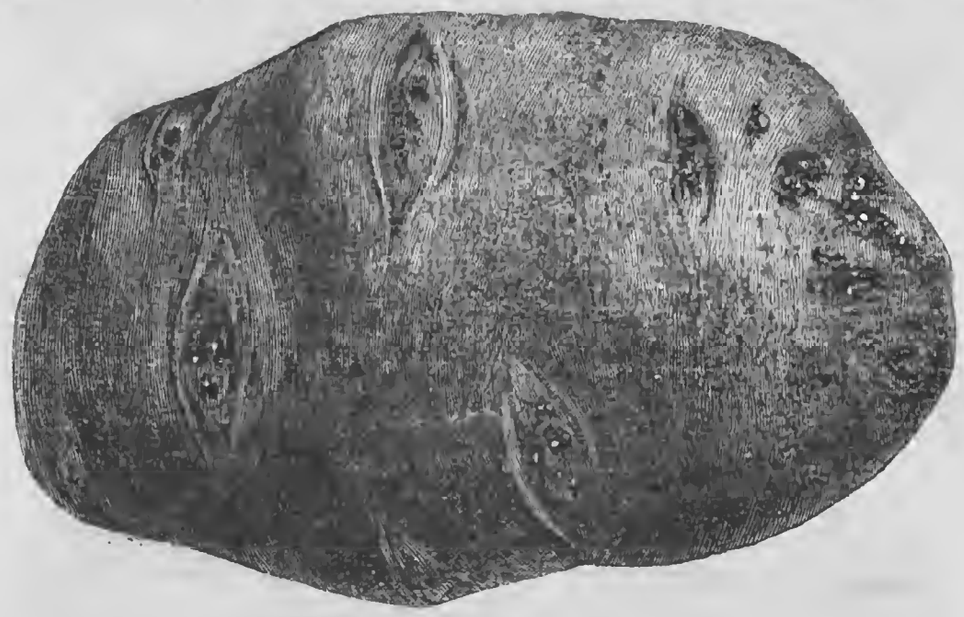
Fig. 1 represents such a marker made to draw five marks at once. The thills are joined to the axle by two long, strong, wrought-iron hinges, playing vertically, (b, b, Fig. 1. A platform, a, about a foot wide is bolted firmly cross-wise to the thills just in front of the hinges for the driver's left foot to rest on, and two standards, m, n, rise vertically from this, well-braced and with a cross-bar, o, for the driver's left hand to rest on, to steady him. Back of the axle is another long board, c, bolted firmly to the axle by the strong slats, s, s. This serves to keep the teeth in position, and is for the driver's right foot to rest on. The teeth, h, i, and e, are wide, V-shaped cultivator teeth bolted to strong iron rods, f, g, and e, that run back horizontally from the axle beyond the range of the wheels, and then vertically to the ground. The teeth can play up and down slightly to adapt themselves to depressions in the ground, but are held from dropping far by the staples, d, e. When the driver bears his weight on the rear platform, c, the teeth are pressed into the ground. When he bears it entirely on the front one, a, *in front of the hinges*, the concern "jacks" and lifts the teeth all from the ground, ready to turn at the end of the rows. A five-toothed marker will mark 25 or 30 acres in a day, one way.

As soon as the cross-marking begins, four



POTATO MARKER.

men begin the dropping, and one man begins to cover with a horse. Each dropper carries about half a bushel of potatoes in a bag, tied corner to corner, slung over the right shoulder and under the left arm, with its open end towards the dropper's right hand. A wagon, loaded with seed, stands at the middle of the rows, and is drawn slowly across the field as the planting progresses, so that its rear end shall always be near the rows that are being dropped. A good, narrow scoop-shovel



ALPHA.

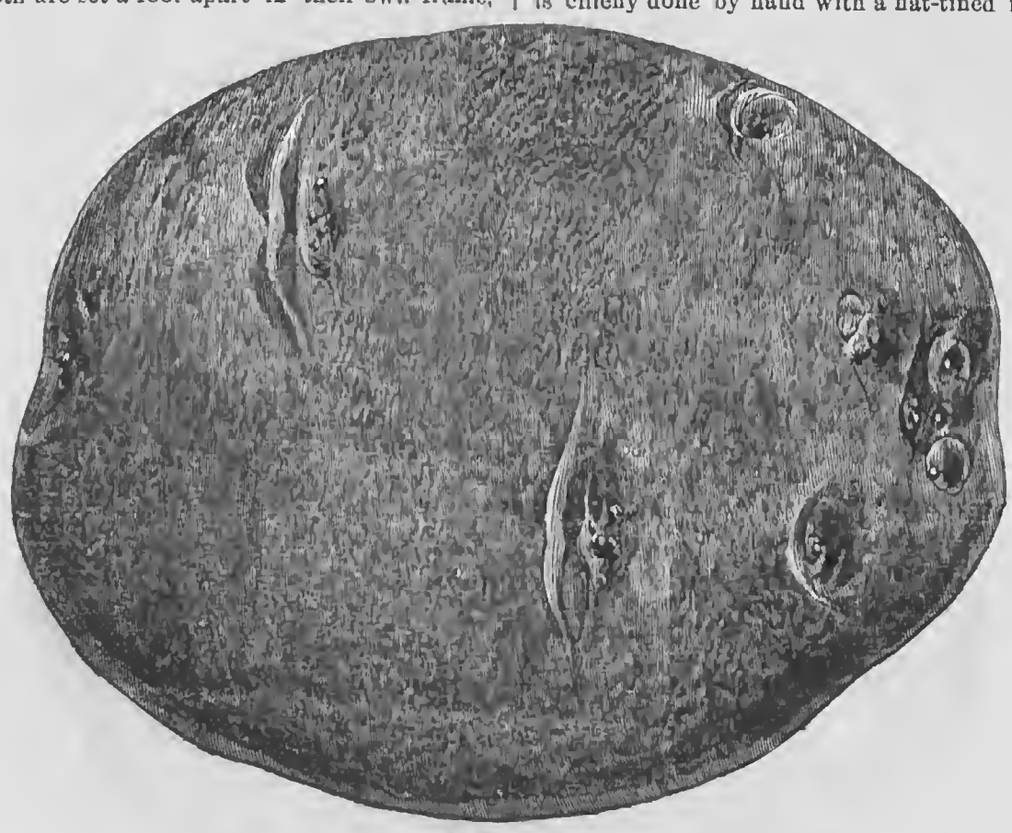
fills the bags readily. Each dropper drops a potato or large piece—never two—at the intersection of the marks and presses it firmly into the ground with his foot as he passes on. This tramping has two objects: first, to "firm" the ground around the seed; second, to prevent the seed from being knocked aside by the horse in covering, or by the harrow in after culture. A man covers with a horse as fast as three or four men drop. Two broad cultivator teeth are set a foot apart in their own frame, or one made on purpose, and turned so as to throw the dirt *in*. The horse walks on the mark, and a neat ridge of dirt is piled up all along the row. If it is desired to "firm" the ground above the seed, it is done with a roller afterwards. A fast-walking horse will cover eight or ten acres a day, as the draft is light and there is no stoppage or hindrance. The horse soon learns to follow the mark.

The After Cultivation

is done entirely by horse, and not at all by hand. As soon as weeds *begin to appear*, the Thomas smoothing harrow should be run over the field, demolishing all small weeds and nicely mellowing the surface. This harrowing should be repeated at least once a week till the potatoes are eight or ten inches high. The Thomas harrow is the only one I know that will do the work well and without damage to the plants. It passes through the hill among the plants, killing all small weeds, mellowing the earth in the hill, and entirely dispensing with hand hoeing. As soon as the potatoes are up enough to show the rows, the cultivator is used in connection with the harrow to secure deeper and more thorough culture between the rows, and to start the hilling. The final hilling, just before the plants begin to "lop" and spread, is done with a good winged shovel-plow. The wings are so adjusted as to throw and hold the dirt close around the vines and make a nice, square hill. Hill culture is preferred to drill culture for two reasons;—it gives a better chance for cultivation with the horse, and it makes the digging far easier. Flat culture, whether in hill or drill, is entirely avoided here, though much advocated in some places. It makes the potatoes hard to dig, and more liable to rot in wet seasons.

The Digging

is chiefly done by hand with a flat-tined fork or hook. With the former a live man can throw out from 50 to 100 bushels, in a day, of Peerless or Early Rose, when the yield is good. These varieties grow in a compact mass and can be thrown out clean at a single forkful, and a sudden flirt of the fork clears them of dirt as they strike the ground. Peachblows spread more in growing and are slower digging; but in the small, high hills they cannot spread very far. The rows are made narrow, usually from 30 to 34 inches apart both ways, and, as many sets per acre are thus planted as the ground can "carry." The vines, when thrifty, completely cover the ground.



BROWNELL'S BEAUTY.

The Varieties of Potatoes

most raised here are those best known everywhere, namely, Early Rose, Early Vermont, Snowflake, Peerless, Brownell's Beauty and Peachblow. The Victor is in high favor with producers, but not with dealers or consumers. And it is found necessary, in raising large quantities of potatoes to use mainly the kinds that sell by the car-lot on regular quotations, either to shippers at the carring stations, or to dealers through commission-men on consignment in the large cities. The Peachblow, the great stand-by for more than 20 years as a late potato, seems to be running out; it blights and does not mature. No new variety seems as yet exactly to take its place.

The Profits

of *successful* potato-raising are large—sometimes immense. I have known a large crop in the "off year," when prices were high, to bring about $150 per acre of gross receipts. But the Colorado beetle and the army-bug, together with the limited area thoroughly suited, in soil, climate and surroundings, for successful potato-raising, have combined to prevent such general over-production as to bring prices down to ruinous rates.

EXPERIMENTS WITH POTATOES.

PROFESSOR. W. J. BEAL.

For the past twelve years or more, many varieties of potatoes have been raised in the garden of the Michigan Ag'l. College. The potatoes have been studied more particularly for the past five years. For a considerable portion of of this time, about 250 of the most prominent named varieties have been grown. The soil is somewhat variable, though it has always been sandy and generally of rather poor quality brought up to good fertility by horse manure well composted. For most of the time the potatoes have been grown on what is called "old land," that is, there was no sod turned under. For the past three years they have been on sod ground, sometimes twenty hills of a variety, and from this down to one, two, or three hills.

In 1868, the highest ten in yield ranked in order as follows: 1, Chenery; 2, Cuzco; 3, Cascoe; 4, Forfarshire Red; 5, Harrison; 6, Shaker's Fancy; 7, Strawberry; 8, Orono; 9, Chili No. II.; 10, Dana's Seedling.

In 1874, the highest ten in yield ranked in order as follows: 1, Climax; 2, Lady Finger; 3. Jersey Peachblow; 4, Early Favorite; 5, Peerless; 6, Breese's King of the Earlies; 7, Kearsarge; 8, British Queen; 9, Snowflake: 10, Tyrrell. The following varieties were not compared with the above list, viz.: Compton's Surprise, Early Vermont. Probably the latter on that year excelled all those named above.

In 1875, the highest ten ranked as follows: 1, Early White; 2, Early York; 3, Early Favorite; 4, Carpenter's Seedling; 5, Pond's Seedling; 6, Early Goodrich; 7, White Rose; 8, Red Jacket; 9, Seedling Mercer; 10, Ice Cream. The Climax was watery and of poor quality This was true of some of the others, but they were not all tested in this particular.

In 1876, the highest ten in yield were: 1, Long Pond (probably Pond's Seedling); 2, Missouri Round; 3, Breese's Prolific; 4, Snowflake; 5, New Kidney; 6, Early Don; 7, Ohio; 8, Early Violet; 9, Early June; 10, Whipple's Seedling.

In 1877, they ranked as follows: 1, Pond's Seedling; 2, Bulkeley's; 3, Climax; 4, Galva; 5, Worcester's Seedling; 6, Early Russet; 7, White Rock; 8, Early Mowhawk; 9, Bulkeley's Seedling; 10, Dyright.

By these figures, of the yield of potatoes planted in small quantities, we may learn something:—We see that they vary in rank; that they should be raised in large quantities on even soil for several years in succession. Then, the quality is a matter that cannot be measured in the half bushel. Some experiments were made in trimming the tops. This, on a fair trial, proved to diminish the yield of the tubers.

Will Potatoes Run Out?

An article on this subject by the present writer was printed in the RURAL some time ago. Further tests since then have resulted the same as those then reported. Those sorts which have been long kept here, have all decreased in yield and most of them have deteriorated in quality. The cultivation has been good in every respect, so far as I can judge, except that for most of the time they were not planted on sod ground, or on new ground. Quite a large number of those first raised have run out. We have lost the seed, as the plants dwindled and failed to set a single tuber. We do not claim that they would run out if treated in every respect first-rate; but, as ordinarily treated, they often, if not always, run out or nearly out.

In some portions of the South, seed is imported from the North every year. The seed

raised in the South is unfit for seed. Let any one look around him for any of the old favorites of 20 years ago or more. Where are they? Many of our new sorts are no better, nor are they more productive than were once those old varities. The old kinds have deteriorated and the new have taken their places; at least this is true so far as the author can learn. This may not be the case in some places which are most congenial to potatoes. The raising of new varieties is as easy as the raising of new sorts of tomatoes. The plants should be started in the spring in a similar manner. The yield is often surprising on the first year. In most places there will be a demand for new varieties every few years. The Early Rose is still popular here, but is evidently on the decline.

Mr. Gulley, foreman of our Horticultural Department, furnishes the following as some of his observations for last year. Most of those he mentions were raised on sod ground in small quantity and for the first time in our garden. They were planted the 20th of May. On August 12th, the following were ripe:—Early Ohio, Bliss's Triumph, Early Goodrich, Extra Early White; on August 19th, Granite State, Carpenter's Seedling, Acme, Bulkeley's Seedling, Red Jacket, Beauty of Hebron. It is fair to say that Alpha is very early, but was not included in the trial above. It was raised in another place. It is one of the very earliest. Other varieties ripened from September 1st to the 15th. The most productive were Burbank's Seedling, Beauty of Hebron, Mammoth Pearl, Garrison's Seedling and Genesee County King.

Michigan Agricultural College, Lansing.

NOTES ON POTATO CULTURE.

E. J. BROWNELL.

SINCE the Colorado beetle became so troublesome, I have attempted to grow only potatoes enough to make sure of a family supply, for a small patch thoroughly cultivated and well taken care of, is more profitable than a large piece, half-cultivated, the vines in which when about half-grown, are abandoned to the ravages of the beetle, as I have seen to be the case with many pieces during the past two years. But, if a small piece can be grown with profit, so can a larger piece, if given the same care and attention, and an observation of a number of years, proves conclusively to my mind that, taken for a series of years in succession, there is no single crop that will afford, or at least has in this locality afforded better profits than potatoes.

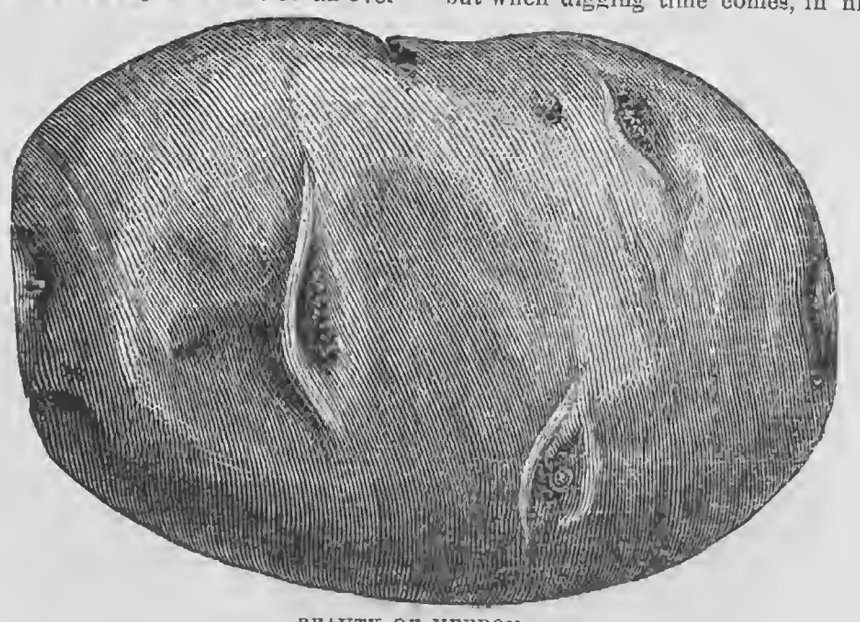
IN SELECTING GROUND for this crop I should look first to the quality of the soil, and, after that, to ease of cultivating it, but between two pieces, one of which was wet and heavy, and the other dry and favorable, except being stony and somewhat harder of cultivation, I should give the latter the preference, as the difference in the quality of the product, even though the quantity might be the same, would be enough to more than compensate for the difference in the trouble of cultivation. Of late years I make it a rule to plant on land that is in a condition of sufficient fertility to produce a good crop without manuring for the current year. I believe the application of barnyard manure directly to this crop, has a tendency to cause the potatoes to rot: and, moreover, I think they are coarser in quality. Perhaps this objection would not apply to the use of superphosphate; at least so some claim, but as I have never experimented with it on potatoes, I do not know what the effect would be. I usually apply unleached ashes as soon as the potatoes come up, at the rate of about a handful to each hill, and I think this improves the quality, as well as adds to the chances for a good crop.

IN PLANTING, if the ground is sufficiently mellow—and on this account I prefer a piece that has been cultivated the previous year, usually either in corn or buckwheat—after thoroughly dragging it, I plow a light furrow in which I drop the seed, and throw another furrow over it. Then, when the tubers begin to appear above the surface, I go over it once with a drag lengthwise of the rows, which levels it down and destroys the weeds leaving it clean, without injury to the crop.

IN SELECTING SEED, I pick out the medium-sized potatoes and cut them so as to leave three or four eyes to each piece, and plant one piece in a hill, the hills being about eighteen inches apart, in rows about three and one-half feet apart.

IN VARIETIES I have found nothing yet that, for all purposes, suits me better than the Early Rose, though the Late Rose yields somewhat better, and is of fair cooking quality; and the Snowflake, though not yielding quite as well, cannot be excelled in quality.

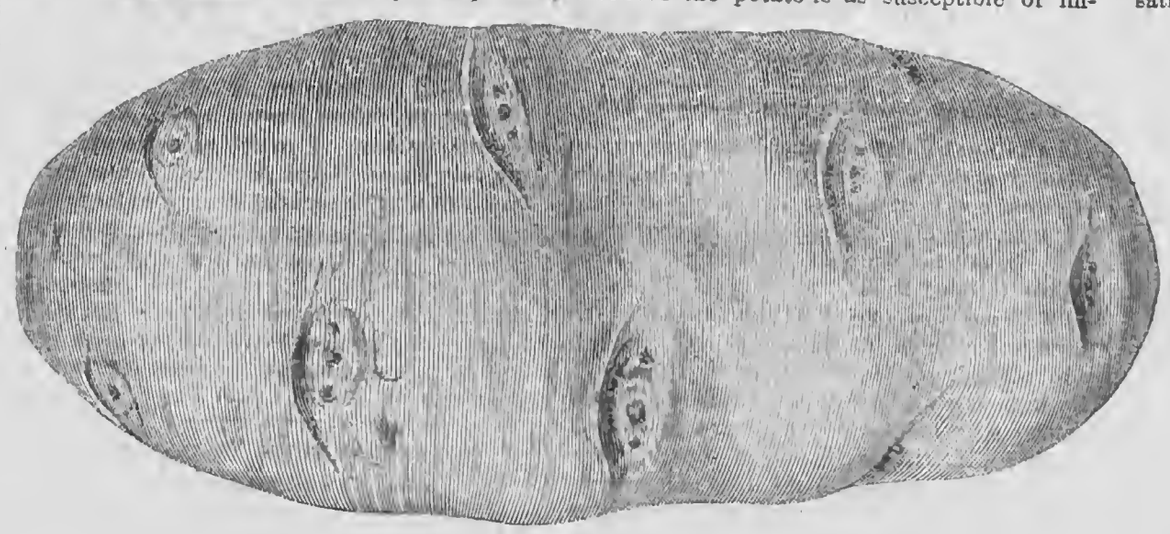
FIGHTING THE COLORADO BEETLE.—Now, I have the potatoes planted and the vines above ground, and here comes the trying time; for the potato beetle has been watching for their appearance, and is in readiness for operation. At the risk of being called "old-fogyish," I shall venture the opinion that it is preferable to hand-pick the pests rather than to use Paris-green, as is commonly done. In my field of about one-half acre, to which none was applied last year, the tops remained green until the potatoes ripened naturally, while there was not a piece in the neighborhood, on which the poison was used, the tops of which did not die down when the tubers were about half-grown. There may have been some other cause for this difference, but it seems to me worth a trial to ascertain positively whether this is the effect of the poison. I know the advocates of its use will claim that it is only the result of an over-



BEAUTY OF HEBRON.

dose that proves thus injurious, but if an overdose has this effect, is it not proof that even a small quantity is injurious, to some extent?

My mode of hand-picking is to take an old pan and hold it under the vines, and, with a piece of shingle, give the latter a light rap, brushing the beetles off into the pan; then I kill them by pouring on them scalding water. I took some pains to make an estimate of the time spent in this treatment last year. I could go over the whole field in two hours, and by doing so twice, or, at most, three times each week, I was successful in preventing the enemy from doing any injury to the crop. If possible, I shall hereafter plant potatoes where I can give the hens the range of the field, and, by scattering corn among the vines, shall try to get the fowls to work there, as I am satisfied that they will pick off a good many of the beetles; and if there are fowls enough in proportion to size of field, they will keep the pests off entirely, for on a piece I planted last season, for early use, where the hens ran a good deal through the season, they kept the vines entirely clear of bugs.



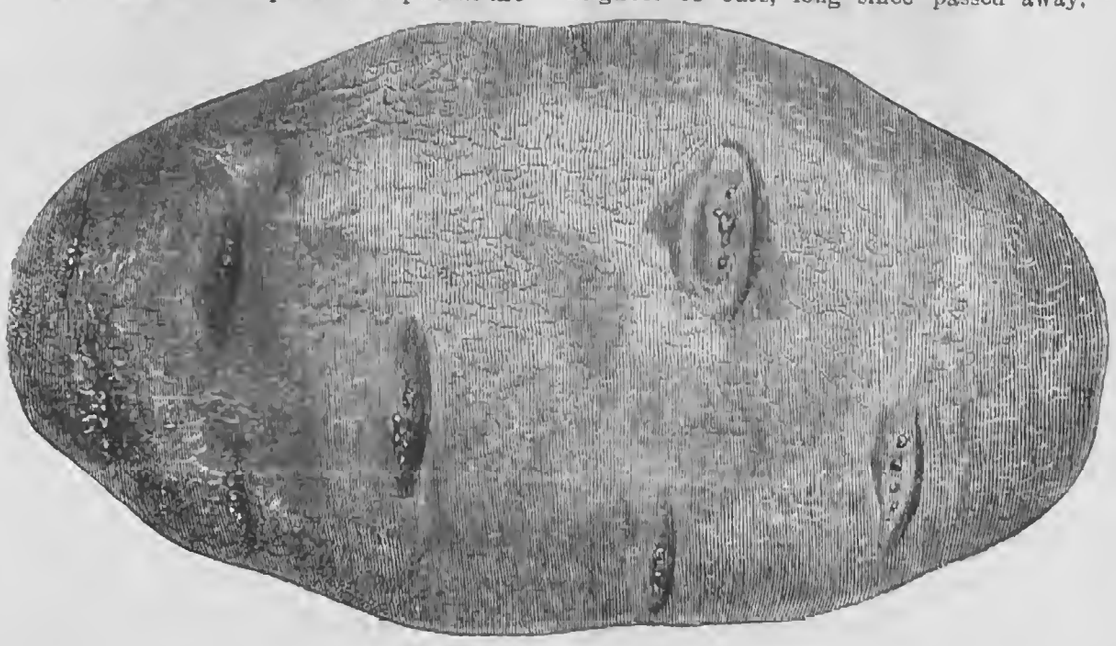
ST. PATRICK.

HOW TO KEEP POTATOES FROM DETERIORATING.

THE potato will be acknowledged by all to be one of the most important crops that the farmer raises, ranking next, at least, to the great bread staples, wheat and corn. In fact I hardly think that an entire failure of the corn crop would be felt more than an entire failure of the potato. And yet, as ordinarily cultivated, we find the potato constantly deteriorating, "running out" as we say. To remedy this, men all over the country are every year producing new varieties. These being given the "highest" kind of culture, produce well, and are thrown on the market and sold to the farmers in small lots at exorbitant prices. The farmer, wishing to get all the seed possible from his new potatoes, again gives them extra garden culture and is well satisfied with his purchase. He now has seed with which to plant his fields. The next year he plants them, and gives them ordinary field culture; but when digging time comes, in nine cases out of ten, he finds that he has spent his time and money "for that which is naught," the old varieties doing generally as well, and sometimes much better than the new.

Now, I believe we are altogether on the wrong track in this matter. I believe if the time and money spent in producing and testing new varieties were expended in improving and perfecting the old, well-established sorts, we should be better off; for I think by judicious selection of seed and proper cultivation, the old varieties may not only be kept from "running out," but may be greatly improved. I believe the potato is as susceptible of improvement as any of the grains. What farmer would go to his corn crib and select his seed promiscuously therefrom, and if corn happened to be a little higher-priced than usual, select the nubbins and pig corn, reserving the best to sell, and not expect his corn to "run out"? And yet that is the way very many farmers manage with their potatoes, and then have to keep changing their seed because their varieties "run out."

There are perhaps but few of the older farmers who do not recollect the old Long Pinky potato, one of the best potatoes ever raised in this country, a potato of medium size, with now and then one quite large. Some forty years ago, when I was but a boy, I recollect a neighbor of ours, long since passed away,



EXTRA EARLY VERMONT.

always selected the largest potatoes of that variety for seed, and in a few years his Pinkies had improved in size until a load of them was a beautiful sight, always meeting with quick sales and good prices, for the times.

Now I will give my theory in regard to the improvement of the potato, a theory which I intend to put into practice in the future. As it will take sometime to fully test its value, I hope that many of my brother farmers will join with me in carrying out some such plan by which varieties of potatoes may not only be kept from deteriorating, but may be improved.

Perhaps all who have dug potatoes have noticed occasionally a hill of large yield of large, uniform-sized tubers in comparison with those from the surrounding hills. I would select a half bushel, more or less, from such hills to commence my seed patch. I would keep them at such a temperature that they would be sure not to sprout until I wanted to plant them. I believe the first sprouts have far the most vitality and that all others have a tendency to deterioration, so I would get them into the ground with their first sprouts perfect, not more than four to the hill, and not cut too near to the eye. I would give them *good* ordinary culture. From this patch I would again select from those hills that gave the best yield of good-sized tubers, reserving the rest for general planting.

If this were done for a series of years, I believe the potato might be bred up to as high a standard as any of our grains or even our farm stock.

W. E. MANCHESTER.

Lackawana Co., Pa.

POTATOES FOR THE NORTHWEST.

S. RUFUS MASON.

FOR an early potato for Nebraska, none has done so well in my land, a black, sandy loam, as the Extra-Early Vermont. It is nearly two weeks earlier than the Early Rose, two-thirds more productive, dry and mealy from the first digging, and now—Sept. 22—as good as any potato I ever tasted. If it can be kept through the winter and spring, so as neither to freeze nor sprout, it might take the place of all late potatoes; but it is very susceptible to warmth and moisture, and should therefore be dug as soon as the vines die in August, to prevent second growth, and also be kept from sprouting in the spring till time for planting. I am satisfied that allowing potatoes to sprout out of season, is the main cause of their deterioration.

For a late potato, I know nothing better than the White Peachblow. To insure good tubers, plant in good, dry soil; cultivate once a week till blossoming; dig as soon as the vines die; store in a perfectly dark place, and prevent sprouting till time to plant. I believe this programme will suit the world over.

Soil For Potatoes.

There are few natural soils which are just right for a potato patch, but any soil may be made right, even upon the worst material for a foundation. The field should be high enough to be entirely free from standing water at all times, and may then be made perfect at little expense. If it is a heavy clay, it will be naturally cold and in suitable condition late, besides being cloddy and lumpy. To such a soil apply chips from the wood-yard, short straw, bottoms of old hay or straw stacks or any half-rotted, coarse manure. These have the effect to keep the soil open mechanically, to allow warmth and moisture from above to enter, to prevent baking in a drought and packing by heavy rains. If the soil is too sandy, work in muck, old, dense, well-rotted manure, light clay soil, or any friable material at hand. Any intelligent man can make a soil for potatoes, by giving it the following essential properties, using any artificial means he may have at command:—It must be medium between light and heavy; rich, but not with green manure; warm by a natural exposure to the east, northeast or south, but not towards the west, as it would then be too hot; moist by such openness and such friability of the soil as will enable it to extract its main supply of moisture from the atmosphere.

After giving the soil the additions which will produce this condition, it must be thoroughly worked once a week from the time the plants show through till they blossom.

A tight, hide-bound soil, makes small potatoes, poor seed and short crops; an open, loose soil allows the tubers to grow and crack the earth around the hill, to attain full size and to ripen well. To keep up the quality of potatoes, always save for seed the finest in shape, size, and maturity or ripeness. Cut to two eyes, with as much of the body of the potato to each piece as possible. In planting, put two pieces in each hill.

Dodge Co., Neb.

FIRST-CLASS POTATOES.

IT is surprising, almost incredible, that such a large proportion of the potatoes grown for home table use, and those which find their way to market, are not of the first quality. To grow fine-flavored, good-cooking, mealy potatoes for the table requires a soil and culture peculiarly adapted thereto, as well as a favorable season and weather. Just what the essentials may be will vary in different localities. Although the tastes of different individuals may

vary in regard to what constitutes first-quality tubers, yet vary as they do and may, there is scarcely any one who will not accept as good potatoes those that in boiling or baking, cook through evenly without any watery, salvey, or hard core, and which crack open evenly when lightly pressed, presenting a mealy mass, floury and light without being so dry to the taste as to be flavorless, and which, when eaten with a little salt, tempt the appetite to crave more of the same sort. Such potatoes I have received and tested from "potato breeders;" but I have seldom been able to grow them. The nearest I have been able to come to it, was growing on a sandy loam soil newly broken, with a light sod, like a clover sod, fertilized with plaster and ashes. Animal and farmyard manure, unless thoroughly rotted, I have found not good for the potato crop, and, when applied, it is better not to place it in contact with the tubers. On arable soil I have noticed that the best success was had on such as was in good heart from the manuring of previous crops, and which had not grown potatoes since broken from a sod, and that had been fertilized with mineral matter. Large growth of tubers I have observed to be less favorable to quality than a medium growth. The routine of culture will vary according to circumstances, so that it is not necessary to say farther here.

Worcester Co., Mass. W. H. WHITE.

NOTES FROM THE RURAL FARM.

Potato Tests.

THE potatoes given below were planted upon moist ground and manured with well rotted barnyard manure only. Cut to single eyes.

SEEDLING from D. S. Marvin; one potato, dark-red in color, narrow, long. Planted April 24—six pieces. Dug August 19. Weight of yield, four pounds.

EARLY ROSE.—Same date; one potato, four pieces. Dug August 19. Weight of yield, 9¾ pounds.

TROPHY.—April 26; four pieces. Weight 2¾ pounds. These resemble Beauty of Hebron in shape and color.

SEEDLING from John F. Beard No. 1; four pieces—April 24. Yield seven pounds—all large or medium. White, oblong, flattened.

SEEDLING from John F. Beard No. 2; four pieces. Yield 11½ pounds. Grow remarkably close in hill. Very white. Heavy, solid, of good flavor.

MANHATTAN.—Planted May 20; one potato of good size; eight pieces. Yield, 18 pounds. Light-purple skin, often splashed with white. Average large.

WASHINGTON.—Same date. One potato; seven pieces. Yield 12 pounds, some large, many small. Color of Early Rose, long, narrow; rather soggy when cooked.

EUREKA.—Same date. One potato; seven pieces. Yield 15 pounds. Color of Early Rose. Long, oblong, flattish; average large.

CENTENNIAL.—Same date. One potato, small; six small pieces. Yield six pounds. All medium size, roundish, prominent eyes. Reddish color.

BEAUTY OF HEBRON.—Same date. One potato, small. Six small pieces. Yield 10 pounds.

BURBANK'S SEEDLING.—Same date. One potato, small; eight pieces. Yield seven pounds. Resembles Beauty of Hebron. All medium.

EXCELSIOR.—Same date. One potato, small; six pieces. Yield four pounds.

IMPROVED PEACHBLOW.—Same date. One potato, small; five pieces. Yield two pounds.

EXPERIMENTS WITH POTATOES.

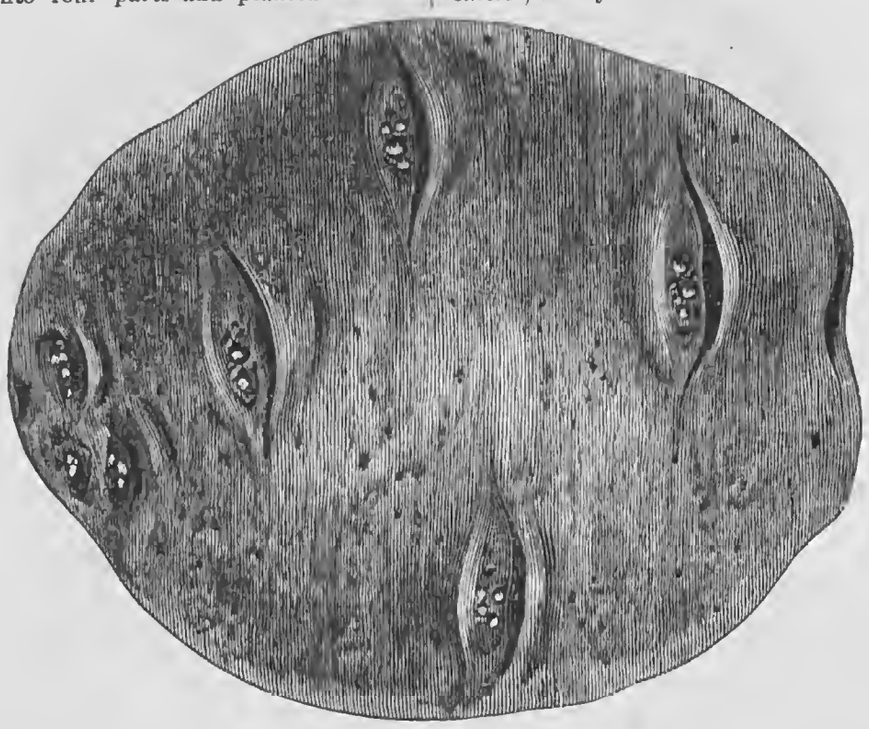
IN order to test the relative cropping qualities of the few varieties of potatoes I cultivated out of the multitude introduced to the public within the last few years, on the 5th of May I planted eight hills of each of the following kinds. The soil was a sandy clay loam—a clover sod. No manure was used. The tubers were cut to single eyes, and one eye planted in a hill. The care given all was the same in every particular. At digging time I selected four hills of each variety, with the following results when the respective yields were weighed:

Dunmore Seedling	13 lbs.
Genessee Co. King	26 "
Compton's Surprise	19 "
Early Rose	11 "
Late Rose	22 "
Tompkin's Surprise	10 "
Calico	9 "

Owing to drought during the past summer the yields were not large; but the figures show the relative productiveness of the various sorts.

I also made the following tests with and without fertilizers:—I planted eight hills of the same varieties under each condition, and out of these I selected and weighed the product of four. These weighed: — without fertilizer, nine pounds; with a tablespoonful of salt sprinkled at the roots of the vines after hilling up, 12 pounds; with a compost of one part of salt to five of unleached wood-ashes, 14 pounds; with one part of salt, five of unleached wood-ashes and three of decomposed heu manure, a handful of the mixture having been placed at the roots after hilling up, 22 pounds. I also used leaf-mold with splendid results.

Concerning the cutting of seed, I made the following trial in ten hills of the same varieties under each of the named conditions. 1st, I planted whole medium-sized tubers, one to a hill; 2d, medium-sized tubers cut into four parts, one piece to a hill; 3d, I cut to a single eye and planted one piece to a hill; 4, I cut one eye into four parts and planted one of



BLISS'S TRIUMPH.

these small sets to a hill. The result of each lot of ten hills was:—Whole tubers, 20 pounds; quarter tubers, 27 pounds; single eyes 38 pounds; one eye divided into four parts, 21 pounds.

A. CRAWFORD.

Lapeer Co., Mich.

POTATO NOTES.

D. S. MARVIN.

The "Rural" Seedling Potato.—(See p. 673.)

THE RURAL Potato Number is the appropriate place to make a record of a promising new seedling potato of mine. In order that a better judgment may be formed of its characteristics I mail herewith a typical tuber. I have named it the "Rural," for, like its namesake, it is in advance of others, the best for the farmer, well-bred, of high quality, healthful and refined. It is a seedling of Brownell's Beauty, three years from the seed-ball, and among six bushels—all there are of them—there isn't a single ill-shaped potato. The skin is white, rough and thick, so that worms can hardly affect the tubers which are of a medium and quite uniform size; the tops are small, healthy and expend all their energies in developing tubers. It will rank in quality with the Snowflake which it looks like; but it matures three or four weeks sooner and yields better. I should be pleased to have it tested on the RURAL Experimental Grounds, and perhaps the Conductors of the paper may like it well enough to distribute specimens of it among their subscribers after next season.

In comparison with it I have tested some others under the same conditions of soil, climate, manure, etc. Among these was the Beauty of Hebron which I find a valuable potato. The yields of it and of the "Rural" are about equal; but the latter matures much the earlier. The Beauty, however, has more large tubers, and more scraggy ones, and evidently belongs to the Rose family. The Garnet-Chili family, to which Brownell's Beauty belongs, I believe to be healthier and longer-lived as well as less subject to rot. The "Rural" keeps well and sprouts late in spring.

Planting Potatoes in the Fall.

The only other practical notes of value I have to record, relate to the success of some experiments I have now been carrying on, for a number of years, in planting potatoes in the fall, instead of in the spring. My attention was first directed to the subject from observing that volunteer hills from seed left in the ground, grew with greater vigor, matured earlier, and yielded better than those planted in spring. I have therefore found in practice upon a small scale, that there are really decided advantages in this new method. The work is done at a slack season when it can be well done, and the only objection is the danger of the seed freezing; but at the North where the snow lies deep, there is seldom any loss. The seed should be examined in spring, and if loss has occurred, the ground can be replanted, and will yield all the better for the fall fitting. A well drained, dry soil, must be selected, the tubers planted whole, and about four inches deep. I do not approve of planting very small, refuse potatoes; but a better crop can thus be secured than from large ones planted in the spring. The culture and other conditions and management are the same as in spring planting. It is a good practice to spread long manure over them in the fall and to harrow the ground early, before growth in spring, with a smoothing harrow.

Jefferson Co., N. Y.

POTATO CULTURE IN NORTHERN VERMONT.

T. H. HOSKINS, M. D.

IN the Vermont county of Orleans potatoes are, after butter, the money crop of the farmers. We all raise them, and many of us make them a specialty. The questions of how to prepare the land, how to prepare the seed for planting, how to plant and how to cultivate with an eye to the best results, are prominent topics among us. The following are the conclusions reached by, at any rate, quite a number of growers within my acquaintance. In

Preparing the Land

an effort is made to have a deep and mellow seed-bed. I have myself found the best success with potatoes after corn; the corn having been well dunged, the land fall-plowed after the corn is harvested, and again the last of April before planting time. But, unfortunately, not one-tenth as much land is here planted to corn as to potatoes, so that the great bulk of our potato crop is grown upon a reversed sod. The disc-harrow is an almost necessary tool for fitting this reversed sod for potatoes. Two methods of manuring are practiced: — the first is to spread the dung upon the sod in the fall, and not to turn it until spring; the other is to plow in the fall, dung in the spring and work fine with the Randall or La Dow harrow. In either case it is usual to use plaster, ashes, or superphosphate—the latter at the rate of about one barrel to the acre, applied in or near the hill. I think the best results follow fall manuring and spring plowing. In properly

Preparing the Seed,

it is generally cut, though a good many farmers drop in a hill one whole potato, just too small to be merchantable. My best results are uniformly from cut seed, and this planted as soon as convenient after cutting. Two eyes to a piece are enough. I never fail of a good stand this way; while in trying to "season the sets" by keeping awhile after they are cut, there is often a loss. Rolling the cut sets in plaster seems to at least do no harm. Two sets are dropped in a hill. In drills one is dropped every ten inches. As an almost universal rule,

Potato Planting

here is done in hills, so as to be cultivated both ways. A great deal of hand-hoeing is yet practiced, and is necessary where pains are not taken to have the hills at equal distances and in tolerably straight rows. Different implements are used for furrowing out and cross-marking. Share's horse-hoe, with the teeth removed and the wings closed, is the best tool I have ever used for the former. Chains attached to a pole work well for cross-marking. I have, myself, in planting potatoes after corn, found the best results from planting in drills. When the seed is covered four inches, there is no danger in cross-harrowing these drills with an ordinary harrow, just as the potatoes are breaking the ground. This, with two horse hoeings, makes clean tillage where the previous corn crop has been properly tended. Upon sod plantings the sloping-tooth harrows would be better for that purpose. Though it saves much work in weeding, and, indeed, renders hand culture unnecessary, this practice of harrowing potatoes comes very slowly into use. Hereabouts absolutely level

Culture

is not in all cases practicable with potatoes. But in drill cultivation, where the seed is put in from four to six inches deep, there is no need of hilling to secure the best results. Three-and-a-half feet is near enough for the rows in this way, and I prefer in the last cultivation to throw some dirt towards the vines to cover the small weeds, rather than to run the hoes deeply and closely enough to the row to eradicate them. Those who plant in hills, upon sod, usually hill up moderately at the last hoeing, but the hills are made low, broad and dishing.

The crops in this county are almost uniformly large. I think they will average nearly 200 bushels per acre. I know many large fields that go over 250, and occasional yields of 300 and even 400 bushels are reported. Early Rose is still the principal variety grown. Prices range from 25 to 40 cents; or, in exceptional years like the last, 50 and 60 cents. At the latter prices, they pay well; at the former, poorly; yet better now than cows, sheep or hops.

POTATOES IN CALIFORNIA.

LUTHER BURBANK.

IN California we have so many varieties of climate and soil that what thrives in one place may fail in another when the conditions appear to be about the same, yet the potato, like most robust-growing vegetables, may be grown from one end of the State to the other and from the mountains to the sea; but the best results in its culture are always obtained on a loose, sandy or loamy soil and in a cool climate. These conditions are found along the coast where potato culture and dairying are profitably carried on together. There the cool, moist trade winds and fogs from the Pacific, aid in retaining in the soil the moisture so necessary to the potato and in keeping the grass fresh and green for the dairy.

The markets of San Francisco are furnished with large quantities of early potatoes from the islands and banks of the Sacramento River and from the land around the city and half-moon bays, but the larger portion of the main crop comes from near Humboldt, Bodega, and Tomales Bays. Potatoes of excellent quality are also produced among the foot-hills of the Sierra Nevada and in various places in the central part of the State. In the warm, fertile valleys which produce the best corn and wheat, the yield of potatoes is usually small, though good crops of some of the early kinds may be raised if planted early enough to complete their growth between winter frosts and the hot, dry weather of June.

POTATO CULTURE here differs but little from that in the East. For the main crop the ground

CENTENNIAL.

is plowed rather deep soon after the winter rains are over. As the plowing proceeds, pieces of potato are dropped along every fourth furrow; the ground is afterwards thoroughly harrowed and, if still rough or lumpy, is rolled or "clod-mashed." A light harrowing as the vines are coming up, and one cultivating are usually about all the attention the crop receives until digging time.

THE DIGGING, which is always done with a long-handled shovel, is mostly performed by Chinamen who go from field to field pitching their tents near-by, where they board and lodge themselves until the season is over.

It is rather astonishing to see the dexterity and economy of muscle with which "John" inserts the shovel under a hill, usually exposing the whole lot at the first scoop. As soon as dug, the potatoes are stored in bulk in the field, or, more commonly, assorted and placed in gunny sacks and packed away in warehouses ready for shipment.

THE VARIETIES which do well here are not as numerous as they are east of the mountains. The "Bodega Red," a hardy, strong-growing kind, is the one almost universally planted for the main crop. It requires a longer season than any other potato grown. Of it there is a sub-variety (sport) having a white skin; the Red, however, is preferred by growers because, if exposed to sun and air, the injury is less apparent to the eye, although it is none the less apparent to the taste.

In the old potato-growing sections, both these sorts seem to be failing; perhaps from old age, but more probably from planting small ones from year to year and a lack of potash in the soil, which is sure to occur when land is long cultivated to potatoes. Most growers have found that a load or two of ashes or a few loads of well rotted straw-stack per acre, will double the yield. Both these fertilizers used to be thought worthless, but they are now carefully saved for this purpose.

Most of the new varieties have been tried here, yet only a few of them have been found profitable. Each locality has its favorite, the Indiana Premium and Late Rose are the best for *dry* land: Peerless, Snowflake, Jersey Peachblow and Burbank yield heavily on moist land. The potato beetle has not yet made its appearance in the State, or, if it has, no damage has been reported.

The late spring showers of this year gave an opportunity to plant later than usual; in many places fine fields may be seen growing, which were planted after removing a crop of hay or grain.

Early potatoes have been so low as hardly to pay for digging; prices are better now, but there is little prospect for any great improvement, for there is more land planted to potatoes here this year than ever before.

Sonoma Co., Cal.

FACTS ABOUT POTATOES.

HENRY STEWART.

Rotting.

THE most frequent cause of rotting of potatoes in pits or cellars is putting them away before they are thoroughly dry and well ripened. The safest way to manage them is to cover them from the sun while digging, as the heating is injurious. Then when well dried in the field, remove them to a dry, airy barn floor and scatter them on a straw bed a few inches thick and air them thoroughly. If the doors are opened for this purpose, the tubers must be kept from the light by a covering of straw. When it is dangerous to keep them longer in this way, they may be removed to the cellar and kept in barrels or bins with ventilating holes or spaces made in them. Potatoes thus cured will not sprout readily until the spring arrives.

The Feeding Value of Potatoes.

The actual money value of nitrogen and starch for feeding purposes has not been determined so accurately as that of the constituents of fertilizers. Now if we had such a guide, we could fix the price we could afford to give or take for any of our products. Unfortunately we are in the dark greatly in this respect. But from many actual tests and comparisons it is pretty well certain that a bushel of potatoes is worth 25 cents to feed, either to horses, cows or pigs. The 15 or 16 per cent of starch they contain is not the only valuable constituent: they have some albuminoids which are to be considered: 2½ pounds, of starch are worth one pound of fat or oil for feeding. Potatoes are then worth nearly as much per pound for the starch as any substance having six per cent of fat. The following comparison may not please a chemist but may be near enough for a farmer who uses the materials. Cotton seed cake meal contains 10 per cent of oil, at least that is all I have ever been able to get from several different samples by treating it with ether, and I have fed up some tons of it and tested every lot. But it has very little water, while potatoes have 75 per cent. If we equalize the two, then, as regards water and also equalize the starch with the oil in the above ratio, we have the following: viz.

	Fat.	Cost per lb. for fat or starch
Cotton seed meal dry	10 per ct.	2½ cent.
Potatoes dry	24 per ct. (equal to 60 per ct. starch.)	1⅔ "

This would tend to show that potatoes are a cheaper food at 25 cents a bushel, than cotton seed meal at $25 per ton, taking into account only oil in one and the starch in the other, and equalizing them. At this rate a good many potatoes might be fed profitably this year.

Cooking Potatoes.

Raw starch is only very partially digested in an animal's stomach, and the cells may be found in large numbers voided whole in the dung. But in cooking, the starch cells are burst open and the starch is rendered soluble and digestible. Therefore if it will pay to cook anything, it will pay to cook potatoes. When boiled and fed cold, they are excellent for horses; good for cows; and for pigs, boiled with corn ears, there is no more healthful or better fattening food than potatoes. Poultry are remarkably fond of them, and a few hot baked or boiled potatoes, right out of the oven or pot, will help to fill the egg basket about the holydays and later in the winter.

The Potato Rot.

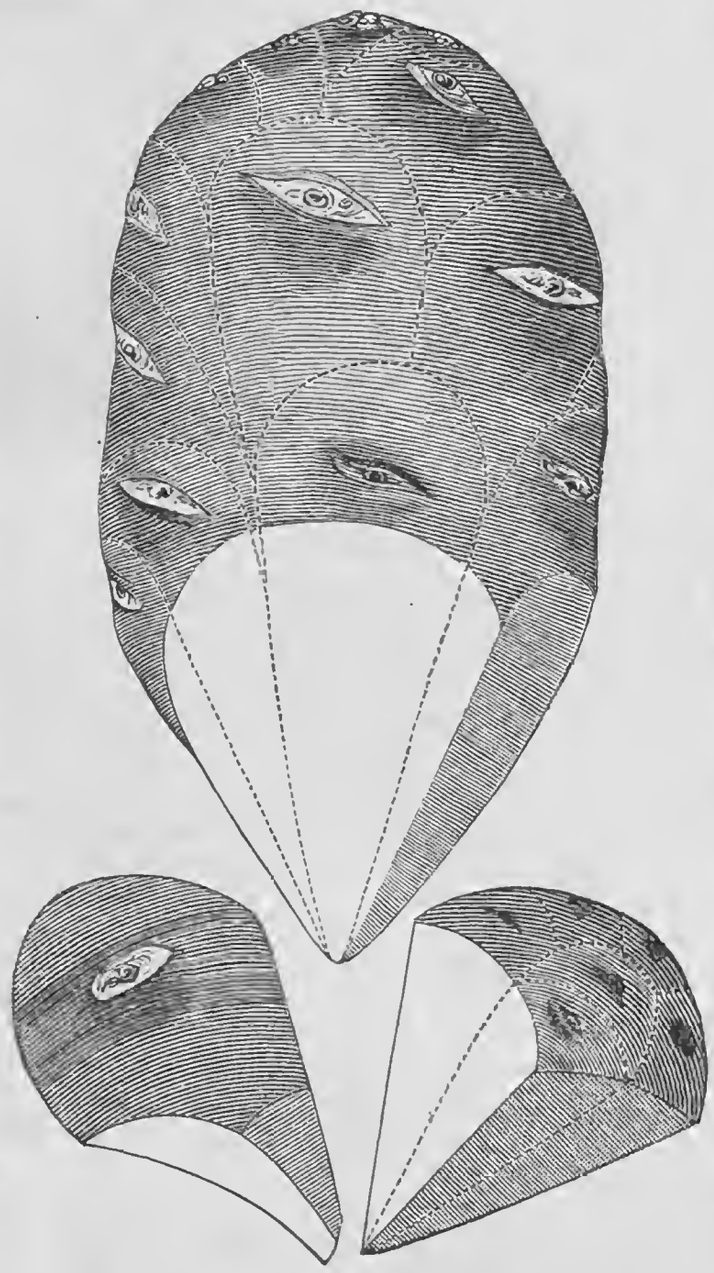
It is well-known now that the potato rot is caused by the growth of a parasitic fungus named by Prof. A. De Bary of Strausburg, *Phytophthora infestans*. The spores of this fungus finding a seeding place upon the plant, send their mycelium through the spidermis, or skin, of the leaves and stems and penetrate the substance of the plant and grow among its living tissues, pushing branches between the cells and often directly into the interior of them, thus completely destroying them and changing them to a dark-colored substance. It is needless to say a word about the distinctive character of this fungus and the rapidity with which it spreads over an extensive district. These are well understood. Our business is to find out how the rot may be prevented or avoided. Unfortunately the complete life-history of this fungus is not known. How or where the spores or seeds pass through the winter is at present a mystery. It is well known that they emerge from some quarter in the spring and that the planting of potatoes apparently sound but yet containing mycelium of the fungus, will infect the crop with the disease. The planting of tubers, then, from a crop that has been diseased in any portion, is to be avoided. The destruction of rotten potatoes or diseased stalks by burning is a useless trouble, as it is known that as soon as they decay, the parasite perishes with them. Lastly, the feeding of diseased potatoes is injurious, because the starch has been destroyed with the cells, and the substance of the tuber is at the best watery and innutritious. But so far as we know, all fungi spores are to be avoided as suspicious if not dangerous, and we cannot tell what seeds of disease may lurk in diseased food. It is always best to be safe.

THE "RURAL" potato, Mr. Marvin's Seedling, is shown above. We thank Mr. Marvin for the name and hope it may prosper.

HOW TO CUT TO A SINGLE EYE.

MR. B. K. Bliss furnishes us with the following plain directions for cutting potatoes to single eyes:—

Take the potato with the stem end—the place where it was joined to the vine—down. It will then be noticed that the eyes are arranged around the tuber in regular ascending rotation from the bottom to the top, similar to the thread of a corkserew, each eye being a little above and further around the side than the one next below it. Now take the potato in the left hand, with the stem end down, keeping it in a perpendicular position throughout the entire cutting. Take a sharp, thin-bladed knife and remove the first eye, by placing the knife about equally distant between it and the eye next in rotation above it, sloping it to the indenture left by the stem—see dotted lines in center cut—removing the flesh with it. When the first eye is removed, turn the potato around in the hand until the next eye above appears. Remove this one in the same manner, and keep on turning the potato, removing each eye as it appears in exact rotation, always sloping the knife to the stem. After three or four eyes are thus removed, the bottom part of the tuber will have a somewhat pyramidal form—see cut. It will be noticed that each eye removed has a similar form to that represented by the cut on the left, and has its proportionate share of the flesh attached.



CUTTING TO A SINGLE EYE.

After the first two eyes are removed, no further trouble will be found until the seed end is reached, and only a little extra care will be required to remove these closely-clustered eyes. The cut on the right represents what remains of the potato after all but the small eyes are removed, while the dotted lines show how to separate each of these. It will be noticed that the base retains the same form throughout, and by sloping the knife each time, and cutting down to the apex of this inverted pyramid—which is the center of the tuber—each eye will be supported by an equal amount of the flesh which is to start it into a strong, healthy growth. With common varieties, where seed is cheap, many will think this manner of cutting too troublesome. But if every farmer should save one-half his seed, as he easily could do—for it will only require two barrels of sets for an acre, instead of four, as are usually planted, the increase being equal—thousands of bushels would annually be saved, worth many thousands of dollars. But to those who wish to obtain a large increase from a small quantity of seed, as is necessary to those who buy the new and valuable varieties, this manner of cutting so that every eye is saved, will prove invaluable.

DESCRIPTION OF ENGRAVINGS

BURBANK'S SEEDLING.—White flesh, fine grain. Medium early. Large. Eyes not prominent. Very productive.

BEAUTY OF HEBRON.—See "Everywhere" reports in RURAL NEW-YORKER for the past six weeks.

WASHINGTON.—Origin unknown. Long and rather thin. Eyes shallow. Flesh-color. Very productive. Ripens after Early Rose.

ST. PATRICK.—A cross between Garnet-Chili and Early Rose. White skin, few and shallow eyes. Medium early. This was offered last spring for the first time.

LATE SNOWFLAKE.—A sport from the Early Snowflake and more productive.

MANHATTAN.—Like Compton's Surprise though more regular. Skin dark purple, with white splashes. Origin unknown. Flesh white. Very productive and a good keeper.

SUPERIOR.—A cross between Brownell's Beauty and White Peachblow. Very productive. Dark skin. Eyes small. Medium early.

CENTENNIAL.—Same parentage as Superior. Eyes few—not prominent. Skin dark; flesh white. Second early. Productive.

IMPROVED PEACHBLOW.—Cross between Jersey Peachblow and Excelsior. Said to be as good in quality as the Peachblow and more productive.

RUBY.—Parentage Early Rose and White Peachblow. Flesh white, fine-grained and of good flavor. Matures with the Early Rose and is said to be equally productive. Red skin.

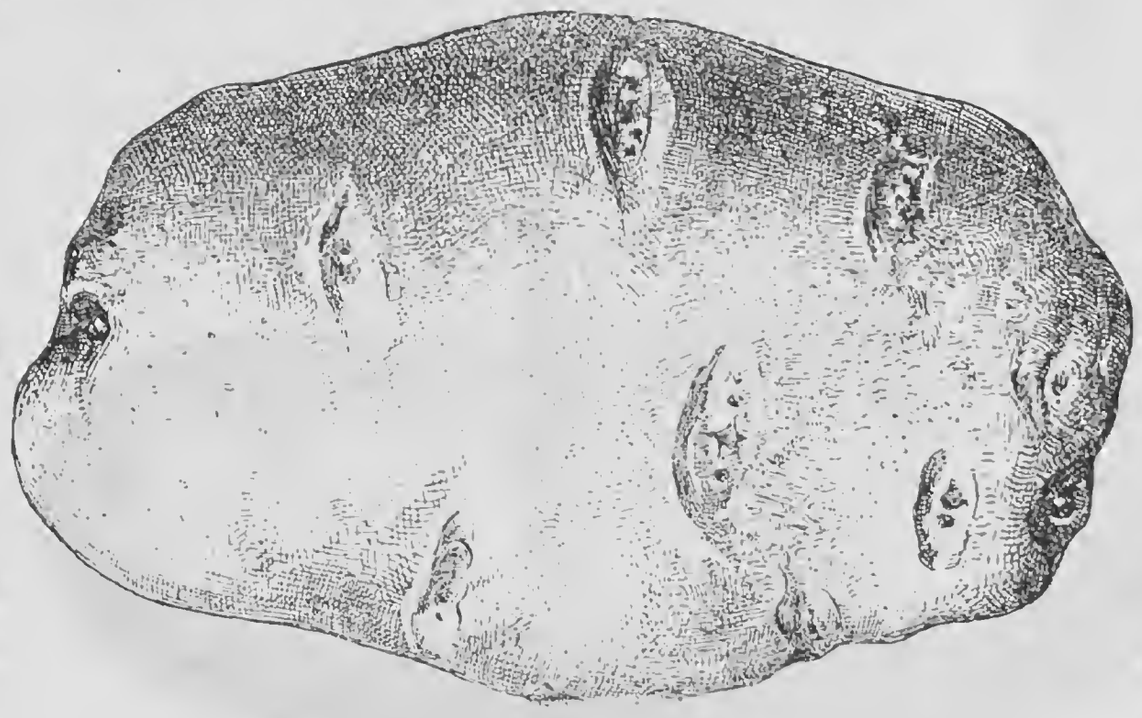
ALPHA.—This is, no doubt, the earliest potato in cultivation. Parentage, Early Rose and Sebec. White skin, slightly red about the eyes.

SNOWFLAKE.—Ripens about the same time as Early Rose. Eyes few and flat. Skin, white. Flesh, white. Fine keeper.

BROWNELL'S BEAUTY.—Eyes few and small; flesh white. Very productive.

EXTRA EARLY VERMONT.—One of the earliest of potatoes. Mr. Bliss mentions one of these raised by a Mr. McLeod, that weighed three pounds twelve ounces.

BLISS'S TRIUMPH.—Originated in Connecticut a few years ago. It is a cross between the Peerless and a seedling of Early Rose, and matures a few days in advance of the latter. Tubers of medium size, round and uniform in shape. Color, light-red; flesh of fine texture and excellent flavor.



THE "RURAL."

LAYERING POTATO TOPS.

As a ready and simple means of increasing the yield of potatoes, we may mention the layering of the tops. This is practiced in Europe by nearly all gardeners and by many farmers, and it is a wonder that it is not more commonly resorted to in this country, especially when it is desired to augment the yield of new and valuable varieties.

About the time when the first new tubers are large enough to be used at the table, the patch should be gone over for this operation. With a hoe remove the earth near the first hill in the row almost as deep as the roots of the plant, then bend the stems into the hole thus formed and cover them up with earth, giving the tips an upward turn, and let them reach four or five inches above ground. Proceed with the next hill in like manner, bending it over the first, and so on until they have all been layered. The stems thus buried will send out roots and set tubers the same as the original roots of the plant. We have seen a potato patch thus treated, give at least a one-half greater crop than a similar patch close by on which the tops were not layered.

"MR. HENDERSON will be glad to hear me say that I saw Pearl Millet, raised from his seed, from 10 to 13 feet high, and having a stem as thick as a lady's finger. To judge from what I saw of it, I should say half an acre of evergreen sweet corn would be worth, as green food for milch cows, and for stock generally, more than a whole acre of this exaggerated grass plant." The above is what "B. F. J." says in the Country Gentleman.

OUR POTATOES.

Our potato crop this season is not nearly so great as the yield reported from many places, but it is much better than that of last year. About four bushels were planted and forty or more harvested, not including those consumed by the family from the advent of "new potatoes," till digging-time. Last year our potato crop was poor, owing to rot. This year our folks resolved to try a change. Accordingly, in addition to such ground as was formerly planted, a side-hill piece of green-sward was broken up. No manure was used upon it; yet just there it was that our best, our fairest and smoothest potatoes were grown, both Snowflakes and Early Roses.

Some of the seed potatoes were cut in sections; the "seed ends" only of some were planted; some were planted whole; but our largest potatoes were grown from large potatoes quartered, lengthwise, one piece only being put in each hill.

As soon as the vines were up, the warfare with the potato beetles began. The pests were hand-picked thoroughly from the first, and every egg that could be found was destroyed; consequently the potatoes got a good start before sustaining any marked injury. So persistently were the beetles dealt with that but one crop was hatched, but, in spite of all our vigilance, that beetle crop was a prolific one. The warfare continued until the potato tops gave evidence of maturity, when we abandoned the field.

As our potatoes were planted early, they were necessarily dug out the last of August. The weather being fair, they were quickly dried off in good condition for storing, and were immediately put in bins in the cellar. Some predicted universal rot in consequence; but while on nearly all sides we hear of potatoes rotting in the ground, in some instances so badly as to render digging useless, we have as yet found but few rotten ones in the cellar; and we think that perhaps those might have been affected when dug, as we found a few rotten ones at that time. However, should our potatoes keep well, we shall ascribe it to having adopted the plan recommended this season in some of the newspapers, that of sprinkling slaked lime plentifully under and amongst the tubers in the bins at harvest time. It is said to absorb the moisture and prevent rot.

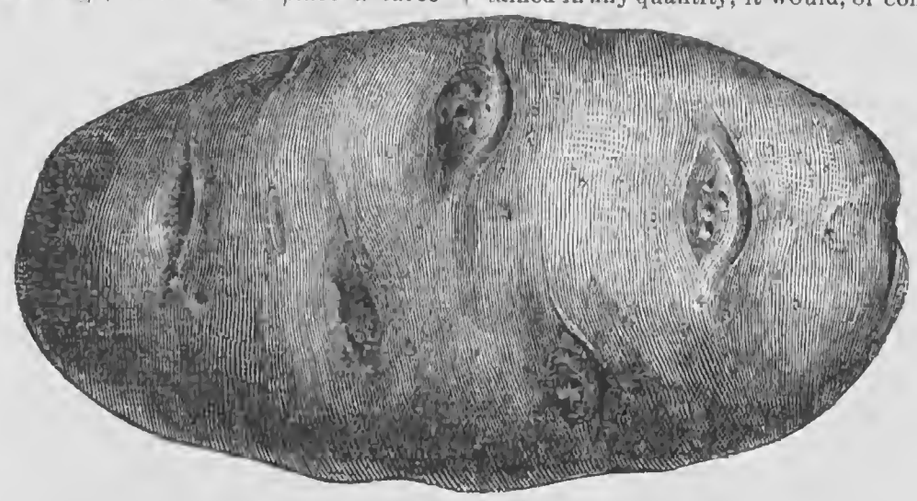
Our potatoes are mostly Snowflakes, a potato that I can heartily recommend; indeed, on all accounts, except that the Early Rose—our long-time favorite—may be a trifle earlier, justice compels me to place the Snowflake ahead of every variety with which I am acquainted. For cooking purposes, baking included, I have never seen its equal—with the Beauty of Hebron I am not acquainted. As a keeper, the Snowflake seems all that can be desired; in proof of which it may be stated that last spring, at time of planting—middle of May—it was not sprouted at all, while some of the Early Rose had sprouts six inches in length.

Year after year our potatoes have one peculiarity—they are more or less marred by rough, unsightly blotches, generally reaching below the surface. My experience is that these are not more liable to rot than those not so affected, the greatest disadvantage being that so much of the potato must be wasted in paring off the affected part. Some claim that it is a sort of blight or rust, others that the tubers have been eaten by angle-worms or by a small wire-worm, while others ascribe it to ashes, as in planting on newly cleared land it is sometimes found to have badly attacked those planted where log-heaps have been. But owners of old farms complain of the same thing in some degree; so, since our garden abounds in these rusty potatoes and we seldom find in it an angle-worm, neither theory seems to me to be correct. With us the land is new, having been mostly cleared from one to seven or eight years only—soil a heavy, black loam, in places gravelly.

MRS. J. A. VAN VALKENBURGH.
Ulster Co., N. Y.

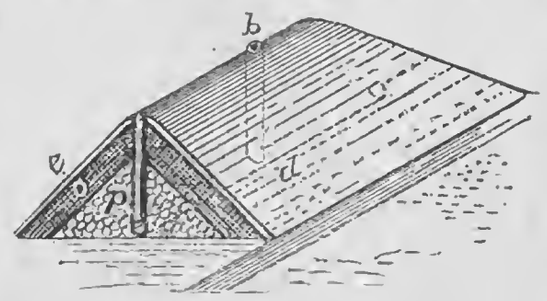
STORING POTATOES IN MOUNDS.

Every farmer raises more or less potatoes, at least enough to supply his own household. But it is not every farmer who has a frost-proof cellar in which to store the crop during winter, and those who have no such convenience must either sell out in the fall or store the crop out-of-doors. There are two methods of keeping potatoes out-of-doors: either in a pit in the ground, or in a mound above the ground. Of these we give preference to the the mound, because stored in that manner they are kept drier and are, therefore, less liable to rot; moreover, they are much more easily gotten out again in spring. Level a piece of ground nicely in some dry place and pile up the potatoes, as seen in the cut; then cover with a layer of straw ten inches or a foot in thickness, and, finally, put on five or six inches of earth. The more straw used, the less liable the potatoes are to freeze. Of earth alone it would require several feet in thickness to keep out the frost. Last winter the ground froze three feet deep in many places in the Northern States. But the straw absorbs the moisture from the pile and confines a layer of air that helps to keep out the frost. If the mound is large, it is well to place a three-



BURBANK'S SEEDLING.

inch tile in the bottom along the middle, and also upright ones at intervals of about six feet, as shown by the dotted lines b and d. These will cause a circulation of air and keep the potatoes dry. When cold comes, these openings must be stopped up and if necessary, another layer of straw and earth must be added. This is the way that potatoes



POTATO MOUND.

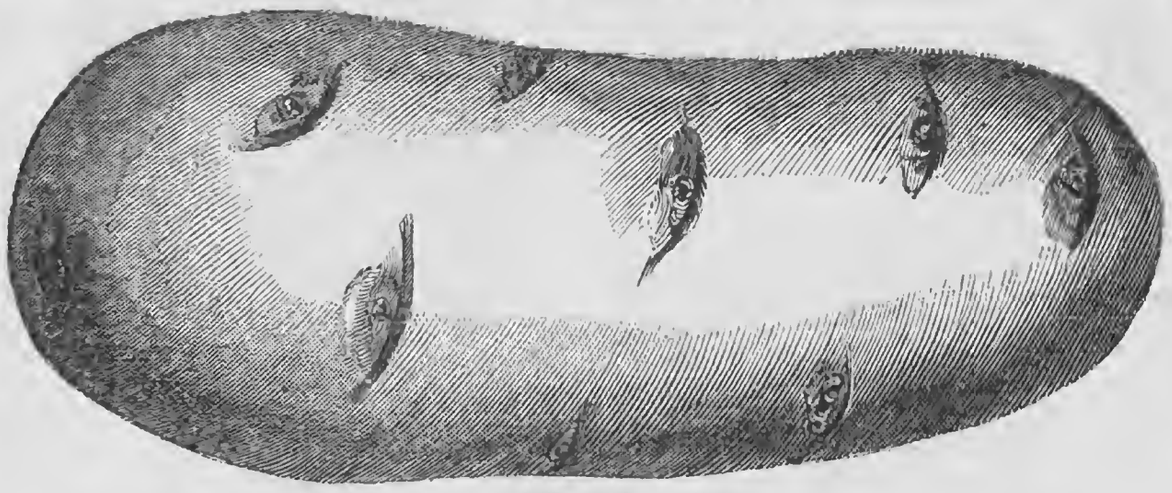
are stored in northern Europe and when the work has been properly done, we have never known them to suffer from cold or rot.

HOW POTATOES MAY BE RAISED FROM CUTTINGS.

In the beginning of March a hot-bed should be prepared in which to raise the cuttings. Any ordinary hot-bed will answer, and farmers who do not generally use hot-beds can prepare one as follows: Dig out a pit two feet deep and as large as needed. It should not be less, however, than four feet square in order that the hot-bed may maintain a moderate heat. Fill this three feet high from the bottom with hot horse manure mixed with straw or leaves, and well shaken together, so that the mass can heat equally throughout. Next, place a frame and sash on the heap and place a layer of soil four inches thick in the frame; the soil should be turned over once a day for two or three days till it is warmed through. Now divide the potatoes lengthwise and place the pieces, on top of the soil, with the cut side downward. They should not be watered until the wounds are healed, to avoid rotting. The sprouts will soon appear, and when these have reached a hight of three or four inches, they may be cut off an inch above the potato, and set in rows in the soil of the hot-bed, like other cuttings. They must be watered and will also need to be carefully shaded from the sun till they have struck roots. The potatoes will continue to send up sprouts, and all may be cut off and set in the ground in like manner. These cuttings will soon form independent plants, and when they have reached a hight of five or six inches, their tops may, in turn, be cut off and set as cuttings.

In May or as early as the ground is fit to work and the weather will permit, transfer all the young plants that may be ready to the open ground at distances precisely as the tubers are planted. This work is best done on a cloudy or rainy day, to avoid their wilting. Once well started, these plants will grow rapidly and should be treated like other potatoes. It is not advisable to make cuttings later than the beginning of July, as tubers from later cuttings cannot mature before frost.

This method of increase is to be recommended only for new and costly varieties; for older sorts of which tubers can be obtained in any quantity, it would, of course, not prove profitable. When, however, a variety costs from one to three dollars a pound, the desirability of a rapid increase from a small stock, becomes apparent. The quantity that in this way can be raised from a single potato may thus be estimated: A good-sized potato has about fifteen eyes, and from these, by repeated cuttings, may be obtained at least 50 plants. Each of these 50 plants may again yield three more, which, when planted out, will make altogether 200 hills; with the very small yield of a pound and a half from each hill, this would be 300 pounds, equal to about two barrels from one potato.



THE WASHINGTON.

POTATO NOTES.

Cost for Fertilizers of 100 Bushels of Potatoes.

	Pounds.	Price ₱ lb.	
Nitrogen	9.60	21½c	$2.05
Phosphoric acid	10.80	9c.	.97
Potash	33.60	7½c.	2.53
Cost for 100 bushels			$5.54

Potatoes Converted into Other Forms of Food.

Mr. Conrad Wilson says:—

How to convert potatoes, with the best economy and with the largest profit, into other forms of food, into milk, butter and meat, is a problem not yet fully solved. Various estimates have been made by practical men as to the effective value of the potato in the production of beef, mutton and milk; and though opinions still differ, the proportion of other food staples that potatoes are capable of yielding, is nearly indicated in the following statement:

A bushel of potatoes, when judiciously fed to animals of a good breed, will produce:

Of Beef	from 2 to 3	pounds.
Of Mutton	" 4 to 5	"
Of Pork	" 4 to 5	"
Of Milk	" 35 to 40	"
Of Butter	" 2 to 2½	"

It is, of course, not supposed that potatoes are fed *exclusively* in producing these results, but in a suitable combination with other kinds of feed.

If now we apply to this estimate the figures of the above table, we should discover

What an Acre of Potatoes Means,

when expressed in the form of other food staples. We shall find that it is measured

In Beef	by 400 to 500	pounds.
In Pork	by 800 to 1,000	"
In Mutton	by 800 to 1,000	"
In Milk	by 7,000 pounds, or over.	
In Bread	by 4,000	"
In Butter	by 400	"

Again, as the total potato product of this country is nearly certain to reach 200 million bushels as the average for the next decade, it will be seen that if the above figures are extended so as to meet this case of the total product, then it will be found that

The Annual Potato Crop of the United States

is equivalent

In Beef	to 400,000,000	pounds.
In Pork	to 800,000,000	"
In Mutton	to 800,000,000	"
In Milk	to 7,000,000,000	"
In Bread	to 4,000,000,000	"
In Butter	to 400,000,000	"

WHAT OTHERS SAY.

Seed Potatoes.—The crown-eyes of the potato are the only ones which yield vigorous plants, according to the London Ag. Gazette; the produce of the other eyes is feeble and unremunerative. If, therefore, potatoes are cut for seed, they should not, (as is usual) be cut in their length, by which the crown is divided and eyes of all kinds introduced into the seed, but they should be cut across, the half containing the crown-eyes planted, and the other half consumed as food. The very best results are obtained when large potatoes are taken, all eyes excepting those of the crown cut out, and the whole remaining potato planted. Stebler points out that the potato is an underground stem, and the crown-eyes the buds at the end of a branch. That the terminal buds of a branch are always far more vigorous than the lateral buds, any one may ascertain for himself by watching the growth of trees and shrubs at the present season of the year. The degeneration of varieties of potato is believed by some of the German writers to be largely due to repeated propagation from small potatoes and feeble buds.

Seed Potatoes.—More depends on getting good strong eyes than on their number, remarks W. J. F., in the Country Gentleman. A potato that has greened in the sun is always a good seed potato. We keep our seed potatoes too close and dark before planting. This tends to develop the eyes too rapidly, and this premature growth exhausts the vitality of the potato. He suspects that one reason why potato seed this year is inferior, is because the winter was so long and cold that potatoes had to be kept too dark and warm, to prevent freezing. A year ago an opposite season produced the same result. The warm winter of 1877-8 produced too much premature growth of potato eyes, which had to be rubbed out before planting, and a fresh start made from dormant buds.

(For continuation of Potatoes see page 678,)

FAIR NOTES.

The Battenkill Valley Industrial Society.

The above-named Society held their first Annual fair at Factory Point, Vt., Oct. 2d and 3d. Last year a move was made to see what interest the people in this vicinity would take in a town fair. The results were encouraging, and last winter a Society, comprising the north shire of Bennington Co., was organized, and the necessary steps taken to hold a fair. Two buildings were erected, one, 26x38 feet, which was used for Mechanic's Hall; another, 26x50 feet was used for Floral Hall. There is a good half-mile track on the grounds, which the directors spared no pains in putting in good order. The first day was fine and the grounds quite well attended. The second day there was the largest crowd the writer ever saw in Manchester. Membership tickets were sold for $1 apiece which secured admittance for the holder, wife and necessary help to care for stock, etc. Something like $800 were taken at the gates, which places the Society on a firm financial basis, and insures its future success. The show of horned cattle was good for a small place. A full-blooded Holstein bull that was brought into the place about three years ago, has influenced the herds to a considerable extent, and black calves and two year-olds predominate. Swine and sheep have not received so much attention. There is a marked improvement in horses in the past three years. The farmers are taking pride in being able to take a premium if it is small. The poultry department included some fine birds. The exhibit was certainly larger, than the writer has seen at the State fair held at Rutland, Vt. As this is not a manufacturing town, little could be expected in that line; but Mechanic's Hall was pretty well filled and showed some fine specimens of home skill in the trades. Floral Hall was crowded. It is useless to try to enumerate the articles worthy of mention, but I will say that this department was a complete success. E. L. T.

The Fair of the American Institute is now in progress at the Institute Hall, at 63d Street, this city. It is an artisans' fair of the most pronounced type, and is of but little direct interest to the tillers of the soil. Horticulture, however, is represented by a few good collections of fruit, of which the one shown by Ellwanger & Barry, of Rochester, is by far the largest and best. Mr. C. J. Copley, of Stapleton, Staten Island, exhibits a fine collection of grapes. Mr. C. has for some years past raised numerous seedling Grapes, some of which prove to be of first quality. Vegetables are present in small quantities; among others are some extra fine tomatoes. Cutflowers make a good display and fill the air with aroma.

A Disaster at a Fair.—A disaster occurred at the Adrian (Mich.) fair-grounds the other day by which 16 persons lost their lives and many more were hurt. About 2,000 people had assembled on the newly erected grand-stand to witness the races when the center of the structure gave way with a crash. The front part fell outward, and the back fell into the river, precipitating the mass of people among the ruins.

Everywhere.

RURAL SPECIAL REPORTS.

N. H., Reed's Ferry, Hillsborough Co., Oct. 1. The Blount corn received was planted on May 20. It grew three and four stalks from one seed, with from two to seven ears per stalk. It did not ripen before the frost. It was a curiosity for this place; but I shall have to throw up the sponge in regard to the premium. The Golden Rural tomatoes were very fine and bore an abundance of fruit; but the Acme is the "boss" tomato. We never had anything like it and consider it worth the price of the RURAL—which, by the way, we think is better than ever We don't think much of Pearl Millet. The Beauty of Hebron proved to be a fine potato. We raised from one small potato fifty-two tubers. The Voorhis watermelon did not get ripe. A part of the flower-seeds did not come up; others were very fine. Our crops in this section are very good. Potatoes are a large yield, and we have a good many apples for the odd year. F. F. W.

VT., Manchester Depot, Bennington Co., Oct. 3.—I think I can give as good report of the Beauty of Hebron potato as any of the RURAL subscribers. Through an oversight, I suppose, last spring I received from the RURAL two packages of seeds. In one package there were two potatoes; in the other one only. I gave one potato to an uncle who raised from it six pounds of tubers. The other two father planted on land that has been used for a garden for 15 years. He put manure in a trench and placed the seed about 10 inches apart, one eye in a hill. He had 18 eyes; the result was 58 pounds of tubers. Of these 15 of the largest weighed 15 pounds; of the next size, 40 weighed 23 pounds. There were 97 suitable for table use and 35 small ones, making 132 in all. My uncle raised from potatoes of the "Burbank Seedling" variety a full barrel of tubers on a plot of ground eight by forty-five feet, which is a very good crop. If any RURAL subscriber can beat this for a potato story, I should like to hear from him. The other seeds sent I shared with my neighbors, and they have given satisfactory results. The Millet, however, is of small growth; it is too far north here, I think, for its successful cultivation. The potato crop has been the heaviest that has been known here for years. They are worth 30 cents per bushel; oats, 35 cents; hay, $10 per ton delivered. Corn is about an average crop. E. L. T.

MASS., Blackstone, Worcester Co., Oct. 1.—I planted my Blount corn on the 26th of May, and had it cut on the 26th of September. I planted one kernel in a hill, three feet apart in the rows and about 3½ feet between the hills. The ears average four on a stalk; the stalks average 13 feet in hight. I do not think the season is long enough for it here. I shall have seed enough to try it again next year. Two hills of my corn I had carried to the cattle show; there were 19 ears on the two hills. Pearl Millet would be a good soiling plant if the season were long enough. I planted mine the same as I did the corn, on the same land and the same day. It did not grow much until the middle of June. Some of it was pulled up, it looked so much like barn-grass; but by the first of July it was as much as 18 inches across, with a very thick bottom. The tallest of mine was over seven feet high, with a blossom spike over a foot long. O. W. F.

N. Y., Bloomville, Delaware Co., Sept. 24.—The weather here is very dry at present, although we have had plenty of rain during the summer. The crops have been very abundant. The Beauty of Hebron potato is very fine; I raised from the potato you sent me, which weighed two ounces and had eight eyes, 30 pounds and 11 ounces of very large potatoes. The Defiance wheat was nearly a failure; it rusted badly and was very much shriveled. Pearl Millet did not any of it grow. T. R.

N. Y., Belfast, Allegany Co., Oct. 4.—I cut the Beauty of Hebron seed potato into 13 pieces, each having a single eye, and planted one piece in a hill. From these I have obtained 32½ pounds of large tubers, the largest weighing 1½ pound. The Golden Rural tomato is the best I ever had. H. C. E.

PA., Monroeville, Alleghany Co., Oct. 5.—The Beauty of Hebron potato did splendidly. The Acme tomato was not a whit behind it in well-doing, and we like it greatly. The Pearl Millet, however, is rather late and I fear much of it will not mature seed. Some of the flower-seeds didn't come up; but others did very well. N. B.

OHIO, Mt. Vernon, Knox Co., Oct. 2.—I grow from eight to ten acres of potatoes each year, and find good crops can be grown almost every season with a little care in the selection of ground on which to plant them. For this purpose, I prefer a clover sod and let the clover grow as long as I dare, say, to the 15th of May in this section. I then turn it under and plant the potatoes immediately in drills, two feet four inches apart for varieties with medium tops and two feet six inches for those sorts that spread large tops, putting the seed, cut to two eyes to a piece, 12 inches apart in rows. So soon as the vines make their appearance, I harrow with a light harrow and keep the ground free from weeds by "working" until just as they begin to blossom, when I hill them up with a single-shovel plow with wings attached made to expand as may be needed.

I prefer upland to bottom for potatoes. Take any good free soil and mark out drills, say, 4½ inches deep and put in them, say, two inches of well-rotted manure, or, what is better, scrapings from an old chip pile, or rotted pomace from a cider mill. Cover the potatoes slightly and till the ground well, and you are sure of a crop, bugs or no bugs. This season my crop per acre was:

Brownell's Beauty	150	bushels
Burbank's Seedling	200	"
Early Vermont	125	"
Alpha	140	"
Dunmore	150	"

This week I have been digging Burbank's Seedlings that weighed from one pound ten ounces to two pounds thirteen and a half ounces each. The potato of the latter weight I have now on exhibtion and it alone would make a dinner for any man, with some to spare. Price of potatoes here is:—40c. per bushel with indications of reaching 50c. soon. M. W.

KANSAS, Edgerton, Johnson Co., Oct. 1st.—A few weeks ago I thought my Blount's corn would surely take the prize, and so thought some of my neighbors who saw it growing; but since reading in the RURAL some of the reports of corn 16 feet high and stalks 10 inches in circumference, averaging 10 and 12 ears to the stalk, I think my chances for a premium exceedingly slim; in fact my visions of a prize have almost entirely vanished. I planted 123 grains in 100 hills, three feet each way, on April 29; but as some of the grains were poor, they did not all grow. Others died after they came up, so that by transplanting where there were two in a hill, I barely succeeded in getting 100 stalks to grow in as many hills. I had some stalks 14 feet high; but I don't think they would average that. I had one stalk that had 20 ears or rather nubbins. There, now, who can beat that? A great many grains produced three good-sized stalks, and no stalk had less than three ears, while some had nine. I cut up my corn Sept. 1st, and it made the tallest and biggest stook of corn I ever saw. My Pearl Millet is all ripe, many of the stalks measuring 11½ feet high, with heads fully 12 and 14 inches long. I planted my Beauty of Hebron together with a package sent me by Gen. Le Duc; in all about two quarts, one eye in a place, and 18 inches apart in the row, on the same day, and side by side with Early Rose. I have dug them and have six heaping bushels of as nice potatoes as ever grew. I give the measurement of five of them, 5½x16, 10x15, 9½x17, 9½x18, 10½x13½. They beat the Rose badly for earliness, size, and productiveness, and I think they are of better flavor. I shall plant them altogether next year. Defiance wheat was badly shriveled, on account of rust. Our Acme tomatoes were the finest we ever raised. They were admired by all who saw them. Our flower and shrub seeds did not do so well on account of drought. Altogether what I have raised from seed sent me by the RURAL, is worth more than five times the price of the paper. A. B. D.

KANSAS, El Dorado, Butler Co., Sept. 30, 1870.—In the cultivation of potatoes in Kansas we find it quite difficult to secure a good crop of the late varieties. As regards Peachblow, Early Rose, Snowflake, Early Vermont and Early Ohio, all do well if planted very early in the spring, as they mature before the drought commences; but to obtain a good crop of late potatoes we have to give at least from one to two feet of straw mulch which is generally put on as soon as the potatoes are planted. As it is not customary to manure our land here for any crop at present, I cannot say what would be the result, if we planted as we used to do in the East. By the following plan, I never failed of a good crop:—Plow the ground deep, as early in the spring as possible; then drag it smooth. When ready to plant, mark out with a common plow good deep furrows three and a half feet apart. In the furrows place well rotted cow manure, and drop the potatoes on top; then follow with five parts of land plaster and one of salt, mixed; cover with a small plow and drag smooth, and keep the drag going until the potatoes are well up. Then cultivate in the usual way, and you can be sure of a good crop of nice potatoes even in a dry season. Perhaps some may say "too much trouble!" but when the time comes for digging there is no more work in digging a good crop than a poor one. I call it up-hill business to dig an acre for 50 bushels when you can, by this method, get 200 or more. J. J. B.

MO., Benton City, Audrain Co., Oct., 4.—Benton City is on the St. Louis, Kansas City and Northern railroad, one hundred miles from St. Louis and seven miles from Mexico, our county seat, which has three railroads and a population of about 6000. Good unimproved land, prairie and timber, is worth $4 to $8 and improved land, $8 to 16 per acre. Wheat is yielding 15 to 30, and corn, 30 to 60 bushels per acre. We have good soil, markets, timber, water and stock range and also good schools, good society and a mild and healthful climate, but the country needs more good farmers and mechanics. I have been here several years and I find I can do better on a farm here than in any of the several States in which I have formerly lived. Recently there has been considerable inquiry for land and farms here, by parties from the North and East, who after thorough investigation, find that they can do much better here than farther west. Many of the bargains have been taken, but still there is plenty of room. To all who wish to get good homes and cheap homes, I would say:—"Come now while you can select; come and help us to make Missouri one of the best States in the Union!" B. F. W

S. C., Aiken, Aiken Co., Oct. 4.—The crops of this section of South Carolina may be classed as a fair average. At one time it was feared that the long drought in June would have cut them down much below the average, but we are thankful to be able to say such fears have not been realized, and the farmers generally are contented with their prospects. One thing in their favor is that they are less in debt than in former years.

There is comparatively little small grain planted in this section in consequence of the expense of cutting and harvesting it by hand, and hauling it to the water-power mills to be trashed. It appears to me if the patentees and manufacturers of machines and implements took the trouble to bring there inventions to notice in the South that their is, in that line, a fine field open for business. Now that the South is recuperating from the disastrous effects of the war, and the farmers are getting out of debt, they are beginning to make improvements and adopt new methods of culture. As illustrating one of our needs, most of the lumber is worked by hand. In this county, with a population of 25,000, I know of only one planing mill, while there are probably a hundred or more saw-mills. If wood-working machinery were exhibited and explanations of the advantages made personally, instead of by circulars, many might be induced to add such machinery to their mills, as water power is abundant. The fairs which take place throughout the South, generally in the fall, would offer an excellent chance to show the machinery in practical operation. The State Fair this year takes place Nov. 11, in Charleston, and power will be furnished to those desirous of exhibiting machinery in operation. I trust some of the enterprising men who advertise in the RURAL will give this matter more than a passing thought, for it will not only be advantageous to them, but it would aid in diversifying the products of this section. The South, heretofore, has paid comparatively little attention to manufactures or to inventing machinery for the saving of manual labor, consequently a favorable opportunity is afforded for the introduction of implements adapted to the peculiar needs of the people. Machinery for making brooms, turpentine and other barrels, rice and kaoline tierces, wooden-ware and a thousand and one like conveniences, could be advantageously introduced. There are very few tanneries here, while large quantities of hides are shipped North. Near this town there are immense beds of the finest kaoline and clays suitable for pottery works, but no one thinks of utilizing them, other than by drying the material, packing it in tierces and shipping it abroad. A party in middle Georgia informed the writer that he had made $600 last spring by the use of a portable thrashing machine. As indicating the change which is taking place, the recent report on cotton manufactures states that the increased consumption of cotton last year by the Southern mills, was 26 per cent. while that by the Northern mills, was only two per cent. The assessed value of land in this section is about $2 an acre, although much is sold for a less price; that lying near railroads and towns, as a matter of course, commands a better price.

To those desirous of changing their location, the midland region of North and South Carolina and Georgia offers many advantages, especially to those whose health or the health of whose families is delicate. The first visitors of the season are arriving. As is well known, Aiken is quite a favorite resort for invalids in the winter, thousands having been benefited by a short residence here. Heretofore, one of the drawbacks has been the high price charged for board, but now, as prices of other goods have fallen, so has the price of board. The competition in this line is strong, and the housekeepers are anxious to get boarders early in the fall, so that now one by looking around, can find board at the private houses at very reasonable prices. Many who are out of health, make a mistake by deferring coming South till late in the winter or early spring months, when it would be far better for them to come and enjoy the magnificent weather of the fall months when they can remain with pleasure out-of-doors all the time. E. G. C. W.

The Querist.

ANSWERS TO CORRESPONDENTS.

Care of Gold Fish.

O. A. H., Stamford, Conn., asks for information concerning the care of gold-fish.

ANS.—We referred the question to a lady friend who said she had some experience with them, and she answered that they nearly always died after having been confined in a basin in the parlor for a month or so. We have, however, had better success; some that were kept in a tank in the greenhouse lived almost three years. If kept in a small basin, fresh water every day is absolutely necessary, and the water should not be taken from a well but from a stream or clear pond. Large fishes also need to be fed on crumbs of bread and very small pieces of meat, if there is nothing in the water on which they can feed. Attention should also be given to the temperature of the water; for, though they can bear great variations of heat and cold, a constant temperature of about 60 degrees seems to be most favorable to their well-being.

Weighing Corn for Premiums.

O. W. F., Blackstone, Mass., asks: 1, how long a time must elapse after the Blount corn stalks are cut until they can be weighed; 2 how long after the corn is husked until the bushels can be weighed; 3, whether Hollyhock and Rose of Sharon will winter-kill in that latitude—the boundary line between Mass and R. I.

ANS.—1 and 2. We have not specified the time in either case, and only stipulate that both stalks and corn must be dry before they are weighed. Under ordinary circumstances we would consider four weeks a sufficient lapse of time. However, if our friend wishes to compete for the book premiums offered by the Farmers' Publishing Company, the corn must be weighed three months after harvest, as stated on the announcement of the premium 3. They are hardy.

Miscellaneous.

F. McC., Wenona, Ill., 1. has some house plants, and she has been wondering how she should manage to keep them from freezing this winter. She has heard that to wrap a newspaper around them affords a good protection; she wants advice. 2. Some time since she found that the roots of some of her Geraniums were affected with a small white worm, and the soil of plants thus affected did not dry out, she wants to know the reason.

ANS.—1. Any ingenious housewife who loves her plants is far better able to devise means of protection than we are. She knows just where is the best place to put them at night and can take advantage of many circumstances we know nothing about. Newspapers are good to wrap around plants as a protection against a light frost. 2. The soil in those pots did not dry out because the plants were sick and did not absorb and evaporate the moisture. In healthy plants the roots absorb moisture and the leaves evaporate it, which process was in this case at a stand-still.

K. H., Bolington, Va., sends an insect which he saw sting a poplar post; thinking it might be injurious, he asks for its name and habits.

ANS.—This is the common horntail or Tremex Columba. It belongs to the lowest family of the Hymenoptera. By use of its ovipositor—the stiff, horn-like organ which gives it its common name—it bores into Maple, Beech, Bass-wood, Elm, Pear, Button-wood and Poplar, and lays its eggs in the hole which it forms. It is often found fast to the wood, being unable to withdraw its ovipositor. The larva feeds on the wood, but the insects are too rare to do much or any harm. The horn tail is 1½ inch long, or 1½ inch to the end of the so-called horn. The colors are black, brown and yellow.

G. H. T., Granville, Mass., asks, 1. whether the rubber boots advertised in the Fair No. of the RURAL, are really what is claimed for them: 2, some recipe for extracting grease, dirt and paint from clothing.

ANS.—1. Yes, they are just what is claimed for them; otherwise we should not have admitted the advertisement. 2. A deodorized preparation of benzine is good for this purpose; so are some French chalks and patent soaps. The next druggist can either supply them directly or procure them for a purchaser.

W. T. T., Salisbury, N. C., asks where can he get cans and other fixtures for carrying on a retail milk dairy.

ANS.—Dairy Supply Co., 261 Greenwich St., N. Y., or Jones & Faulkner, Utica, N. Y.—[N.B. Many questions and answers are crowded out of this number.—EDS.]

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, OCT. 18, 1879.

FAIRS.

At the present time, and at this season each year, the average farmer is regular in his attendance at fairs. State, local and county fairs are now in full blast, and a glance at the Rural's list is a satisfactory proof that the article is supplied in quantities equal to all demands. As it is thus conclusively shown that there are fairs enough to go round, it may be worth our while to ask the question, "What do they amount to as a means of enlightening the classes for whom they are especially designed?"

In theory a fair is the least expensive and most convenient means of assembling all that is best in live-stock, farm products, machinery and horticultural novelties for purposes of study, comparison and sale, and the several exhibits are presumed to be so arranged and disposed that these objects may be easily attained. A fair is nothing if not educational in its tendencies, at least. As a matter of fact, managers of agricultural societies seem to lose sight entirely of fundamental principles, and conduct their shows just as would any shrewd amusement-monger whose only aim is to make the gate-money the index of success.

It looks as if there was no confidence placed in the idea that the farmers take an interest in the profession to which they are wedded; hence horse-trots, tournaments, and other heterogeneous displays are interjected into fairs, taking oft-times the most prominent part. In short, a fair without the racing features is considered by many as the play of Hamlet would be without the Prince. No more successful policy could be adopted to bring the system into disrepute.

As at present planned, the agricultural fair is quite unsatisfactory to the student of agriculture. There seems to be a lack of system and ideas among the managers. Little heed is paid to compactness and coherence of arrangement. The live-stock is often stalled without such an arrangement in classes as would enable a visitor to take a comprehensive view, and the animals, when judged, are led into a prize-ring in a hurly-burly fashion that is confusion worse confounded. After the awards are made, the inquisitive farmer may straggle about the pens and gaze at some blanketed creature, adorned with a blue ribbon, and get what information it is possible to extract from some ignorant, indifferent attendant. If he is interested in Jerseys, for example, he will probably find them sandwiched between other breeds, according to the convenience of the exhibitor or the whim of the superintendent. After having been trotted out for the delectation of the judges, the horses are as inaccessible for purposes of study and comparison as if they were precious jewels done up in cotton.

The horticultural display is arranged to suit the convenience of exhibitors, and apples, grapes, etc., are as inextricably mixed as if they were different varieties of the same species. It would seem idle to add that this is all wrong, and that such an arrangement defeats, in a measure, the purpose which brought them together. There should be intelligent method. Things of the same kind should be grouped together, no matter if, in doing so, one man's entries are placed in fifty different places. There should be more compactness. Entry cards should state clearly the class, name and particulars of the exhibit. It is not enough to affix a number to a stall, for instance, and leave a wide field for speculation as to whether the thing shown is a pyramid or a pig. Everybody cannot afford to procure catalogues, and even when purchased, they are no great aid, as it is unusual for more than two-thirds the entries to be actually represented, while many exhibitors are on hand who have not entered at all. Prize-takers in every class should be conspicuously shown, and all pains taken to explain their merits. If these things were done, a fair would fulfill its mission and our question receive a complete answer. The matter, after all, is considerably controlled by farmers themselves; let us see, then, if next year we cannot chronicle an improvement. In the meantime our readers are, at the present time invited to post themselves upon Potatoes.

UTILITY OF A SEED-CONTROLLING STATION.

A Seed-Controlling Station has for several years been in operation in Denmark. The object of this institution is to ascertain the quality of the seeds sent in for analysis as to their purity, germinating power, percentage of weeds, percentage of unsound grains, etc., and thus to protect farmers, gardeners and others, who use seed, from being imposed upon by unscrupulous dealers, and to advise them as to the use of seeds they may already have on hand. The station has done some excellent work and given much satisfaction. However, in a late number of "Ugeskrift for Landmænd" a prominent farmer, in a somewhat striking manner, proves that either the system adapted for analysis is at fault, or the work is carelessly conducted. He selected samples of clover seed, red and white, filling several bags with the same kinds and from the same bins respectively, then sealed up the bags, stamped them with different stamps and sent them by different routes to the station. Not dreaming that the samples were from the same lot of seeds, or even from the same man, the officials found an undue discrepancy in the quality of the seeds, which ought to have been alike, and the writer therefore argues that there is something wrong.

Whatever may be at fault in this case, the advantages of a Seed-Controlling Station, when properly conducted, are easily seen. The standard of quality of both farm and garden seeds would immediately be raised, and by virtue of the strong competition already existing, every seedsman would be obliged to deal in nothing but the best seeds or else retire from the business. The constant liability to analysis would do away with the many adulterations now practised of seed sold on a large scale. The trade in seeds, especially in those that are raised largely as farm crops, constitutes no little item of commerce. Statistics show that during the three months from the first of January to the 31st of March, 1879, our exports of seeds, mainly clover and timothy, amounted to no less than $1,005,206, which is even less than for the corresponding period of last year, while our imports of seeds for the same three months of the current year, amounted to $89,295, and those of last year to $102,151. The price that the cultivators must pay for these imported seeds when retailed to them, will run up to at least twice or perhaps three times the above values.

We urge that a Seed-Controlling Station be established by the Agricultural Department at Washington. The expense to be incurred would be small beyond the salaries of competent and trustworthy men to do the work, while the benefit it would confer upon our farmers and planters, and upon this branch of our commerce, would be inestimable.

PEARL (CAT-TAIL) MILLET.

Last year we raised a few rows of this now much-talked-of forage plant at the "Rural Grounds," Bergen Co., N. J. The soil is there a clayey loam. As may be seen by reference to this journal of November 2d, 1878, our best plant grew to the hight of ten feet one inch. There were 56 stalks, and the weight of the entire plant was 42½ pounds. The soil was not highly manured, nor was any special care given to the plants. Taking such a plant as our unit of measure, the yield per acre would have proven something prodigious. But such estimates are usually very deceptive, and we took occasion (as reference to the above number will show) to guard our readers against extravagant expectations. Some time after Mr. Peter Henderson reported *his* yield under high cultivation. It was so much greater than ours that we remarked upon it and he replied that in fact his yield was greater than he had stated. This year we planted Pearl Millet in considerable quantities at our farm. Here, unlike the "Rural Grounds," the soil is a sandy, sometimes gravelly loam, and the situation within three miles of the ocean. We planted it in four different parts of the farm. One was manured with stable and barnyard manure; another with liquid barn-yard manure; the third with superphosphate and wood-ashes, and the fourth with stable manure and superphosphate. Strange to say, there was not a plant that attained the hight of six feet, and the average hight was less than five. Strange again, there was no difference in the growth as between the several plots. The plants were all alike, dwarf and slender, unmindful whether heavily manured or not manured at all; whether manured with ashes, superphosphate, stable or barnyard manure, one or all. Those who have read our voluminous "Everywhere" reports will not be surprised at the above report from our farm. In a majority of instances our correspondents have met with failure in this their first trial of Pearl Millet, while a small minority have met with gratifying success. The upshot of it all is that while its cultivation may in a few places in the North be profitably continued, there need no longer be any doubt entertained as to whether Pearl Millet will ever meet the grand expectations which the results of a few garden trials have excited.

Mr. B. K. Bliss, at our request, sent to the Rural Farm one peck (15 lbs.) of Late Snowflake potatoes. These were cut to single eyes and two pieces were planted six inches apart in each hill. They were planted not until June 18. It is a matter of guess-work whether, if nothing had occurred to interfere with their growth, they would have matured. Just as the tubers were beginning to form, however, a terrible rain-storm occurred which for several hours inundated the field in which they were growing, killing late pea and cucumber vines and injuring many other vegetables cultivated in the same field. To what extent the Late Snowflakes were injured we can not say. The crop was dug Oct. 1st, and, although most of them were very small, the *average* was at least 60 potatoes to a hill. In one hill there were 80, counting every one even if no larger than a pea. We have since cooked some of them and a whiter, brighter, mealier potato we have never seen or tasted.

BREVITIES.

There is probably no potato that is a better keeper than Snowflake.

Two sound eyes to a hill are sufficient. As many potatoes can be raised therefrom as if whole potatoes are used.

The best potatoes, grown under favorable circumstances, contain 20 per cent. of starch; poor ones, about 10 per cent.

Taking this number all-in-all, it will be seen that we have in no wise exaggerated the yield, earliness or quality of the Beauty of Hebron sent free to our subscribers.

We take the liberty to regard the use of bags as a covering for bunches of grapes, thereby protecting them from insects and birds, as one of the vagaries of enthusiastic horticulturists.

We are much indebted to the following persons for the use of many of the engravings of potatoes used in this number of the Rural New-Yorker, viz: B. K. Bliss & Sons, J. M. Thorburn & Co., James J. H. Gregory, Peter Henderson.

A cellar that is cool, dry and dark, and yet well ventilated, is the best place for preserving potatoes in large quantities. When smaller quantities are to be preserved there is nothing like dry sand. The same may be said of fruits and roots of all sorts.

Farmers do not attach enough importance to the preservation of the *leaves* of the potato plant. They too often wait for the potato beetle to destroy a part of the leaves before Paris-green is applied. A full crop of tubers is *impossible* without perfect leaves.

Our special correspondent at the Illinois State Fair says that the horse premiums went directly where they should go—into the pockets of men who breed for *useful* rather than for *sporting* purposes. He attributes the high order of visitors and the spirit of candid inquiry that were everywhere seen and manifested to the absence of the trotting horse.

The imports of England for the first four weeks of the new harvest exceeded 7,200,000 cwts. of wheat and flour against 4,400,000 cwts. in 1878; 4,100,000 cwts. in 1877 and 3,400,000 cwts, in 1876. It is estimated that the sales of foreign wheat during that time have been seven times greater than sales of home-grown wheat.

A dozen years ago British consumers required a trifle less than two pounds of imported ham and bacon per head; now they require a trifle over twelve and a half pounds for every man, woman and child in the country. As we said editorially the other day, our foreign market for stock products is growing apace.

At the International Patato Show at the Crystal Palace, the American potatoes held a prominent place. In the great open class of 24 varieties, the first prize was awarded to a collection having nine varieties of those sent out by B. K. Bliss & Sons, of this city. Another class of twelve varieties of which six were American, took second premium.

In all accounts of fairs lately held in nearly every part of the country, there are few things more remarkable than the rapid propagation of Jersey cattle noted by the prominent positions they hold at the different exhibitions. A few years back, a Jersey was seldom seen at any of the fairs, except here and there in the East, whereas, now according to nearly all reports, they number as many as any other breed, and often more.

Autumn is the best time to cleanse fruit trees, and indeed all plants, from scales and other insects. Now the fruit trees can be handled with less liability of breaking buds and spurs than in the spring after the buds have begun to swell, and the work will be as effective now as then. Use strong soapsuds of whale-oil soap. Apply it with a stiff brush; and do not confine the washing to the trunk, but go over all the small branches and everywhere on the tree where scales are found.

A third batch of prospecting English farmers have arrived in Canada to "spy out" the suitability of the land for the settlement of many intending agricultural emigrants. It matters little ultimately to this country whether these men settle here or in the Dominion; for the immigration across the border from our neighborland bears an annual ratio to the number of new settlers there: the more newcomers enter the Dominion, the heavier the emigration thence to the United States.

And still they come:—Another batch of 267 farmers with their wives and families left Liverpool for Texas last Thursday. For years Texas has directed considerable attention to inducing foreign emigrants to settle in the Lone Star State. She has sent several prominent men as agents to Great Britain who have there delivered addresses in public halls and elsewhere, setting forth the advantages of that State for settlement, and now she seems to be reaping the advantages of her past efforts.

We see in the Pacific Rural Press the statement that Staphylea Bolanderi, about which little has been hitherto known, has been rediscovered by Prof. J. G. Lemmon, of Sierra Valley. Prof. Bolander found it many years ago, but only in bloom. The shrub has its leaflets in threes. The fruit is an inflated pod from two to three inches long, pendant, like a pear, hanging in clusters of three or more. They remain upon the branch through winter. The shrub grows about 10 feet in hight. It belongs to the order Sapindaceæ, in which there are but four other genera.

The growing importance of our live-stock interests urgently demand more attention to the improvements of our herds, and whatever tends to bring this about by impressing the advantages of it upon the public mind, deserves commendation. Of this character is the Fat-Stock Show to be held in Chicago on November 10. Entries for it must be made with Mr. Fisher, Secretary of the State Board of Agriculture, at Springfield, Ill., on or before November 1. Successful as was the first show of the kind last year, we trust that the coming one will be still more fortunate.

Not since O'Connell's days have the Irish people been so thoroughly stirred up as they are at the present time. A large number of landlords are following the example of their English compeers, and making reductions in rent; but this concession can be of little benefit to tenants who can absolutely pay nothing in a majority of cases. Passive resistance to the payment of rent is the course urged upon the tenant-farmers by their leaders. If this advice is followed, it is hard to see how the landlords can enforce their claims. The entire eviction of the recusant farmers of a country so purely agricultural as Ireland, is impracticable.

The English potato crop is so remarkably poor this year, that it is estimated that farmers must lose at the lowest estimate $25,000,000 by this crop alone. A dozen years ago the average quantity of imported potatoes used in Great Britain was only five pounds per head, and that was nearly double the amount used in the two preceding years; now the population use an average of a trifle under 29 pounds a head; and this ratio must be largely increased the coming season, owing to the failure of the present crop. It is, therefore, probable that the export demand from this side of the Atlantic will stiffen up prices for potatoes at least along the States east of the Alleghanies.

Cover such plants as Pampas Grass, Tritomas, and remove Dahlias and the like to the cellar where it is best to cover them with sand. Hardy bulbs may now be reset for another year. Dig over the beds and put them in order for next spring. Prepare the ground for lawns and sow Blue-grass. An old bucket or paint keg half-filled with stable manure, and filled with water as used, will furnish enough fertilizing material for 500 plants during the winter. Cover the keg with a board. Wash all pots clean before they are used. Pot the Tube-roses that have not bloomed—they will bloom during the winter. If Mignonette seeds be sown now, the plants will bloom before spring. Deutzia gracilis is a fine plant for forcing. Cyclamen Persicum is one of our prettiest winter-blowing bulbs.

Two days after publication in our last issue that the price of wheat must go even higher, it went up from four to seven cents, and there seems little danger of its declining, except, perhaps through some temporary flurry. Speculators complain that this year there is much less chance than usual for them to realize heavy profits, inasmuch as farmers have themselves been holding back their crops for good prices. This step they attribute to the wider knowledge of the state of the markets and the probable outlook diffused among farmers by the agricultural press. Heretofore these men bought at low figures, so cutting short the farmers' remuneration; held on for a rise, and reaped a large profit from other mens' labors; now the profits go, to a great extent, where they ought to go—into the farmers' pockets. Usually we do not advise farmers to become speculators in their own products; but this year the certainty of good prices for nearly all farm products justifies a judicious change in this matter.

The annual convention of the North American Bee-keepers' Society will be held in the Lyceum Theater, Des Plaines St. Chicago Ill, commencing at 10 A. M. on Tuesday the 21st inst. Present indications point to a very large and enthusiastic meeting. Arrangements have been made with a number of railroads to carry those going to the convention at reduced rates, but in order to avail themselves of this reduction of fare, they must obtain a certificate from the chairman of the executive committee, Mr. T. G. Newman, (whose address we believe is 972 West Madison St. Chicago,) which is to be presented to the railroad officials. Those of our bee-keeping friends who may find it convenient to attend, will probably have an opportunity to learn much that may prove advantageous. Twenty-five of the most prominent bee-keepers in the country are appointed to present essays on all the topics that at present are of paramount interest to the business.

Industrial Societies.

ILLINOIS STATE FAIR.

[Special Correspondence.]

SPRINGFIELD, Ill., Oct. 11.

THIS fair opened at Springfield on Sept. 29, and closed on Friday, October 3d. The total number of entries in all the Departments, was 12,840, this being several thousand more than at any previous exhibition under the auspices of the Society.

Lack of Preparation.

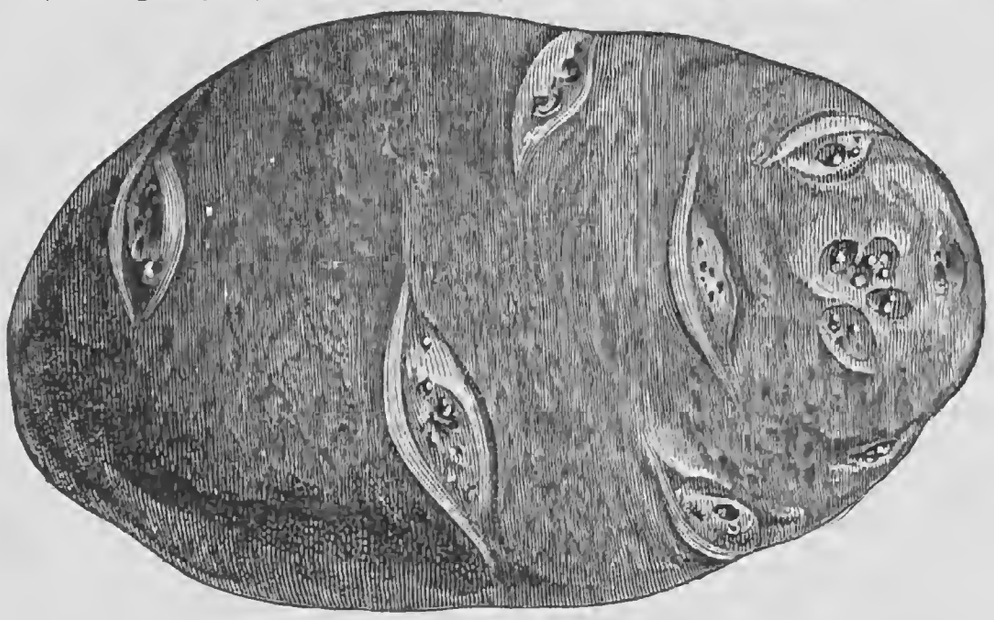
The weather throughout the week was extremely warm, and a brisk breeze swept clouds of dust from the parched earth, adding to the discomfort of a burning sun. Fair-goers, however, can stand anything but rain and mud; so they took in their allotted "peck of dirt" and went smilingly on with their work and their sight-seeing. Monday, Tuesday and Wednesday were discouraging days to exhibitors. A committee of Springfield citizens last winter gave bonds to the State Board of Agriculture for the performance of a contract to erect buildings, pens and stalls, for the different departments; to furnish adequate power for the running of machinery and so on, agreeing to have everything in readiness by the opening day. They wretchedly failed to carry out the contract. Exhibitors came here with the material to make one of the finest exhibits ever seen in the country. They might almost as well have landed on an open prairie The buildings were nearly all too small; the new ones were incomplete; hundreds of additional pens and stalls were needed for the accommodation of live stock; boxes of poultry lay scattered about Poultry Hall, without coops for their display; the shafting for machinery designed to be shown in motion, was not in readiness, and when, on Wednesday, attachments to power were made, the power was totally inadequate. Machines that had been transported hundreds of miles, at great expense, were rendered almost useless for the purposes for which they had been sent. A mutiny seemed imminent, and loud protests went up to the Board at their evening sessions, and it is not unlikely that suits will be brought against the Board for the recovery of money uselessly spent in making what would otherwise have proved most valuable exhibits. The Board threaten the local committee with litigation. Whatever may be the outcome of this talk, it is certainly a fact that great damage has resulted to the prospects of the fair here next year. With the office of Secretary in this city and the Board Committee on Grounds, in frequent sessions here before the fair, it seems a little strange that matters were allowed to drag on in this way. There are people who intimate that less attention paid to presidential receptions and more to preparations for exhibitors would have bettered things materially. The presence of President Hayes and party probably added a trifle to the gate receipts; but not very largely, as the total receipts for the week were below those of a number of previous fairs. However, if the final result is what a great many predict that it will be viz: a vote by the Board to locate the fair permanently at some central point, or to open three separate fair grounds in the State—one northern, one central and one southern—the annoyance here will not be regretted.

Horse Exhibits

In many respects the horse show was the most remarkable ever made in the State or in the West. The entries footed up a trifle over 1,400. There were 60 in the thoroughbred lot; 178 roadsters; 185 all-work; 46 imported draft horses; 103 home-bred draft: 211 agricultural-purpose horses; 35 carriage; 57 driving teams; 21 saddle horses; the balance being made up of the different sweepstakes lots Illinois has more Norman-Percheron horses than any other State. L. Dillon & Co., of McLean Co., began the importation of these horses more than twenty years ago and they have continued the business of importing and breeding them to this time. Mr. Dunham, of DuPage Co., has done a great work in this line. Others too have become worthy competitors until we have hundreds of specimens as fine as can be found in France. The Clydesdales are not behind them in the estimation of many men. Their number is less, but among them are some of the finest specimens of the breed in the world. The premium for the best draft team was given to a pair of Clydes owned by the Canada West Breeding Association, and the 2d to Dillon & Co., on a fine span of Percherons. Moffatt Bros. Paw Paw Grove, Ill., took a large share of the premiums in this class on their most excellent French horses. A. & S. Pickrell, Mechanicsburgh, were also prominent exhibitors in this class. The thoroughbred horse is not as largely bred here as in Kentucky; but the blood tells in the general all-purpose horses of the State. The exhibits of horses indicated careful and intelligent breeding and were convincing evidence of the steady improvement that has been going on for many years until the general average of horses in Illinois is better than in any other Western State. No finer rings were ever shown in the West than delighted the crowded amphitheatre at Springfield. The Board of Agriculture some years ago decided to leave out the Agricultural "hoss trot," and, as a result, the fast element in man that is the invariable accompaniment to the fast horse, did not appear here. The horse premiums went directly where they should go, into the pockets of men who breed for useful rather than for sporting purposes. If the Board continue firm in this attempt to purify its fairs by keeping out the jockeys and their disreputable hangers-on, the fairs will steadily increase in popularity and in the accomplishment of good work. Exhibitors of machinery, of fruits and farm products, of specimens of fine arts, and of live stock, all testify to the high order of visitors at this fair. They pay marked tribute to their intelligence and the spirit of candid inquiry that was everywhere manifest, and they justly attributed the past change to the absence of the trotting horse.

Cattle Exhibits.

The chief feature of the cattle department was the fine display of the milch breeds. The Jerseys took the lead with 156 entries, and among them as fine animals as the country affords. Samuel Stratton, of Montgomery Co., and Churchman and Jackson of Indiana, showed the largest number and took the largest amount of premiums, though the smaller exhibitors had very choice animals. The Holsteins contributed 82 entries and were admirable specimens. They were mostly from the dairy regions at the north part of the State where they are rapidly gaining in popularity, their admirable combination of milking and beef qualities suiting those enterprising dairymen. Several premiums were awarded to the fine imported Holsteins owned by Paul Rothbarth, of Chicago. The Ayrshires were more numerous than ever before at an Illinois fair. The Devon herd of Mr. Ross, of Fulton, has few equals in any State and undoubtedly stands at the head of the Western herds. His strongest competitor was David Whitmore, of Miami Co. O. The Herefords were there in full force. T. L. Miller, of Will Co., and Mr. Culbertson, of Cook Co., were chief among the exhibitors in this class. This breed is developing strongly in this State. Mr. Culbertson's late importation of some of the finest animals to be found in England, adds much to the position of the Herefords in the ring contests with Shorthorns. It is generally conceded that this was the finest Hereford show ever made in the United States. The Short-horns were less numerous than was anticipated. Just why this falling-off is something of a mystery to the public. We had but two herds here. They were owned by Samuel Pratero and by J. H. Potts & Sons, of Central Illinois, and were as fine herds as the State can produce.



SNOWFLAKE.

The Swine Exhibits.

were large and excellent. The Poland-Chinas and the Berkshires were about equal as to number. The Chester Whites were more numerous than I have known them for the past three or four years. The Duroc, or Jersey Reds exhibited by a Pennsylvania breeder, attracted much attention and will be bred in the West to a considerable extent at no distant day. The small breeds are not gaining very rapidly in the corn regions.

The Sheep Exhibits

were of very high character though not as large as at some former shows. There were four exhibitions of Merinos; two of Shropshires and two of Hampshires; four of South Downs and half a dozen of Cotswolds and Leicesters.

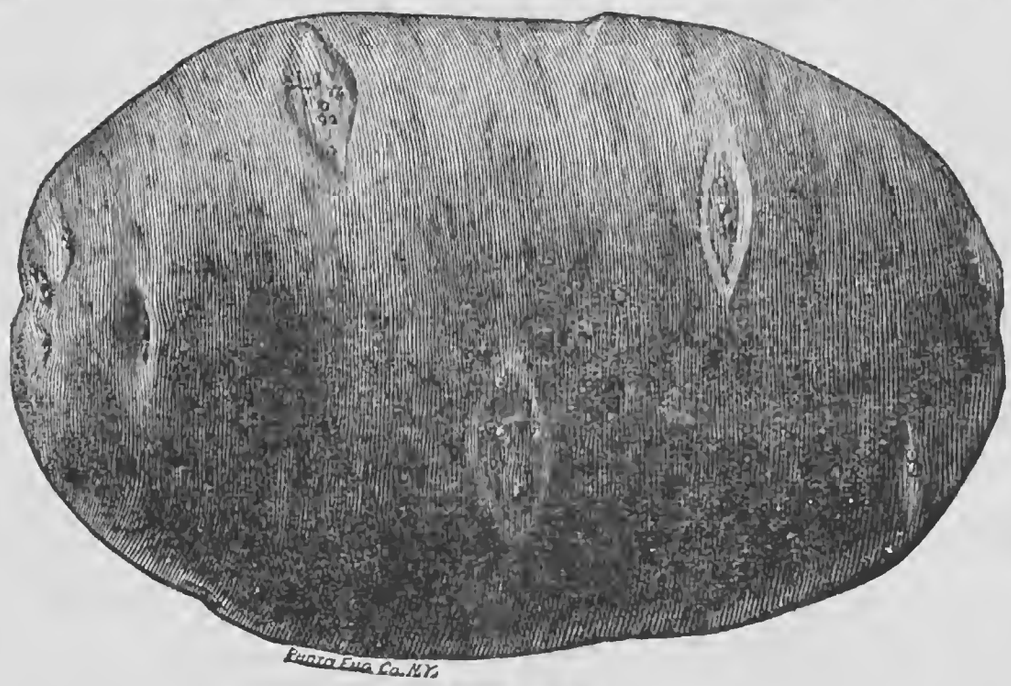
Both the Swine Breeders' and Sheep Breeders' Associations held evening meetings on the ground, at which international papers were read. Both interests exhibited a healthful energy.

The Poultry Exhibits

at Illinois fairs have usually been very mediocre, but on this occasion the collection was uncommonly large and of most excellent and varied character. In Brahmas, Light and Dark, Cochins and Games, the show was very superior; while in all the other popular breeds competition was lively.

The Fruit Exhibit

was, of course, very largely made up of apples, though the display of grapes was good. The Warsaw Horticultural Society sent some valuable contributions, as did many of our most prominent orchardists and nurserymen. In all respects this exhibit was much finer than last year's. In plants and flowers I noticed little change from the usual display. This feature is an attractive one, and adds especially to the pleasure of the ladies.



LATE SNOWFLAKE.

The Dairy Exhibit

was meagre, far more so than should have been the case in this State, where the dairy interest is of such magnitude. It is to be hoped that the show at Chicago soon will be more creditable, as no doubt it will be.

The Agricultural Machinery Department

was simply immense, and it was varied beyond any precedent within the State. But the space for it was limited and its arrangement far from satisfactory to either managers or exhibitors. Ohio, Indiana, Wisconsin, Michigan, Missouri and other States contributed of their best. Next to St. Louis, manufacturers delight in exhibiting to an Illinois crowd. So far as they were concerned, they would have made this the most satisfactory machinery exhibit of the season. As it was, the people enjoyed it greatly and they ordered largely of every class of machinery. Here are grouped together a few special mentions of prominent exhibits in this department. Messrs. John Deere & Co., of Moline, Ill., made a magnificent display of sulky and hand plows, walking and riding cultivators, etc., in their building on the grounds. Messrs. Deere & Co. have the largest plow works in the country, and have made and sold over 150,000 implements in one year. The central point of their exhibit was the handsome Gilpin Sulky plow that was sent over to the Paris Exposition last year. This plow, which we noticed at the time, is one of the finest pieces of mechanism ever turned out in this country. The "Gilpin" went into the field trial at Paris, and was awarded the grand prize [a Sevres vase, valued at one thousand francs] over fifty competitors. Another prominent feature of the exhibit was their new Deere walking cultivator. The new features in this implement are:—an improved coupling, which admits of the shovel gang being adjusted to the exact width desired, also readily changing the hight of ends of beams, thus altering pitch of shovels for depth, and, having long bearings both ways, this gives great steadiness and effect to side motion; and *a spring* which does not lose its tension or sustaining force until the gangs are hung up, assisting in all the operation; a spring which is made to carry just as little of the weight of the gangs as is desired, by simply hooking the chain in different links, making the side movement for dodging crooked rows and hanging up the shovels *mere child's play;* transferring the weight of gangs and of the pole to the wheel; decreasing the wear on bottoms of shovels, and lessening the draft.

In connection with the new departure in dairying, or the Fairlamb system of making butter by collecting cream from dairies, instead of the milk, the cans for raising the cream and transporting the same were on exhibition by Davis & Fairlamb, manufacturers, Arena, Wis., and could not fail to attract the attention of dairymen looking for improvements in butter-making. Each can is provided with an air-chamber, and a perfectly tight air-cover, and an arrangement for measuring the cream, the whole forming a system that is perfectly reliable. This system is largely in use in the Northwest and should be investigated by Eastern dairymen, as it is one of the plans of the future. The writer had an interview with a prominent manufacturer of creamery butter in this State and his verdict was, that better butter was made by the Fairlamb system than could be made in his creamery. His reasons were, 1st. "The milk is set at the dairy at the time of milking." 2nd. "No injury is done to the cream by transportation." 3d. "The dairyman is always receiving a premium (for producing the best quality of milk, keeping best grade of stock and feeding higher) by the extra quantity of cream he has to sell, and from the cream a better quality of butter is produced than by the customary way of feeding cows for a quantity of milk."

The Stoughton Wagon made by T. G. Mandt, Stoughton, Wis., was delayed in transit, the wagons not arriving until late on Thursday afternoon—too late for the Committee to report on them, and only in time to give the enterprising manufacturer a chance to exhibit his goods to a few. If these wagons had been here before the Committee reported, without doubt they would have received the first premium. The Stoughton wagon is well known among the farmers of Wisconsin, Minnesota and throughout the Northwest for its ease of draft and durability. The manufacturer is a pusher and spares no pains to put out a wagon that is first-class in every respect. He has made for it the best of reputations at home, and proposes now to extend its usefulness all over the country. Those who know this wagon consider it equal to any farm or lumber wagon built; while at the same time it has several points that are not found in other wagons. It has a patent adjustable reach that can be extended long enough to carry lumber twenty-four feet in length; also a spring to hold up the tongue; also a patent gear brake which is an important improvement. These wagons are built of the very best material and in the most substantial manner. The manufacturer warrants them to be all that is represented, and will be happy at any time to furnish our readers with full information in reference to them.

There was a fine display of tile and brick-making machinery, which would have been a great deal more effective if the management had supplied the power, as they had agreed to. As it was, the exhibitors made as fine a show as possible with the power at their command. The Tiffany Improved Tile machine with brick attachment, exhibited by H Brewer & Co., Tecumseh, Mich., was awarded the first premium. This is an auger machine and attracted a great deal of attention. In it the pressure is applied to the disc upon a very small area; it dispenses with the bridge, or bracket, used on other machines. The rotary motion of the core pins, as the tile issues from the disc, produces the same effect as when smoothing plastic material with a knife, thus producing a very fine tile. J. W. Penfield, of Willoughby, Ohio, exhibited his new

IMPROVED PEACHBLOW.

Auger Tile Machine which he has been perfecting for the past six months. Mr. Penfield has long been known as a reliable manufacturer of brick and tile machinery, and in his new machine he intends to combine both the advantages of the perpendicular and horizontal machines. It makes tile from two to twelve inches in size. He has not been able to fill orders for this machine this season; but by enlarging his works he expects another year to be able to supply the rapidly increasing demand for the Penfield machines.

Cooley's Patent Creamer manufactured by John Boyd, Chicago, Ill., was shown in operation by J. J. Lockwood. We have often spoken highly of this system, and many of our readers are familiar with it. By it farmers and dairymen get all the cream there is in the milk. It makes the best quality of butter, is cheap and durable, and it pays for itself by the saving of labor in handling the milk. It works equally well in all seasons of the year. Mr. Boyd has put out nearly 3,000 creamers this year, and has yet to hear of the first one that does not give satisfaction.

Messrs. C. Aultman & Co., of Canton, Ohio, made a large and handsome display of their celebrated Buckeye self-binders, mowers, reapers, Canton Monitor engines, Sweepstakes thrashers, etc. Their exhibit attracted a large crowd and showed that the "Buckeyes" are very popular machines in this State. Their engines and thrashers were in full operation working to perfection. The "Monitor" is now made with a traction and self-propelling steering attachment which has proven a success. Messrs. Aultman & Co., have had a very successful season, finding it hard work to fill their constantly-increasing orders.

A fine exhibit of Porter's patent wire cable derrick and Porter's wood track hay-carrier for barns was made by J. E. Porter, of Ottawa, Ill., and was awarded two first premiums. It attracted a great deal of attention. Mr. Porter showed his machines in operation, practically illustrating to visitors their simplicity and the ease with which hay, straw, etc., can be handled both in stacking in the field and in moving them away in the barn.

An ingenious arrangement, in the shape of an automatic check rower, was exhibited by Mr. Jas. Rothschilds. This implement is manufactured by the Sucker Check Rower Co., of Millwood, Ill. It will meet a want long known to the farming community. It is cheap, simple and durable, and we are assured by the patentee that it will do and has done all the work that is claimed for it. Our readers can obtain full information of this new invention by addressing as above.

The Racine farm fan, warehouse and elevator mills were exhibited by the manufacturers, Johnson & Field, Racine, Wis. These improved fan mills combine all the advantages of the various kinds now in use, and also many important and greatly needed improvements introduced by these manufacturers. Although this is comparatively a new firm, still their mills are already sold all over the country and have obtained an enviable reputation. Their warehouse mill gives the best of satisfaction and attracted a great deal of attention on the grounds. It was shown in full operation, cleaning all kinds of grain and seeds. It is particularly adapted for separating oats from barley. This is a point that warehousemen should take into consideration, as this mill is acknowledged by leading barley men to have no superior in this respect. The manufacturers are always glad to furnish information.

The "Boss" churn carried off the blue ribbon. Messrs. Rhoades & Palmer, of Rockford, Ill., have built up a very large trade in these churns. They are manufacturing them by the thousand and are sending them by the car-load to Vermont on orders from dairymen who are qualified to judge of their merits. They have also received an order from a London, England, firm for churns to be used in making butter for the great London Exposition.

W. W. C.

BRIEF SUMMARY OF POTATO REPORTS TO THE AGRICULTURAL DEPARTMENT.

We thank Mr. A. E. Carman, Acting Commissioner of Agriculture, Washington, D. C., for a large manuscript summary, in advance of publication, of the reports made to the Department from various parts of the country with regard to the results obtained from specimens of the Beauty of Hebron and a few other promising new varieties of potatoes sent out by Commissioner Le Duc to be tested. Of these reports we have condensed a few selections from those States about which our "Everywhere" has given rather meagre information:

Alabama.

BEAUTY OF HEBRON.—Lowndes Co. "Planted March 8; ripe in 90 days; yield 317 bushels per acre."

Shelby Co. "Second crop planted August 12; grew well until frost cut them in October; a few nice tubers were made. Two crops can be grown."

Autauga Co. "Foliage luxurious; blossomed April 30; decayed in 150 days; solid; delicious."

VICTOR.—Lowndes Co. "Planted February 1; decayed July 1; yield light; flavor excellent."

Monroe Co. "Growth vigorous and fine, no blossoms; yield 400 pounds to peck; superior in every respect; early as E. Rose; best ever planted."

ALPHA.—Autauga Co. "Foliage slender; pale; blossomed April 25, decayed in 95 days; not large or many in a hill; very inferior."

RUBY.—Autauga Co. "Foliage large; luxurious; blossomed April 20; decayed in 95 days; very prolific; good; as fine as E. Rose."

Arkansas.

BEAUTY OF HEBRON.—Franklin Co. "Foliage strong and copious, decayed in 130 days; yield, 6,000 pounds per acre, uniform size and shape, mealy and superior flavor."

Lonoke Co. "Foliage rank and beautiful; yield large; a splendid table potato."

Garland Co. "March 21, planted eight quarts; matured June 1; yield, 450 pounds; quality very good; handsome shape and size."

Saline Co. "Planted March 18; dug July 8; earlier than Victor; yield, 44 pounds for one; fair size; flavor good; adapted to this climate."

Johnson Co. "Planted two quarts March 20; foliage large, thrifty, decayed in 55 days; dug June 24; yield, 79 pounds from two quarts; fine, thin skin; mealy."

Independence Co. "Planted March 19; foliage healthy; blossomed May 15, decayed in 78 days; yield, 210 pounds; medium size; most excellent, mealy and delicate."

Crawford Co. "Better than Early Rose in all respects; it grows 'two stories,' one pushing the other out to get room in the soil; it is the potato beyond all others; I get two crops a year."

VICTOR.—Saline Co. "Planted Feb. 14th; dug July 8th; yield 24 pounds for ¼ pound—very large—mealy and delicious when boiled."

Johnson Co. "Planted one quart, March 20th; foliage large, decayed in 115 days; dug August 20th; yield 66 pounds; large, mealy, fine-flavored."

ALPHA.—Franklin Co. "Foliage delicate; decayed in 120 days from planting; yield at rate of 4,200 pounds per acre, irregular in form, smooth and tender when cooked."

Johnson Co. "Planted two quarts, February 2nd; foliage thrifty, decayed in 115 days; dug August 20th, yield 66 pounds, large, mealy, fine-flavored."

Washington Co. "Planted March 23d; bloomed May 25th, ripe July 10th, yield moderate, size medium, white, mealy and smooth."

RUBY.—Franklin Co. "Foliage vigorous, decayed in 145 days from planting; yield 6,600 pounds per acre; irregular in shape, clammy when cooked—not good."

Johnson Co. "Planted one quart, March 20th; foliage thrifty; decayed in 91 days; dug July 25th; yield 3,600; rather small, cook well; extra flavor."

Florida.

BEAUTY OF HEBRON.—Willsboro' Co. "Reported to grow thriftily and to be of good quality. November is the best month to plant."

Columbia Co. "Planted 1 quart August 15; bloomed in 63 days; vines vigorous, decayed in 70 days; yield over 80 pounds; as good as Early Rose."

Taylor Co. "Planted 1 quart September 28; foliage healthy; decayed in 74 days; yield 10 pounds to a quart, good quality."

Hillsboro Co. "Fine for table."

Taylor Co. "Not successful."

Georgia.

BEAUTY OF HEBRON.—Forsyth Co. "Grew well; ripened quickly; fair yield; mealy and good quality."

Johnson Co. "Planted five potatoes August 12; bloomed September 18; gathered 360 potatoes; very good."

Coffee Co. "Yield small, but fine, smooth tubers."

Early Co. "Good yield."

Bullock Co. "Ready for use in 50 days; superior."

Charlton Co. "Dry and mealy."

Sumter Co. "Fine yield and quality."

Kentucky.

BEAUTY OF HEBRON.—Owsley Co. "Planted August 15; matured in 120 days; yield 280 pounds for eight pounds; mealy, delicious for table."

Warren Co. "Beautiful potato; 50 from four potatoes; better and earlier than E. Rose. Superior to any other."

Shelby Co. "Planted April 1 on sod land; foliage luxuriant, decayed in 100 days; yield 190 pounds for 12 planted; quality equal to E. Rose."

Bath Co. "Strong foliage and bloom; yield 600 pounds for 16 planted; large tubers; excellent."

VICTOR.—Bath Co. "Strong foliage; ripe in 115 days; 252 pounds for four quarts planted."

Scott Co. "Foliage healthy; yield heavy; excellent quality."

ALPHA.—Owsley Co. "Planted August 15; ripe in 120 days; yield 210 pounds for eight; mealy and of fine flavor."

Bath Co. "Delicate foliage; ripe in 100 days; yield small, but tubers good."

RUBY.—Owsley Co. "Planted August 15; matured in 90 days; yield 250 for eight; flavor good; fair and smooth, not so large as Victor."

Maryland.

BEAUTY OF HEBRON.—Cecil Co. "Yield, 173 pounds from two quarts; very good quality; nearly identical with the Early Rose."

Montgomery Co. "One quart yielded 27½ pounds, each potato weighed 11 or 13 ounces, and some one pound."

Anne Arundel Co. "Yield, 27½ pounds from one quart; very fine, rich potatoes."

VICTOR.—Cecil Co. "Very productive, but not so good as Beauty of Hebron."

Howard Co. "As good as Early Rose and better than Alpha."

Carroll Co. "Planted 10 pounds, and in 90 days dug 184 pounds; not so good as Early Rose."

Mississippi.

BEAUTY OF HEBRON.—Clark Co. "Yield, 54 pounds for one planted; excels all other potatoes."

Noxubee Co. "Fine yield and quality."

ALPHA.—Fayette Co. "Yield good; tubers size of turkey eggs; fine flavor and quality."

Jefferson Co. "Excellent yield."

RUBY.—Grenada Co. "Superior yield and quality."

North Carolina.

BEAUTY OF HEBRON.—Yancey Co. "Yielded 72 pounds for eight planted."

Richmond Co. "Yield, 9,872 pounds per acre."

Nash Co. "Nine potatoes produced 3½ bushels."

Alexander Co. "Yield, 300 pounds from eight quarts; large."

ALPHA.—Henderson Co. "The earliest potato grown."

Orange Co. "Yield, 17 pounds from one quart."

RUBY.—Henderson Co. "Yield, 40 pounds for one quart."

Oregon.

BEAUTY OF HEBRON.—Grant Co. "Great acquisition; we'd like to have them throughout the county."

Curry Co. "Foliage blighted; no bloom, decayed in 125 days; yield 133 bushels per acre; sound and very good.

Clackamas Co. "Planted March 15; vines strong and green; no bloom: ripe July 20; yield at the rate of 200 bushels per acre; mealy and very good for the table; good and solid."

Multnomah Co. "Foliage thrifty; bloomed June 20, decayed in 85 days; yield 120 pounds from 36 hills; very fine for the table.

Tillamook Co. "Planted April 13; prolific; blossoms decayed July 18; dug July 29; planted four quarts, dug 252 pounds; cook very readily; the finest I ever used.

Lane Co. "Foliage healthy; decayed in 95 days; yield fair; size large; of excellent quality.

VICTOR.—Josephine Co. "Foliage healthy; did not bloom; decayed in 75 days; yield moderate; quality fair—not dry enough.

Multnomah Co. "Foliage thrifty; bloomed June 14; decayed in 79 days; yield 180 pounds from 36 hills; excellent for the table.

Douglas Co. "Foliage healthy; yield 100 pounds from two quarts; superior quality; a great acquisition.

Tillamook Co. "Planted April 18; blossomed June 15; decayed July 25; dug August 1; planted two quarts, dug 194 pounds; quality good."

Lane Co. "Foliage healthy; decayed in 100 days; yield 12-fold the seed planted; good quality and keeps well."

Curry Co. "Foliage healthy; no blossoms; decayed in 119 days; yield, at the rate of 200 bushels per acre; best quality known here."

ALPHA.—Josephine Co. "Foliage not large; no bloom; decayed in 60 days and rotted badly; sound ones dry, mealy and of good flavor."

South Carolina.

BEAUTY OF HEBRON.—Newberry Co. "Good yield, quality and flavor."

Abbeville Co. "Yield, 50 pounds to two quarts, inferior."

VICTOR.—Abbeville Co. "Yield, 1½ bushel from one quart; good."

Hershaw Co. "Good as Early Rose; more prolific."

RUBY.—Newberry Co. "Superior quality."

Tennessee.

BEAUTY OF HEBRON.—Greene Co. "Yield 40 pounds to two quarts; excellent."

Unicoi Co. "Twenty-four potatoes yielded 274 pounds."

Sevier Co. "Healthy, yield 28 pounds to one quart seed."

VICTOR.—Sumner Co. "Yield 70 pounds per quart; fine, large, mealy."

Jackson Co. Tubers equal to E. Rose."

Sevier Co. "Yield 53 pounds from one quart."

ALPHA.—Overton Co. "Yield fair, tubers fine."

RUBY.—Overton Co. "Good yield; superior to Alpha."

Sevier Co. "Yield from one quart 66 pounds, extra."

Texas.

BEAUTY OF HEBRON.—Burleson Co. "Yield six bushels from eight quarts."

Bee Co. "Largest potato ever raised here; smooth, sweet and mealy."

Washington Co. "Is a great acquisition; would not take $1 a pound for the seed if I could not get more."

Angelina Co. "Splendid yield, not to be excelled; very early."

VICTOR.—Isleta Co. "Yield 154 pounds for five pounds planted."

Burleson Co. "Very good yield."

Brown Co. "Yield 170 pounds from two quarts."

Virginia.

BEAUTY OF HEBRON.—Prince William Co. "One quart yielded 85 pounds, and I also got 91 pounds from one quart planted late."

Highland Co. "Very fine and the earliest potato raised here."

Dinwiddie Co. "Yield six pounds from two potatoes.

Stafford Co. "Yield 180 pounds from two quarts."

Mechlenburgh Co. "Planted March 15; bloomed in May; ripe July 1; large, smooth, medium-sized; yield 67 for 1."

Lee Co. "Excellent; yield 160 pounds from four quarts."

Caroline Co. "Well adapted to this climate, fine."

Amelia Co. "Yield 104 pounds to one quart. Superior."

Westmoreland Co. "Yield from 15 potatoes one bushel of extra-fine tubers in flavor and quality."

VICTOR.—Wise Co. "Large yield, fine quality."

Mechlenburgh Co. "Yield 48 potatoes for one."

RUBY.—Fairfax Co. "Yield light but fine."

Wise Co. "Excellent quality."

ALPHA No. 2.—Stafford Co. "Planted April 1; bloomed in 40 days; ripe June 20; yield 100 pounds from two quarts; white and mealy."

Mechlenburgh Co. "Yield 180 pounds from four quarts, white, mealy, good flavor."

West Virginia.

BEAUTY OF HEBRON.—Mason Co. Strong growth; yields well; early; handsome; we prize it highly.

Morgan Co. Good yield—40 pounds from one quart.

Roane Co. Much larger than Early Rose. Superior quality and yield.

Jefferson Co. "Magnificent yield. Superior."

ALPHA.—Mason Co. Yield 45 pounds, good quality, from one quart.

RUBY.—Mason Co. Foliage healthy. Yield 65 pounds from one quart; color pink; good growth; excellent.

Literary Miscellany.

IN FOLLY'S NET

CHAPTER XI.

MAKING DOUBLY SURE.

MR. BLAIR entered the room with his usual easy grace of manner and self-possession, and Jean, rising from the sofa, stood before him, a quaint, odd figure, in her trailing crimson draperies, with the white kerchief crossed over her breast, and her pretty hair fastened up high on her graceful head.

"How do you like me?" she said, sweeping him a saucy courtesy.

"How do I like you?" he repeated, looking down at her with smiling, tender, dark eyes. "I like you always far too well for my peace of mind, Jean."

Jean's fair face flushed, and she repented her little coquettish movement.

"May I give you some tea?" she said, with a pretty assumption of hauteur, which Mr. Blair thoroughly admired. "I hope you have had something substantial."

"Yes," he said, absently. "But I shall like some tea, if you will be good enough to give me some."

Jean poured out some tea, coloring a little as she gave it to him, at the thought that they were here together, domesticated "as man and wife," and there was something significant in Mr. Blair's glance, as he lifted his eyes and met hers.

"I have just despatched a messenger to Sholto," he said. "It was impossible to do so before, in the storm. As it is, I think we must reconcile ourselves to passing the night here. It is getting late, and the night is dark."

"Oh! I hope not," said Jean — most sincerely. "They would be so anxious."

"Their anxiety will be relieved by the arrival of my messenger," said Mr. Blair.

"True," assented Miss McLeod, looking into the fire. "It is a most dreadful *contretemps* altogether."

"I cannot but——" he stopped abruptly, then went on—"I cannot regret what gave me the intense pleasure of your society for so many hours," he said. "I can never regret our adventure, Jean, and it will be the object of my life to prevent you from regretting it also. Ah! think," he went on "what happiness it must have been to feel that you were with me, dependent on me for help and protection; to have held your little hands in mine—to have felt you cling to me in your terror, to have held your dear head against my breast—to have carried you in these arms—these arms that have yearned to hold you ever since my eyes first fell upon your face. Ah! Jean, those hours of terror and distress to you were hours of unutterable joy and delight to me; to the man who loves you—who loves you dearer than his life—dearer than his honor." He had caught her hands in his, and was holding them tightly, pressing them passionately to his lips and to his heart, while Jean, faint and trembling, shrank from the burning passion in his eyes.

"Does my love frighten you, little bird?" he said, in a moment, in a voice of the softest tenderness. "You must not let it, my pretty, timid child, for it is yours to order, mine to obey. I shall be wax in your hands, Jean. You shall never repent your trust in me. You shall be very happy, my darling."

"I do not understand you," she said, with a little faint shudder—"I do not understand you. You are terrifying me, Mr. Blair; it is not generous, when I am so completely in your power."

"Ah! forgive me, my darling; I will be patient. Do not fear, Jean. In time, when you shall be my wife, not in name only, but in heart and mind, then my love shall not terrify you as it does now."

His words, which she did not understand, but which startled her with a sudden, vague dread, were hardly uttered, when the door of the little sitting-room was thrown hastily open and before Jean's hands were free from Mr. Blair's eager clasp, Lord Sholto, followed by Captain Murray, appeared on the threshold. Jean sprang forward with a little cry of surprise and joy; but before Andrew Blair turned to greet his friends, he pushed into the breast pocket of his coat a crumpled paper which he had picked up from the floor by Jean's sofa.

It was the note he himself had written to her.

"We met your messenger, Blair," exclaimed Lord Sholto. "Well, Jean, how are you? half drowned, and terrified out of your life at the thunder? Whose garments are those you are wearing?"

"The landlady's," said Jean, laughing, recovering her usual good spirits at the prospect of deliverance. "Don't I look bewitching? would you like a *trois temps* with me?"

"Immensely," laughed his lordship. "Are you coming with us? or do you prefer spending the night here; you look very cosy, I must say."

Jean flushed a little.

"Was Florence very anxious?" she said.

"A little at first; but when I told her Blair had left us to go and meet you she knew, I suppose, that you were in good hands, and set her anxiety at rest. Collins put in some dry clothes for you, Jeanie."

"Did she? That was thoughtful," said Miss McLeod. "Is that my bundle, Captain Murray? So many thanks. Now I shall get rid of my picturesque garments; I will not be many minutes."

So saying, she disappeared into an inner room and divested herself of Mrs. Martin's flowing garments; dressing for about the first time in her life without the assistance of a maid, and in a few minutes she was equipped and ready to start. She found Lord Sholto and Captain Murray alone in the sitting-room; and the former volunteered the explanation that Blair had gone to settle with the landlady.

"If you are ready, Jeanie, we can go down to

the carriage," said Lord Sholto, offering his arm. "It will be one o'clock before we get home, so we must not delay."

"You will not be able to conduct me down those stairs," laughed Jean, as they stood at the head of the narrow staircase. "I will precede your lordship."

She ran down lightly; in the bar-parlor, empty and deserted now and but dimly lighted by one small lamp, Mr. Blair and the landlady were talking with more earnestness than the settling of an account would seem to warrant; but there was gold on the counter under Mrs. Martin's hand, so that it was evident that Mr. Blair had remunerated her for her accommodation in a manner befitting the profuse liberality of the Australian millionaire. He turned as Jean appeared.

"You are ready?" he said, with a touch of embarrassment. "We have concluded our business also. Good-night, Mrs. Martin."—*To be continued.*

BOOKS RECEIVED.

Haworth's. By MRS. FRANCES HODGSON BURNETT. New York: Scribner's Sons. Price, $1.50.

IN spite of the power and dramatic force of the writer, the strongest impression left by the book is its aimlessness. There are a number of strongly drawn characters; there are dramatic scenes in abundance; but of sustained action, leading up to a final climax, there is none. The characters go on their separate ways, utterly independent of one another, and the reader is filled with a vague wonder as to why he has been led through many pages of careful character delineation and exciting incident to learn in the end that Mr. Ffrench, Haworth and Saint Meran mysteriously disappear, and that of the others only one (Granny Dixon) does anything definite—*she* dies; the rest walk out of the door and out of the book at the same time, or else sail away.

Haworth, the hero, is admirably drawn. A coarse, bold man, the author has not hesitated to paint him as he was, sins, vulgarity and all. Miss Ffrench, a cold, proud beauty, who is so self-contained as to be quite above and beyond the emotions and interests of ordinary humanity, is interesting as a character sketch but repellant as a woman.

The quaint shrewdness of Janey, the child whom much serving has made a woman in spite of her tender years, is effectively contrasted with the fierceness of Granny Dixon, whose shrill tones and spiteful remarks ring through the entire book.

The most charming and lovable of all is the mother of Haworth. By her true womanliness and her abiding affection for her son she wins and retains the love of the reader. After the turbulence of Haworth, the frigidity of Miss Ffrench and the morbidness of Miss Murdock, it is refreshing to turn to this sweet-tempered, natural woman.

The Great Speeches of Daniel Webster, with an Essay on "Daniel Webster as a Master of English Style." By EDWIN P. WHIPPLE. Boston: Little, Brown & Co. Price $3.00.

THE opportunity here afforded of obtaining some of the best of Webster's speeches will be eagerly embraced by many whose limited means have prevented their indulging in the six-volumed "Life and Works of Webster" issued in 1851. Of course this work does not pretend to any such completeness as the earlier edition, but still from the forty-three speeches given one can form a correct idea of Webster as an orator. Quite apart from his eloquence and the perfection of his style, it is interesting to learn what so prominent a statesman thought on the questions of his day. (His speech on "Executive Patronage and Removal" contains many timely and valuable suggestions which we would commend to the notice of "machine" politicians of to-day.) To attempt anything like a criticism of these speeches would be like "gilding refined gold" for no praise, however generous, could add any weight to this wonderful man's reputation as an orator and a statesman. The best monument of his intellectual greatness is his own words, the careful study of which as embodied in his speeches, arguments and diplomatic correspondence cannot be too strongly urged upon all.

From Attic to Cellar. A book for Young Housekeepers. By Mrs. OAKEY. New York: G. P. Putnam's Sons. Price, 75 cents.

The author is already favorably known to the reading public through her various contributions on home matters, in which she has given evidence of a thorough appreciation of the difficulties and trials of housekeeping, and by her common sense directions has indicated a way out of the same. Her tour from "attic to cellar" is very thorough, nothing however trivial having seemingly escaped her notice, and accomplished indeed must be the housekeeper who will not be profited by going "upstairs and downstairs and in my lady's chamber" in company with so experienced a guide as Mrs. Oakey.

Of books on household decoration and on cookery we have had enough and to spare and it is therefore really a treat to have some one discourse to us on choice and arrangement of a home; daily habits; duties of servants; house cleaning; home and society, and dress. It is impossible in a short notice to give any thing like a fair idea of this book. It has to be examined to be fully appreciated.

Our Folks; A Play in Three Acts. By GEORGE M. BAKER. Dramatized from Running to Waste: The Story of a Tomboy. Boston: Geo. M. Baker & Co. Price 15 cents.

THIS little play is for amateur theatricals, and it is so arranged that little or no expense need be incurred for costumes or stage properties. There is not a villain in the play; it depends for success upon pictures of home-life and the characterization of homely, everyday people.

Life at Home; or, The Family and its Members. By WM. AIKMAN, D.D. New York: S. R. Wells & Co. Price $1.50.

THIS book is designed mainly for the newly married. Not but that those who are old in Hymen's service may not be benefited by it, but it is meant rather as a guide to show young couples what errors of conduct to avoid. Much of the advice is admirable, particularly that relating to the *permanency* of the marriage relation. We take exception, however, to the tone assumed in pointing out the duties of the wife. The day has passed for the *obedience* theory. The wife of the future will call no man master save the "Man Christ Jesus."

Alpine Flowers and Other Poems. By AUGUSTA CLEVELAND PRINDLE. Sold by Whitney & Adams, Boston. Price $1.00.

THERE is nothing very much to be said of these verses. The sentiment is sweet and pure, and not ungracefully expressed.

MAGAZINES.

APPLETONS' JOURNAL—CONTENTS FOR OCTOBER.—Vivian the Beauty, by Mrs. Annie Edwardes, author of "Archie Lovell," "Ought We to visit Her?" etc.; Chapters V. to IX. Leaves from the Laurels of Moliere. The French Play in London, by Matthew Arnold. Art and Criticism, by Sidney Colvin. The Seamy Side, by Walter Besant and James Rice; Chapters XVI. to XVIII. Conspiracies in Russia, III.; by Karl Blind. A Dialogue on Human Happiness, by W. H. Mallock. The City of Rocks, by F. Murphy. Poems: "Dulce est desipere," by F. A. Symonds; "Her Cuckoo," by Frederick Locker; "Portent," by Edgar Fawcett; "Facing the Hights," by Howard Glyndon. Editor's Table: The Nude in Art once more; Women as Horticulturists; Art and Democracy. Books of the Day: Herbert Spencer's "Data of Ethics;" "The Life and Letters of Madame Bonaparte;" Warren's "Recreations in Astronomy;" Brooke's "Milton;" "Travels with a Donkey in the Cevennes;" Quatrefages's "Human Species;" "Roman Days;" "Spain in Profile;" "Delicia."

FACING THE HIGHTS.

I.

SINCE the one song we can sing is
But a sad one!
Since the presence that we bring is
Not a glad one:
Must we—you, my heart, and I—
Stay to watch the world run by,
While we two sit back and cry—
Wearily?

II.

What! Is this our strait? and truly
Is all lost?
Is Hope given up and duly
Shrived and crossed?
Come, heart! Can not you and I
Yon untrodden country try,
Rather than lie down and die—
Drearily?

III.

Seems to me, the hills glow greenly
Over there.
If our Fate has served us meanly,
Can't we bear?
Let us trudge it, you and I,
Heart, to where those new lands lie;
Let us bid the old good-by—
Cheerily! HOWARD GLYNDON.

Appletons' for October.

WOMEN AS HORTICULTURISTS.—Flower-culture has greatly increased in recent years in the vicinity of all our large cities, but the taste for flowers is something that grows upon what it feeds, so here is large space for women to exercise their skill and industry. The supply and the demand for cut flowers are both very large, and probably keep pace with each other, but window flower-culture is only in its infancy. Within the last few years an increased taste for this sort of ornamentation has been very evident. Ten years ago there was probably not an hotel or restaurant in New York that planted flowers in its courtyards or approaches, and now nearly every one has them. Very beautiful, indeed, is the flower garniture at some of these places. In private dwellings window-boxes of flowers are becoming more and more common, but the majority of houses are still without this pleasant and graceful ornamentation, and hence the ladies who take up plant-growing might with a little tact greatly stimulate the public taste in this particular. And what more fitting pursuit for women than the cultivation of flowers? In what more charming conjunction can we imagine them? what employment is there anywhere that accords so exactly with their love of color, their passion for beauty, their delicate susceptibility to odors, their delight in whatever is sweet, cleanly, pure, and needing care and nurture? It is a wonder that flower-rearing is not already generally in their hands.

The practical difficulties with young women searching for a vocation is that they have no capital, no special training, little knowledge of current commercial needs, and no disposition to enter untried fields of labor. They are ceaselessly demanding new avenues for employment, under the impression apparently that by talking about them vigorously these new avenues will open of their own accord. Assuredly fruit-growing, flower-culture, and kindred pursuits offer no great obstacles to young women with a small measure of determination and a little activity of imagination. The great point with us all is to be able to think out things, and this is what we mean in this instance by imagination. Neither men nor women are likely to gain much success in established vocations, much less enter upon untried ones, unless they have ideas, the power to construct, to form, to plan, to discover relations between facts and possibilities of facts, to detect significances and follow them to their logical outcome. In flower-growing, however, there is this advantage—many ladies have natural taste and a little smattering of the art, and hence it would not be difficult for them to gain sufficient knowledge from books and practical experience in their own gardens to make a test of the suggestion which the writer in "Macmillan" makes; and eventually training-schools may be established in which young women could enter. The thing is, to make a beginning; and to make a beginning the very first requisite is practical intelligence.—*Appletons' for October.*

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

LETTERS FROM A COUNTRY GIRL.

MARGARET B. HARVEY.

READING FOR PROFIT.

TO BE able to read and enjoy Ruskin is a long step forward in the true appreciation of good literature. If any of you, my friends, can do so at present, you will find little difficulty in selecting a library—and if not, you need not be discouraged. Every one cannot understand Carlyle, and Emerson, and John Stuart Mill, but this is no reason why every one should not admire and love Miss Alcott. Her books I recommend unhesitatingly to all who would form a good literary taste. Not only is the language forcible, but the sentiments are good and the characters life-like. And when you know the "Little Men" and "Women," and the "Old Fashioned Girl," and "Rose," and "Christie, and all their friends and adjuncts, I don't think you will care very much for "The Red-Headed Scalper of the Bloody Plains" on the one hand, or "The Misfortunes of Celestine Florentina, Countess of Fiddle-Faddle," on the other. But very likely you will care for those standards of English literature, the works of Scott and Dickens.

A few years ago, to mention these last was to indicate a stupendous task to many, in the way of accumulating sufficient funds to purchase the books. Girls supporting themselves by their needle, and boys apprenticed to trades, very often had ten cents when they hadn't two dollars, consequently they bought what they could for their money—flashy weeklies. But now the productions of the brightest and wisest flood the country in a form as convenient and at a price as low as any of the trash-papers. So it is easy to read almost anything that one wants, or to send the same to young friends at a distance.

Having finished Scott and Dickens, you will find it but an easy transition to Miss Muloch and George Eliot. Among translations from foreign languages it would be well to revel among the fantastic creations of Jules Verne and the wonderful conceptions of Victor Hugo. It is scarcely worth while to spend any time over the constant stream of new novels regularly issued from great publishing houses, for out of twenty you will probably not find one worth finishing. Of all appearing within the last six months, I remember but two I would care to read again—"Sir Gibbie" and "Miss Margery's Roses."

Probably by this time in your reading you have met with extended allusions to certain things in the domains of science, art, philosophy, history, and so forth, which have opened your way for new and far-reaching trains of thought. Follow these up at your first opportunity, and *always* look out any name or date or circumstance mentioned. Your dictionary and encyclopædia thus will grow to be your right hand men. And so, before you know it, you will find that you are gradually accumulating an invaluable stock of general information.

You are now especially led, according to the peculiar bent of your mind, towards works on Botany, Geology, Architecture, Political Economy, and what not. Giving each one chosen the attention it deserves, you will suddenly wake up to the fact that you know just nothing, but that you have nevertheless reached a much higher intellectual state, and that you could not now endure the mental food upon which you once lived. Now you are ready for the solid wisdom contained in the fascinating prose of the writers whom I mentioned at the head of the article.

POETRY.

Talking of authors, what do you know of them? Well, unless you know something of them—their nationality, character, habits and, above all, the age in which they lived—you can't more than half appreciate their books. So you must begin and play the "Game of Authors" in earnest. And a priceless aid in learning of English writers, is Cleveland's "Compendium of English Literature," with its sequel, "Literature of the Nineteenth Century." These are better than the encyclopædia, inasmuch as they give an extended notice of each, with a specimen of his or her authorship.

If you like prose, you ought also to like poetry. You hear it said that this is a prosaic age, that fact is opposed to poetry, and so forth, but this is a serious error. The truth never wars against itself. Let the prose be true and the poetry be true, and all will be well. Besides you ought to love a thing for what it is. Love a rose because it is a rose, and don't think that you might cook it if it were a cabbage. Roses and cabbages have respectively their places, and keeping in them, antagonism between them is impossible. If you would truly love prose, I repeat, love poetry also.

Perhaps, I admit, you cannot right away. The distance between "Mary had a little lamb," and "The Drama of the Exile" is infinite. But don't attempt too much at once, neither settle down with too little. Take some volume of selections like Dana's "Household Book of Poetry," or Whittier's "Songs of Three Centuries," and read a small amount in your leisure moments, and I truly believe a love for the beautiful in thought, embodied in the beautiful in rhyme will grow upon you. Then you may profitably follow up your new pursuit in more extended works. You will like Longfellow probably, most people do. Whittier and Bryant, perhaps, you will soon learn to think even finer. Tennyson you surely ought to love, as also sweet Adelaide Anne Proctor, while much of Byron and Shelley you may profitably skip. The grandness of Milton and Dante, and the Brownings, require, for thorough comprehension, a certain maturity of mind, which, however, will be vouchsafed to the earnest seeker, amply repaying him for every effort.

There is extant a little book entitled "How to Read," which was published late last year. The hints given in it are valuable, but what I chiefly recommend it for, are its valuable lists of works upon every conceivable subject. These alone are worth more than the price of the book, one dollar. Those who have this at hand need no information of mine.

And I believe this is all I really have to say upon the subject of forming a correct literary taste, for, after all, such a thing is an individual matter. I might add, however, as regards periodicals, unless you are sure of your own judgment, turn away from all except those which you know to be thoroughly respectable—for instance, those noticed in the columns of your valued household journals. Remember, too, that you always have your Bible, which, aside from any sacredness generally attached thereto, is in itself, a model of literature—historical, poetical, philosophical—in matter, figure and language.

WHAT BOOKS TO BUY.

One word upon buying books. If you have but a limited sum to spend, lay it out judiciously. That is, don't buy a host of ephemeral volumes that you'll only read once, or at most twice, and so have nothing left for valuable books of reference that you'll always need. I have seen great bookcases piled full with "Jennie Ray" and "Annie Gray" and "Fair and False," and "Advice to Young Ladies," with nothing whatever in the shape of a dictionary, or gazetteer, or encyclopædia, or concordance. Be extremely cautious about buying from a publisher's circular. This is precisely the process by which your grandmother's garret came to be piled with a lot of musty tomes that are worth nothing now, and, but for associations, would ere this have been converted into kindling. No, if you have only one shelf, and the money to fill it, put there a Webster's Unabridged, an Appleton's or Chamber's Encyclopædia, a Lippincott's Gazetteer of the World, a Smith's Dictionary of the Bible, and, of course, a Bible—or perhaps the first two, and the last one alone—even if you never purchase another book as long as you live. What you have is and always will be,—in your day, at least—worth its weight in gold. Next, get some of the classics of your language,—Shakespeare and Milton and Chaucer and Spencer and Pope and Bunyan and Carlysle and Ruskin and Mill and Emerson and F. W. Robertson and Charles Kingsley. Afterwards, perhaps, Scott and Dickens and a few other popular novelists, but the supposition is that you have read them already, consequently don't need to own them yet awhile. Anything else you can always obtain, either from the library or your friends,—but you have no call whatever to possess a book at all, unless you really need it, or, upon becoming thoroughly acquainted with it, like it or love it well enough to want to keep it near you.

Of course, if you are well off in the world's goods, it is your duty to buy books largely, not only because with your abundance you ought to do all in your power to make trade good, but so as you will be able to lend to poorer friends—for lending books, within proper limitations, I think as much a duty as the dispensing of ordinary courtesy.

There's always a way to read, however. It used to be my boast that I had read everything, yet never owned a book. This would not be strictly true to-day, however,—still, exclusive of school-books, I have all told, only about eight, some of which are a dictionary, an encyclopædia, two testaments and a Bible. I have one novel, one little book of religious meditations, and one treatise on water-colors. Before you begin to pity me, however, sisters dear, let me tell you what a gentleman friend said to me upon my mentioning the scantiness of my library—a gentleman, by the way, whose culture and knowledge are something wonderful. He said, "I think your way's the best. I used to buy all the books I read,—and now I have a lot of useless lumber on my hands, and I wish I had my money back again."

Now another heresy (for most writers, I think would call it heterodox in me to advise economy, in book-buying—still, I know the world) *don't* read much. I think poring steadily over books one of the worst things a woman could do,—not only will it draw her attention away from present duties, but it is unhygienic. A walk or ride in the open air might do her more good in less time. I think more than an hour's reading at one sitting, unless in special cases, injurious, producing very often headache and lassitude. A strong, healthy woman may not feel it at first, but she will in time. Let her begin by being a bookworm and she will end by literally "reading herself out,"—that is, getting herself in such a habit of exhausting her strength, that the very effort of settling her thoughts upon a subject will grow wearisome, finally impossible. One hour in the daytime, with perhaps two in the evening, every day, is enough for any one, according to my belief and experience. The little gained then and well-digested, will be worth days of reckless devouring, and the interim between reading discontinued and reading renewed, will give opportunity to question and think and reason, and to return to the book refreshed and well able to continue:

WHICH IS WORTH MOST.

And, after all, I have learned, there are better things than books. Men lived and loved and suffered and achieved and died before books were known, and perhaps were as good and as happy as some of us are. The mirror is less than the image it reflects. The life is more than the meat, be that meat mental or material, though both kinds of meat are necessary. The grandest descriptions of natural scenery are less than the valleys and woods and mountains themselves; the most exciting of plots are tame compared to the intense comic and tragic in our own lives; the noblest of sentiments expressed in written language are far, far less than we may feel in the sorrow and suffering and love and hope and joy which we are all called upon to experience. Read, then, to help yourselves to live,—but never, as you value life itself, never sink living, actual living, in reading and thinking about living. Geometry is a science and books are useful, rightly to interpret it,—but geometry is independent of its interpreter, and its facts would exist were all the books relating to them blotted out forever.

So, I think, with all our reading, it is not so important what or how much we read, but how we show forth in our daily lives the benefit of what we actually do read. And more than this,—it is possible for us to live nobly, purely, even grandly if we never open a book,—though it is well to open many and often.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

INVALIDS CONVALESCENT.—CHAPTER 2.

MARY BEAL M'LOUTH.

In chapter first, the RURAL of July 26 made me say *crushed* coffee for invalids. It should read *crust* coffee. This is made by putting a crust, or pieces of bread, in the oven and browning slowly until the pieces look a rich color to the center. Pour boiling water over and let stand a few minutes. I could hardly recommend Java coffee for the sick, though some might drink it without realizing any ill effects. Pardon the digression.

I have often wished that some of the tired, over-worked, poorly-paid sewing girls in some of our cities might find their way into the country. But there seems to be some attraction—what, I cannot say—that binds them to such a life. The few in this country—and I guess the trouble is general—who can afford to hire, must, with a few exceptions, accept of young, inefficient help or none. The average farmer's wife, if she has any interest in the work—and if she has not, she has made a great mistake in marrying a farmer—begins life hopefully. She labors to her utmost strength, hoping for better times, though she knows not when they are coming, for she finds, as years roll around, her cares increase, and although it is sometimes true that every back is fitted for its own burden, there are many backs broken because of the burden being too heavy. And it is often increased by one's own false pride, in attempting to follow in the wake of dame Fashion. If all made their garments plain, sewing machines might be a help to those who are able to use them. But with their early appearance there arose a multitude of burdens heavier than all the previous ones; and these must be borne, or else one is excluded from society. Under the present administration sewing machines are sure destroyers of health, and those who value their future happiness—for what enjoyment is there without health?—must either lay them aside entirely, or use them in all moderation, getting along with less ruffling, edging, trimming, flouncing, shirring, fluting and stitching.

One curse to farming life is land. Nearly all farms contain more acres than the owners can cultivate *well*, which necessarily calls for much hired help. But greedy to own as much as neighbor so-and-so, farmers will buy more, keeping in debt, instead of putting their surplus means in improvements. And so their lives are worn out before their prime. I have known what it was to cook for a host of harvest hands in the hottest part of the season, and I set my wits to work to contrive some way to get out of it, and still not lose financially. Hiring so much, boarding the men, thrashing the grain, and driving nine miles to market, take off the profit. For my part, I was thoroughly sick of it; cooking for so many confined me to the house constantly, and I knew my health was failing. I had read of women going West doing *farm* work and gaining strength, and concluded their health was not renewed by going West, but by the farming. Perhaps with some the first and greatest trouble will be in getting their husbands to consent to any such plan. But fathers are generally glad of the girls' help, so girls had better learn before they get married.

All young ladies who have worn short dresses in practicing calisthenics, at school, realize how much more easily and quickly one can step so clothed, than when obliged to carry around several pounds of trail, with heavy trimming added. In short, make your working dresses loose, plain, short and as comfortable as possible. In repairing what has been a nice dress for every-day wear, the first sensible thing to do, is to cut off the back breadths of the skirt, so that they shall not be any longer than the front ones, and take off the trimming. Now, equipped for active labor, you must persuade your husband every morning to fill the large wood-box, and on wash days to bring tubs, benches and pounding barrel, with several pailsful of water. Teach the children to stand over the table or wood-box when eating fruit, and, above all, not to wipe their hands on their clothes or soil the table-cloth. They will learn very young to be tidy, but begin just as soon as they are weaned to teach them how—it's much easier than to break them of a habit after it is once formed. Our boy does not soil his clothes at the table one time in twenty, and has not used a bib since he was three years of age. But he has a napkin to wipe his mouth and fingers, and in giving sauce, or bread and milk, I give him fruit without the juice, and moistened bread—not bread swimming in milk.

If anything is spilled on the table-cloth, wash it out and always take care to fold it exactly as it was when first ironed. This to avoid large washings. Have a large apron for all dirty work; it can be easily slipped off, leaving you in a presentable condition, if your dress is short. Perhaps Mrs. Grundy might raise her nose a degree or two higher, but compare your condition with hers some morning after you have fed the lambs and chickens, and perhaps gathered some fruit. Her drabbled, long dress must be changed for a dry one, and perhaps washed, while you can go on in your employment without any interruption. Fold the sheets and the every-day under-clothes when they come from the line, and with a few shakes hang them on the bars to dry more thoroughly. You will be just as comfortable and sleep just as soundly as though you had worked a long time ironing. Heavy churnings are too much for any woman, so tell your husband that if he will churn this morning, you will dig a couple of bushels of potatoes. The children can pick them up, and then he can carry them into the cellar. Do not spend every moment you have to spare, scrubbing, cleaning, mopping and sweeping, using up the best of your life fighting that much-to-be-dreaded enemy, dirt; but take life as it comes, and, if friends call, tell them you have learned that "health" lives out-of-doors, and if you spend all of your time in a heated kitchen, you will never find it.

Chapter III. will tell you what a woman can do out-of-doors. And though I have seen some of the wealthiest who did not hesitate to do any work which came in their path, I have found others who did not possess fifty dollars' worth of property, who were afraid of soiling their delicate hands by physical labor.

DOMESTIC RECIPES.

Boiled Potatoes.

Wash the potatoes, leave the skins on and throw into boiling, salted water. When a fork will easily pierce them, throw in a small dipperful of cold water. Let stand two minutes, throw off the water and stand on the back of the stove, with the pot lid half removed, until the steam is evaporated. Take up, peel and send to the table in an open dish.

Gravy for Potatoes.

Put a spoonful or more of butter, according to the quantity of potatoes you have, into a frying-pan and set over the fire until brown, being careful not to scorch it. Mix a spoonful of flour in a cup of thin sweet cream—or milk, if one has no cream—pour into the browned butter, boil up, season with pepper and a little salt if necessary, and turn over the boiled potatoes. This is a very nice way to serve small potatoes. MRS. W. BIGELOW.

To Boil Potatoes.

Select those of about one size, wash very clean but do not pare. Put into a pan of cold water for an hour before boiling. In boiling use no more water than will cover them. The moment they are done, turn off the water and set the kettle on the back of the range with a cloth over the potatoes and the cover drawn to one side. After a few moments, take off the cloth, sprinkle a little salt over, put on the cover and shake up the potatoes. Let them stand with the cover on for a minute or so, then serve.

Saratoga Potatoes.

Pare the potatoes and cut into slices so thin that one can almost see through them. If for breakfast, prepare them the night before and let stand in a dish of ice-cold water. Just before frying drain them from the water and wipe them dry with a cloth. Fry only a few at a time in boiling lard as you would doughnuts. Before putting in the potatoes, separate the slices from each other and do not attempt to cook more at a time than you can keep separate. Tend with a fork, tossing them over and over until browned evenly and delicately. Take up with a skimmer and place on a sieve. Sprinkle with salt. MARY B.

Sweet Potatoes.

Boil the potatoes until tender, peel, cut lengthwise, put flat side down on a greased pan and place in a hot oven. As the potatoes begin to crust, baste with a little melted butter. Repeat until nicely browned.

Potato Soup.

Peel and boil ten good-sized potatoes; turn off the water and rub through a colander. To the potatoes add two quarts of boiling water and simmer for one hour. Then add two tablespoonsful of butter, pepper and salt to taste with a tablespoonful of minced parsley. Let boil up, then add two cupsful of hot, thin cream or rich milk and pour out. Serve with "crisped crackers." MRS. JAMES BAKER.

To Boil Potatoes.

Select and pare potatoes as near the same size as possible; throw into cold water for half an hour, then put into a sauce-pan and cover with *cold* water. When the water boils, check it several times by throwing in cold water—a little at a time—as the slower the potatoes boil the better they are. When tender throw off the water and sprinkle a little salt over them. Set on the back of the stove to dry with the lid off. Serve in an open dish.

ENGLISH HOUSEWIFE.

Potatoes and Onions.

Boil potatoes until tender but whole and cut into slices while hot. An hour or more before preparing this dish, dress and slice a few onions and let stand in salt and water. Put a little butter or drippings into a frying-pan, put in the sliced onions and cook until delicately browned. In a vegetable dish place the onions and potatoes in alternate layers, add a cupful of vinegar to the gravy in the frying-pan, bring to a boil and pour over.

Potato Pie.

One cupful of grated raw potatoes, one quart of sweet milk, three eggs, a little salt, sugar and nutmeg to taste. Let the milk come to a boil, stir in the potato, let cool, add the well beaten eggs and other ingredients. Bake with an under crust.

Potato Souffle.

Boil five good-sized potatoes, press them through a sieve. Bring to a scald half a cupful of milk with a spoonful of butter, add to the potatoes with pepper and salt and beat to a cream. Then beat the yelks and whites of four eggs separately, add the yelks first, one at a time, beating thoroughly, then the whites, just stirred in without beating. Turn at once into a buttered pudding dish and bake twenty minutes in a quick oven. The dish should be large enough to permit the souffle to rise.

MRS. HOPKINS.

QUESTIONS ANSWERED.

Crystallizing Grasses.

M. W., Poquonoc Bridge.—Dissolve 18 ounces of alum in a quart of soft water, heating it over a slow fire in a covered tin dish and stirring it occasionally with a stick until dissolved. When nearly cold, suspend the grasses to be crystallized by a thread from a small stick laid across the mouth of a deep glass or earthen jar into which the solution is poured. Let remain in the alum water 24 hours, take out and suspend in the shade to dry. The crystals will be larger if the solution is allowed to become almost cold before putting in the grasses.

News of the Week.

MISCELLANEOUS.

MONDAY, October 13th, 1879.

The National Miners' Association has ordered a strike for a 10 per cent advance in several middle district mines of Pennsylvania, and miners in the Clearfield, Cambria, Westmoreland and other districts are in the movement. All the miners in the bituminous coal region are expected to follow the national association's orders, and the strikers, now numbering 5,000, will probably soon increase to from 10,000 to 15,000. Mollie Maguire outrages in some of the lawless mountain regions are rumored, but the miners generally behave quietly. Where riotus demonstrations appear the authorities are preparing themselves for emergencies. Startling developments are expected.

The Supreme Court of Pennsylvania has rendered a decision holding the County of Allegheny in that State responsible for losses occasioned by the Pittsburgh riots of 1877. The suit was brought to recover the value of whiskey shipped at Cincinnati for Philadelphia, and destroyed *en route*. The Legislature of Pennsylvania in 1841 passed an act making the counties of the State responsible for all losses by mob or riot within their borders, and it is on this act that the decision is based. The counsel retained by the county made the point that the disturbances through which the loss was caused were not such as were contemplated by the law, but amounted to an insurrection spreading through several States. The court, however, disposed of this very speedily, and no one who remembers the disgraceful circumstances connected with the Pittsburgh riots can fail to recognize the justice of its remarks:

The Southern papers are considerably rejoiced that the consumption of their cotton-mills increased 26 per cent. during the past year and of mills at the North but 2 per cent. The whole consumption, 186,489 bales South and 1,375,384 North, was the largest ever known, though British consumption in the same time was smaller than in any previous year since 1869-70. The South is certain to manufacture still more of its cotton during the next two years, and the general introduction of Northern Alabama coal, which is rapidly driving Pittsburg coal from the lower Mississippi, is helping on the gradual establishment of cotton-mills in that section. Cincinnati, which has a quiet way of doing a big thing, is having an exposition, all by herself, whose attendance for the first 23 days has been 319,951; the paid admissions at the Centennial exposition for the first 19 days were only 378,930. A new oil region has been discovered in Trumbull county, Ohio, and one of its peculiarities is a well of the finest lubricating oil, near West Mecca, flowing five barrels a day, refined and ready for use on the nicest machinery. Speculators have leased 2,000 acres in the vicinity at enormous prices, for the oil brings $16 a barrel, while that of the Pennsylvania oil region brings less than 70 cents. The New York usury law whose faulty construction as to the date at which it goes into operation has led to long controversy, is clear enough in one particular—it makes it a State prison offense to lend a man money after January 1 next at any rate over 6 per cent., though it were to save him from bankruptcy. During last August 12,881 immigrants landed at New York, 60 per cent more than in the same month last year. Of the August immigration this year one-half was from England and Germany, in equal shares. A farmer attempted to cut into a premium pumpkin at a fair at Council Grove, Kan., to get a few of the seeds, but found it made of wood. It had taken many prizes at fairs for its weight, 230 pounds, and its circumference, seven feet.

"We see no evidence of any serious attempt upon the part of the local authorities to suppress it. At the time of its commencement a feeble attempt was made by the sheriff, resulting in the enrollment of some half-dozen deputies. But there was no proclamation calling upon the body of the county to come to his assistance in preserving the peace. No one doubts at this day that, if a proper effort had been made at the proper time, the mob could have been held in check." Pittsburgh's fire marshal, assisted by a committee appointed by the county officials, fixed the total loss of the riot at $2,832,918, of which $1,301,800 was property of the Pennsylvania road, $1,200,000 freight and individual cars, and 331,118 private property. The county tried to bribe the last Legislature to shoulder the debt on the State, but only succeeded in ruining a number of politicians with an itch for gain, and must now add the amount to its present debt of $1,750,000. This addition will increase the county tax about 31 per cent.

Enormous speculative transactions at the Stock Exchange still continue and have at length begun to attract general attention. The business in shares alone has averaged over 400,000 shares each day, and on one day the aggregate was 489,000 shares. A remarkable feature of this business, is that less than one-fourth of it is in stocks which pay any dividends. The fluctuations in prices, too, are as remarkable as the great number of shares which change hands. Although speculation is wild, and such reasons as there are for a recovery from the depression of the last five years are greatly exaggerated, yet the speculation is not unaccountable. The resumption of specie payments enlarged the currency, inspired confidence, and put the money market on the same basis as foreign money markets. Then the refunding of the public debt turned out of 5 and 6 per cent. U. S. bonds a great many millions of dollars, part of which returned to 4 per cent. bonds, and a part went into other securities paying higher interest. During the transfer there was a strong inducement for all who had speculative ventures to float to bring them out in the most attractive way. Refunding of the debt induced the Treasury to use its influence to keep money very easy, which helped outside speculations as well as the Government bond market. Following this refunding, with its direct and indirect influences, came the good harvests in this country and the short crops throughout Europe, and as the logical result of this came the importation of gold. Since August 1 nearly $39,000,000 of foreign specie, almost all gold, has arrived, and about $15,000,000 more are afloat bound for New York. Except for these specie imports the speculation which had been built on the favorable events of the early part of the year must have broken down for want of money facilities; but the gold imported has been sufficient to move the crops, to carry the new securities which have come into being by the million, to sustain the advance in the price of old securities, and to furnish bank facilities for the enlarged volume of mercantile business. It has, however, been barely sufficient; there has been nothing to spare. These are the main reasons why Wall Street and other departments of speculation are wild.

Rome wasn't built in a day, but Deadwood has been rebuilt in a day, or a few days at least, which is all the same. Merchants rehung their signs while the ashes were yet hot, and in more than one case the carpenters blistered their hands at work on new buildings in the midst of smouldering debris. In answer to a Chicago inquiry as to whether help was needed, an enthusiastic reply was shot over the wires as follows: "Ours is a land of gold. Save your money for Memphis. Deadwood is able to contribute to more needy cities." General Stoneman derides General Fremont's scheme for turning the waters of the Colorado into the desert basin of California and Arizona. He says that, presuming the connecting canal to be 1,000 feet wide and 10 deep, and running at five miles an hour, it would take 200 years to fill the basin. After being filled it would, he asserts, require an additional cutting of the same depth and 250 feet wide to compensate for evaporation.

Gov. Luke P. Blackburn, of Kentucky, has pardoned 37 convicts from the State penitentiary during the 34 days of his administration. By the way, there seems now no doubt but that this is the Doctor Blackburn arrested in Canada for conspiracy to introduce yellow fever into Northern cities during the war, by the introduction of infected clothing. Great damage has been done in various parts of the country by prairie fires. Owing to the severe droughts that have lately prevailed in most parts of the country, there is great danger from this cause in wooded and prairie regions. Near Wright, Texas, Thursday, white men called a colored woman and her two children to the door and shot them dead in cold blood. We are told that "the authorities are working faithfully to bring the murderers to justice." This is hopeful, certainly, as from the numerous cold-blooded murders in Texas recently one would judge there were no officers of the law in that State.

Capt Payne's command was rescued from the beleaguering horde of Indians by Gen. Merritt's forces last Monday. After leaving Rawlins, Merritt pushed rapidly forward over execrable roads or rather tracks accomplishing forty miles on the first day, the same on the second and *seventy* miles on the third during which he pushed on day and night. On his arrival the Indians withdrew after a slight brush, and a parley. They offered to surrender on condition that the troops would not advance to their Reservation, but declared that they would fight to the last man in case this condition were refused. It was refused; they are now reported to be fortifying all the hill tops lining the various routes to the Reservation. Sheridan has telegraped Gen. Merritt that he must insist on an unconditional

surrender as the only terms on which peace will be granted the "hostiles." Merritt is preparing to advance through a difficult country towards the Reservation at the head of about, 1,500 men. During the seige Payne lost only two men killed and a number wounded, in addition to the loss of Major Thornburgh, and those who fell with him at the outset. On the Friday before Merritt's arrival to relieve Payne, the latter had been joined by Capt. Dodge and his company of 40 colored cavalry. Dodge heard of Payne's predicament twenty-five miles away, and gallantly resolved at all hazards to make his way to his side. Accordingly, after a rapid march, he burst through the circle of surrounding red-skins, though with the loss of every horse in the company but three, and shared with Payne and his men the dangers of the rest of the seige. Much praise is justly given to him and his men for this chivalrous action. The news of the death of agent Meeker is confirmed, but the report that he was tortured is denied. A couple of Indians entered his office, grasped him by the throat, flung him to the ground and shot him dead. The employes of the Agency fled to a barn from which they offered a vigorous resistance, but the building was fired by the Indians, and as its occupants rushed out from among the flames, they were shot down. The women at the Agency were alive at last accounts, having been saved from outrage and massacre by Chief Douglas who also takes care of the children, money and papers, and hopes to make use of the white people in his charge as hostages, by whose means he expects to be able to obtain better terms finally, for the members of his tribe who have committed the recent outrages.

With regard to the walk for the O'Leary belt we have had here for the past week, a little fellow, 18 years old, named Murphy came in first with a score of 505 miles, beating all who at the outset were considered certain to be ahead. He comes from Haverstraw in this State, where he used to push a brick cart from one part of a brick-yard to another. The practice he had in moving about in this way got him $5,000 for six days' work last week, besides perquisities doubtless from those who won by betting on him. Well, the walk was a success for Dan O'Leary and the other fellows who got it up. Their expenses for paying the walkers, hiring the hall, etc., were about $25,000, and they took as gate-money, for hire of stalls, etc., about $50,000, leaving them about $25,000, to divide among themselves. Walking matches have become mere business speculations, and the sooner this gambling, rowdyish, disreputable thing is over, the better for public morals. After all, what are the best feats of these fellows on a prepared track, with music and applause, drinks, trainers and attendants, in comparison with Rankin's journey of 160 miles in 24 hours over a villainous country, with a possible enemy at every bush, with darkness half the time around him and nothing to cheer him on but the knowledge that his speed might save Payne's beleaguered forces?

FOREIGN.

The returns of the Prussian election which are just over, put the Liberals in a decided minority. The Liberals and Progressists together elected thus far number 135, while the Conservatives and Ultramontanes together number 246. There are 25 nondescripts outside these divisions. A majority made up of Conservatives and Ultramontanes may not be manageable, but in one way or another Bismarck will make it serve his purpose. He promises a reduction of direct taxes, the purchase of the railroads by the State, and a subsequent reduction of fares and freight charges by a reduction in the expenses of management. His visit to Vienna has been a great success. He was well received by everybody, and is said to have come to a thoroughly good understanding with Austria as to the course to be pursued in case of any further trouble in the East on the part of Russia. The agreement surmised here a couple of weeks ago, has been completed:—In the event of either Germany or Austria going to war with any other nation, the forces of both countries will be united for the defence of either. This object achieved, Bismarck has obtained from the emperor leave of absence for five months to recuperate, on condition that he shall still control any question of importance that may arise in the meanwhile. Andrassy, too, has retired permanently from the Ministry of Foreign Affairs in Austria, on account of ill-health from overwork. He has been succeeded by Baron Hemyrle, a friend of his, and secured the thanks of the emperor for the valuable services he has rendered the State.

There is little or no progress visible in the discussion of the land question by the politicians in England. The Liberals promise to take it up whenever they get into office, but nobody of note is willing to say what they ought to do. The discussion in the press seems to point to legislation removing some or all of the present legal restrictions on absolute ownership—that is, putting an end to entails under marriage settlements and wills, and perhaps forbidding mortgages; or, in other words, obliging a man when he wished to raise money on his land to sell some of it. This would gradually, effect a great change of ownership. Land would pass rapidly from the possession of needy, indebted men into the possession of men who could pay cash for it. But who would these men be? The Conservatives maintain they would be rich men owning large estates, because poor men could not afford to own property yielding so small an interest, and the Radicals that they would be peasants seeking small holdings. The Conservative view assumes, probably falsely, that land would not fall heavily in value if it were no longer possible to use it as an inalienable basis for family influence, social and political. If it did fall heavily it would pay a very good interest.

Anti-rent meetings are still the order of the day in Ireland. Yesterday one was held at Cavan, at which 30,000 people were present. The Irish land question seems just now to be attracting even more attention than the English; mainly, however, because the Irish are more demonstrative. "Don't pay a farthing of rent," seems to be the general advice, "and they won't dare to turn out all the farmers in the country, to say nothing of bringing starvation upon the multitude of laborers and their families depending for "praties and salt" on the neighboring farmers."

VARIOUS.

How old is Glass?—The oldest specimen of pure glass bearing anything like a date is a little molded lion's head, bearing the name of an Egyptian King of the eleventh dynasty, in the Slade collection at the British Museum. That is to say, at a period which may be moderately placed as more than 2,000 years B. C., glass was not only made, but made with a skill which shows that the art was nothing new. The invention of glazing pottery with a film or varnish of glass is so old that among the fragments which bear inscriptions of the early Egyptian monarchy are beads possibly of the first dynasty. Of later glass there are numerous examples, such as a bead found at Thebes, which has the name of Queen Hatasoo or Hashep, of the eighteenth dynasty. Of the same period are vases and goblets and many fragments. It cannot be doubted that the story prepared by Pliny, which assigns the credit of the invention to the Phœnicians, is so far true that these adventurous merchants brought specimens to other countries from Egypt. Dr. Schliemann found disks of glass in the excavations at Mycenæ, though Homer does not mention it as a substance known to him. That the modern art of the glass-blower was known long before is certain from representations among the pictures on the walls of a tomb at Beni Hassan, of the twelfth Egyptian dynasty; but a much older picture, which probably represented the same manufacture, is among the half-obliterated scenes in a chamber of the tomb of Thy at Sakkara, and dates from the time of the fifth dynasty, a time so remote that it is not possible, in spite of the assiduous researches of many Egyptologers, to give it a date in years.—[Saturday Review.

Majolica.—The name is derived from the Island of Majorca, where the Saracens established manufactories of the ware. Afterward the ware was imported into Italy, where it borrowed the classic forms and myths of ancient Greece and Rome. Hence it is at once domestic and refined in character, Oriental and classic; with the harmony of color of Chinese faience, the grace of ornamentation of the Persian and the Grecian classic simplicity and symmetry of form. It was famous for its lustre, but modern lustres are inferior in beauty to the old methods, especially the secret one which produced the golden lustre—a yellow color overlaid with mother-of-pearl.

Health is often impaired by the excessive use of tea or coffee. The strengthening qualities of Broma or Cocoa are known to the student, the invalid, and to the hard worker, the world over. To secure such in its greatest purity, ask your grocer for Walter Baker & Co.'s. This house has the highest reputation for its goods, dating back to 1780.

25c. buys a pair of Lyon's Patent Heel Stiffeners and make a boot or shoe last twice as long.

There are more cures made with Hop Bitters than all other medicines.

THE MARKETS.

PRODUCE AND PROVISIONS.

New York, Saturday, Oct. 11, 1879.

Beans and Peas.—The market for beans is firm and the local demand is somewhat checked by the strong rate asked for mediums and marrows. Exports for the week 1,675 pkgs, again including some for England and also some for the Continent. Green peas firm at recent advance. $1.55@1.60; Southern B. E. lower; $2.75 for 2 bu. bag. Canadian, nominal at 70c. Medium beans, $1.60@1.62½; marrow, new, $1.60@1.62½; other, $1.49@1.55; Pea, $1.60; W. Kidney, $1.60@1.65; R. Kidney choice, $1.55@1.65; poor or soft, $1.45@1.50. Black are in market but not regularly offered. Receipts 19,525 bush.

Beeswax.—Offerings are fair and demand slack; quoted at 23@32½c. for Western and Southern.

Exports past week, 8,625 lbs.

Broom Corn.—New is wanted, as the stock of old is well absorbed. Brush and short broom, choice, per ℔., 5½@6½c.; do., common to good, 4½@5½c.; hurl, good to choice, 4@5c.; do., common to fair, 3½@4c.; red and crooked, 2½@3½c.

Butter.—Receipts for the week, 30,785 pkgs.; exports, 17,000 do. A feeling of depression prevails in butter, and the sudden change from a brisk to a quiet market will be apt to injure prices. There has been more or less marking down in State all the past week, and best buyers are shifting their purchases from high priced creamery to the improved style of tubs, provided by the fall season. Exports look large, but unfortunately the mostly represent old business. Western holds up well in the new order of matters. Dealers apprehend an accumulation before the demand revives; still as stock is of a better keeping character than much that has been got rid of, the apprehension does not create much uneasiness.

Cotton—Has shown a fair export demand, and the market is generally steady. Sales at the close: October, 10.16@10.17c.; November, 9.95@9.99c.; December, 9.99c.; January, 10.09c.; February, 10.23c; March, 10.37@10.38c.; April, 10.54@10.55c.; May, 10.68@10.70c.; June, 10.82@10.84c.; July, 10.91@10.93c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

Cheese—Shipments for the week have been only 27,700 boxes. In the early part of the week trade was about at a stand, and the situation was nominal, but later the receipts were small and comprised little fancy stock, while the English markets were advancing, which served to strengthen shippers who became freer buyers and had to meet firmer prices on late made choice. Latest sales are of. Fancy at 10½@11c.; good to prime at 9@10c.; fair to good at 8@9c.; half-skimmed at 5½@8½c.; skimmed at 3@5¼c. State farm dairy: Fine at 9¾@10c.; good to prime at 8½@8¾c.; fair to good at 7½@8¼c.; skimmed at 3½@5½c. Wisconsin factory: Fine at 9¾@10c.; good to prime at 8¼@9¼c. Ohio factory: Cheddar, fine, at 9¾@10c.; do., fair to good, 8@9c.; flat, fine, 10@10¼c.; flat, good to prime, 9¼@10c.; flat, fair to good, 8@9¼c.; half-skimmed, 5½@7½c.; skimmed, 4@6c.

Liverpool cable, 50@50s. 6d.

Steam, 50@50s.

Receipts for week, 30,890 packages; exports, 32,000 do.

Dried Fruits.—Apples have a steady, fair inquiry, and are firm on most grades. Peaches are steady and in demand. Small fruits generally unchanged.

New North Carolina apples, 6¼@8c. for fair; 8¼@9c. for choice; 10¾c. for fancy sliced. Patent evaporated apples, choice, in cases, at 12c.; do. fair to good, 10@11c.; N. Y. State sliced, choice, 5@5½c.; do. quarters, choice, 4¼@5c.; western quarters, common and old, 3½@4c.; new southern quarters at 4@4¼c.; new N. C. peeled peaches at 14@17c., do. Georgia, at 12@16c. Peaches, Delaware evaporated, peeled at 22@26c.; do. unpeeled at 11@12c.; new halves at 7c. Blackberries at 9c. for new. Raspberries at 28@29c. Pitted cherries at 18c.

Eggs.—Receipts for week, 5,768 bbls.; do., last week, 6,641 do. The weather has been against sales and prices have weakened at the close. Prime marks only meet a demand. There is a light inquiry for limed for bakers' use.

Near points, 20c.; State and Penn., 18½@19½c.; Western and Canadian, fresh, 18½c.; off grade, 17@17½c. A few limed at 16c.

Flour.—An active business has been noted and prices well sustained.

Latest sales are at: $5.10@5.65 for inferior to fancy superfine State; $5.50@5.75 for ordinary to very good extra do., odd lots and lines; $5.75@6.00 for very good to verychoice do.; $5.10@5.65 for very inferior to very fancy superfine Ind., Iowa, Mich., &c.; $5.40@5.75 for inferior to very good shipping extra do., and $5.75@6.00 for good to choice extra do.; common to choice white wheat extras, $6.35@6.75; choice to very fancy do. at $6.35@7.50; red and amber winter wheat, inferior to very choice trade and family, at $5.65@7.00; round hoop Ohio at $5.50@6.00, and trade and family brands of do. at $6.10@7.00, the latter rate for very choice; St. Louis, $5.35@6.65 for inferior to very good extra; $6.75@7.50 for very good to fancy; Minnesota clear, inferior to very choice, $5.50@6.65; Minnesota "straight," inferior to strictly fancy, $6.00@7.25, and patent poor to very fancy at $6.15@8.50; unsound stock at from $4.25@6.50; city mill extra at $6.15@6.50, ordinary to very fancy, for West Indies; do. for Buckland, $5.50@5.75 for ordinary to choice; do. trade and family extras, $6.25@7.25; do. for South America, $6.50@6.75 for standard to choice brands; No. 2 at $4.35@5.10 for ordinary to very fancy (the latter an extreme for even winter wheat product).

Fresh Fruits.—Exports of apples 8,033 bbls. Low prices have brought out shippers. The weather has been severe upon tender fruit, and the retail demand, is runing largely upon fine pears. Extra hard showy apples, $2; good to prime, $1.37@1.50; poor to fair, 75c.@$1.25. Cranberries are lower. The supply of quinces makes a sudden pressure, hence the easier rates. Grapes have never had a period of such long, low ruling. All nuts have declined. Cranberries—Cape Cod, fancy, per bbl., $6@6.25; do., good to choice, $5.50@5.75; do., poor to fair, $4.50@5.25; Eastern, large round hoop bbls., fair to choice, $4.50@5.50; N. J., fancy, per crate, $1.75; do., good to choice, $1.50@1.62; do., light colored, $1@1.25. Pears—Duchess, per bbl., $2@3.50; Sheldon, $2@3.50; Virgalieu extra, $3@4; do., inferior, $@2; Beurre Bosc, $3@3.50; Beurre d'Anjou, $2.50@3.00; Beurre Diel, $@2.50; Seckel, choice, $3@4; do., inferior, $1@2; Cooking pears, $1.25@1.75. Quinces—Apple, State, choice, per bbl., $3.50@4; do., inferior, $1.00@2.50. Grapes—Delaware, State, 18 3-lb. boxes, $2.00@3; do., in baskets, ℔ lb., 6c.; Catawba, State, 18 3-lb. boxes, $2@3.50; do., loose, per lb., 4@5c.; Concord State, 18 3-lb. boxes, $1.25@1.50; do., in baskets, ℔ lb., 3@3½c.; do., up-river, bulk, ℔ lb., 2@3c. Isabella, State, 18 3-lb. boxes, $1.25@1.50; do., bulk, per lb., 2@2½c. Peanuts, Va. hand-picked, $1.50; do., extra prime to fancy, $1.20@1.30; do., good to prime, $1@1.15; do., shelled, per lb. 5½@5¾c. Chestnuts, $1.25@1.50 ℔ bush.; Hickory, shellbarks, 75c.@$1.

Grain.—The exports of wheat are not as large, yet have reached 2,000,000 bushels for the week; demand is liberal on speculative account, and the upward movement has made decided progress; latest sales are of No. 1 amber at $1.37¾@1.38; No. 2 amber at $1.33½@1.37; do., October option, at $1.37; ungraded amber at $1.31½@1.38¾; No. 1 white at $1.36½@1.37¾; do., October, at $1.36¾@2.37¾; do., November, at $1.38¾@1.39½; do., December option, at $1.40@1.40¾; No. 2 white, at $1.34½@1.35; ungraded white at $1.35@1.38; No. 1 red at $1.37½; No. 2 red at $1.37@1.37½; do., October option, at $1.37@1.38; do., November option, at $1.39@1.40; do., December option, at $1.40¾@1.41½; No. 2 red steamer at $1.35½; No. 3 red at $1.25@1.26; ungraded red at $1.30@1.36; mixed winter at $1.35¾@1.35½; No. 2 Chicago spring at $1.23; No. 2 Milwaukee at $1.30; New York No. 2 spring, at $1.27@1.28; do., October, at $1.28@1.28½; do., November, at $1.32; No. 2 northwest spring, November option, at $1.20½; ungraded spring at $1.19@$1.22½; No. 3 spring at $1.23@1.25½. Rye at 52@53c. for Western. Corn is active and firm in price; sales of New York No. 2 No. 2 at 55c.; do., October, at 55c.; do., November, at 55½@56c.; do., December, at 56½c.; steamer mixed for October at 54½c.; ungraded Western mixed at 55@55½c.; No. 2 white quoted at 62@63c. for car lots; round yellow at 60c. Oats are rather more in favor of buyers; sales of New York No. 1 white at 43c.; New York No. 2 white at 40¾@40½c.; New York No. 3 white at 38½@39c.; New York No. 1 at 40c.; New York No. 2 at 39@39½c.; New York No. 3 at 38¾@38½c.; New York rejected at 37c.; ungraded white Western at 38@46c.; mixed Western at 37½@41c.; white State at 41@43c; mixed State at 40@41c.; No. 2 Chicago at 40c.

Hay and Straw.—There is a very fair inquiry and prices generally steady.

Shipping hay quoted at 50c.; retail lots at 50@60c. for medium, and 70@80c. for prime; clover at 35@45c. Straw at 60@90c. for long rye, 40@50c. for short rye and 40@45c. for oat.

Exports for week, 579 bales.

Honey.—Receipts are free, but the offering is not large at the prices. White clover comb, single, 15@16c.; larger boxes, 12@14c.; buckwheat, 10@12c.; clover extracted, 10@12c.; strained, 8@9c.

Hops.—Emmet Wells in his weekly circular says: "The extreme firmness which has characterized the market for the last three weeks has culminated in an advance of 1@2c. per ℔, on new hops, 37c. now being obtainable for a choice article. The receipts show a heavy increase over last week, while the shipments have fallen off considerably. Scarcity of freight room is the cause assigned for the small exports. It is now quite evident that England will take every bale of hops that we can spare, and will do so provided we do not run our prices too high, for every mail we receive brings more and more discouraging news from the English hop plantations. The yield is not only coming down much below early anticipations, but the quality is very deficient. England can get but little help from Germany, for that country will want all of the hops they have grown for their own use. The market closes very strong, with a fair prospect of a further advance within a day or two."

Quotations are for New Yorks, new crop, 30@37c.; Eastern, new crop, 30@35c.; Wisconsin, new crop, 30@36c.; Yearlings, growth 1878, 7@18c. Olds, all growths, 4@10c.; Pacific coast, growth 1878 (nominal) 9@14c.

	Bales.
Receipts for the week	7,519
Total receipts since September 1, 1879	21,215
Total receipts for same period in 1878	5,069
Export clearances for the week	2,024
Total exports since September 1, 1879	16,125
Total exports for same period in 1878	1,006

Oil-Cake.—Western is quoted at $28.75 per ton.

Poultry and Game.—Moderate supplies of game have made the market better for sellers. Parcels, however, must be really prime to bring our ex reme rates. A good many lots have suffered from the recent warm spell and some have proved a complete loss.

Partridge, State, 50c@1. per pair. Western, 50c.; grouse, 50c@1; woodcock, 50@60c.; wild pigeons, $1.25@1.50 per doz. Snipe not wanted; $1.50 selected. Red head ducks, 70c. per pair; mallard, 60@70c.; other, 30@40c. the latter for Teal. Reed birds, $1@1.25 per doz., other small birds, 20@25c. not wanted. Venison saddles short, 12@15c.; whole deer, 10c.

Dressed poultry from distant points has turned out badly, and for that matter some lots of State have been rejected. Near points in limited demand and likely to be until the weather changes.

Turkeys, Phila., dry-picked, 13@15c., State and Western, 12@13c. Young, 12@13c. Chickens, Phila., 15@16c. State and Western, 11@13c. Fowls, dry-picked, Phila., 13@14c.; State and Western, do., 11½@12½c.; scalded, 10@11½c. Spring ducks, 14@16c.; other, 10@13c. Young Phila., geese, 12½14c.

Live chickens of good size are selling well. For fowls the demand is fair; almost summer weather having given city killers continued business. Turkeys mostly common. Prime ducks wanted. Chickens, N. J., 11@12c. State, 11@11½c. Western, 9½@10c. Fowls, N. J., 11c. State, 11c. Western, 10@10½c. Roosters, 6@8c. Turkeys, 10@12½c. Ducks, 40@70c. per pair. Geese, choice, $1.37; other, 87c@1.25.

Provisions—Are generally higher with an active trade. Mess pork closed at for October at $9.90 bid and $10 asked; November at $9.90, and the December option at $9.80@9.90; January at $10.40 bid for new. Lard—Western steam at $6.50@6.52½ for spot lots; $6.50 for Oct., $6.20@6.22½ for November and December. Stearine at 6¾@6¼c. Tallow at 5¾@6¼c. Beef Hams at $14.25@14.50. Beef at for plain mess at $10.25@11; extra mess at $11@11.50; packet at $11.50@12; tierced beef, city extra India mess, at $19@22; and Philadelphia do., at $13@13.50,

Seed—Timothy is quiet at $2.15@2.25. Clover seed at 7¼@8c. for choice new Western.

Tobacco—The home demand is very good, but export trade slack. Prices are essentially as last week.

Vegetables.—Exports past week, 8,250 bbls potatoes. Supplies are heavy and the market is unchanged. Early Rose, State, double-heads, $1.25@1.37; in bulk, $1@1.12; Peerless, do., $1; Peachblows, $1.50. Sweet, Del., $1.62@2; N. J., $1@1.25; Va., $1@1.50; cauliflower lower. Green corn, per 100, 25@75c.; tomatoes, Long Island, near-by, per crate, 20@30c.; string beans, ℔ bag, 50@75c.; potato Lima beans, $1.75@2; Lima beans, flat, $1.25@1.50; do., shelled, bu., $4.50@5; squash, marrow, ℔ bbl., 50@75c.; do., Hubbard, $1@1.25; cabbage, per 100, $2.50@3; onions, white, per bbl., $1.75@2.50; red, Eastern, $1.50; do., Chester, $1.25@1.50; yellow, $1.50@1.75; beets, N. J., 75c.; Russia turnips, Jersey, 50c.@$1; carrots, 75c.@$1; egg plant, L. I. and near-by, ℔ 100, $4@8; peppers, bullnose, ℔ bbl., $1.35@2; pumpkins, per 100, $2@4; Cauliflower, ℔ bbl., 75c.@$2.

Wool—Has continued in active demand on wants of manufacturers, and prices have hardened. Sales of X and XX Ohio and Michigan at 39@43c.; State at 38c.; medium Ohio at 40@43c.; heavy, fine, unwashed Western at 22@23c.; low Western combing at 42c.; spring California at 25½@32c.; Texas at 25@28c.; scoured Texas and Colorado at 57½@70c.; Colorado at 23@25c.; Oregon at 28@30c.

LIVE STOCK MARKETS

New York, Saturday, Oct. 11

Beeves.—Receipts for the week, 11,004 head; do. last week, 10 255 do. The week has been an unsatisfactory one for sellers. Sales were slow and only followed long bargaining. Some stock unsold at the close. Ordinary to fair Texas and Cherokee cattle, 6¾@6¾c. dress 55 lbs.; Colorado, 6¾@7¼c.; poor to good native steers, 7@8¾c.; prime to extra, 9¼@9¾c. dress 56 lbs.; very fancy, 10@10¼c. Exports very light.

Cows and Calves.—There are no new features old prices are named, few lots or single cows worth $45.

Veal Calves.—Choice calves have been scarce and the market is firm. Extra 7c.; choice Buck's Co., 6¾@6¾c., prime State, 6@6½c.; poor to good, 4@5¾c. Buttermilk, 3@4c.; grass, 1¾@2¾c.

Sheep and Lambs.—Receipts for the week, 30,579 head; do. last week, 30,308 do. There has been a fair demand for prime sheep, but the offering of that class was not liberal. Very common sheep sold down to 2¾@3c.; extras, 5¾c.; good State, 4@4¼c. Lambs in good demand, Western, 5c. State and Canadian, 5¼@6c.

Swine.—Receipts for the week, 33,756 head; do last week, 29,331 do. Live hogs been wanted at $3.90@4.40. Trade has been slack in N. J., owing to the warm weather, 40@70 lbs., 6¾@7c.; 70@100 lbs., 6¾@6¾c.; 100@150 lbs, 6@6¼c.; 150@200 lbs., 5¾@6c. City dressed, 5¾@6c. Pork tenderloins, per lb., 8c.

Reading for the Young.

AT THE BOTTOM OF THE SEA.

If we had fish nature enough to take up our abode in the ocean and for some time explore the hidden recesses of the deep, we should no doubt meet with some very singular creatures. The forms of life, both of plants and animals, would be more strange by far than any to be found on the land, and we should likely discover wonders that are now unknown, and perhaps forever will be. Deep water can only be explored by sinking a heavy instrument that will grasp and carry up a portion of the mud from the bottom, which is then examined and conjectures made of life in the deep from what small animals and shells it may contain. But much as there is yet to be learned about life in the water, a great deal is already known. Many curious animals have been studied and classified according to the rank they hold in the animal kingdom.

The engraving is designed to show a quiet nook between the rocks at the bottom of the sea and the inhabitants that people it. The animals here seen belong to the class known as Echinodermata, which includes sea-urchins, star-fishes, some animals which are attached to a stem and fixed to a rock like a plant, called Crinoids, or feather-stars and many others. The broad five pointed body towards the top of the picture is one of the common star-fishes very often found on the sea shore, and vary in size from one inch to a foot across. It differs from the two snake-tails, or brittle-stars with their five long arms, seen just below, mainly in that the stomach of the star-fish is prolonged into the arms while the long arms of the brittle-star are merely limbs for locomotion and does not form a so necessary part of the body.

In star-fishes the mouth is situated in the center of the body on the under side of the surface. They live on all kinds of small animals that they catch, but not being rapid swimmers themselves they seldom succeed in making prey of anything but snails and other shellfish, that are still slower in their motions. When their prey is so placed that they cannot get the mouth around it, they have the power of extending the stomach out of the body and throwing it around the victim. The bulky, cucumber-like body near the bottom, is one of the animals commonly known as trepangs, or sea-cucumbers. As a rule, the skin of these is leathery and often covered with scattered spines. They move along by twisting and contracting their bodies like worms. The tuft of feathery ornaments at one end of the body are tentacles which surround the mouth and help to catch the food. These animals are rare and can only be obtained by dredging in deep water. Some of the tropical forms attain a large size and some are largely sought after to be sold to the Chinese who regard them as a delicacy. UNCLE MARK.

LETTERS FROM THE COUSINS.

DEAR UNCLES AND COUSINS:—Uncle Mark, I thank you very much for the radish seed and corn. The radishes were the best I ever ate, but I cannot judge of the corn, as it was so late when I received it, that it did not grow much. My sister saved her seeds for next year, in case mine should not ripen; it was well she did, for none of mine did ripen. I have charge of all the seeds from the RURAL, and I had just helped to plant them when I wrote last. The watermelon seeds were overlooked and forgotten until it was too late. Deutzia crenata and Callicarpa Americana did not germinate. Three of the Yucca filamentosa came up, but are so small I fear they will not live through the winter. The tomatoes, Ricinus and Hollyhocks grew finely. I planted the Vitis with the Clematis and Maurandia in a box and set it where I thought it would be out of the reach of the hens, but, of course, they did get into it, while I was at school, and dug them all out. From the small potato sent, about eighteen pounds of large mealy potatoes were raised. Father says they are the best he ever raised; he tells every one about my splendid new potatoes.

Anna has brought in her plants for the winter; they are looking better than ever before. She tried the soil recommended in the RURAL, for Geraniums and Heliotropes instead of the soil she generally uses, and finds it is much better. I have an orange tree three years old. Will it ever blossom in this climate? Is it necessary to bud it? Do Balm and Rose Geraniums blossom?

Why does Ivy think I failed to do justice to Hawaii Nel's letters? I think they were very interesting, and I would like to see more as good. If I cannot write anything interesting I like to read good letters. I almost won a volume of poems, last winter, but almost isn't quite, and so I lost it. The winner was to select the author. I think I should have chosen Longfellow. When I first read Jean Ingelow's "Story of Doom" I did not like it, but after reading it again, I like it very much.

Our school presented the teacher with a volume of Tennyson's poems or rather money to buy it, as there was not sufficient time for us to procure it before the close of the term.

> Kindness to any is ne'er thrown away,
> God will remember us for it one day.

In my last letter my name was printed WISE. If there were anything in a name I should wish it was mine, as I am *very* far from WISE, and instead am a very ordinary and useless WIRE. Wires are a very necessary and sometimes ornamental article but I am an exception. Now, please don't try to make people think I am wise, this time, Mr. Compositor if you please. LENORA WIRE.

[The Orange will blossom in this climate; of course it must be grown in a tub and kept indoors in the winter. It is not necessary to bud it, but it will probably be the better for it. You can bud it with the Sweet-scented Orange. Balm and Rose Geraniums do blossom.—U. M.]

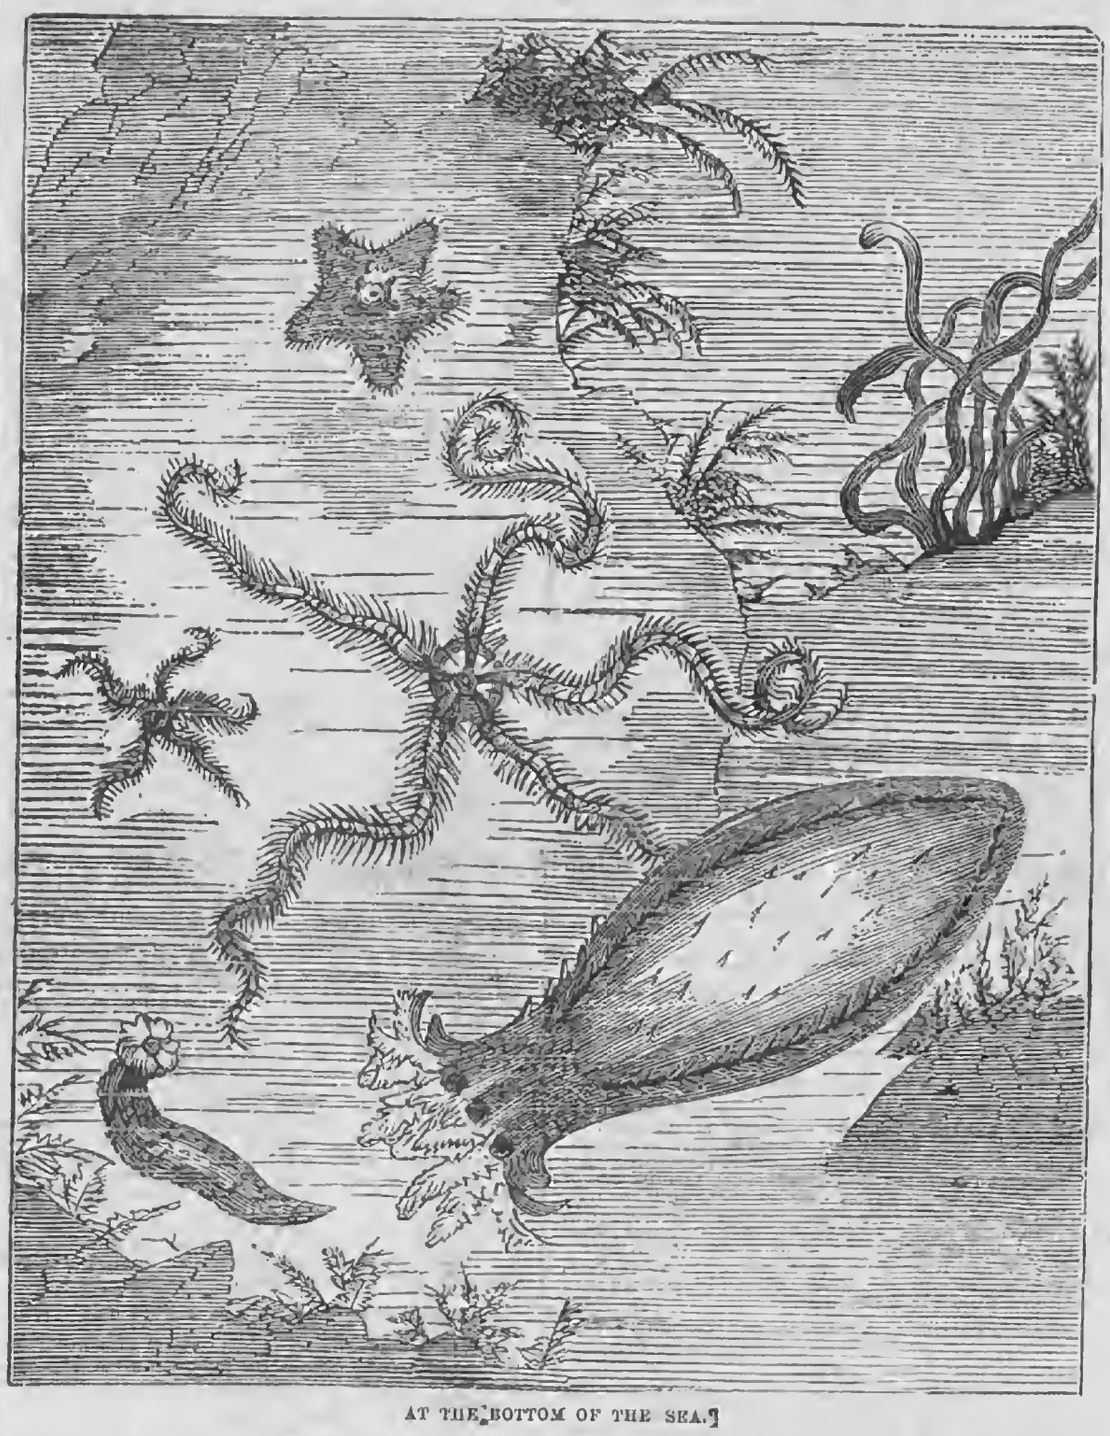
DEAR UNCLE MARK:—I ought to have reported before now, but have found so little time to write this summer, that it was impossible to do so. One of my chief duties was the charge of the chickens and in hot summer weather when they need almost constant attention and care, between them, housework and the garden, not much spare time was left. I am afraid I cannot make as good a report as some of the cousins, for the weather was so unfavorable here. My plants could not grow as fast or be transplanted as early as they should have been. Some of my seeds did not come up and those that did were so parched they could not grow. Neither my Callicarpa nor Dutchman's Pipe seeds came up. Do either of them require any special treatment? The Aquilegia came up nicely, were transplanted in good time, and were growing well when papa hoed them up. Where can I get more seed? The Pansies are beautiful. I love Pansies. Every face is so loving and at the same time so mischievous, that how any one can look at them and not notice their dear little human faces, I can't imagine. To me they seem to have just been to a funeral and while they still wear their mourning garments, they are laughing. Our Pansy bed is situated in the lower part of our garden, the soil is a rich black loam, and they seem to thrive well in it; one of the Pansies now before me measures two inches across both ways. The Petunias and Pinks came up well and are very fine. I have two strong plants of Hibiscus alive. Does the seed of the Variegated Vine need special treatment, also the seeds of Leavenworth's Eryngo? Neither came up. I did not try the Mimulus as I could not give it the right treatment. The Phloxes are very beautiful. The Dolly Dutton corn and the radishes were very nice. We think the Christina melon the best muskmelon we ever ate. The strawberry bed has done pretty well, but it needs weeding just at present. But I must close now, my letter is too long already.

Yours sincerely, MINNIE S. WHITE.
Erie Co., N. Y.

[This is a very creditable report. Though Minnie has not met with a brilliant success, I think I can say that she takes a deep interest in her garden, and where the interest is success is sure to come. Neither of the seeds mentioned need any *special* treatment—U. M.]

DEAR RURAL COUSINS:—I once more take my faithful pen in hand to write you a letter, hoping to interest you a few minutes in a brief description of Ivy's Rest. This place is situated in a most beautiful valley in the southern part of the Excelsior State, near one of the many tributaries of the grand old Hudson. Our scenery is indeed delightful. We are surrounded on every side by the giant old hills, which serve as a protection from the winter storms, while further west we see the dark, gray mountains towering in the distance, dotted here and there with large and no less beautiful summer resorts. Seen in the dull, gray twilight of evening, these look like some huge Castles of which we read in the legends of old. Fruits and milk constitute the chief products of this region for the export of which the railroad (one of the many links of civilization) proves a great benefit to our people. Autumn is here, and cruel Jack Frost has already visited different parts of our town, and our forests are now assuming a golden aspect; the Ivy (what relation) as it clings closer to its friend the old Oak tree, alone retains its natural color, but it, too, must soon yield to King Winter's chilly embrace, only to start again in the coming spring, and so continue on its course, onward and upwards, long after I, its lover and namesake, have left this world of joy and sorrow, and I trust that God will pilot me (and all the cousins) safely through life's journey, as he does the Ivy on its course. I sympathize with the Two Sisters in regard to their loss; they will please to come again, as I like their letter very much. It would also please me much to see another letter from Wild Fern. She would write if she only knew how I value her letters. Now, Mr. Editor, I will close, thanking you for the space allotted to my last letter, and trusting you will see this safely by that much dreaded place, the waste-basket.

Once more, Adieu, IVY.
Ivy's Rest, N. Y.



AT THE BOTTOM OF THE SEA.

DEAR UNCLE MARK:—I would like very much to join the Horticultural Club. I would be very much pleased if you would place my name upon the list. I have not a very large garden of my own but have a couple of flower beds. I have some Petunias, Phlox and Zinnias. I live in the country and my father is a farmer. I don't think I should like to live in town at all. May be I would if I were used to it. This being my first letter I will shorten it some. If it doesn't find the waste basket, perhaps I will write again. I am thirteen years old.

Williams Co., Ohio. MARY SCHAEFFER.

P. S. I forgot to say that the corn you sent to papa (Blount Corn, I guess) is ten feet high and very heavy. Almost every stalk has four or five ears, and some more than that. But it is so slow getting ripe that papa is afraid it will get killed by the frost. The Acme tomatoes are splendid, we got more than ten bushels from our vines. M. S.

DEAR UNCLE MARK:—Seeing there are so many little girls joining your Horticultural Club we concluded we would send our names. It has been so dry that our flowers did not do well this year. We have Balsams, Verbenas, Asters, Zinnias, Star Flowers, Portulaca, Cannas, and several other kinds. In the spring we have a great many flowers. We dearly love flowers and think it a great pleasure to attend to their wants. We also have a little garden for vegetables, but they did not do well, perhaps because they were planted rather late in the season, besides, the summer was so dry and we all went to school, so we could find no time to water them, but we hope to have better success another year. Yours respectfully,

Spencer Co., Ky. BARBARA & LIZZIE POUND.

DEAR UNCLE MARK:—I wish to join your Horticultural Club, if you will be so kind as to take me in. Mamma and I have a great many flowers; we have three hundred and twenty-five pot plants and a great many in the yard and garden. We have twenty-four varieties of Coleus, sixteen varieties of Begonia, twenty varieties of Geranium and six varieties of Cactus. We have six hanging baskets and a great many other varieties of pot plants. I will write no more at present but will write again, if I see this published. I am eleven years old.

Warren Co., O. EVA M. DAWSON.

DEAR UNCLE MARK:—I have long had a great desire to join the Horticultural Club, and now wish you to place my name on the list. I did not have many flowers this year, but will try and have more next year. I will write no more now, but will try and write again, if I see this in print. I am twelve years old. RETTIE CLARK.

Cayuga Co., N. Y.

DEAR UNCLE MARK:—I thought I would write and ask you to accept me as a member of the Horticultural Club, I am very much interested in the culture of small fruit. I am about setting out a small strawberry bed of three or four hundred plants, which I hope will prove a success. I set out a bed last fall but they winter killed badly. With kind wishes to all the RURAL Cousins. I will close. Your friend,

Chittenden Co., Vt. W. H. RAND.

Sabbath Reading.

"THE CHRISTIAN LIFE A GAIN."

BY HENRY WARD BEECHER.

THE day is largely gone by—certainly with us—in which the entrance upon a Christian life and the prosecution of it are beset with such difficulties as they used to be when I was a child, and as they still are, I suppose, in some communities. There are a great many who seem to feel as though complying with the requirements of the phrase, "giving up all for Christ," was to be a process of plucking off; as if it were the duty of everyone that is going to be a Christian to throw down everything and give up everything.

I think there can scarcely be any phrase that is worse adapted to give a true conception of duty in Christian life than that. For entering upon a Christian life, so far from being a process of giving up everything, is a process of gaining everything.

Is a person called to give up bodily health? It would be a great sin to do it. In some churches and by some teachers fasting and maceration, and mortification of the body, are thought to be great duties. Christ did not think anything of the kind. He laid no such injunction upon any. On the other hand, to seek vigorous health, a good condition of the body, is our duty to ourselves, to our God and to our fellow-men.

Are we called to give up any of our friends—father or mother, brother or sister, husband or wife? If the time should come when by reason of persecution or revolution there should be the choice forced upon us either of abandoning father or mother, brother or sister, husband or wife, or of taking Christ, under such circumstances we must take the greater, but this choice is not forced upon a person once in a generation, or in a hundred years; and when one becomes a Christian, so far from giving up friends, he takes them in a dearer manner than he has ever done before. Love ought to be deepened and made more delicate and more heroic by piety. When one enters a Christian life, so far from losing home, or the flavor of home, he comes to have an increased attachment and relish for home. There is a power in true piety which is able to make home shine as it never did before.

Well, must the scholar give up his study, and the mechanic his labor, and the husbandman his toil, on entering a Christian life? Why, no. "Diligent in business" is the command of God; and in every rightful calling we are serving not ourselves alone but the whole community; and we must not give up that service. When a person becomes a Christian he is not called upon to abandon his occupation or industry—very far from it.

Well, are we to give up good spirits and laughing cheerfulness when we become Christians? No. On the contrary, we are commanded to rejoice; and the scope of the command is so great that if the earth were to forget to bring forth, and everything were to fail, the prophet would yet rejoice in the Lord; and the New Testament echoes it. Not only are you to rejoice if you have animal spirits that are buoyant and cheerful, but you are to rejoice when the circumstances around about you are not favorable to joy. You are to rise, even in the darkest places, into such an atmosphere that you can rejoice in God, if you do not rejoice in the things that surround you.

Well, what do you give up? To be sure, if you are pursuing any disreputable course, if you do anything that is mean, if you are indulging in any vice or crime, that you give up; and you ought to be willing to give it up. Nobody ought to call it a sacrifice to give up that which is wrong. Everything that is right you are to keep. "Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report, think on these things," the apostle says. Hug them, as it were, to the soul.

When, therefore, a man enters a Christian life he enters upon a nobler life, a truer life, a purer life, a more loving life.

Throw away, therefore, I beseech you, every conception of the Christian life which represents it as a life that requires you to give up everything. You that are old in the Christian life, never say again, "Give up all for Christ." Rather look upon the Christian life as a life by which you are to inherit all, to take on all, to be more joyful, and to be stronger, with an increased desire for things that are beautiful and good.

The Christian life requires that one should lay just so much violence on himself as to make that straight which is crooked, and that right which is wrong, and to overrule selfishness and vanity, and subdue everything which prevents harmony, and establish perfect joyfulness in himself.

Blessed is he that enters into the service of the Lord Jesus Christ, and that has the spirit of Christ in him, and that day by day, at home, at school, in business, in pleasure, in social relations, everywhere, has the consciousness that he is walking in the spirit of Christ, in the love of Christ, in the presence of Christ, and with the influence of Christ upon him.—*Boston Advertiser*.

As one who carries gunpowder would not wish to be where sparks are flying, lest he should be destroyed; so should we carefully avoid such places and company as may lead us into sin.

PERSONAL ITEMS.

Ex-Doorkeeper Fitzhugh who was "a bigger man than Old Grant," is now doorkeeper to the Texas Legislature.

At the solicitation of Dr. Kenealy, the Tichborne claimant, has consented to contest the representation of Nottingham at the next election.

So good a man was Indian Agent N. C. Meeker esteemed by the people of Colorado that all through the State they spoke of him as "Father Meeker;" and yet his goodness didn't save him from the murderous hands of the Utes.

In the court at Mount Vernon, Ill., a few days ago, the anger of the prosecuting man, John Slaughter, ran so far ahead of tardy justice that he drew a revolver and killed Robert Wilson, the defendant.

Moltke's sister married an Englishman named Burt, whose daughter, by a former wife, became the Marshal's wife. She was 16, he 39. It was a thorough love match. Moltke has a fine estate in Silesia, to which he is greatly attached.

Prof. Swing, the noted Chicago preacher, hopes returning good times will not bring back the old rage for property which created frequent mortgages. "They are," he says, "a pestilence under which estates die, and churches sicken and have to be sat up with at night."

The Princess of Wales, altho' she left Denmark nearly twenty years ago, is still as great a favorite with the Danes as in her girlhood; they always welcome her visits with immense enthusiasm. The Copenhageners used to call her by the pet name "Olestenen"—"The apple of our eye."

General Passenger Agent Farmer, of the Pennsylvania Railroad Company, after a four month's vacation for the benefit of his health, has resumed the duties of his position. We are glad that one farmer at least can afford to take a four months' holiday trip, even for the sake of recuperation!

Queen Victoria once signified to Viscount Macduff, now Earl of Fife, that she would not be unwilling to have him for a son-in-law. He is not yet 30, was schooled at Eton, has eight residences in the Highlands, and is warmly spoken of by all classes. His four sisters are ladies of extreme beauty, but have not all been enviable in their wedded life.

Among the persons who pressed forward to shake hands with President and Mrs. Hayes at the depot in Parsons, Kansas, recently, was a Mrs. Slaughter, who lives near Altamount. Before Mrs. Hayes had taken the lady's hand she exclaimed: "Why, Amanda, where in the world did you come from?" Mrs. Slaughter was a schoolmate of Mrs. Hayes, but had not met her since her marriage, many years ago.

Miss Jennie Flood, who, according to report, is betrothed to U. S. Grant, Jr., is the only daughter of James C. Flood, the head of the Bank of Nevada, and next to Mackay, the richest man on the Pacific slope. Miss Flood is about twenty-four years old, has dark brown, luxuriant hair, blue eyes, full face, beautiful teeth and a tall, handsome form. With the exception of a brother, who has been feeble since childhood, she is an only child. She was educated in a convent, and is an accomplished, amiable, practical girl.

Major Thomas T. Thornburgh, of the Fourth United States Infantry, who was killed by Indians in the action at Milk Creek, Col., September 29, graduated at the Military Academy at West Point in 1867. He had previously served as a volunteer in the army during the rebellion, and was in several engagements. His first commission was as Second Lieutenant, Second Artillery. He served in California and Alaska, and in 1871 was detached as Professor of Military Science at East Tennessee University. He afterwards served in Texas, Nebraska and Wyoming.

Ex-Governor Throckmorton was defending a murderer the other day, at Gainesville, Texas. He desired to convince the jury that the man whom his client killed, although in his shirt sleeves and without a pistol pocket in his trousers, might still have been armed. The lawyer had prepared himself to illustrate his argument. Taking off his coat and standing before the jurors, he said, "Can you see any sign of arms about me?" They shook their heads. Then he drew a pistol from under each arm, one from each boot leg, and a long knife from the back of his neck.

The cook of Emperor William is a fickle Parisian, with whom his Majesty has had several quarrels since the Franco-German war, owing to the cook's irrepressible patriotism. Several times he has been discharged, and each time taken back into favor, owing to the imperial love of the French cuisine. After the last scrimmage the chief offered to return on the following conditions only: "Majesty, if I am not allowed my liberty in the kitchen, I shall leave your service and for the last time, because neither my health nor my peace can stand this incessant wrangling!" The Emperor smiled and submitted, being really attached to the chief, who has been with him for many years, and has grown rich.

The Hon. and Right Rev. Monsignor Stonor has been proposed to the Holy See and accepted for one of the new English Roman Catholic Bishoprics. Monsignor Stonor has been President of the English College at Rome, and is well known to English-speaking visitors for the amiable manner in which he performed toward strangers the duties of assistance formerly performed by the Hon. and Rev. Monsignor Talbot, the convert brother of Lord Talbot de Malahide. Monsignor Stonor is a son of the aged Lord Camoys, for many years lord in waiting on the Queen, and his now eldest brother Francis is married to the second daughter of the late Sir Robert Peel, who is a lady in waiting to the Princess of Wales.

When the brain is wearied, the nerves unstrung the muscles weak, use Hop Bitters.

New Publications.

New Operas!

Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.

Fatinitza. Opera by Suppe.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.

Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15.

Bells of Corneville. By Planquette, (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling well, for 50 cents) and who are looking out for new and easy operas.

Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple**, each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record**, published weekly. It keeps you well posted as to musical matters, gives 6 or 7 pages of music per week and costs but $2.00 per year!

OLIVER DITSON & CO., Boston.

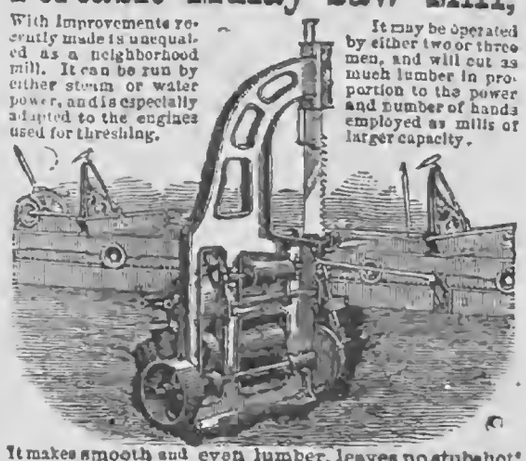
Portable Mulay Saw Mill,
With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.



It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.
It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.
Also manufacturers of the **Phoenix Threshing Engine** and the **Eureka Drain Tile Machine.**

Wit and Humor.

CRUEL DEVICE.—A new device for the bedevilment of lovers was operated successfully by a heartless young man on the local train yesterday. A couple sat in the seat before him; the lady was young and modest, and the swain wore very large cuffs. One arm was thrown carelessly along the back of the seat, and upon this the evil-minded person behind rubbed some phosphorus. The affectionate performances of that cuff, when the train was rushing through the kindly darkness of the tunnels, were beheld by all the unfeeling and snickering occupants of the car, whose cruel enjoyment was not a little increased by the demure and unconcerned appearance of the lovers each time the train bounded again into the light.—*Virginia (Nev.) Chronicle.*

A SMALL boy was sent to the country to board a short time ago. He promised his mother that he would write a good long letter, describing his trip and boarding place, etc. A week went by, and his poor mother was nearly distracted when she got the following interesting letter from him: "I am here, and I swapped my watch for a pup, and he is the boss pup; and I went in swimmin' fourteen times yesterday, and a fellow stole my pocketbook, and I want some money; and I shall bring the pup home."—*Boston Globe.*

HARD TO PLEASE.—"Did you make the train?" "No," was the reply. "it was made in the car shops." "I mean did you catch the train?" "Of course not; it's not infectious." "Well, you fool, did you arrive at the depot in time?" "No, you idiot, I arrived in an omnibus." "Great Scott!" shrieked the interlocutor, "did you board the cars?" "Jumping Jerusalem!" bawled the questioned man, "you know I don't keep a boarding-house."—*Richmond Dispatch.*

TEACHER—"Now, boys, quadruped and biped, you know, are two kinds of animals. Quadruped, animal with four legs, such as cow, elephant, horse, etc. Biped, animal with two legs, such as—well, ah—. Yes, there is a biped," pointing to a goose on the wall, "and I am a biped, and you are all bipeds. Now, what am I?" Pause. One of the bipeds—"A goose, sir!"

"ARE you building air-castles in Spain, Mr. Jones?" said a landlady to a boarder, who was thoughtfully regarding his coffee cup. "No, madam, only looking over my grounds in Java," replied Jones.

"How to tell bad eggs," is the title of an article in an exchange. When you have anything to tell a bad egg, you must be careful not to break the shell while imparting the information.

In Districts formerly Ravaged

By fever and ague, immunity from the dreaded scourge is enjoyed by those who have rendered their systems malaria-proof with Hostetter's Stomach Bitters, the best preventive and remedy. Quinine cannot compare with it in efficacy, and is anything but safe. Physicians commend the Bitters for its remedial and resuscitating properties and the closest analysis reveals nothing in the composition of a deleterious nature. It does not deteriorate, is an agreeable cordial as well as a potent medicine, and when mixed with brackish or unwholesome water neutralizes its hurtful properties. The denizens of malarious localities, not only in the United States, but the tropics, regard it as an invaluable protection, and in hosts of families it is kept constantly on hand. As the tide of emigration spreads farther westward, the demand for it among those compelled to encounter the vicissitudes of climate, constantly increase.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

Ralph Evans 1190

VOL. XXXVIII. No. 43.
WHOLE No. 1552.

NEW YORK, OCT. 25, 1879.

PRICE FIVE CENTS.
$2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1879, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington. — Entered at the Post-Office at New York City, N. Y., as second-class matter.]

The Vineyard.

THE NIAGARA GRAPE.

Among the many kinds of new seedling hardy white grapes which we have seen and examined during the past five years, we have rarely met with one that in essential respects seems to promise more than the Niagara, two bunches of which from life are here portrayed. They were sent to this office by Mr. J. S. Woodward of Lockport N. Y. and drawn by our artist without the slightest embellishment. Mr. Woodward informs us that the seed was produced by a cross between the Concord and Cassady, the latter, a hardy white grape, the pollen parent. The seeds from this cross were sown in 1868 and produced several varieties, of which only the Niagara was deemed worthy of preservation. It has fruited since 1872 and been tested in different places showing no signs of disease or defects of any kind. The vine is said to be a strong grower, more so even than the Concord, and the leaves are large, glossy and thus far entirely free from mildew. The bunches are very compact, and the berry, about the size of the Concord, is of a light pea-green, having a firm skin, a soft pulp and a flavor sweet and agreeable. It ripens with Hartford Prolific and the berries are said to hang upon the vines for several weeks after ripening and yet remain firm and sound. The Niagara is not yet offered for sale, but we have thought it well to introduce it to our readers as worthy of being borne in mind. Mr. Woodward informs us that such good authorities as Mr. T. S. Hubbard of Fredonia and Mr. A. C. Younglove of Vine Valley, express the opinion that it is destined to supplant the Concord as the Grape for the millions.

THE NIAGARA GRAPE.

MODE OF CULTIVATING THE GRAPE-VINE IN CALIFORNIA.

It must be remembered by Eastern readers of the RURAL that our climate differs considerably from theirs, and Grape-vines may require different treatment in both places. As we have no heavy freezing winters, our plowing and seeding, pruning and planting are done between the first heavy rains—usually in November and the following March.

As soon as the leaves fall, pruning is begun. We use the saw and small hand shears, also the double hand shears, the handles being from 12 to 16 inches in length. This style is coming into general use now, as it has the power to cut limbs two inches in diameter. Vineyardists never use the trellis; but short stakes are used the first year. The vines are set from six to eight feet each way and are pruned low to form heads, usually about twelve inches from the ground, which, in a few years form strong stumps with many spurs. These spurs, or shoots, are cut back to three or four eyes, or buds, and only as many are left as the vigor and age of the vine will justify. The soil has much to do with the pruning. A strong, deep soil will be able to support twice as many spurs as a poor and thin soil.

There are many different theories here in regard to the best time and mode of pruning, so I will mention only what I have practised and found successful:—I prune altogether with the long-handled shears. I cut out all the dead wood and those spurs which are too close. I cut out in order that the vine will let the more sunshine through it. I cut each cane back to three eyes and leave on a vine of six inches in diameter fifteen spurs, often less, according to the shape of the vine. The third or fruit bud will start first, and in a few days the next will swell. Those are the fruit buds. The first or base bud, is dormant and only produces wood for the next season.—(? EDS.) The buds are well out by the last of March, and, should we have a frost, as we sometimes do, the first buds are killed. The others that were not so forward, may escape, in which case they will now start out with much vigor, and make up partially for the loss of the first buds. A frost at that season usually injures the grape crop very much.

After the pruning is done, the brush is carried to some convenient place and burned, and the plow is put to work turning under the grass and weeds. After plowing, the harrow is used both ways; then the ground is cross-plowed, harrowed and rolled, or rubbed with plank to break the lumps. That is all the plowing required for the season. The cultivator is now used until the grapes are nearly ripe. I have practised summer-pruning on land that is rich, but I have some doubts as to the benefits derived from it. If pruned, however, while the shoots are young and tender, the vine forms a head and shades the grapes from the hot summer sun which often burns them on the vine. Summer-pruning is done by clipping the tops of the young shoots with a large knife. It should be done in the latter part of April in this county. Mildew has been

troublesome on low land that is rich and damp. Summer-pruning is beneficial in such places, as it will allow the air to circulate through the vines.

California from west to east and north to south is the home of the Grape-vine. Grapes are cheaper than any other product of the farm. The distilleries and wineries only pay $10 to $12 per ton, while barley averages $25 and wheat $35 per ton. Yet it will pay to raise grapes even at those figures.

Sacramento Co., Cal. P. H. MURPHY.

Grape Notes.

Mr. J. Steigleder, of Shelburne Falls, Mass., has favored us with a box of grapes containing several fine bunches of Shelburne, Pocumtuck and Count Bismarck. Of the Shelburne he says that it did better than the Concord with him. The Concord mildewed and the fruit rotted on the vines from continued cool rains. We gave a cut and description of this grape in the RURAL of Oct. 26th, 1878. It is a white (or green, no color); a seedling of Allen's Hybrid. Bunch large, sometimes shouldered, compact, long. Skin thick; fruit sweet; originated in 1869. Ripens Sept. 1. The Pocumtuck is a seedling of the Delaware crossed with Allen's Hybrid. It originated in 1869, and fruited for the first time in 1873. In most respects it resembles the Delaware, but Mr. S. asserts that it has decidedly healthier foliage. It has medium-sized bunches, not shouldered. Skin thin, like the Delaware; fruit vinous, rather sour; white, rosy-tinted. Count Bismarck, Mr. S. states, does not ripen so far north. The bunch is loose, with medium-sized berry; very green in color; sweet but sprightly, with a thick skin.

Farm Topics.

THE TRUTH ABOUT IT.

[THE object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

HARD TIMES—WHAT MAKES THEM.

WE recently paid a visit to the home of our boyhood in a beautiful valley of interior New England. Thirty years have passed since we went therefrom to battle with the world. We found there the same cry as here, "Hard times; want of money." We presume it was the same in the olden time and always will be, simply because of the want of the public for things just a little beyond their ready reach. People exert themselves to get what they could get on without, and thus strain their purses. A little comparison of things as they were in that vicinity 40 years ago and now, may do no harm.

We see a child's carriage of ingenious construction and superior workmanship; an elaborate and expensive top shields the occupant from the rays of the sun, and the nicely-adjusted springs overcome the inequalities of the road. All very nice, very comfortable and also very expensive—that carriage cost at least 25 dollars. Very likely the carriage provided for the father of the child who rides in this one, was of far different construction. The wheels, of which there were probably only two, were solid, cut from plank, and the body, a rough box—cost, all told, perhaps a dollar-and-a-half.

And now we are on the subject of carriages, let us look at larger ones. In the olden time the lumber box wagon, without springs, served to carry its owner and family to mill, to market and to meeting. A pleasure wagon was a novelty and a carriage with a top seldom seen. Now the lumber wagon is kept only for heavy work on the farm; the market wagon is as easy as a coach, and phaetons and carriages abound. To draw these, different horses are required. Old Dobbin is still kept for the heavy work, but is not fit to use on the road, and it would not answer at all to 'tackle' the phaeton to an animal that could not make ten miles in an hour without urging. I will not even guess at the difference in value of the horses and wagons in the township between now and 40 years ago. And this is not all. Fine horses are expensive to keep, require fine harnesses and, beside that, time to use them.

Leaving this subject, let us take a look in the country store where we used to think every necessary thing was kept for sale, and see there many articles we never saw before leaving home; articles of luxury merely; they cannot be necessaries, because in former times they were not to be had and people lived very comfortably without them. Articles of dress, of household adornment, of food; articles that would come under neither of these departments are there displayed and sold.

There is also a difference in the furniture and furnishing of the houses and in the dresses of the inmates, that is notable. But says one: "Do you object to any or all of these things? Is it not well for all people to surround themselves with as many comforts as possible?" Most certainly I do not object, and should be very glad to see every one in possession of all the comforts he can wish for; but I would remind him of the old saying: "You cannot eat your cake and keep it."

The truth about it is that this talk of "Hard times" comes, not because there is not more money earned and received by the people at large to-day than formerly, but because it is more readily spent now than then, and for *wants*, not *needs*, and our wants increase correspondingly to what we see others about us have. Franklin said truly, "The eyes of other people are the eyes that ruin us. If all but myself were blind, I should want neither fine clothes, fine houses nor fine furniture."

L. A. ROBERTS.

HISTORY OF A POOR FARM.—No. 18.

FISH PONDS FOR FARMERS.

A FARMER may enjoy every delicacy which the earth, the water or the air affords. He is the only man who lives neighbor, as it were, to Dame Nature and upon whom she lavishes her neighborly favors. Every product of the soil may be his; the game which inhabits his fields and woods are his, and where a stream or springs afford a water supply, he may provide his table with a bountiful supply of fish at the cost of a few days' labor.

Needing a large supply of muck to replenish the empty yards, cellar and pens, which have all been cleared to furnish manure for the fall grain and grass-seeded fields, I have undertaken to dig a pond 600 feet long, 15 feet wide and from three to four feet deep, that being the depth of the muck at the edge of a meadow at the foot of the hill. Numerous springs break out and furnish a copious supply which will keep the pond always full of clear, cool water, the best conditions for the successful

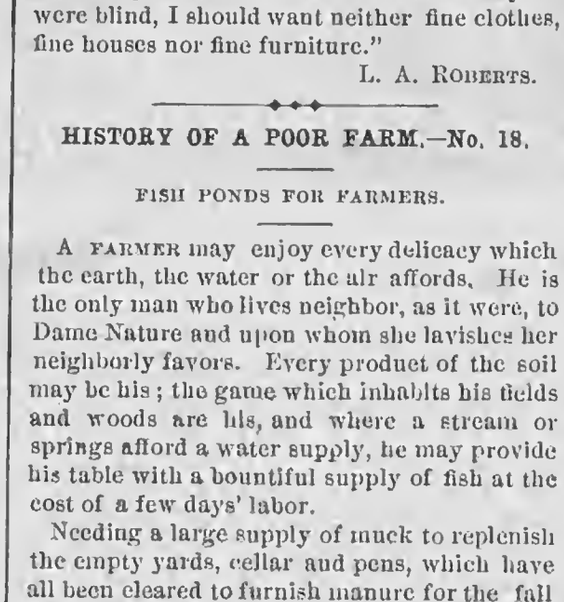

Fig. 1.

growth of trout. My plan is as follows: (see fig. 1). The pond is dug out down to the sand underlying the muck, and the bottom is, of course, somewhat uneven. In places where it is possible to do so deep holes are dug to furnish hiding places for the fish in winter time, when the pond may be frozen over, and in which they can lie in comparatively warm spring water. To make the digging easier and to keep the holes free from water as the pond is made, it is dug in sections, as follows (see fig. 2). A square of 15 feet is first dug out, marked 1. Then No. 2 is dug out leaving a piece a foot thick, marked by the shaded lines between 1 and 2, to keep out the water which by this time has filled No 1. When No. 2 has been dug out to the bottom, the piece left is cut down with a sharp long-handled spade and is drawn out of the water with a grab hook, a Hexamer prong hoe is the best tool I have used for the purpose. It does not matter if this piece cannot all be taken out, on account of the oftness of the bottom and the water; it is of

Fig. 2.

very little consequence anyway. Then No. 3 is dug, leaving the strip as before. In this way the whole work can be done with dry feet, as the water rises only from the sand at the bottom; the surface water being dammed out. A quantity of large boulders and stumps has been drawn from the woods and these will be rolled into the pond here and there, and rough branchy stakes are being driven in places, both to prevent the boys from netting the pond at night, and to supply rubbing and hiding places for the fish.

The pond, P, discharges into a creek, C, by means of a channel, Q, which is crossed by a dam, D D, about 18 inches high, in which is a gate, G, that closes itself at high water from a freshet in the creek. The pond, P, is thus protected from high water and there is no danger of the fish escaping into the creek. At the head of the pond, P, is a four-foot ditch, O, cut down to the sand and connecting with a large spring, S, having a gravelly bottom. This ditch, O, is shut off from the pond by a wire gate, W, and is intended for a spawning bed for the trout which can be let in at the proper season and shut out when it is over. The young trout can be kept in this pond, and hereafter it is intended to add other ponds at right angles to the main one for yearlings and small fish, as may be required. All the expense will be repaid by the muck dug out of the ponds, which I consider is worth one dollar a load.

I might have had the muck dug out here and there in holes, and left unsightly puddles, useless and disagreeable. It costs no more to dig the muck in this shape than in irregular holes and the ground can then be made exceedingly valuable. Forty dollars will purchase 1,000 trout to stock the pond, and 50 cents will supply water-cress seed to plant the borders of the pond, and the cress will furnish haunts for sufficient aquatic insects to feed the trout, besides giving a valuable harvest in itself. A small drain in the large swamp sown with water cress has this year supplied 320 baskets which brought 25 cents a basket, net. It will not be long before the pond will return its cost in fish to be had for casting the line at any time a mess is required in the kitchen. Former experience in a similar way, has proved to me that any farmer with a large spring, a constantly flowing drain, or a stream which can be made to run through a pond without danger of overflow, can secure a constant supply of fish for his table and a few to sell occasionally, without any trouble in feeding them or keeping so many as to be forced to strive against unnatural crowding and other costly or disastrous conditions.

Sheep Husbandry.

IMPORTING SHEEP DUTY FREE.

COL. F. D. CURTIS.

The Proper Care and Feed to make Combing Wool.

When sheep are imported for "breeding purposes," the duty—twenty per cent. on the cost—will be abated. This is a material reduction in the cost, which can be saved by those who import ewes to breed from.

Next to breeding, feeding is the most important consideration. Combing wool with a length of staple and degree of luster which will command the highest price, can only be produced by following a careful system of protection and feeding. The flock should never be exposed to the storms of autumn, winter, or the early spring. Such exposure will surely enfeeble the constitutions of the sheep, and so wash the wool and the skin, that instead of the fleece being soft and lustrous, it will be harsh and dingy. The sheep will not yield as much wool per head besides being constantly subject to disease. The increase in the productiveness of the flock, when carefully housed, will always pay for the trouble and increased expense in doing so. When sheep are thus handled, they will almost instinctively return to the fold when a storm is brewing, or by a little training they will come at the call. A cold wind is injurious to coarse-wooled sheep, and they should never be allowed to be thus exposed. When it is possible for them to do so, they will seek a cover of some kind to get out of a cold wind. The open fleece makes a coarse-wooled sheep particularly sensitive and many times a farmer wonders in the winter why his sheep have not done well, when, if the truth were known, the cause would be found to have been exposure to winds and storms while in the pasture. No one need expect to succeed with a flock of coarse-wooled sheep, who disregards their protection.

Ordinary keeping will not produce combing wool. The sheep must be fed both rich and succulent foods. These, if properly combined, will produce a physical condition of healthfulness without which there will not be a growth of fleece of the required standard. The sheep must be kept in a fleshy condition so as to insure a sufficient secretion of oil to give gloss and strength to the wool, and at the same time the system must be kept free from fever and constipation which will produce fever. A sheep may fatten when in this condition; but the wool would show the effects. It would be useless to attempt to grow combing wool without first providing a liberal supply of roots. Regular rations of this food should be given daily, from four quarts to a peck, according to the size of the sheep. This will keep the bowels open and prevent the sheep from having "stretches" and other diseases incident to constipation. Roots aid in the digestion of other food and promote assimilation in the stomach, so that they have a feeding value beyond their actual worth as food. Oil-cake meal is another essential pre-requisite for producing wool of a high luster, and, without it, the finest samples of combing wools could scarcely be produced. Cotton-seed meal will answer very well as a substitute, but is not equal to the linseed. A gill a day is ample for a large sheep. Mixed with the oil meal and the roots, there should be a feeding daily of oats or bran. Good, bright straw can be utilized in the feeding of sheep in connection with the nutritious foods we have mentioned. When yeaning time approaches there should be a liberal supply of clover, hay and strong feeding which should continue to shearing time. An abrupt check in feeding sheep before shearing, with the consequent depletion of the system, will reduce the growth of wool and often causes a break in the fiber, which spoils the wool. A steady and uniform growth makes a strong and even staple which is desirable. Regular feeding, without any sudden changes in the diet or condition of the animal, will insure this. It must be remembered that this liberal feeding will reward the farmer not only in the growth of a long and beautiful staple which will bring the highest price, but also in the increased volume of his manure heap containing a fertilizer rich in the most desirable requisites of plant-food.

The Herdsman.

FEEDING COWS IN PASTURE.

ONE advantage in soiling cattle is that, when the work is properly done, the animals always have a sufficiency of food, and if they are cows in milk, they will give a larger product than if allowed to roam and depend upon what they can get. At this time of year pastures are apt to be short, and to grow poorer until snow comes and the stock is put into winter-quarters. Grass makes little growth in this State after the first of October, but cattle are often kept at pasture till December. During these two months they roam over the fields soiling whatever feed there happens to be, and often animals are nearly starved, because it has not come to the time of year when farmers deem it necessary to feed. This is a a mistaken policy. At any time when pastures begin to fail, stock should be fed, and with all they can eat. A piece of drilled corn is excellent early in the season; but if this has not been provided, some corn meal, or a mixture of corn meal and wheat bran will be found admirable. It is real economy not to let cows fall in their milk through lack of feed—if the flow is checked, it cannot be re-established to its previous amount by high feeding afterwards. A cow half dried by being stinted in the fall, will not hold to her milk nearly so well through the winter.

Low as dairy products have been, it pays to feed cows well. Getting the bulk of their food in the pasture, what is given in addition goes mainly to increase the milk, butter and cheese product. There is also a natural gain from increased value of manure made from cows which are fed in pasture. It is, in fact, one of the best means of enriching a farm to make it carry all the stock it will bear and buy feed as needed when the home-grown supply is short. In this way the number of cows a place will carry can soon be so largely increased that the farm will be well able to maintain its own fertility. On the other hand, very close pasturing in the fall should be avoided so far as possible. It is better always with clover and timothy to leave some growth in the fall as a winter protection for the roots.

W. J. F.

Monroe Co., N. Y.

The Apiarian.

HINTS ON WINTERING BEES.

THE main subject that at present should engage the bee-keeper's attention is the wintering of his stocks. Four points that are of paramount necessity for successful wintering, may be thus enumerated:—first, the bees should go into winter-quarters in a healthy condition; second, they should have a sufficient quantity of healthful food; third, the colonies should be strong, and, fourth, they must have protection against cold.

The diseases from which bees are liable to suffer are: dysentery and "foul brood." From the nature of dysentery, it is only dangerous in winter while the bees are confined. Foul brood, on the other hand, is a summer disease. It is a minute fungus that attacks the brood, causing it to decay, and, consequently, also causing a failure of rearing young bees. As the germs of the fungus readily spread, it is the

most terrible scourge the apiarist has to contend with. If a colony has been suffering from this disease until late in the season, so that no young bees have been reared, there is but little chance for such a colony to pass safely through the winter; or, if it should, it is almost certain to succumb under spring dwindling, though the disease be eradicated.

The consideration of food involves the most important factor in connection with successful wintering. A large proportion of the many stocks that perished last winter, died of starvation, either from an absolute lack of food or from its being covered with ice and inaccessible to the bees. If on examining the colonies now, it is found that they will need more honey to last them through the winter, this should be supplied immediately. Thirty pounds of honey are the least quantity that a colony can safely be trusted to subsist on during the winter, and experience and observation have convinced us that this should be of the best capped honey. Sweets gathered from cider mills or molasses factories are unfit for bee-food, and will in most instances cause dysentery and great mortality. If no capped honey is on hand, feeding may be resorted to, which should either be of the best extracted honey, or a syrup made from the best quality of granulated sugar. It is a mistaken policy to rob the bees of their choice treasured honey for the sake of making a few cents, and as a substitute feed them on foul, adulterated and worthless stuff that is hardly fit to be put on any table. The little that may be gained by the sale of the honey is lost tenfold by the weakening and loss of colonies. "The laborer is worthy of his hire," and whoever attempts to defraud the bees of their well-earned hire, must suffer the inevitable penalty. It is also essential that the colonies should be strong; they will not then suffer so severely from spring dwindling, nor from the cold during the winter. Weak colonies should therefore be united, and if any is without a queen, one should be introduced without delay.

When these three conditions—the health, food and vigor of the colonies—are satisfactory, the next point is a suitable protection against cold. Before the hives are put in winter-quarters, they should be carefully gone over, the frames arranged in a compact form in the middle, closed up by division boards, and covered with a quilt or cloth. To facilitate the communication from frame to frame, and thus enable the bees to get at the food without separating from the cluster and traversing the round of each frame, a hole of about half an inch in diameter should be made in the middle of each comb. This provision is of more importance than is generally supposed. If, in a protracted, severe cold, the honey becomes exhausted on two or three of the middle frames and there is no passage through the middle, the bees have but the alternatives either to starve or separate from the cluster and one by one crawl over the edge of each frame till the honey is reached. The first alternative is a sure death, and if the second be chosen, many will undoubtedly be chilled, fall to the bottom and there perish.

If there is any vacant space in the hive, this should be filled with chaff or cut straw, which help to absorb the moisture evolved from the bees, as well as to keep them warm. It is well also to cover the entrance with a piece of wire-gauze, or with a piece of tin in which holes have been punched; the bees will thus be shut in, and the mice out, otherwise these might make their way through the entrance.

A dry, dark, frost-proof cellar or room, in which can be maintained a temperature of between 35 and 45 degrees F., will form the best winter-quarters for bees, and if such a place cannot be secured, the nearer the place chosen comes to this standard the better. In most cellars ventilation will be needed. This may be effected by connecting a stove-pipe with a chimney above, and letting it extend downward to near the floor. If no suitable house-room can be had, the ingenious bee-keeper can winter his bees very successfully out-of-doors on the summer stands, or in some place sheltered from the winds. Here each hive should be surrounded by a box nailed together of rough boards, and supplied with a movable, slanting cover. The box should be so large as to permit a space of a foot, or, better still, a foot and a half, to be packed with chaff or dry straw, on all sides of the hive. To permit flight when desired, and thus avoid dysentery, let a wooden tube lead from the entrance of the hive to the outside of the box. Two or more hives may also be placed together, and one box made to answer for them all. The straw should be packed very tightly around the hives, and this can be done most effectually if it is cut up in lengths of two or three inches.

See to it that every hive is clean, dry and tight, and that the best possible provisions for successful wintering are made in every particular. Were there means of knowing just how severe the winter would be, some work might perhaps be saved, but as it is, no bee-keeper can be considered prudent who does not provide for the worst.

The Poultry Yard.

POULTRY AND POULTRY BREEDING.

A. M. HALSTEAD.

Where the hens are to do the hatching they need to be removed to the "sitting" room. This should be done at night. Move the hen carefully and quietly and put her on a nest with dummy eggs for a few days until she is sitting steadily. The French use turkeys and do not wait for them to be "broody," but make them drunk with a wineglassful of spirits when they are wanted for use. An ordinary-sized turkey will cover 20 eggs and may be used for several lots of eggs.

Incubators and artificial mothers, however, have been brought to such a state of perfection that it seems folly to cling to the old method. The saving comes from the avoiding of loss by breakage, by hens leaving the nest or trampling the half-hatched chicks to death. Moreover, the incubator and brooder are always ready for use and save the time of hens, which can be devoted to laying. In both the natural and artificial method it is necessary to full success that the eggs receive a daily airing.

As the chicks hatch, remove them from the nest as fast as dry, and cover them with some warm material until ready to put them out. Here is when the brooder artifical mother comes into play. The chicks may be taken from the hen or the incubator, and put into the brooder; where, by means of a small lamp, they are kept warm and dry, and receive all the brooding they need—more than with the hen, for the brooder is always ready to hover them, while the hen is not.

The young chicks need no food for the first twenty-four hours. After that they should be fed plentifully and often. At first give them the yelks of hard-boiled eggs, chopped or crumbled fine. After the second day, mix coarse corn meal and wheat bran, equal parts, and scald it. When two weeks old, begin feeding cracked corn or wheat for their night food. In addition to this, they may be given occasional feeds of boiled rice, small potatoes boiled and mashed and mixed with a little corn or barley meal, bread crumbs and stale bread steeped in milk or water; in fact, all the scraps from the table should be saved and given to them. Green food—cabbage chopped fine, onions, ditto, celery tops and, best of all, lettuce—is highly relished and should be fed to them often. To give delicacy to the flesh of the chicks designed for the table, make their principal feed, for a week or ten days before killing, barley-meal moistened with milk and occasionally alternate with Indian meal.

The greatest profit in raising chickens must come by getting them fit for market at the earliest possible age. The average cost of hatching and raising chickens (I speak now of doing so by artificial means) until they are eight weeks old, is not over fifteen cents each. At this age they should weigh from one and a half to two pounds. The cost for the next two months will be more than doubled, while the increase in weight will not be over fifty per cent. It follows, therefore, that the most of the profit comes from the first two months' care and feeding. Broilers at that age will sell in April and May in our large cities at from 75 cts to $1.00 per pair and sometimes for as high as $1.50.

QUESTIONS AND ANSWERS.

Among the questions oftenest asked me are the following: Are the chicks as healthy under the care of the artificial mother, as under the natural parent? Answer—More so, and especially because they escape the lice pest which always attacks chickens soon after they are hatched. Question—Are artificially hatched chickens likely to have gapes and chicken cholera? A. After careful examination and experiment I am satisfied they are not. Q. Is it necessary to be very careful in handling eggs? A. No; not as careful as we are apt to think. Jolting does no harm, though a sudden jar which separates the inner connection with the shell, does. Q. Is it good to wet food long before feeding? A. Yes. Unless wet long enough before feeding to allow it to swell, it will distend the crop, and is apt to cause sickness and sometimes death. I always prefer to cook food for chickens and all stock, and believe in the practice most heartily. Q. Is cistern water injurious to fowls? A. Not if pure. Q. Is it a good plan to put pepper in food? A. I don't believe in stimulants of any kind, or in any of the condiments and artificial foods in vogue. Good wholesome food, fed often, is best, and helps most to force the six-weeks' broilers, in the sale of which lies the profit of poultry raising. The question about gapes and cholera was put to me because it seemed that the artificial method would prevent the spread of such contagions. As to the tick and gape worm Dr. Law thinks it not unlikely that the gape worm lives in a parasitic state in the abdomen of the tick, and he gives an instance of a similar case in a certain species of tape-worm common in dogs.

POULTRY NOTES.

I wish through the Rural to call the attention of our farmers to the proper care of their chickens, prompted to do so by witnessing the daily havoc among the flocks of my neighbors, one of whom has lost 185 birds within the past month, while another has lost 119, and I am fully convinced that there isn't a farm in the whole parish on which some loss in poultry has not occurred. In the cases in which I had an opportunity of making an investigation, I found the remnants of the flocks generally suffering from diarrhœa, while in several instances the surviving fowls were badly infested with lice.

As to lice, the pests are the results of gross negligence, and may be removed by the use of a dust-bath in which powdered sulphur has been mixed; a little lard, too, should be applied under the wings. This treatment, accompanied by an energetic white-washing of the poultry house, will soon rid the poor creatures of this misery-producing annoyance. With regard to diarrhœa, and all other diseases to which fowls are subject, prevention is much easier and better than cure. I have raised a large number of fowls this season, and of them I have lost only four, and these by accident. Although my poultry house is by no means a comfortable structure, yet I always keep it dry and clean, and feed the birds regularly twice a day myself. This is a job which I would entrust to no one else. I make a mixture of 4 oz. of saltpeter; 4 oz. of Talamonicum; 6 oz. powdered rad. gentiana; and 4 oz. powdered rad. calami. Any drug store should be able to put up the prescription. Of this mixture I give the whole flock, young and old, numbering 200, four ounces mixed with corn meal twice a week and find that it increases their appetite. Chickens, ducks and turkeys, eat it with considerable gusto. George Marx.

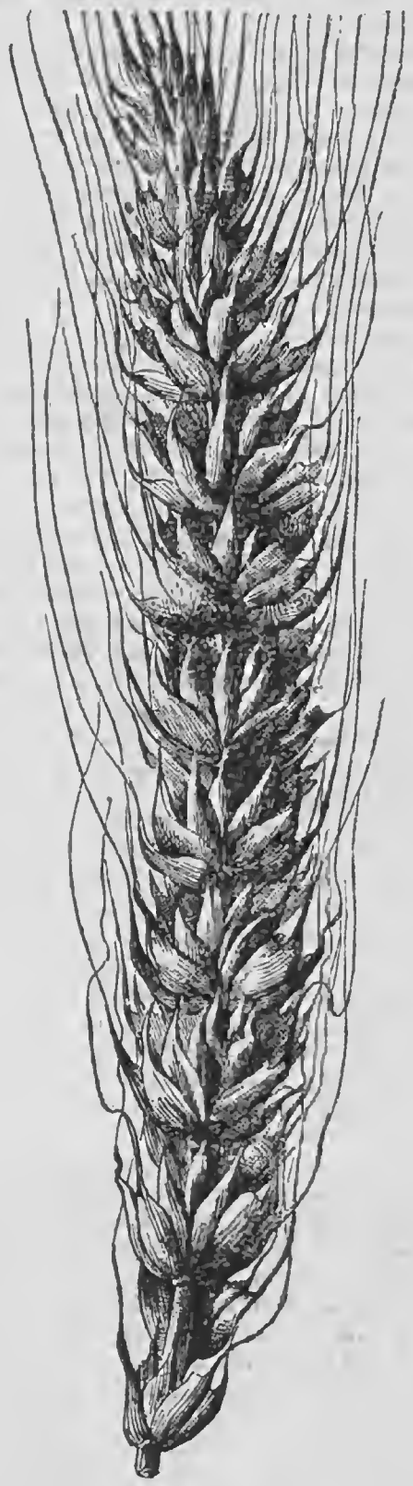
Somerset Co., N. J.

[Diarrhœa to which our correspondent refers above without giving any remedy therefor, is generally due to a scanty supply of grain—which necessitates an excess of green food—dampness and unwholesome food of any description. When the disease is caused by a diet of green or soft food, the diet must be changed and water given sparingly. Five grains of powdered chalk, the same quantity of rhubarb and three grains of cayenne pepper, may be given with advantage; and if the looseness is not speedily checked, a grain of opium and one of powdered ipecacuanha should be given every four or six hours. When the ailment arises from undue acidity chalk mixed with meal or rice-flour boluses are excellent.—Eds.]

Field Crops.

A GOOD VARIETY OF WHEAT.

The accompanying engraving represents a specimen of winter wheat sent us by Chas. Kroff, Esq., of Hickory County, Mo., which he calls the Gipsy wheat. He writes concerning it as follows: "My Gipsy wheat out-yields any other variety grown in this section. I have raised it for five years and the lowest average has been 22½ bushels per acre. In 1877 on nine acres I raised 254 bushels from 11¼ bushels of seed sown broadcast on corn land and plowed in with a double shovel three times in a row. It makes excellent flour as white as that of any red variety." We may add that of all the varieties of wheat sent us from different parts of the country, none has pleased us better than this. The berries in the heads we have received, are of medium size and appear somewhat shriveled; this, however, may be due to early cutting. The beards of the head illustrated have been shortened.



GIPSY WHEAT.

CASTOR-OIL BEAN.

JAMES BARTON.

This agricultural product is named in botany *Ricinus communis*. In the United States it is cultivated in California, Kansas, Missouri, and southern Illinois; but the fall frosts will almost surely cut short the crop if planted north of 38 deg. Possibly other portions of the Southerly States produce the article in a small degree. The East Indies, Italy, and the United States produce all, or nearly all, the beans the world requires.

Its cultivation in Southern Kansas is deservedly increasing in popularity, and its uses in the arts, manufacture, and for medical and lubricating purposes are rapidly increasing. There are mills for extracting the oil in Fort Scott, Kansas, St. Louis, Missouri and in California. I don't know of any more west of the Mississippi. The business is connected with the extraction of linseed oil from flaxseed. Several qualities of castor oil are made. The purest quality is made on the "cold drawn" plan; that is, the seed is crushed and the oil extracted without the application of heat. The inferior qualities are crushed from seed that has had heat applied to it. As a lubricator for axles of wheel carriages, it is generally thought to be superior to all others, and is as economical as the various cheap oils, on account of its durance being much longer.

The mode of cultivation is much like that of Indian corn. It is planted in hills four feet apart. Two beans are dropped in each hill, and if both germinate, the weaker plant is destroyed. It is planted during the corn-planting season; that is, when no further frost may be expected. It is cultivated after the manner of corn. The hight of the plant varies from three to eight feet, according to the soil and season. There are two varieties of the oil-bean, namely, the blue-stem and the red-stem; some farmers prefer the red and some the blue. There is a so-called castor-bean plant that is magnificent in its tropical luxuriance, but it is more a foliage than an oil plant, the beans being out of favor with the oil-crushers.

The beans mature during August and September, or rather the maturing continues till the frost kills the plants and all the immature beans. The plant throws out during this period, from time to time, what are called the spikes, to which are attached the pods containing the beans. These spikes vary in length from four or five to 15 inches, the average

being about 10 inches. The spike is in the form of a cone and stands erect on the plant.

The harvest commences when the first beans begin to pop. The shell holding the bean explodes and the bean is ejected a number of feet. The cause is doubtless the same that produces the popping of corn, being the application of heat to the inclosed moisture. Children are used with economy in the gathering of the spikes. A sled, about three feet wide, is generally used, which is drawn between the rows. The spikes that have thrown out one or more beans, are detached with a knife, and the others are drawn to the popping floor near the homestead. The floor is prepared by clearing from grass a level space of an extent corresponding to the amount of the crop. The spikes are thrown upon the floor without crowding one on the other, and the sun gives the heat to expel the beans. They are then winnowed from the chaff and are ready for market.

The price is now 90 cents per bushel, of, say 42 pounds. There is always a market for them, yet the buyers are in a "ring." The few mills regulate the prices. All the buyers are local agents for the mills, and while there is generally no competition, the crushers are aware that they must pay at least a certain price, or the beans will not be likely to be produced the following season. The yield varies from 10 to 18 bushels per acre. In other words, the yield is as near that of wheat as can be determined. Farmers are not in unison as to the kind of soil best adapted to the bean; but the general opinion is correct, and that is, the better the natural soil, the better the crop.

There is a great advantage arising from raising beans, and it is, that the soil becomes decidedly and greatly improved. It is generally supposed that this arises from so many of the beans being unavoidably expelled in the field. There is a singularity attending the gathering of the beans that is both peculiar and unpleasant. A dizziness and qualmishness frequently attack the gatherer. These are manifested particularly after a heavy dew or a rain, when the sun is shining hot. An odor is then exhaled from the crop, which causes the nausea; but there are infidels who attribute all this to imagination. The writer is in this case one of the faithful.

It is perhaps not generally known that live stock will become sick and frequently die from eating the beans. As a rule stock that is decently fed, will not touch them. They are equally dangerous to persons who may partake of them.

The time will surely come when the Ricinus communis will be one of the leading foliage plants. Its hight, shield-shaped leaves—eight and nine cleft, of a breadth of eight to twelve inches—stems the color of the grape bloom, and the blossoms, rich and red on the conic spikes, give it, all in all, a tropical character.

Soublette Co., Kan.

Alfalfa.

I HAVE read with care the article on Alfalfa, in the RURAL for Sept. 20, by J. S., of Fort Collins Col., and I write now to indorse every sentence of that article, as according perfectly with my experience of the past four years with it, here in Washington Co., Mo. Hay-making before spring frosts cease and after the frosts of autumn begin, is a rather unusual experience, but it is done with Alfalfa. Most of our citizens emigrating from Germany or France are familiar with this grass by the name of Lucern, and I have yet to meet one who fails to testify to its great value as a forage and especially as a soiling plant. I cut a crop for hay the first week in October. N. W. B.

NOTES ON VARIOUS TOPICS.

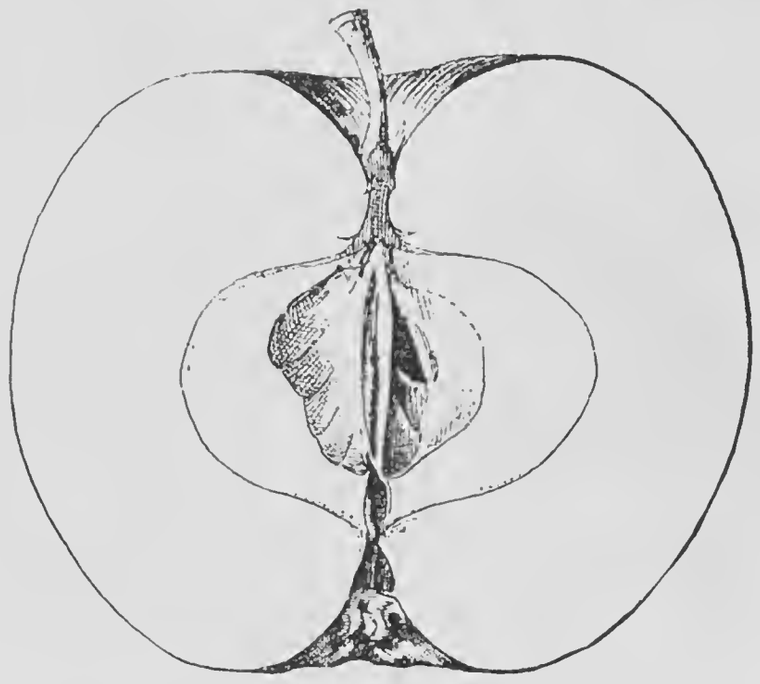
S. RUFUS MASON.

Strawberry Soil.

THE difficulty found by different persons living near together, in growing the same kinds of Strawberries on apparently exactly the same kind of soil, is caused, I believe, by the difference in kinds of manure and amount of water applied: I don't say *moisture*, for mere moisture won't grow Strawberries—they must have a flood of water regularly and often. The best strawberry bed I ever had or ever saw, was manured heavily with hog-pen manure where leaves from the woods had been used for bedding. I also let water from a hydrant flow into the bed every morning during the flowering and fruiting seasons till the plants were nearly covered. To enable such a little plant to bear so large a crop as is its tendency to bear, and such delicious fruit, it must be fed abundantly, at the right time, and with the right sort of food. I know of no richer manure for any plant or crop than hog manure and decayed forest leaves worked together as only hogs can do it. If, however, this composite is not kept soaking wet, it becomes hard, dry and lumpy, and the plant at once dries up. In my soil out here, over-luxuriance keeps us busy cutting off runners.

If a Strawberry is good in all points except firmness of fruit, grow it *well* as I indicate above, and that difficulty will nearly or quite vanish. Half-starved flesh of all kinds is *always flabby*.

Here is a sum in arithmetic which seems



WINTER ST. LAWRENCE—SECTION.

never to have been worked out by cultivators in general: how long can a plant keep up its character while starved and kept in a hide-bound soil? To those who have never yet got as far as the "single rule of three" I would say, study Peter Henderson's "Gardening for Profit" on that subject. He crams his soil with manure and his purse with dollars, but that is the "double rule of three," far beyond the general ken.

The Manure Question.

Never apply heating manures upon a dry soil, or cold ones on a wet one. All manures which attract moisture should go upon a dry soil, such as plaster, salt, ashes, etc., etc.; to put such manures upon wet soils is to flood them and leach out their virtues. Much disappointment is experienced by novices—old or young—who don't know the nature of the fertilizer they employ. To have manure do all its work, it must have water either from irrigation, the subsoil or the atmosphere. Dry manure is worse than none.

Vegetable Pits.

If Mr. Mylius—whose pit for preserving gardener's stock is illustrated and described in the RURAL for Sept. 27—will put all his sashes on the south side of his pit and run a partition along the middle of it down from the ridge-pole, he can then have his vegetables in the dark, and his Roses in the light, where they should be; now they both have darkness and light half and half.

Dodge Co., Neb.

WESTERN SMALL FRUIT NOTES.

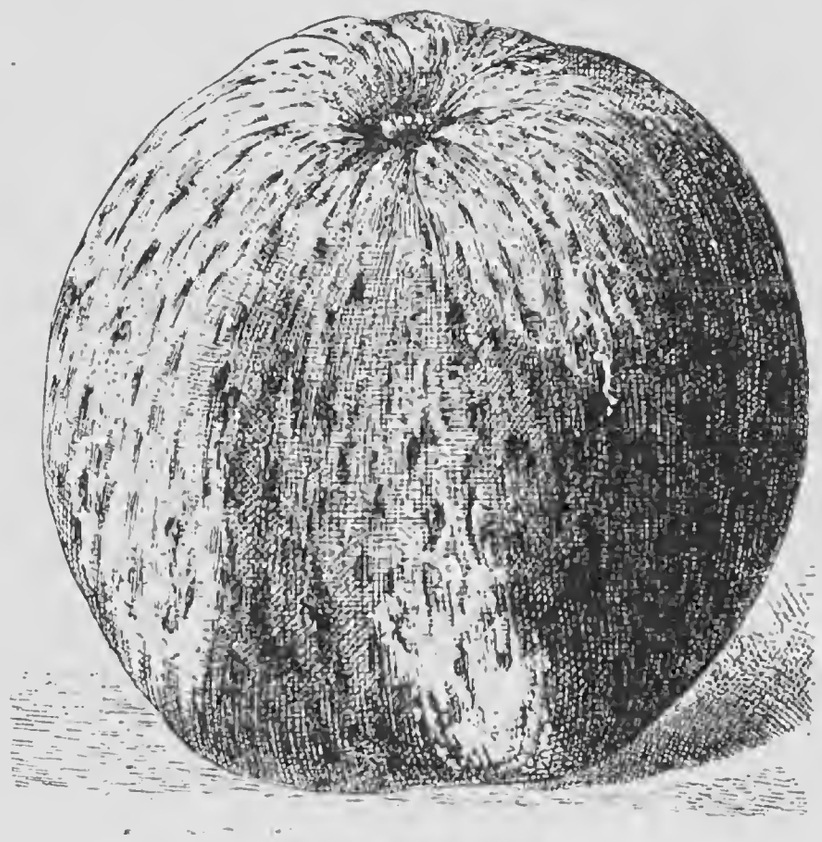
CUMBERLAND TRIUMPH is very large but too soft and light-colored. Cowing's Seedling gave us our largest berries, but is *very* irregular. I have fruited several newer kinds, but not enough to speak of their merits. I got plants of New Rochelle and Caroline, from Mr. Carpenter, of New Rochelle, a year ago last spring. They fruited this year, and if they will not do better than they have done, I would not give them garden room. New Rochelle was very full of large berries, but the quality was so poor that we did not pick a quart. Caroline was not so large, and berries were poorer yet. The Black Defiance I find the best flavored berries among over 20 varieties. I do not recommend it for market, but it should be in every family garden. Capt. Jack was much more prolific this season than Wilson's Albany. It dwindles in size at the last, but no more than the Wilson, while its superior color and equal firmness make it a desirable market variety. It has, however, to recommend it, the fact that it is the firmest red berry. The berries are fully as solid as the black ones, and on that account it is a good shipping berry. Among Raspberries the Thwack is the best red I have yet fruited. It was entirely uninjured last winter when Philadelphia and Mammoth Cluster were somewhat hurt, the Herstine about half killed and all Black-caps, except Snyder. Western Triumph and Taylor's Prolific, killed to the snow line. In quality it equals the Herstine. It also equals it in size and is much firmer. [In quality, to our taste, it is the poorest berry we have ever eaten. Eds.] Up to this year I have considered the Turner the best red. Brandywine is a weak grower and poor bearer. The quality is not as good as that of Turner. W. J. C.

La Pate, Ind.

Pomological.

THE WINTER ST. LAWRENCE APPLE.

OF this apple I am not able to say much. It has appeared at the fruit shows of the Montreal Horticultural Society and elsewhere in the Province in increasing quantity for a number of years, and during the present season frequently with the name of "Manx Codlin" affixed to it. Good judges, however, declare it not to be the true apple of that name. From inquiry and observation in orchards where this apple is grown, I find it increasing in consideration as a very good fruit both for home use and market. Its keeping quality is not definitely ascertained, but it is probably good. Size, medium to large. Tree hardy, a good grower, and productive. This apple is more conical than the fall apple known as St. Lawrence, with finer striping, somewhat duller color and greater regularity of form. It has many of the characteristics of a profitable market fruit. T. H. HOSKINS, M. D.



WINTER ST. LAWRENCE.

Industrial Societies.

THE ST. LOUIS FAIR AND EXPOSITION.

[Special Correspondence.]

ST. LOUIS is in the central part of the Mississippi Valley, the richest agricultural country in the world. The city is easily accessible from all directions by both river and rail; and in the amount and value of its manufactures it ranks as the third city in the United States. With all these advantages in its favor it is but natural to expect that the St. Louis fair should be as nearly a model fair as any in the country. Just what a model fair should be I would not like to say; but while it has much to commend it I do not think that the St. Louis fair has yet reached perfection, or that its example is one which can be blindly followed in all things. Too much attention is given to exhibits which, however attractive they may be, are of very little real value, while articles of far greater importance are almost entirely neglected. As instances of this, artificial flowers received premiums to the amount of about one hundred dollars, while wheat received only twenty; rabbits received fourteen and oats ten dollars; pigeons sixty-nine dollars, and corn thirty. The building for the exhibition of grain, fruits, vegetables and other farm products was much smaller than that devoted to poultry, and while ample space was given to the large exhibits of bees, no room could be spared for flowers or plants. Another point which I heard freely criticised was that in one department the Superintendent was a large exhibitor, that he appointed the judges, waited on them himself, *and took all the principal premiums*. This certainly was not in good taste, nor did it show good judgment on the part of the Fair Association to allow such a thing to be done. It is to be hoped that this may not be repeated in the future for even an appearance of crookedness in making the rewards will do more to destroy the reputation of a fair, than years of honesty can undo. I was surprised to see anything of the kind at the St. Louis fair, as heretofore it has had the name of being managed by straightforward men; but this year a grave mistake was made in the management of at least one important department.

The two leading features of the fair seemed to be the mechanical and live stock departments. Excellent stalls, forage and water were provided for stock, and unlimited space allotted to implement manufacturers and exhibitors.

The grounds of the Fair Association are the largest and most conveniently arranged of any in the West, if not in the entire country, and are one of the most attractive places in the city. The annual fair has always been a financial success, and as all the profits are expended in making improvements, the grounds are now all that could be asked by a landscape gardener. Shade trees are abundant, the walks and drives are all nicely covered with concrete pavement, a picturesque little lake affords daily boat-rides to hundreds of children, and beautiful flower beds are everywhere to be seen. About fifteen acres of the grounds nearest the main entrance, are used as a zoological garden where a remarkably fine collection of animals is kept, second only to that in Fairmount Park at Philadelphia, after which the garden is modeled. On the opening day of the fair the heart of Secretary Kalb was made glad by the advent of a young zebra, the only one ever born in the United States. The garden and grounds are open to the public every day throughout the year, and whenever the weather is pleasant, they are well filled with visitors from both city and country, and the gate receipts from this constant stream of visitors go a great way in enabling the Association to offer the liberal premiums which are given in most departments.

The Exposition.

The Exposition opened on September 22d, two weeks prior to the opening of the fair on October 6th. The manufacturers of heavy and cumbersome machinery, and implement dealers who wish to make large exhibits cannot well afford the expense involved in making displays for so short a time as one week, and for their benefit the Exposition which includes the agricultural machinery, general machinery, textile fabrics, mechanical, geological, chemical and mineral departments, was instituted a few years ago and has, so far, been moderately successful. As an exhibition, it has been a complete success, but for some reason it does not attract visitors as was expected. The public knows that the fair will be a still larger exhibition, and persons from the country who can make but one visit to the city, usually wait for "fair week" before coming. The attendance this year, however, was better than ever before, and exhibitors say that it pays them to spend the two weeks of the exposition for the sake of having everything in good shape for

the fair when they can devote their whole time to visitors.

The Fair

opened on Monday, Oct. 6th, after most of the county and State fairs were over, and exhibitors had little other business to attend to—this, of course, is an advantage in many ways, as parties who had been in attendance at other fairs could go to St. Louis before returning home, with very little extra expense, and as this is recognized as the leading fair in the West, a St. Louis premium is valued more highly than any other.

Live Stock Department.

Of Short-horns only forty-eight animals were shown, a much smaller exhibit than was made during the previous week at Springfield, Ill. J. H. Potts & Son, of Jacksonville, Ill., had the largest herd — sixteen animals, and most of them very choice. Prather, of Illinois, and Larrimore, of Missouri, showed some choice stock, but, as a whole, the show of Short-horns was not what it should have been.

Although the Holsteins are a comparatively new breed in the West, the show of them was large and of fine quality, Paul Rothbarth, of Chicago, being the leading exhibitor. Most of the Holsteins in this country came from North Friesland, but Mr. Rothbarth makes all his importations from West Friesland, and thereby secures a much finer-boned animal, better milkers, and at the same time loses nothing of the easy fattening qualities which are so essential for all profitable animals. The Holsteins are much larger than any other milk breed, but, excepting this herd, most of those exhibited were too coarse-boned for the best beef. The Holsteins are very popular in the West, and although there were several fine herds on exhibition, I saw none that I liked as well as these, and none which proved so attractive to the dairymen present. Mr. Rothbarth secured the first premiums for bulls, cows and heifers in several rings, taking both first and second premium, and also receiving the sweepstakes for best herd led by his bull Gruneo.

Of Herefords, T. L. Miller, C. M. Calbertson and J. S. Hawes, each exhibited herds, but Mr. Miller, who has done more than any other man in the West to introduce this breed, took the lion's share of prizes.

The exhibit of Jerseys was larger than that of any other breed, there being 152 animals present, the largest herd being from Churchman and Jackson, of Indiana. Four herds were shown from Missouri, the other exhibitors being mostly from Illinois and Kentucky.

The Ayrshires numbered seventy-one, none of which were from Missouri; Ohio and Pennsylvania being the principal exhibitors.

That the Devons are still a popular breed was shown by the six herds present, numbering sixty-one animals.

Many exhibitors in this department made the too common mistake of having their animals too fat to be of any value to any one but the butcher, and, although it is frequently the case that the fattest animals take the premiums, I cannot speak too strongly against the practice of making animals so excessively fat simply for exhibition, and thus ruining them for breeding purposes. The exhibits of

Sheep and Swine

were neither very large nor unusually good, prices having ruled so low for several years, that breeders have given less attention to such stock than heretofore. Poland-Chinas and Berkshires seemed the favorite breeds of swine, while Cotswold and Leicestershires were the leading sheep.

Farm Produce.

In this department the show was very much better than last year, but still far from what it should be. It is emphatically the neglected part of the exhibition, and in this I think the Association makes a great mistake. The offer of liberal premiums for farm products is the only way to interest farmers in the fair, and as long as the largest premiums offered are only ten dollars, large exhibits cannot be expected. Of wheat there were only four entries, the premium going to a fine sample of the Fultz. In corn the competition was more interesting, about twenty samples having been shown. Some of the lots were composed of enormous ears, fully three inches in diameter and thirteen to fourteen inches in length. I did not like these large styles as well as some of those of more moderate dimensions, having longer grains of corn and smaller cobs. In oats there was but one sample, and that of only fair quality. Potatoes made the largest show of any one article in this department, there being about one hundred and fifty baskets present. The first premium went to a basket of Snowflakes and the second to the Peerless. The Victor seemed a favorite sort, and I noticed a few very fine Beauty of Hebrons. The show of vegetables was very fine, although one very large collection from E. H. Smith, of Dubuque, was delayed on the road and almost ruined. Mr. Smith informed me that of 320 varieties of potatoes grown by him, he has found none more profitable than the Victor.

The Missouri Agricultural College was represented by a very fine collection of grain, corn and potatoes from the experimental farm. The wheat and oats were shown both in the sheaf and in glass jars, and every article was plainly labeled with the name of the variety and the yield per acre. The exhibit was arranged with great care to make it as instructive as possible by showing the comparative merits of the different varieties, and was of more real value than any similar collection I have ever seen. I wish that it could be exhibited in some of the Eastern cities to show some of our self-satisfied farmers what the West can do when it tries. Missouri certainly has reason to be proud of her Agricultural College which is doing such a work for her farmers.

Fruits.

The show of fruits was better than was expected, having been more than four times as large as last year. In apples the principal exhibitors were from Illinois, although Missouri had a few good collections on exhibition, notably one from St. Joseph, which was the largest and finest I have ever seen in St. Louis. Pears were fairly represented, and of very fine quality. The same might also be said of grapes. Mr. Ricketts was present with a fine collection of his seedling grapes which attracted more attention than did any others, both for their fine quality, and from the fact that they had never before been seen in the West.

Honey should have been in this department, but there was none shown, the nearest approach to it being a model hive, bee smokers and comb foundation from A. J. King, of New York. The smoker was a modified Quinby, but was decidedly the best I have ever seen.

Butter and Cheese

were shown in considerable quantities, but almost entirely by a few commission merchants of St. Louis, no creameries being represented directly. The Cooley milk cans and the rectangular churn had no competitors.

Agricultural Machinery.

There was a gigantic array of mechanical work in the shape of farming implements, and those interested in such a display found abundant room for study and improvement. Very few premiums, excepting medals and diplomas, were offered in this department, yet exhibitors almost without number came forward to show the public what had been accomplished during the past year in the way of inventing new and improving old labor and time-saving machines. This department formed one of the most interesting features of the whole fair.

Of course, plows formed a leading portion of the display and these were exhibited in every variety of form from the old cast-iron plow of Pennsylvania to the hardened steel for the Western prairies and the highly polished adamantine implement needed for the "gumbo" lands of Texas. RURAL readers may not be aware that there are but three plow manufactories of any note in the Mississippi Valley, excepting in the State of Illinois, and it is doubtless true that Illinois manufactures more plows than all other States west of the Alleghanies combined. The exhibit of chilled plows was larger than ever before, owing to the increased popularity of these implements in the sticky soils of Texas and other Southern States. Other styles of plows were, of course, represented by hundreds, but although, the common walking plow is still the one in general use, the sulkies seemed to attract the closest attention, many farmers saying that they intended to purchase them as soon as their present plows are worn out. On Western farms where large and comparatively level fields are the rule, the sulky can certainly be used to great advantage, as it not only performs its work more rapidly, but with greater ease to the team on account of its lighter draft.

Many of the exhibitors in this department have erected permanent buildings for their own accommodation.

Walter A. Wood has a neat pavillion for his display of reapers, and the McCormick, Champion, Marsh harvester and others also have special buildings. C. Aultman & Co. make a fine exhibit with their Buckeye machines. The Whitman Agricultural Co., of St. Louis, had several buildings, located near the RURAL headquarters, for their exhibit of general farm machinery, which covered more than double the space of any other exhibit on the grounds and included over 250 different implements and machines.

Implement manufacturers are generally a good-natured set of men, who will put up with almost anything, but those who were here made loud complaints, some of which, at least, were very reasonable. Exhibitors who had large and attractive pavilions well filled with implements were unable to procure a single pass for either proprietors or employes, while to other exhibitors passes were issued freely. The Superintendent and his assistant were on the grounds but a few hours daily, and the department was left almost entirely to run itself.

The Gale Manufacturing Co., Albion, Mich., made a truly magnificent display, embracing a full line of their rod and wood beam plows, sulky hay rakes, etc., etc. This exhibit was said by visitors to be the handsomest and most complete show of hand plows ever made on these grounds. At all times during the fair it attracted a large and appreciative crowd. The Gale plow is very popular in this section, as was attested by the large number of orders taken by their enterprising agent. Their new rod beam plow has proved a great success, and sells rapidly wherever introduced. Farmers have but to test these plows to be convinced of their merits.

J. E. Porter, Esq., of Ottawa, Ill., made an exhibit of a full line of his celebrated haying implements, and carried off first premium on his wood-track hay-carrier, and first premium on his hay fork.

The Whitman Agricultural Company, of St. Louis, made the largest single exhibit on the grounds. Their display included a full line of their celebrated corn-shellers, of which they make ten different kinds, with capacities ranging from 10 to 300 bushels per hour; also their Monarch and Young America corn and cob mills, which grind from 15 to 16 bushels of feed per hour, according to fineness. These mills also make fine meal for family use. Their display attracted a great deal of attention.

The St. Louis branch of the Gibbs & Sterritt Manufacturing Co., Corry, Pa., made their usual fine display of Climax mowers and reapers. This season they have added to their line a new, light, inclosed gear mower, which has met with great success in the field. This mower is light, weighing about 575 pounds; it is simple in its construction, made of the very best of material, and has given perfect satisfaction wherever it has been used. At the late Exposition at Kansas City, Mo., the Gibbs & Sterritt Co. carried off the first premium on their combined Climax mower and reaper, and again, at the St. Joseph's, Mo., Exposition, they were awarded the first premium, $25 and a silver medal, on the same machine. They may well feel proud of their success in the West this season. A very large number of Climax machines has been sold this year, and the prospects are that the manufacturers will have to increase their works next season so as to be able to fill orders.

Messrs. J. A. Fields Son & Co., St. Louis, Mo., made a fine and handsome display of machinery, including all the machines that they were agents for. A prominent feature of the exhibit was a full line of their well-known Big Giant corn and cob mills, which they showed in full operation. This mill was, as usual, awarded the first premium. They have this season added an automatic sifter to this mill, which is a very important improvement, as they can sift the meal as fine as wanted for family use by simply gauging the meshes of the sieve. Messrs. Field Son & Co., have had a fine business the past year and the constantly increasing orders for the Big Giant indicate its steadily growing popularity.

The Highland Machine Works, of Highland, Ill., exhibited the Payne sulky attachment which is novel and valuable. Like other attachments, it has a wheel to support the driver, and one under the forward end of the beam; but the essential feature of this sulky is a small wheel, between the mold-board and the land-side of the plow, which bears the weight of the plow and the furrow slice, and thus the sliding friction of ordinary plows is converted into rolling friction, by which the draft is very materially lessened, and the plow runs much more steadily. The attachment is perfectly adjustable for all depths of furrow and can be fastened to any plow.

The Baker screw-feed grain drill, manufactured by the Mechanicsburg Machine Co., Mechanicsburg, Ohio, was exhibited by the inventor. This new and popular machine was greatly admired by both farmers and dealers. This drill is a radical departure from the common drill. Among many of its special points of merit are: 1, the spring pressure on the hoes, which insures the covering of the grain under the most unfavorable circumstances; 2, the wrought or gas-pipe frame is a model of neatness and possesses great strength and durability; 3, the screw is one of the most even force-feed distributors yet invented. At the late exposition held at Kansas City, Mo., although the Board of Managers did not offer any premiums on grain drills, yet for these special points of merit the committee recommended that an award of a silver medal be made to the Baker screw-feed grain drill.

One of the features of the exhibit on the Whitman Mfg. Co.'s platform was a miniature Chicago Pitts thrasher and horse power. This elegant little model—which is a perfect facsimile of the celebrated Pitts machine made by the firm of H. A. Pitts' Sons Mfg. Co., Chicago, Ill.—was in full operation and attracted a great deal of attention. The principal new features of the Chicago Pitts machine, as put out this season, are the end-shake shoe, link sieves, and improvement in throat and concave. The new shoe can be raised and lowered, making it perfectly adjustable to all kinds of grain. The increased width of the machine increases its thrashing, separating and cleaning capacity. The Messrs. Pitts have met with a great success this season on their improved machine, which warrants us in saying that the "Chicago Pitts" will long hold the enviable reputation that they have maintained for the past forty years.

THE WAYNE AGRICULTURAL WORKS, Richmond, Ind,. made a fine exhibit of reapers and grain drills. Their Richmond Champion force-feed grain drill was awarded the grand gold medal last week at the Cincinnati Exposition over all competitors. They have lately added a force-feed fertilizer attachment to this drill, which is very simple and effective. A few of them were put out the past season, and in each case they give the best satisfaction. Next year the manufacturers will be prepared to put them all over the country

A. P. DICKEY'S celebrated farm and warehouse fan-mills, were exhibited by Mr. A. P. Dickey, Racine, Wis. There are six sizes of these mills made with capacity of from 40 to 400 bushels per hour. Mr. Dickey is a veteran in the business, and these mills are well and favorably known all over the country. The Dickey is unequaled for its simplicity, and grading qualities and for separating foul and refuse matter from oats as well as for separating wheat, barley, oats, and other grains.

THE OLIVER CHILLED PLOW CO., South Bend, Ind., made a magnificent display of their justly celebrated plows in their new pavilion. Their exhibit included plows of every description, made to suit the wants of farmers in all parts of the country. The Casaday Sulky plow made by them attracted a great deal of attention. This plow is making as good a reputation as a sulky plow as the "Oliver" chilled has as a hand plow. Now that the season is over, the Oliver Plow Co. are making increased efforts to be ready to fill the immense demands that are already pouring in on them for next year. They have made large additions to their works and hope to be prepared to fill all orders.

BARNES' WIRE CHECK ROWER was exhibited by the manufacturers, Messrs. Chambers Behrin & Quinlan, Decatur, Ill. The success of this check rower is beyond all question. Only the best annealed steel wire is used in its construction; this being superior to other wire, there is no stretching or drawing up. The wire does not cross the machine; thus all unnecessary friction on the pulleys is avoided. This feature also lightens the draft and does away with all side draft. The check rower is indispensable to farmers using corn planters, as it saves time, labor and money. The Barnes' check rower has been in the market for the past six years, and the constantly increasing sales bear evidence of its great and extending popularity. This firm also make Brown's elliptical ring and triple-groove hog and pig ringer, which is the only ring that we know of that closes on the outside of the nose, overcoming the objections that are made to rings that close with joints in the flesh.

THE new Barlow rotary corn planter exhibited in the display of the Vandivere Corn Planter Co., Quincy, Ill., by its inventor, attracted a constant crowd. This planter has been thoroughly tested for the past two years and has proved a perfect success. The new feature is a revolving seed cup, which enables the driver to see the corn ready to drop five hills in advance. It is simple, reliable, and fills a want long felt by our farmers. These improvements make this planter one of the most desirable in the market.

One thing the St. Louis Fair lacks, and that is means for reaching the grounds from the city. Four lines of street-cars are entirely insufficient for transporting fifty thousand people to and from the fair daily, and if railroad connections could be made with the grounds the attendance would be increased fully 50 per cent. The railroads running into St. Louis all make very liberal reductions on rates, exhibitors from the East being especially loud in their praise of the exceedingly low figures and excellent management of the Wabash route, both in regard to passengers and fast freight.

S. M. T.

Industrial Implements.

AT the St. Louis Fair Messrs. Cornish & Curtis of Fort Atkinson, Wis., made a handsome exhibit of a full line of their celebrated Rectangular and square box churns and lever butter workers. Mr. Curtis showed his churns in full operation, exhibiting gilt-edged butter made on the grounds, showing practically that the Rectangular would do all that was claimed for it. At the Minnesota State Fair, held last month, butter made by the Rectangular churn carried off twenty-two out of twenty-five premiums offered by the Society, and at State and County fairs in Wisconsin, eighteen out of twenty premiums were won by butter made in the same churn.

Everywhere.

RURAL SPECIAL REPORTS.

VT., Newport, Orleans Co., Oct. 9.—A cool summer has been followed by a cold, wet September, with frost on the 25th, that put a stop to vegetation, catching at least three-quarters of the corn in an unripe state. My own crop of the Pierce or "Pedigree" sort, was, however, fully ripe September 16, or only eight days later than last year. It is now in process of husking, and will average 80 bushels per acre, of dry, shelled corn. This is a variety that might suit those who find the Blount corn too late. Since October came in, we have had dry, hot, hazy weather; hot not only by day but at night; indeed, the hottest weather of the year. Potatoes are rather more than an average crop, and selling at 20 cents. Oats are good, as well as other small grain; the hay crop has been large, and the fall feed is far better than in average years. The rise in the prices of butter and cheese is cheering to our farmers who have been rather blue lately. The fruit crop is a fair one, but Northern Vermont will buy a good many apples for several years yet, as most of the orchards are young, the people having only recently found varieties adapted to the climate. T. H. H.

MASS., Fall River, Oct. 7.—I let some of my Pearl Millet grow to see how tall it would become, and now it measures nine feet nine inches and is still going up, with heads from 10 to 14 inches long. Never before have I had so much fodder on so small a piece of ground. My Blount's corn has not cared out so well as some other varieties; but there are three or four ears on a stalk. The Beauty of Hebron I planted beside the Early Rose; they ripened about the same time, but the Beauty gave the best yield. My Acme tomatoes are very fine; I trained them up about three feet and then let them fall over. A. F.

N. Y., Elmira, Chemung Co., Oct. 13.—The dry weather, which has been a cause for much complaint by farmers of this valley for more than two months, still continues. Never before, within the memory of our oldest inhabitants, was there known such a scarcity of water. Springs, creeks and wells are drying up, and in many cases farmers find it very inconvenient to obtain water for their stock. Pastures are yielding so little feed that foddering has already commenced and in consequence hay has advanced to $14.50 per ton, with prospects of its being still higher. Straw brings from $6 to $8; oats, 30c. to 35c. per bushel; wheat, $1.15 to $1.20; rye, 55c. to 60c.; corn, 55c. to 58c.; barley, 60c. to 70c. For the past two weeks the weather has been very warm for October and would have been timely in July or August. We had a light rain Sept. 24, which started wheat to growing, but dry weather immediately followed, so that it is making but little growth and bids fair to go into winter in poor condition. G. A. G. JR.

N. Y., Le Roy, Genesee County, Oct. 3.—The two small Beauty of Hebron potatoes sent me last spring, contained 13 eyes. I planted one eye in a hill on good soil for corn. I have dug them and got about three-quarters of a bushel of splendid tubers—no small ones. They ripened a little earlier than the Early Rose. I shall keep them all for seed. The Acme and Golden Rural tomatoes are very fine and of excellent quality. The Acme ripened first, and should be classed with the Hebron potato as a beauty. From the Voorhis watermelon seed I gathered three large melons of most delicious quality. Blount's corn has grown almost too well—from 12 to 15 feet high. The ears have set well, but I fear the season will not be long enough to ripen them. D. J.

OHIO, Foster's Crossings, Warren Co., Oct. 9.—My Pearl Millet grew slowly at first owing to our cold weather in June; but it has since grown finely. I have harvested some of it and expect to cut some more to-morrow. I have one magnificent hill which I am saving for seed. The Columbine is growing finely, and so is the Rose of Sharon of which we have several small trees. The Weigela too is doing well. Blount's corn was planted in the garden and is doing well. There are three stalks to a hill and two large ears to a stalk. I intend to plant it in the field next year. The other seeds failed for one cause or another. J. D.

WISCONSIN, Porter's Mills, Eau Claire Co., Oct. 1st.—My corn has done finely. It was planted on the 10th of May, four feet apart each way, three to four grains in the hill with no manure. I put on some plaster at the second hoeing, and hoed it every week till harvest commenced. It is over twelve feet high with from four to seven ears to a stalk. It is too late for this climate; but I saved some for seed before frost came; it is all frost-bitten now, but I shall save almost all of it for seed. It will grow, if properly dried. The Beauty of Hebron potato did well. From the single potato I obtained all the tubers I could pile on half a bushel. There were very few small ones among them. I could not see that they ripened any sooner than the Early Rose; but they will yield more large potatoes. Defiance wheat rusted badly with me. It is all shriveled up. I sowed it in drills, hoed it, put ashes on it at the first hoeing, and, after a while, plastered it well with lime and hoed it in, and still it rusted badly, but stooled out to beat anything I ever saw. I shall try it another year. The tomatoes are first-rate; very smooth and solid. Wheat here is a poor crop, but of better quality than last year. Oats are good, I may say splendid. Corn is good; husking is commencing now. T. M.

MICH., Eastport, Antrim Co., Oct. 6.—My Beauty of Hebron far exceeded my expectations. I had six hills, with one eye in a hill, and from them obtained 14 pounds six ounces. The Pearl Millet was a failure. Blount's corn is too late for this latitude. The Acme tomatoes rotted somewhat. The lettuce was the best I ever raised. Of the flower seeds only three kinds grew, owing to the extremely dry weather we had. This also injured all early and put back all late crops. Frost, however, has held off until almost everything is secure. We finished planting late potatoes on July 13. They came up, but seemingly did not grow until about the middle of August, when, after rain, they began to grow rapidly, and now they will weigh from one to two pounds and are still growing. M. M. P.

KANSAS, Fort Larned, Pawnee Co., Oct. 7.—This year our fall and spring wheat, as well as oats, rye, potatoes and beans, have all proved failures. We had no garden, though we planted many seeds. Corn was a light crop; Egyptian corn, a medium one. There is nothing to sell but a little millet and wild hay, and these bring only $3 per ton. Dry! Dry! Dry! and windy. Droughty Kansas! E. S. B.

NEB., Rising City, Butler Co., Oct. 7.—I consider Blount's corn an entire failure. It is true it will set from one to six and eight ears on a stalk, and the stalks will grow 12 or 14 feet high; but the ears are small and will not begin to yield with our common field corn, but I think it has given a good lesson for farmers, as it has cost them nothing but the time. My experience in raising corn for the last twenty years in corn States is that hills four feet each way and three stalks to the hill, and one good ear on each stalk, will produce more corn to the acre than I can get from any other mode of cultivation on a large field. The Beauty of Hebron potato is a success, and is worth the price of the paper. I received one small potato containing seven eyes. I cut one eye on a piece and planted one eye in each hill, making seven hills. I gave them no manure and no extra care. I dug them on the first of September and got a heaping half-bushel. As an early potato I did not test them as I wanted them all for seed. Pearl Millet is worth nothing with us as a fodder plant. We can raise eight times the amount of sowed corn on the same area of ground. The Voorhis melon is of fair quality, but not as good a bearer as other varieties with us. Defiance wheat rusted; I sowed too thin. Shall give it another trial. The Golden Rural tomato is splendid for the table and a good bearer. Crops in this section are good and corn extra. Wheat is yielding from 12 to 20 bushels per acre. Potatoes are plentiful and of superior quality. Our season has been a peculiar one—dry through March, April, May and the first half of June, wet through harvest, then dry again up to the present time. F. A. B.

MO., Lowrey City, St. Clair Co., Oct. 7th.—The Beauty of Hebron potato I sprouted in a hot-bed and made 24 hills, and in spite of standing the severe drought, I have 30 pounds of splendid tubers. The Pearl Millet is a great curiosity to the "Natives," all asking for seed. I counted 40 spikes from one seed, and all stalks nine feet high. But few of the flower seeds grew, owing to the dry season. The Blount corn was planted in second sod. I had 62 hills, with two stalks each; but five hills were destroyed by storms. The only cultivation it received was two hoeings. It got no manure. It was ripe and gathered the 1st of September. It weighed 80 pounds in the eob. Five ears the largest number on any one stalk. I omitted to mention that I dug a hill of Hebron potatoes on the 1st of July and planted for second crop. These I dug on the 1st of October, and they were just as fine as the first planting. I often see inquiries in the RURAL by persons about the lands in different States, but none about southwest Missouri; there is no better land and climate to be found anywhere than here. T. J. R.

VA., Bonsack's Roanoke Co., Oct. 11.—We have quite a drought in this part of the country, and unfortunately it is in the hight of seeding; farmers are putting their seed into the dust, fall pastures are failing fast, feeding stock will commence this fall a month earlier than usual. We have had two frosts, yet the days are as hot as in July. S. C.

N. C., Brookston, Warren Co., Oct. 8.—Here only enough potatoes are grown for use during early summer or until sweet potatoes are large enough to eat. The variety in general cultivation is the Early Rose. Seed is procured from the North every year at a cost of $1 25 to $2 per bushel. Planted in February, they are ripe in June; yield, light; quality, good. A late crop, planted in July, sometimes succeeds, but usually the earth is too hot and dry, causing the seed to decay before growth commences. The more elevated portions of this State are said to produce fine crops of late varieties. I have seen specimens that were large and fine in appearance. M. B. P.

CANADA, Chateauguay Basin, Province of Quebec, Oct. 1.—The Beauty of Hebron is a success in size, flavor and productiveness; we are proud of it and of its propagator. One of the tubers I should like to have exhibited; it would make a meal for a small family. The crop in this vicinity is good and perseverance has vanquished the potato beetle, though it entails extra work on the farmer in the busy summer season. The Pearl Millet has grown about five feet, but will not form seed with us, as we may expect a sharp frost any night. A neighbor to whom I gave a few seeds, hoed it all up as a grass when it was a few inches high and then thought the seed to blame. This often happens in one way or another, and seedsmen are unjustly blamed.

I want to get the Cuthbert Raspberry—such good accounts are given of it. The Clarke has done wonderfully this season, bearing steadily since July, and to-day I had a few brought in from the plantation, and instructed the children to go along and clip off blossoms and green fruit, as they would injure the canes for next year. The moist season has doubtless helped to lengthen the fruiting. Our seeds from the Rural Grounds are a constant source of pleasure to us, and this year we received first prize for Gladioli at the Montreal Horticultural Society's Show, owing largely, I think, to one fine specimen sent by Uncle Mark of the RURAL to one of the children who joined the club. A white Abutilon given me by the editor some years ago, was in full bloom and took the second prize. These little things are encouraging, especially to the young people of a family who are interested in horticulture. A. L. JACK.

CANADA, Northfield Center, Brant Co., Ont., Sept. 23.—Most of my seeds from the RURAL have done as well as I expected. The Blount corn (the mammoth of corns) stands over 12 feet high, with seven and eight ears set on a stalk; but it will require a longer season than we have just here for it to ripen, although it is doing well, as the frost has not harmed it yet. The Pearl Millet did not appear to do as much as was anticipated, growing very slowly. The Hebron potato has given me the most satisfaction. I received two little, puny fellows. The first received came at a very unexpected time, the coldest day of the winter—the 28th day of February—but it was all right; the other came when the weather was warm, good and sound, both together weighing about three ounces. I cut and planted them on the 8th of April (13 eyes), and have just dug, and on weighing them, I have 13½ pounds of very nice potatoes, making a yield at the rate of 72 bushels to one. The spring wheat was like the Millet—of but little account. As we cannot raise spring wheat in this region, I do not wonder at its failure. Of the flower and other seeds I have a fair show. The Beets, Hibiscus militaris, Rose of Sharon, Aquilegia, Yucca, Acme tomato and Hollyhocks have all shown their good will in raising heads above ground, though some of them did so very late. I presume this tardiness was due to the very dry weather in the first of the season. D. S.

The Querist.

ANSWERS TO CORRESPONDENTS.

Inflammation of Lungs in Sheep.

W. C., White River, King Co., Wash. Ter., says:—We have a few sheep and have been trying to improve them, but all the best ones die and we cannot understand why a fat sheep which we know was lively and apparently well yesterday, should to-day be found dead—lying in an easy position, as if the death had been sudden and painless. A few days since I found the best yearling ewe upon the place dead; the nose lay upon a rail as if the animal was sleeping and in such an easy position that I spoke to her to make her get up and then took hold of her, when I found she was cold and stiff. She was fat. Several have gone the same way. In May a Hampshire Down ewe, nine years old, was sheared in the afternoon; was *very* fat and lively; next day she was dead. Their pasture is river bottom land, clay loam, very productive of timothy, clover and weeds. If it is something they eat that kills them, why is it that some of the poorest ones do not die? One of my neighbors has a few sheep running upon sandy bottom land set in timothy and clover. There are some sloughs running through it with water containing a little iron, but sheep seldom drink in summer here; there are heavy dews. Sixteen of his best sheep have lately died very suddenly and mysteriously. They were very fat and were not known to be ailing until found dead. Everybody said that Dolbear's sheep were healthy and fit for the butcher; but, without any warning of disease, the very best ones have suddenly been found dead. A few days since a ewe lamb born in January, was found lying stretched out on her side dead, as if she had died without pain. Mr. Gwinnette, an Englishman who knows more about sheep than all the rest of us, was sent for. He made a thorough examination, and found the lamb very fat—a heavy caul and the kidney perfectly loaded with tallow. The liver was all cut to pieces and not one leech was found. The animal appeared to be all right—the large stomach contained no worms and looked well. The gall was perfectly black, the lower portions of the lungs were as black as ink, the rigging around the upper part of the heart was shriveled and wasted away. The spleen and kidneys were in good condition so far as we could see. There are three other flocks of sheep running on three sides of the fields where Dolbear's sheep are kept, and none of them die. The soil, water, grass and weeds and other productions are the same in all the fields. Dolbear's sheep had the best of care during the winter, were fed shelled oats for about six weeks while not one man in a hundred in this country ever feeds grain to sheep. I would like to know what causes the death of these sheep and what is the remedy."

ANSWER BY HENRY STEWART, AUTHOR OF THE SHEPHERD'S MANUAL.

The disease is undoubtedly inflammation of the lungs, probably complicated by bilious disorder and pericarditis. Fat animals are more disposed to inflammatory diseases than those in moderate condition. Excessive fat is a disease, for the system becomes engorged with carbonaceous products, the blood becomes charged with unhealthy matter, the bile is usually in excess, the digestive apparatus is overtaxed and an inflammatory condition is general. Consequently, high-bred and rapidly growing and fattening animals are frequent victims to inflammatory disease. The lungs are usually first affected, and then the liver and other intestines. Inflammation of the lungs appears in a flock sometimes, and indeed frequently, as an *endemic* disease, attacking many at one time, few of the flock that are in a plethoric condition escaping. This is explained by the fact that the conditions which cause the disease in one are present with all, and there is simply the result in each case of a malady occurring from causes which are general and not individual. The disease consists of inflammation of the substance of the lungs (pneumonia), frequently with hydro-pericarditis (dropsy, or atrophy of the heart-bag), as in the case referred to above, with diarrhea, sometimes with pleurisy. When pleurisy occurs, the animals suffer much pain and there are heaving of the flanks, grinding of the teeth, much thirst and other indications of suffering. Without pleurisy, there is little exhibition of pain; the sheep isolate themselves, lie upon the belly with the head stretched out, and so die without struggling. The always fatal end is sudden, and is generally reached in 24 hours and before any symptoms are observed. Usually the exterior lobes of the lungs only are affected, and sometimes but one lobe. The symptoms usually present when the disease has progressed somewhat are: redness of the eyes, rapid breathing and discharge from the nostrils. But none of these may be present, and the only indication of the trouble may be the hiding away of the sheep and great tenderness of the loins, which is always present. From the rapid course of the disease, treatment is unavailing. Prevention is the better way. Every flock-owner should see and count his sheep once or twice every day; should observe any redness of the eyes, dryness of the muzzle, discharge at the nose, foulness about the hind parts or other unusual appearance, and at once investigate it and apply proper remedies. Sheep that are in high condition should be watched with extra care. Store sheep should not be fed high, but kept in fair condition only. Those prepared for sale should be hurried off as soon as ready for market, and without delay. Where danger is suspected, a dose of two ounces of salts, repeated in diminishing quantity until the bowels are well relaxed, may be given. A seton in the brisket, or the application of mustard to the sides of the chest, may be found useful, and the feed should be reduced very liberally.

Muck, Its Use and Value.

J. D. C., Cambridge, Erie Co., Pa., says:—I have just thrown out of my muck swamp 100 loads of muck which I expect to haul in winter. It lies in a long ridge beside the ditch from which it was thrown, the ditch being about four feet wide and the same in depth. After clearing off the turf or top sod, which is about four inches in thickness, I find one foot next below it quite spongy, dark-brown in color, then two feet black and fatty or oily; next one foot reddish-brown in color and smelling like an old cow stable, apparently free of greasy matter next above it, and lying on a bed of very soft ash-colored clay. As I am not familiar with muck and its formation, I describe this to learn whether this is the

usual formation of such beds. 2. Shall I not have difficulty in removing this muck on account of frost congealing it into a solid mass by next winter? 3. Shall I get the best results by applying to sandy or clayey soil? I have both. 4. Are thirty loads put through the barnyard worth as much as fifty applied directly from the swamp? 5. May it be freely applied to Strawberries on sandy soil? and is it beneficial to such soil only on account of its manurial value or are its mechanical effects advantageous also? 6. How will the kind of muck herein described, compare, load for load, with barnyard manure, in value as a fertilizer?

ANS.—1. This description of swamp muck agrees with the general character of it when in beds of such depth. The lowest layer which smells so strongly, is in the process of decomposition which has already reduced the next layer above it to a pasty mass. 2. If the muck is left in its present condition, it will, probably, freeze solid and cannot be removed until the spring. But if it is thrown into heaps of 30 or 40 loads each, the brown, spongy and fibrous matter will, in process of fermentation, heat to some extent and will only freeze on the surface, and, possibly, if that becomes dry, it may not freeze at all. 3. This muck will be of greatest benefit on sandy land; but the fibrous portion *must* be rotted or it will dry and remain unchanged in the soil for years; at least, it has behaved in this manner on the writer's farm. 4. Yes; and more; because it becomes decomposed and absorbs valuable liquid manure. 5. The beneficial effects of muck are obtained from its fertilizing value, also from the darkening of the color of the soil which renders it more absorptive of heat, and also for its increased capacity for absorbing moisture. Five hundred loads per acre on a sandy soil, might be applied with benefit; this would give only about three and-a-half inches in depth, which, mixed with eight or nine inches of soil, would vastly improve it, adding to every acre an enormous amount of matter containing, probably, one or two per cent. of nitrogen. 6. The two can hardly be fairly compared, because barnyard manure is in a different condition from the muck, being available to some extent, while the muck will require some time to develop its fertilizing properties. Theoretically the value of the muck will be about half as much as that of the manure; practically, not so much, because it will not be available so soon as the manure would be, and time is an important element in the estimate of the value of any fertilizer.

Weak Eyes In Horses.

M. B. P., Warren Co., N. C., says: A large percentage of our horses in this vicinity are afflicted with what I suppose to be ophthalmia. Many different opinions are current as to the cause, the most prevalent being expressed in the words: "Feeding corn;" but when we notice that our horses are kept in dimly-lighted stables with from one to six months' accumulation of manure under them, I think we must be stupid indeed, if we cannot see or, at least, smell the true origin of weak eyes. Will Doctor Salmon, or some other good veterinarian tell us the "Truth about it?"

ANSWERED BY DR. D. E. SALMON, D. V. M.

ANS.—It seems very probable that M. B. P. is right in attributing the cause of this trouble to the condition of the stables. It is certain that dark or dimly-lighted stables, and especially those in which what little light enters must strike the horse directly in the eye, have an injurious effect, and if not exciting causes of ophthalmia, they are undoubtedly predisposing causes. If we add to this the emanations from such accumulations of manure and urine, it would hardly seem necessary to look further for an explanation of such a disease. Horses raised under such conditions and particularly those that, in addition, are starved while growing, are very subject to *rheumatic ophthalmia* and *specific ophthalmia*. These are exceedingly frequent and very troublesome diseases in the South and West; they make their appearance when an attempt is made to put the animal in extra condition by increasing the ration. There are many horses which cannot be put in salable condition on this account. The great trouble is the constitution and temperament of the animal have been ruined by improper surroundings and care while growing, and they can never afterwards be repaired. Medical treatment is often, as a consequence very unsatisfactory, though in some cases it is very effectual. It must be varied according to the condition of the parts and in severe cases must be directed by an intelligent veterinarian. The common practice of putting powdered, caustic substances in the eye, cannot be too strongly condemned. Ten grains of sulphate of zinc and one grain of sulphate of morphia dissolved in four ounces of water, make an excellent local application, but nothing stronger should be used except by professional direction.

The Two Best Grapes For the Table.

L. J. W., Trumansburgh, N. Y., asks what two varieties of grapes are most desirable for table use. He has room for two vines only, and wishes to set out those best suited for family use.

ANS.—We answer "Delaware" for one, unhesitatingly; but, really, it is not easy to answer for the second. There are at least 50 of the newer varieties of grapes better than Concord for home family use; better than any of Rogers's Seedlings, which are highly valued in many parts of the country. During the past month many different varieties of new grapes have been sent to this office, all of which were said to be very hardy and many of which were of fine flavor. There are several of Miner's Seedlings now offered for sale (seedlings of the Concord), that, as grown at Linden, N. J., seem all but perfect. There are also some 15 or 20 of Ricketts's Seedlings (many of which are crosses between native and foreign sorts), that, as grown by Mr. R., are incomparable both as regards size of bunch and flavor. But will they succeed in a given locality other than that of their nativity? *That* is the thing to be demonstrated. Out of the scores of new grapes offered, unquestionably *some* will succeed with our questioner. Perhaps the Delaware will not succeed in his grounds. We advise him and all who desire such information, to read all that is said of grapes in current literature, and to answer such questions for themselves by personal experiment. It is the only *safe* guide.

Where to Settle in Delaware or Va.?

D. Watson, Dundas, Ont., Canada, asks our advice as to where it would be most advisable for him to settle in Delaware or Virginia. He wants information as to the quality and price of land; the facilities for transportation to market; the distance from town; the amount of "improvement;" the class of society, and any other points of interest that may suggest themselves.

ANS.—Even if we were very well acquainted with the respective advantages of all places in the above-named States, we would hesitate to recommend any one of them in particular as the best for settling in, even to a man with whose character and circumstances we might be acquainted. 'Tis a thankless job to advise in such a matter, and one that begets subsequent grumbling oftener than thanks. In the present case, though we are pretty well acquainted with many parts of Del. and Va., still there may be among the places there which we have never seen, some that would suit our friend better than any we have visited; and, moreover, we know nothing of his character, circumstances, or of the business he intends to follow. We must therefore decline giving any advice in the matter. We give the name and address of our correspondent in full, however, so that any of our friends who may know of an eligible locality in either Del. or Va., may communicate directly with him.

Wood-Ashes As a Fertilizer.

A. L. F., Oshawa, C. W., asks 1, whether wood-ashes are a good manure for apple trees; what quantity should be used, and the best time for applying them; 2, whether the ashes are also good for fall wheat, and if so, how much should be used and at what time; 3, whether lime and ashes would lose any of their fertilizing virtues if mixed with muck drawn out in winter and heaped up in the fields for top-dressing meadow lands.

ANS.—Wood-ashes are an excellent application to apple trees or any other trees or plants. Spring is the best time to apply them. Regulate the quantity by the facilities for obtaining the supply. There is little danger of applying too much, unless the land is surfeited with potash. Ashes are good for fall or spring wheat. They may be sown at any time, though we would prefer spring; and there is little fear of applying too much of them, as a liberal dressing strengthens the straw, and enlarges as well as improves the grain. Composting either lime or wood-ashes with muck is one of the very best methods of utilizing them for manurial purposes. None of their own fertilizing virtues are then lost, while they help greatly to neutralize the injurious acids of the muck and to render its manurial elements fit to be readily taken up as plant-food.

Remedy for Foul Sheath.

An old Subscriber, Bethlehem—just a dozen Bethlehems in the U. S.—has a pair of three-year-old steers which are "foul," and he asks whether there is any remedy for the ailment.

ANS.—Our friend does not state what kind of "foul" is meant, whether in the feet or sheath, but we presume it is in the latter. Give each steer a quarter of a pound of Glauber salts daily with bran to act on the stomach and kidneys, and wash the parts with extract of Witch Hazel. The latter will allay the irritation and cure the soreness, and the former will remove the cause. A syringe may be used to force the extract up into the sheath.

The "Enigma" Seedling Potato.

J. S., Norwich, N. Y., sends us a specimen of a seedling potato, raised by him, three years from the seed-ball. He describes it as a great yielder, surpassing in this respect the Snowflake, Rose, Garnet and California, the only other sorts he cultivates, and he asks us whether we know the variety, and if it belongs to no named sort, to suggest a name.

ANS.—Different varieties of potatoes are produced from seed (that is, the seed of the fruit or potato "ball"). Some seedlings very closely resemble the parents, but generally there is a marked difference either in appearance or yield. Perhaps we do not get our friend's meaning. If this is a seedling, it may be supposed to differ from named varieties, and therefore to belong to no named sort. How would "Enigma" do for a name?

Miscellaneous.

L. J. A., Felicity, Ohio, inquires how she can propagate the Lantana. She seldom fails to root cuttings from other plants, but somehow she failed every time with the Lantana.

ANS.—The Lantana may be propagated by seed, cuttings and layers. We have never had any trouble in making cuttings take root, though they will do so more readily if struck in a hot-bed or propagating house where they can get heat from below. Layering will be a sure process. Make an incision on the under side of a young branch, then bend it into the ground so that the cut will be at the point buried deepest, and keep it in position with a hook. It will take root in the course of a few weeks.

F. P., Dodge's Corners, Wis., has some trees which he wishes to graft and he asks when he shall cut the cions and when to graft according to the method recently illustrated in the RURAL.

ANS.—Cions may be cut any time during the winter and early spring before the buds start to grow. If cut before they are used, they should be kept in moist sand or earth until spring. Grafting by the method advocated by Professor Gale in the RURAL of Sept. 20th, may be done any time during March and April.

S. H. D., Fishers' Island, asks where a pure-blooded Cotswold or Lincoln ram can be bought.

ANS.—Wm. H. Smith, Ketchum's Corners, Saratoga Co., New York, has a fine flock of Cotswold sheep. Messrs. Wolcot and Campbell, New York Mills, Oneida Co., N. Y., have Lincoln sheep for sale. Sheep-breeders would find it to their advantage to advertise in the RURAL.

C. P. B., Edwardsville, Ill., asks whether clover seed is likely to be more abundant this year than last, and at what price can it be bought in large quantities in this city.

ANS.—It is thought that this year's crop of clover seed is somewhat less than that of 1878. The wholesale price in this city can be found every week among our Market Reports.

H. L. K., Republican City, Neb., asks what we think of glass instead of earthenware flower-pots.

ANS.—There are several objections to their use:—They are considerably more costly; they lack porosity, and the roots are liable to injury through the action of the sun through the glass.

A. H. A., Volusia Co., Fla., asks for the names of reliable manufacturers of bone fertilizers in the North.

ANS.—L. L. Crocker, Buffalo, N. Y.; Baugh & Sons, Philadelphia, Pa.; W. H. Bowker & Co., Boston, Mass.; Mapes's Formula and Guano Company, 160 Front St., N. Y.

A. N. S., Savannah, Ga., asks where can "The Parks and Gardens of Paris," spoken of in the RURAL of Sept. 27, be bought.

ANS.—At the office of the publishers, Macmillan & Co., 21 Astor Place, New York City.

A. B., Monroeville, Pa., sends a leaf and asks the name of the plant that produced it.

ANS.—We cannot determine the name of the plant by the leaf alone without the flower.

E. S. W., Stanton, Kans., asks if we can recommend the $25 Osgood Scale advertised in the RURAL?

ANS.—Yes, it is a good scale.

H. B. K., So. Westminster, Mass., asks if Geraniums can live out doors during the winter.

ANS.—No, that is if Pelargoniums are meant. There are several hardy Geraniums.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, OCT. 18.

Various.

CATALOGUES, PAMPHLETS, ETC.

STATEMENTS and arguments in behalf of American Industries against the proposed Franco-American commercial treaty, submitted to the Special Committee of the San Francisco Chamber of Commerce. This bulky volume of 220 pages contains some excellent pleading against the treaty of commerce which French free-traders have lately been trying to induce this country to form. The wine interest of the Golden State would suffer proportionately more from French competition than any other branch of domestic business, hence the bitter opposition to the projected treaty manifested in this work.

VICK'S FLORAL GUIDE for Autumn. Success makes flower culture delightful, and Mr. Vick wants all his customers to succeed. He therefore sells seeds that will grow, if only a fair chance is given them. The present catalogue, however, has to do with bulbs and plants. To get an idea how interesting and useful it is our readers should order it. James Vick, Rochester, N. Y.

WILLIAM PARRY, Cinnaminson, New Jersey, Catalogue of Strawberries, Raspberries, Blackberries, Grapes, Currants, Gooseberries, Apple, Peach, Pear, Cherry, Ornamental Trees and Shrubbery. Also a catalogue of *new Strawberries* of great promise illustrated with colored plates. Free to applicants.

John S. Collins, Pleasant Valley Small-Fruit Nursery, Moorestown, Burlington Co., N. J. Wholesale price-list of small fruits and plants. The Cuthbert and Gregg Raspberries, Crescent Seedling, Miner's Great Prolific, Sharpless and the Kieffer Hybrid Pears are given special prominence. Free.

Gibson & Bennett, Woodbury, N. J., Descriptive (illustrated), Catalogue of small fruits, fruit and ornamental trees, hardy shrubs, Roses, etc. Free to applicants.

EDWARD A. FROST, Rochester, N. Y. Wholesale catalogue (No. 4) of the Genesee Valley Nurseries for autumn of 1879. All sorts of fruits and ornamental trees.

CIRCULAR. Moore's Early Grape, John B. Moore, Concord, Mass. Also, circular of Medium Yorkshire Swine.

FASTENING ZINC LABELS ON TREES.—Unless frequently examined the wire used to fasten labels to trees, as recommended by "Griswold" in a late RURAL, is apt to injure the tree by cutting into and sometimes girdling it. An improvement on this is to make and attach the labels as follows: A convenient size is five or six inches long, an inch wide at one end, tapering to a point at the other. Write the name, date of setting and anything else of special interest in connection with the specimen, on the widest end with a common lead pencil, and wind the pointed end round a limb. As fast as the tree grows the flexible zinc unwinds without injuring the tree. The pencil marks unite chemically with the zinc and soon become indelible. The best zinc for the purpose is that which is thin, old and corroded. I obtain them at the tin shops here, cut to order, for 25 cents per hundred. L. W. G.
Amherst, Mass.

WHAT OTHERS SAY.

PROFITS FROM BEES.—Mr. G. M. Doolittle, the well known bee-keeper of Borodino, N. Y.; in an article to the American Bee Journal, says: Perhaps it may be interesting to the readers to know how our report stands for the past seven years, for it is only by a number of years' experience in any business that a true result as regards profit or loss can be obtained. Our average yield for each colony in the spring of 1873, was 80 pounds; in 1874, a fraction of a pound less than 100; in 1875, a little over 106; in 1876, just 50; in 1877, a little less than 167; in 1878, 71; and in 1879—the present season—58 pounds, making an average yield of a little over 90 pounds per colony for the term of seven years. By looking over our diary we ascertain that our honey has sold at an average price of 21¼ cents per pound, the highest price having been obtained (28½c.) in 1874, and the lowest (10½c.) in 1878.

From past experience, we believe a thorough practical workingman can do all the work required to be done with 100 colonies of bees, and from the above he should obtain for an average term of years, 9,000 pounds of honey annually, which at 21¼c. per pound would bring him a yearly income of $1,912.50. Although the average yield per colony for seven years to come, may be increased, yet the price during that time is likely to be lower, as the high prices caused by the war are passed, and unless we have some unforeseen event to raise the price of honey, it will probably never bring 28 cents per pound again. Still, with a much lower price for honey than that averaged for the last seven years, bee-keeping ranks favorably with almost any other pursuit.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, OCT. 25, 1879.

APPLICANTS for seeds are requested not to stick their stamps to the letters. This practice causes us much trouble and the stamps are often destroyed in the attempt to sever them from the paper. *Leave them loose in the letters.*

INHERITANCE.

FROM time immemorial, until comparatively of recent date, the possessions of a father, on his death, descended to his posterity, in some cases all to his oldest son, in others to all children, but in different proportions, and in others still to wife and children in equal amounts.

Innovations on this custom were made at different periods, and the State or the king claimed a portion of every estate, the rest being distributed. In still later years a person while living was permitted to dispose, by will to take effect at his death, of one-third of his property, the rest being divided between his widow and the king. The right of the king to any portion was afterward contested, but that of the widow to her dower still remains intact, while the remainder, in case no will is made, is divided among the blood relations of the deceased in such way as is by the law provided.

Where property has come into the possession of a person by inheritance it seems right that it should pass down in the blood as it is termed, but wherein children or other relatives, the wife excepted, have any right to the property accumulated by another by his labor, skill, or business capacity, we fail to see, and the fact that the law admits of a parent's right to dispose of his property without consulting his children, shows the growth of public opinion in the right direction. The children, however, do not seem to see it in that light. They appear to feel that the parent's duty is to roll up a competence, by hard labor if need be, that they may live lives of ease and luxury. Hence it is that we have so many contested wills and disputes about estates occupying the time of the courts, at great expense to the public who have no interest in the matter.

It is true that children do not come into the world of their own volition, and the responsibility of the parents is recognized in that they are obliged to support them during their infancy. It is supposed that every child is an expense until it arrives at the age of 10 or 12 years. From this age, for three or four years, it is considered able to earn its own support, and after that until the age of 21, to earn enough more than its necessary expenses to refund to the parents what they may have been out of pocket on its account during its infancy. In the present condition of society, the parent is usually considerably out of pocket when the child attains its majority, but that is, perhaps, not the fault of the child. The law supposes the account to be adjusted and the books balanced when the child is 21 years old and sets out in the world for himself.

But whatever may be right as to inheritance of property, there are inheritances of other kinds that the child has an inherent right to demand from its parents, and which if they neglect to provide they do an injustice and a wrong that cannot be made good either in this world or in the next. First, and most important of these rights, is that of a good constitution, for on this one thing depends mainly the child's chances of success in all things. Above all money valuation is a sound mind in a sound body, and without the latter the former is seldom found. It is therefore the most solemn duty of the parents to so live, and obey the laws of their physical being that their children shall inherit none of the ills that flesh is heir to, but be strong and vigorous. Further, it is now the universally received belief that children inherit from their parents mental as well as physical qualities, and that even to the third or fourth generation the peculiar characteristics of the ancestors can be found with more or less clearness in their offspring.

Has any parent a moral right to make his child a thief or drunkard? But thousands are so living to-day that children yet unborn will be what the lives of the parents now live will make them. We may not be able to trace depravity so far back as Adam, but an honest son is pretty good evidence of an honest father. Just so sure as the inordinate use of tobacco, alcohol or opium in a parent begets a love of stimulants in his children, is it that the improper use of any of the moral or mental faculties will prove injurious to coming generations. We can only touch on these points; but are glad to be able to refer those interested in the subject to many valuable works now easily procured and which should be generally read.

Another inheritance parents should be proud to leave, is a good name. However much they may be lacking in worldly possessions, or vigor of mind or body, this is always within their reach. Rectitude and righteousness every man can have if he will; if he have them not, he deprives his children of a birth-right of no little value, beside weighing them down with a load that it may take a lifetime of earnest endeavor to get rid of.

Parents, think of these things, and for your own sakes as well as that of your children, live wisely, think rightly, act nobly and you will leave such inheritance that your children will rise up and call you blessed.

THE FIELD FOR VETERINARIANS.

IT is a noteworthy fact that while on the other side of the Atlantic veterinary surgeons are almost as numerous, and we may say, considered relatively as indispensable as doctors of medicine, they are practically unknown in the United States. The whole number of educated and skilled veterinarians in this country at present, it has been asserted on good authority, does not exceed three hundred, at the most liberal estimate. It is only in the large cities where great numbers of domestic animals are congregated, such as car-horses and dairy-cattle, that there has been made any skilled effort for the prevention and cure of diseases from which these animals may suffer.

This almost total absence of veterinarians is not due to a lack of work for them, but rather to a want of appreciation of what they might accomplish in saving animal life.

The live-stock interest and its relation to veterinary practitioners may appear clearer when put in figures. In 1870 the total value of the live-stock in the United States was estimated at two thousand million dollars, while since then it has increased by hundreds of millions. During the three first months of the current year, when lives-tock trade was at its slackest, the exportations of live animals amounted to $1,764,568. Yet it is a fact that this enormous quantity of perishable property, from which this country is prepared, to a great extent, to supply the markets of the world with beef, mutton and pork is, practically left unprotected against the inroads of disease, by a lack of skilled veterinarians. At the opening on the 2nd inst., of the American Veterinary College of this city, the President stated that the loss of animals by disease in the State of New York alone, had for a single year run as high as $10,000,000. The bulk of this sum might have been saved, had proper treatment been available. But especially is the lack of veterinarians felt when contagious diseases make their appearance. The dreaded pleuro-pneumonia infecting the cattle on the Atlantic coast, and which a few months ago threatened to be so destructive both to commerce and animal life, could never have gained so tenacious a foothold had there been men qualified to discern and stamp out the disease from the first. But not only from a financial point of view is veterinary skill needed; humane considerations also demand that means should be provided to relieve the suffering animals that now are either subjected to the barbarous operations of ignorant quacks in the profession, or drag out a miserable existence till they finally drop and die.

Here is a field of work for energetic young men—a field, too, that offers as honored a position, and as good compensation as that of medicine or better. Should one in three of those who now study to cure the afflictions of the *genus homo*, turn their attention to animal diseases instead, we believe that the veterinary field would, for a quarter of a century to come, only be partially filled, while the doctors of medicine would still increase in undue proportion to the population.

THE YIELD OF OUR BLOUNT CORN.

THE mistake which we made in our Blount corn test, was in the selection of a plot on the supposition that the season was to be a dry one. The plot had been in pasture for a number of years, the ditches had become obstructed so that when the heavy storm of early summer visited us, the water remained in places long enough to kill many plants and so to weaken others that they never amounted to anything afterwards. A frost also killed a number of plants while few of those from the second planting had time to mature. We beg to state that we have no interest in Blount's corn or in any other corn, seeds or plants whatsoever, beyond what their merits justify. But it is only fair that the palpable causes should be stated why our yield of Blount's corn was not considerably greater than it turned out to be. The plot was an exact quarter of an acre, *i. e.* 82½x132 feet. Ten loads of coarse barnyard manure were plowed under, and 100 lbs. of Baugh & Son's superphosphate sown broadcast. Then it was harrowed and rolled each three times. One kernel was planted every 14 inches in the rows, the rows four feet apart. We have harvested from this plot 18 bushels of shelled corn, or at the rate of 72 bushels per acre, which, when the disadvantages under which the crop was grown are fully considered, proves this in our estimation to be the most prolific variety of corn we have ever cultivated. Whether this opinion of ours is or is not well founded, will soon be determined by the reports of the thousands among whom our seed was distributed.

SOLUBLE AND INSOLUBLE PHOSPHATES.

FOR the first crop it is often supposed that soluble phosphate (*i. e.* super-phosphate or bones or mineral phosphate dissolved in sulphuric acid) is nearly twice the value to a crop that insoluble phosphate is.

During the past three years this question has been the subject of a very thorough investigation in Aberdeenshire, as we learn from the London Gazette, and the results are by no means in accordance with the above supposition. On comparing the dissolved with the undissolved phosphates, the superiority of the former has been found to be "only slight" and not maintained at all the stations where this series of experiments has been carried on. The importance of a *fine* state of division is strikingly illustrated by the differences shown in the crops grown by bone *powder* and bone *flour*. The first crop from the flour is heavier by about a fourth than that grown by the powder, though the first contained the same quantity of phosphates as and rather less nitrogen than the latter. It would appear from these experiments that the costly process of dissolving is for some soils, at least, altogether unnecessary. It is very hard to get at the "true inwardness" of the action of concentrated fertilizers.

Salt and the Pear Blight.—What can our readers tell us about the probable benefit of salt around pear trees? Does it prevent the blight? Are the trees near the salt ocean coast as liable to be injured as those in the interior? Have any tried the effect of sowing salt thickly under and around the trees? The inquiry is prompted by information in regard to the matter, that suggests further investigation.

BREVITIES.

GIVE the potato ashes, lime, superphosphate, bone flour or plaster.

THE Jerusalem Artichoke is recommended as the next best thing in England to make amends for the loss of the potato crop.

IT seems there are many now who agree with our correspondent Mr. Lovett, viz. that Cuthbert and Queen of the Market are the same Raspberry.

Thanks for *one* experiment. "Clinton," who may be trusted, gives the results of his test with weevil-eaten peas, printed on last page of this issue.

THE experiments of Dr. Voelcker go to show that the most valuable manures for potatoes are phosphoric-acid and nitrogen, and that potash is only occasionally helpful.

THERE is probably no better time in the whole year than the present for pruning and cutting back grape-vines, all sorts of fruit trees and ornamental trees and shrubs.

SIR Garnet Wolseley has had a new cucumber named after him. It produces cucumbers in abundance, of a pale green color, "of excellent flavor," 20 inches long and of the same thickness from end to end.

THERE is one matter that most farmers neglect viz., to have a large quantity of coarse, pure sand in their cellars or out-houses where roots etc., are wintered. There is not a root or fruit that we know of that will not keep better in sand than out of it.

THE specimen of the Winter St. Lawrence apple received from Dr. Hoskins, and illustrated on page 688, was very handsome, with firm, fine-grained flesh, and spicy, subacid taste, though it is not yet in eating, and therefore a reliable judgment of its quality cannot be given until later in the season.

THE editor of the California Horticulturist mentions the fruiting of Akebia quinata on his place as something worthy of record, as he deemed it dioecious and there was but one blooming plant. Our own vines have never fruited, but we have often noticed both male and female flowers upon the same plant.

M. ERWOOD sends us a basket of leaves and fruit of his Erwood's Everbearing Raspberry. We have had several plants of this variety for several years. The berry is of medium size, red and of fine flavor. But the vine is not an abundant bearer with us at any time, though after the regular early fruiting, it continues to ripen a few berries until frost.

IN Hillsboro' N. C., we learn there was an orange tree growing under a large tree of the Osage Orange. When the fruit of the true Orange was produced, it revealed a remarkable combination of the qualities of the fruits of the two trees which are so similar in name but so distinct in nature. The case is well-established—having been closely observed by those who were intelligent. But we cannot believe the phenomenon due to the contiguity of the trees.

THOUGH the United States are pre-eminently characterized by their numberless companies and organizations of all kinds, Europe is ahead this time. Denmark has an insurance company against damage to crops by hail-storms. Hailstorms are quite frequent in the spring of the year in the countries around the Baltic, though it is only occasionally that the hailstones are large enough to do severe harm. The company is said to be liberally patronized by the farmers.

MR. L. S. Hardin says in the London Ag. Gazette, speaking of our great International Dairy Fair that "It is to be hoped that the dairymen of England will send over their best goods, and, as they will find both the markets and awards remunerative, we hope they will take full advantage of the opportunity, and send us shiploads of exhibits. We would be glad to see a much more extensive exhibit of dairy utensils than was shown last year. Whatever is done, we hope it will be by early and energetic action.

IN Centennial days a great splurge was made over standard Currants and Gooseberries. All the finest European sorts could thus be successfully grown upon the Missouri currant stock. They would resist mildew and borers. Engravings of plants *loaded* with fruit were published in the leading papers. Two dollars each were charged for single plants, and many were sold. The RURAL bought six, as we remember. Except that they are interesting to strangers, few who have tried these standards would care to purchase them again at any price.

THE French are, almost proverbially, poor colonists. In a new settlement they perform all the early duties of a colonist excellently, and conciliate the natives better perhaps than people of any other nationality, but their colonies do not increase. The fact is that the French inhabitant of a city seldom emigrates, and the French peasant or farmer, never—well, hardly ever. It is a trifle strange therefore to hear that a body of 259 small farmers are now on the way to settle in this country. Well, French farmers are the thriftiest in the world; and may in this respect teach most of our farmers a useful lesson.

THE Duke of Beaufort and Mr. Walter, M. P., proprietor of the London Times, are among the latest prominent public characters in England, who have declared their belief that Great Britain cannot compete with this country in wheat production. They advise native farmers to plant less wheat and pay more attention to products in which there is less to be feared from foreign competition—such as stock raising. In reality, however, it is by no means improbable that with the rapid improvement of our herds here, American meat will ere long be as powerful a competitor of home-raised meat in the British markets as American wheat is now of home-grown wheat.

ONE important consideration anent English agricultural depression, seems to a correspondent of the London Agricultural Gazette, to have been overlooked. It is that truth lies at the bottom of a well. Now, he thinks most of the inquirers are busily engaged upon the surface, reporting the state of farms and so forth. Mr. Jenkins has gone to Denmark, Messrs. Pell and Read to America, entrusted with the office of investigating the agricultural resources and methods of various sections of the country—*but* nobody has been commissioned to go down the well where the whole truth of the matter lies hid. Sooner or later *somebody must* go down this well. It cannot much longer be shirked.

SEEDSMEN and others inquire of us for seeds of the Golden Rural tomato. We have none to sell—none to give away. The entire stock is in the hands of our subscribers. We have several distinct varieties of red tomatoes which, in the course of a year or so—life spared—we hope to offer to our subscribers. We have been breeding for two years for a better keeper, while yet the new sort shall preserve the *medium* size, round, seamless contour and solidity of flesh which characterize the good Acme. As regards *selling* seeds, it is necessary we should repeat that we have never yet, in a single instance, sold a seed or a plant. Our old friends must excuse us for repeating this so often. They know our rule, but our *new* friends do not.

A NOVEL system of agriculture has for a number of years been practiced on a farm in Hertfordshire, England. The owner, Mr. Prout, instead of harvesting the crops himself, divides the fields into lots when the grain begins to ripen, and the crops are sold upon their roots at public auction. No live stock is kept, and the fertility of the soil is entirely kept up by artificial manure. For the thirteen years, since 1866, the average expenses of running the farm have yearly amounted to $16,500, and the net income for the same period has yearly averaged 16 per cent. of that sum, or $2,640. It has thus proved a decided success, while numberless farms cultivated by the ordinary method, have been barely able to pay expenses, and many have run behind-hand.

Literary Miscellany.

DE 'SPERIENCE OF DE REB'REND QUACKO STRONG.

SWING dat gate wide, 'Postle Peter,
Ring de big bell, beat the gong,
Saints and martyrs den will meet dar
Brudder, Reb'rend Quacko Strong.

Sound dat bugle! Angel Gabrel!
Tell de elders loud an' long,
Cl'ar out dem high seats ob heaben,
Here comes Reb'rend Quacko Strong!

Turn de guard out, Gin'ral Michael,
Arms present, de line along,
Let de band play "Conk'rin Hero"
For de Reb'rend Quacko Strong.

Den bid Moses bring de crown, an'
Palms, an' weddin' gown along!
Wid processions to de landin',
Here's de Reb'rend Quacko Strong.

Joseph, march down wid your bred'ren,
Tribes an' banners musterin' strong;
Speech of welcome from ole Abram,
Answer, Reb'rend Quacko Strong.

Tune your harp-strings tight, King David,
Sing your good Ole Hundred song,
Let de seraphs dance wid cymbals
'Round de Reb'rend Quacko Strong.

Angels hear me yell Hosanner,
Hear my dulcem speritool song;
Halleluyer! I'm a comin',
I'm de Reb'rend Quacko Strong.

Make that white robe radder spacious,
And the waist belt 'strodn'ry long,
'Cause 'twill take some room in glory
For de Reb'rend Quacko Strong.

What! No one at de landin'!
'Pears like suff'n' 'nudder's wrong;
Guess I'll gib dat sleepy Peter
Fits—from Reb'rend Quacko Strong.

What a narrer little gateway!
My! dat gate am hard to move,
"Who am dat?" says 'Postle Peter
From the parapet above.

Uncle Peter, don't you know me—
Me a shinin' light so long?
Why de berry niggers call me
Good ole Reb'rend Quacko Strong.

Dun'no me, why! I've convarted
Hundreds o' darkies in a song.
Dun'no me! nor yet my massa!
I'm deReb'rend Quacko Strong!

Ole Nick's comin', I can feel it
Gettin' warmer all about.
Oh! my good, kind, Kurnel Peter,
Let me in, I'm all too stout

To go 'long wid Major Satan
Into dat warm climate 'mong
Fire an' brimstone. Hear me knockin',
Ole church member, Quacko Strong.

Dat loud noise am comin' nearer,
Drefful smell like powder smoke;
'Nudder screech! Good heaben help me—
Lord, forgib dis poor ole moke.

Allers was so berry holy,
Singin' and prayin' extra long;
Now the debble's gwine to catch me,
Poor ole nigger, Quacko Strong.

Hi! dat gate swings back a little,
Mighty squeezin' to get froo!
Ole Apollyon howlin' louder,
Every thing around am blue.

Bang de gate goes! an' Belzebub,
Bunch ob wool upon his prong,
Goes along widout the soul ob
Missabul sinner, name ob Strong.

IN FOLLY'S NET

CHAPTER XI.

(Continued from page 669.)

"Good-night, sir. Good-night, ma'am," said the landlady, curtseying low. "Good-night, gentlemen; I wish you a safe drive home."

And so they entered the carriage, and drove through the silent night, with a starlit sky overhead, back to Sholto Hall a rather silent quartette, for Jean was weary, and angry with herself and Mr. Blair; the latter was silent and absent in manner, and Lord Sholto was turning over in his mind the scene which his unexpected arrival at the Langdale Inn had disturbed, and wondering whether Jean McLeod were merely a foolish, giddy girl, true at heart for all her careless gaiety, or whether she were a thorough paced flirt, unworthy of his brother-in-law's passionate devotion.

"I wonder whether I ought to tell him," mused his lordship, leaning back in his corner, feigning sleep. "She had no right to make the rendezvous with Blair at all, and it is very wrong of her to have encouraged him as she does. One can hardly blame him, for it would be hard for any man to resist Jeanie when she means to be fascinating. Why in the world cannot she be content with the heart she has won? Well, Ivor will be here in a day or two now. I wonder if I ought tell him; I must consult Flo. Poor old fellow, I would not touch his faith in her for the world, and he loves her so entirely that it will go hard with him if she turns out a jilt."

"Here we are," said Captain Murray, at this juncture, as the lights in the windows of Sholto Hall began to gleam, and the carriage turned into the avenue, "safe and sound. Are you very tired and sleepy, Miss McLeod?"

"Very," said Jean, emphatically.

"And yet you had a very cozy nap at Langdale," said Mr. Blair, rousing himself from a reverie into which he had fallen.

"So I had," she answered, laughingly. "I can never forget how good you have been, Mr. Blair," she added, in a gentler tone, as he helped her to alight.

"Good," he answered, hastily, in lower tones, which, however, reached Captain Murray's ears. "Must I remind you again that it is natural for a man to be good to his own property?"

Jean did not reply; indeed, she hardly heard the words, for the great hall door was wide open and Lady Sholto's pretty figure, in her evening dress of silk and lace, was on the first step.

"Oh! Jean, you naughty girl!" she exclaimed, in a flutter of tears and laughter. "What a fright you have given us!"

She caught the girl in her arms as she spoke, and embraced her; but Jean's nerves had been sorely tried in the last few hours, and her composure was giving way under Lady Sholto's tearful welcome. She dared not speak, but stood very white and still, suffering the embrace, but not returning it.

"Don't let me see anyone else to-night, Florence," she said, hastily, in a moment; "I cannot bear it. I am so tired, I must go to my room."

"I think she had better go upstairs at once, Lady Sholto," interposed Mr. Blair. "She has gone through a great deal, you know, and to-morrow, when she has had a good night's rest, she will be able to give you an account of our adventure. She is very tired now, you see."

"So she is, poor child," said Lady Sholto, too much agitated to notice what did not escape Lord Sholto or Captain Murray—Mr. Blair's cool tone of proprietorship when he spoke of Jean. "Come up, my darling; you must indeed be tired to death."

They went upstairs together, Jean with the same unnatural composure on her pale face; but when she had gone up a few steps, she turned with a vague idea that Mr. Blair had been kind and careful of her, and that she had not been grateful enough, and held out her hand to him.

"Good-night," she said, with a faint smile, and Mr. Blair quietly lifted her hand to his lips, and said:

"Good-night, Jean."

"Oh! Jean," began Lady Sholto, with irrepressible excitement, when they were safe in Jean's bed-room, "I am so thankful you are home again. It has been such an anxious time, and one or two of those women have been saying such unkind things—insinuations, you know—nothing that one could take hold of and contradict."

"Have they?" said Jean, mechanically; she was weighed down by a strange, undefined sense of terror and a foreboding of evil, for which even her utter weariness could not account.

"Yes," said her ladyship, whose anxiety and agitation had been too long repressed easily to be silenced when once they had given way. "I have a letter for you, too, from Archie. It came by the evening mail. I hope—oh! I hope they won't say them before him, Jeanie; it would pain him so horribly. Here is your letter, dear."

But to Lady Sholto's intense surprise Jean flung the letter from her with a passionate gesture of pain.

"I do not want it," she said, in hoarse, broken tones. "Take it away. I am not worthy to touch his letter."

And she flung herself, face downwards, on the rug, in a hysterical passion of sobs and tears, which made Lady Sholto ring for Collins in alarm.

"She is overtired, my lady," said the maid, as she raised Jean and placed her on the sofa, white and exhausted now, with faint sobs breaking from her white lips; "your ladyship knows how frightened Miss McLeod always is in a storm. She will be better directly, and a good night's rest will do her good. There, you are better now, Miss Jeanie, are you not?"

When the hysterical passion was over, Jean was too utterly prostrated to do more than smile faintly in answer to Lady Sholto's tender good-night, and half an hour after, when the maid went down stairs, she knocked at Lady Sholto's door to tell her ladyship that Miss McLeod was asleep now and resting beautifully, which announcement interrupted Lady Sholto's animated account of her interview with Jean to her husband, who was sitting in an arm-chair by his dressing-room fire, with his little wife perched upon his knee.

"She threw the letter on the ground," resumed her ladyship, when Collins had been answered, "saying that she was not worthy to touch it; that she did not want it."

"Archibald's letter?" ejaculated his lordship, in surprise, fondling the tiny hands he held in his.

"Yes, Archie's letter. And then she threw herself on the ground and sobbed and cried as if her heart would break. Oh! Arthur, what does it all mean, do you think?"

"I suppose she is overwrought altogether," said his lordship, sagely, "and she is full of remorse about her little flirtation with Blair, which takes tremendous proportions in her present excited state. Archibald is the only fellow who can manage her, though I believe at heart she is as sweet and true as she can be. I believe that from the bottom of my heart, Flo."

"And so do I," said Lady Sholto, warmly. "And Archibald is so devoted to her that it would break his heart if anything came between them."

"Hearts are not very brittle now-a-days, wee wifie mine," said Lord Sholto, laughingly, "or if they break, they are very easily mended. And now jump up, my darling, for I am tired to death and shall be very glad to find myself in the arms of Somnus or Morpheus, or whichever of those gods and godesses presided over 'tired nature's best restorer, balmy sleep'."

CHAPTER XII.

A TERRIBLE AWAKENING.

THE next morning Jean McLeod awoke without a trace of the exhaustion of the previous night, nor any ill remaining from the fatigue of her adventure on the moors.

Almost her first action on awaking was to stretch out her hand for the letter which she had so passionately repulsed the night before, and having read it, fell asleep again, with her cheek resting upon it, and her smile as bright and sweet as the smile seen on the face of a slumbering child. When she awoke again, the sun was high in the heavens, and Collins was standing by her bedside with a cup of tea, and some letters on a silver waiter.

"Is it very late, Collins?" asked her mistress, rather sleepily, stretching her white arms lazily. "I have been sleeping so soundly."

"Yes, miss. Her ladyship thought I had better not disturb you," answered the maid, as she deposited the tray on a little table by the bedside and crossed the room to open the curtains and admit the bright sunshine; while Jean, raising herself on her pillows, sipped her tea, and glanced at the superscriptions of her letters, one of which she recognized as in Lord Ivor's handwriting; and as soon as Collins was safely in the dressing-room, she broke open the seal. Archie's letters were too precious, and her love for the writer too sacred, to be made public.

It contained but a few short lines; but few and short though they were, they made Jean's heart beat and her eyes brighten with joy, for they said that when she would be reading that letter Lord Ivor would be on his way to the Highlands, and hoped to be at Sholto on the evening of the day on which she would receive it.

"How glad I am!" said Jean to herself—"how glad I am! My darling, my darling, how happy I shall be to see you!"

"Where is everybody, Collins?" she asked, when the maid returned.

"The gentlemen are away on the moors, miss," said Collins; "and her ladyship and the other ladies have all gone out driving: they were going to visit the ruins of Walsing Abbey, her ladyship said. She left this note for you, miss."

"Are all the gentlemen gone shooting, Collins?" said Jean, glancing up from the perusal of Lady Sholto's note.

"Yes, miss."

"You are sure?"

"Quite sure, miss," said Collins, looking quite surprised.

"Everybody out, then, and her ladyship says they will not be home to luncheon. It's hardly worth while getting up," said Jean. "Hand me a glass, Collins; I must look my best to-day. The Earl is coming."

"Indeed, miss!" and Collins brought the glass, and stood by while Jean examined herself, half-seriously, half-laughingly, and handed it back when the inspection was over, with a little smile. The fatigue of the day before had not paled her pretty wild roses, nor dimmed the lustre of the sweet, wine-brown eyes; and Jean, with her hair streaming around her, in her pretty white drapery, was very fair to see.

"Ah! well," she said, after a time, having perused her letters and finished her tea, "I may as well get up; and when you have dressed me, Collins, we can decide upon a dress for to-night. What have I got that is very pretty? His lordship will be here for dinner."

"I think it will have to be that white silk, after all, Collins," she decided, finally. "You must put some fresh tulle in at the neck and sleeves, of course, and some ribbons, I suppose."

"What color, Miss Jean?"

"I don't know, I am sure. Suppose you put flowers instead of ribbons, Collins. I leave it to you; you know what suits me better than I do."

"Shall you dress again to-day, miss?"

"No, not until this evening. I am going down into the library to write some letters, Collins; give me my letter-case, please."

The great house seemed very silent and deserted as Jean went lightly through the long galleries, down the broad, carpeted staircase into the drawing-room. While there, she suddenly remembered a song Lord Ivor had sent her, and which she had not yet learned; so she sat down to the piano, and tried it over, singing it in her sweet contralto, until she knew it perfectly, and then went on her way to the big, empty library.

The library at Sholto Hall looked, like the drawing-room, on the pleasure-grounds, with long windows opening to the ground. It was a handsome, modern room bright and cheerful, and generally rather a favorite resort of Lord Sholto's guests.

Jean deposited her letter-case on one of the tables; but she was apparently not in a writing humor, for she wandered aimlessly about the room, took up one book and glanced at it, then, putting it down, took up another with the same result.

"I ought to write to Archie," she said at last, half aloud. "It is much easier to write a confession than speak one."

Seating herself at the table, she opened her writing-case, selected a pen with elaborate care, and set to work. At first her task proceeded but slowly; but after a few moments the pen traveled more quickly over the dainty, cream-laid note-paper and she became absorbed in her letter—so absorbed, indeed, that she did not notice that a gentleman entered the room by one of the open windows, and sat down quietly in one of the great arm-chairs.

He did not disturb her, or give any sign of his presence until, having finished her letter, Jean proceeded to put it into an envelope, directed it in her bold, dashing, fashionable hand-writing, to "The Earl of Ivor;" and, turning round, started a little on perceiving the intruder.

"Ah! Mr. Blair," she said, surprisedly, "I did not hear you come in. I thought you were out with the sportsmen."

"No; I did not go this morning," he said, quietly. "I had a purpose in staying at home which purpose I have gained."

Jean colored a little at the significance in his voice; but she made no answer, and he did not speak.

"I need scarcely ask if you have recovered from your fatigue of yesterday," he said, in his soft, caressing voice. "The question is superfluous."

"Thank you, I am quite well," she answered, a little coldly. "And you, yourself?"

"Perfectly well, thank you," he answered. "We have the house to ourselves, I believe?"

"Yes," Jean said, a little nervously. "Lady Sholto has driven over to Walsing Abbey."

"So one of the servants told me," he answered, absently.

"Have you been reading, Mr. Blair?" said Miss McLeod, in a moment, trying to overcome her growing embarrassment.

"Yes; 'Vanity Fair,'" he replied, glancing at the book he held.

"Ah! one of the best works ever written," she said, warmly. "If not the best."

There was a long pause then, which neither seemed willing or able to break. Mr. Blair turned the leaves of his book idly, with an expression of grave pre-occupation on his handsome, dark face, and Jean sat in silence, playing with her pen-holder, with rather unsteady fingers.

At length he rose, put down his book, and drawing up a chair near the table, where she was sitting, threw himself into it, and leaning forward, put his hand gently over hers.

"Well," he said, softly, "have you nothing to say to me to-day?"

Jean colored hotly with surprise and some annoyance, and tried to disengage her fingers from his clasp; but he held them fast.

"What, still shy?" he said, with gentle raillery—"still coy. Surely after the occurrence of last evening coyness and shyness are out of place between us, Jean."

"I do not understand you," she said, haughtily. "Will you be good enough to release my hand, Mr. Blair?"

He smiled to himself, and glanced at her crimsoned face.

"You do not understand me," he said, in the same gently mocking tone. "If you think a little you will do so. Do you remember what happened last night?"

"Perfectly," she answered. "You were so good to me yesterday, Mr. Blair, that I cannot but feel grateful to you. Do not change my gratitude into dislike."

"That would be an unfortunate change," he said, coolly. "Dislike between two persons who are bound to spend a life-time together would be a most undesirable sentiment, would it not?"

Jean looked at him in speechless astonishment; she had risen from her seat and stood before him, for her hands were imprisoned still, regarding him with angry, wondering eyes. He gently forced her to seat herself again.

"You do not answer me," he said, quietly. "It would be a very undesirable sentiment, my dear Jean, as a little consideration will show you."

"How dare you speak to me in that tone?" she said, haughtily, angry tears rising in her eyes. "I was foolish yesterday, I admit; but my folly has not given you a right to insult me."

"Nothing is further from my thoughts or wishes," he said, lightly. "Foolish yesterday! You were charming yesterday—most charming! I can never forget how charming. By the way, Jean, under the circumstances, would it not be as well to discard this?"

As he spoke he touched the hoop of diamonds on the third finger of her left hand.

Jean's color faded slowly, leaving her pale as death, and she made another movement to rise from her chair; but he detained her once more.

"Sit down, Jean," he said, firmly. "Let us understand each other—we have had trifling enough. Are you willing to listen to me while I explain to you the position in which we stand to each other? If so, sit down."

The young girl obeyed. She was as pale as death—even her lips were white in the agitation of the moment; but her eyes met his frankly and proudly.

"I do not suppose you are ignorant of the laws of this country which is yours and mine, Jean, on the question of marriage," Mr. Blair said, quietly. "Have you ever heard of such a thing as a Scotch irregular marriage?"

Whiter and whiter grew the beautiful young face opposite to his, while into Jean's eyes stole an expression of unutterable terror and dread.

"Ignorant or not," he went on, gravely, "it does not matter; for ignorance of the law cannot affect the question. In this country, if a man and woman declare themselves man and wife in the presence of a witness, they are married, and if they entered into any other matrimonial contract, it would subject them to be prosecuted for bigamy."

Jean was silent. She could not force her lips to speak; but, looking at her face, Mr. Blair saw its unutterable horror and terrible pallor.

"Did you understand, me, Jean?" he said, gently. "Do you understand now your relationship towards me?"

"Do you mean that I am your wife?" said Jean, with her pale, parched lips quivering.

"I do," he answered, gravely.

"But it is impossible;" she cried out, with sudden passion—"it is impossible! I did not mean to marry you. You did not mean——"

"I beg your pardon," he said, interrupting her. "I did mean to marry you."

Jean looked at him in horror; then, wrenching her hands from his clasp, she went on in a broken, passionate voice, full of pain:

"You are jesting, Mr. Blair," she said, piteously. "You could not be so cruel. It would be too dreadful! You do not mean it! It cannot—it cannot—it cannot be!"

"I am very sorry to distress you," he said, gently. "But it is so. By the law of this land, you are my wife, and I your husband."

"Oh! Heavens, it cannot be true!" said Jean, turning from him in a passion of despair—"it cannot be true!"

There was a moment's silence.

"Mr. Blair," she said, turning to him desperately, "even if it be true, although I cannot believe it, you cannot wish to hold me to such a contract."

"You do not see yourself as you stand now, Jean," he said, smiling, "or you would not ask such a question."

"Oh! have pity on me!" she cried, passionately. "You know that I do not love you! You know that my whole heart belongs to another! You cannot wish to break my heart!"

"You are using bad arguments, Jean," he said, quietly. "I love you!"

"If you loved me," she said, piteously, "you would not pain me so terribly. I will not believe it!" she added with sudden passion—"I will not believe it!"

She turned from him scornfully as she spoke. Mr. Blair bit his lip.

"Listen to me," he said, quietly. "I have no wish to make any assertion which cannot be proved. I claim you as my wife! I can bring witnesses to prove that you acknowledged me as your husband—willingly, without any compulsion. I am quite certain that we are legally married; but I am quite willing to abide by the opinion of a lawyer. It will be better, if possible, to avoid the publicity of a court; and if you were more experienced in such matters you would know that in almost every case, the appeal to a court has merely caused the ratification of the marriage."

Jean made a gesture of despair.

"Have pity on me!" she said in a moment, turning to him, holding out her little, trembling hands in supplication. "Have pity on me! I love him! I love him!"

"And I love you!" he said, softly. "Jean, what can I do? If the law has made you my wife, what can I do?"

"Is that all you have to say to me?" she said, in a moment, regaining some appearance of calmness. "May I go?"

"Certainly," he said, with gentle reproach. "You will always find me ready to accede to your wishes, Jean. I told you last night, it is yours to command, mine to obey."

She turned to the door silently, then, remembering her letter, turned back for it. Mr. Blair detained her gently.

"Forgive me," he said; "but this letter—I must ask you not to send it, Jean,"

"Very well," she said; and without hesitation she tore the letter across and threw it into the waste-paper basket.

"Thank you," he said, gently; and, moving away, she left the room.

With a slow, feeble step she climbed the broad staircase she had descended an hour before so brightly and gaily; and when she reached her own apartment she let herself fall on the sofa with a gesture of passionate despair.

"It has come," she said, brokenly; "the trouble has come. How can I tell him? Oh! Heavens how *can* I tell?"—*To be continued.*

FACTS ABOUT PHILATELY.

PRAKRAMA.

II.—The Different Kinds of Stamps.

NEARLY all stamps may be divided into two classes, postage and revenue stamps. A postage stamp represents money paid to a government, corporation or person voluntarily, and for which the party making the payment receives an equivalent in the transmission of his correspondence or merchandise. The character of a revenue stamp is essentially different; it represents a tax, the payment of which is compulsory, and for which the payee receives no equivalent. The authority to issue revenue stamps belongs exclusively to the government of a country, but where this is federal, may also be exercised by the individual States. Thus, several of the United States have issued revenue stamps, those of California being the most numerous, varied and interesting. The Match, Playing Cards, and Proprietary stamps inscribed with the names of the manufacturers, which have been issued in this county, are not exceptions to the definition I have given.

Postage stamps may be classified in several ways. Those issued officially, but only for a single post-office, should not be mixed with the general issues of a country, and must also be separated from unofficial emissions like the stamps issued by express companies in the United States, and the "Diligencia" stamps of Monte Video which were issued by the proprietors of the diligences running between that city and towns in the interior. The terms "local stamps" and "locals" are applied to these private stamps as well as official "locals," but this use of the word is inaccurate, as an express company would ordinarily use the same stamps at all points on its lines. Again, we may classify postage stamps by the purposes they are used for, as ordinary postage, unpaid letter, registered letter, and returned letter stamps, newspaper stamps, and official stamps and franks. In addition to these, Spain has "Impuesto de Guerra" and the United States of Colombia "Anotacion" stamps; while Austria and Italy have special sets for the foreign branches of their post-offices. Adhesive stamps should be separated from stamped envelopes, and both of these classes from postal cards. Newspaper wrappers and letter sheets impressed with stamps are usually grouped with stamped envelopes.

The taxes for which revenue stamps have been employed have varied so much in different countries that it would be impossible to form a complete list, but there is an evident distinction between those required on documents and those representing taxes on merchandise. Among documents, receipts and bills of exchange have been very frequently taxed. As telegrams are a kind of correspondence and thus connected with postage stamps, it seems proper to separate telegraph from document stamps; but in the case of the first issue of United States revenues this can not be conveniently done. The new Spanish stamps inscribed "Correos y Telegs." defray the cost of telegrams as well as postage, and thus introduce a new complication. Document stamps are either adhesives or stamped paper, but only the former are ordinarily collected. A few varieties of stamped wrappers have been used for taxes on merchandise in this country, but I cannot now recall a single foreign example.

III.—What to Study about Stamps.

The nationality, the purposes for which they are used, the designs and colors of stamps are so obviously essential that I need not remind even a beginner of their importance; but there are other facts which are necessary to a real knowledge of Philately and are extremely interesting that might pass unnoticed. The date of issue is indispensable to the arrangement of a collection; but this has been already determined in regard to nearly all postage and many revenue stamps. Information as to the date of issue of the fiscal stamps of some countries is now very desirable, and, as this is a good field for study and research, I would advise collectors to notice the dates of cancellation, or, if possible, obtain official information, and then compare notes. No historical facts connected with the emission of stamps should be neglected; the names of the engravers, the processes by which the designs are produced, and even the machinery employed in their manufacture are proper subjects for investigation. The way in which cancellation is effected should be noticed as this is sometimes curious; the United States Tobacco stamps which are cancelled with a steel die which cuts out very small pieces of the stamp exemplify this.

The provisional use of postage for revenue stamps or *vice versa* is of exceptional interest. For instance: the high values of Hong Kong revenue stamps are used also for postage, and the only way to distinguish the latter is by noticing whether cancellation is effected by a postmark or otherwise.

IV.—Surcharged Stamps.

A surcharge is any inscription printed officially over a stamp, and not intended as a cancellation. The purposes for which surcharges have been adopted have been quite varied. They may indicate conquest. An example of this is found in the stamps of the South African Republic which were surcharged "Transvaal" when the country was annexed by Great Britain. A surcharge may be adopted to designate the stamps of a tributary state or province; as on some of the India revenue stamps which are surcharged "Mysore," and the Canada Bill stamps surcharged "N. S." for use in Nova Scotia. A surcharge may also indicate the purpose for which a stamp is used. Thus the provisional India official postage stamps are revenue stamps of that country surcharged "Service Postage" and the first issue of Quebec Law stamps were surcharged with initials to indicate their use. The recent change of currency in Mauritius and the adoption of the rupee as the unit of value necessitated the emission of new stamps, and while the dies were being prepared the stamps in use were surcharged with new values in "cents" over the old ones in "pence" In many instances the supply of a particular value has become exhausted, and the demand has been temporarily met by surcharging another stamp. The United States Tobacco stamps have been surcharged on several occasions when the tax has changed: the first issue of postage stamps for Straits Settlements were those of India surcharged with a crown above and value in cents below over the old values in annas; and the "Escuelas" stamps of Venezuela (so called because the revenue collected in this way is applied to the maintenance of the schools—*escuelas*) have printed across the face a microscopic inscription giving the date of the law authorizing their emission. The bill stamps of Mauritius present an interesting peculiarity. They are printed one value on a sheet, but are surcharged "First of Exchange," "Second of Exchange," or "Third of Exchange" consecutively, so that when correctly separated they come in sets of three. The Match stamps of the United States exemplify another use of surcharges. Some of these are found surcharged with the initials of a new firm which has purchased the business. Varieties of surcharge may perhaps pass unnoticed when the printing is defective, or, as sometimes happens through carelessness; inverted, and anything about a printed cancellation which appears unusual should be carefully examined.

THE RIGHTS OF OTHERS.

THE use of tobacco by any person, is a persistent and flagrant transgression of the rights of others. Persons claim the privilege of doing as they please; but no principle of law, gospel or common sense allows any man to please himself by displeasing or annoying others. If a man had neither father, mother, wife, nor child, nor friend; if he lived as a hermit in a hole on some desert island, untrodden by any human foot, he might perhaps claim the natural right to do as he pleased, provided there was no God and he was without moral responsibility. But it is impossible for society to exist unless men will consent to the abridgement of their personal rights or privileges, and learn to consider and respect the rights and inclinations of others. All law is based upon the principle that the inclinations of the individual must yield to the good of the community. He who refuses to accept this principle of action, speedily finds himself an outlaw. He arrays himself against society, and society avenges itself upon him by compelling him to submit to wholesome authority. No man moving in society has a right to make himself a nuisance or an occasion of offense to others. He is bound to observe the proprieties and decencies of life. As a member of society he must do nothing by which society itself would be subverted. No man living has the right to defile the water I drink. No man living has the right to poison the air I breathe. Every man who uses tobacco is continually doing this very thing: He burns his filthy cigar or his nauseous pipe, drawing smoke into his own mouth and then puffing it out for me to inhale. What right has he to poison the air I breathe? What right has he to give me the headache, or in any way deprive me of the privilege of breathing the vital air which God has made necessary to my very life? If he could get away beyond all human fellowship, where no one could see him, hear him, or be in any way affected by his conduct, the case would be different; but he intrudes himself upon others; he poisons the air I breathe, and seems to imagine that he has a perfect right to do this; and that I have no right whatever to object to his doing it. He is mistaken. It is not only my right but my duty to protest against his impudence and selfishness. No man has a right to poison his wife, or make his children sick, by the use of tobacco. Thousands are nevertheless doing it from day to day. Helpless women, little children, feeble and sensitive, suffer headache, nausea, and untold disgust, because some selfish and uncourteous man claims the privilege of doing as he pleases in regard to personal habits, without respect to the rights of those around him. Such men have mistaken their position. They may be able, under the law of brute force, to do as they please, but under the higher law of right and propriety they are unquestionably condemned.

One marked effect of the use of narcotics seems to be to blunt the conscience and render the mind insensible to delicate moral and equitable distinction, consequently men, without the slightest apparent sense of impropriety, commit the greatest breaches of public courtesy. A man has no more right to smoke in my face than he has to spit in my face; and yet I can hardly go on the street without being sickened by the nauseous puffing of a smoker who seems to have no more idea that he is making a nuisance of himself than a Fejee Islander has of the indecency of going naked. If these men who do this could know the loathing which they cause in the minds of men and women whom they meet from day to day, it is certain that unless their consciences and sensibilities were thoroughly calloused they would rid themselves of a habit so uncourteous to others and so unjust to themselves.—*The Christian.*

NEW PUBLICATIONS.

Abraham Lincoln and the Abolition of Slavery in the United States. By CHARLES GODFREY LELAND. Price, $1 50. New York: G. P. Putnam's Sons.

THE author brings to his task an absorbing admiration and enthusiasm for the subject of his sketch, and as may be inferred we are given a rose-colored view of Mr. Lincoln's character and conduct. In spite, however, of Mr. Leland's lack of discrimination and his inability to do justice to those whose political creed is opposed to his own, he has written a very pleasant book. The circumstances of Lincoln's birth, his early struggles and all the steps by which he raised himself from poverty and obscurity to the most exalted place in the nation, together with the conscientious manner in which he discharged the duties of his responsible position, are carefully portrayed, and an instructive and entertaining narrative is the result. Most of Mr. Lincoln's life was passed amid stirring scenes and any record of him must include mention of public events and political parties, and so the growth of abolition and "emancipation" sentiments are traced and the prominent battles of the civil war are described.

The information which the author furnishes relative to his own magazine ventures, is not only wholly uninteresting, but is in the worst possible taste, and as for the two collections of doggerel by courtesy, called poems—The Black Regiment and The Proclamation—they would disgrace an old-time dime novel. Here is a sample stanza or two:—

THE PROCLAMATION.

Now, who has done the greatest deed,
Which History has ever known?
And who in Freedom's direst need
Became her bravest champion?
Who a whole continent set free?
Who killed a curse and broke the ban
Which made a lie of liberty?
You, Father Abraham—you're the man!

* * * * * *

The word is out, the deed is done,
The spear is cast, dread no delay;
When such a steed is fairly gone,
Fate never fails to find a way.
Hurrah! hurrah! the track is clear,
We know your policy and plan;
We'll stand by you through every year,
Now, Father Abraham, you're our man.

Leland's Lincoln is the initial volume of "The New Plutarch" series, and the following are the other volumes of the series:—Coligny; The Failure of the French Reformation, by Walter Besant, M.A.; Judas Macabæus and the Jewish War of Independence, by Claude Reignier Conder, R. E.; Victor Emanuel; The Attainment of Italian Unity, by Edward Dicey, M.A.; Joan of Arc; The Expulsion of the English from France, by Janet Tuckey; Alexander the Great, by Rev. W. J. Brodribb, M.A.; The Caliph Haroun al Raschid; Saracen Civilization, by Prof. E. H. Palmer, M.A.; Richelieu and his Court, by Walter H. Pollock, M.A.; Hannibal and Carthaginian Civilization, by Samuel Lee, M.A.; Harold Fair Hair and the Scandinavians, by Erik Magnusson, M.A.; Charlemagne and his Time, by Prof. Beesley; Gustavus Adolphus and Whittington, Lord Mayor of London.

Easy Lessons in Popular Science. By JAMES MONTEITH. New York: A. S. Barnes & Co.

THIS little volume is designed to furnish a means of scientific instruction for small children. The object is certainly commendable, and the manner in which it has been executed deserves some praise and shows traces of careful selection and arrangement. The method advocated—that is, a series of conversations between the teacher and pupils, in which the scientific facts shall be presented and illustrated—is perhaps the best, where practicable, but requires exceptional qualifications in the teacher. Thus: the lessons are supposed to be illustrated by blackboard and drawings. Now, not one teacher in a thousand can make a blackboard drawing that will give a clear idea on the appearance of an animal that is less characteristic than that of an elephant. Where statements are made to children they should be strictly accurate, especially so as ideas derived from school-books are not easily corrected; and we regret to notice several departures from this rule. The author mentions a cuttle-fish as a very curious fish; to which we may add that it is *so very curious* that it is not a fish at all. Is there any need of teaching children such nonsense? We believe not, and that it would have been quite as easy to have stated what a cuttle-fish *is*. The distinction between a vertebrate and a mollusc is not beyond the comprehension of any child old enough to understand the difference between an exogen and endogen, which is given correctly enough in the book. The doubts we have entertained of the advisability of teaching the natural sciences to small children have only been increased by a perusal of Mr. Monteith's "Easy Lessons."

The Bodleys Afoot. With Sixty Illustrations. By HORACE E. SCUDDER. Boston: Houghton, Osgood & Co.

OUR old friends, the "Bodleys," appear this time "afoot," and what could be more timely, is not pedestrianism the rage? Unlike professional walkers, this family did not confine itself to a saw-dust ring and go round and round the same. The Bodleys extended their walks to Peru, Russia, Rocky Mountains, indeed it would be rather hard to say where they didn't go. Then they are such an inquisitive, adventurous family, and withal so jolly, that of all possible traveling companions they are the most delightful and entertaining. The illustrations are numerous, varied and in excellent taste, some of the designs being exceptionally dainty. The covers of the book and the fly-leaves are unique, and altogether, both inside and out, the book cannot but delight the heart of any of the "little folks" who may be so fortunate as to obtain a copy.

Eyesight and How to Care for It. By GEO. C. HARLAN, M. D., Surgeon to the Wiss Eye Hospital. Philadelphia: Lindsay & Blakeston. Price 50 cents.

IN this useful little book, every thing of interest concerning the eye is to be found. The author's lucid style and simple language, taken in connection with the illustrations, serve to give the reader an intelligent idea of what this organ is like, and how best to care for it. The anatomy and physiology of the eye, the ophthalmoscope, injuries and diseases of the eye, optical defects, spectacles, practical suggestions and effects of school-life upon the sight, are some of the topics treated of. One important advantage of this series is, that it contains the very latest discoveries regarding the different "Health" subjects, which is more than can be said of many more pretentious works.

MAGAZINES.

HARPERS MAGAZINE FOR OCTOBER.—Contents: On the Skirt of the Alps.—Illustrations.—At the Public Well; a Morning Scene in Venice; Balcony Marketing; Riva, from the Ponale Road; Lemon Gardens, Lake Garda; Limone, Lake Garda; Tremosine, by Lake Garda; San Giovanni, Bellaggio, on Lake Como; Lecco; A Street in Bellaggio; Villa Serbelloni. Painted Glass in Household Decoration.—Illustrations.—Painted Glass, Twelfth Century, at Liege; Painted Glass, Canterbury Cathedral; Specimen from St. Denis; Painted Glass, Strasburg Cathedral; Specimen from the Chapel du St. Sang, Bruges; Fragment of Disk of antique Colored Glass; Screen; Fruit and Game, Dining-room Decoration; Memorial Window in Society Library. The Connemara Hills.—Illustrations—Pilgrims at the Holy Well; Roundstone; "There, Ma'am, is America;" The Little Cabin; The Bathers; The Dance; Flanigan's Lunch. Fifty years of American Art, III.—Illustrations.—"View on the Kern River;" "The Yosemite; "The Bathers;" Landscape; "County Kerry;" "The Adirondacks;" "Ship Ashore;" "A Foggy Morning;" A Marine; "Arguing the Question;" "The Rose;" "Dress Parade;" "A Bed-time Story;" "The Scout;" "On the Old Sod;" "Lost in the Snow." A Ramble in Central Park.—Illustrations.—A-Maying in the Central Park; A rustic Arbor; Riding the Donkey; Equestrians; A Flirtation; Island in the Lake; The Cave; Feeding the Swans; Goat Carriage; Children and Lambs; A hot Day; King of the Inclosure; Gardening in Central Park. The Two Burdens.—A Poem—With two Illustrations. Through Texas.—Illustrations; "Mebbe you'd like to go Quail-baggin';" Bagged; G. T. T.; Galveston Bar and Roadstead; Immigrant's Camp; Cotton Wagons; Elm Street, Dallas; Cow-Boys; Court House, Fort Worth; Yuma Stage leaving Fort Worth; Group of Texan Hunters; Colorado River, from Mt. Burnell; View on the Comal River; Street Scene in San Antonio; A Stampede; Buffalo Hunter's Camp; "Gwine Home to Georgy;" Cotton Compress. White Wings: A Yachting Romance.—Chapter VIII and IX.—Illustrated. The State of the Alcohol Question. Belle's Diary. Young Mrs. Jardine—A Novel.—Illustrated. The Revolution in the Life of Mr. Ballingall. Mary Anerley—A Novel—Chapters X to XIII. Editor's Easy Chair. Editor's Literary Record. Editor's Historical Record. Editor's Drawer.

One of the newspaper letters says that the "vulgarity" of Jews is undeniable. It admits the good character and refined manners of many ladies and gentlemen of the Hebrew race, but it says that the number of the vulgar of that race who go to summer hotels is disproportionate. This is the point upon which the emphasis is laid. They are welcome to their religion, but as a class they are vulgar; therefore they are avoided, and therefore the hotels are compelled to exclude them. This is iterated and reiterated as the reason of the exclusion; but it is not the true reason. The fact is plain. There may be a great many vulgar Jews. But Jews are excluded from hotels not because they are vulgar, but because they are Jews. They are ostracized at hotels for the same reason that they are ostracized at clubs—an instance of which we mentioned a year or two since. There was no pretense that the gentleman proposed for the club was any more vulgar than a great many of the members, nor that he was not both refined and accomplished, and a perfectly clubbable man, except in one fatal point: he was a Jew. The exclusion at Saratoga and at Manhattan Beach pleaded vulgarity because it did not dare to make the real plea.

* * * * * *

There was no question of vulgarity. Jews as a class may or may not be especially vulgar, but they are no more refused for that reason than colored applicants would be. Some years since an accomplished Haytian, the minister of his govern-

ment to the United States, went to Newport in the summer. He was altogether a gentleman, of singular grace and charm of manner, and remarkably intelligent. Indeed, in social graces and wide knowledge of the world there were few gentlemen in Newport who were comparable to him; but he was politely requested to eat at a second table because he was not perfectly white. He was, in fact, of mixed negro blood. Another gentleman, more than twenty years ago, crossed the Atlantic on the same ship with some Southern gentlemen. They had the pleasantest intercourse during the voyage, for the gentleman in question was unusually well educated and refined. He was not especially dark in complexion; but as the voyage was ending, he requested the captain to mention to the Southerners that he was a grandson of a slave. Upon hearing the astounding truth, his late pleasant companions were ready to cast him into the sea.

This sense of caste is due to the prejudice of race. It is a wrong which the law no longer sanctions, but it survives socially. It is a relic of barbarism, and how sacredly it is cherished the attitude of the hotels, largely sustained by private feeling, however loudly it may be publicly condemned, plainly shows. Yet it is a mere prejudice unworthy a generous nature and a civilized people. The debt of Christendom and of civilization to the Hebrew race is incalculable, and the root of the prejudice is but the tradition of Christianity that Jews crucified Christ. It is a terrible retribution. A whole race is held responsible for the crime of a Syrian mob two thousand years ago. Men of no Christian principle whatever flout better men today because other men murdered the founder of Christianity. The mischief of this hotel exclusion, which the law, indeed, prohibits, is that it fosters this revolting prejudice—a prejudice which is barely urged as its own justification, and which both by our religious and political principles is especially unworthy of Americans.—*Editor's Easy Chair, Harpers for October.*

SOCIETY OF THE DAMNED.—A curious institution still exists in Paris—the Society of the Damned. These damned are dramatic authors, and they meet once a month and dine at Brebant's. Their number has no fixed limit, only every member, to be eligible, must have been hissed. An eminent dramatist is selected as chairman, and holds the post for three months. His election generally follows close on a splendid failure. M. Meilhac, M. Dumas, Jr., M. Zola and M. Offenbach have all filled the chair and presided at the monthly dinner. These dinners are given on the last Friday of the month, and are extraordinarily hilarious.—*The Theater.*

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

ONLY A LETTER.

ONLY a letter that came last night,
A dear, little love bird, winged with white,
That whispered the words in the maiden's ear
Of the sweetest song that a maid could hear,
And sang it over and over again,
Aye! the charmed din and the soft refrain,
And the burden was this—so old, so new,
"Do you love me as I love you?"

Only a letter, by Cupid sent,
That maketh the maiden's heart content,
That bringeth the blushes sweet and shy,
And the tell-tale light to her azure eye!
A missive read in the shadiest nook,
And dearer far than the choicest book,
Then hid with the precious things and few,
Tied with a band of love's own blue!

* * * * * * *

Only a letter that came this morn
With the heaviest weight that could be borne;
And yet it seemed to the man in gray
But a trifle light as he passed his way.
A wife is stunned by the sudden blow,
A mother's heart is filled with woe,
For the bird of omen tells a tale
That would make the stoutest spirit quail.

Only a letter, thin and white,
That has robbed a home of its joy and light,
That has hung, by the cruel news it bore,
That funeral crape on the outer door!
A missive clutched with hopes and fears,
And drenched with mourners' scalding tears;
Read and re-read with lips grown white,
Then laid with a shudder out of sight.

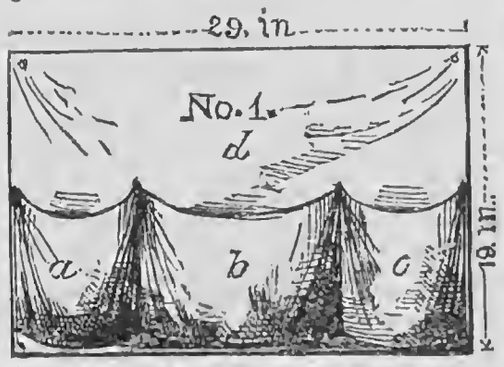
[*Chicago Times.*

A VISITOR.

MRS. J. E. S.

DEAR "CLUBITES."—Every one ought as she gathers in be willing to give out. Many are willing but want of practice, a fear of not being able to write well, or a dozen and one other reasons deter them from putting their thoughts upon paper. While the peculiarities of other people should to a certain degree be respected there is no reason why we should cater to our own or wish others to. Having read with much interest the various articles of the Woman's Club and received some very valuable suggestions; and being under great obligation to our Editress for permitting us space, it appears to me that in no way can I so well pay the debt I owe as in writing about some things that I am doing; also inquiring about other things that I want especially to know.

Wanting a place for brushes, slippers, combs etc., in the bathroom I took a piece of striped blue and white ticking and made two wall pockets. In No. 1, I let *d*, run up behind the mirror leaving just space enough to readily take out or put in the brushes at *a*, and *c*, and the slippers at *b*. In No. 2, I made two sets of pockets, 1, 2, 3, 4 and 5 for brushes etc., 6, 7 and 8 for tooth brush and combs. After stitching all around the edges of the back piece and twice between the divisions of each pocket they were finished in feather-stitch with scarlet yarn around the pockets and edges. Having a mania for driving nails, I put a shingle-nail in each of the corners and the middle of the opposite sides and drove them into the wall. They are so firm that should I want to take them down it might be a little difficult. Better so than to have them so slipshod as to be an annoyance, instead of a convenience and comfort as they were designed.



So many things are done carelessly that I can not afford to do anything slack. And too, we know not how many slight their work because you or I do. All have an influence either for good or bad. It may be an unconscious one, that is, we may not realize how little or how much influence we do exert; still every act, word or look in the presence of others leaves its impression, so also does our daily work leave its impression, and the manner in which it is done fades not slowly away. Annoyance has been so plainly depicted upon the human face divine that now whenever I put a tidy upon a chair, sofa or sofa-pillow it is fastened so well and firm that it remains as placed. The man of the house says "those tidies behave so well that they are a luxury."

More especially came I to the "Club" to present the subject of *using alum*. Many articles are written by eminent M. D's about its being deleterious to the stomach etc., and the use of baking powders in which it is found is being discouraged, in other words using alum it is claimed produces a hundred and one ailments to the consumer. It occurs to me that those who have studied up this matter ought to be shown some respect for their opinions until we prove them false. If alum is hurtful *why* put it into pickles? Why put it into bread? Why use it except for medicinal purposes? We can not afford to harden our pickles or whiten our bread at the price of our health!

A VIRGINIA LETTER.

DEAR MISS RIPLEY:—How time flies! Summer is gone, and I have not written. "Why? The answer to this question would fill a volume. Immediately after the hurry of spring work came the berry season. And this would be Chapter 1. After putting up many gallons of strawberries, I found it was "Love's Labor Lost," for they became tough and all went to juice. The mere heating results so. Blackberries do better, but rival all the *blacks* in the South for *working*. I soon found it would not do to trust them in my dark closet of preserves, and I had to give them a probation in the spring-house. But whortleberries do behave well and retain all their attractions in imprisonment, rigid or careless. That which will *sour* the disposition of any other fruit has no effect upon this. I always like

To Can Whortleberries.

Put one pint of water in a kettle, fill with fruit; pour over it one pint of sugar, let it get hot through; fill the jars while in the hot water—(why does'nt some enterprising Yankee invent a crate and boiler accompanying his jars, for holding them in the water?)—with the fruit, leaving the syrup, to which add more fruit, till all the cans are full. Lift from the water and seal.

Then came the harvesting of early matured vegetables, dried beans and their hulls. I always save the hulls in tubs along with the bran, waste salt, nubbins of sugar corn, etc., and pour boiling slops over them as a warm porridge for my cows, on winter mornings. In Summer, when the grass is green, they do not need them, and in Fall, I feed them the bottom leaves of the cabbage, the turnip tops and whatever will not keep for winter.

After harvesting these and rushing through a thousand other little preparations, I ran down home (parental) for a spell. Here I saw many things. The Pinafore and Tournament were chapters for other papers; and I *must* give Uncle Mark's boys a description of the watermelon patch belonging to the cousin who came home with me from that fine old farm. I knew she was accustomed to good living, so I tried (vainly often) to improve my dishes. She liked

Waffles and Corn-batter Cakes.

Two eggs well-beaten, stir in a little flour, then one teacup of buttermilk, in which has been dissolved one teaspoonful of soda, one teacup of sweet milk, then the remainder of one quart of flour. For batter-cakes, stir in meal instead of flour. Use plenty of lard in baking—or gravy, or butter. For dinner we had

Fruit Pudding.

One egg well-beaten; one cup sweet milk; one and a-half cups of berries; half cup of sugar; one spoonful of butter; one cup bread crumbs. Bake in a shallow dish.

Roll (steamed.)

Line steamer with pastry, fill with alternate layers of fruit and thin dough; steam one hour, turn out on a large dish; (it looks like a big, white cheese), and serve with sugar and cream in Summer; with hot sauce in Winter. I like cool things in Summer, and hot in Winter.

One afternoon I was getting a nap after the fatigues of superintending dinner, and Cousin called to me "Here is something will arouse you," and began reading that "Vigorous Protest" by "A Woman," about scouring the coffee pot with ashes, and I *did* feel just a little indignant at first, and resolved to reply to it, and next morning, (for I always write in the forenoon when I am fresh) began "*Woman* thy name is Frailty" and wrote a long piece proving the carrying out of my idea of economy in using ashes and water instead of soapsuds. For the alkali—and grease (accumulating from butter used in parching coffee) unite and make a soap for cleansing and sweetening. Only those pots used and blackened by fire *need scouring*. My *new* and *hard* coffee pot, never was nor ever will be scoured till it becomes leaky and like the other two has had the second and third bottom put in; then when accidentally smoked, it will be brightened by rubbing (no friction) with ashes. I never allow any new thing with a high polish to be *scoured*. It at once takes on a *pewter* look, and I supposed this would be taken for granted. I have never so much as cleaned my watch chain by shaking it in suds in a bottle, though "old gold" is so *fashionable*. I like it to glitter with *new luster* if the intricacies do hold dust.

Yes, I wrote an article, but before I sent it, we took a trip to one of the greatest curiosities in Virginia. A lake on top of the mountain four thousand feet above the sea. Then I forgot the coffee-pot woman, and went off into writing of "Bald Knob, Mountain Lake, The Cascade, Pompey's Pillar," and wrote eight pages of foolscap, and could have written for weeks of the beauties and wonders of this spot. I saw the mountains of five States from the highest point in Virginia where, the Alleghany covers a greater breadth than in any other State. I brought away a wealth of lichens, mountain-ash berries and plants, and will submit to be advised what to do with them to preserve them in the most attractive form. Of course "A Woman" will be the proper person to enlighten me and here she may expend her superabundant supply of information to some purpose.

Then we went to the Fair at Wytheville and I caught many ideas, and a cold. I took my shell frame and a premium on it, (as well as on my horse Harry Hot Spur.) The frame was oval cut from a thick plank, left rough and covered with putty. Little spiral shells were sunk into the putty for the inner and outer margins; at the top, and bottom and sides a rose was made by pressing the hinge-point of bivalves into the putty around a pointed shell, beginning with small and gradually increasing and expanding as the petals of a rose. The spaces were filled with other designs and a ground work of small insignificant shells. It is best to frame a wreath of shell flowers on a back ground of black velvet. Use wax or putty or white lead. Into pink wax, press a spiral and surround it with bivalves with the hinges out. These are smooth and pinkish and look like dahlia petals, make sprays of leaves by threading on silver wire small rice. Four or five smooth white shells secured by wax make pretty single flowers and may be worn at the throat or for ear-drops. I had such a spray on a black card beneath the frame, held by a photograph holder made of oblong bivalves, fastened to a little square of onyx bought at the Centennial as a specimen of William Emperor of Germany's mantle-piece for which he paid $25,000. The onyx and shells were the same color, creamy opaque with wavelets of greenish transpareney. With white putty I stuck the little pair on at the hinge, open at the top just wide enough to admit a photograph and it holds the magnificent dark ground picture of my cousin, on a little bracket, apparently, sawed walnut, but only stained paste board. Reeds Island, Va.

HIS METHOD vs. HER METHOD.

So much has been said and written about want of system and thoroughness on the part of women, that I a member of the much maligned sex, offer the following facts as evidence that want of thoroughness is not as much a matter of sex as is generally supposed.

There are at present two prominent societies for aiding those who desire to improve their minds. The one, the Chautauqua Literary and Scientific Circle, the other, the Boston Society to Encourage Home Study. The first named is managed by men—a clergyman being at the head of it, the other, is under the control of ladies. The former *should* be characterized by thoroughness, that being pre-eminently a masculine attribute, if report speaks true. A review of the plan of each society's work will best illustrate which is superior.

The Chautauqua Circle, is a four years' course, the time required for study being an average of 40 minutes reading each week-day, from Oct. 1 to July 1. Those who feel so disposed can devote *hours* to studying, but the time per day, specified above, is considered by the management sufficient for the student to perfect himself in the list of studies given. For the year 1879-1880, the following are the appointed studies:

General History of Rome.
Text-Book on Roman History.
Primer of Latin Literature
Philosophy of the Plan of Salvation.
Text Book on Christian Evidences.
English History and Literature.
How to Get Strong and How to Stay so.
History of the United States.
Text-Book on American History.
Primer of American Literature.
Biology, Botanical and Geological.
Text-Book on Biology.

Postal card blanks for three-quarterly reports are furnished all members, on which students are requested *to give the names of the books they have read, and the number of hours devoted to reading*, this constitutes a report.

"I now repeat what I said in my closing address of last year, that the ground of your acceptance of the C. L. S. C. will be the statement of the simple fact that you have read the required books or their equivalents," so says the official circular.

In nine months with 40 minutes study a day, it is expected that students will master the elements of some eight or nine studies, and the "reports" consist of a simple statement of the number of hours employed in studying. Pray, what idea of progress can be gained by knowing that a student has read a book for three or four hours? He may in that time have thoroughly mastered a dozen paragraphs, or he may have skimmed through thirty or forty pages. It would seem that cramming a pupil with a few facts about half-a-dozen different studies, and rating him by time expended in study, instead of by the amount of information acquired, is hardly calculated to "develop the habit of close connected, persistent thinking," which the Circle declares it is their object to do.

The Boston Society allows the student to select her course of study. Usually but one course is chosen; some, however, take two, and a very few three courses. One study constitutes a course, which is not measured by years, but by *books*, so the student, by little or much study, herself determines the length of the course. By concentrating all her efforts on one study, the student becomes thoroughly posted on it and acquires a stock of available information, instead of dividing her time and energy among several studies, no one of which can she, by any possibility, gain more than a smattering of.

After the course has been selected, the address of one of the Society is given, to whom the student sends monthly reports, which consist of notes taken on all she reads. The notes are taken from day to day from *memory*, and the Society correspondent returns them to the student with explanations, corrections, etc. When the book is finished—not the course, but the first book of it—a printed list of questions is sent the student, the answers to which are designed to test her conscientious application to the task assigned her. She has to write out the answers from memory, and is allowed only 2½ hours to do it in. Finally, the student is expected to write an abstract of the book—not a mere catalogue of facts, but to give the drift of the thought of the work. This, too, is to be done without any reference to books. What with notes and abstract, the student cannot fail to have a firm hold on the facts given for her consideration. Slighting is not possible under so thorough a system. EDNA HOUGHTON.

THE FAIR MONTH.

SEPTEMBER has come and gone, and with it the great annual reunions of the farming community—the Agricultural Fairs. Nothing in the life of a genuine farmer so tends to stir the languid pulses and quicken every honorable ambition as these gatherings. There is food for every taste and help of some kind for every class. People are benefited without knowing it, in many ways.

Care-worn women, whose busy lives do not afford them time, or who have not room convenient to cultivate house-plants, have their eyes gladdened by the sight of beautiful flowers on exhibition. The narrow-minded farmer who travels in his little round throughout the year, feels a wholesome pang of discontent with his own stunted apple trees, as he sees the choice specimens that are so tastefully displayed. He goes home determined to post himself a little better on the culture of fruit.

The staid old ladies scan with a critical eye the samples of woolen yarn, stockings and mittens entered for premiums, and descant on the better times in their young days, when such kinds of work were done so much better.

The children who have resolved themselves into a "committee of the whole" to judge the quality of the candies, peanuts, and other eatables for sale, are not behind the rest in enjoyment. The looker-on, too, has a treat in watching the different countenances, and studying the varying expressions of the changing sea of faces. Looking over such an assemblage the other day, I was highly edified at some remarks I could not help overhearing. Two over-dressed men were standing near, looking about them with that pompous air of superiority which cannot be described. Incipient office-seekers they probably were.

"Well," said one, "what do you think of the show?" "Barely passable," returned the other; "hardly worth one's while to throw away his time on; but I suppose these things serve their purpose by amusing the *common people*."

One of the "common people" was certainly amused at their wise discourse, but I have often since found myself wondering what quality of the mind is called into action by this feeling of being so much above, or superior to common humanity. It certainly is not refinement, or modesty, or cultivation, or self-knowledge, which thus sets itself on a pedestal above the mass of mankind. None, who truly identify themselves with the spirit of our fairs can entertain such a foolish estimate of themselves. B. C. D.

Elkhorn, Wis.

EDITORIAL ANNOUNCEMENTS.

IN our issue for November 1, will be published illustrations of the latest fashions in overskirts and polonaises, suitable for ladies and young girls.

The following week (Nov. 8,) a full account of modish goods, for house and street wear will appear.

CORRECTION.—In answer to an inquiry which appeared in the RURAL NEW-YORKER relating to "Home Sweet Home," I would suggest that the word parent be used instead of mother in the second verse of the poem as given in RURAL of Oct, 4. It would then be a correct copy of Payne's original. R. M. L.

Oak Burn, N. Y.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

MRS. ENDICOT'S JOURNAL.

Putting away summer clothes; bread-making; keeping sponge over; ammonia for cleaning paint; how to clean a carpet.

Oct. 10.—Monday was such a beautiful day, the clothes drying so quickly, that I had many summer clothes washed, ready to be put away. I think it is so much better not to have them lie with the starch in, especially if there is much white about them, as it is almost sure to turn yellow. I don't know but I have rather a novel complaint to make for a housekeeper—that of too many closets. Our house has a very peaked roof, and the rooms up-stairs have a strip taken off of each side, so as to make the ceilings square, giving two closets the whole length in each room, and in one there is a third made by the chimney. My trouble comes in spring and fall, when their contents have to come out. It being so handy, many things get tucked away that should have been disposed of at once. I made quite a large package of the children's outgrown clothing for the Dorcas Society. As I had planned more extra work for this week than Betsy could do alone, I thought I would bake bread while she ironed, on Tuesday. Keeping that in mind, I had my potatoes for dinner mashed on Monday. When they were boiled sufficiently, I had my flour in a jar—about three pints, I should think—and over it I poured the water in which the potatoes were boiled. After they were mashed, I left two good spoonsful in the kettle, to which I added about a pint more of water and put all in the jar, stirring till perfectly smooth. Just after supper I added a cupful of soft hop yeast and set it on the hot-water tank of my stove, in a dish, not wanting such another experience for Betsey as I had while she was gone. (Coming out one morning, I found my sponge running over tank and stove, and dripping down on the clean floor.) Before breakfast next morning I stirred my sponge down, adding a cupful of warm water. After breakfast I mixed my bread, adding one more cup of warm water and kneading the dough thoroughly. By nine o'clock it was ready to work out into the pans. Before our 12 o'clock dinner I had four beautiful, smooth, brown loaves of bread, which, when cut, were all one could ask for. Now that the weather is getting cool, I will not bother with yeast any more, but each time save a pint bowl of sponge, which I will use to start the next. I think it makes superior bread.

Wednesday morning was not just the kind of a day I would have chosen for house-cleaning, but as we only intended to clean two chambers, and only in one of them did the carpet have to be taken up, I concluded to go on. I was glad I did, for by nine o'clock the sun was shining brightly. Barton being too busy to help us, he sent a colored man, who took up the carpet, switched all the dust out of it, folded and carried it up-stairs, thus saving us much time and strength. The beds I put out in the sun and air; had the room swept with a damp broom; then the wall wiped off by tying an old flour bag over the broom. In Harry's room I took some spots off the paper by rubbing with a dry crust of bread. Then I called on my old assistant, the ammonia bottle, without which I wonder how anyone keeps house. The addition of two or three spoonsful to a bucket of water made the paint look beautifully clean without any soap and with but little rubbing. The carpet in my east room, which I did not have taken up, is rather light. I had Betsey take a bucket of water, just a little warm, with but one spoonful of ammonia in it, and wipe it all over, just as you would an oil-cloth, only wringing the mop drier. You would be surprised to see how clean and bright this treatment made the carpet look. The windows in this room I had her leave until afternoon, as it is my experience that it is almost impossible to clean glass and make it look clear when the sun is shining on it.

RAG CARPETS ONCE MORE.

While I do not wish to awaken a spirit of strife among the Rural readers in regard to the economy of making rag carpets (for there has, as we all know, been enough said already concerning them), yet, being in favor of their use, I have thought I might help "Tyro," to a way of disposing of her woolen rags, by relating my experience. One knows well enough that, when woolen carpets are sold so reasonably as at present prices—and they exceed in beauty, if not excellence, the homely rag covering—those who are not very industrious would be but poorly rewarded for their toil and time in making rag carpets. But those who need them, and can find plenty of material, may be quite surprised at the cheapness of dyes, within the reach of all. I have noticed that the aim of weavers and those who employ them, is to imitate closely in colors and striping, the home-made woolens which the farmers' wives used to manufacture; hence the dyes are the main expense.

As so much more cotton is woven in nowadays than formerly, the many new ways of coloring cotton, without *weeds*, give one better advantage for imitation of the striped yarns, once so desirable. I, like all new beginners, aimed for beauty in shades, and having more white cotton than woolen fabric or prints to dispose of, found that the coloring of the goods would be of more expense than I liked to bear; besides, the dyes, many of them, are very unhealthy to use, but I was well enough suited with the durability of them in all cases; hence I yet speak in their favor, wherever they can be used advantageously. Having found among my woolen materials a homely variety of shades with no harmony in colors and not enough in quantity to go through all the breadths alike, what better way was there to dispose of such than to have them all immersed in a black dye? Many say, such rags show dust, and soil so easily; but do not any of the fancy colors look well when divided by a black stripe of a thread or two? Again, old calico dresses—faded—often make rags strong enough to wear well, but *so homely* as to look like an old carpet if used much in striping.

When I had 10 pounds of motley shades of woolen, which would not spot or fade, they were all colored black. When 15 pounds of cotton, faded in all sorts of colors, were wound into skeins, a dye was made by covering a copper wash-boiler full of the boughs of common willow, with water, and boiling them until the twigs could be easily separated from the bark. Throw out the twigs and put the bark into the boiler again. Steep with renewed heat, and, when well boiled, remove the bark, refill with twigs and add a pound of copperas. After removing the twigs bark, boil your calico until the color you wish is made. If you want more than the pretty shade of drab you get, then add an ounce or two of logwood, well dissolved, and a slate color will be the result. Or you can leave out your willow entirely, and color faded calico with logwood and copperas, and any sort of rags will look well beside these shades, whether gay colors or dull.

I have always disliked blue in a carpet, but I saw that there were chemicals which produced such lovely shades, by magic almost, that I found my alliance to human nature was such that I must imitate the carpet-makers and have plenty of green—my yellow and blue being used to produce it—and an over-supply of blue was the result. Then my natural prejudice against blue in any carpet of rags, made me wish I had not bought so much dye, but as I had several yards of carpeting woven and never a bit of blue in it, I resolved it should have a place, or be re-dyed; so, as an experiment, I took my warp, which was a very dark blue, to the weavers, with only three colors of rags—black, blue and drab. The result was, a carpet which took the first premium, over nine other pieces, at the county fair. The center of one stripe was three threads of drab cotton, next two of black, three of blue, two of black, three of blue, four threads of black and drab twisted—each color twisted slightly by itself, then twisted together. Next three threads of drab cotton, then a stripe composed of eight threads of black and blue, alternating, the black joining the drab, or the reverse. When finishing the stripes, add three threads of drab cotton. Next is a dark stripe made of nine threads of black woolen, three threads of dark navy blue, three of bright dark blue alpaca. Next a stripe of seven threads of blue cotton, four of one dark shade, three of sky blue and two of black. Next a stripe of drab cotton of six threads in width, this stripe ending with a center of 11 threads of black and drab cotton—six of black and five of drab alternating.

My experiment was not displeasing to my eye, hence a good, durable and handsome carpet was the result, and though rather sombre at first glance, yet with suitable paper hangings and other adornments, it would add much in beauty and comfort to the home of a poor woman who could not afford the more expensive dyes or carpeting. I spent only three whole days in preparing the 15 pounds of cotton drab goods, after the skeins were sewed, and 15 cents in money. But after all the time and labor of making the rag-carpets, I think with pleasure of the comfort (as my imagination gives coloring to the picture) of a floor which a woman has within a few months described in the Rural. It was made of boards of one kind, alternating with another variety, then oiled and brightened by handsome rugs for ornament or warmth. Yet the good substantial rag carpets, save the strength of the busy house-keeper, who has not the new handsome floors.

If my experience of a lifetime, in the making of rag carpeting, will benefit the ladies who read the Rural, then my time and approval of them thus expressed, will not be uselessly given.

A Reader.

DOMESTIC RECIPES.

Onion Sauce.

Boil five small white onions until tender, then chop fine. Boil a cupful of milk, add a piece of butter, with pepper and salt to taste. Stir in the minced onion with a small spoonful of flour moistened with milk.

Butter Taffy.

Two coffeecups of white sugar, three-quarters of a teacup of vinegar, three-quarters of a teacup of butter. Boil until brittle. Pour into buttered dishes.

Mary B.

To Cook Cabbage.

If any of the Rural readers are so lucky as to have cabbage, I should like them to try my method of cooking it. Cut the cabbage fine as for slaw, then put a tablespoonful of lard in a skillet, and when heated, put in the cabbage. Season with salt and pepper. Stir until tender, then pour sweet cream over it, just enough to moisten. It is excellent. No water is needed. Worms have eaten all the cabbage around here.

If Mrs. Endicot could see my three little boys gathered around the table eating "Farmers Rice," she would smile, I am sure. Papa is as anxious for his share as the children.

Ill. Mrs. Trouble.

Crullers.

Two quarts of flour and four large teaspoonsful of baking powder sifted together; two teacupsful of sugar; two eggs; large cupful of new milk; flavor to taste. No shortening is required in this recipe.

Lemon Snaps.

Two teacupsful of sugar; one of butter; two-thirds of a teacupful of milk; four teaspoonsful of baking-powder and about two quarts of sifted flour. Roll thin and bake quick. Flavor with lemon.

Molasses Cookies.

One pint of molasses; one egg; one cupful of shortening; two teaspoonsful of saleratus; two tablespoonsful of ginger. Roll about quarter of an inch in thickness. Bake in a quick oven.

Mrs. T. D. Carman.

News of the Week.

MISCELLANEOUS.

Monday, October 20th, 1879.

A member of the Dominion Parliament and Canadian Minister of Finance Filley, have been at Washington studying our national banking system. The bank failures in Montreal and elsewhere have proved the weakness of Canada's present system, and the next session of Parliament will attempt to build a new one something like what we have. The Supreme Court of Indiana has decided the State statute constitutional which gives the wife of an insolvent under $20,000 possession of a third of his property, when the rest is sold for the benefit of the husband's creditors. The deadly quarrel between the Underwood and Holbrook families at Graysaw, Carter Co., Ky., has resulted in the murder of five Underwoods and one Holbrook in three weeks. Atlanta, Ga., the busiest little city in the whole South, has put up 550 new houses during the past year and expects to be the biggest city in the State when the census is taken next year. The coroner's jury which has been investigating the grand-stand disaster at the Adrian (Mich.) fair grounds, by which 15 or 16 lives were lost and 270 persons injured, have rendered a verdict finding W. T. Lawrence, owner of the stand, Sizer, the architect, and E. H. Armstrong and Henry Armstrong, the carpenters who built it, guilty of criminal negligence. All but the latter have been arrested on the charge. During the year ending June 30, 19,300 applications for patents were received at the patent office, and 2674 caveats were filed, while 12,471 patents were issued, 1547 trade marks and labels were registered, and 828 patents were granted, but withheld for the payment of final fees. The receipts of the office were $703,146, being $154,495 in excess of its expenditure.

Large meetings have been held in British Columbia, and resolutions passed and petitions to the Premier of the Dominion government, protesting against the employment of Chinese labor in constructing the Canada Pacific railway. The judge of Baldwin county, Ga., has made an application to Governor Coquitt for a military organization to suppress the "Georgia Tigers," a band of outlaws who hold half the county in awe and defy arrest. They killed two men Tuesday and burned several houses. During the past three years they have killed twenty men and women, mostly negroes. The Governor will send the military if needed. In Washington it is semi-officially stated that Congress will be asked to retire Justice Hunt on full pay, and that Attorney-General Devens will be offered the position by Hayes. The Secretary of War's estimate for the fiscal year ending June 30, 1881, aggregate $40,000,000 or $344,000 less than the estimate for the current year. This is the lowest appropriation asked for in twelve years. The next season's orange crop of Florida promises to be from 10 to 20 per cent. larger than the last one.

The returns to the Department of Agriculture at Washington for the month ending October 1, 1879, show an average condition for the cotton States of 81, being a decline since September 1 of 5. Arkansas and Tennessee are the only States showing an increase over the condition at this time in 1878. The condition of tobacco October 1 had improved from that on September 1 in nine of the producing States, has declined in two, is unchanged in one. The State averages are, Massachusetts 103, a gain of one; Connecticut 110, a gain of 10; Pennsylvania 111, a gain of 11; Maryland 98, a gain of 2; Virginia 87, a gain of 5; North Carolina 90, a gain of 3; Tennessee 104, a gain of 14; Kentucky 95, a gain of 9; Indiana 99, a gain of 9; Ohio 70, a loss of 4; Missouri 78, a loss of 10; while Illinois remained unchanged at 100; total average for these States 93, a gain of 6. Early planted tobacco ripened well, and has been harvested in good condition, showing in general an excellent quality. Late crops were materially damaged by frost in Ohio, and slightly so in a few localities in Virginia and Tennessee. The decline in Missouri is ascribed to drought. The forthcoming annual report of the Commissioner-General of the Land Office will contain an interesting comparative statement of the disposals of public lands to actual settlers during each of the last five fiscal years. The totals range from about 3,500,000 to 4,000,000 acres each, for the years 1875, 1876 and 1877, 7,166,974 acres for the year ending June 30, 1878, and 8,650,119 acres during the 12 months which ended with last June. The totals of entries under the homestead and timber-culture laws contrast as follows: for the fiscal year of 1877, 2,698,771 acres; 1878, 6,288,779; 1879, 8,026,685 acres. The cash sales show a decrease 255,000 acres since last year, when they aggregated about 877,000 acres. But the net increase in the amount of land taken by actual settlers during the last fiscal year is found to have been nearly 1,500,000 acres.

Of the 8,000,000 immigrants who have found a home in the United States during the last thirty years, 6,000,000 landed in New-York. This proportion of three-quarters of the whole in favor of New-York has of late years been largely augmented. Immigration attains its fullest volume in the spring. For instance, this year, though January and February brought over nearly the same number of immigrants, 3,996 and 3,983, there was an increase of almost 100 per cent. in March, and another augmentation again, of not quite 100 per cent. in April, when it was 14,238. May was the largest month of immigration yet recorded for 1879, for it was 22,049. In June the number diminished, and was 19,068; in July it was 16,263, to increase a thousand in August, until last month its exact figures for New York were 21,755 making a total for the nine months, up to the 1st of October of 126,489 persons. This month the indications are that the total of immigrants will be very nearly as large as in May, somewhere in the neighborhood of 22,000. It is quite possible that during the coming months of November and December, immigration will diminish, but with such experience in this business as may be gathered from the Secretary of the Board of Commissioners of Emigration and from the steamship companies, fully 10,000 more people may be expected before New-Year's The total immigration, then, for 1879 will be very nearly 159,000 persons. This mighty influx will compare closely with the immigration of the year 1863, though 135,000 less than that during the most memorable year of 1872, when 294,581 foreign persons were landed in New-York, there having been a single day of 8,000. Last year—1878—may be called the commencement of the turn in immigration. After 1872, the influx of foreigners had declined, year after year, until in 1877 the minimum of 54,536 had been reached. In 1878 the first jump was taken, an increase of over 20,000.

As to division of nationality, during the last nine months, the Germans stand first as to numbers, being 24,218; the Irish next, 16,658; the English are 14,213; Swedes, 9,947; Scotch, 4,300; Norwegians, 4,188; Swiss, 3,703; Welsh, 1,866, and French 1,664. Russia presents a fair number of immigrants this year, having sent us so far 2,138. If immigration is somewhat capricious in its movements, it seems to incline to very gradual augmentations, but with sharper declines. Between 1863 and 1872, from 155,844 to 294,639, the increase was 138,795, but from this maximum it fell in 1877, a period of only six years, to something not much over 54,000.

It is quite impossible to determine what exact amount of property these immigrants bring with them—what addition they make to the riches of the country. Intelligent efforts, made some years ago, failed to arrive at any definite results, but the Commissioners of Emigration think that about $70 is a fair estimate of the money brought by each person, and that their effects amount in value to about as much. If, then, we are likely to receive in New York 159,000 foreign persons this year, their total capital will represent something like $22,260,000. Any one who will take the trouble of going to Castle Garden will be surprised to see how well clad are these immigrants, representing, as they do, a class much higher in the social grade than those of former years. There can be no doubt that before long many honest and capable English farmers will take up their lot with us—men with money, who will bring with them the capital necessary to make a fair investment in land. Some of the Russian immigrants have come fairly provided with means, and the case is cited of some 20 families, not numbering 100 persons, whose capital amounted to $85,000. With our vast extent of territory, with only some thirteen people to the square mile, with the easy methods of distributing any incoming population, no matter how large it may be, even such an immigration as we will have this year can be most readily absorbed.

On Thursday last the rowing contest between Courtney, the American and Hanlan, the Canadian was to have come off at Chautauqua Lake, N. Y. The betting before the time for the race was 100 to 75 in favor of Hanlan, and at there figures it is said that at least $240,000 were staked. On the night before the race, however, both the boats Courtney had brought with him to row in, were sawed, one asunder and the other nearly so. There was no other boat on the lake in which Courtney would consent to row, so Hanlan rowed over the course and claimed the stakes, $6,000, offered by the agent of Hop Bitters. His claim has been refused, however, on the ground that there was no actual competition and that before the money is paid, the contestants must really row together. There is a world of crimination and recrimination as to which side was guilty of the disgraceful action, owing to which the race failed to come off. Courtney had two men to guard the boat house, but they very conveniently abandoned it for an hour or more during which time, it is said, the mischief was done. Hanlan, therefore says Courtney was afraid to meet him, and to avoid doing so, connived at the cutting of the boats. On the other hand, Courtney and his colored trainer "Frenchy Johnson" have made affidavits that Ward, Hanlan's friend and backer, tried several times to induce Courtney to "throw" the race on the ground that Hanlan wouldn't row unless he was sure of winning, as he intended to get up a race with Elliott of England, in which the betting would be heavily in his favor if he went over triumphant, and that he intended to lose the race after his friends had taken all the bets offered by his English backers, thus pocketing a fortune. They say that a large sum was offered to Courtney to lose the race, and that on his refusal, the Canadians cut the boats. All agree that there never—well, hardly ever—was such a saturnalia of gambling and rascality as that at Chautauqua during the race excitement.

After relieving Payne's command, Gen. Merritt pushed rapidly forward to the White River Agency where Agent Meeker's body was found with a chain tied round the neck, by which it was evident that the old man had been dragged around before his death. The bodies of most of the other agency employes were also found, but those of some were not discovered so that it is supposed that these are still alive either with friendly Indians or among the miners in the neighboring hills. The women at the agency as well as the books and money have been taken care of by Chief Douglass, who has remained faithful. Indeed, it now seems that the late outrages and hostilities were undertaken solely by about 250 Indians whose whereabouts is now unknown. It is supposed they have scattered in small bands and will be befriended by the roving, hunting Indians of the Uintah and Arrapahoe tribes. A week ago it appeared probable that the military would be permitted to deal exclusively with the Utes, but since then the "peace policy" has gained the upper hand, and Agent Adams has been commissioned to obtain from the Indians the surrender of the arms of the late hostiles and of

the persons of these who were guilty of murder and other crimes during the outbreak. The Interior Department, therefore, has taken charge of the affair, and consequently all of Gen. Merritt's command have been ordered to their stations, leaving only a small number of troops at the White River Agency to guard the supplies collected there and on which they can subsist during the winter in the event they are snowed in and orders recalling them cannot reach them. The only explanation given by the Secretary of the Interior is that the Department has the fullest confidence in the plan now being followed, and that it would be folly to expose the army to unnecessary risks, with winter weather already threatening their march toward Rawlins. What the special instructions of Agent Adams are cannot be ascertained, but they are said to be wholly of a conciliatory nature.

The walking craze seems on the wane in this city and, indeed, elsewhere also. Here the public has been surfeited with the thing. After the contest for the Astley belt came another for the O'Leary belt, and yet another last week in the same place for prizes ranging from $1,600 for the first to $200 for the sixth. The men had to walk only 14 hours a day, resting from 12 o'clock at night until 10 in the morning, and all who had not made 50 miles a day when retiring, were excluded from further competition. Forty entered and only seven continued the struggle until the end of the week. The attendance was never over 2,000 at any time, and often the large garden was apparently deserted by all but a few deadhead loafers. It can scarcely have paid the managers. That Mrs. Anderson, too, is trudging an innumerable number of quarter miles in as many quarter hours in another hall here, but there are few who care to see her. The same want of public patronage meets a half a dozen other similar exhibitions in various parts of the city.

Yellow fever still continues to plague Memphis, chiefly among returned refugees. Yesterday there were two new cases and one death. The cold wave now moving South will probably kill the Yellow Jack, or rather, cause him to hibernate until next autumn or late summer. So Ohio has gone Republican by about 23,000. This issue is supposed to be the death-blow of the greenback doctrine, known also as the "Ohio idea," and also of the presidential hopes of Allen Thurman, who will not be re-elected to the Senate, as both branches of the State Legislature are Republican.

FOREIGN.

Englishmen seem to have taken up the "personal journalism" of this country, long after it has fallen into discredit here, just as they are taking up the caucus after the best Americans have grown sick of it, and are anxious to find means of escape from it. The two leading ventures in this field have been very successful and have had a good deal of excellent writing, but their main attraction has been the gossip of society and piquant details of the private life of well-known persons. Another leading feature has been savage attacks on the conductors of obnoxious newspapers, in the style of the late James Gordon Bennett. One unhappy man, Buchanan the poet, appeared on the scene some years ago in the character of the Indignant Moralist, and tried to stop their excesses by a series of prosy articles on the "Signs of the Times" in the Contemporary Review. He had only issued one when he disappeared under a retort from the World which covered him with mud as no man was probably ever covered before. Since then the fun has grown fast and furious, Truth, under the editorship of Mr. Labouchere, leading the way into fresh fields every day. Having fallen foul savagely of one Lawson, the proprietor of the Daily Telegraph, there followed the old-fashioned American street-fight—Lawson with a cane, Labouchere with an umbrella—in which Labouchere apparently got the worst of it, and is now threatening his opponent's life in default of "satisfaction." He is known to his brother-editors of the same school as "Labby" and "Henry." One of the fraternity, the editor of the Town Talk, is in Newgate awaiting his trial for a criminal libel in announcing proceeding for divorce by the husband of one of the reigning beauties, Mrs. Langtry. The whole business is a much more disgusting mess than anything of the kind we have had here, owing to the popular eagerness to know what the aristocracy are doing—a passion of which we have here no counterpart. Both Mrs. Langtry and Mrs. Cornwallis West, the two best known "beauties" of London, have brought actions for libel against this Jewish editor. He charged that the husband of the former had applied for a divorce from her and implicated the Prince of Wales and other notabilities. Mr. Langtry appeared in court and swore that he never hand any charge to make against his wife. He had also foully belied Mrs. Lewis on several occasions. In court he abjectly apologized, for his lies but was sent to await trial to Newgate, in default of $10,000 bail.

Fifty-eight Servian deputives being opposed to the government's bill for the emancipation of the Jews, it is thought it will not obtain the two-thirds majority requisite to its passage. Count De St Vullier, the French ambassador at Berlin, has been specially requested to tender heartfelt thanks to Prince Bismarck for the kind and friendly way in which he spoke of France during his late visit to Vienna. The city of Chichuahua, Mexico, has been captured by revolutionists under Macherro. General Trivino, with federal forces, is en route for the scene. The Russian committe of the volunteer fleet has ordered a fifth cruiser constructed at Marseilles at a cost of £100,000. The duchess of Edinburgh was delivered of a still-born child, Monday. She is progressing favorably.

The Afghans made a feeble defence, as usual, on the hights outside Cabool, and at the last accounts General Roberts was in possession of the city. The inhabitants, as in 1842, have tried to relieve themselves from complicity with the mutineers, and the Indian Government seems to be thoroughly puzzled by Yakub Khan's position. They apparently cannot make up their minds whether he sympathized with the revolt or not. He is so weak in every way that he probably cannot tell himself. Herat is still in the hands of its rebels, and there is talk of a proposal on the part of Russia that she should take that province, and England the rest, but this is hardly likely to be entertained in London. Herat is the most important stronghold in Central Asia. What will be done with Cabool remains to be seen. Sending another envoy there to be guarded by an army would hardly look well at the elections, and it would probably be difficult now to find one who would go without an army. By this morning's cablegrams it appears that Yakub Khan insists on resigning; the English are taking measures for assuming the government of the country, and have definitely informed Russia that English influence *must* be paramount in Afghanistan. General Hill has been appointed military Governor of Cabool. The magazine of Bala-Hissar has been blown up, killing 27 English and a great many natives. Desultory fighting is going on in various parts of the country—exclusively of a guerrilla character.—The Irish land agitators have got past argument and entered on coercion. The English papers are full of accounts of threatened landlords, and of tenants who have waited in a body on their landlords to ask for lower rents. On the estate of Lord Normanton, an absentee landlord, 300 tenants, headed by their parish priest, demanded lower terms of the agent and promptly rejected his offer of a small reduction. The Marquis of Headfort and his agent have been served with a like demand, backed by a thinly-veiled threat of death if the reduction was not granted. A "lady of rank" writes to the London Times that her agent cannot collect the rents which make up her marriage jointure, because any farmer paying rent is threatened with a shot from the hedge. These are isolated instances which show a general state of affairs which perhaps renders the occupation of the country by troops only a question of time.

In England the Irish land agitation is the most serious subject that at present engages the public attention. The commotion in the Green Isle is waxing fiercer daily, and English statesmen and the English public are becoming apprehensive of its ultimate issue. At home the farmers are still either preparing to emigrate in large numbers, or doing so. Miners, too, are about to leave the country *en masse* almost, and it is expected that this country will soon be overstocked with this class of labor. Manufacturers are trying to regain their hold on foreign markets by reducing the prices of their wares. This they can do only by lowering the wages of their hands, and the attempt to do this is resisted by strikes in a large number of places. Times are so hard, however, that the masters generally triumph; but on the arrival of better days, the men are bound to renew the struggle by again "striking." In a public speech the other day, the Marquis of Salisbury, Secretary for Foreign Affairs, electrified the public by a speech in which he strongly denounced Russia's policy of constant aggression by which she seeks universal dominion. He said that if Germany and Austria had really concluded a defensive alliance, the news should be hailed with joy by all civilized nations unwilling to be terrorized by the semi-barbaric Slav; and that Austria henceforth, from her position in Bosnea, would be the sentinel at the door of Constantinople, who would render it impossible in future for Russians to cross the Balkans.

The treaty here referred to, lately concluded by Bismarck during his trip to Vienna, has been ratified during the week by the Emperors William and Francis Joseph. Although the tone of the Russian press towards Germany has become somewhat milder, there is now no doubt that war between Russia and Germany is merely a question of a few years, to be deferred probably until after the death of the German Emperor now over 80, or of the Czar, already broken down in health. Meanwhile, Russia's aggressive career in Central Asia has received a temporary check by the defeat of the expedition against the Tarcomans. The Muscovites have retreated, but only, of course, to advance again with greater strength. In France the main topic of interest is the struggle between the Republic and the Church, hinging just now mainly on the educational question; the clericals insisting on religious instruction and their own control of the matter, and the Republicans maintaining that education should be solely secular in the public schools.

In Spain the chief talk until the last few days, was about the approaching marriage of the King. Owing to the uncertainty of the Spanish Monarchy of late, the bride's dowery of 20,000,000 francs, or about $4,000,000 has been deposited in Vienna, so that she may not have to starve, should her husband be driven from the kingdom by rebellion or sent to the grave by the assassin's dagger or bullet. On Wednesday, however, a great disaster in the provinces of Almena, Malaga and Alicante, has given the people something else to talk about. A great inundation has caused immense loss of life and property in these southern provinces. According to this morning's cablegrams, in the Malaga and Alicante districts, 2,000 houses have been destroyed and it is believed 500 persons perished by the floods. The damage to property is estimated at 30,000,000f. A later telegram from Murcia states that 570 bodies have already been found. It is believed that over 1,000 people have perished.

Baker's Chocolate, so noted for its nutritive, salutary, and delicious qualities, hardly needs any further indorsement after the awards given for its excellence at the leading expositions in this country and Europe. A trial is all that is needed to convince any one of its great merit.

That tow, nervous fever, want of sleep and weakness call for Hop Bitters.

Sour stomach, bad breath, indigestion and headache easily cured by Hop Bitters.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Oct. 18, 1879.

BEANS AND PEAS.—There is a slight pressure in the bean trade, but a fair active demand has left the market steady for prime parcels of new. Exports for week, 1,226 pkgs. Receipts 15,836 bush. Business in green peas is unprecedented this year and the market is higher with continued free sales, $1.65@1.70; Southern S. E. peas, $2.50 per 2 bu. bag. Canadian scarce and firm at 70@75c. bulk and bond. Marrow beans, new, $1 60@1.62½; do., $1.40@1.50; medium prime, new, 1.55@1.60; White Kikney, $1.65@1.70; Red Kidney, prime, $1.60@1.65; poor, $1.40@1.50; Black, $1.75@2; pea, $1.65@1.70

BUTTER.—Receipts for the week, 27,100 pkgs.; do., last week, 30,785 do.; exports, 18,000 do. The market regained its feet quite promptly with the reappearance of shippers. The local trade is steady again, but as before, running upon State dairy stock, which has the usual fall attraction in quality. Western butter has a buoyant tone in sympathy with State.

State, pails and tubs, single dairy marks, fresh, extra, 22@24c.; best invoices, 20@22c.; good to prime, 19@19c.; fair to good, 17@18c. firkin and tub single dairies, choice, 20@21c.; do., dairies good to prime, 18@19c.; do., firkins, choice dairies, 20@21c.; do., good to prime, 17@19c.; do., fair to good, 15@16c.; Welsh tubs, best invoices, 18@20c.; do., good to prime, 16@17c.; do., fair to good, 15@16c.; State, tubs, poor, 13@14c.; State creamery, best invoices, 27c.; do., good to prime, 25@26c.; do., sweet cream, boat, 24@26c.; do., fair to good, 22@24c.; Western creamery, best invoices, 27c.; do., good to prime, 24@26c.; do., fair to good, 22@24c.; creamery, poor to fair, 20@22c.; do., imitation creamery, 15@19c.; do., dairy, fresh, extra, 17c.; do., good to prime, 14@16c.; do., fair to good, 13@14c.; do., poor to fair, 11@13c.; do., June, 12@16c.; do., factory, best invoices, June, 15c.; do., fair to good, June, 12@13c.; do., best invoices, late made, 12@14c.; do., fair to good, 10@12c.; do., poor to fair, 9@10c.

CHEESE.—Shippers have been indisposed to operate in excess of actual needs, on account of a still further advance, which was impelled by the country advices, where the offerings are moderate. Fancy late made lots have been chiefly taken, and towards the close 12½@13c. was paid The exports have amounted to 36,000 boxes.

Quotations are for State factory: fancy at 12½@13c.; good to prime at 11½@12½c.; fair to good at 10½11c.; half-skimmed at 8@10½c.; skimmed at 6@7½c. State farm dairy: Fine at 12@12½c.; good to prime at 11@12c.; fair to good at 10@11c.; skimmed at 6½@7½c. Wisconsin factory: Fine at 12@12½c.; good to prime at 11@13c. Ohio factory: Cheddar, fine, at 12@12½c.; do., fair to good, 10@11c.; flat, fine, 12@12½c.; flat, good to prime, 11½@12c.; flat, fair to good, 10@11½c.; half-skimmed, 8@9c.; skimmed, 6@8c.

COTTON—Has shown a full speculative movement, and prices closed strong at for October, 10.38c.; November, 10.52c.; December, 10.48c.; January, 10.55c.; February, 10.68@10.69c; March, 10.83@10.85c.; April, 10.95@10.97c.; May, 11.10@11.12c.; June, 11.17@11.19c.; July, 11.25@11.27c.

Quotations for spot cotton are based on American standard of classification, and an cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples are wanted, especially sliced lots at strong prices. Peaches are unchanged with a moderate degree of activity. Small fruits are generally firm.

New North Carolina apples, 8¼@8c. for fair; 8½@9c. for choice; 10@10½c. for fancy sliced. Patent evaporated apples, choice, in cases, at 12@12½c.; do. fair to good, 10@11c.; N. Y. State sliced, choice, 8@8½c.; do, quarters, choice, 4½@5c.; western quarters, common and old, 3¾@4c.; new southern quarters at 4@4½c.; new N. C. peeled peaches at 14@17c., do. Georgia, at 12@16c. Peaches, Delaware evaporated, peeled at 25@27c.; do. unpeeled at 10@11c.; new halves at 7c. Blackberries at 9@9½c. for new. Raspberries at 28c. Pitted cherries at 15@18c.

EGGS.—Receipts for week, 5,675 bbls. Sales are moderate as buyers are cautious while the weather is so detrimental to quality.

Near points, 21@22c.; State and Penn., 19@20c.; Canadian and Western, 19c.; which is easier for the latter. Limed not moving.

FLOUR—Is active, including speculative demands and prices are higher and strong.

Latest prices are: $5.50@6.10 for inferior to fancy superfine State; $5.85@6.15 for ordinary to good extra do., odd lots and lines; $6.15@6.25 for good to very choice do.; $5.45@6.10 for inferior to very fancy superfine Ind., Iowa, Michigan, &c.; $5.90@6.15 for inferior to good shipping extra do., and $6.15@6.35 for good to choice extra do.; common to choice white wheat extras, $6.50@7.35; choice to very fancy do. at $7.35@8.50; red and amber winter wheat, inferior to very choice trade and family at $6.45@7.85; round hoop Ohio at $6.00@6.50, and trade and family brands of do. at $6.50@7.85, the latter rate for fancy; St. Louis, $6.40@7.25 for inferior to very good extra; $7.25@8.25 for very good to fancy; Minnesota clear, inferior to very choice, $5.85@7.00; Minnesota "straight," inferior to strictly fancy, $6.40@8.15, and patent poor to very fancy at $6 40 @9.00; unsound stock at from $4.75@6.75; city mill extra at $6.85@7.25, ordinary to very fancy. for West Indies, do. for England, $5.50@6.35 for poor to choice; do. trade and family extras, $6.75@8.00. do. for South America, $6 8@7.25 for standard to choice brands; No. 2 at $4.65@5.50 for ordinary to very fancy.

FRESH FRUITS.—Exports for week, 11,878 bbls. Even with the large shipping business prices have ruled weak, and holders have been glad to push stock from the stations. Louisiana oranges not of good quality. Marking boxes "Florida" will deceive no dealer here.

Prime State apples in shipping order, $1.75@2; mixed, fall, $1.25@1.50; poor and open-head bbls., 50c.@$1. Some extra showy Kings, $4.25. Cranberries weak, with a pressing stock. Cape Cod, fancy, bbl., $8; good to choice, $5.25@5.75; poor to fair, $4.50@5; Eastern, ordinary, $4.50@5.50; N. J. crates, best, $1,75; other, $1@1.62. Pears have again had bad weather and few lots have realized full rates; but the market is firm for all prime sorts. Duchess, $4@5.50 bbl.; Sheldon, $4@5; Virgalieu, $4.50@5.50; poor do., $2@3; B. Bosc, B. d'Anjou, B. Diel, $4@5.50; Lawrence, $5; Seckle, extra, $6@8; soft, $2@4; cooking, $1.75@2.50; Boston boxes, $1.50@2.50 each. Choice quinces, $5@6, bbl.; other, $1@4. Grapes have still a full supply and low prices. Catawbas, cases, 18 3-lb. boxes, $1.75@2; loose do., 4@5c. per lb.; Concord, loose, 2@3c.; Isabella, cases, 18 3-lb. boxes, $1.25@1.75; bulk, 2@3c. New peanuts quoted, 2¾@3¾c. for green and 5@6c. for prime per lb.; (the new regulation). Old, irregular and pressed for sale. Chestnuts, $1.25@2; Shellbarks, 75c.@$1; Pecans, 10@10½c.

GRAIN.—Speculation has been of an even more extensive character, and full exports also are steadily taking place. Nothing like the present activity was ever before known here. It does not seem a question of price so much as to secure supplies. The latest sales of wheat are of No. 1 amber at $1.53½; No. 2 amber at $1.49¾@1.50; ungraded amber at $1.46@1.50½; No. 1 white at $1.48¾@1.52; do., October, at $1.50¾@1.51½; do., November, at $1.52@1.53½; do., December option, at $1.55@1.56¾; No. 2 white, at $1 47¾@1.48½; ungraded white at $1.48 @1.51; No. 1 red at $1.51½; No. 2 red at $1.51@ 1.52½; do., October option, at $1.51¾@1.52¾; do., November option, at $1.53@1.54¾; do., December option, at $1.55¾@1.56¾; No. 3 red at $1.45@1.46; ungraded red at $1.48@1.51; mixed winter at $1.45@ 1.50; No. 2 Chicago and Milwaukee spring at $1.40@ 1.41; New York No. 2 spring, at $1.40; do., October, at $1.40¾@1.41¾; do., November option, at $1.41½ @1.42¾; do., December option, at $1.43½; No. 2 northwest spring, October option, at $1.41; do., November, at $1.42@1.43; No. 3 spring at $1.35@1.36; ungraded spring at $1.36¾@1.40. Rye is at 85@90c. Barley at 95@98c. for No. 1 Canada; $1@1.03 for No. 1 bright do. Corn—New York No. 2 afloat at 61¼@ 61¾c.; do. in store at 60¾@61c.; do., October, at 61@ 61¾c.; do., November, at 62@62¾c.; do., December, at 63¾@64¾c.; ungraded Western mixed at 61@61¾c.; No. 1 white quoted at 67c.; No. 2 white at 66c.; round yellow at 61@65c.; low mixed at 65c. Oats—New York No. 1 white at 46½@47c.; do. No. 2 white at 44@ 44½c.; do. No. 3 white at 42@43c.; New York No. 1 at 43½c.; New York No. 2 at 43¼@44c.; do., November option, at 44c.; New York No. 3 at 42@42½c.; New York rejected at 40c.; ungraded white Western at 43@46c.; mixed Western at 42@44c.; white State at 44¾@48c; mixed State at 43½@45c.; No. 2 Chicago quoted at 43½@44c.

HAY AND STRAW.—Receipts are rather moderate the demand continues fair, and prices are on a firm basis.

Shipping hay quoted at 50c.; retail lots at 50@60c. for medium, and 70@85c. for prime; clover at 40@50c. Straw at 65@70c. for long rye, 40@50c. for short rye and 40@45c. for oat.

HONEY.—Supplies arrive liberally. Sales light, weather against sales. White clover single, 15@16c.; larger boxes, 12@14c.; buckwheat, 10@12c.; clover extracted, 10@12c.; strained, 8@9c.

HOPS.—Emmet Wells in his circular says: "Receipts and exports for the week are nearly equal. The predictions in our last issue of an advance have been more than realized. Considerable excitement prevails in the hop-growing districts, caused by several of our leading shippers paying 40c. for large choice lots. These prices appeared high several weeks ago; but from late foreign advices received here, there can be little doubt that full figures will be maintained. The reason we do not quote above country prices, is because parties who have fine shipping hops do not offer them.

Quotations are for New Yorks, new crop, 30@40c.; Eastern, new crop, 30@38c.; Wisconsin, new crop, 30 @38c.; Yearlings, growth 1878, 7@18c.; Olds, all growths, 4@10c.; Pacific coast, growth 1878 (nominal) 9@14c.

	Bales.
Receipts for the week	7,969
Total receipts since September 1, 1879	29,214
Total receipts for same period in 1878	7,203
Export clearances for the week	7,376
Total exports since September 1, 1879	23,501
Total exports for same period in 1878	1,492

OIL-CAKE.—Western is quoted at $28.75 per ton.

PROVISIONS.—Hog products have been active and higher. Mess pork quoted at for October at $10.05 bid and $10.10 asked; November at $10.05 bid and $10.15 asked, and the December option at $10.15@19.60; January at $11.05 bid for new, and $10.15@10.20 for seller's option, old and new. Beef at for plain mess at $10.25@11; extra mess at $11@11.50; packet at $11.50 @12; tierced beef, city extra India mess, at $19@22, and Philadelphia do., at $19@19.50. Beef Hams at $14 @14.50. Tallow at 6¼@7c. Stearine at 6½@6¾c. for Western. Lard—Western steam at $6.40 for spot lots; $6.40 for Oct., $6.32½ for November, $6.40 for December, $6.50 for January.

POULTRY AND GAME.—Receipts of live poultry light, prices better, with a good demand.

Chickens, N. J., ₱ lb., 12¾@13c.; State and Penna., 11@12c.; Western, 10½@11c. Fowls, N. J., ₱ lb., 11@ 12c.; State and Penna., 11@12c.; Western, 10½@11c. Roosters, old, 5@6c. Turkeys, N. J., State and Pa., 12@13c.; Western, 10@12c. Ducks, N. J., N. Y. and Pa., per pair, 50@70c.; Western, 40@45c. Geese, N. J., $1.25@1.50; N. Y. and Pa., $1.25@1.50; Western, $1@ 1.12. Pigeons, 25@30c.

Dressed Western and State turn out poor. Demand improving, regardless of the unseasonable weather. Lots in choice order quoted.

Turkeys, Phila., dry-picked, 15@16c., State and Western, prime, 12½@13c.; young, 12½@13c. Chickens, Phila., 15@17c.; State, 13@14c.; Western, 11@12c. Fowls, Phila., dry-picked, 11c.; N. J., choice, 13@14c.; State and Western, dry-picked, 12@13c.; scalded, 11@12c. Ducks, spring, Phila., dry-picked, 15@17c.; State, 13@14c.; West'n, ₱ lb., 11@12c.; old, Phila., dry-picked, 12@14c. Geese, young, Phila., 12@14c. Squabs, white, ₱ doz., $2.75@3; dark, $1.50@2.

Game arrives in poor condition; good quality birds only wanted at prices. Wild ducks scarce, but not inquired for.

Partridge, State, prime, per pair, $1@1.25; soft, 40@50c.; Western, 75c.@$1. Grouse, prime, 90c.@1.12; soft, 50@75c. Wild pigeons, stall fed, per doz., $1.75 @2; flight, $1.25@1.50. Woodcock, State, per pair, 50@60c.; Western, 40@50c. English snipe, per doz., $1.25@1.75. Plover, $1.25@1.75. Minn. venison, short saddles, ₱ lb., 14@16c.

TOBACCO—Export demand is moderately active, but home demand is quite brisk, and especially for seedleaf, with prices generally steady. Quotations are for Kentucky leaf.

VEGETABLES.—Exports potatoes past week, 5,212 bbls. Supplies very dull; prices unchanged. Garden stuff has a long lease of life, owing to the extended warm weather. Early Rose, double-heads, $1.35@ 1.37; in bulk, 1@1.25; Peerless, do., $1@1.12; Sweet, Del., $2@2.25; N. J., $1.25@1.50; Va., $1.75. Onions improving. Green corn, per 100, 25@50c.; tomatoes, L. I., near-by, per crate, 15@75c.; string beans, ₱ bag, 50@75c.; potato Lima beans, $1@1.50; Lima beans, flat, $1; do., shelled, ₱ bu., $3@3.50; squash, marrow, ₱ bbl., 50@75c.; do., Hubbard, $1@1.50; cabbage, per 100, $2 50@3.00; onions, white, per bbl., $2@2 50; red, Eastern, $1.50; do., Chester, $1.25@1.50; yellow, $1.50 @1.75; beets, N. J., 75c.; Russia turnips, Jersey, 50@ 75c.; carrots, 75c.@$1; egg plant, L. I. and near-by, ₱ 100, $4@5; pumpkins, per 100, $2@5; cauliflower, ₱ bbl., 50c.@$1.

WOOL.—Prices tend upward, with an active call for supplies and sharp competition to secure the coarse and medium grades. Quotations are for domestic fleeces.

Ohio, Pennsylvania and West Virginia—XXX and Picklock, 44@46c. ₱ lb., XX, 41@43½c.; X, 41@43c.; No. 1, 41@45c.; No. 2, 36@38c.; common, 32@34c.; combing, 43 @45c.

New York, Michigan, Indiana and Wisconsin—XX, 38@40c.; X, 37@40c.; No. 1, 41@42c.; No. 2, 34@36c.; common, 31@33c.; combing, 41@43c.

Iowa, Vermont and Illinois—X and XX, 36@39c.; No. 1, 40@42c.; No. 2, 32@36c.; combing, 39@41c.

Missouri, Kentucky and Tennessee — Washed fleece, 36@40c.; unwashed fleece, 30@35c.; unwashed combing, 30@34c.

LIVE STOCK MARKETS.

NEW YORK, Saturday, Oct. 18

BEEVES.—Receipts for the week, 11,030 head; do. last week, 11,004 do. Cattle sold with less difficulty this week, and the yards were cleared at a trifling advance over Wednesday's figures. Very light natives sold at 6¼c., to dress 54 lbs., but the range was mainly at 7¼@10c., to dress 54@59 lbs. Texans sold at 7@7¼c., to dress 56 lbs.

COWS AND CALVES.—Receipts are liberal. Shortened pasture hereabouts adds some stock to the supply. Best New York price this week, $45; common down to $20@25.

VEAL CALVES.—There is a good sale for prime veal. Heavy Mount Holly calves begin to arrive. Hog-dressed calves have sold at 9@10c., but it is a risk to send them this sort of weather. Choice fed calves, 7@7¼c.; other, 5½@6¾c; buttermilk, 2¾@3c.; grass, 2@2½c.; Mt. Hollys, 6¾c. to 5c., 250 lbs. to 300 do.

SHEEP AND LAMBS.—Receipts for the week, 29,482 head; do. last week, 30,519 do. Trade has had a very fair run at 5¾@6c. for ordinary to prime sheep and 5@6¾ for common to choice lambs. A car-load of extra Ohio wethers sold at 5¾c.

SWINE.—Receipts for the week, 37,030 head; do last week, 33,758 do. Extra Ohio, corn, sold at 4¾c.; but the market was generally quiet at $3.70@4.15 per 100 lbs.; city dressed hogs, 5¾@5¾c.

Country-dressed pork has no steady quotation, as the weather forces sellers to accept the best terms packers or butchers will offer; 5@6¼c. was the last range for heavy to light N. J. in good order.

Reading for the Young.

BOTANY.—NO. 3.

UNCLE MARK.

Inflorescence.

In two previous lessons in botany, I have spoken of leaves and of the flower, and I now propose to give a short talk on inflorescence. Some of the cousins, I have no doubt, are not familiar with this word and they may wonder what it means. To such I will say that it is derived from a Latin word which means to begin to blossom, and as applied to the science of botany it has reference to

THE ARRANGEMENT OF FLOWERS ON THE STEM.

By examining several plants you will notice that the flowers do not all occupy the same relative position on the stem, and that some are solitary while others appear in clusters, and thus give rise to great variations. The Rose, for example, bears its flowers on the ends of the branches, the Geranium sends out its flower cluster from the side of a branch just above a leaf, others like the clover have the flowers arranged in a compact bunch called a head, and still others like oats and many grasses bear the flowers in a large loose bunch called a panicle. It is all these different manners in which the flowers appear that are designated by the general term inflorescence.

FIG. 1.

Before we proceed any further it will be necessary to define a few names that you must learn before you can understand what is to follow. *Sessile* is a term used to designate a flower that has no stalk to support it, but which is attached directly to the branch; the same term is also applied to a leaf that has no stalk. You will remember that in the lesson on leaves the stalk of a leaf was called a petiole, and if the leaf was compound the short stalks that supported the leaflets were called petiolules. Now, the stalk of a flower is called a *peduncle*, and if the peduncle is divided so as to support several flowers, each individual little flowerstalk is called a *pedicel* (p' fig. 2). A *bract* is a small leaf that grows on a peduncle (b' fig. 2). A *scape* is a flower stalk of such plants as the Tulip or Hyacinth which have no stem for the leaves to grow on above ground; such plants are therefore called stemless, or acaulescent. There are two classes of inflorescence, 1st, Indefinite, 2d, Definite. The type of

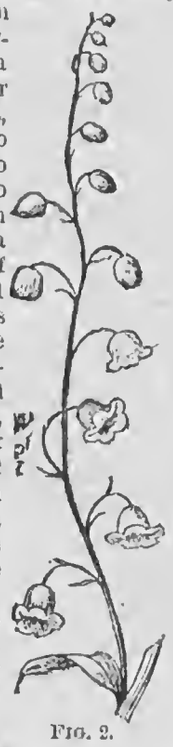

FIG. 2.

Indefinite Inflorescence

is seen in fig. 1, which represents the end of a branch of the Moneywort, Lysimachia nummularia, a trailing plant very commonly planted in hanging baskets. It is called indefinite because the branch, having a leaf-bud at the end, continues to grow on *indefinitely*, developing leaves and flowers in their axils (the place just above a leaf is called its axil, and the bud generally found there is called an axillary bud) as it grows. Fig. 1 also shows the very simplest inflorescence we can have, a *solitary* flower, a single flowerstalk bearing a single flower. The principal divisions of this class are the *raceme*, the *spike*, the *spadix*, the *catkin*, the *head*, the *corymb*, the *umbel* and the *panicle*.

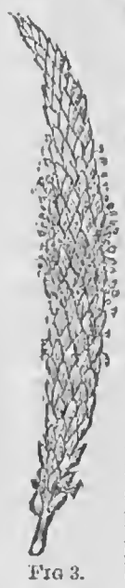

FIG 3.

THE RACEME

is seen in fig. 2. You will notice that it is not a single flower, but a flower cluster that springs from the axil of a leaf; each flower is supported by a pedicel, and the older ones are at the bottom of the raceme.

THE SPIKE

differs but little from the raceme (see fig. 3), the only difference being that here the flowers have no stalks. If we could remove the pedicels in fig. 2 and attach the flowers directly to the common flowerstalk we should have a spike. Mullein and the common plantain found along road-sides furnish good examples of the spike.

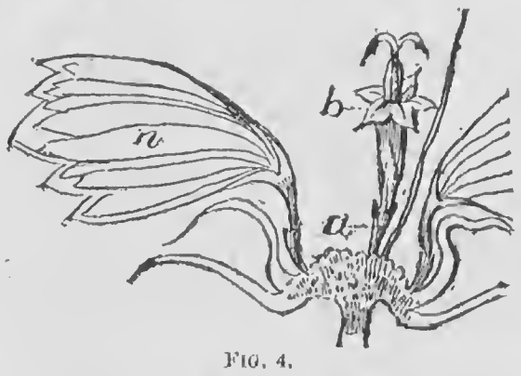

FIG. 4.

THE SPADIX

is a form of inflorescence much like the spike; the Calla is a familiar example. Botanically considered, the large white leaf of the Calla, commonly called the flower, is not the flower at all, but a sheath enveloping the spadix or fleshy spike of flowers,

THE CATKIN

is also a kind of spike. It is the name applied to the drooping, scaly, flower cluster borne by the Birch, Poplar, Willow and other trees.

THE HEAD

is a cluster of sessile flowers, of which the outer ones expand first. Red Clover is a well-known example. You will see that if we could push the spike together into one globular bunch, we should have a head, or, if we could elongate the head, the result would be a spike. There is another kind of head, by some authors called a capitulum, which, however, means the same thing, that is very commonly mistaken for a solitary flower. I refer to the heads of the large family of plants known as *Compositæ*, including the Asters, the Dandelion, Coreopsis, and many others. The shining flowers are heads of flowers as may be ascertained by picking them to pieces. The circle of expanded floral leaves that are commonly mistaken for the corolla are called ray-flowers and are neutral, that is, they produce no seed. In fig. 4 is seen a section of such a head showing two of the ray-flowers and one perfect flower with its calyx, corolla stamens and pistils and a bract, standing on the *receptacle* of the head. The green leaves at the base of such a head is not a calyx, but a collection of bracts called an involucre.

FIG. 5.

THE CORYMB

is like the raceme except that the lower pedicels are so long that all the flowers are raised to the same hight so as to form a level-topped bunch. This kind of inflorescence is seen in Fig 5. The Hawthorn is an example.

THE UMBEL

is shown in fig. 6. It resembles the corymb in that all the flowers reach to the same hight, but differs from it by having the pedicels of equal length and all proceeding from the same point. The flower cluster of a Carrot is an example of an umbel.

THE PANICLE

is but a compound raceme, the pedicels being divided and subdivided several times. It is shown in fig. 7. Oats and several kinds of grass are good examples.

It is noticeable that in all these forms of indefinite inflorescence, the flowers begin to expand first at the bottom of the branch, raceme, spike, etc., and at the outside of the head and umbel, and gradually go toward the top or the middle of the cluster.

The Definite Inflorescence,

is an arrangement of the flowers on a somewhat different plan from the one just described. In this case, the oldest flowers are at the top instead of at the bottom of the cluster. The plan is illustrated in figure 8; the oldest flower is seen at a, just on top of the stem, while the younger ones are on the outside. When the flower at a was formed, the stem or branch could grow no farther in that direction, that is, it was then *definitely* settled that it should grow no taller. The buds just below the flower then started to grow and the flowers b, b, were formed, and in like manner the buds c, c.

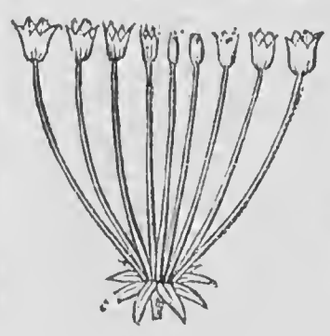

FIG. 6.

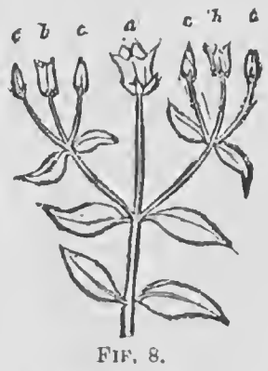

FIG. 8.

FIG. 7.

There are comparatively few plants that flower on this plan, nor are the sub-divisions numerous, the most common being

THE CYME,

which is any flat-topped, rounded or expanded inflorescence, whether simple or compound of the definite class; the Dogwood and Hydrangea are examples. The *Cymule*, *Fascicle* and *Glomerule* are other forms differing but little from the cyme.

There are still other kinds that might be mentioned but they are not common and therefore of little importance.

A BEAUTIFUL STORY.

COLERIDGE relates a story to this effect:—Alexander, during his march into Africa, came to a people dwelling in peaceful huts, who knew neither war nor conquest. Gold being offered him, he refused it, saying that his sole object was to learn the manners and customs of the inhabitants. "Stay with us," said the chief, "as long as it pleaseth thee." During this interview with the African chief, two of his subjects brought a case before him for judgment. The dispute was this:—The one had bought a piece of ground, which, after the purchase, was found to contain a treasure for which he felt himself bound to pay. The other refused to receive anything, stating that he had sold the ground with what it might be found to contain, apparent or concealed. Said the chief, looking at the one, "You have a son;" and to the other, "You have a daughter; let them be married, and the treasure given them as a dowry." Alexander was astonished. "And what," said the chief, "would have been the decision in your country?" "We should have dismissed the parties and seized the treasure for the king's use." "And does the sun shine in your country?" said the chief; "does the rain fall there? Are there any cattle there which feed upon herbs and green grass?" "Certainly," said Alexander. "Ah," said the chief, "it is for the sake of those innocent cattle that the Great Being permits the sun to shine, the rain to fall and the grass to grow in your country."

GRAMMAR IN RHYME.—It is seldom that one sees so much valuable matter as the following lines contain, comprised in so brief a space. Every little grammarian just entering upon the mysteries of syntax, will find it highly advantageous to commit the "poem" to memory, as by so doing many a "black mark" will be avoided, for with these lines at the tongue's end one need never mistake a part of speech.

1. Three little words you often see
   Are Articles—*a*, *an*, and *the*.
2. A Noun's the name of anything,
   As *school* or *garden*, *hoop*, or *swing*.
3. Adjectives tell the kind of Noun,
   As *great*, *small*, *pretty*, *white*, or *brown*.
4. Instead of Nouns the Pronouns stand—
   Her head, *his* face, *your* arm, *my* hand.
5. Verbs tell of something to be done—
   To *read*, *count*, *sing*, *laugh*, *jump*, or *run*.
6. How things are done the Adverbs tell,
   As *slowly*, *quickly*, *ill*, or *well*.
7. Conjunctions join the words together—
   As men *and* women, with *or* whether.
8. The preposition stands before
   A Noun, as *in* or *through* a door.
9. The Interjection shows surprise,
   As *oh!* how pretty—*ah!* how wise.

The whole are called Nine Parts of Speech,
Which reading, writing, speaking teach.

The Puzzler.

MISCELLANEOUS ENIGMA.

Composed of 75 letters.

My 59, 45, 17, 25, 26, 21, 69, 38 is a modern writer of comic paragraphs, one of which forms the answer to this enigma.

My 27, 28, 32 is part of a musical instrument.
My 39, 24, 31 is a pronoun.
My 6, 12, 50, 15 is a girl's name.
My 66, 51, 70 is a garden tool.
My 61, 60, 29, 64, 63 is a disease.
My 4, 2, 22, 10, 46 is used by the bakers.
My 13, 11, 9, 5, 8, 7, 20, 33, 35, 34 is a merchant.
My 48, 53, 47, 16, 41, 24 is commendation.
My 74, 62, 75 is an American poet.
My 36, 73, 65, 67 is a flying toy.
My 55, 54, 53, 52, 44, 14, 49 is result.
My 18, 19, 37, 1, 30, 3 is a driver of cattle.
My 43, 40, 57, 58 is a plaited cloth worn round the neck.
My 42, 56, 72, 71, 68 is XL.

☞Answer in two weeks. UNCLE WILL.

HIDDEN GRAINS.

1. How heat tans your skin.
2. A cherry enticed the bird.
3. Drink goats' milk.
4. I curl my lip in scorn.
5. He shot a buck, W[illiam] Hea told me so.
6. I'll be with you in a trice.
7. Don't rob Arley.
8. Mamma, I zealously love you.
9. I wonder if laxatives are good.
10. I like to hemp pillow cases.
11. I saw Atho, Miny and Tom.
12. Give the cub room, Cornelia.
13. Is Bascom ill, Ettie?
14. With a young man.
15. The clove rose in my throat.

☞Answer in two weeks. LITTLE ONE.

ILLUSTRATED REBUS.

☞Answer in two weeks. W. B. D.

How can you spell "potatoes" with one letter?
What has more eyes than ears?

☞Answer in two weeks. W. B. D.

PUZZLER ANSWERS.—Oct. 11.

HIDDEN PARTS OF A FLOWER.—1. Calyx; 2. Corolla; 3. Petal; 4. Stamen; 5. Pistil; 6. Pollen; 7. Pod; 8. Cotyledon; 9. Capsule; 10. Petiole; 11. Pericarp; 12. Raceme; 13. Peduncle; 14. Anther; 15. Whorl.

The green sand marl has long been a staple fertilizer and amendment in the State of New Jersey, where it occurs as a geological deposit, or rather as three distinct deposits (upper, middle and lower marl beds), which stretch across the State from the Highlands of Navesink near Sandy Hook, to the Delaware River below Wilmington, and in many localities admits of easy excavation. In composition it is somewhat variable, as shown by the analyses above given, made on separate samples which were obtained quite near each other. If the value of the potash and phosphoric acid in the above analysis is reckoned, for the former, at its lowest price, viz., 4½ cts. per lb., and for the latter at 9 cts. per lb., the value of reverted phosphoric acid, we have, in 2,000 lbs. of 316, no less than 114 lbs. of potash worth $5.13, and 18 lbs. of phosphoric acid worth $1.62, the total being $6.75. The same reckoning applied to the other analysis which is published by Professor Cook in the Annual Report of the State Geologist of New Jersey for 1878, p. 45, gives 103.6 lbs. potash worth $4.66, and 45 lbs. phosphoric acid worth $4.03, the total being $8.69 as the worth of a ton.

It must be conceded, however, that the green marl contains its potash not in the freely soluble state of muriate or sulphate, but as a less soluble silicate, not worth, commercially, so much as the potash of potash-salts. Experience shows, however, that vegetation makes ready use of the plant-food contained in the marl, its application having a speedy effect on clover and grass.

The silicate of alumina, iron and potash which constitutes the green sand (or *glauconite*, as the pure green mineral is termed by geologists), in fact readily suffers decomposition with liberation of its potash, and at the same time furnishes in the residual silicate the substance which confers on good soils their remarkable quality of retaining the soluble fertilizing elements which would otherwise go to waste. No doubt it is this silicate which largely accounts for the striking improvement of the light, sandy soils of Eastern New Jersey, large tracts of which have been transformed from a desert to a garden, mainly as a consequence of the use of this marl.

At the price charged, the green sand marl will be found, to judge from the results of its use in New Jersey, a cheap means of improving not only our very light soils, but also the better loams, which require constant manuring to maintain their fertility.

This marl must usually be applied in large quantities, several tons to the acre, in order to get good results. It then forms a valuable amendment and a durable source of potash.

Correction.

In Bulletin No. 31 the cost of Lombard & Matthewson's superphosphate, Station No. 295, should be $38 instead of $40.

S. W. JOHNSON, Director.

PERSONAL ITEMS.

George Washington is the name of one of the Ute chiefs now seeking to thrash the country of which his illustrious namesake was the father.

While looking at the big trees in the Yosemite Valley a few days ago, Senator Morgan, of Alabama, fell from a boulder and broke his collar-bone.

Captain Payne, whose creditable service in the Ute country has won him admirers, is a younger brother of General William H. Payne, of Warrenton, Virginia.

The editor of the Paris (Texas) Banner said in print that Lawyer Bonner was a murderous ruffian, and Bonner proved the justness of the characterization by shooting him dead in the street.

Miss Lillie Ayer, daughter of the dead pill-maker, is reported to be engaged to the impecunious grandson of Dom Pedro, of Brazil, Prince Philippe Louis Marie de Bourbon. She will furnish $5,000,000 capital for the new firm.

John J. Bailey, who married a daughter of the late Governor Ford, of Illinois, and who was for many years chief librarian of the St. Louis public school collection, was arrested in St. Louis the other day for pocket-picking.

Mr. N. C. Mecker, the agent of the Ute Indians in Colorado, who was killed the other day, gained considerable reputation a few years ago as the founder of the town of Greely, Colorado. When that enterprise was undertaken Mr. Mecker was the agricultural editor of the New York Tribune.

The heirs of Mark Hopkins, the California millionaire, are surprised to find that Mr. Hopkins neglected to mention a little sum of $5,000,000 in United States bonds and $300,000 in gold in the inventory made by him of his property. This little sum was hidden away in the Treasury at Washington.

Reed and Pell, the British Commissioners to examine American agriculture, are highly pleased with the Northwestern States and Territories. They say that Minnesota's climate is a luxury and her soil unsurpassed, her only need being people and trees, which will come in good time. They are now on a tour through Nebraska, Kansas and Texas.

Charles A Pawbey, a general service clerk in Adjutant General Wherry's office at West Point, N. Y., has been court-martialed for attempting to black-mail a cadet, found guilty, dishonorably discharged, stripped of all pay due and coming due, and sentenced to two years' imprisonment in a military prison.

There is peace in the Mormon Zion again. Emeline A. Young and the other heirs of the late Brigham who sued John Taylor, the present head of the church, and his co-executors in the management of Brigham Young's estate, have settled the suit for $75,000. The charge was fraud or breach of trust, and this compromise looks as if it was not as easy to set up a good defense as to buy off the complainants.

Hon. George Vickers, ex-United States Senator, died at his residence, in Chestertown, Md., on the 8th inst, of heart disease. He had been in public life for a number of years, having served several terms in the State Legislature, during the last of which he was Speaker of the House. Afterwards he was elected State Senator, and subsequently, at the expiration of his term, he was sent to the United States Senate, where he served two terms, his successor being Senator Dennis.

Charles Young whipped his wife at New Philadelphia, Ohio, within a week after their marriage. She had been a popular belle, and a party of young men, probably including disappointed suitors, decided to avenge her wrongs. They seized Young in the street on a dark night, carried him to the gas works, and pumped warm coal tar on him until, the substance cooling, he was coated several inches deep. Then they took him home, placed him against the door-post, and rang the bell.

Senator A. Douglas, of Illinois, and his brother Robert M., of North Carolina, sons of the "Little Giant," have recently come into the possession of $200,000—the Court of Claims having awarded them that amount for cotton belonging to their father, which the federal troops confiscated in Washington county, Miss., during the war. Senator Douglas came into possession of slaves through his first wife and they raised the confiscated cotton on James Hulton's plantation in Washington county.

Mr. Gladstone is to be the guest of the Earl of Roseberry at Delmeny Park during his canvass for Midlothian against the Earl of Dalkieth, the son and heir of the Duke Buccleuch. Though the canvass will not fairly begin till the end of November, the preliminary contest has already been opened with spirit at Edinburgh by a meeting held on the 4th inst., at which the well-known advocate, Mr. C. L. Guthrie, made a dashing speech in support of the candidature of Mr. Gladstone.

Dr. Julius Lemoyne, one of the leading advocates of cremation in the United States and designer and builder of the cremation furnace at Washington, Pa., died there this week aged 81. Yes; he was cremated in his own furnace. He was quite wealthy and is said to have disinherited a son who refused to permit a dead child of his to be disposed of in this way. It is also reported that in his will he cancels any bequest made to any of his legatees who refuses to sign an agreement providing for the cremation of his own body after death.

P. P. Roots, a resident of West Point, N. Y., whose shrunk shank is no reproach, for he has walked through seventy-two Octobers, got it into his head that he needed a good, plump, peachy wife. Being a man of business, he advertised for such a person. Now, down among the prickly pears of Texas there wilted the Widow McMullen, aged forty-five years, and three thereof without a mate. The Widow McM. answered her distant Roots and fixed upon Fort Madison, Iowa, as the trysting place. On the 4th inst. the two met at the place appointed, and in one hour the Rev. Mr. Powell had joined them.

Five years ago Alderman Orndoff, of Virginia City, Nevada, and Farmer Treadway, of Carson, Nevada, made a wager of $100, the one that he could within five years breed a bull-pup the weight of which should be seven and one-half pounds, and the other that he could cultivate a cabbage that should weigh forty-five pounds. Each man deposited his money in the Carson Bank. Both went to work on scientific principles. Now, at the expiration of the time, Alderman Orndoff has reduced his dog to seven pounds and Mr. Treadway has sent his cabbage up the scale to forty-eight pounds, and both cabbage and bull-pup will be presented to General Grant upon his arrival in Virginia City.

Mrs. Mary Eddy Huntoon is a sister of the Eddy brothers, whose spiritual materializations used to draw so many visitors to Spirit Vale, Vermont. She went into the same business lately; but people would no longer go to her home to pay for seeing the supernatural wonders, and she was compelled to make tours. She went to North Adams, a few days ago, and excited a great deal of interest among the credulous part of the population. Editor Mabbett of the Transcript and the Rev. Dr. Osborne of the Baptist Church, resolved to expose the fraud by main strength. Mrs. Huntoon's seances usually closed with the appearance of a materialized Indian, who bounded out of the closet, in the ghostly light, with a yell that curdled the blood of the assembly. The editor and the clergyman chose this juncture for action, the understanding being that the former should grab the Indian, while the latter held Webster Eddy, who was constantly on guard. The Indian had no more than yelled before Mr. Mabbett grappled with the figure, and in an instant they were rolling and tumbling on the floor. Eddy attempted a rescue, but Dr. Osborne wrestled with him vigorously. The melee continued until somebody turned up the light, exposing Mrs. Huntoon as the personator of the Indian. She said there was no humbug; the spirit withdrew as soon as touched by the editor, leaving the material of the medium; but the feathers and other toggery could hardly be explained away. Hereafter, she subsequently declared, she will arm herself with a knife, and further attempts to interfere with her will be attended with serious consequences.

One Pair of boots or shoes saved every year by using Lyon's Patent Metallic Heel Stiffeners.

New Publications.

New Operas!

Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.

Fatinitza. Opera by Suppo.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.

Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15

Bells of Corneville. By Planquette, (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling well, for 50 cents) and who are looking out for new and easy operas.

Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple**, each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record**, published weekly. It keeps you well posted as to musical matters, gives 6 or 7 pages of music per week and costs but $2.00 per year!

OLIVER DITSON & CO., Boston.

C. H. Ditson & Co., 843 Broadway, New York. J. E. Ditson & Co., 922 Chestnut St., Phila.

CENTS from DATE TO JAN. 1, 1880. **The Chicago Weekly News** will be sent, postpaid, from date to Jan. 1st next, for 10 cents. W. W. Giles' Patent Lightning Saw Horse.
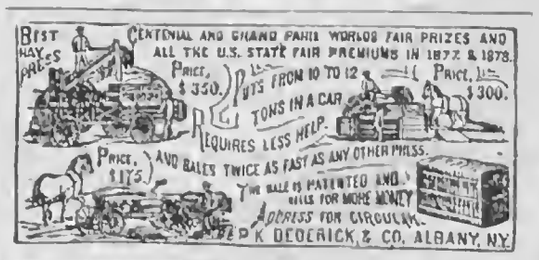
Having purchased the exclusive right of this machine for the States of New York, Pennsylvania, Maryland, N. Jersey, Delaware, Vermont, Massachusetts, Rhode Island, Connecticut and Maine, we are now prepared to fill all orders for them promptly. Send for circular to **Frank & Co.,** 176 Terrace St., Buffalo, N. Y.



The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper* and in Premiums to All.

BRIEFLETS.

Is it wrong to color butter if the coloring is harmless? . . . Salt in small quantities is good for poultry. . . . There is nothing better than *straw* as a winter covering for *straw*berry plants. . . . The markets are now full of Sheldon pears. . . . The Chicago Live-stock Journal says that the small Yorkshire is the finest-boned, smallest-eared, shortest-headed, most dish-faced, shortest-legged and most easily fattened pig in existence. . . . Wollney has shown that dark-colored soils are warmer in hot weather and cooler in cool weather than light-colored soils; that is, they absorb as well as radiate heat faster. . . . WILDER, Rogers's 22, is one of the largest black grapes, . . . Moore's Early seems to be ten days earlier than Concord, but the fruit is inferior in flavor and the vines less vigorous. , . . The Niagara is a beautiful new white Grape of fine promise. . . . The Lady is fulfilling our prediction, made over two years ago. It thrives in many parts of the country, is earlier and better than Concord. Bunches small, compact, white. It is a pure Concord seedling. . . . Josiah Hoopes says, in the N. Y. Tribune, that the cracking of pears has been cured in its worst form by merely incorporating a liberal supply of unleached wood-ashes in the soil. . . . Mr. Meehan thinks the St. Michael d'Archange the best early September pear for his section (Philadelphia). . . Prof. Loomis's machine for preparing fiber from Palmetto, is working satisfactorily in Florida. . . . Pres. Wilder says: "Plant the most perfect and mature seed of our very best fruits, as the means of more rapid progress, to cross-fertilize our finest fruits for still greater excellence." . . . Baldwin apples of one grower bring two to three dollars per barrel, while his neighbor's bring but one dollar. This is owing to selection and packing. . . . According to Mr. Hubbard, the Talman Grape, which had been rechristened Champion, is now again named Beacousfield in Canada. . . . Elvira and Noah are said by Isador Bush to be the best of the new varieties of Grapes for Missouri. Noah is also valuable in Kansas and in lower Iowa. . . . T. S. Hubbard was awarded the Wilder Silver medal for the largest and best collection of grapes exhibited by an individual. . . . Mr. Wm. Saunders thinks that the days of indiscriminate pruning of orchard trees would some day be considered as the barbaric age. . . Evidence accumulates that the Japan Persimmon is not hardy north of Washington. . . . Mr. M. B. Batcham thinks that grape-rot is caused by damp weather and a consequent plethora of sap. The watery portion of sap cannot escape in moist weather, hence fungus growths, rot, mildew and blight. It is a time when all human diseases, too, increase. . . . Mr. Campbell says that the Delaware is exempt from grape-rot; we have so found it. . . . Mr. Purdy thinks the Gregg Raspberry is the best Black-cap in cultivation. He deems it identical with the Great Western. . . . Mr. T. T. Lyons thinks Moutclair a fine Raspberry—he is right. Mr. J. J. Thomas says it is good and hardy. . . . Mr. Strong deems Pride of the Hudson worthless in Massachusetts; Mr. Purdy (Rochester) says it is worthless with him. Surely a *new* fruit of any kind has a cruel gauntlet to run—and, so, indeed, it ought to have. . . Snyder Blackberry is very much praised. . . . It is asserted by a French agricultural journal that whenever angle-worms become troublesome to pot plants, they may be killed by watering the plants with water in which a quantity of finely-crushed horse-chestnuts has been soaking for some time. The nuts contain a principle that is poisonous to the worms, and these will immediately come to the surface and die. Even dried horse-chestnuts preserve their poisonous qualities for angle-worms.

Worm-Eaten Peas.

I desire to add my testimony to what has already been said in the RURAL in regard to the worthlessness of worm-eaten peas for seed. I recollect that, when a small boy, I frequently heard it stated, with much positiveness, that the insects did not injure the peas at all for seed. I doubted the truth of the assertion even at that time, and have always made it a rule to reject such samples as were much affected, when selecting peas for seed. Indeed, I did not suppose that in this enlightened age there could be any difference of opinion upon the subject. But it seems from what has appeared in the RURAL, that I was mistaken. I therefore concluded to try an experiment for myself, and accordingly, on the 15th of July last I selected 25 sound peas, and an equal number of those that had been worm-eaten, but were otherwise apparently just like the first. I planted the two samples, side by side, on the same day and both with equal care. The result was such as I had anticipated. While of the 25 sound seeds, 23 came up promptly, the plants being strong and vigorous, of the 25 unsound seeds planted, but *two* ever showed any sign of germination, and of those two, the plants never gained a hight of six inches. This experiment fully confirmed my former opinion of the folly of sowing worm-eaten peas. CLINTON.

Wit and Humor.

THE AGRICULTURAL INTEREST IN ENGLAND.

Landlord (to tenant who had given up farming at the end of his lease, to await better times.) "Well, Jackson, how do you like living on your capital?"

Farmer.—"Not too well, my lord; but I find it cheaper than letting you live on it!"

HOW LONG PAT WORE HIS SHIRT.—An officer, who was inspecting his company one morning, spied one private whose shirt was sadly begrimed.

"Patrick O'Flynn!" called out the captain.

"Here, your honor!" promptly responded Patrick, with his hand to his cap.

"How long do yon wear a shirt!" thundered the officer.

"*Twenty-eight inches!*" your honor.

AN English visitor at Peshawur sends home the following inscription copied by him from a tombstone in the English graveyard there: "Sacred to the memory of Rev. Blank Blank, A. M., who spent seventeen years as a missionary among the Afghans, and translated the Holy Writ into their language. He was shot by his attendant. 'Well done, thou faithful servant.'"

A PHYSICIAN should know something of the human heart. Mme. de C—— sends for her medical adviser, and as soon as she sees him she bursts out with—"Doctor, I am ill; my nerves are out of order—I feel melancholy—I"—— The doctor, interrupting her: "The fact is you want a change." "Just so." "Well, then, send your husband to the country."

A LITTLE religion is a dangerous thing. That was well illustrated in the case of the fire-eating Virginian, who, while returning from a camp-meeting, held out his hand to an old enemy and exclaimed: "Give me your hand, Sanders; I've got religion, and I feel mean enough to shake hands with a dog."—*Oshkock Christain Advocate.*

GEORGE is five years old. His mother had undressed him for a bath before putting him to bed. As soon as he stood before her he said: "Now, mamma, I'm a kid." "Yes, dear," said she. "You know what kind of a kid I am, mamma?" "No, darling." "Well, na-kid." His mother thinks that is good for a kid of his age.

HE had an auburn-haired girl, and promised to take her out riding. She met him at the door when he drove up, and he exclaimed: "Hello, Ready?" She misunderstood him, and they dont't speak now.

"I WOULD rather," says the editor of the Okolona States, "be a living ass than a dead lion." Nature having gratified him in this particular, what in the world is he growling about?

A MUSCULAR girl at Wabasha
Was insulted one day by a "masher;"
He appeared, when she'd done,
As though he'd been run
Through a mower and reaper and thrasher.

"WOMAN is a delusion, madam, exclaimed a crusty old bachelor to a witty young lady. "And man is always hugging some delusion or other," was the quiet retort.

THE old story of Romulus and Remus being raised by a wolf is outdone every day in Kentucky, where men are raised by mules, sometimes fatally.—[St. Louis Times-Journal.

FATHER (to sleepy boy)—"Come, James, you ought to be up with the lark on such a beautiful morning." Matter-of-fact boy—"All right, but how'm I going to get up there?"

DOES a standing joke ever require a seat.

The False Notions

Exist in the minds of many otherwise intelligent people as to the requirements of a disordered stomach or liver. The swallowing of nauseous and powerful drugs is the way to encourage, not to cure dyspepsia and liver complaint. Nor can a constipated or otherwise disordered condition of the bowels be remedied by similar treatment. That agreeable and thorough stomachic and aperient, Hostetter's Bitters, which is the reverse of unpleasant, and never produces violent effects, is far preferable to medicines of the class referred to. It infuses new vigor into a failing physique, cheers the mind while it strengthens the body, and institutes a complete reform in the action of the disordered stomach, bowels and liver. Appetite and sleep are both promoted, uterine and kidney affections greatly benefited by its use. It is indeed a comprehensive and meritorious preparation, free from drawbacks of any kind.

Arboricultural.

JAPANESE MAPLES.

JAMES HOGG.

WITHIN the past twelve or fifteen years numerous additions have been made to the already large list of the genus Acer, by the discovery of several new species in Japan and Amoor. Dr. Savatier and M. Franchet, in their catalogue of Japanese plants, enumerate twenty species, viz. *A. Japonicum*; A. *Sieboldianum*; *A. pictum*; *A. truncatum*; *A. trifidum*; *A. diabolicum*; *A. circumlobatum*; *A. Burgerianum*; *A. palmatum*; *A. capillipes*; *A. spicatum*; *A. Tartaricum*; *A. micranthum*; *A. rufinerve*; *A. cratægifolium*; *A. carpinifolium*; *A. distylum*; *A. argutum*; *A. pycuanthum*; *A. sessilifolium*; *A. cissifolium*; and *A. nikoense*. To these Dr. Maximowicz has added *A. tegmentosum*; *A. monomaxim* and *A. barbinerve*. Many of those enumerated by Dr. Savatier were discovered by Dr. Maximowicz.

The most of the garden varieties which have been introduced into this country and Europe are derived from *A. palmatum* of Thunberg. He gives as species *A. septemlobum* and *A. dissectum*, but these are only varieties of this species. Dr. Siebold called it *A. polymorphum* on account of its great tendency to vary in its foliage. It will thus be seen that these names which are given in the nursery catalogues as distinct species, are only synonyms of *A. palmatum*. Strange to say, although the species was introduced into England as far back as 1820, none of the varieties was introduced until within the past few years. There is also a variety of *A. platanoides*, variously known in the European nurseries as *A. palmatum*, *A. crispum* and *A. laciniatum*, which has the lobes of the leaves deeply jagged, with acuminated bristle-like teeth on the edges; this should not be confounded with the Japanese species. Dr. Savatier, speaking of the latter says: "The form of the leaves varies much. Sometimes they are palmate with 5 to 7 narrow lobes (*A. palmatum. Thunb.*) or divided into 7 to 9 much larger lobes (*A. septemlobum Thunb.*), or even more multiparted palmate, with narrow laciniations (*A. dissectum. Thunb.*). These three principal varieties subdivide themselves into many others, which the industry of their gardeners has multiplied *ad infinitum*."

Thunberg gives the following description of this species. "Leaves palmate, serrate, smooth, flowers umbellate; tree medium-sized, entirely smooth; branches and branchlets opposite, round, turning purple, spreading leaves on the extremities of the branchlets, stalked, incisely palmate; 5-7 nerved, smooth on both sides; lobes 5-7, (Siebold says 3-9) lanceolate, acute, equally sharply serrate; nerves sometimes hairy."

Another class of the garden varieties is derived from *A. trifidum*. Their foliage is not so finely dissected and so fern-like in appearance as that of the previous species. Dr. Savatier says, in speaking of it "The leaves of this species are very variable; are sometimes almost entire, sometimes more or less deeply tri-lobed; some have broad lobes, others have narrow ones, some are smooth on the edges, others are dentated." Thunberg describes it thus, "Leaves undivided, entire, trifid; branches round, smooth, purplish; leaves at the ends of the branchlets, few, undivided, bilobed, or trilobed, entire, on both sides smooth, above grass-green, below paler, ovate, acute; lobes ovate, acute, wide. Some of the varieties of this species have blotched leaves. It is very distinct from the previous species and produces correspondingly distinct varieties. It has larger, different shaped leaves and a stronger and different habit of growth.

A. Japonicum is a very beautiful species, the leaves are large, almost circular in shape, and notched on the edge into 11 or 13 sharp lobes. Multipartedly incised, opposite, serrate, on both sides downy, petioles short; the nerves at first hairy; branches and branchlets round, purple and smooth; umbels many flowered; flowers sub-umbellate, purple; seeds winged and woolly.

A. pictum has the leaves smooth, palmately seven-lobed; lobes acuminated, oblong, entire, alternate, aggregated together at the ends of the branches, smooth on both sides, variegated with white; branches smooth, ash-colored.

A. carpinifolium is a rare species, the foliage of which is so unlike that of a Maple and so closely resembles that of the Hornbeam that none but the most experienced botanists would recognize it as a Maple, except they saw the flowers and the fruit. I am not aware of there being any varieties of it.

I do not think that *A. cratægifolium* has been introduced into this country, but a very beautiful variety with deeply incised leaves has been. It is of upright growth with brownish-red bark and is quite different in appearance from those derived from *A. palmatum*.

These are all that have been introduced into this country, so far as I know. The other species named would no doubt be desirable additions to our lists of ornamental trees. Many of them are closely allied to our American species, and can hardly be distinguished from them; for instance the Japanese *A. spicatum* differs from the American species of the same name, but not sufficiently so to warrant making it a distinct species. *A. circumlobatum*, *A. argutum*, and *A. barbinerve* are allied to *A. glabra*. *A. capillipes*, *A. rufinerves*, and *A. tegmentosum* are related to *A. Pennsylvanicum*.

Much difficulty has been experienced in propagating the various varieties of Japanese Maples. As a rule they are of delicate growth and require to be grafted on some good stock to insure a reasonable strength of growth. They will take on some of the American species and will make a good growth for a year or two, when suddenly, sometimes within twenty-four hours, the whole plant will die. This could be overcome only by importing plants of the type species to be used as stocks. The type can be propagated by cuttings, but as some of the trees originally imported are now beginning to produce seeds, stocks will be more readily obtained. The Japanese increase them all by grafting, principally by inarching. As the varieties generally produce long, slender branches, they place a row of stocks—six, eight or more—close to the mother plant, and three or four inches apart; they then inarch a branch at as many different points as there are stocks to graft it on; an eye or bud being left at each inarching. They graft in this way in order to obtain as many grafts as possible, and not to dwarf the plants, as is generally supposed. They also have a fashion of training up a stock with a clean stem five or six feet high, and then inarching a number of varieties—sometimes a dozen—upon it, on different sides, producing a very novel and beautiful effect.

I trust that what I have written above will, in some measure, clear up the confusion which exists among horticulturists

JAPANESE MAPLE.
Acer palmatum var. dissectum atropurpureum. — (See Ed. Brev.)

in regard to these Maples. Unfortunately nearly all the information that can be obtained about them can only be had in the works, difficult to be obtained, of Maximowicz, Savatier, Miguel, Siebold, and Bunge of the past few years, and of Thunberg and Trattinick of seventy or eighty years ago. No American or English botanist has yet made Japanese Maples a special study.

NOTES FROM THE RURAL GROUNDS.

Select Trees and Shrubs.

For the consideration of those who, during the present fall, intend to select ornamental shrubs or trees, or both, we give below a list of a few of those which are as desirable as any with which our experience has made us familiar. Many, if not all of them, have been described in previous numbers, and portraits from life have been presented from time to time of some of those which we have supposed were unknown to a majority of our readers. We have prepared, and are still preparing, life-drawings of other new and valuable trees and shrubs, which, in their turn, will be published between the present time and next spring, which latter period is, in our estimation, if not in that of most experienced horticulturists, the safest for transplantation, all things considered, for this and more northerly climates.

Trees.

Fagus sylvatica purpurea.—This is the Purple-leaved Beech which, among all trees cultivated for *purple* leaves, we place first.

Fagus sylvatica pendula, the Weeping Beech, the most picturesque of weeping trees.

Cladrastis tinctoria, or Virgilia lutea. Yellow Wood. Described and illustrated in Rural of 4th inst.

Fagus sylvatica heterophylla. This Beech is of very slow growth, but its habit is compact and shapely.

Salisburia adiantifolia. The Maidenhair or Jingko tree. Of slow growth for a few years. Later it grows rapidly. Unless cut back from year to year, a habit too spreading and open mars its beauty.

Liriodendron tulipifera. The Tulip tree. We recommend this for the lawn only on the condition that it be cut back severely every fall or spring. The only safe way to remove this from the fields or woods is to select young trees about an inch in diameter and cut off the stem two inches above the roots, planting only the roots.

Magnolias. See Fair Number of the Rural New-Yorker.

Salix pentandra (?). We do not think this is *pentandra*, though so catalogued by most nurserymen who have it for sale. It is but a Willow, but it here resembles in its general appearance the Big Laurel of the South, though growing only to the hight of about 20 feet. For its large, dark-green, lustrous leaves; for its symmetry and compactness; for its hardiness and vigor, we prize it among our finest trees, and there are no others that more excite the admiration of our visitors. Several years ago we distributed cuttings (which root freely) among our subscribers, and it is proposed, as our stock is again sufficient, to make another distribution next spring.

Shrubs.

Viburnum plicatum. One of the handsomest of shrubs and far more desirable than the Hobble-bush (V. lantanoides), the High Cranberry (V. Opulus), or the Guelder Rose.

Pavia macrostachya, or Æsculus parviflora. Long-raceme Pavia. A low-growing, wide-spreading tree, or large shrub. Some specimens attain the hight of 15 feet and a diameter of 30 feet. This will be illustrated in this journal in a few weeks.

Hydrangea paniculata grandiflora.—Coarse, but very showy when few other shrubs are in bloom.

Hibiscus Syriacus variegatus, or variegated Tree Hibiscus. Leaves half green, half creamy-white. Probably our best variegated shrub.

Berberis vulgaris purpurea. Purple-leaved Berberry.

Diervilla hortensis nivea. White-flowered Weigela.

Cydonia Japonica. Japan Quince. White, rose and dark-red varieties.

Chionanthus Virginica. White Fringe.

Cercis Canadensis. American Red-bud.

Stuartia pentagyna.

EVERY-DAY NOTES.

Samuel Parsons, jr.

The Chinese Sumac.

This Chinese Sumac differs in several ways from other forms of the Rhus species with which I am familiar. It grows larger and more like a tree than its relatives, for one thing, and for another, its leaves are broad and massive and specially distinguished by a marked extension of the leaf half an inch wide along the entire midrib. This peculiarity is visible at a considerable distance. But the crowning charm and fitness for ornamenting the lawn possessed by Rhus Osbecki is its wonderful fall coloring. All Rhuses are fine in the fall, and everywhere on our hill-sides common Sumacs glow at that season with the most vivid scarlet and dark-red tints. The great advantage, however, pertaining to Rhus Osbecki is, considering the species, the extraordinary size of the leaf as well as the tree. On these leaves, under strong sun-light, burn in the most effective manner broad masses of scarlet, shading into blood-red and brown; or, on the other hand, into brilliant yellow, curiously mottled or solid, as the case may be. The flower itself is decidedly attractive.

Mingled with common and cut-leaved Sumacs, Rhus Osbecki would be equally effective on the outskirts or in the middle of the group. An isolated position, however, accords better with its rare and showy merits. In general behavior R. Osbecki much resembles its American relatives. I should also note that its employment on any lawn in America is very recent.

Trees Green in Late Autumn.

With the various seasons come associations according with the time of the year. In fall, we think of garnered crops, luscious, rich-hued fruits and golden or crimson autumn leaves. I fear, however, few incline to dwell sufficiently on the charms of certain trees remarkable for retaining green foliage late in fall. At no time of the year is the contrast of full life with fading vegetation more striking than during the autumn. Elms, Poplars, Horse-Chestnuts, Lindens and even Maples are fast turning brown and sere. How refreshing, then, to behold bright green foliage amid general decay, and how important to secure the few trees for the lawn that are capable of thus resisting fall decay. Let me call your attention here, for example, to three or four choicer specimens of this kind.

The Weeping Slippery Elm has perhaps received due attention, but I cannot help commenting briefly once more on the excellence of its late vigorous foliage. This year it has been very marked. There has been little frost before October 15, and much dry weather, and leaves generally are simply drying up and falling off. But the Weeping Slippery Elm stands almost perfect in coloring and clothing of foliage.

Three very slow-growing trees noteworthy for late retention of foliage in fall, are Fraxinus excelsior atrovirens, Ulmus Siberica and Ulmus viminalis. Fraxinus excelsior atrovirens, a rare tree, has the blackest green I ever saw on tree leaves. These leaves are, moreover, curled, shining and tough, making very odd-looking, diminutive trees of most persistent character. Persons accustomed to the appearance of the ordinary European or American Ash could never believe this Fraxinus atrovirens a member of the former species. In every way, as far as I know, this peculiar Ash is as hardy, long-lived, etc., as any of its relatives.

Ulmus Siberica is round-headed, slow-growing and decidedly rare. I know of but one good specimen, although there are, doubtless, others scattered about the country. This specimen presents a very curious appearance, with its dark decided green fully evident at the very beginning of winter. It is, otherwise, massive and even elegant as well as unquestionably long-lived. The leaves, likewise strongly curled and closely grouped about the branches, have a certain elm-like aspect, but at the same time little of the general habit of the species.

Ulmus viminalis is a very scarce and odd tree of dwarf character. A very distinct and elegant variety, it has small, rough leaves and numerous slender, smooth, twig-like branches, somewhat pendulous, like those of the Cut-leaved Birch. I speak of its dwarf character with entire faith, because I note this habit in a specimen that is before my eyes frequently. In view of this fact, I was somewhat startled by noting in a horticultural journal of high repute that some one declared he had an Ulmus viminalis that had grown 40 feet in 30 years. May I dare to surmise that this specimen consisted simply of the common European Elm which, from being originally the stock of Viminalis, attained higher dignity on the death of the grafted portion of the tree. Yet could any one mistake the Viminalis for the common European Elm? At any rate, all must concede that U. viminalis is an excellent and curious tree in fall.

I should like to speak also of Ulmus Berardii, a beautiful miniature variety, of slender growth and pyramidal habit, with deeply and delicately cut foliage held late in fall, but I have referred to such trees merely as types of what may be added to the ornamental character of the lawn in fall. Lawn planting for autumn effects, should constitute a distinct and carefully studied department of landscape gardening.

THE YELLOW WOOD.

The interesting articles on this tree, which were given in the Rural of Oct. 4, tell so much about it as to seem to invite whatever scraps of addition may be made to those statements. It has shown some rather curious behavior here among the Alleghanies, which must be attributable rather to the dry mountain air than to any lack of good quality in the soil. One of our trees is on the Juniata bottom, where the stream is as yet but narrow, and another is set on the front of a terrace of triple depth of good soil, both with good drainage. A severe freeze on the third of May killed tender foliage here, taking all our Grapes but those sheltered by leaves etc. The leaves of the Yellow Wood were nipped twice, and this seems to have completely stunned the trees. There has not been a perfect leaf on either, nor any extension of growth during the whole summer.

But this does not prove that the tree is tender, for some vigorous currant bushes in excellent mulched soil and with plenty of room, have ponted in the same way since being deprived of their leaves by the worms about the middle of May. We had cool, rainy weather during the summer, more than was good for corn, and just the thing, one would think, for the hardy Currant, but not one smile—not one green leaf—would that row of stumped bushes give to the sunshine through all the summer, up to this middle of October. Nurserymen soon learn by the knife what a disaster to the growth of a young tree it is to prune it when the leaves are just opening. Even the rubbing off of redundant buds under grafts etc., must be done by the clock, if we would gain the good results and avoid the harm. The buds should be rubbed off *as soon as they swell*, and as this cannot be done all at once, one finds gain in going over them two or three times, thus making the operation more gradual.

Like Mr. Parsons, I regret that the liquid name Virgilia, which Michaux gave to the tree found on the banks of the Tennessee River, in honor of the poet Virgil, has not been retained by our botanical authorties. The French seem to adhere to it. They like euphony and the music of vowel sounds, and will strain a technical regulation for the sake of it. Cladrastis is, indeed, a rasping and drastic name for so soft and neat a tree, which was the favorite of A. J. Downing, above all the growth of the forests.

Central Pa.

Farm Topics.

THE TRUTH ABOUT IT.

[The object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—Eds.]

GOOD LUCK IN FARMING.

W. I. Chamberlain.

"You've had prime good luck with your young Maples, ha'n't ye?"

I was so busy trimming the roadside hedge that I had hardly noticed the coming of the wagon, whence the voice proceeded. Now I looked up. It was rather a "shackley rig," and the speaker looked the worse for the wear. I didn't recognize him, though he was probably one of my "neighbors" living a few miles further back from town.

"Yes," I replied, "first-rate luck. Only one has failed out of 175, and I guess that will make out to live yet. And my apple trees and peach trees all lived."—

"Wall," he replied, "that's jest the way some folks always do seem to have luck, but I never did. Once in a while I take a fit to have an orchard or some shade trees, but it's no good. What don't die the first year, mostly give in the second, and there a'n't enough left to fuss with. Get up, Polly!"

As he drove on towards town I fell to trimming the hedge again, and to thinking wherein my "luck" consisted. In the first place, I had the bad luck to have a wretched clay roadside to set the trees in. It had been cut up by wheels in muddy weather till it dried up as hard as the middle of the road. But I had the "good luck" to work over it three seasons, plowing, manuring and working until it became quite respectable. Then I had the luck to take Maples from the nursery, well used to sunshine and ordinary soil, and to take them up carefully and have them in the ground again before the rootlets were dried at all. I also had the luck to have by each tree a bushel or more of the best soil on my farm to put around the roots before filling in any of this roadside soil, even though much improved. The trees were set in October. I had the bad luck to have a most severe April and May drought, but the good luck to mulch the trees and draw wagon-loads of water from my pond and thoroughly soak the ground above the roots of each tree with eight or ten gallons of water at a single watering. It did not need to be repeated, and when the abundant rains came, the last of May, the trees had the "luck" to be leaved out and growing nicely and ready to start on with a leap, as if they had never been transplanted. But for the preparation of the tough soil and the mulching and the heavy watering, there probably would not at the end of this severe drought have "been enough trees left to fuss with."

The truth about it is, that most of the "good luck" in farming and gardening is simply the result of good management and faithful, persistent industry. Good luck wintering cows means warm, well ventilated stables, good feed, regular feeding and careful handling and attendance. Good luck with early spring lambs, means careful previous management of the ewes, warm quarters and prompt attention when the lambs are dropped. Good luck selling them to the butcher, means that they are of the proper mutton breeds, and thrifty and well-fattened; and also a knowledge of the markets and the ability to hold if you cannot sell to advantage. Good luck with fruit, means a selection of varieties adapted to the given soil, climate and market, good thorough culture, and care in handling and sagacity in marketing. Good luck marketing butter, means good "butter breeds" of cows, good feed and feeding, scrupulous neatness from the milk-pail to the churn and butter crock or package, and a knowledge of the markets and of the value of the product. Good luck in curing hay, means good implements and barns, and sagacity in prognosticating the weather, or sense to read the prognostications of "Old Probabilities." Good luck raising wheat, means a rich, warm, well-drained soil, proper preparation of the ground and good seed and good sowing and spring tillage with the smoothing harrow or other harrow. A shrewd neighbor said to me "Winter-killing of wheat is only another name for poverty of soil."

And so we might go through the entire catalogue of farm and garden processes and products. Good luck seems to be a compound, which in the "last analysis" resolves into sagacity, industry and perseverance. These three things, in agriculture and horticulture as well as in business and the professions, seem always to be rewarded. Elsewhere as well as in the law is it true, as Webster said, "There is always room up higher."

Summit Co., O.

A PROJECTED AMERICAN ROTHAMSTED.

The editorial remarks on a practical and scientific farmer, in the Rural for October 11, are very much to the point. What is there said with regard to the nature of scientific farming in contradistinction to practical farming, is quite correct. At present I am in the midst of scientific and experimental farming, which, should it not enrich the principal, will, it is to be hoped, do a world of good to those in the vicinity who watch the results. Great preparations are in contemplation, and the work this fall will chiefly consist in getting everything ready for spring. A record of all the proceedings will be kept, and, I presume, published in due time. The soil will be fed with all varieties of fertilizers, a different kind being applied to each plot of a quarter of an acre. With regard to dairy cows and sheep husbandry, especially the breeding of early lambs, the animals will be divided into groups, and each lot treated in a different manner, so as to ascertain the most profitable method of handling them for the purposes intended.

Field Crops.

BLOUNT'S PROLIFIC CORN.

H. L. Wysor.

On the agricultural page of one of your city journals for Sept. 10th, appeared the following note from the Editor: "This new white corn was so highly recommended by the originator and others who had it for sale that we were induced last spring to plant about an acre of it, in order to learn its value from practical experience. While other excellent yellow and white sorts, planted at the same time, are ready for harvesting, the Blount is going upward and onward with a very small show of ears for the time of year, Sept. 1st. The originator claimed that this variety would give from four to twelve ears on a stalk, but we will be content with one, if that matures before frosts, which is more than is promised at the present writing. Why any farmer wants to raise corn with stalks as large and tall as hop poles, and then get no more than one or two small ears on each, is something we cannot understand, for it is a waste of the fertility of the soil, for the large stalks are of no value whatever. The name of Blount's Prolific should be changed to Blount's Folly."

This same journal accused the Rural sometime before of pronouncing a general opinion without sufficient authority in regard to the hardiness of the Japanese Persimmon, and now it is itself guilty of the same thing in re-

gard to Blount's corn. It is, no doubt, true that this corn is too late for the latitude of New York [It is not too late with us.—Eds.], as I gather from the reports of the correspondents of the RURAL in that State, but that it will not succeed in New York is no reason that it will not succeed in other parts of the country. It is also true that the corn grows unreasonably tall, especially when the smallness of the ears is considered; but, nevertheless, I think it will be found that it will yield more here, and in the greater part of the West than any other variety. Professor Blount asserts that the hight to which it has grown this season, is owing either to the over-enrichment of the soil by those contending for your premiums, or else to its being planted on alluvial land.

From my own experience, I am driven to the conclusion that it is owing, in far greater part, to the nature of the corn itself. I have twelve acres of the Blount, which grew on river bottom—no manure or other fertilizer having been used—to an average hight of twelve feet. On a small plot of the same character of land in a much higher condition and manured besides, corn of the sort commonly grown here reached a hight of not more that seven feet.

This tallness is a serious objection to the corn in more ways than one. For one thing, it occupies too much space, as, in order to give it room enough, it should be planted four feet each way. Then, it is more apt to be blown down by high winds. In this connection, I notice it remarked in the RURAL Brevities that it stood up better than other sorts. Unquestionably it has a firm hold of the ground, but I suspect that the RURAL has already found that as it approaches maturity, the stalks begin to break down a foot or more above ground. Other sorts, when they are blown down, are turned over from the roots, but this is snapped off or bent down in the manner described. The stalks are too soft, as the stubs of many of them can be mashed in the hand, as soon as the upper part has been cut away. Finally, it is necessary to cut the corn nearly two feet from the ground, and even then it is impossible for an ordinary man to tie the shocks sufficiently near the top to make them stand well. It appears to me, then, that Professor Blount, in the further improvements of his corn, should direct his efforts principally to increasing the size of the ears, lowering the stalk, bringing the ears nearer to the ground, and hardening the stalk. I have set forth my objections to this corn, its merits will appear in the report I have to make of its yield with me this year.

As already stated, I planted twelve acres on May 1st, the harvesting of which was finished the 18th of last September. It is now nearly ready to go in the crib. The average number of ears to the stalk is three, many stalks having six. I have already husked enough to ascertain the yield with a very near degree of accuracy. Eight acres of the twelve will yield 100 bushels per acre, the other four having been injured by the white sand which was thrown on them by the flood of last year, will average 50 bushels. The average for the whole will be a little over 80 bushels per acre.

This yield has been made in the face of a drought which lasted six weeks at a time when the corn was in a critical stage of its growth—in silk and tassel. It is remarkable, too, how few unsound ears are in the whole of it. There is hardly one damaged ear in a hundred. This, together with the weight of the grain, will make up in a great measure for the smallness of the ears, as the large gourd-seed varieties are chaffy and many of the ears immature. Blount's corn will probably weigh 60 pounds to the measured bushel, the gourd-seed not over the standard.

Pulaski Co., Va., Oct. 13, 1879.

Pomological.

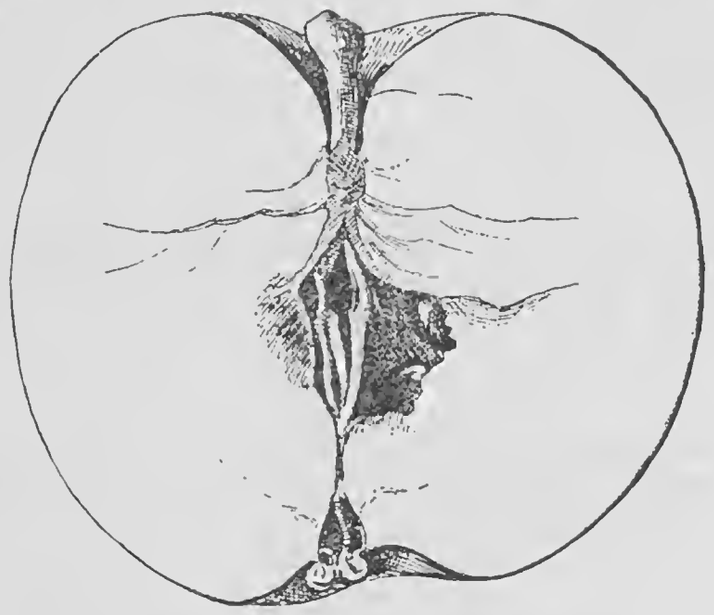
INFLUENCE OF STOCK UPON GRAFT, ETC.

S. B. PECK.

I AVAIL myself of my first leisure hour to accept the RURAL's offer, of Aug. 16 last, to continue this subject, not so much for the purpose of persuading any one to believe in this theorem, as to open another subject in pomology, to wit: the manner of raising commercial fruit trees.

I consider the fact as pretty well established that the stock *does* have an effect upon the product of the cion inserted in it, an effect perhaps not always apparent, but always liable to produce a deleterious or beneficial effect. Downing admits that the stock has sometimes an effect on the quality of the fruit. B. Hathaway, a leading pomologist of Michigan, says:—"The results of my own experience and observation go clearly to show that the stock has an influence in determining every character of the fruit."

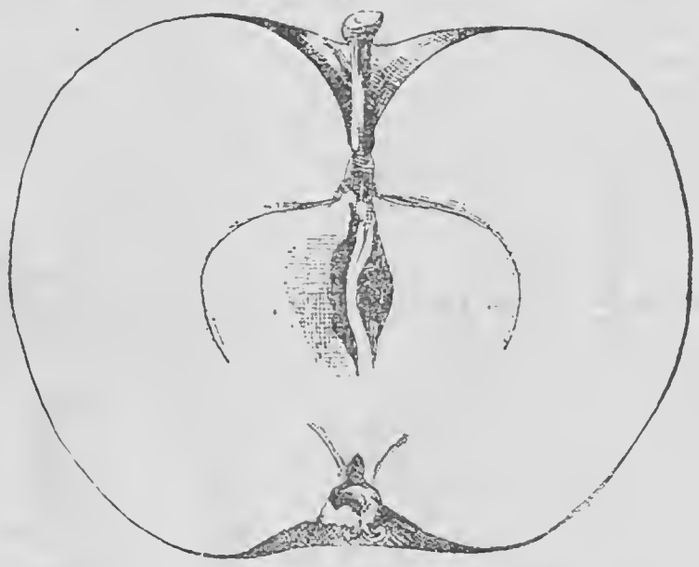
Further evidence to the same point is not lacking, but I proceed to the other question:—Does or does not the ordinary manner of producing nursery trees tend to shorten their lives, diminish their fruitfulness, weaken their constitutions, make them more liable to disease and less able to overcome the injuries of insect enemies? P. Barry says:—"Half of the maladies of trees originate in the negligent or vicious system of propagation." The common practice, as I understand, with propagators is to take the seeds promiscuously from



WHITE WINTER CALVILLE (ABBOTTSFORD).

the pomace at the cider mills, and, after one or two years' growth, to graft into the whole or a part of the root the cions of the variety desired, or to bud into the stock in the fall. L. H. Spier, of Vermont, says:—"Trees grafted in the root, as is practiced in many Western nurseries, will not flourish here, being too contrary to nature for our climate." "As good trees and as good fruit can be raised here as in any State in the Union." Downing says:—"Budded trees usually have much better roots than root-grafted ones." J. J. Thomas says: "A single root will sometimes make but one graft; but more commonly two or three." C. W. Dickerman, author of the Farmers' Book, says:—"The seedling root is cut off at the crown." Barry says:—"The graft is always made at the collar." The last two evidently do not admit the propriety of making several trees from one seedling root. A man, whose name I cannot give and whose words I cannot quote, related, in a pomological meeting, his experience in grafting the Wagener Apple. He said substantially that cions set in the upper part of the root, bore fruit soonest.

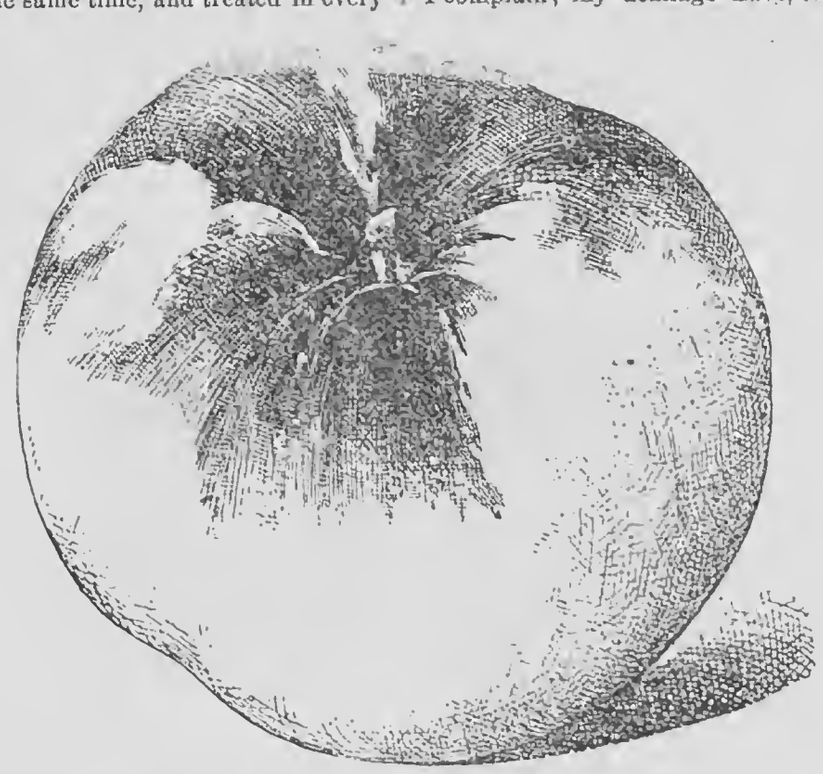
This brought to my mind my own experience with regard to five Wageners, bought and planted at the same time, and treated in every way alike; yet one fruited three years before the rest. Of two Talman's Sweets, also, planted two rods apart in 1862, treated in precisely the same way and looking to-day almost exactly alike, one has borne six to ten times as much fruit as the other. Two other trees, on the same acre, of like age, soil and culture—(American Golden Russet and Red Astrachan), always bear full crops biennially, while some others, seventeen years planted, have never shown a blossom. Others—and some of them covering an area of 20 feet in diameter—have not borne enough to identify their variety, not enough to satisfy the cravings of the early



WHITE WINTER CALVILLE (OF ST. HILAIRE) SECTION.

crop of codling-moth larvæ. All the above, except the Wageners, are on one acre of level, uniform soil, planted at the same time (1862), and always treated alike. About two-thirds of them succumbed to the hard winter of 1874, the rest now appear healthy. Others planted near by in 1864 and '65 from the same nursery (which, I think, is now extinct), have behaved in about the same way, while seedlings from seeds planted about 1864 and replanted at the proper age, have borne every other year all I could expect.

I wage no war with nurserymen. I know that there are men of that profession as honorable as any in the world, men possessing, besides superlative honor, the requisite industry and care to secure their patrons against loss and disappointment. That there are other nurserymen of precisely opposite qualities and habits, the eight varieties of apples which my trees have borne, that were never either ordered or billed to me, afford abundant proof, to say nothing of the failure to raise from them a single specimen of Red Russets or Baldwins, the trees of which I ordered most and which were quite plentiful in the bills sent me. It is not of tree peddlers or professional agents that I complain; my dealings have, in the main, been directly with proprietors through correspondence, and I have not told a quarter of my grievances. I have only spoken of apple trees, as I am more familiar with them than with other fruit trees. I do not claim to be able to say how trees should be raised in the nursery, to insure the best results to the orchardist, but I feel sure that there are faults in their propagation somewhere. If we plant a seedling tree, we have confidence that, with proper culture, it will at a proper age blossom and bear fruit. In my boyhood, say from 1810 to 1820, my principal fall labor was gathering apples and making cider. Our trees were all natural fruit, and seldom any two trees bore fruit alike. There were great differences in the bearing qualities of the trees; many of them bore profusely, but I think we never had a barren tree of proper bearing age.



WHITE WINTER CALVILLE (OF ST. HILAIRE).

My object, in this article, is to obtain light on this dark subject. I write in the hope that the science and perseverance that have quintupled the productiveness of the Strawberry and the size of its fruit, tripled the quantity of corn per acre, given us luscious fruits, instead of the crabbed, acrid ones which nature once provided, may, by the application of profound study, experiment and persevering industry, yet produce fruit trees that the orchardist, by giving them judicious care, can rely upon for productiveness and the possession of that peculiar flavor and aroma which belonged originally to the variety. That such trees cannot be raised for the paltry prices now obtained, I am well aware, and that purchasers and fruit-growers must be more liberal in the prices they will pay, is also certain, if they would have evidence of greater perfection in the trees purchased.

The advantage of the selection of perfect seed from which to breed, is becoming every year more apparent. We have examples of it in the two farm products corn and potatoes. Every good farmer selects for the former his best ears, and to this cause I impute the great increase in product, while it is quite common to plant of the latter what has been discarded for the table, and, instead of 200 to 400 bushels of sixty years ago, we now average less than 100.

Muskegon Co., Mich.

THE WHITE WINTER CALVILLE APPLE OF ABBOTTSFORD, QUEBEC.

THE following description is abbreviated from the Reports of the Montreal Horticultural Society for 1876, and of the Abbottsford Fruit-growers' Association of 1875:

"This fruit, though smaller, yet strikingly resembles the *Calville Blanche d'Hiver*, of France. It was brought to Abbottsford from St. Hilaire 20 years ago, though, strangely enough, the St. Hilaire apple-growers have not, so far, recognized it. At Abbottsford it has proved hardy and vigorous, and in productiveness very nearly equal to Fameuse. Fruit medium, yellowish when ripe, with a blush on one side; flesh firm, crisp, juicy, mildly sub-acid; its only fault is its color, which shows bruises and prevents its being a first-class market fruit; otherwise, it bears carriage well and keeps until April."

If this apple is the French one mentioned above and described by Downing as of inferior quality when grown in the United States, it has in Canada retained its high quality while decreasing in size. I have found, by recent inquiry among Canadian orchardists, that it ranks among the best for profit, preferably for a near market; and I have ocular demonstration of its abundant fruitfulness. I think it well worthy the attention of orchardists in the "cold belt."

Orleans Co., Vt. T. H. HOSKINS, M. D.

THE WHITE WINTER CALVILLE APPLE OF ST. HILAIRE, QUEBEC.

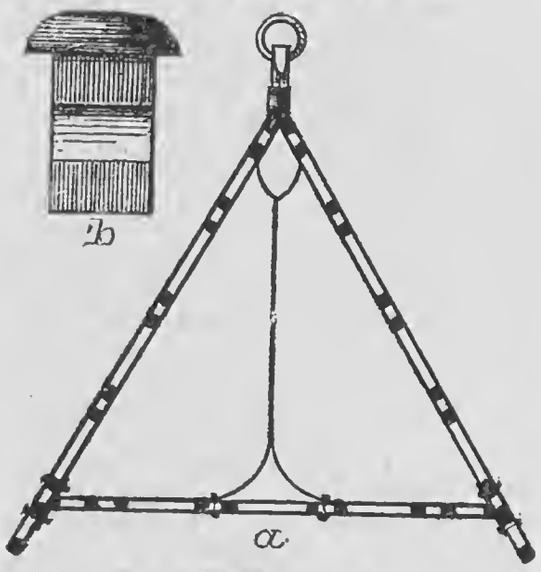
SAYS the Montreal Horticultural Report for 1876: "This seedling originated in the orchard of the late Jean M. Ducharme. The original tree was bearing in 1822, and still bears. It bears heavily, but not young. Fruit, large, roundish, whitish, blushed in the sun. Flesh, tender, juicy, and of a pleasant sub-acid. This apple is attractive, but its tender flesh and delicate color cause it to be easily bruised and injured." I was favorably impressed by what I saw of this apple in the Canadian orchards, but it was evident that it does not stand so highly in the esteem of growers as the Calville of Abbottsford, elsewhere described and figured. But it excels that variety in its delicate beauty, with a skin of ivory and rose leaves, a circumstance which makes it the peer, if not the superior, of any known apple for decorative use, while its quality for the dessert, does not disappoint the expectations excited by its remarkable appearance. T. H. H.

Farm Economy.

A GOOD HARROW.

MR. J. BUNDY, of Belmont county, Ohio, contributes the accompanying diagram of a harrow which he asserts is the best he knows of. It can be easily made by any blacksmith and is not expensive. Each of the three sides of the frame consists of two bars of iron two inches wide by one-quarter inch thick, and

placed an inch and a quarter apart. Between these are inserted the tooth-holders, one of which is shown at *b*. This is a block of cast iron, two inches long, clear of the projection above, one and one-fourth of an inch wide and three-quarters of an inch thick, with a groove into which the tooth fits. Two



of these are used for each tooth, and they are fastened by half-inch bolts. The advantages claimed are that the implement is very durable and that the teeth, being movable, their number can be changed to suit the occasion. An entirely new set of teeth of another shape from the one commonly used, can also be inserted if the soil should require it.

WIRE FENCE.

W. I. CHAMBERLAIN.

It is now fully time to take precautions against snow-drifts during the approaching winter, and one of the best preventives of these along the highways, is the erection of wire fences. One of the strongest points in favor of these is that snow cannot drift behind them. Last winter was an unusually bad season for snow-drifts and great damage was done. Thousands of miles of highway, in short or long stretches, all over the land were literally blocked up, and the teams forced to go through the adjacent fields. Fences, trees, and nursery stock were injured and broken down by the weight of the snow as the drifts slowly settled in thawing, and wheat and rye were to some extent smothered by the compact burden. Hedges, stone walls and board and rail fences will always harbor huge drifts where the wind has a fair chance, and the drifts will block the highway or fill the railway "cuts" or crush fences or nursery stock as the case may be. The obstruction of highways, however, is the point specially requiring the attention of our law-makers. Farmers and railroad companies will look out for themselves in the matter, but the traveling public seem to need the aid of the law. For more than three months in this locality (Northern Ohio) not naturally a snowy one, the teaming of hay, large logs, or anything at all top-heavy, was last winter rendered practically impossible on northerly and southerly roads. Light sleighs would skirt the edges of the huge drifts, one runner a foot higher than the other, or go through the adjoining fields, but top-heavy loads would be capsized. And long after the snow was gone from the fields and most of the way in the roads, the trouble still remained in places. The writer started a man with a load of hay for market. He got two miles, almost capsized, dared neither to advance nor retreat, and the load had to stay there some three weeks on the barn-floor of an accommodating farmer, till the huge drifts settled, before it could be taken either to market or home. And one of my neighbors some weeks earlier had a load capsized in the road, and burried by subsequent storms of drifting snow because it could not be removed.

Is Wire Fence Effectual?—Against cattle and horses it is a perfect barrier, if properly made. The barbed twisted wire used much at the far West, is ugly, savage stuff; but even by this stock is seldom injured. They soon learn to have too profound a respect for it to venture near it, the only danger being to wild or restive animals ignorant of the virtues of the fence. Perhaps, however, a better form is that made with smooth wire, with a barbed strip of wood, an inch or more square, hung loosely to the wire next to the top. This *shows stock there is a fence*, pricks them if they touch it, but swings away without goring or lacerating. The wood strip is patented, but farm or township rights to use it, are sold at fair rates and without humbug or swindle. The nature and unwieldiness of the strip prevent its being manufactured and sold through regular channels of trade, and seem to justify the usually objectionable feature of the sale of a right, rather than of the manufactured article.

Durability.—If the wire is of sufficient size and galvanized or painted to protect it from rust, I see not why the fence should not be as durable as the posts; nor why the wire should not be used again on new posts.

Heaving with Frost.—Posts will heave more or less with frost, just as in board fence. But in the latter the posts cannot be driven back to place with a maul or sledge in spring time without shattering the boards loose. But posts of wire fence may be driven without damage.

Unsightliness.—The eye has been accustomed to hedges, stone walls, fences, etc., which strongly mark the boundary lines of farms and fields; and wire fences, showing little but a line of posts, seem at first unsightly. Whether they will cease to seem so I cannot tell. But I find my eye already prefers them to the "Virginia rail fence." For road fence along a tidy farm, they are nice, for they show crops and culture so well.

Sheep and Pigs.—The former are easily kept in by a fence of four or at most five wires, the lower ones being placed not more than six inches apart. Pigs will stretch and spread the wires and get through; but they are a nuisance on a farm except in a pen or yard or lot exclusively devoted to them, and fenced *pig-proof*.

Breakage.—I hear complaints of breakage, and failure to repair. I have never been troubled in this way; but can conceive that if a long stretch of wire were drawn very tight in hot weather, the contraction in severely cold weather might break it. The tools for tightening, loosening and repairing are not expensive, and should be at hand.

Expense.—In constructing a wire fence a post at the end of every rod is quite near enough, so that half the posts needed for board fence will suffice. The entire expense of material and labor (except setting the posts) is about 50 cents per rod.

There are some objections to the fence, doubtless, not yet discovered. But on the whole, taking into the account cheapness, durability, effectiveness, and protection against snow drifts, convenience in tilling and harvesting crops, non-protection for briars and weeds along the line, and the growing scarcity of lumber, I am inclined to think wire fence in some form will be the fence of the future in the Great West. Or at least it will divide the honor with the osage orange hedge. I have seen the statement that at present prices of land, labor and lumber, the fences in New York would buy the land; and in Ohio the ash, cherry, butternut and black-walnut rails would go far in that direction. The Far West cannot afford such fences. Can we?

QUANTITY OF MANURE PER COW.

Very few farmers have any idea of the amount of fertilizing material produced by a cow in a year, or during the six months in which cows at the North are usually housed and the manure saved. Some interesting experiments are on record in relation to this matter. The most extensive and prolonged are those of Professor Dana, author of the "Muck Manual," who found by actual weighing that the average solid excrement daily, for nine-and-a-half years, of fifty cows, was 56 pounds per cow. These cows were kept at the print works in Lowell, Mass., their manure being used in the process of printing calicoes. The dung was kept free from litter, and carefully collected and weighed each day. In order to lessen the cost of this manure, these cows were purchased when fresh, well fed, and the milk sold to the milkmen of the town. Professor Dana was employed as chemist to the print works, and being much interested in agriculture he availed himself of the favorable opportunity for experimenting. We owe him much for the definite facts he was able to supply in relation to the subject.

Other experimenters, who have weighed the manure of cows for shorter periods, give similar results. James Thompson, of Massachusetts, in a paper printed in the agricultural report of that State for 1868-'9, reports that the solid excrement of five cows for the winter of 1867-'8 amounted to 73¾ pounds daily from each.

Professor Dana fed his cows with a ration of 12 pounds of potatoes and 24 pounds of hay, daily. The ration of Mr. Thompson's cows was six pounds of stewed corn-stalks and poor hay, mixed with one quart of corn-meal, in the morning, with five pounds of hay following. At noon they had six pounds of straw or rowen; in the afternoon two quarts of fine feed and a peck of roots, with seven pounds of hay for the last feed.

It is well understood that nothing comes out of a cow but what has been put into her, in some form. The value of her manure when neither gaining nor losing weight, is less than that of the fertilizing material contained in her feed only by the amount withdrawn in her milk, provided all the excrement, liquid as well as solid, is saved. This refers to pure dung and urine, without reference to bedding or other absorbent material that may be used.

It follows from the facts mentioned that all the manure of a cow, preserved and applied to the land without loss, is capable of reproducing the food consumed, in the same or some equivalent form, provided nothing is lost from it in the soil. Experiments have shown that practically some of the nitrogen is lost. But, on the other hand, considerable nitrogen is added from the snow and rainfall. Some plants, such as clover, seem to possess the power of adding to the available nitrogen in the soil, while requiring very little to be supplied to them during growth. The phosphorus and potassium salts increase naturally in available forms under tillage. Therefore, we may assume that under the ordinary rotation of a well managed farm, the manure of a herd of cows will, where butter-dairying is practiced, and the skim-milk is fed to other stock, be sufficient to reproduce their food continuously. If there is any falling-off it may be made good by moderate purchases of highly nitrogenous feeds, such as oil-cake or bran; or of nitrogenous fertilizers, to be applied to the grain and grass crops of the farm. These must be increased, with perhaps the addition of phosphates, when cheese or market milk is sold, or where young animals are reared for sale or to replace older ones turned off to the butcher. Much can be done to provide for losses of this kind by making all waste materials available for fertilizing purposes, using them as absorbents and in compost. Deposits of muck are particularly useful for these ends, especially on the lighter soils. T. H. H.

Tether-Pegs.—An excellent tether-peg can be made by any blacksmith from a bar of iron, say, three-quarters of an inch thick, by

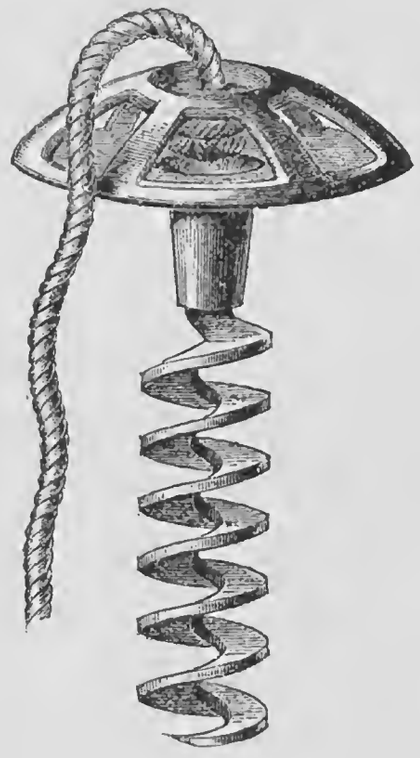


Fig. 2.

twisting it into the shape of a corkscrew, and bending the top into the form of a ring to which the rope is fastened. When screwed into the ground such a device is represented at Fig. 1. A neater but somewhat more expensive tether-peg is shown at Fig. 2. Pegs of this kind are patented and sold in most of the hardware stores. Here the top is hollowed out and the rope secured by a large knot, as represented. It is impossible to pull out such a peg, neither can the rope be twisted or caught round the top.

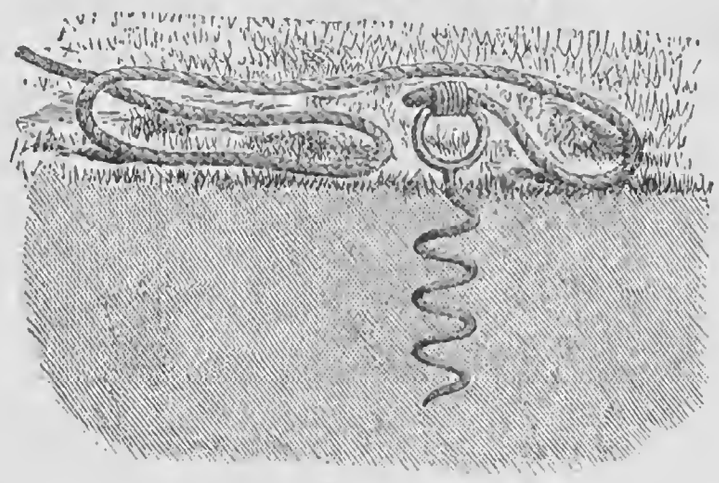

Fig. 1.

The warm weather continues. Our wheat is making an immense growth. Should this "growing" weather last, it may be feared that the stalk will be so far developed as to be killed during the winter.

Miscellaneous.

WHAT OTHERS SAY.

Sugar from Corn and Sorghum.—Mr. C. J. Reynolds gives his experience on the above topic to the Elmira Farmers' Club, as reported in the Elmira Husbandman:

The first experiment this year was with 400 hills of Stowell's evergreen sweet corn. From that we extracted forty-three gallons of juice. It was placed in a heater tank of about one hundred gallons' capacity, and lime added in proper proportion, after which the juice was reduced to nine gallons of very good molasses—better than most of that sold in country stores.

The next experiment was with Amber cane, the seed of which was not advanced to such a degree as to show ripeness. The cane was raised by Mr Nixon, of Caton, the crop of seventeen rods of ground. The juice was worked by the Clough process, the result about thirty gallons of good dense molasses. We continued working such lots as we could get, including corn and sorghum. The results with two lots of sweet corn satisfied us that the statement made by Gen. Le Duc, at the sugar convention held here last spring, and by Mr. Stewart of Pennsylvania, and Mr. Kinney, of Minnesota, regarding the product of an acre, were rather below, than above the truth. I think we have shown that good crops of sweet corn may give as much as three hundred gallons of molasses to the acre, with no serious difficulty in the way of producing either the molasses or the sugar from it. We have not yet been able to extract more than 85 per cent of the juice, because of the imperfection of the machinery, but even with this it is shown that the estimate of yield made by these gentlemen may be accepted. It is claimed that ten pounds of sugar may be made from a gallon of molasses of thirteen and a quarter pounds' density. I have molasses that bids fair to yield a satisfactory sugar product, but I cannot say what result will be attained until after the time has passed to perfect the crystallization.

The whole subject is attracting much notice. Farmers have shown great interest in the experiments I have made—they have watched the work with evident desire to get at the truth. It is a matter of regret that not enough cane or corn has been available to permit operations to be conducted on a scale large enough to show facts more fully than we have obtained them in small trials.

Judge Balcom.—How much molasses do you think might be obtained from a good crop of cane or sweet corn?

C. J. Reynolds.—Three hundred gallons, without doubt, from a good crop, worked up at exactly the right stage of growth.

Judge Balcom. Of what value?

C. J. Reynolds. I can only say that I have submitted samples of that we have produced to examination by good grocers in Corning, and they put the value of some at thirty-six cents ranging from that price to 60c. a gallon. The best has no green shade, no bad taste, it is even better than any brought to our markets.

Judge Balcom—You mean retail prices?

C. J. Reynolds—No sir. Wholesale.

Judge Balcom—Which is the greater cost; to raise the crop, or to work it into molasses?

C. J. Reynolds—To raise it, no doubt. I think an acre of corn stalks, or Amber cane, may be worked up at less expense of labor than would be required to cut, husk and crib the product of an acre of field corn. Of course, when I say three hundred gallons of molasses may be produced from an acre, I mean good ground, good care of the crop in growing and skillful handling in the process of working.

Judge Balcom—Say from land that would produce sixty or eighty bushels of corn to the acre?

C. J. Reynolds—Yes sir—land that will give that amount of shelled corn will produce as much as three hundred gallons of good molasses to the acre.

J. F. Copley—Have you tried beets?

C. J. Reynolds—I have not, but I intend to make the trial on a small scale using the Stewart process. Gen. Le Duc said in the late convention that beets might be worked successfully by it, but I have no practical knowledge of the working. Every body knows that molasses produced from beets is good for nothing to be used as molasses—it is only good to work into sugar.

W. A. Ward—What proportion of the crop of Amber cane, or sweet corn, would it be fair to pay for the labor of working the whole into molasses.

C. J. Reynolds—My idea is that a mill should be so located that the crops to be worked up might be produced within reasonable distance; there should be an abundant supply of good water (for it requires a considerable amount in the process of working) and then the proprietor might buy stalks and pay six or eight dollars a ton, or charge by the gallon for working, perhaps fourteen cents, possibly more. I have cut

different lots and worked up, but I have not sufficient knowledge of the cost to enable me to say definitely what prices could be paid for the stalks stripped and brought to the mill, or to enable me to say exactly what price per gallon should be charged for the working: possibly it may be done for twelve cents a gallon, with the very best stalks in exactly the right condition, but there should be a fair allowance for profit.

W. A. Ward—How many tons of stalks would you expect from an acre?

C. J. Reynolds—Twelve or fourteen tons I should consider a low estimate. Mr. Smith, a farmer near Corning, had a lot of stalks he thought of getting worked up and he tried binding them, but they were so heavy he abandoned that idea. He said "they weighed like pig-iron." Few persons have a true idea of their great weight.

W. A. Ward—The leaves make good green fodder, I suppose?

C. J. Reynolds—Yes, sir; the strippings are all good. About the 20th or 25th of last August I suckered a lot and fed the green leaves to cattle; they ate them greedily. To get good sugar it is important that the stalks should not be frozen, but for molasses it does not hurt the juice if the stalks are frozen hard. Last week a lot of stalks was brought to us one morning when they were frozen nearly solid. They were set up until afternoon and then run through the mill, and the juice made very fine molasses. Last year I cut some stalks when the ground was frozen—the stalks had been frosted a dozen times, I presume—but they gave a good product in molasses. It will not do to leave the stalks long after they are cut before working, for the juice at the butts becomes oxidized and is then nearly worthless.

Judge Balcom—When you estimate the yield of an acre at twelve to fourteen tons, you mean with the leaves and tops, I suppose?

C. J. Reynolds—No, sir; the stripped stalks. The leaves and tops should be taken off before the stalks are cut. The leaves can be stripped rapidly by striking downward with a lath. The inquiry is often made:—"What will a mill and other suitable apparatus cost?" I may say the whole can be procured ready for work, of capacity enough to work up the crops of several farms, for about $150.

Geo. Chamberlain—There is one trouble, that of ridding the ground of roots after the crop is taken off.

C. J. Reynolds—That is not a serious matter if the stubble is left until the following spring. The roots run deep, it is true, but it is not a difficult matter to dispose of them if left as I have said. The crop may be exhausting to the soil—I suppose it is, but I do not know.

W. A. Armstroug—It should not be especially so. The seed is not perfected, and that is what exhausts the land.

HOLSTEIN CATTLE.—Our occasional correspondent, Mr. L. S. Hardin, writes to the London Ag. Gazette as follows:

Considering the favor with which this breed of cattle is being received in the dairy circles of this country, it strikes one at this distance as remarkably odd that the breed should be so nearly omitted from the list of dairy cattle exhibited at Kilburn.

To one who stands in the neutral position of your correspondent it is interesting to note the struggle that is now being inaugurated in this country between the Holsteins and Jerseys for public favor. It may be said that the Jerseys have possession of the field in advance, which is practically true, as the little cow is an immense favorite, and she numbers among her friends and advocates the large class of "gentlemen farmers" who are so fond of writing their experiences to the papers. This keeps the little Jersey constantly before the public, but gives her rather a fictitious value, as this class of writers is not always composed of the most judicious people in the world. On the other hand, the Holstein is generally owned and handled by men of less means, but more experience; men who, from practical handling, have better ideas as to what constitute the real points of merit in a dairy cow. This difference of judgment is most strongly marked in their choice of points to praise in their favorites. Each Jersey breeder gives long dissertations on milk veins, escutcheons, black points, yellow skins and solid colors. The Holstein writers generally confine themselves to long rows of figures, showing how this herd made an average of 8,000 lbs., that one 9,000, and the other 10,000 lbs. of milk in a year, or an average of 350 to 450 lbs. of butter per cow. [Oh!]

This kind of writing never reads so prettily; but somehow or other these figures get in the mouths of our dairymen, and seem to stick there; so much so that the Jersey must look sharply to her laurels if she hopes to retain them.

ABOUT SELECTING TREES.—The Country Gentleman says that if people neglect to inform themselves in relation to the most desirable sorts, and the prices to pay for them, they invite imposition and extortion. The best thing to do, now that the purchasing season is approaching, is to order at once the catalogues of the principal nurserymen, and then to examine them for the names and prices of the best old standard sorts, and then purchase directly of those nurserymen, or of their regular accredited agents, and avoid high-priced novelties.

DALRYMPLE.—The Prairie Farmer says, that on the great Dalrymple farms in Minnesota, comprising a total of 20,000 acres of grain, 115 self-binding reapers cut 1,500 acres a day. In thrashing twenty steam thrashers are employed. The yield this year will be somewhere between 20 and 25 bushels per acre. Fifteen cars of grain will be shipped per day when the season commences.

To Our Agricultural Exchanges.

Agricultural papers are earnestly requested to publish this call, and draw attention to the fact that it is to be held Dec. 9th, during the first week of the International Dairy Fair, and all interested in such an organization are earnestly solicited to attend.

A CALL.

THE indications from every part of the country point to the great necessity for the combined effort of all persons interested in dairy cattle, to collect and disseminate authenticated records of the yields of dairy cows, to the end that we may with far greater precision, intelligence and method than it is now possible to do, improve and fix in our various breeds of cattle higher and more persistent milking qualities, and the ability to transmit those good qualities to their offsprings.

To accomplish this purpose, we, the undersigned, agree to meet in convention at the American Institute in New York City, December 9, at 12 o'clock M., and organize an association for testing and recording the yields of dairy cows:

X. A. Willard; Henry E. Alvord; F. D. Curtis; Colin Cameron; T. S. Gold; S. M Wells; L. S. Hardin; William Crozier; T. M. Seaver, Sec. Int. Dairy Fair; J. H. Reall; Miss Midy Morgan; James Nelson; Lawson Valentine; H. C. Hoffmann; R. H. Allen, B. F. Small, and others.

Hurdling off Farm Crops.

Professor Stewart's article on Mutton and Wool in the RURAL for Oct. 11 is thoroughly practical and truthful. The remarks on the movable hurdle fence are good, and it would be no small benefit to farmers if they would use such fences with sheep while eating off root crops, as well as various other farm crops, such as clover, rye, rape, etc. Iron hurdles on wheels are coming largely into use in England, and if a movable shed also could be devised to give shade in summer and shelter in autumn and early spring weather, the folding of sheep would be more economical than the homestead soiling system. Having been raised and having afterwards farmed in the greatest sheep district in England, where there were thousands of sheep in every parish around me, I am fully acquainted with the extraordinary benefits derivable from sheep husbandry conducted extensively during a great part of the year on the system of hurdling off the crops. SHEEP FARMER.

The Herdsman.

LONG-HORN CATTLE.

Long before the now famous Short-horns had anything more than a circumscribed local reputation, the Long-horns were highly prized through most of the midland counties of England. To Yorkshire is generally ascribed the credit of having produced both breeds, tradition assigning the rich district of Craven in

HEAD OF LONG-HORN.

the West Riding as the original home of the Long-horns, and the fertile alluvial tract of Holderness in the East Riding as that of the Short-horns, although some consider that the neighboring strip of Durham along the Tees, has a prior claim to this honor. The origin of the Long-horns, like that of the Short-horns, is a matter of conjecture, it being unknown whether they were imported from Ireland, or some foreign country, or whether they were locally developed by the peculiarities of the soil and climate of the district of Craven. Certain it is, however, that two or three centuries ago the long-horned cattle of this region had acquired a wide reputation as good beef animals and excellent milkers. Whether these merits were due to any special system of breeding or to merely natural development is uncertain; but the probabilities are in favor of the latter alternative.

The earliest record extant of any systematic attempt to improve Long-horns dates back to Sir Thomas Gresley, of Burton-on-Trent, and to the commencement of the eighteenth century. After him, in 1720, came a farmer and farrier, named Welby, most of whose improved herd died of disease, thus impoverishing their owner. The next improver of the breed was a Mr. Webster, of Canley, who is said to have produced the best dairy herd in the kingdom. Then came the greatest of all breeders, the celebrated Robert Bakewell, of Dishley, Leicestershire. Although his fame is mainly founded on his great improvement in Leicester sheep, yet had not this been so transcendent, he would have become famous for his improvements in Long-horned cattle and in cart horses. During his long life of 70 years he wrought a mighty change in the character of his herd of this breed. His improvements consisted mainly in the production of animals with a much smaller proportion of bone and offal, a larger one of meat, superior quality of flesh, earlier maturity, greater aptitude to fatten, and a more symmetrical form. Moreover, they consumed a smaller quantity of food than the unimproved breed in proportion to their size, but their milking qualities were considerably lessened. On this last account, while the improved animals become great favorites with the graziers, the dairymen and cottagers preferred the old sort, which gave a large mess of rich milk, and took on fat not unkindly when turned off for the butcher.

After Bakewell's death, in 1795, the character of the Dishley Long-horns is said to have deteriorated somewhat in the hands of his successors who lacked his extraordinary skill, sagacity and experience. The great merits of the Short-horns, too, were soon after developed by the skillful labors of the Collings, who commenced to breed them in 1780, and by the enthusiastic efforts of their numerous imitators in the improvement of that breed. Nowadays even in the midland counties of England where a century ago the Long-horns were the prevailing stock, they are now nearly every where replaced by the Short-horns and other popular strains. Lately, however, an attempt has been made to revive the interest in this fine old breed; a Herd Book containing the names and pedigrees of 286 bulls and a still larger number of cows has been published, and it is hoped that from these the breed may once more be widely disseminated.

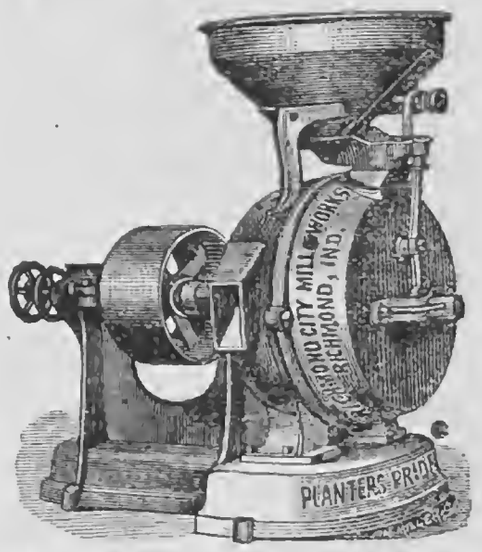
HEAD OF LONG-HORN.

The horns from which the cattle derive their name, are unusually large, sometimes projecting nearly horizontally on both sides, often hanging down on both sides of the face so as almost to prevent the animal from grazing, or curving inward so as to threaten to meet before the muzzle, or penetrate the nose. In color the Long-horns are red, red-roan, blue-roan, yellow-red, or inclining to fawn color; and sometimes white in the back and belly. In size they are above medium, ranging in bulk and weight fully with the Herefords. A few specimens have been imported here and there into this country, but more from motives of "fancy" than profit, as other breeds are held to be more convenient to handle and more remunerative. The two strikingly characteristic heads here presented, we have redrawn from the fine new work on Dairy Farming of our correspondent, J. P. Sheldon.

Industrial Implements.

THE PLANTER'S PRIDE MILL.

THE economy of using ground feed is strikingly demonstrated in cities, where large corporations employing many horses invariably grind both corn and oats, and cut the hay into fine particles. The stock thrives apace, and the percentage of food consumed is smaller than if fed without having been passed through the grinders. Farmers may as well desire the same benefits by feeding in the same manner, particularly as in their circumstances, they can extend the benefits of such a system to horned cattle, hogs, etc., and by so doing enable them to lay on good flesh rapidly, which is both a direct and indirect profit, as they sell for a better price and the result is more rapidly attained. The saving can be mathematically demonstrated. If this plan is pursued it should be done in the most economical manner, and that way is to secure a good mill that will do the amount of work required with the least expenditure of power and the smallest amount of wear and friction.



We illustrate, this week, a very compact, well-made mill that is manufactured by the Richmond City Mill Works at Richmond, Ind. It is just adapted for the use of planters, farmers, stock-raisers and millers and is very popular in the East and South where large sales lately have been effected.

The Mill (except the stones, which are of the best selected French buhr stock) is built of iron and steel, and is very compact, weighing 700 pounds and requiring a space on the floor of only 28x40 inches. The buhrs are 18 inches in diameter, and are banded, faced, furrowed and put in perfect balance. The bed stone is cemented in the front half of the hoop or case, which is held in position by bolts passing through rubber springs, which yield when any hard substance passes in *with the* grain, thus preventing breakage.

The spindle is made of the best quality of machinery steel with extra-long Babbit-metal bearings and large oil cups with hinged covers, and is also provided with a relief coil spring by which the runner stone is drawn back from contact with the bed stone, when it is desired to stop the feed. The driving pulley is 12 inches in diameter, 7 inches face, and the mill should be run at from 400 to 600 revolutions per minute, requiring from three to six horse power. The capacity is from 10 to 20 bushels of corn, and 15 to 30 bushels of feed per hour.

The mill is neatly finished, painted and varnished, and loaded on the cars at the works, free of charge. The tie or fastening bolts are sent with each mill, and it is only necessary to bolt it down, attach the belt, and straightway the mill is ready for business.

Everywhere.

BEYOND THE MISSISSIPPI.

To-day I want to tell something about the dairy interests in this county. In dairy matters but few of the farmers here are prepared to successfully compete with Eastern farmers. In building a new house it is but rarely that a cellar is built under it, the excuse being that it is impossible to drain it. This may be true in some instances, but I have never seen in Missouri a prairie so flat that a good building site cannot be easily found, that can be drained at but small expense. The real reason is that farmers *here*, as all over the United States, are too prone to follow in the same ruts their grandfathers made. Fortunately all are not so minded. Six miles north of our county-seat, Kirksville, stands a large farm-house, almost hidden from view by two fine locust groves that border the drive leading up to the entrance. This is the home of Judge David Ely, the largest land-owner in the county, and one of its best and most progressive farmers. A half-mile further on we see a neat white cottage, literally embowered and engulfed in a mass of vines, trees, shrubs, and rare flowers of every description. Here we have the home of John Ely, son of the judge. He is as far in advance of the majority of farmers in method, order, neatness and head-work, as one of his own magnificent Devons is ahead of a common "native." I have frequently been over his farm, garden, orchard, dairy, cow-stables, sheep-yards, pig-pens and poultry yard; and have on every visit been more impressed with the fact that if farmers would only use *brains* more and *muscle* less, they would achieve grander results. The great wonder is that some farmers succeed at all, so little of forethought, and brain-work is brought to bear upon their farming operations.

Most of Mr. Ely's cows are Devons, and his dairy product bears evidence to the excellent milking qualities of that breed. He is now milking 21 cows, and ships weekly to St. Louis from 60 to 80 pounds of delicious golden butter. This is nicely packed in twelve-pound pails, the lid securely fastened, and in three days from the time the milk is carried to the dairy, some of this butter finds its way to the table of the consumer. The cows during milking time, are fed with oats in the sheaf, cut fine, and, judging by the noise they make, they enjoy their allowance—rewarding their owner with overflowing pails. The calves on this farm are not allowed to obtain their morning and evening meals from nature's source, as other more privileged calves are allowed to do; but are early taught to eat what is set before them. Skim-milk thickened with corn-meal mush has made as nice a herd of calves as ever chased each other over the meadows, and they eat their rations with as much gusto, and as many enthusiastic "bunts" of the pail, as though they had never tasted warm sweet milk fresh from the cow. The process of raising calves in this way, is called "yanking," from the fact that the Yankees practice this method extensively. Very few being prepared to pasture their cows on their own premises, the practice of letting the calves take the "top" milk, the owner taking the rest, prevails here to a great extent. Cows that run on "the range" will not come home unless they are "sent for," if their calves do not obtain their meals in this way; and as it is a good deal of trouble to hunt for them every evening, farmers generally practice this plan and leave "yanking" to those who have "home pasturage." Everything that runs out on the prairies wears a bell, and any one accustomed to it can tell the sound of his own bell a long distance off. The wild pasture contains a good deal of blue-grass, which is indigenous to Missouri soil, and helps to make good butter. Mr. Ely has his meadows set with blue-grass and red clover, and on one side of the meadow a miniature lake sparkles and glistens in the sunlight. This was built for the accommodation of the farm, and is about 10 feet deep. On the side of the embankment, and so arranged that all offensive drainage is carried *away* from the lake, stands the pig-pens, and a steam-heater near by cooks the rations for the Berkshires and Poland-Chinas. In dry seasons, stock on "the range' sometimes have to travel five or six miles in search of water, and then, when they do find it, it is full of all sorts of filth, and nothing but overpowering thirst would induce cattle to drink it. Here, at this lovely artificial lake, every precaution is taken to keep the water pure and clean, so that the cows have this supply to assist them in yielding an excellent quality of milk. There is nothing which becomes tainted so soon or easily as milk, and the drinking of impure water just as certainly affects it as impure odors will after it is taken to the dairy. This fact Mr. Ely not only *knows*, but has *profited* by, and the result is good stock water.

The same cleanliness and care prevail in the making of the butter. The milk is set in large, shallow pans, about three inches deep, and is placed on the cellar bottom, which is cemented and sprinkled with dry lime. The churn is a patent. The power stands outside the dairy, and is a big woolly sheep, that patiently walks its treadmill, cheered by sweet apples occasionally, until the butter comes, when it is released from its labors and set at liberty. Between the dairy and the stables extends a ravine which is now effectually bridged by a *hand* railroad. The track is about four feet in width, and at the highest point is 15 feet from *terra firma*. Almost everything that has to be conveyed from the barn to the house, or from the house to the barn, is carried upon the car which plies its trips free of charge. This piece of farm equipment is entirely of home construction, and saves every year in *time*, to say nothing of hard labor and nervous force, more than the cost of constructing it. Another triumph of mind over muscle! You who have the milk of 10 or 15 cows to carry by main strength from the cow-stables to the dairy, please make a note of this convenience, and construct one immediately; and remember that those only are successful farmers who use their brains to plan, as well as their hands to execute. All others are but plodders, and will always remain such.

Sublette, Adair Co., Mo. BESSIE VICTOR.

NOTES FROM WESTERN ARKANSAS.

LEAVING Erie, Penn., some two weeks since for a trip to this State, having in view the selection of a suitable and permanent location for a home in Western Arkansas, I arrived here in due time well pleased with my journey. From general report, we had expected to find a lawless set of people inhabiting Arkansas, but were exceedingly surprised to meet with straightforward, honest, hard-working and law-abiding citizens, wherever it became our lot to stop; and by strict attention to their business, they will soon lift from the State the name she has borne since the war. All they need is help in the shape of good, healthy and industrious people to clear up the mighty forests, till the vast amount of rich soil, and unearth the boundless treasures of mineral resources, and one day she will stand second to no State in the Union. The Indians, who are just over the line, are friendly and hundreds of them come over every year to pick cotton.

After leaving St. Louis, the soil is rather light, but, passing down through the State, it becomes more rich and heavy. Not much prairie land is found northeast of Little Rock, but upon striking a distance of twenty miles west, it is a splendid rolling country to Fort Smith, abounding with luxuriant pasturage, and capable of raising an endless amount of fruit and produce, grain and cotton. Very little rocky soil is found except on the ridges.

The climate of Arkansas is mild and salubrious. Sudden changes of temperature are less frequent than in the Eastern States in the same latitude, and cases of sun-stroke and headache from heat are rarely known, as in the summer it is no warmer than in the Northern States, and in the winter the thermometer rarely marks lower than 20 deg. above zero.

Western Arkansas abounds in valuable timber in all sections, and the revenues from it are of the first importance, constituting the great wealth yet to be realized in the improvement of the State. The Yellow Pine forests predominate, covering about one-tenth of the area of the State. Several varieties of Oak abound and attain large proportions. Cabinet woods occur in abundance, of which the Black-walnut, Cherry and Maple are the most valuable. Besides these varieties there are the Ash, Hickory, Gum, Sycamore, Elm, Cottonwood, Cedar and Black-Locust, with an undergrowth of Spice, Paw-Paw, Hazel, Cane and large Grape-vines. Arkansas is, beyond doubt, the best watered State in the Union, having nearly 3,000 miles of inland navigable waters, so distributed that they intersect nearly every portion of the State, and afford steamboat facilities the greater portion of the year. Its mineral resources are beyond estimation; coal, iron, lead, zinc and associate metals, together with marble, gypsum, salt, hone and whetstone, granite, &c. Cotton has been the staple product for many years, but of late corn and wheat have received considerable attention, and are found to yield a better profit to the farmer. Corn yields 30 to 50 bushels to the acre, and grows to an enormous hight. Potatoes grow abundantly and as the season is long, have plenty of time to mature, while the sweet potato is right at home here, and specimens have been shown to us as weighing five pounds. Fruits of all kinds are almost a sure crop, and are of excellent flavor and large size, peaches sometimes measuring 13 inches in circumference. The forests abound with several varieties of wild Grapes, which are gathered and made into excellent wine. Sorghum also grows to an immense size, and is cultivated very extensively for sirup.

Gardening seems to be a favorite pursuit for those who reside near the larger towns where they can command a good market for produce. Stock-raising will eventually become one of the leading occupations, as the winter is short enough to admit of their running at large the entire season, while the lands abound with excellent grasses.

I would, say in conclusion, that all those who contemplate going West, had better look in on this part of the State before going elsewhere. They can, I think, get suited here somewhere. The Government land is mostly taken up. Railroad lands vary from $2½ to $5 per acre. Those wishing to rent farms can do so either on shares or by the acre. PIONEER.

Franklin Co., Ark.

RURAL SPECIAL REPORTS.

N. Y., Fluvanna, Chautauqua Co., Oct. 12.—The Beauty of Hebron potatoes were a grand success. I planted 21 hills with only one eye in a hill, and the result was three pecks of as fine tubers as one could ask for. They are at least one week earlier than Early Rose. The Blount Prolific corn will require a longer and warmer season than this latitude generally furnishes. The seed sent me germinated slowly, making it at least one week behind usual seasons. The growth was all one could desire averaging 12 feet—highest, 13 feet, lowest 11 feet two inches. Several stalks produced seven and others nine ears each; none bore fewer than five. Most of it got hard, but the yield was so poor, that it is not worth trying to compete for premium. The Acme tomato is superb, when not affected with rust or rot. Many of them showed signs of decay at the under-side or blow end. The Golden Rurals are fine, but nothing to be compared to the Acme. The Pearl Millet was about half a crop. Owing to the cold, dry season, some of the other seeds did not germinate; those that did, have proved a success. The weather is delightful, if one can so speak of October weather, with mercury at 88° and 90° at 2 p. m. in the shade. Crops generally are good. The apple crop is very abundant, and buyers are picking up all they can, at $1.25 for good winter fruit and $1 for fall apples. Winter wheat is looking fine. During a ride of 40 miles yesterday, I saw many pieces looking all the farmer could wish. Potatoes are a liberal yield and of fine quality. They are marketing at 30c. per bushel. Corn, although injured somewhat by early frosts, is more than an average crop. Feed is generally short, and the butter supply equally short; it is being held for 23@24c. Pork is dull at 5c., dressed. Wheat was a fair crop, average yield about 20 bushels per acre. Buckwheat is a light crop, having been hurt by frost. From my diary of 32 years I find no record of weather like the two weeks past—so warm, equal to average August weather.

H. H. W.

N. Y., Hornby, Steuben Co., Oct. 10.—We have had a very dry season. Crops are therefore short. My Beauty of Hebron potato I cut to 10 single eyes and put one in a hill. On digging them I had 23 pounds of nice tubers, three of them weighing 17 ounces each. The Golden Rural tomato is a perfect beauty.

G. W. B.

OHIO, New London, Huron Co., Oct. 16.—September was a cool and somewhat frosty month, but the frosts were only just heavy enough to kill down the tops of vines and bite some pieces of corn on low land pretty hard, but on most grounds uncut corn and late potatoes are quite green yet. October came in glowingly hot, and keeps so up to this time. To-day the thermometer marks 100° on a limb of a tree in the yard at two o'clock p. m. Grass was light throughout this section. Wheat was very good; oats a large crop; corn very fair. Potatoes were a good crop where the bugs were kept off; the old long kind was with us by countless millions. Apples and peaches are short crops. Hickory-nuts are very plentiful. Fall feed is very good. I presume more wheat has been sown here than ever before, and it is looking well, but needs rain now. My Beauty of Hebron potato did not give me a large yield, owing to the long drought in the fore part of summer; I have only nine pounds from the two small potatoes sent me. The Golden Rural tomato is well liked and yielded a large crop of medium-sized fruit. My melons were gobbled up, or down, by the bugs as soon as out of the ground. My Blount corn was cut up yesterday and pronounced fully ripe. After cutting it half waist high, I had to stand on a salt-barrel head to tie it three feet below the top of the stook. B. P.

ILL., Elm Point, Bond Co., Oct. 15.—Wheat looks well now. It is uncommonly warm for this month. September was very cool. We have only had one frost, and that didn't hurt anything. Tuberoses are in full bloom. Tomatoes and Lima beans are as green and fresh as in August. Corn is all dry and the leaves are all dead, while Pearl Millet is green and growing; I intend to give it a good trial next year. Our stock relish it as well as any feed they get; it has done well for such a dry season. Blount's corn did well. The Beauty of Hebron potatoes are large and nice. We did not get them planted as soon as our old kinds, so I can't speak about their early qualities. Potatoes are scarce and high; it was too dry for them. R. C. P.

MINNESOTA, Le Sueur, Le Sueur Co., Oct. 13th.—Harvest has long since been ended, and thrashing is now in progress. There have been only five accidents from steam engines up to date. In two instances the separator, as well as numerous stacks, was burned. Grain turns out a fair yield to the acre, averaging 10 to 15 bushels, according to locality. The quality is good. Prices are fair, with a prospect of a rise. My Blount's corn is astonishing to behold. The stalks are from fifteen to sixteen feet high, and the ears as large as pop-corn, with from six to eight rows, and kernels as large as pumpkin seeds, and as white as milk. P'q'liar corn I call it. My wife and I think the Golden Rural tomato the earliest and best we ever saw. From the seed obtained from the RURAL we raised all we could eat and can for future use, besides giving away a good many, while many more went to waste on the ground. I have just received four pigs and a South-Down ram from Philadelphia. The pigs and ram cost me $65.00. The Express charges amounted to $54.00. The weight of the lot, including boxes, was 600 pounds. "How's that for high?" Our friend Vick, of Rochester, has been waging a bitter warfare on the U. S. Mail officials for the exorbitant charges on seeds, and I think somebody ought to bestow a little attention of a like character on the Express companies. G. D. S.

KANSAS, Parsons, Labette Co,, Oct., 4—Our growing season is being prolonged a little more than usual. Generally our first frosts are with us at this date, but so far this fall our coldest morning has not been lower than 46 deg. As our corn has long been ripe and as we have very few roots, there is no advantage in this prolongation of the season other than for grass and the castor-oil bean. Our Pearl Millet is mostly ripe. It was sown the 24th of May. Being instructed to plant four feet apart, each way, and having counted the seeds, I found I should require an acre of ground and did not care to risk that much on an article then unknown here. Finally I spared about one-tenth of an acre in an abandoned barnyard. The seed was used liberally, but no Millet came above the ground in three-fourths of the hills. The cause may have been partly in planting too deep, but chiefly in our having too much rain a day or two after planting. I cultivated what grew, and have lots of seeds. As I did not plow deep, owing to the hardness and dryness of the soil, some of the hills have blown over. I chopped off the mud and some of the roots, and put the Millet within reach of the stock. The hogs have corn before them nearly all the time, and the cattle have a good pasture, but they "made for" the Millet lively and soon there was nothing left but the small bunch of roots, the fiber, and the "tail." I have never seen anything devoured with greater avidity, and it was not because of a change from dry to succulent feed, as the hogs have every day more or less grass, weeds, beet-tops etc. But they did *not eat the seed*. This was three or four weeks ago. I don't know how much one of the hills weighed, but it was more than I found easy to shoulder. Each hill was the product of one seed. One of the hills has 99 tails, the others vary from 20 to 75. The Millet is from four to 8½ feet high and the tails five to 12 inches long. The smaller hight and smaller tails are where it was planted, say three feet apart. I intended mine for seed, and so did not cut any except one crowded hill. This was a month ago, and despite uninterrupted and intense heat and drought, the cut stalks in this hill shot up well. I have not the least hesitation in pronouncing it one of the best, yea, by far the best plant here for fodder. Ours should have been planted by April 15 at the latest, and in that event, in an ordinary season, it might have been cut by July 1, and as there will be 2,700 hills, at four feet each way, this would yield, at 25 pounds per hill, over 33 tons of green fodder. My hills that were blown down, including a small portion of root, weighed, I guess, from 40 to 60 pounds each. Now, in this latitude two crops can be had in any season; so the crop is a great deal greater and the quality better than anything known in these parts. Whether it will exhaust the soil much, I don't know; but one can afford to fertilize an acre of land that will produce a crop such as I have figured upon. It must not be forgotten that our latitude is 37 deg. 40 minutes, and our altitude 960 feet.

Our Kansas corn crop is made, and the yield varies from 30 to 75 bushels per acre, the first quantity on poorish high land, and the last on rich creek and river bottoms. Intermediate yields are on mounds and lands between the bottoms and the high "white" lands. The eastern tier of counties, bordering on Missouri, have an unprecedented crop. In this area, comprising 200 miles by 20, the corn is better than any corn ever seen in Illinois; so says a reliable man who lived 15 years there. The yeomanry have got the recurrent fever badly; I mean the excited state in which this body finds itself every two or three years. Sometimes it has saccharine symptoms; at others cereal symptoms. The latter is the

epidemic now. Wheat! Wheat! is everywhere, and, to tell the truth, it looks splendid. The only fear is that there may be too much growth, if this fine weather continues. J. B.

KAN., El Dorado, Butler Co., Oct. 15.—We have been having the best kind of weather for farmers since the first of the month, owing to numerous showers, which have caused the parched pastures to become green and fresh and the wheat fields to look splendid, giving promise of a bountiful harvest. Most of our fall work is already finished, and corn is now being cribbed rapidly; the quality is good; the yield rather below the standard. Large quantities of hay have been put up here for parties who have stock on ranges. The making of molasses has been the order of the day for the past few weeks. I had a test between the best cane grown by my neighbors (White Top) and the Early Amber grown by myself, to see which would produce the most from a given quantity. Mr. J. D. Green, an expert worker of cane, manufactured the products, and the following are the results: 51 gallons of expressed juice from White Top produced 10 gallons of nice molasses, and the same quantity of the Early Amber produced 13½ gallons. As yet it has not shown any indication of granulation. Farmers generally are feeling good, as all kinds of farm products have an upward tendency. Wheat sells from 85c. to 90c. per bushel; corn, 15c. to 20c.; oats, 25c. to 30c.; butter, 20c. to 22c.; cheese, 10c.; eggs, 10c.; hogs, $2.75 to $3 per 100 lbs. As all goods we have to buy are down to bottom prices, we in Kansas are happy and are looking forward to a bright future. W. J. B.

IOWA. Ashantee, Carr Co., Oct. 11.—My Hollyhock, Aquilegia and Dutchman's Pipe, came up and so did the Cock's-comb. The hot, dry weather, however, killed the Pipe, but the others did well, the Cock's-comb being the finest I ever saw. The Rose of Sharon is doing finely. Defiance wheat, however, was a failure. H. R. R.

WYOMING TERRITORY, Colfax, Whitman Co., Oct. 10.—Pearl Millet was a failure with us. Our nights are too cold and we have frost one or two nights in every month in the year. The Voorhis watermelons were fine. Some of our neighbors who tasted them, said they were the finest they had seen since leaving Tennessee and Missouri. Defiance wheat did very well, and was quite an improvement on the seed we sowed, but it is not equal to the kinds grown here. The Acme tomato was very fine, smooth and solid. General crops here are good. Wheat in some places was injured by frost, we had quite heavy frosts in June, July and August. Wheat is worth 40c; potatoes, 50c; and very fine specimens indeed are selling for that figure; butter, 25c; eggs, 10c. We have had rain the past week sufficient to start the bunch-grass. Horses, cattle, and sheep are doing well. H. M.

N. C., Brookston, Warren Co., Oct. 15.—The time has arrived when we can get pretty nearly an accurate estimate of the crops for this year. We started in last spring with a glowing prospect. Especially did corn and cotton give promise of extra crops until late in June when the former began to show the ill effects of a severe drought. It is seldom that cotton is injured by lack of rain, but during July it suffered severely, and at one time the prospects for a half crop of anything except wheat and oats, which were already secured, we thought were exceedingly poor, but about August 1st the blessed rains came and we were saved. The last four weeks have been very dry, fine for curing tobacco, picking cotton, etc. There is not much growing vegetation to be injured. To sum up, taking 10 as an average of last year, we can put corn at 7; cotton at 8; wheat at 10; oats at 9; tobacco at 10, though late, and the increase in acreage will nearly bring corn and cotton up to the average amount in this county. The biggest thing I have to brag of in Blount's corn is a stalk and sucker from one seed, on which were one fair ear and four nubbins. Pearl Millet made one good cutting and two light ones, filling a place just after the early sowing of corn. The few plants saved for seed gave from 10 to 15 heads, averaging about 15 inches in length, a very few produced heads with but few seeds on each. The Golden Rural tomato ripened July 1; the Acme, two days later. The Acme is a little the larger—quality and productiveness much the same. Both rotted in July, cracked badly the first half of August, but have given and are giving us a bountiful supply. No frost yet. Voorhis watermelon was a complete failure, not attributable to the variety or the seed, however. M. B. P.

ALA., Carrollton, Pickens Co., Oct. 14.—I have three young specimens of Pinus edulis that promise to do well, judging by the way they grow. Most of the seed sent me by the RURAL came up and grew well. We had the finest corn of Blount's Prolific variety that I ever saw. We have given our friends seed, so that they may try what it will do next year. We are having splendid weather for fall work. Corn is turning out well in this section, while cotton, our great staple, is not so good as thought to be. There is a tendency on the part of farmers here to raise more small grain and a finer grade of stock and less cotton than ever before. There is room for great improvement in stock of all kinds in this part of the country. The farm fences generally need repair, and most of the farm houses are not of a very elegant style. Now that our farmers are on the road of improvement, they ought to build good residences and adorn their places with a choice selection of hardy evergreens, ornamental trees, flowers and fruit trees, all of which make the homes attractive to old and young. M. E. L.

TEXAS, Houston, Harris Co., Oct.—The few light showers October has brought us, have in a measure relieved us of the severe drought that has afflicted us from early spring throughout the whole of summer, in consequence of which crops have turned out very light, if not entire failures. Cotton suffered least, though the yield is far below the average. Our days now are very hot, but our nights have become cool and dewy. Grape-vines are secreting new sap and beginning to sprout, and many leafless fruit trees are blooming. This will spoil the chances of their bearing next year. Texas never will be a fruit country, in spite of all the "blowing" about the likelihood of its being one. G. M.

CANADA, Nova Scotia, Oct. 11.—I received 130 kernels of Blount's corn, and planted 125, about 120 of which germinated and grew. I planted it on the 27th of April, one kernel in a place, on rich, well manured ground, and put to each kernel one spoonful of superphosphate. It came up and grew until some of the stalks are from 10 to 14 feet high. From three to five ears set on each stalk, but it failed to do more than produce a few ears with anything like well formed kernels, and it did not advance far enough to be fit for seed or even green corn. It evidently will not answer for this latitude. A frost about a fortnight since, checked its growth, or, I presume, it would have kept on growing and added a foot or more to its already remarkable hight. Has it succeeded well anywhere this season? Is it not one of the humbugs of the day? I should like to see it planted in some congenial soil, under the tropics, to see when it would get tired of running away from mother earth. The Early Canada or common yellow corn, as a general rule, ripens well with us, and produces fair crops. C. C. D.

The Querist.

ANSWERS TO CORRESPONDENTS.

Cheese Factories.

H.E.E. R., Hosensack, Pa., asks a number of questions about cheese factories answers to which are condensed as follows:

ANS.—The factory system in dairying has the advantage of doing in one building and by one expert man or woman, all the work that would otherwise be done by twenty—fifty or more families, in as many separate houses. It therefore possesses the merit of economy. It has also the advantage of combining all the work in one operation and of making a quality of product which is always the same, and generally better than the home-made product by reason of the use of the best machinery, utensils, and method, and the employment of the best skill. It therefore possesses the merit of effectiveness. Whether or not it is preferable to home dairying, each must judge for himself. Of course, every patron who makes use of the factory and saves labor in consequence, pays to have his work done for him, and this is the only disadvantage of the system. His family gain the ease, and lose what it costs to purchase it. Factories are conducted either on the joint-stock or share system, and are often private enterprises, purchasing the milk at a stated price. Many factories make butter of the cream, and "skim-cheese" of the milk, with profit; the majority make full-milk cheese, but there must be butter factories, and it is a question what shall be done with the skim-milk if not made into cheese. Creamery butter brings the highest price in the markets. Milk has brought the past season about three-quarters of a cent per pound; but the price is now higher since the advance in cheese. There is one price for milk; and this is an injustice which as yet there has been found no way to avoid; but factorymen look after their own interests well and do not take "lean" or poor milk. There is little difference in "makes" of machinery, the furniture of a factory for 200 cows will cost $600 and upwards. Full information on this point can be obtained of Jones and Faulkner, or Charles Millar, of Utica, or of Whitman & Burrell, Little Falls, N. Y.

Wintering Rhubarb.

D. Y., no address, asks what he shall do to his rhubarbs to carry them through the winter and insure an early growth in the spring.

ANS.—Rhubarbs are hardy and need no protection during the winter. No plant is more easily forced, if wanted early. To this end dig up the plants in the fall, and keep them with adhering earth under a shed or similar place. About January transfer them to a greenhouse, where they can be grown under the shelves, to a furnace room or even to a warm stable. They need no light while growing; the stem will be tenderer without it; all that is needed are moisture and a uniform temperature of between 50 and 60 degrees. Another method is to cover up the plants with leaves to keep the ground from freezing; then, about a month before spring opens, invert a barrel over each plant, and heap manure and other heating material around them to produce some artificial heat.

The Rat Pest.

W. M. K., Washington, D. C., complains that his stable is full of rats, that are too wise to go into the traps which are set for them, and he is afraid to use poison for fear they would carry it to the horse feed on their feet, and he asks how to get rid of them.

ANS.—Plaster-of-Paris mixed with Indian meal set about the stable and water near by, so they can drink when they have eaten, is said to be an effective remedy. Pieces of cork small enough to be swallowed whole, fried in fat to make them attractive, will produce the same result. If they can drink soon after they have eaten, these pieces will swell in the intestines and produce constipation. Probably the best remedy is phosphorous paste, a recipe for which was given in the RURAL for September 27. This, though a poison, cannot be carried about as above indicated.

Apples for Southern Minnesota.

W. F. S., Minnesota, asks the names of the various varieties of apples suited to the climate of southern Minnesota.

ANS.—Saint Lawrence, Sops of Wine, Tetofsky, Plumb's Cider, Talman's Sweet, Red Astrachan, Fameuse, Duchess of Oldenburg. These are reported to do well in Minnesota; the following may possibly also succeed in that locality: Roxbury Russet, Shockley, Sweet Winesap, Utter, Roman Stem, Smith's Cider.

Miscellaneous.

D. L. R., Fredonia, N. Y., asks 1, will oxide of iron do to paint an old wagon that has never been painted; 2, what proportion of oil meal, bran and cut hay—mixed or otherwise—should be used for feeding milch cows, calves and fattening cattle, and also for horses; 3, would it be advisable to roll a piece of clover this fall, that was too poor to cut for hay or seeds; 4, what should be the proportions of salt, wood-ashes and lime for gravelly land and also for clay land.

ANS.—1. Oxide of iron, or metallic paint, so called, forms with linseed oil, a hard, waterproof covering which is not easily destroyed. It can also be procured pure, while lead is almost universally adulterated. It will make a very good paint for wagons, if the brown color is not objectionable. 2. One quart of cotton-seed meal, two or three quarts of bran and 20 pounds of cut hay, will make a fair daily ration for a cow; and one-third as much for a calf. A fattening animal may have two quarts of cotton-seed meal and six quarts of corn meal daily, with what hay and straw it will eat. For horses, corn and oats ground together are the best food, and three to six quarts daily, with 20 pounds of cut hay, will be sufficient. 3. Rolling is of no use, except to pack the soil and break up lumps. There is no need to roll a clover field now; it will do no harm and can do no good; all the rolling possible will never add one iota of fertility to the soil. Rolling clover in the spring is useful in smoothing the soil for the mower, that is all. 4. No benefit can occur from mixing the substances mentioned. Five bushels of salt, 40 to 100 bushels of ashes, and 50 bushels of lime per acre are the usual quantities. Lime is better than ashes for clay land, as it loosens the soil, while ashes make it stiffer; with this exception gravelly land may be treated the same as clay land.

F. M. M., Cross Creek Village, Pa., wants to know where and at what price she can obtain a work on astronomy, a physiology and a good dialogue and speech book suited for a common-school literary society; also what is the price of "Ten Nights in a Bar-room."

ANS.—To tell just what books would best suit the age and attainments of our correspondent is no easy matter, since she does not inform us on these particulars. Supposing, however, that she is a beginner in the sciences, we should consider Steele's series of scientific works as among the best she can purchase. Steele's "Fourteen Weeks in Astronomy" costs $1.25, and that is also the price of his Physiology, Botany, etc. If more comprehensive works are desired, we should first name Dalton's School Physiology as the best on that subject, and White's Astronomy. The price of each of these is about two dollars. Lovell's United States Speaker is perhaps as good as any in that line—price $1.25. "Ten Nights in a Bar-room" costs $1.25. These books can be had by addressing the American News Company, New York City; but as those named may not be exactly what is wanted, we recommend that she send to Dick and Fitzgerald, Ann St., New York, for catalogue of books sold by them.

O. C. D., Wellville, Va., asks for information about the Nansemond Beauty Apple, and also for the names of the varieties of Apples likely to do well in his part of the country.

ANS.—The Nansemond Beauty is of medium size; very good quality for family or market. Season of use, winter. Does quite well in Virginia. The apples which experience has shown do well in Virginia are:—Nickajack, Pryor's Red, Rawle's Genet, McAffee's Nonsuch, Monmouth Pippin, Mother, Newtown Pippin, Northern Spy, Ortley, Peck's Pleasant, Porter, Red Astrachan.

B. P., New London, O., is a competitor for the premiums offered for the greatest yield of Blount's corn sent out from this office to our subscribers, and he asks when it should be husked, in what way the yield should be given and at what time, to fill all the requirements.

ANS.—In the RURAL of Oct. 11 a similar question was answered, to which we call our correspondent's attention. For statement of what the reports must contain see editorial page of this issue.

J. G. S., Paonee Rock, Kans., wants to know how he can keep sweet potatoes over winter, so that he can use them for raising plants in the spring.

ANS.—It is essential that they should be kept warm and dry; to this end pack them in a barrel of dry sand and keep them in a warm place, as in a greenhouse, near a furnace or similar place. The cellar suitable to preserve the common potato, is much to cold and damp for the sweet potato.

H. L. H., Republican City, Neb., sends specimen of plant and asks its name. In Mich., where he obtained the seed, it was called the "Bean tree." It bloomed and matured seed the first season. The Michigan tree grew fifteen feet high, and that was the only one he has ever seen.

ANS.—This seems to be American Senna, Cassia Marilandica, though this seldom grows over six feet high.

C. Bros., Pella, Iowa, sends specimens of plants and seeds, and asks their botanical and common names.

ANS.—Callirrhoe triangulata, or Triangular-leaved Callirrhoe, belonging to the Mallow family, as nearly as we can determine without upper and lower leaves. 2, Dolichos, or Black Bean. We cannot give the species, without the flower—Sinensis, or Black-eyed Bean, probably. 3, Sorghum vulgare, known commonly as Indian Millet, or Doura.

H. W., Warren, O., asks what is the best breed of sheep, hardy, healthy, neither fine nor coarse-wooled; yet good for mutton and wool.

ANS.—This description would answer for the South-Downs. The South-Down mutton is the best and brings the highest price. Feeders generally, however, prefer grade Cotswolds or some other of the large, long-wooled breeds.

B. D. M., Sherbourne, N. Y., asks when and how to plant peach stones.

ANS.—Plant them now in rows 15 inches apart, and about 2½ inches deep. If a large quantity is planted, the rows should be far enough apart to admit of the use of the horse cultivator.

S. F. B., Buckeye Center, Ill., is in trouble with his kerosene lamp, the cap on top is loose and he can't fasten it any way he tries. He wants advice.

ANS.—Mix water and plaster-of-Paris till the mass is in a semi-fluid condition, then fill the brass cap and press it on the lamp.

G. W. G., Pentwater, Mich., asks, 1. where can French Lucern seed be bought; 2. what is the difference between it and Alfalfa; 3. whether any firm in this city would buy the handsomest of ferns well prepared.

ANS.—1. From any large seedsman; 2. they are identical; 3. we do not know of any.

W. F. M., Wales, Ill., asks, 1, how much should a bushel of leached ashes weigh; 2. how much should be used per acre.

ANS.—1. About 50 pounds; 2. that depends greatly upon the nature and condition of the soil; but 50 bushels are seldom *too much*.

O. S. B., Burdett, N. Y., asks where he can buy potash and pearlash, and what is the price per pound.

ANS.—Of Newman & Ranehl, 32 and 24 New Chamber St., this city. Potash costs 4¼c. per pound, pearlash 6c.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, OCT. 25.

F. S.—S. B. P., thanks.—G. B. A.—W. T.—J. & R. C.—M. M.—B. D. N.—E. J. F. B. sends good Everywhere, but no address.—G. M.—E. F. B.—M. B. P.—F. C.—O. P. C.—R. C. P.—B. D. N.—B. G.—F. B.—C. P.—A. B.—J. THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, NOV. 1, 1879.

OUR ANNUAL PREMIUM LIST AND POSTERS ARE NOW READY. THEY WILL BE MAILED, WITHOUT CHARGE, TO ALL WHO APPLY.

WHY DESPOND?

THOUGH the spirit of speculation is not so rife as it was a few years ago, it is certain that there is still an unwarrantable eagerness to make large and quick profits—a making haste to be rich. This spirit is very unfavorable to those important pursuits which demand patient toil and waiting for the rewards they promise. Crops must have time to grow, and when one crop fails, a long time must elapse before the next effort can bring relief. While this eagerness for rapid accumulation turns many from the safe and honorable callings of plain industry, it also exerts a potent influence on many who are devoted to different branches of agriculture. They are too much affected by the restlessness of the speculative temper. If they fail to meet the rewards of labor, which they anticipated, they are tempted to abandon their occupation or sink into a very unpleasant and hurtful despondency.

As the old crops are about finished and preparations for the new are under way, it is an appropriate time to call upon the heroes who have struggled in the peaceful conflicts of the farm to summon their calm judgment and moral manhood, as they face the prospects of another year. Especially do we appeal to those who, from any unforeseen cause, have encountered bitter disappointment. They are in danger of rash conclusions or unmanly down-heartedness. Let them consider that if they have been faithful, they are as worthy and as free from blame as if they had succeeded. Happy is that man who is without cause of self-censure in the day of trouble! Let them remember that failures are seldom as disastrous as they at first appear. Evils of many kinds often threaten to overwhelm the men they attack, and then with astonishing rapidity diminish their threatening, if they do not entirely vanish. Who has not been in straits that were fearful, which were passed in a very short time, to deliverance?

Let the disappointed look around and see if there are not good ways to meet the demands of the emergency. Such cases have often revealed unsuspected advantages and capabilities. Failures have frequently led men to success and fortune which would otherwise never have been realized. One reason is that failures call up the slumbering powers and develop resources that were before undiscovered.

Another natural idea is that the worst failures seldom go farther than to necessitate a cheaper style of living. Any one would be surprised to know how many things he can spare without any great loss of comfort or well-being. While most of our wants are artificial, few are really indispensable. It is, then, a sheer want of manliness for one to yield to losses and go moping about under disappointments. It is childish. True manhood is always ready to bear self-denial, not only when it is necessary, but even when it contributes to a good cause. Failures require self-denial, and self-denial makes men nobler, stronger, and, often, happier. Failures may necessitate unwonted economy; but the habit of that economy may be the certain guide to greater success in the early future. Cowards feed the ranks of despair and suicide. They want courage to "bear the ills" they have. Let the unfortunate cheer up! Let them try harder and hope fondly for better results of labor next time. Let them see if there have been no mistakes which may be avoided in future. Let them remember the story of Bruce and the spider. Let them mark the example of many in every generation of the past. Above all, let them trust in Him who is "good when He gives—no less when He denies." Farmers dealing, as they must, so directly and constantly with nature, need a quiet, abiding reliance on a beneficent Providence.

TME CORN PREMIUMS.

JUDGING from the many inquiries we receive concerning the corn premiums, the mode of reporting, etc., it seems necessary that we should make another statement in regard to this matter. All who registered their names in this office before August 1st as competitors for the premiums, and who have otherwise complied with the rules as announced in the RURAL of April 26, are entitled to partake in such competition. In previous announcements we have not definitely stated *when* the corn should be weighed, only stipulating that it should be dry, thus, of course, giving considerable scope for the competitors to exercise their own judgment; but this seems to be a troublesome point and some desire a more definite statement.

In view of this, and to avoid misunderstanding, we have decided that both corn and stalks shall be weighed *four weeks* from the date of harvesting, or, if this time should already have expired, then it should be done immediately on receipt of this announcement. The premiums will be awarded according to the *greatest weight of shelled corn from the number of kernels planted;* thus the one who has the greatest weight will receive 1st prize, the next in order 2d prize, etc. But for purposes of information and comparison we also desire to know the number of bushels of shelled corn, the weight of stalks, the average number of ears to the stalk, the length of growing season, the kind of soil, the kind of manure, if any were applied, and also the mode of culture. To be explicit in this report, it should be put in some tabular form thus:

1st. Date of planting.
2d. " of harvesting.
3d. " of weighing.
4th. Weight of shelled corn in pounds.
5th. Measure of shelled corn in bushels.
6th. Weight of stalks.
7th. Average number of ears per stalk.
8th. Character of soil.
9th. Manure;
10th. Cultivation, including distance apart, whether the suckers were pulled, etc.

Any remarks that the cultivator desires to make, can then be added.

The book premiums offered by the Farmers' Publishing Co. constitute a different series, and will be awarded to the heaviest weights of shelled corn respectively, the corn to be weighed *three months* after date, and for which, of course, a second report must be given.

A PROBABLE CHANGE IN OUR "FREE SEED DISTRIBUTION."

WE learn through Mr. Robert Douglas, of Waukegan, Ills., that Professor Sargent, of the Arboretum of Harvard University, is of the opinion that Abies Sibirica (seeds of which we have offered as one of the ten kinds of our next "Distribution") will *fail except at the North.*

Mr. Douglas himself writes us that he was not aware that this tree would not stand further South than New York, but that he now recalls that during his recent trip East he did not see any specimens about Washington or Baltimore, that were in good condition. It will be better, therefore, that we should send seeds of this tree only to our subscribers living north of the latitude of New York City. For those living south of it we shall substitute either plants or seeds which we were reserving for a *supplementary* distribution. We shall not *begin* to distribute our collection until after the first of January, before which time other changes may suggest themselves which shall enable us to make it of more value to our readers, and that is the very thing we earnestly desire to do.

In this connection, we beg to state that already many of our subscribers have, in making their applications, failed to comply with our directions. Some have forgotten to sign their names; others to give the town or State; still others so incorporate their application in the middle of letters that they are liable to be overlooked. No doubt such of our friends will think they have occasion to censure us if, through necessity, their applications are disregarded.

A LULL IN THE EXPORTATION OF BEEVES.

ALTHOUGH the freightage on that class of goods has lately been reduced about one-third, yet exports of American live cattle have been greatly falling off of late, until now some of the heaviest shippers have suspended that branch of the business, while continuing to send across a diminished, but still a goodly supply of dressed beef. The causes of this lull in the trade are mainly two:—First, it is deemed safer to ship beef than beeves in winter time; but the second is the chief cause, and that is the low price of meat in Great Britain at present. The root and hay crops have been so poor this year in England that farmers and graziers are throwing an unusually large quantity of their meat stock upon the market rather than incur the high expense of wintering them in face of the poor outlook for profit next year, owing to the close competition from this country. This unusually large supply has depressed prices, especially owing to the prostrated condition of various industries and the consequent impoverishment of those dependent upon them for a livelihood. Next year, however, it is nearly certain that the trade will be much brisker than ever before, owing to the diminished home supply in Great Britain and, it is hoped, to the better condition of business there.

DWARF PEARS.

DWARF PEARS have many friends and many enemies. It is not surprising at all. The Dwarf Pear requires peculiar treatment to bring out its good qualities. Those who give it such treatment can never become its enemies, if they never become its friends. We know of one person who, ten years ago, ordered a goodly number without knowing either what Pears would thrive in his section or what Pears would thrive upon quince stock. They were planted so that the juncture between the Pear and Quince was above ground and in small holes dug out in sod ground. Even the circles about the stems were not kept free of weeds or grass. Several died years ago, and those that remain were better dead. The owner is an enemy of Dwarf Pears! We know of another place where Dwarfs have been growing for 15 years. They were set in cultivated soil and the ground is cultivated every year. They were set so that the junction of the stock and cion was three or four inches below the surface. The main stem is washed every spring with lime and potash. The varieties are Seckel, Dutchess, Louise Bonne and Howell. The trees are in perfect health and bear well. The owner is a friend of Dwarf Pears! Who's to blame?

A REAL THANKSGIVING DAY.

THE year is drawing to its close—growing thin, so to speak. One can almost look through it and see the shadow of 1880. After a long period of depression, everything again looks bright for our favored land—favored as few other lands are favored upon the face of the earth. Individuals, as heretofore, and as must ever be, have had their sorrows and sufferings to bear; but the nation has never in its history been placed under a heavier load of obligations to Him who directs the sunshine and the rain—the germinating plants and their maturing fruits. It is with a saddened feeling that one sees in some of our home journals an ill-disguised satisfaction that we must be the gainers for the depression in other countries. We have enough to be thankful for without the heaping measure which the sufferings of others may for a time secure us. The National Day of Thanksgiving draws nigh. If we would have it a day of *real* thanksgiving, let us, while we rejoice over our own abundance, heartily sympathize with those who, from no apparent indiscretions or faults of their own, are deprived of their daily bread.

WHEAT AND OATS.

A NUMBER of agricultural journals have advocated sowing oats and wheat together. The leaves of the oats are supposed to keep the snow from blowing away; to prevent the sun from thawing the frozen ground and to make a good top-dressing for the growing wheat in the spring. But it seems plain that if wheat make a fair growth in the fall, its own leaves will arrest the snow as well as out leaves, while they would serve just as well to arrest the action of the sun upon the frozen ground. As a "top-dressing" we do not believe the wheat crop would be appreciably benefited. Not until the leaves were plowed under and rotted in the ground, could any benefit be derived from them as a manure. So far as we can see, therefore, the oats, instead of benefiting the wheat, would simply exhaust the soil of nutriment and moisture.

ROLLING AFTER SOWING WHEAT-FIELDS.

THE objection to rolling wheat fields after being sown, has been made that the snow will blow off or collect in drifts here and there. But if wheat is sown early, the leaves should cover the entire surface before winter, and we should suppose would hold the snow as well as a rough soil-surface. Whether this supposition is well founded or not, we have this fall rolled five fields after the seed had been drilled in or sown broadcast, and another season will probably enable us to test the question.

BREVITIES.

SEE that the poultry are not obliged to roost in a draft.

THUS far, tea culture in California is quite unsatisfactory.

MR. ROE is propagating a new variety of Grape—a sport of the Concord.

DON'T store celery too early. Don't cover strawberry beds until after the ground is frozen an inch in depth.

THOMAS Hogg, the White-flowering Hydrangea of late introduction, has bloomed with us during the entire summer.

GOLDEN Russet, Northern Spy, Roxbury Russet are among the most profitable kinds of Apples for the State of New York.

COMPETITORS for our corn premiums need not hurry themselves. The premiums will not be awarded until all have had time to make mature reports.

THE prettiest *green* in the world is that of a well-sown, well-manured wheat-field at this time, if sown before September 25. There is much about wheat to justify the present wheat mania.

MR. WOODWARD writes us, date Oct. 20: "I wish you could drop down in Lockport and see the vines (Niagara) the foliage yet dark and vigorous and looking as if freshly varnished."

THE California Horticulturist has a neighbor who has tried Prickly Comfrey for chickens, pigs and cows with the result of their unanimous refusal to do more than look at it. The editor thinks the name of "Forage" plant a misnomer.

COL. CURTIS says, in the N. Y. Tribune, that "Another folly is the importing mania. It is time this senseless practice was stopped. What we want is to improve the herds we have now, by mixing the blood of animals whose value is known by actual test and record."

THE heavy importation of food into England, from all parts of the world, but especially from this country, will hardly surprise any one on reflection that a country not so large as New York and Pennsylvania, has to support a population nearly as large as that of the United States.

WE regret to learn that with the present number of the New England Farmer, the connection of Russell P. Eaton, who has been its Editor and Publisher for over twenty years, comes to a close. Mr. Eaton through this long term of labor has made many friends among the farmers of New England to whom he has rendered signal service.

IT is reported ("by an Italian," that is all we know about it) that grapes may be kept in fine condition until March if buried in pits under ground. The branches and fruit are cut off in the fall and hung in the pits which are made two or three feet deep in high, dry ground. Then boards are laid across to hold the earth above. The pits are not opened until the grapes are needed for use.

LET'S make sheep dogs a feature of our agricultural fairs, following Lord Bective's action. Give prizes for the best bred and best trained. Judging other farm districts by our own, two-thirds of the farmers own dogs and a majority of them are "tow-rows" or yelping, mischievous, worthless curs. Collies are useful dogs and cost no more to feed and take care of than the others.

AN International Dairy Fair has just closed in London, England, and despite the agricultural depression among our trans-Atlantic cousins, it is reported to have proved very successful. Unlike the late show of the Royal Agricultural Society at Kilburn, this exhibition had a fine display of American dairy products and machinery, and both classes of goods are said to have made a very favorable impression on English dairymen and the general public. The exhibits from this country were in charge of our correspondent, Professor J. P. Sheldon, and of Mr. Oliver. A fine display of dairy stock formed a marked feature of the Show, and among them was a large number of Holsteins entered for competition for premiums for the best milk yield.

THE PURPLE, DISSECTED-LEAF JAPAN MAPLE.—The picture of Acer palmatum var. dissectum atropurpureum, presented this week upon our first page, is an exact copy of a sprig from a plant growing on the RURAL GROUNDS. We believe it to be one of the best, if not the very best, of the Japan Maples. Besides what Mr. Hogg says in his accompanying article, it needs only to be added that it has proven hardy with us. The leaves are of a dark purple color during spring, fading during summer to a deep green, not unlike the color of the leaves of the Purple Beech at the same time of year. The habit of this fern-like tree is pendulous. The growth is slow, never attaining a hight greater than that of what we usually term shrubs. The RURAL NEW-YORKER has had much to do with the introduction of the Japan Maples, and they still seem to us among the most desirable of the many beautiful plants for which we are indebted to Japan.

ON Wednesday, Oct., 22, a number of gentlemen, connected in one way or another, with agricultural interests, met together in this city at the room of the Farmers' Club, in Cooper Institute for the purpose of organizing a National Agricultural Society, on somewhat the same plan as that of the Royal Agricultural Society of England. After the delivery of an address by J. H. Reall, chief organizer of the Dairy Fair held here last winter, and the reading of a number of letters sympathizing in the object, a committee of thirteen was appointed by the chairman to issue a call and make preparations for a meeting here, at a date to be decided on hereafter, for the purpose of organizing the projected Society. The following gentlemen were appointed as such committee: J. H. Reall, of New York; Colonel William Crozier, Prof. H. E. Alvord, Lawson Valentine, ex-Governor Hyde, Colonel J. B. Mead, Dr. A. S. Heath, L. S. Hardin, James Neilson, Ezra Whitman, T. S. Gold, and Victor C. Piolette.

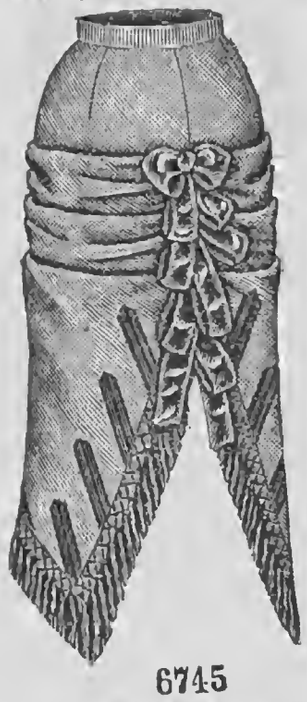
For Women.

CONDUCTED BY MISS FAITH RIPLEY.

DESCRIPTION OF CUTS.

FIG. No. 1.—The skirt is four-gored and cut from striped goods. It is simply faced at the bottom and left perfectly plain. The two curtain-portions which turn back in *revers* are separately added and extend only just underneath the lower edge of the scarf above. This consists of a straight width gathered or shirred at the center and harmoniously draped at the side where it and the curtains are overlapped by the edges of the back-breadth. The latter is of oblong shape and is draped so as to form a *panier*. The model of the skirt is No. 6737; price, 25 cents. The basque is coat-like. The front is of the ordinary basque depth and is ornamented with long lapels. The back is in square coat-tail style. The model is suitable for any material made up into costumes and is No. 6736, price 30 cents. The hat is of felt.

No. 6757.—The material selected for the formation of the garment is soft all-wool suiting, and the trimming consists of silk several shades darker. The front buttons from the throat to the depth of a basque below the waist-line, and then each side turns back upon itself to form *revers* that



6745

widen gradually toward the bottom. The closing edges are straight and fold under in broad hems and each side is conformed to the figure by means of two bust darts. A cluster of six plaits is folded in the back edge of each front portion, draping it handsomely in *panters*, and drawing the reversed edges still further apart. Adjoining the front on each side is a side-back gore, proceeding from the arm's eye and extending in the outline of a broad, straight panel to an even depth with the remainder of the back portion, which consists of only one division, the curved seam through the center terminating just below the waist-line, where the fullness is formed into a double box-plait on the under side. Three upturning plaits are folded in each side edge a little lower down, and these, with the double box-plait, produce a stylish effect. Price of pattern 30 cents.

6745

No. 6746.—The fronts of this polonaise are so effectively curved at the closing, that but one bust dart and one under-arm dart are required in each side. The closing extends to about the depth of a basque, and then the edges of the front are sewed together for a few inches and the seam shirred closely so as to form numerous soft, graceful wrinkles in the drapery below the hips. Below the termination of the shirring the edges are sloped off with a slightly diagonal effect so that the edges fall a little apart. These wrinkles merge into three plaits that are folded under each under-arm seam, and are located just opposite three more similarly arranged in the back drapery. The back is somewhat longer than the front, and from its mode of draping, partakes of the fashionable *panier* style. All the lower edges of the garment are bordered with a two-inch wide band of striped silk, which is also continued up the front opening. A band of the striped material passes across the back in the outline of a pelerine collar, and proceeds in vest outline down each side of the front as far as the shirring. A bow of ribbon falls over the shirring. This model may be worn with either a walking skirt or a train of moderate length. Fringe, lace, plaitings, scolloped or slashed edges are fashionable decorations, but the prevailing feature of the present fancy is to trim one kind of goods with another; striped fabrics predominating as decorations. They are cut crosswise, engthwise and bias. Price of pattern 35 cents.

6748 6748

No. 6754. Ladies' Cloak.—The front is narrow and double breasted, with curving front edge and above the bust is slashed straight across as far as its edges are lapped. Below the slash it is closed with one row of buttons and button-holes, and upon the sides are large, oblong pockets, with turn-over laps whose side edges are sloped off with pretty effect. A stylish rolling collar is sewed to the neck within a few inches of the outer edge of the front, whose tops are reversed in fancy lapels as far as the slash. The edges of the cloak, pockets and lapels are bound with silk braid, and the pocket-laps are faced with silk. Rows of buttons and silk-bound button holes ornament the pockets and the skirt-laps of the back. This model is adapted to all the fancy and plain dress and cloak fabrics in vogue, and may be trimmed with fur bands, braid, piping, or machine-stitching. Price of pattern 30 cents.

No. 6747. Ladies' Coat.—The fronts are in cutaway shape, and fall over a straight, double-breasted vest, which turns back in lapels at the top and closes in the usual manner, a row of buttons being added on the over-lapping side. The vest-fronts extend to the under-arm seams at their lower parts, but for the remainder of their length they are over-lapped by the coat-fronts for only about two inches. This process of uniting coat and vest is productive of a very attractive effect. Fancy pocket-laps rest upon the sides and a rolling collar encircles the neck and forms notched corners where its ends meet the lapels, with which they are reversed. All kinds of coatings are made up in this way. The edges may be piped, corded, under-faced, machine-stitched or ornamented with braids. Price of pattern, 30 cents.

No. 6745. Ladies' Overskirt.—The material is fashionable suiting, and the decorations embrace bows, fringe and satin pipings. The *tablier* comprises two gores, which are bias at their front edges for some distance from the top and then sloped off diagonally toward the bottom, so that they fall apart in Vandyck shape. The bias edges are sewed together, and then three rows of shirring are made, commencing about six inches from the top and extending to the end of the seam, wrinkling the upper portion of the front into a soft, graceful drapery. The back of the overskirt consists of a single breadth of the goods, which is rendered stylishly *bouffant* by means of three plaits folded downward in the side edges and tacked in the same folds at the center. Suit goods of any kind, from the cheapest to the most expensive, make up stylishly in this way. Lace, plaiting, ruching, or any fashionable decoration may be used. Price of pattern, 30 cents.

6747

No. 2.—This costume is composed of two garments, a skirt and waist. The material represented is a soft, all-wool camel's-hair, trimmed with bands of a contrasting shade. The front and sides of the skirt are laid in side-plaits from the belt to the bottom, and before the plaits are folded five bias bands are stitched upon the material that is to be used. After the plaits are laid, they are pressed to position and tapes fastened upon the under side. The upper part of the back-breadth is perfectly plain, but the visible portion is plaited to correspond with the remainder and similarly ornamented. The drapery is a graceful modification of the *panier* style, and consists of two front-portions and a back-portion. Each front-portion descends in curtain style from the belt at the center of the skirt, and is draped by plaits at its back edge, which is of the same depth as the back-breadth. The skirt pattern is No. 6741; price, 30 cents.

6747

The waist has a plaited body and a plain yoke and closes at the back. It is completed with a belt and has a standing collar. Sometimes the waist and drapery are alike and contrast with the skirt. The waist model is No. 6740; price, 20 cents.

No. 3.—This costume is a Princess, made to cling to the figure. Pointed straps of silk proceeding from openings made in the skirt in front of the outer plaits, cross the top of the plaits and are buttoned together over the middle one with a button and button-hole. The front, which is cut on a fold of the goods, is faced from neck to hem with silk to simulate a *plastron*, the facing being continued about the neck in the shape of a deep, round collar. The *plastron* is further outlined by a narrow fold of silk neatly applied just outside its margin, and the neck is completed by a standing collar of the goods. A round, silk cuff-facing, surmounted by a narrow silk fold, trims the coat sleeve neatly. Three similar folds decorate the skirt back of the *plastron*, between which and the box-plaited back-skirt the upper fold is surmounted by perpendicular bands of silk about three inches long, and placed at equal distances apart. Lace, ruffles, plaitings or any decorations preferred, may be used instead of the bands. This costume is made of cashmere of a deep wine shade, but the model is adapted to all sorts of plain and figured fabric. The pattern is No. 6750, price 25 cents. The hat is a wine-colored felt, trimmed with a silk scarf and a fluffy ostrich feather.

6754

No. 6753.—This misses' *panier* polonaise is made of suit goods and trimmed with plaiting of the same silk bands, and ribbon bows and the construction is quite simple. The ornamentation upon the bust is quite a novel addition and beside being very pretty in itself, is an ingenious device to improve the immature figure of a miss. A bias piece of the material is shirred four times at the top and turned in at the bottom for about an inch and shirred three times. The top is then inserted in the shoulder seams close to the neck, and the bottom extends down the front by the closing to a little below the top of the dart. A piped military collar completes the neck and a bow is fastened at the throat. Price of pattern 25 cents.

No. 6748.—This misses' basque with vest is made of plain goods and trimmed with striped material. The front is overlaid with cutaway jacket portions, which are sewed in with the shoulder and under-arm seams. These jacket portions extend to within an inch of the neck at the shoulder seams, and by their curved outlines are especially adapted

6754

to improve the figure of a miss. They are laid up in three shallow plaits at each back edge near the bottom and these plaits produce just enough of the *panier* effect to be coquettish. The basque is

No. 1.

completed with a round cuff-facing made of the striped material. A standing collar also of the striped goods encircles the neck. Price of pattern 25 cents.

Literary Miscellany.

IN FOLLY'S NET

CHAPTER XIII.

(Continued from page 694.)

THE SHADOW OF A TROUBLE.

"JEAN, Archie is here!" said Lady Sholto, putting her head in at Miss McLeod's door, on her way to her own dressing-room. "He is waiting in the library. He hurried over his dressing on purpose to have a glimpse of you before dinner; and if you are ready to go down you will have a clear half-hour, for the dressing-bell has just rung."

6753

"Very well," Jean said; "I am ready, Florence, and will go down at once."

And as Lady Sholto closed the door and the sound of her quick footsteps died away, Jean rose slowly from her chair, and turned to the door with a faltering step. She was alone in her room, for she had dismissed Collins as soon as the important operation of dressing was over, during which process her maid had found her young mistress strangely languid and indifferent, notwithstanding her anxiety of the morning to look her best. All the brightness and animation had faded out of her face, too, and it wore a strange look of pain and trouble.

Glancing at herself in the glass, Jean shivered a little at the wan, white face which met her gaze, and mustering her courage by a strong effort, she turned resolutely away and went down to the library with a quick step, as if she feared her courage would not last her until she reached her destination. Making a desperate effort, she pushed open the door, and Lord Ivor, who was alone in the room, uttered a glad exclamation and came forward to meet her.

6753

Jean lifted her eyes, and with one look at the beautiful, smiling face of her lover, one glance into his proud, tender gray eyes, her self-control deserted her; she sprang forward, and as he clasped her in his arms, she burst into a passion of tears, the saddest, saltest tears Jean McLeod had ever shed in her life of twenty-two summers; for she had sailed under fair weather skies hitherto, poor child, and now that the storm was threatening she had not courage to meet it.

"Jeanie, why, Jeanie, darling, what is the matter?" said the Earl, surprised beyond measure at her agitation, and a little alarmed. "Are you so very glad to see me that you are crying for joy, or," with a touch of serio-comic reproach in his rich, deep tones, "are you sorry that I have come at last?"

"Ah, no, no, no!" said Jeanie, through her sobs; and her clasp tightened round his neck, and her head pressed closer against his shoulder.

"Not sorry! Then look up, my darling, and let me see if I can read in your eyes the reason of this foolish agitation," he said, tenderly. "It is so unlike my little Jeanie to give me such a tearful greeting that you quite alarm me, pretty one!"

Still the passionate sobs continued rending the slender white-robed form which trembled in his arms, still Jean McLeod clung to her lover, weeping bitterly—hopelessly, in a silence which she could not break, and which at length seriously alarmed the Earl. The smile faded from his lips, and with a look of tenderest anxiety on his proud face he bent over her, trying gently to raise the bowed head lying upon his breast.

6757

"My darling, you are alarming me terribly. What is it, Jeanie? Are you ill?" he said, in a tone of unutterable love and tenderness.

She shook her head faintly.

"Not ill?" he said. "Then what is it, Jeanie? My child, it is almost cruel to keep me in this suspense."

"Archie, Archie!" said Jean, brokenly, "I cannot—I cannot tell you!"

And then the tears broke forth afresh, and she trembled so exceedingly that Lord Ivor's fears redoubled, and he saw the necessity for soothing her with as little delay as possible.

"Jeanie," he said, with gentle firmness, "try and tell me what is troubling you, my love. Nothing can hurt me so terribly as your evident suffering, but at least give me an idea of its cause, and let me see if I can alleviate it in any measure."

"When I tell you," said the girl, faintly, her tight clasp round his neck relaxing a little, "you will put me out of your arms and wish you had never seen my face."

"Whatever happens, it will always be the dearest face in the world to me," he said, fondly lifting it a little and bending his lips tenderly to the wet cheek lying against his heart, and softly putting away the soft, bright hair, loosened by her agitation, straying over his breast. "Come, my dearest, take courage and tell me what it is."

Earl put his arm around her, giving her his support with perfect gentleness and patience.

"What is it?" he said, in a moment, bending over her with a smile, as she took his hand and, clasping it in both hers, pressed it fondly to her feverish lips. "Have you been a very naughty child during my absence? Have you been flirting very desperately, and do you think I shall be very angry?"

"You will hate me," she said, piteously. "And yet—oh! Archie—I did not mean—you know I did not mean it, do you not?"

"And so it is a flirtation," said Lord Ivor, drawing a long breath of relief. "Come, then, mademoiselle, confess, and I will forgive all, absolutely and entirely, for the sake of the penitence you have evinced."

6757

He encircled her again fondly with his arms, and Jean trembled and shivered at the tenderness of his touch.

"You know I cannot be very angry with you, Jean," he whispered, tenderly. "Tell me what it is without fear, my child—here—in my arms. Now are you comfortable? Yes? Then I am ready to hear this history."

"And when you have heard it you will put me out of your arms forever," said, Jean, with weary sadness.

"Try me, darling," he said, touching his lips to hers.

Huddled up close to him, with her head resting upon his shoulder; her eyes seeking his face in unutterable love and sorrow, and her hands still clasping his, Jean told him; and short and simple as the narrative was, it was often broken

6746

by irrepressible sobs and once by a short silence, when her voice failed her from very weakness and her eyes closed in a momentary faintness, during which her head lay yet more heavily upon his breast.

The Earl listened in complete silence, by no word or gesture did he interrupt her story, although his color faded perceptibly once and a gleam of passionate anger shot into his eyes at the *denouement*. Even when she had ended he was silent for a moment, though he held her still close to his side with undiminished love and tenderness.

"And so he thinks he can take my darling from me so easily," he said at last, when he had stifled the anger in his voice, in the fear of increasing her agitation and alarm. "And you think I am going to let him do so, Jeanie," he added, with a little, low laugh, at which Miss McLeod lifted her head and looked at him with some faint surprise on her fair pale face.

"But, Archie, he seemed so sure, he asserted it as a fact," she faltered. "He said he would prove it."

"My darling," the Earl said, impressively, "put your heart at rest. Let him prove it if he can; but my opinion is that not even the abominable law which is in force could prove *that* a marriage."

"Oh, Archie!" the flood of relief and joy at Jean's heart almost suffocated her, and she turned so ghastly pale that the Earl was startled and rose to ring for assistance.

6746

"No, don't ring," she said, faintly. "I am not ill, but the reaction is terrible. Oh, Archie, if you knew how I have suffered since this morning! I dared not see you, and yet I longed for your coming with such an intense longing. I thought you would help me if anyone could."

"Poor little girl," said Lord Ivor, compassionately. "Such a white, wan face appeared when you opened the door, that I was quite startled. Have you told anyone else, Jeanie?"

"No," she answered, with a startled glance. "I did not say anything. Lord Sholto was out, you know, and I knew Florence would be dreadfully distressed. Besides——" she hesitated.

"Besides what, my dearest?"

"Besides if you had told me that I was his wife, Archie, I should have run away to-night, and never seen any of them again."

"That would have been a very foolish and childish proceeding," said the Earl smiling a little

No. 2.

He had seated himself on the sofa as he spoke, and drawn Jean gently down to a place at his side, and holding her little hand in his, waited silently for a moment. The young girl's sobs had ceased; but the exhaustion, which could not but follow such excessive agitation, had succeeded it. She was white as death, her breath came in hurried gasps, and her head sank forward heavily. The

sadly. "Very unworthy of my strong-minded Jeanie, who was so eloquent about the rights of women a few weeks ago. And now, Jeanie, listen to me, dear child. I must tell Arthur."

"Must he know, Archie?" she said, coloring a little.

"Of course he must, dear child, but I think it need go no farther than Arthur—which means Florence, of course—and we must consult a lawyer, you know. Mr. Blair cannot be very sure of his ground; but, at any rate, as he has chosen to abide by a lawyer's decision, we will do so also. I will write to my father's old University friend, Sir David Cairnes, to-night, and to-morrow we shall have his decision. Meanwhile, Jeanie, I am going to send you to bed, for you are not fit to put in an appearance at dinner with that white face and those tell-tale eyes."

"I will go up stairs," she said, wistfully; "but I need not go to bed, Archie. Cannot you come up to Florence's boudoir after dinner and sit with me?"

Lord Ivor hesitated a moment.

"I think I had better not, my dearest," he said, with a slight constraint in his voice. "I shall have a great deal to do this evening, and I think you will be all the better for a good long rest. You must try and sleep soundly to-night, dear child, and be calm and strong to-morrow for the council of war."

"The council of war!" she repeated, vaguely.

"Yes, the council of war, love," he said, with a slight laugh. "We will have the lawyers here, my darling, and a regular cross-examination will be held, you know."

"Oh, Archie!" she said, shrinking back from him with a face full of pain.

"We will make it as easy as we can for you, Jeanie," he said, tenderly.

"Oh, do not!" she said, with tears in her eyes and voice. "Do not—your kindness is breaking my heart. I deserve that you should be so angry with me, Archie, and you are so good. Oh, my dearest and best, how I love you! how unworthy I am of all your tenderness and trust!"

"Foolish bairn," he said, smiling, but with a very unwonted dimness in the proud, gray eyes. "It is I who am unworthy of your true, pure love."

"Unworthy!" she said, passionately; "do not say so, Archie! Sometimes I wish—I wish with all my heart—that you had never seen me. I seem to have brought you so much sorrow and trouble. And you are so patient with me, so forbearing, so long-suffering, that you make me feel ashamed of my own unworthiness, of my wicked folly——"

"Jeanie, I cannot have you talk so," he said closing her lips with a kiss. "Hark! there is the second bell, love. If you wait one moment you will be able to escape to your room without detection; What! more tears, Jeanie—nay, if you are so childish, I shall have to scold you really."

At the door, when she had crossed the room, her hand still clasped in Lord Ivor's, Jean paused and lifted her eyes to his; it seemed to the Earl's excited fancy as if she were bidding him a long, silent farewell. He took her to his arms again.

"Jeanie, love," he said, brokenly, "you are paining me terribly."

She made no reply, but putting up her two little hands, clasped them round his neck, and drawing the tall head down to hers, kissed him twice passionately, then loosing her clasp, she slipped from his arms and was gone; while the Earl went slowly back into the center of the room, with a face full of anxiety and alarm.

"Has that fellow good grounds for his assertion?" he muttered to himself, as he stood there for a moment in deep thought. "If he has—if he has, Heaven help us both!"

Then composing his features as best he could, and assuming an air of quiet indifference, he left the library, and made his way to the drawing-room, where most of Lord Sholto's guests were assembled waiting for the announcement that dinner was served.

* * * * * * *

CHAPTER XIV.

THE SHADOW DEEPENS.

"Do you mean to say that he claims her for his wife—that he asserts that they were married by what passed between them at Langdale?"

And Lord Sholto, with an expression of the deepest astonishment on his face, looked over the table at his brother-in-law, who was lying back in a deep arm-chair with a cigar between his lips, but with the deepest perplexity and distress depicted on his handsome countenance.

The Earl nodded his head slowly.

"But on what grounds?" said Lord Sholto, after a moment's silence, with the blank astonishment visible on his face still.

"On these," said Lord Ivor, curtly, throwing away his cigar, and rising from his chair. "And, Sholto, bitter as the thought is, I believe he has some show of right on his side. You know, or perhaps, you don't know—the Scotch laws with regard to the most sacred and holy contract into which two persons can enter. You have heard, surely you have, of Scotch irregular marriages?"

Lord Sholto shrugged his shoulders.

"Of course I have heard of them," he said. "But I know nothing whatever about them, Archie. Does Mr. Blair—confound him!—pretend that Jean went through an irregular marriage ceremony with him at that wretched inn?"

"There is no necessity for any ceremony whatever," said the other, gravely. "In this country, Arthur, a man has merely to call a woman whom he wishes to marry his wife in the presence of witnesses, and she becomes so, and *vice versa*."

"Legally his wife?" asked Lord Sholto.

"Legally his wife," was the answer. "Look here, old fellow, while I was waiting for you here, I searched for law books in your library. You don't appear to possess many, but I found one."

He turned to a table, and took from it a dusty volume, which he opened at a place that he had marked.

"Listen to this, Arthur," he said; and, in a husky, strained voice, he read as follows:

"'No form or ceremony, civil or religious, no notice before or publication after, no writing, no witnesses even are essential to the constitution of this, the most important contract which two private parties can enter into. Matrimonial consent may be verbally and effectually interchanged when no third party is present, and if it can be proved, even at the distance of years, by subse-

No. 3.

quent written acknowledgments, or oath of reference, or in any other competent way, that such consent was given, the parties will be held to be married."

There was a momentary silence when the Earl had finished reading the paragraph. Then the book fell from his fingers, and he covered his face with his hands.

After a time Lord Ivor uncovered his face, and pulled himself together, as it were.

"It is no use studying that horrid law-book," he said, with a sad attempt at laughter. "Neither you nor I have brains, even if we were in a fit state, to understand it, Arthur. Of course, this terrible question must be settled with as little delay as possible."

"What is to be done?" said his lordship, rather helplessly; for, thoroughly kind-hearted, honest, upright gentleman as he was, Lord Ivor's brother-in-law was not over burdened with brains.

"Poor Jeanie was in such terrible distress, that I was obliged to make light of it," said the Earl, rather irrelevantly. "That fellow stayed at home this morning on purpose to see her, and she was thoroughly overcome with the tidings which, in your absence, she was obliged to hear in silence. But it seems that he stated that he was willing to take a lawyer's opinion in the matter, and I think the only thing we can do is to agree to his proposition."

"But if the lawyer decides in his favor?" said Lord Sholto, in dismay.

The Earl turned frightfully pale, then a gleam of fury lightened in the gray eyes.

"I will kill Blair," he said, slowly.

"And be hanged for murder," said the other, more calmly. "Don't talk nonsense, Ivor. If the decision is in Blair's favor, you must bear it like a man, and not add to Jean's suffering by yours. Surely, however," Lord Sholto went on, "there is a court to which one can appeal?"

"I have looked through this," said the Earl, wearily, "and in every case the court has ratified the marriage. Besides, it would kill Jean. No matter what the lawyer's decision is, we must abide by it, Arthur. If it be for us, well and good; if it be against us"—his face was pale as death as he concluded, brokenly—"Heaven help us both!"

There was another silence, which Lord Ivor broke at length.

"I am going to write to Sir David Cairnes," he said. "In memory of his old friendship for my father, I think he will help me in this. I will entreat Sir David to come to-morrow."

"I am sure he will do so," said Lord Sholto. "I will send McCormic at once. He is to be trusted to any extent. Sir David has always been most cordial to Florie and myself," he added, crossing over to ring the bell, while the Earl went to a writing table and took out writing materials.

"Send McCormic to me," said Lord Sholto to the servant who answered the bell; "and order a conveyance to be ready to take him to the station at once."

"Yes, my lord," said the man; and when the door closed after him, Lord Ivor looked up from his writing.

"You must do something else for me, Arthur," he said. "I cannot see Blair."

"Of course I will see him, my dear fellow," said Lord Sholto; "only you must give me directions. What am I to say?

"Just tell him merely, as quietly as you can, that we have sent for our lawyer; and ask him if he has any legal adviser for whom he wishes to send. Give him every facility," added the Earl. "I cannot see him."

"No; you shall not, Archie. I must tell my wife."

The Earl smiled sadly.

"Of course you must, old fellow. Poor little Florence, how sorry she will be! Don't tell her until to-night, when you are alone, Arthur, or her distress may give your guests a clue to what is going on, and for all our sakes that had best be avoided. Ask her to be good to Jeanie" he added, softly, as he bent over his writing again.

In a few moments the door was opened, and McCormic appeared. In a few brief words Lord Sholto gave him his instructions, and while he went to make his arrangements the Earl completed his note.

"Use all diligence, McCormic," said his master, when the man reappeared. "Perhaps Sir David Cairnes may return with you from Edinburgh to-morrow. I can depend upon your seeing to his comfort in every way. As you go through the hall send Burton here to me."

"I am going to send for Blair," he added, turning to his brother-in-law as the gillie disappeared.

"Then I will go back to the drawing room," said the Earl, rising. "I don't want your visitors to suspect anything, Arthur; so don't look too solemn when you come back with him."

"All right," said Lord Sholto, mentally wondering how he could help doing so, and heartily wishing for the time when he could take Florence into his confidence over his dressing-room fire; and while the Earl went back to the drawing-room he despatched the butler with a message to Mr. Blair: "His lordship's compliments, and if Mr. Blair were disengaged would he be so kind as to step into the library for a few moments."

In the drawing-room all was very gay and animated, some one was singing at the piano a sad little song about grief and parting, which seemed to the Earl almost prophetic, as he stood leaning against the wall, looking with proud, weary eyes on the pretty scene.

Lady Sholto, looking very delicately pretty in her black velvet dress and diamonds, was sitting on a sofa near the fire, holding a little screen between her face and its glow; she was talking to an elderly dowager and the old minister of the parish, a benign, kindly, white-haired man, of dignified presence. His was a face which wore the marks of sorrow, borne and conquered, and the Earl remembered having heard a sad story about him; how he had laid his young wife and two little ones in one grave, years ago, when a terrible fever had raged in the neighborhood.

"He was a young man then," Lord Ivor thought, wearily. "How did he bear it? How shall I bear my life if they give my darling to that man."

And the lady at the piano sang softly in her rich soprano voice, going on with the last stanza of her song:

> "Beating heart, why thus lament?
> Woe is thine, then be content;
> Tho' on earth no more we rove,
> Softly sighing vows of love,
> Find my heart, in this relief,
> Yielding to these words belief,
> I shall see thee yet again
> Though to-day we part in pain."

"Is that his consolation?" thought Lord Ivor, looking at the old clergyman. "Will that be mine?"

At this moment his sister, catching his eye, beckoned him to her side, and leaning over the back of her chair, he tried to interest himself in a conversation about parochial matters, in the midst of which he saw Lord Sholto and Andrew Blair enter the drawing-room side by side; but in a few minutes they separated, and while Mr Blair strolled across the room to the piano, Lord Sholto made an almost imperceptible sign to his brother-in-law and sauntered into the conversation where Lord Ivor shortly after joined him.

"He agrees to everything," said Lord Sholto, with some depression making itself felt in his tone. "He said one lawyer was sufficient, but I persisted, and he at last named Cantire of Glossin: we will send a carriage for him in the morning if Sir David comes."

"Does he seem sure of his ground, Arthur?"

"Horribly sure," said Lord Sholto, ruefully. "But he is just the kind of fellow to be sanguine if he wished for anything," he added, to cheer up his brother-in-law. "Don't be down-hearted, Archie. All will be well yet."

"I trust so," said the Earl, rather sadly, and shortly after, pleading fatigue from his journey, he took leave of his sister and went to his own room when he rested from his fatigue by pacing up and down restlessly, indefatigably, all the livelong night, and finally throwing himself on his bed as the dawn looked in at his windows.

The morning brought a telegram from McCormic, Sir David could not be with them until about three o'clock on the same afternoon; but they might expect him without fail, and, allowing the distinguished advocate an hour for repose and refreshment, the "council of war," as Lord Ivor had called it to Jean, was fixed for four o'clock and a carriage was sent down to Glossin with a note from Mr. Blair, requesting Mr. Cantire's attendance at Sholto Hall on urgent private business.

CHAPTER XV.

SIR DAVID'S DECISION.

The long night hours which had been so dreary for the Earl and Lord Sholto, had not been less long or dreary for poor Jean McLeod, for during them she had not closed her eyes in sleep for one moment; nor had she, for an equally short period of time, ever lost sight of the possibility that these lawyers might give the decision in Mr. Blair's favor, that decision on which hung, not only her happiness—that would be a small matter—but Archie's.

Towards morning, however, the maid induced her to take a dose of chloral, and had the satisfaction of seeing her fall asleep at last, with tears still glittering on the long lashes, and a sorrow on the fair, pale face, terrible to witness on one so young.

Jean slept through the morning hours, and Lady Sholto, coming down to her brother with the tidings, wisely suppressed the other information Collins had given her of the dreadful night of unrest her mistress had passed, for the Earl was looking so ill and haggard himself that Lady Florence's loving heart ached for his suffering, and it was difficult for her to pay to Mr. Blair the ordinary civilities of a hostess.

The consultation, or council, or whatever the correct term may be for the strange and unusual discussion which was about to take place, was to be held in the library, at four o'clock all the personages interested in it were assembled there, except the one of all, perhaps, most nearly interested, Jean McLeod.

Sir David Cairnes, who was a tall, thin, rather hard-featured man, had seated himself at the center table, in a large, high-backed chair, in which he looked quite official, while Lady Sholto, pale and nervous, occupied a low chair by his side, and her husband stood on the hearth-rug with Lord Ivor, whose handsome face was very pale, but proud and calm as usual.

Mr. Cantire, a handsome, brisk-looking little man, was also seated at the table; he had bright, dark eyes, regular features, an unusually pleasant, talkative manner, which was, however, completely subdued by the awe he felt for the distinguished company in which he found himself. A note-book and pencil lay before him, and he was twisting his fingers nervously in and out of his curly dark hair, in evident discomfiture. Mr. Blair, looking supremely haughty, resolute, and rather paler than his wont, had thrown himself into a deep arm-chair, in an attitude of careless attention; he was looking unusually handsome, and Sir David Cairnes, who was a great admirer of masculine comeliness, gave an occasional admiring glance at the proud, dark face, the flashing eyes, and the careless grace of his posture.

They had been silent for some minutes; but previous to that, Mr. Blair had been exchanging courteous observations with Sir David, on the weather and his journey, and Lady Sholto had answered rather hesitatingly and unsteadily truly, some remarks which the latter had made to her. All her thoughts were with Jeanie, and she was wondering what was detaining her upstairs, when there was the sound of a soft footfall on the marble floor of the hall without, the library door opened, and the young girl came in with a slow quiet step.

The few hours quiet sleep which the opiate had given her had not prevented Jean's face from being very pale, and the hollow circles around her eyes made them look larger and darker than their wont. Her lips were closed firmly, and the shadows lay heavily round the sweet sad mouth; but Mr. Blair started at the change a few hours had made in the bright girl; she looked years older, the mirth had faded from her eyes, and the mouth looked as if it had forgotten how to smile.

All the gentleman rose at her entrance and bowed; Jean inclined her head slowly, as she stood at the door, in recognition of their salutation; then, as she came forward, with her slow noiseless step, Lord Ivor went to meet her, and took both her hands tenderly in his.

"Courage, my darling," he said, softly, his proud gray eyes looking defiance at the handsome, dark face, which had grown suddenly very pale, over Jean's shoulder, and he led her to a couch, on which she sank down, while the Earl stood, erect, proud, and motionless, at its head.

There was a momentary silence, then Lord Sholto spoke.

"Sir David," he said, quietly, "we have requested your presence here to-day in order to put before you a matter which is of the deepest interest and moment to us all. We do not wish to enlist your sympathies on one side or on the other; we wish merely to place before you a fair and impartial statement of certain events, trusting to your knowledge of the law to set us right in the matter on which we are at variance."

"I shall be most happy to give you any advice or judgment in my power," said Sir David, looking a little mystified.

"And we are content to take your decision as final," interposed Mr. Blair, suavely. "Your experience at the Scottish bar, the well-known integrity of Sir David Cairnes, and the professional distinction he has obtained are sufficient guarantee that the decision will be a correct one and according to the law of this country, which has no abler exponent."

Sir David bowed slightly, Mr. Cantire glanced admiringly at Mr. Blair, and Lord Sholto, breaking in rather abruptly, said:

"We have given Mr. Cantire a memorandum, which he will be good enough to read, and which will put you, Sir David, in possession of the facts of the case. Will you be kind enough to proceed, Mr. Cantire?"

"As your lordship pleases," said the little solicitor, briskly; and taking up his note-book he proceeded to read a short, concise, and correct account of the adventure of Mr. Blair and Miss McLeod on the moor, with which my readers are all, I hope, well acquainted. He had not proceeded very far with his narration when Sir David interrupted him.

"I beg your pardon," he said, ceremoniously, "Did I understand you to say that the gentleman and lady met by appointment?"

Mr. Cantire hesitated; his instructions did not contain the answer to Sir David's question, and he looked from one to the other of the persons assembled for their assistance.

Mr. Blair sat quietly with his eyes downcast apparently he did not choose to speak, and no one else save Jean could answer the interrogation. The girl's color came and went as Sir David repeated the question.

"Yes, by appointment," she said, faintly, and almost involuntarily she put up one little trembling hand and touched Lord Ivor's as it lay on the head of the sofa, instantly his palm closed over her trembling fingers and he gave her a little reassuring smile.

"By appointment; thank you," said Sir David, quietly, making a note of the answer. "Pray continue, Mr. Cantire."

The narration went on for some few minutes uninterrupted, when Sir David interposed again.

"You say the lady did not contradict the asser-

tion that she was his wife, that she silently admitted the truth of it," he said, "Did she at any time call him her husband?"

"Yes, my lord—yes, sir," stammered the little lawyer, getting rather confused, "twice or three times in the hearing of the innkeeper and her servant."

"Did she say anything about the length of time they had been married?" said Sir David, using his pencil again.

"Yes; in answer to a question from Mrs. Martin the lady said they had been married a very short time,"

"Thank you. Go on, if you please."

A few more lines finished the reading; Mr. Cantire put down his note-book and took up his pencil; Sir David glanced over his notes he had taken, with a grave abstracted expression; and while Lady Sholto leaned back white and trembling in her arm-chair, her husband crossed over suddenly and took his place by the Earl, putting his hand affectionately on his shoulder. Lord Ivor's face was very pale but calm still, although his eyes were watching Sir David's face with a strained anxious gaze painful to see. Jean sat with her head bent on the cushions of the sofa, perfectly still and motionless save when a long shudder ran through the slender bowed frame. Andrew Blair alone sat calm and unmoved, in the same attitude of careless ease. his head resting on his hand and his dark eyes fixed thoughtfully on the fire.

"Are any of these statements disputed, Mr. Cantire?" said Sir David, after a pause.

"I believe not, Sir David."

"In case they are, would witnesses be forthcoming?"

Mr. Cantire glanced at Mr. Blair, who inclined his head slightly.

"Yes, Sir David."

Another pause, a terrible pause.

"You are doubtless aware, Mr. Cantire, that the question before us, that of an irregular marriage, is one on which opinion is divided," said Sir David, quietly. "One lawyer takes one view of the question, and one another. What is your view of this case, Mr. Cantire? Do the statements you have read prove a marriage in your opinion or not?"

The little lawyer hesitated; he did not like to hazard his opinion before Sir David had given his own, and there was a pause.

"Well, sir," said Sir David, rather sharply, lifting his steel blue eyes on Mr. Cantire's face, "have you formed any opinion?"

"Yes, Sir David," said Mr. Cantire, at length mustering courage.

"Will you favor us with it, sir?"

"My opinion, Sir David, is that there is before us strong evidence in favor of marriage ——" he hesitated again, and in the slight pause that followed, Jean lifted her head and fixed her brown eyes on the lawyer's face with an expression which made him turn away his own, and made the conclusion of his sentence rather unsteady—"and I think the lady and gentleman who met at Langdale are, according to the laws of this land as I understand them, husband and wife."

A low, faint, shuddering cry broke from the cowering figure on the couch, and the beautiful head fell into its former attitude of abasement.

A slight gleam of triumph lighted up Mr. Blair's dark eyes, but he said nothing, nor did he move from his place. Lord Ivor stood proud, silent and motionless, waiting, as it were, for Sir David's decision.

Very slowly and distinctly the words fell from his lips, as if each one were uttered with due deliberation.

"My opinion coincides with yours, Mr. Cantire," he said, quietly, and for a few minutes the silence in the room was so complete, that you might have heard a pin fall.

Then the Earl made a slight movement forward and an attempt to speak; but his voice died away, and he turned with a mute appeal to Lord Sholto, who said:

"Did you understand Sir David, that the lady denies any intention of marriage or any consent?"

Sir David raised his eyebrows slightly.

"But the evidence proves otherwise," he said, quietly. "I am giving you judgment according to my light," he went on, calmly. "Another lawyer might give a different opinion; but even that is doubtful, although, as I said, there is a variety of opinion in the matter."

"Is there any chance if the matter were brought before a court of his decision differing from yours, Sir David?"

"A slight one, a very slight one," was the quiet answer. "Lord Sholto, I am bound to tell you that marriages have been declared legal on less than the evidence brought before me to-day. I will quote but one. A gentleman called a woman his wife, in the presence of a servant, with the intention of committing suicide the next hour, and the few words he spoke gave her every right as his widow to claim his property."

Another silence, a terrible silence, during which Lord Ivor staggered back a pace or two with a face of unuttered anguish, while Lord Sholto threw his arm round him, fearing he was about to fall.

"Sir David's decision is to be final, I believe?" said Mr. Blair, quietly, at length rising from his seat, and resting one hand on the table, when Jean suddenly stood upright, her slight figure swaying to and fro in her weakness, but with the strength and courage of despair on her beautiful, miserable face.

"One moment," she said, in a piercing voice of agony. "Do you mean to say that a few words spoken in jest make that man"—oh! the contempt in her voice at the words—"my husband? Do you mean to say that I belong to him because in my mad folly I allowed him to call me his wife, to prevent any unkind remarks the innkeeper might have made? Do you mean that those words are sufficient, without one scrap of writing, to give me into his power?"

To be continued.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

PEN THOUGHTS FROM EVERY DAY HOUSE.

ANNIE L. JACK.

Our youngest girl has quite a faculty for staining her dresses with every imaginable thing—fruit of all kinds, of course, and butternuts. Last week, when putting away summer clothing, I found several dresses in a very bad state, and determined to try a recipe I had seen floating through some Western newspapers. So I made a solution of Epsom salts and moistened the spots, then rubbed well and moistened again. While the material was wet a tin vessel was filled with boiling water and set on the stains in rotation. It was left on each spot for some minutes and the water kept hot. After this came a thorough washing, and the dresses were kept out in the hot sun for more than an hour. I do not say they were as good as new, but many of the ugly, dark stains, had disappeared.

How plentiful the apples lie about the doors where chickens and children have access to them! A brood of late ducks finds a tender feast in the ruddy cheek of a Fameuse, and if a giant Alexander drops to the ground there is always a stray hen ready in the orchard to peck it. A friend in Boston sent me the other day a new recipe for cooking apples, which I will give in her own words. "We are trying a new combination in apples that I got at Salem. They are cut up as for apple sauce, stewed a long time with a little water, a cup of molasses and some spices. At the time of taking off the fire, stir in a quantity of hot toast cut into little squares. Eaten cold with cream, we think it delicious." If I should tell you the house from which this recipe came to me, it would add to its prestige, but the sacredness of friendship forbids publicity.

How tired one gets of anything so plentiful as to be always in sight! When apples first come in and when they are getting scarce, we relish them with double zest. Just now, eating so many fresh from the tree, we almost feel it a trouble to take up our time cooking them. Yet an apple freshly baked, or made into a sweet and wholesome sauce, is always suitable and healthy food. Just now we are busy in the garden at intervals taking up the last of the plants. I find coarse boxes filled with sand and a little earth better for those to be wintered in the cellar, than *heeling* them in. Mine last season lived quite well, and came out in the spring a yellowish green, that soon became fresh wood and early bloom, when planted out. Parsley must be cut and if tied in small bunches and dried by hanging, head downward, in a dark pantry, will be found to remain as fresh and green as if tied and put into bottles. So *many* things to do at this season and frost is coming!

SYSTEM IN HOUSEKEEPING.

When I step into a friend's house and see every thing at sixes and sevens, as regards its domestic arrangements, I feel as though I should like to take hold and produce order out of the chaos. This, no doubt, sounds egotistical; but to an order-loving mind the sight of dust and disorder, to say nothing of bad management, is simply a tormenting aggravation; and a person of such a character can no more help thinking that if she were at the wheel the domestic machinery would run with less friction, than she can help breathing. Permit me, Rural sisters, to tell you my way of managing housework. In the morning, after dressing herself neatly—and it is only necessary to wear a well-fitting, clean calico wrapper, with ruffle of the same at the neck, if one does not care for a white collar, and with hair tidily arranged and a clean apron on—the housewife is ready for the day's duties. Before leaving her sleeping room, she should take the blankets from off the bed and open the windows, that the fresh air may enter. The next step of a housekeeper is supposed to be in the kitchen, especially when there is no servant, where breakfast should be made ready as speedily as possible, that the "guid man" may not be kept waiting longer than is really necessary. A substantial and nourishing meal may be easily prepared, out of few and simple materials. For example, let us take the following for one morning, varying it as you choose from time to time:—Coffee, nicely prepared, and a little observation and experience, will teach one how to make this just right. Take the potatoes left from yesterday's dinner and warm them up. Spread the table with a clean cloth; place the dishes in their proper places, and now with good, sweet bread and butter and a dish of fruit, you will have a plain but good breakfast. As soon as the meal is over, wash up your dishes and put them in the closet, each kind in its appointed place. Do not leave them standing, to draw flies, or until they become dry, and consequently hard to wash, in order to do something else, as I have frequently seen housewives do, but get them out of the way and off your mind, that you may take each duty as it comes along.

After your dish-washing is finished, if you have no extra, pressing duty, sweep your kitchen, dust the furniture, and be sure your cook stove is clean and black; for who wants to eat food cooked on a dirty, greasy stove, covered from morning till night with ashes and chips? Next, arrange your sitting-room, that you may not feel mortified should you have a morning call. Then pay a visit to your sleeping apartments, carefully and neatly making the beds and putting each garment that happens to be lying around, in its proper place. After this, various duties will occupy your attention—baking, preparing vegetables for dinner, etc., etc.

Of course, those who live on a farm, have the care of milk and butter, but with a little tact and good management, these duties come in their proper places. Of course, all of these things are not easy to do, and they tax woman's strength sadly sometimes; but if she looks well to the ways of her household, and is a frugal helpmeet to her husband, she must expect to be weary many times. After dinner, which should be served at twelve o'clock, if possible—and in the country it generally can be—when the dishes are washed and put away, what remains for the housewife to do but make herself tidy and sit down to her sewing or whatever she chooses to do? To be sure, there will be days when extra work will keep her busy from morning till night, and days when company will come and interfere with the usual routine of work. But a neat, industrious housewife, who systematizes her work, will not be flustered or "put out" because she has extra duties, or because company unexpectedly drops in upon her.

AUNT PATTY.

DOMESTIC RECIPES.

Rice Griddle Cakes.

One cup of sifted flour; two cups of warm, new milk; three eggs; one cup of boiled rice; teaspoonful of salt; large teaspoonful of baking powder. Mix the flour with one cupful of milk, then add the rice—which must be newly boiled, or reheated by steaming and then beating light with a fork—and thin with the other cupful of milk. (All of this last cupful may not be required to reduce the mixture to the proper consistency.) Beat the yelks and whites separately, whipping in the yelks first and the whites last. Add the baking powder mixed with a little flour and bake at once.

Prune Whip.

Stew one pound of nice prunes with very little water and sweeten with white sugar. Beat the whites of five eggs until stiff and stir to the prunes. Put into a pudding dish and bake half an hour. Serve when cold with cream.

MRS. DENTON.

Quail on Toast.

Dry-pick them, singe, draw, cut off their heads and legs at the first joint, split down the back, wash and wipe dry with a cloth, rub a little melted butter over each bird and broil over a clear fire. Turn often and dip once or twice into melted butter. Season with pepper and salt. Take as many half slices of bread as there are birds, toast to a delicate brown, butter and place a bird breast upwards on each piece. Thin slices of broiled bacon may be served with the quail.

E. L. G.

QUESTIONS ANSWERED.

Bread-Making.

Mrs. Gunn wishes directions for making good, sweet bread.

Ans.—*For yeast:* Four large spoonsful of flour; six grated potatoes; three spoonsful of sugar; two spoonsful of salt, and one of ginger, mixed to a paste. Simmer one handful of hops in a quart of water for half an hour, strain and pour boiling hot over the above mixture, stirring the meanwhile. When cooled, stir in a large cupful of yeast. Put into a stone pot, let rise in a warm place, then keep in the cellar.

The Sponge: One quart of warm water, three mashed potatoes, with enough sifted flour to make a stiff batter. Beat well, then stir in one coffeecupful of the above yeast and let rise in a warm place. Do this the evening before baking.

Kneading, Baking: In the morning sift several quarts of flour into the mixing-bowl. We are careful to have more flour in the bowl than needed, so that the dough never adheres to the sides or bottom of the bowl. The surplus flour can be re-sifted and returned to the barrel. Make a well in the center of the flour, stir in a piece of lard the size of an egg, two tablespoonsful of white sugar and a large handful of salt. Pour in the sponge, then very gradually add a quart of warm water with one hand, while with the other carefully mix in the flour. The process of kneading is very important. The flour should be worked in by degrees, and not "dumpt" in. The dough must not be too stiff, neither should it be sticky. No exact directions can be given, but experience and practice will prove the best guides. When thoroughly kneaded, form into a round mass, cover and let rise in a warm place. When light, mold into loaves. At this kneading no more flour should be used than necessary to keep the dough from sticking to the hands and board. The loaves should rise one-half hour before baking. Bake from three-quarters of an hour to an hour. After the first fifteen minutes the heat should be moderate. Good flour, good yeast and care are requisite in bread-making, and without which no housekeeper can expect to make *good, sweet bread.*

News of the Week.

MISCELLANEOUS.

MONDAY, October 27th, 1879.

After the Republican victories in Ohio and Iowa the chief interest in the political world seems at present centered in the contest in this State. All parties are actively canvassing. Robinson expresses confidence in his re-election, John Kelly declares that Robinson's defeat is a foregone conclusion, and that the struggle lies really between himself and Cornell. The latter says nothing, but is working hard, while his followers are loud in their certainty of electing their man. The "Scratchers" are pushing vigorously a pamphlet and circular warfare against the Republican candidate, and rejoice in the name of "Young Republicans," though most of the leaders of the movement are old stagers.

As a sequel to that boating fiasco of Hanlan and Courtney at Chautauqua Lake, Mr. Blaike, the Referee, applied for the money at the Bank in Rochester where the $6000 stake had been deposited by the Hop Bitters agent. He wished to draw out the cash to be handed to Hanlan who had rowed over the course unopposed. The Bank, however, refused to pay the amount, unless a *bona fide* contest took place, whereupon Mr. Blaike urged Hanlan to row the race over again as the speediest means of settling the dispute. This, Hanlan has agreed to do, provided the stakes are so placed that there will be no difficulty in the winner's obtaining them after the next race. The donor of the stakes writes, suggesting that the next race should take place at Washington, D. C. Courtney has not yet been heard from. The most important news from the scene of the late Indian hostilities is that Gen. Adams has succeeded in unconditionally obtaining possession of the women and children saved from the massacre at Meeker's White River Agency. The whereabouts of the hostiles is still in doubt, some reports sending some of them north to join Sitting Bull, while others say they are scattered among the tribes of friendly Indians. The Interior Department is confident of securing the peaceful surrender of the men guilty of the late outrages and an amicable yet satisfactory settlement of the entire difficulty.

Memphis rejoiced yesterday in the first frost of the season severe enough to destroy Bronze Jack for certain. The number of deaths daily from the fever had dwindled down two or three before Jack Frost routed Yellow Jack. The railroads are already running on regular time to the plague-smitten city; refugees are returning from all quarters, and business will soon be all the livelier for its late collapse.

According to the international postal law, the following articles are prohibited from transmission in the common mails: Tobacco to England; salt, daggers, sword canes, and pistols of small size to Italy; copper coin, and copper, silver, and golden articles to Holland; cigars in lesser amount than 3,000, also alcohol, liquors and beer to the United States and Canada. Although San Francisco's chartered wheat fleet numbers 62,744 tons against 34,279 at this time last year, tonnage is so scarce that shippers are telegraphing for vessels to Australia, New Zealand and Callao, Peru. The export demand is enormous and farmers and exporters are anxious to ship right-away on account of the recent foreign advance in the price of wheat. There are 15,953 tons of disengaged shipping at San Francisco, but the captains, who are Americans, are holding off for higher rates and sailors are so hard to get that a dozen loaded ships cannot leave for want of hands. Portland, Oreg., is in the same fix. The pleasure-traveling Gate City guard of Atlanta, Ga., have been enjoying an exceedingly cordial reception in New England—first at Hartford where ex-Gov. Hubbard and Gen. Hawley were among the speakers of welcoming addresses, and next at Boston where they were handsomely treated. The Mollie Maguires are on the war-path again in the region between Pittston Junction and Scranton, Pa., and their outrages by incendiarism and other means are numerous. Last week a gang of 20 attacked a passenger train on the Lackawanna and Bloomsburg railroad. They signaled the engineer to stop, but he, surmising danger, let on steam. The response was a volley of shots, riddling the cab, and one ball plowed through the scalp of the brave engineer.

FOREIGN.

The Austrian and Hungarian governments have accepted the war estimates for maintaining 800,000 men in the Austrian Imperial army for the next 10 years. A statement submitted by the Hungarian government shows that when the military systems of Europe are completed, Italy will have over 2,000,000 soldiers; France, which has 1,815,000 now, will have 2,723,000, Russia has 2,389,000 already, and Austro-Hungary 1,194,000, what wonder that Europe is becoming impoverished with so many of her sons taken away from productive industry in the prime of their lives, and living upon the labors of their fellow-countrymen! The committee at Madrid having in charge the

subject of slavery have adopted, by a vote of 16 to 5, a report proposing that slavery be abolished in Cuba, but that the negroes who are enfranchised shall, during a maximum period of five years, continue to work for their present masters, receiving not less than 10 pesetos per month. Beyond the capture of the Iluascar and the seizure of Antofagasta, Chili has accomplished little in its war with Peru and Bolivia, but she has been fortunate in carrying on the war without its interfering with foreign trade or the development of internal resources. About one-third of her exports are from her mines, and the mineral products exported from the Republic in the first six months of the present year were $8,371,427 in value, against $7,888,257 in the same period last year, an advance of five per cent. Wheat stands next among Chilian exports, and the area of wheat this year is the largest ever sown, and promises to yield an export of twice the usual value. The imports are steadily increasing. Chili, so far, has fought the war without a loan, and the payment of interest on the public debt has been continued, but payments to the sinking fund of 2 per cent, by which the debt is to be eventually redeemed, have been suspended.

A number of Russian Nihilists, seeing that their views are not practicable for the present, and only bring upon those who hold them useless martyrdom, have declared themselves, in proclamations addressed to the people, as simply Republicans. This declaration has been very badly received by the real Nihilists. The party seem, for the present, at any rate, to be shrinking sadly, owing to the large numbers of the most prominent members transported to Siberia, the great many who have abandoned it, at least temporarily, owing to the present prosecutions of its adherents, and to a considerable emigration of those who prefer to abandon their country rather than their opinions. The canton of Uri is the only division of the Swiss Republic that has thus far readopted capital punishment. Now another canton is considering the expediency of taking the same step, and it is a significant fact that of all the Swiss cantons these two have been the most backward in respect to public school instruction. Statistics officially compiled for the German Government show that the present population of the empire very considerably exceeds that of 1816. In 1875 it was 42,727,360, for the whole country, of which Prussia had 25,742,404, and Bavaria 5,022,370; in 1816 the population of the whole country was 24,831,396; for Prussia, 13,706,978, and for Bavaria, 3,607,036. The figures for the other and smaller States are in about the same proportion, being on the average an increase of nearly 100 per cent, notwithstanding emigration and war.

In France the question of the hour is the relation of the government to the amnestied Communists who have just returned from penal servitude in New Caledonia, whither they were sent for the crimes they had committed during the existence of the Government of the Commune in Paris in 1871. A few of them have escaped, like Rochefort, since the date of their transportation; a large number have died; some of the worst criminals are still imprisoned, but the large bulk of the survivors, having lately been pardoned, have returned to France, glorying in the deeds for which they were punished, violent in their denunciations of the government which condemned them and arrogant in their demands that the wretches still unpardoned shall be liberated and honored for the part they took in the Communal troubles. Some of them have offered themselves as candidates for office in cities where the rabble have much power, and one of them has been elected to the national legislature from a section of Paris mainly inhabited by the working and criminal classes. The government seems resolved to punish severely any outbreak or denunciations of these fellows, who delight to pose as martyrs to liberty, which with them means license. The monarchists and imperialists are cheered by the action of these returned convicts, inasmuch as their extreme violence tends to alarm the quiet masses of the people, who, in their alarm, might be tempted to prefer a settled and peaceful despotism under a King or Emperor to a factious republic with the dregs at the top instead of at the bottom.

The inundations in southern Spain are far more disastrous than reported last week. Whole provinces of rich country have been submerged, except the high places. Immense numbers of stock of all kinds have perished. Almost all the crops have been destroyed; buildings and "improvements" of every description have suffered very severely, and, worst of all, a large number of people have met their deaths. Already, 2,000 corpses are reported to have been found and the tale is not yet all told. Subscriptions to relieve the distressed are flowing in from all over Europe, and from this country also.

WHAT OUR PREMIUMS ARE.

ARTICLE No. 95 on our Premium List is the "Aquapult" which means that it is a machine for throwing water to a distance, just as the Ancient called the engines which they used for hurling stones, catapult. But our Aquapult is a pump, as may be seen in the illustration. It weighs only nine pounds, and is very compact. There is a stirrup that slides up and down the cylinder, adjusting the depth to which it is desired to immerse the cylinder. This is a great convenience because the pump may be used in a pail, spring, or running stream, while the foot holds it firmly in place and the hand and arm are free to exert their full strength in pumping. The uses to which the Aquapult may be put are many. It is a small fire-engine for one thing, throwing a stream as high as the windows of the second story. Nothing could be better for washing windows, and for sprinkling flowers, vines, and for general use in the garden. It is excellently constructed (mainly of brass) and as it is supplied by THE RURAL has a discharge pipe, two nozzles, and three feet of rubber hose. As it is only necessary to send ten subscribers at $2 each, to possess the Aquapult, we think that many might employ a spare hour profitably in canvassing and earn an implement that is almost always in demand about the house and grounds.

THE season for contracting that disagreeable and really serious disease, Catarrh, is at hand. Dr. Sykes, of Chicago, has a remedy that he offers this week, in which he has the greatest confidence. He has the most positive assurance of those who have tried it that it will do all that is claimed for it.

Bilious persons should avoid the use of coffee, and nervous persons the use of tea. An agreeable and healthful substitute is found in Cocoa. Walter Baker & Co.'s Chocolate and Cocoa preparations are highly recommended by the medical faculty, and are sold by all grocers.

Nothing is uglier than a crooked boot or shoe; straighten them with Lyon's Heel Stiffeners.

When life is a drag, and you have lost all hope; then trust in Hop Bitters.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Oct. 25, 1879.

BEANS AND PEAS.—The demand for beans continues steady and the whole has a strong tone in prices, with exceptional marks of old marrows and new mediums tending higher. Export trade good: 900 pkgs. for week. Sales for abroad exceed those of last year at this date about 3,000 bbls. Green peas have further advanced and the outlet seems yet unfilled. Canadian and B. E. peas quiet and in buyers' favor. Marrow beans, old, $1.45@1.55; new, $1.62½@1.65; medium, $1.60@1.62½; pea and w. kidney, $1.70@1.75; red kidney, $1.65@1.70, prime; 1.45@1.55, soft; So. B. E. peas, 2 bush. bag, $2.40@2.50; Canadian, in bulk and bond, 70@74c.

Receipts of beans for week, 10,816 bush.

BUTTER.—Receipts for the week, 33,375 pkgs.; exports, 17,000 do. There has been a steady, active movement and quite a stiff advance, particularly for the high grades of stock. Exporters are not seeking creamery to any extent, but have worked liberally upon fine State firkins and tubs, and showy styles of Western. Welsh tubs are a scarce item this fall. Most of the receipts to date are out of market stock. It looks at the moment as if there would be an early break in the receipts, the weather is cold and reports are numerous of diminished pasture. The feature of the week is the sudden advance that has attended under grade State and Western stock.

State, pails and tubs, single dairy marks, fresh ends, 28c.; best invoices, 26@27c.; good to prime, 24@25c.; fair to good, 22@24c. firkin and tub single dairies, choice, 26c.; do., dairies good to prime, 23@25c; do., firkins, choice dairies, 25c.; do., good to prime, 23@24c.; do., fair to good, 20@23c.; Welsh tubs, best invoices, 24@25c.; do., good to prime, 22@24c.; do., fair to good, 20@23c.; State, tubs, poor, 15@18c.; State creamery, best invoices, 30c.; do., good to prime, 28@29c.; do., sweet cream, best, 29@30c.; do., fair to good, 26@28c.; Creamery, poor to fair, 24@26c.; Western imitation creamery, 22@24c.; do., dairy, fresh, extra, 23@23c.; do., dairy, good to prime, 19@21c.; do., fair to good, 17@19c.; poor to fair, 15@17c.; do., June, 17@20c.; factory, best invoices, June, 18@19c.; do., fair to good, June, 16@17c.; do., best invoices, late made, 19@20c.; do., fair to good, 16@18c.; do., poor to fair, 14@16c.

CHEESE.—With the country advices of higher markets prices were put up here, but exporters have not been willing to follow any improvement, and there has been a very dull condition of trade through the week. At the close the feeling was rather easier. Shipments for the week have been only 28,400 boxes.

Quotations are for State factory: fancy at 13@13c¼.; good to prime at 12@12¾c; fair to good at 11@12c.; half-skimmed at 9@10c.; skimmed at 6@7½c. State farm dairy: Fine at 12½@13c.; good to prime at 11¾@12½c.; fair to good at 10½@11¼c.; skimmed at 5@8c. Wis. factory: Fine at 12½@13c.; good to prime at 11¼@12c¾. Ohio factory: Cheddar, fine, at 12½@13c.; do., fair to good, 10½@11¼c.; flat, fine, 12½@13c.; flat, good to prime, 11½@12c.; flat, fair to good, 10@11¼c.; half-skimmed, 8@10c.; skimmed, 5@7c.

Receipts for week, 77,922 pkgs.; exports, 27,000 do.

Liverpool cable, 63s.; steam, 55@60s.

COTTON—Unusual excitement has prevailed the past week, with very variable prices; closing, however, showing a strong market and quoted at for October, 11.33@11.35c; November, 11.27@11.28c.; December, 11.29@11.30c.; January, 11.40c.; February, 11.54@11.55c; March, 11.69@11.70c.; April, 11.84@11.85c.; May, 11.96@11.98c.; June, 12.11@12.13c.; July, 12.17@12.20c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

Strict good ordinary	10⅝	Middling	11 1-16

DRIED FRUITS.—Offerings of sliced apples are larger, but demand quickens and prices of choice lots are strong. Peaches are slow and unchanged. Small fruits are generally strong.

New North Carolina apples, quoted at 5¼@5c. for fair; 8¼@9c for choice; 10@10¾c. for fancy sliced. Patent evaporated apples, choice, in cases, 12½@13c.; do, fair to good, 10@11c.; N. Y. State sliced, good, old, 5@5½c.; and choice held higher, in small lots up to 8@9c.; quarters, choice, 5@6½c.; western quarters, common and old, 3½@4¼c.; new southern quarters at 4@4½c.; new N. C. peeled peaches at 14@17c., do. Georgia, 12@16c. Peaches, Delaware evaporated, peeled at 25@27c.; do. unpeeled at 10@11c.; new halves at 7c. Blackberries at 10c. for new. Raspberries at 28c. Pitted cherries at 15@16c.

Expo ts since January 1st, 25,421 pkgs. of apples; same time last year, 12,532, do.

EGGS.—Receipts for week, 5,769 bbls.; do. last week, 5,326 do. A better demand is looked for with improved weather. Former October receipts have lost seriously—as badly as in a summer month. Uncertain quality has checked sales, and many lots of so-called good hang upon the market. Cheap buyers are using prime limed in preference to risking low-priced fresh.

Near points, 22c.; State and Penna., 20½@21c.; fresh Western and Canadian, 20c.; poor, 18@19c.; limed State, 16@16½c.; Western, 15½@16c.

FRESH FRUITS.—Exports of apples past week, 13,694 bbls.; since Jan. 1, 133,340 do.; same time last year, 76,335 do. Light receipts and the advancing season have improved apples. The exports now include a good many winter sorts. Cranberries are looking up. Pears are reduced to small lots. Quinces scarce and wanted. Grapes higher. Peanuts dull, 4½@5c. per lb. for new choice; 2½@3½c. for other. Hickory nuts, 75c.@$1. Chestnuts, $2.50 for prime; extra, $3. Apples—Kings, State, good to choice, per bbl., $2.50@2.75; Baldwin, $2.25@2.50; Greening, $2.25@2.50; winter apples, mixed, good to choice, $2@2.50; fall apples, do., $1.75@2; do., do., poor to fair, $1.50@1.75; N. J., fair to good, $1.50@2. Cranberries—Cape Cod, fancy, bbl., $6.25@6.50; good to choice, $5.50@6; fair to good, $5@5.50; Eastern, large, round hoop bbls., fair to choice, $4.50@5.50; N. J., fancy, per crate, $1.87; good to choice, $1.50@1.75. Pears—Duchess, per bbl., $5@6; Boston, per box, $2.50@3; Virar or Wakefield, per bbl., $2.50@3.50; Lawrence, $4@4.50; Beurre Clairgeau, Boston, per box, $3@3.50; Beurre d'Anjou, $2.25@3; Beurre Bosc, $3@3.50; Seckel, choice, per bbl., $4; inferior, $2@5; cooking pears, $1.75@2.50. Quinces—Apple, State, choice, per bbl., $6@7; pear, do., do., $5.50@6.50; State, poor to fair, $1.50@5. Grapes—Catawba, State, 18 3-lb. boxes, $3@3.25; do., do, loose, ₩ lb., 5@7c.; Concord, up-river, bulk, 4@5c.; Isabella, State, 18 3-lb. boxes, $1.50@2; bulk, ₩ lb., 2@4c.

FLOUR.—There has been rather less export movement, and prices at times have been lower, but they left off firm, with some improvement in demand.

Latest sales are at $5.35@5.85 for inferior to fancy superfine State; $5.75@6.00 for ordinary to good extra do., odd lots and lines; $6.00@6.25 for good to very choice do.; $5.35@5.85 for inferior to very fancy superfine Ind., Iowa, Michigan, &c.; $5.75@6.00 for inferior to good shipping extra do., and $6.00@6.25 for good to choice extra do.; common to choice white wheat extras, $6.25@7.25; choice to very fancy do. at $7.25@8.50; red and amber winter wheat, inferior to very choice trade and family, at $6.35@7.75; round hoop Ohio at $5.90@6.45, and trade and family brands of do. at $6.00@7.25, the latter rate for fancy; St. Louis, $6.35@7.25 for inferior to very good extra; $7.25@8.50 for very good to fancy; Minnesota clear, inferior to very choice, $5.75@7.00; Minnesota "straight," very inferior to choice, $6.35@8.00 (fancy held higher), and patent poor to very fancy at $6.50@9.00; unsound stock at from $4.75@6.75; city mill extra at $6.00@7.25, ordinary to fancy, for West Indies: do. for England, $5.75@6.25 for poor to choice; do. trade and family extras, $6.75@8.00; do. for South America, $6.75@7.15 for standard to choice brands; No. 2 at $4.25@5.25 for poor to fancy.

GRAIN.—For wheat, trade has been feverish, irregular market at times much lower, but closing with some recovery of prices and a more active speculative tendency. The export movement has been more moderate. Latest sales of No. 2 amber at $1.45@1.46; do., October, at $1.45, ungraded amber at $1.40@1.45; extra white at $1.47; No. 1 white at $1.46@1.47; do., for October, at $1.45½@1.47; do., November, at $1.46¾@1.47; do., December option, at $1.49½@1.50; No. 2 white, at $1.42@1.44; ungraded white at $1.40@1.45; No. 2 red at $1.43@1.48; do., October option, at $1.45½@1.46¾; do., November option, at $1.46¾@1.48; do., December option, at $1.48¾@1.51½; No. 3 red at $1.42; ungraded red at $1.38¾@1.46; No. 2 Chicago and Milwaukee spring at $1.36@1.38; New York No. 2 spring, at $1.39 bid; do., October option, at $1.36; do., November option, at $1.35@1.36¾; do., December, at $1.38¼@1.39; No. 2 northwest spring, November, at $1.38; No. 3 spring at $1.31@1.33; ungraded spring at $1.31@1.39. Rye at 89@90c. for No. 2 Western. Barley at $1 for ungraded Canada; 85c. for six-rowed State. Corn has been easier and less active; latest sales are of New York No. 2 afloat at 61@62c.; do., October, at 61@61¼c.; do., November, at 62@62¼c.; do., for December, at 63¾@64c.; New York steamer mixed at 61c. bid; ungraded Western mixed at 61@62½c.; yellow Western at 62½c. Oats are offered at the close at a decline. Sales of New York No. 1 white at 45c.; do. No. 2 white at 41½@42½c.; do. No. 3 white at 41¾@41¾c.; New York No. 1 at 42@42¾c; New York No. 2 at 41¾@42c.; do., December option, at 45c.; New York No. 3 at 41c.; New York rejected at 39c.; ungraded white Western at 42@44c.; mixed Western at 40¾@42½c.; white State at 43@45c; mixed State at 43c.; No. 2 Chicago 42¾c.

HAY AND STRAW.—Trade is active and prices strong.

Shipping hay quoted at 50c.; retail lots at 50@60c. for medium, and 70@85c. for prime; clover at 40@50c. Straw at 70c. for long rye, 40@50c. for short rye and 45@50c. for oat.

Exports since Jan. 1st, 61,464 bales; do., last year, 49,800 do.

HOPS.—Emmet Wells says in his circular: "The continued heavy export movement has caused a further advance on choice new hops of 3 cents per lb.; sales having been effected this week at 43 cents, and bids as high as 45 cents made in some instances, but declined by holders. While it is acknowledged on all sides that hops are "booming," a slight feeling of uneasiness pervades the trade, holders and shippers generally wondering what effect the heavy arrivals will produce upon the London market. It is believed that a decline in the price there would be instantly felt here, though we think there is not much to fear on this score, when taking into account the great shortage in England, and the small amount we have yet to spare for export. Our brewers are just beginning to wake up to a realizing sense of the situation, and are feeling around to see what they can buy; they find but few good hops offering below 40 cents, while 45 is generally asked."

	Bales.
Receipts for the week	8,229
Total receipts since September 1, 1879	37,443
Total receipts for same period in 1878	9,457
Export clearances for the week	5,462
Total exports since September 1, 1879	28,933
Total exports for same period in 1878	1,462

Quotations are for New Yorks, new crop, choice, 40@43c.; New Yorks, new crop, medium, 35@38c.; New Yorks, new crop, low to fair, 30@33c.; Eastern, new crop, 34@40c.; Wisconsin, new crop, 30@40c.; Yearlings, 7@18c.; Olds, all growths, 4@10c.; Pacific coast, new, 35@40c.; Pacific coast, olds, 9@14c.

OIL-CAKE.—Western is quoted at $23.75 per ton.

PROVISIONS.—Prices have tended upward with active export and speculative demands. Mess pork closed at for October at $10.80 bid and $10.90 asked; November at $10.80 bid and $10.90 asked, and the December option at $10.80@11; January at $11 for seller's option, old and new. Bacon at 6¼c. for long clear and 6¾c. for short clear. Beef Hams at $14@14.50. Lard—Western steam at $6.95@6.97½ for spot lots and for Oct., $6.97½ for November, and $7.05 for December. Stearine at 6¾@7c. for Western. Tallow at 6¼@6¾c. for prime.

POULTRY AND GAME.—Supplies of live poultry have been heavy and prices have been dropping for the past three days. Few turkeys arriving; held in the country for next month.

Chickens, N. J., ₩ lb., 11@11½c.; State and Penna., 10@11c.; Western, 9@10c. Fowls, N. J., 10@10½c.; State and Penna., 9½@10c.; Western, 9@9½c.; Roosters, 5c. Turkeys, 8@10c. Ducks fair, 40@65c. Geese choice, $1.25@1.50; other, $1@1.12. Pigeons, ₩ pair, 30@35c.

Dressed poultry is in good supply; ice packed parcels have sold the best. Dealers look for an improved trade, still supplies should not be rushed forward without advice from consignees. Prices are easy in sympathy with live.

Turkeys, Phila., dry-picked, 15@16c.; State and Western, prime, 12@13c.; do., fair to good, 10@12c.; Chickens, Phila., 14@16c.; do., Jersey, 12@14c.; do., State and Penn., 11@13c.; do., Western, 10@12c. Fowls, Phila., dry-picked, 14c.; Jersey, choice, ₩ lb., 11¼@12½c.; State and Western, dry-picked, 11@12c.; scalded, 10@11c. Ducks, spring, Phila., dry-picked, ₩ lb, 15@16c.; State, ₩ lb., 12@14c.; Western, ₩ lb., 9@12c.; old, Phila., dry-picked, 11@12½c. Geese, young, Phila., ₩ lb., 12@13c.; old, Phila., dry-picked, 10@11c.; Squabs, white, ₩ doz, $2.75@3; dark, ₩ doz., $1.75@2.

In game woodcock are lower, but other birds are fairly active, prime grouse and partridge leading the sales. Venison has sold promptly on cool days. Wild ducks, $1@1.25; for Canvasback, 70c.; for Redhead, 65@70c.; for Mallard, 45@50c.; for Teal, 25@30c.; for common, per pair:

Partridge, State, prime, per pair, 1.25; soft, 60@75c.; Western, @$1. Grouse, prime, 1.25; soft, 60@80c. Wild pigeons, stall fed, per doz, $2; flight, $1.50@1.75. Woodcock, State, per pair, 40c.; Western, 30@40c. English snipe, per doz, $1.75@2. Plover, $1.75@2. Tame pigeons, shot, $1@1.25. Minn. ven son, short saddles, ₩ lb, 18c. State and Western, ₩ lb., 15@16c. Whole deer, 11@13c.

SEED.—Clover has been in active speculative demand and is much higher, quoted at 10@10½c. for good to choice Western. Timothy is strong at $2.50@2.75.

TOBACCO.—An active business is reported in seed-leaf, at strong prices, but Kentucky leaf is rather quiet. Prices have not varied.

VEGETABLES.—Exports potatoes past week, 5,721 bbls.; since January 1, 148,900 do.; same time 778, 154,500 do. The demand is good for potatoes, but Western receipts begin to add to what were already in surplus, and prices will rule easy while so much stock is visible and accessible. Garden truck has become firmer since our recent frost. Early Rose, State, per double-head bbl., $1.25@1.37; in bulk, per bbl, 1@1.25; Peerless, State, do, $1; N. J., do., 87c.; Sweet potatoes, Del., $2@2.25; N. J., $1.25@1.75; Va., yellow, $1.75. Green corn, per 100, 25@50c.; tomatoes, L. I., near-by, per crate, 25@40c.; string beans, ₩ bag, 75c.@$1.25; potato Limas beans, $1.50@1.75; Lima beans, dull, $1.25@1.50; squash, marrow, ₩ bbl., 50@75c.; do., Hubbard, $1@1.25; cabbage, per 100, $2 50@4; onions, white, per bbl., $2@2.50; red, Eastern, $1.50@1.75; do., Chester, $1.50@1.62; yellow, $1.75@2; beets, N. J., 75@87c.; Russia turnips, Jersey, 50@75c.; carrots, 75c.; egg plant, L. I. and near-by, ₩ 100, $3@4; pumpkins, per 100, $2@5; cauliflower, ₩ bbl., 75c.@$1.75; celery, per doz., 87c.

WOOL.—Trade is brisk and prices have further advanced. Sales of X and XX Ohio at 44c.; X and above do. at 41@44c.; XXX do. at 45c.; medium Pennsylvania at 45@46½c; spring Texas at 27c.; new fall do. at 23@27c.; scoured Texas at 66@70c.; spring California at 21@33c.; Mexican at 17@18c.; Nevada at 25½c.; Eastern Oregon at 31@33c.; unwashed Western at 31@36c.; Donskoi at 17@21c; Cape at 33c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Oct. 25.

BEEVES.—Receipts for the week, 13,203 head; do. last week, 11,089 do. Without showing much animation the market has had an element of steadiness that has sustained prices. At this season of the year a good deal of rough stock, and many animals that farmers wish to avoid carrying over, come forward, but they meet with low prices, say 5@7½c. The market closed ½c higher than for Wednesday last. State Texas quoted 6¾c.; fresh Texan and Cherokee, 7@8c.; common to prime native steers, 7¾@9¾c., to dress 55@56 lbs.; extra and fancy, 10@10½c., to dress 56@57 lbs.

VEAL CALVES.—Prime grades of veal scarce; extra N. J. quiet at 8c.; prime State, N. J. and Buck's Co., 7½@7¾c.; good, including State, 6¾c.; heavy Mount Holly ranged at 6@7c.; buttermilk calves, 3@4c.; grassers, 2@2¾c.

COWS AND CALVES.—Market dull. Receipts include many near-by cows since pasture has shortened. The range is $30@60, the latter for a few singles.

SHEEP AND LAMBS.—Receipts for the week, 37,605 head; do. last week, 29,482 do. Not as active as at our last; sales generally at 3½@3¾c. for poor to good sheep and 5¾@6¼c. for ordinary to prime lambs.

SWINE.—Receipts for the week, 39,787 head; do. last week, 37,000 do. Hogs begin to be wanted; late sales prompt $3.85@4.05 for State and $4.15@4.20 for Western. Country-dressed pork has been unsettled during the week.

Reading for the Young.

THE CHILDREN'S CHICKENS.

ALICE P. ADAMS.

Tom and Kitty had always lived in the city, until their father moved to California to take charge of a large ranch. Their knowledge of domestic animals and fowls was quite limited, as their pets in the Eastern home were only two—Beauty, the gray pony, and Tiny, a saucy little Scotch terrier.

So the children were greatly pleased when, on the very day after their arrival in the new, strange land, the chickens were given to them, on condition that they assumed entire responsibility, and gave food and drink at the proper time. The two young people soon became fascinated with their feathered pets, and spent hours in the poultry-yard watching every motion and daily discovering wonderful traits of character.

Of course names were given to all the favorites, and prominent among these were Jack and Jill, a pair of handsome Light Brahmas. Old Jack was so large that he could pick corn from the top of a barrel while he stood on the ground, and he stalked about the yard in a lordly manner that greatly impressed the other roosters. He was not greedy, and when he called to the hens, or "gurgled" as Kitty expressed it, he never ate the nice tidbit himself, but gave it up with evident satisfaction.

Jill was the largest hen in the yard, with an abundance of fluffy white feathers and a little perky tail. She was Tom's especial favorite, and would hop into his lap and eat corn from his hand as long as he would feed her. She never objected to being carried anywhere about the place, or even to being stroked on the head and back when she was on the nest; but when Kitty took liberties and shook Jilly's bill she would "sing," and her song was the most unmusical croak I ever heard.

Then there were little Jack and Jill, young Brahmas, resembling the older pair so much that they were called by the same names with the diminutive prefix. Little Jill was very tame, and would walk up to you at any time if you held out your hand, and allow herself to be taken up, and curl her claws contentedly over your finger. But I imagine that this docility was partly due to the fact that she expected something to eat, for she was a sad gormand; Kitty declared that she never carried her head like the other chickens, but always held it down, looking for some unlucky insect to snap up. One day when Papa was planting the premium corn sent by the RURAL, he heard a slight noise, and turning around found that little Jill had been complacently following, picking up the kernels as he dropped them. And when the corn came up there was a long empty space, a monument to little Jill's gluttony.

Perhaps the homeliest hen in the yard was Nettie Danford, who wore yellowish-brown with considerable red about the head, and had a disagreeable habit of picking at the buttons on Kitty's wrapper. She received the name of an unsuccessful lady editor whose paper was discontinued within six months after the first issue, and whom she was supposed to resemble in personal appearance. Nettie had the reputation, too, of being a most astonishing scratcher. She executed no fancy figures but every scratch counted, and woe to the luckless chick that stood behind her energetic claws.

Two of the roosters were special pets; one of them, Dr. Latham, a dashing White Leghorn, was named for a spruce young doctor in the neighborhood; the other, a handsome Brown Leghorn, was also very gay until he had a serious fight with old Jack in which the latter was victorious. After the battle when Jack came near, the Leghorn would slink away with drooping head and tail, his whole attitude so expressive of humiliation, that Tom christened him Mr. Church, in memory of a little insignificant gentleman living at their old home, who never dared to make a remark unless it was sanctioned by his wife. Poor Churchy! The children tried in vain to help him recover his lost spirits. His tail feathers drooped lower and lower till they swept the ground, he refused to eat, and one morning Tom discovered him in an out-of-the-way corner, dead.

A trim little Quakeress was Friend Ruth, dressed in modest gray with a touch of white, having a shining gray topknot, and a hint of worldly vanity in the delicate sea-green of her ear lobes.

Then there was the old Gourd Hen, so called because she hatched her first chickens in a large gourd; and Yankee Doodle, who had a very peculiar crow, supposed to resemble the first strain in the chorus of the song for which he was named; and a host of others all more or less famous, but the one that was most frequently shown to visitors in preference to the rest was undoubtedly Shanksy.

He was noticed from the first as having a long slim body, and after the down came off from his back and wings it was nearly two months before the feathers appeared. He possessed a long thin neck, also destitute of plumage, that he was continually stretching "upward and onward;" and he presented such a ridiculous figure with his naked wings which looked as if the sun had blistered them, that his name was remarkably appropriate.

Shanksy's plumage diminished his queer appearance but little; for the feathers on his neck would not lie smooth, but bristled as if he was in a chronic state of irritation; and he had a most comical tail composed of a bunch of down with one black feather shooting out at the side.

The children had many disputes over the sex of Shanksy. Tom declared him to be a rooster, and Kitty as stoutly insisted that *she* was a *hen*. I heard them one day as they were coming from the chicken yard.

"Now, Kit, *any* body that's got eyes could tell 't Shanks is a *rooster*!"

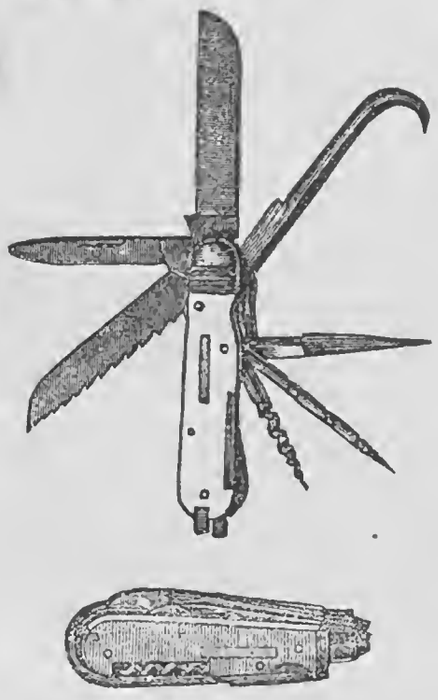
"Humph! You don't know any thing about it. Shanksy told me *herself* that *she* was a dear little *pullet!*"

Los Angeles Co., Cal.

A REMARKABLE KNIFE.

DEAR NEPHEWS:—I venture to say that most of you are perfectly posted in regard to premium lists and other devices that the insinuating publisher, about this time of year, sends around to all his friends, and to a great many people besides whom he would like to secure for friends. They are works of art, and I always like them because they are full of pictures and nice, seductive little romances, which, like the stories in the dictionary are "unco short," but very plain as to meaning.

Well, the RURAL'S publisher has proven no exception to the rule, and I find on my table (fresh from the mail,) a very nice premium list, indeed. One article took my fancy captive immediately and carried me back to days when I should have considered that to possess it would have been the acme of happiness. It is simply a jack-knife, but *such* a jack-knife! Look at it.



It would have been worth more to Robinson Crusoe than his man Friday, could he have owned it. Old as I am, I nevertheless, could not resist the temptation, and I now own a "multum in parvo" knife, as it is called. Indeed, it *is* much in little. I have gone about the house hunting for loose screws on which to try the screw-driver, which is so conveniently placed in the head of the knife just beside the big blade. I have notched the furniture (on the sly) with the saw-blade, have bored into door-jambs with the gimlet (I had nothing that I could open with the cork-screw), punched with the brad-awl, used the hook-shaped blade to lift covers from your Aunt True's stove, and then cracked nuts in the jaw formed by half closing it; in short, I have been the grand nuisance of the house (so your aunt says) for one whole day.

Now, boys, if you want something that will be more useful than your best friend, do as I did and get the knife—but, something occurs to me. You can't secure it as I did. I had to pay money, you may have it for nothing, or what amounts to the same thing, by merely sending in the subscriptions of five of your friends, which will cost them two dollars, each. I am not sure that I would own a nephew who would do without this knife—I would turn him over to Uncle Mark. I want to hear from the first boy who raises a club and pockets a *multum in parvo*, because then he can compare notes with UNCLE TRUE.

PENITENCE.

THERE is a touching story of the famous Dr. Samuel Johnson, which has had an influence on many a boy who has heard it. Samuel's father, Michael Johnson, was a poor bookseller, in Litchfield, England. On market-days he used to carry a package of books to the village of Uttoxeter, and sell them from a stall in the market-place. One day the bookseller was sick, and he asked his son to go and sell the books in his place. Samuel, from a silly pride, refused to obey.

Fifty years afterward Johnson became the celebrated author, the compiler of the "English Dictionary," and one of the most distinguished scholars in England, but he never forgot his act of unkindness to his poor, hard-toiling father; so when he visited Uttoxeter he determined to show his sorrow and repentance.

He went into the market-place at the time of business, uncovered his head, and stood there for an hour in a pouring rain, on the very spot where the book-stall used to stand. "This," he says, "was an act of contrition for my disobedience to my kind father."

The spectacle of the great Dr. Johnson standing bareheaded in the storm, to atone for the wrong done by him fifty years before, is a grand and touching one. There is a representation of it (in marble) on the doctor's monument.

Many a man in after life has felt something harder and heavier than a storm of rain beating upon his heart, when he remembered his acts of unkindness to a good father and mother now in their graves.

Dr. John Todd, of Pittsfield, the eminent writer, never could forget, how, when his old father was very sick and sent him away for medicine, he (a little lad) had been unwilling to go, and made up a lie that "the druggist had not got any such medicine."

The old man was just dying when little Johnny came in, and said to him, "My boy, your father suffers great pain for want of that medicine."

Johnny started in great distress for the medicine, but it was too late. The father on his return was almost gone. He could only say to the weeping boy, "Love God and always speak the truth, for the eye of God is always upon you. Now kiss me once more, and farewell."

Through all his after-life Dr. Todd often had a heartache over that act of falsehood and disobedience to his dying father. It takes more than a shower of rain to wash away the memory of such sins. Dr. Todd repented of that sin a thousand times.

The words, "Honor thy father and thy mother," mean four things, always do what they bid you, always tell them the truth, always treat them lovingly, and take care of them when they are sick or grow old. I never yet knew a boy who trampled on the wishes of his parents who turned out well. God never blesses a wilfully-disobedient son.

When Washington was sixteen years old he determined to leave home and be a midshipman in the Colonial navy. After he had sent off his trunk he went to bid his mother good-by. She wept so bitterly because he was going away that he said to his negro servant, "Bring back my trunk; I am not going to make my mother suffer so by my leaving her."

He remained at home to please his mother. This decision led to his becoming a surveyor, and afterwards a soldier. His whole glorious career in life turned on this one simple act of trying to make his mother happy. And happy, too, will be the child who never had occasion to shed bitter tears for any act of unkindness to his parents. Let us not forget that God has said, "Honor thy father and thy mother."—*Youth's Companion.*

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I have been a constant reader of the letters from the cousins belonging to the Horticultural Club, and have been so much interested that I, at this late date, request the best of Uncles to enroll my name with the rest of the Rural Cousins. I am eleven years old and am very fond of flowers, I can do a great many kinds of work, but my delight is the flowers of which we have many kinds. We have also a great many beautiful wild flowers. I wish you could see them, they are such curiosities. Your nephew,

Butler Co., Kan. LUTHER H. BROWN.

UNCLE MARK:—Will you please put my name on the list of the Horticultural Club. Papa gave me all of the flower seeds from the RURAL this spring, some of the plants are nearly three feet high now. Papa made me a rustic flower-stand for the window this winter, it is filled with plants now. Uncle Mark, will you please tell me how to grow English Ivy from cuttings, I have tried it and they all die.

Your niece NELLIE.

Hamilton Co., Ohio.

[Cut off the cutting just below a leaf and also half way between the second and third bud, set them in a pot or box and keep them moist and warm.—U. M.]

UNCLE MARK:—I am nine years old. My father has a farm, and has given me a piece of ground to cultivate. I have raised some nice vegetables this year. He takes the RURAL too and from the Acme seeds which you sent to him, he raised some of the finest tomatoes ever grown. I like to read the letters from the boys and girls and I also wish to join the Horticultural Club, if you can take me as a member. WILLIE C. HOYT.

Dutchess Co., N. Y.

UNCLE MARK:—I see that you are letting the Aunties join the Horticultural Club and as I am a lover of flowers and also of the RURAL, I thought I would like to join. I have two sisters, Abbie and Hattie, with me and we each have quite a variety of house plants. If I am accepted as a member I will write again. AUNT ELIZA.

Oakland Co., Mich.

[You are welcome Auntie.—U. M.]

DEAR UNCLE MARK:—I was very glad to see my letter in print, but I was sorry I did not tell you where I live, as I want to join the Horticultural Club with the rest of the cousins. Please put my name down now. Mamma and I dug the Beauty of Hebron potato you sent, and we had eighteen pounds from one potato; fifty-four large ones and thirteen small ones. FREDDIE STACKPOLE.

Snohomish Co., Washington Territory.

DEAR UNCLE MARK:—I am a very little girl, but love flowers so much. I and little sister Nellie try to have nice flowers all the time. We have such lovely warm weather here, that we can have flowers all the time. Nellie and I wish to join your Horticultural Club, so we can get some of your flower seeds. EUGENIA S. MITCHELL.

Fort Meade, Fla.

Mary Anerley. A. Novel.—R. D. BLACKMORE.

STOCK RAISING IN COLORADO.—It is carried on, as must be generally known, from Texas to a region considerably north of the Union Pacific Railway, and great herds pass from the Lone Star State through Kansas, and up to the great iron roads running east and west. In New Mexico, in Southern Colorado, on the Arkansas and its tributaries—the Fountain, the St. Charles, the Muddy, the Cucharas, the Huerfano, and others— in the great parks over across the range, and over the plains in Colorado, Nebraska, and Wyoming, the herds roam, and the *rancheros* ride. Between Denver and Julesburg, on the Union Pacific Railroad, lay the immense range of the late Mr. Ayliff, one side of which was fifty miles in length. He is said to have begun fifteen years ago with a capital of $100, and his estate is valued at $1,500,000. It was interesting and instructive to hear how one of his friends accounted for this unusual success: "Some people try to attend to several things, or to do more than one kind of business, but he only thought of one thing for those fifteen years, and that one thing was cattle. And attending only to that, and working at it and thinking about it all the time, he came to understand it wonderfully well, and to have perfect judgment about making the most of stock."

A dissertation on the cattle herds of the Great West would occupy a large volume, and those who have chosen other parts of this domain than Southern Colorado are doubtless competent to "give a reason for the faith which is in them," and amply support the wisdom of their choice of location. To us this same Southern Colorado seems to present on the whole, the greatest advantages. It is traversed by railroads, and accessible from all sides; and the climate is most salubrious, and so mild in winter that the stock can remain on the range throughout the year. Other things being equal, there are many men who highly prize the grand, ever-present spectacle and genuine companionship of "the everlasting hills." No doubt in other regions land can be had more cheaply, and sometimes occupied without fee or reward, but there are sure to be counterbalancing disadvantages.

Above a certain latitude, and notably in Wyoming, great losses have occurred from severe winters, and not very far to the north the "Lo family" (as the noble red man—"Lo! the poor Indian"—is called on the plains) comes in to disturb and molest. All admirers and advocates of these hyperborean regions have ample opportunities to rise and explain; be ours the pleasant task, reclining under the spreading cotton-wood, and in the shadow of the Sierra Mojada, of singing the eclogues of the valleys of the San Carlos and the Huerfano,, for it is "not that we love Cæsar less, but Rome more."

We have said that water was the prime requisite, and the banks of streams are the first sought. Government land is divided into sections of 640 acres (a mile each way), and quarter sections of 160 acres. What more simple and easy, we hear some one ask, than to take up four quarter sections in a line along the stream, and while we only own, strictly speaking, a quarter of a mile in width, to occupy, without let or hindrance, away back to the divide (ridge between that valley and the next), being sure that no one will have either the motive or the will to dispute with us the possession of this arid area? Nothing, certainly, except that a number of able-bodied citizens beside yourself have not only conceived this same idea, but acted promptly on it, and that in consequence, the supply of water frontage may be found inadequate to meet the demand, and its market value, consequently and proportionately increases. There are always, however, ranchmen willing to sell, for one reason or another, and no one need despair of obtaining a good location at a fair rate, with the improvements ready made. Then he can buy his stock, mainly, if he be wise, on the spot and in the neighborhood; for, with the great improvement now taking place in breeds, it is no longer desirable to buy largely in Texas. Then come his "cow-boys," or herders, not Mexicans, as in old times, but generally stalwart Americans, quick of hand and deliberate of speech. They are provided with swift and sure-footed horses, generally, in these days, of the *broncho* type— a mixture of the American horse and the mustang.

It may now fairly be asked, where else in the world, and in what other known way, can a man sit down and see his possessions increase before his eyes with so little exertion involved on his part? With the dawn the cattle are all grazing. Thin and gray enough the grass looks to the inexperienced eye, but the ranchero well knows the tufts of buffalo and gramma growth, gauges the value of this feed as compared, in the matter of nutriment, with the richest greensward of apparently more fertile regions, and remembers that it grows afresh twice a year. Then, with the utmost regularity, and some time before noon, the whole herd—the splendid bulls, the plump steers, the red and white and roan and mottled cows—take their accustomed trail, and seek the water with unerring certainty. Then back to the grazing again, and again, and feed until

> "The embers of the sunset's fires
> Along the clouds burn down,"

and night brings them repose.—A. A. HAYES, in *Harper's Magazine for November.*

THE MUSICAL RECORD for Oct. 18, besides many interesting articles on musical matters contains the music of Michalis's celebrated Turkish Parade March, and that of Handel's popular, Angels Ever Bright and Fair. The Record is published by Oliver Ditson & Co., Boston. Single copies .05. Yearly subscription $2.00.

PERSONAL ITEMS.

Mrs. Nellie Sartoris, accompanied by her husband, will sail for this country in a few weeks.

Shakespeare was married when he was 18, Dante at 23 and Brigham Young when he was 18, 19, 20, 21, 22, 23, 24 and so on.

It is announced that Elizabeth Cady Stanton has a daughter old enough to vote. Thus will the suffrage movement be kept going.

Property left for educational purposes by William Hulme of England, valued in 1691 at $200, is now estimated at from $2,500,000 to $3,500,000.

Empress Eugenie's household at Camden Place is broken up. Her faithful henchmen, Dr. Conneau and M. Pietri, have virtually taken their leave of her.

Ex-Governor Hendricks has a bet of a cane with Editor E. B. Martindale, of the Indianapolis Journal, that Grant will be the next Republican Presidential candidate.

Sir Garnet Wolseley is not an Irishman, it is now reported, but the head of the family is Sir Charles Michael Wolseley, an English baronet of a creation in 1682 and a Catholic.

Ella Judd was a clerk in the Post Office at West Stockbridge, Mass. She could not bear to let the letters sent by Mr. Paulding to a young lady pass through her hands without reading them. She was caught opening them, and will be prosecuted.

A Miss Whitten, now at Damariscotta, Me., has probably the longest hair of any woman in the world. It is eight feet long and when dressed in a French twist it passes six times around her head. The growth is perfectly natural.

Nordenskjold, the explorer, is a man of medium hight and robust frame, with hair of the true Viking color, a hale, fair complexion and a clear, bright eye, whose powers of vision, however, are somewhat dimmed, if wearing spectacles is any criterion.

Alfred Bentley of Hardinsville, Ky., refused to pay the rent of the farm on which he lived, and declared that he would submit to no remonstrance about it. James Bight, the landlord, rode to the place to confer on the subject, and the tenant shot him on sight with a rifle, killing him.

Gasparoni, a brigand, who in his day was the terror of all Italy, and of whom all manner of strange and romantic stories have been told, is dead at last, at the age of 90 years. Very peaceably did the old man die, "in the poorhouse at Ablategrasso," says the telegram from Rome.

It is the common belief that Sitting Bull is the chief of the Northern Sioux. The Sioux City (Iowa) Journal says that he is not the chief, but that Black Moon is head chief or "President," Sitting Bull "Secretary of War," Iron Crow "General" and Big Road "Brigadier-General."

The late Major Thornburgh is said to have been one of the best marksmen on the frontier. He could break glass balls with almost unerring skill; a friend relates that on once tossing a nickle into the air Thornburgh fired at it, and the bullet struck the piece of money when about 15 feet from the ground.

Cetewayo, the Zulu King, is rather a handsome man. He has a singularly dignified and stately air; a tall, sinewy figure, good features, a fearless glance, beautiful teeth, a head splendidly set upon his shoulders and a velvet skin. His attire is likewise impressive—a $2 tablecloth of the ordinary red and green pattern.

Mr. Blaine is a distinguished-looking man with broad shoulders, snowy beard and iron-gray hair. It is said, moreover, in reference to his manner of speaking, that he is "a thorough stumper. He must have a space in which to speak, at least ten feet by four and he will cover every foot of it, and keep those crowded about the borders dodging to avoid his fists."

Isaac G. Jenkins, a wholesale merchant, of Syracuse, N. Y., wound up the week on last Saturday evening and wearily trudged home, thinking as he went that the world's a hard world at best. When he took a seat in his library a letter was handed to him, and opening it carelessly he was electrified to find $2,500, with the simple explanation: "I robbed you of this years ago." Mr. Jenkins hasn't an idea who the conscience-smitten person may be.

Over the entrance to the main reception room at Senator Sharon's residence, on the night that the rich Californian entertained General Grant, was a floral piece which has occasioned much comment. It was the word "Welcome," each letter being a lovely marvel of alternate natural color. The "W" was of carmine geranium bloom, the first "E" and the "M" of white jasmine, the "C" and final "E" also of carmine geranium, and the "L" and "O" of alternate Swiss violets and ageratum. The "Welcome" was the only floral motto.

Study Hop Bitters, use the medicine, and you will be wise, healthy and happy.

New Publications.

New Operas!

Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.

Fatinitza. Opera by Suppe.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.

Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15

Bells of Corneville. By Planquette, (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling for 50 cents) and who are looking out for new and easy operas.

Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple**, each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record**, published weekly. It keeps you well posted as to musical matters, gives 5 or 7 pages of music per week and costs but $2.00 per year!

OLIVER DITSON & CO., Boston.

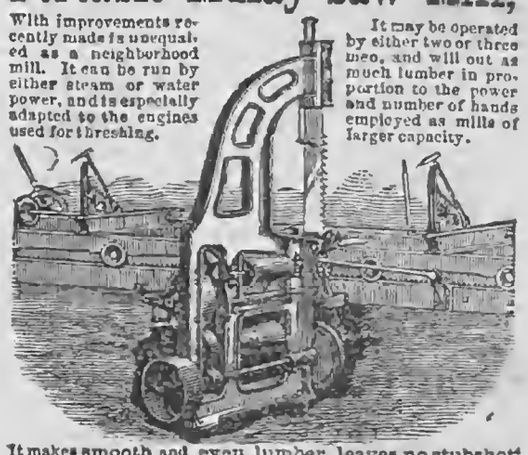
Portable Mulay Saw Mill,

With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.

It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.



It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.

Also manufacturers of the **Phoenix Threshing Engine** and the **Eureka Drain Tile Machine.**

FOR HUSKING CORN,

HALL'S PATENT HUSKING GLOVES are the most economical, because, being plated on the wearing surface, makes them last five times as long as any other kind of gloves; and for large-handed husking, *Hall's Patent Husking Pins* are the best in the market.

No. 45 Sewed Husking Gloves, per pair.....$2.00

THE MACKINNON PEN.

An Entirely New Writing Instrument for Desk or Pocket.

Writes seventy-five pages of foolscap with one filling, on any paper, with any clean writing or copying ink.
THE POINT is as smooth as diamond can be polished, is conical in shape, and glides over the paper as easily as a soft lead pencil.

CLEANLINESS.
It **cannot blot** or soil the hands, because ink cannot escape, except in the act of writing, and when not in use the pen is HERMETICALLY SEALED.

DURABILITY, CHEAPNESS.
Report No. 1135 of the Franklin Institute of Philadelphia reads: "The point of the Pen is ACTUALLY A RING OF IRIDIUM (diamond). . . . . It is at once tasteful and useful, and for the service rendered is NOT COSTLY. We cordially appprove of the instrument." The *Scientific American* says: "Our daily use of it demonstrates to us that whoever supplies himself with a MacKinnon Pen possesses a good thing."

NOTHING MORE APPROPRIATE AS A
HOLIDAY GIFT
TO A LADY OR GENTLEMAN.

☞ Be careful our Name is stamped on every Pen, as there is a Cheap Imitation in the Market.

All who wish to avoid the annoyances of the common writing materials should examine the "MACKINNON PEN" at their stationers, or address the manufacturers,

D. MACKINNON & CO.,
200 Broadway, N. Y.

☞ All persons owning one of our Pens of the first manufacture should send it to us by registered mail, to be made over with all the late improvements, which will be done at manufacturers' price, and warranted for **three years.**

BRIEFLETS.

THE foreign demand is for American *red* wheats. . . . Yankee speculators are accused of running up the price. . . The Cucumber has been cultivated for more than 3,000 years. . . . "James Veitch" is considered by many the finest Strawberry in cultivation in England. . . . The English potato, "Magnum bonum," has never yet, it is said, been attacked by *Peronospora infestans*. . . . Why not buy and sell eggs by the pound? . . . Disbudding apple trees to change the bearing year is, according to Mr. Robert Manning, a failure. . . . A. O. Scott, in the N. Y. Tribune, tells how a cat, having lost her young, adopted six young rats after killing their mother. . . . Sugar's up. . . . The acreage of wheat in England is less than for many years. English farmers have lost confidence in their climate and in their market. . . . Barley is more remunerative. . . . Many farms for sale—few buyers. . . . Come hither, cousins! . . . For the English farmer there is a great abundance of one commodity—advice! . . . In the face of want, one sickens of advice. . . . The London Times says that a keen appreciation of novelty, a readiness to adopt improved processes and the extensive application of machinery, constitute important elements in the industrial successes of the United States. That's the way we economise time, labor and expense. . . . J. J. Mechi cannot understand why farmers manure their gardens more abundantly than their fields. . . . The Mass. Ploughman says that the Belle Lucrative is the most delicious of autumn pears. . . . The Country Gentleman thinks that in quality the Croton is superior to Duchess, Prentiss, Lady, Niagara, or Pocklington, though of less vigorous growth. The Rebecca grape has a sweet, rich and very agreeable flavor, but the vine sheds its foliage too early and the fruit, therefore, fails to mature fully. . . . Croton is a yellowish-white, handsome grape, but the vine is subject to mildew. . . . A vineyard should not be cultivated later than July; late cultivation causes late maturity of the fruit. . . . Prof. Beal holds that of all organs the styles in the apple blossom are the most reliable for distinguishing varieties. . . . The Prentiss, which is sometimes spoken of as a new Grape, originated at Pultney, Kenka Lake, N. Y., where it has fruited for 15 years. . . . There are 10,000 acres in Grapes in Ohio. . . . Maine farmers get $5.75 a ton for sugar beets. . . . The growing wheat in southern Indiana and south-western Ohio is reported to be greatly suffering from the Hessian fly. . . The Nebraska Farmer thinks that hay is very beneficial to hogs. Cut itwith the hay-cutter—the greener the better—and mix with bran, shorts or middlings and feed the same as other food. . . The Rome Herald thinks that camphor is a cure for gapes. "An hour after a chicken has swallowed a camphor pill," it says, "the chicken smells of camphor. Camphor is a strong vermifuge and the worm dies." . . Now is the season, if ever, to graft Grape-vines. . . J. S. Wells, of Woodbury, N. J., bought a pound of the St. Patrick potato. It produced "two baskets" but they were "unfit for the table." . . . Mr. Bateham says, in the Ohio Farmer, that Duchesse d'Angouleme, Louise Bonne de Jersey and Beurre d'Anjou are the only pears which on quince stock can be recommended "for profit." . . Gen. Diven says that pasturing on low, marshy land is a cause of "ropy" milk; Mr. Copley thinks it due to impure water; the editor of the Husbandman quotes Dr. Henry Leffman (microscopist) to show that it is due to low forms of vegetable life by some means (unknown to him) infused in the milk. . . . John Roy spread 2½ bushels of salt on his wheat per acre and the growth of the wheat is decidedly stronger than on a piece not treated to salt. . . Judge Balcom says timothy may hurt wheat if sown in fall. Another member of the club remarked that if timothy made a good growth in the fall, clover will not take so well the next spring. . . . The London Ag. Gazette thinks that the only persons certain to be benefited by the Royal Commission are two members of Parliament, who have been paid to come here where no doubt they will have a most enjoyable time. . . "Cross a pure-bred Galloway with what you like," says a correspondent of the the London Ag. Gazette, "nine times out of ten progeny will be horuless and in other respects resemble the Galloway more than its other parent, which is a good proof of the breed being long established." . . Reports from Bessarabia (Russia) and Silesia (Ger.) state that rinderpest is very prevalent. . . American innovations in the way of farm utensils and machinery are the constant wonder of foreigners. . . England is discussing the merits of the Cooley creamer and generally with approval. . . Wages per month by the year in 1879 were lower in South Carolina than in any other State, and highest in California and Nevada. . . The Suffolk is the popular breed of hog among the nobility. . . Ten years ago, good grapes brought twenty-five cents per pound, now the average is less than five. . . The Hessian Fly has been very destructive to wheat in Russia. . . The Mennonites of Kansas have been successful in raising silk-worms. No doubt the United States is destined some day to become a great silk-raising country. The Mulberry grows luxuriantly, so does the Osage Orange. The one thing wanting is cheap labor. . . "People who are considered church folks are delighted with horse-racing at fairs. They would not attend a circus or allow their children to go, but an 'agricultural fair' is different you know."—N. Y. Tribune. . . The premiums for the next fat Stock Show in Chicago (Nov. 10—15) aggregate $5,000. . . "The Foster peach," says J. J. Thomas, "has proved one of the most profitable market peaches in Western New York and handsome profits have been realized. It resembles Early Crawford."

"ONE TOUCH OF NATURE."

(George has promised his Ethel the first shot for luck! A covey rises!)

Ethel (at the critical moment).—"Oh, George! Perhaps they, too, have loved!"

CORRECTION.—The modern name of Atlas, must be compositor, because his shoulders are so broad, and he so obligingly bears all the mistakes in the printing office. A case in point:—We had in our recent Fair number an advertisement setting forth the merits of Dr. Sykes's Catarrh cure and his insufflator, for which latter he charges $1.50. The compositor thought it would be an improvement to substitute "insufficator"—whatever that may mean—and he also came to the conclusion that doctor's price was too high, so he put it at $1.40, a reduction to which Dr. Sykes objects. Hence if our readers want an *insufflator* they must remit $1.50.

The North Pole and Equator

Are not more widely distinct than the standard tonic, stimulant and alterative, Hostetter's Stomach Bitters, and the cheap and fiery local bitters which unscrupulous venders foist upon the unwary as medicated preparations with remedial properties. The latter are usually composed in the main of half rectified alcoholic excitants, with some wretched drug combined to disguise their real flavor and are perfectly ruinous to the coats of the stomach. Hostetter's Bitters, on the contrary, has for its basis choice spirits of absolute purity, and this is modified and combined with medicinal extracts of rare excellence and botanical origin, which both invigorate and regulate the bowels, stomach and liver. They effect a radical change in the disordered physical economy, which is manifested by a speedy improvement in the general health.

SALE OF IMPORTED JERSEY & GUERNSEY CATTLE.

Per Steamer Cornwall.

Mr. P. W. Fowler, of the Clarendon repository, Watford Herts, England, will sell at auction without reserve

Biographical.

DR. ASA GRAY.

BY PROFESSOR W. J. BEAL.

PROBABLY every person in the United States and in the British Provinces of North America who has any knowledge of botany, has heard of Dr. Asa Gray and has some idea of the work he has done for his favorite science. At the present time, the masses of educated people have a much greater respect for botany than they had twenty or thirty years ago. They have learned that botany does not consist merely in hard names; that there is something more to learn about a plant than its name and description.

No person in America has done more to bring about this respect for botany than the subject of this sketch. He has done much to show how plants are constructed, how they grow, and how they behave. He has frequently pointed out some of the relations of botany to agriculture and horticulture, and the relations which plants sustain to all of the organic and inorganic world. He has done much to make botany popular, by his essays, by his books and by his teaching in Harvard University. In 1836 his first text book appeared and was called "Elements of Botany." Since then, at various times, have appeared others, till now we have "How Plants Grow," "How Plants Behave," "Lessons in Botany," "Manual of Botany," "Field, Forest and Garden Botany" and "Structural Botany." These are all good, but the best of them it seems to the writer, is "The Lessons," and the poorest. "The Field, Forest, and Garden Botany." A new edition of the "Structural Botany" has just appeared. This has been almost entirely rewritten; much matter has been dropped, much added, and the book brought up to the times. He has omitted most that pertains to the anatomy and physiology of plants and also the illustrated accounts of the prominent natural orders. The work is adapted to advanced students, and it is the best work we have in the English language on the subjects on which it treats.

In 1842 he was elected Fisher Professor of Natural History in Harvard University, and has occupied this chair ever since that time—a period of thirty-seven years. Until within about five years, he has taught the classes in botany at Harvard. It may not be generally known that his name appears as first among the list of Professors appointed in the University of Michigan. This position he never filled, but soon resigned to go to Harvard. As a teacher his greatest forte is in directing the studies of his special or advanced students. He is extremely fond of plants and everything that pertains to them. He admires their beauty; he likes to study all of their adaptations to the rest of the world. It is almost impossible for any person to work under his direction and in his presence without catching something of his inspiration. Nearly all the leading Professors of Botany in the colleges of the United States, have been students of Dr. Gray for a greater or shorter period.

By many he is known for his valuable text books just enumerated, but these constitute but a small part of his work. He has described and named a vast number of flowering plants which have been collected in numerous exploring expeditions. These descriptions appear in numerous government and State Reports which need not here be enumerated. These are very valuable contributions to science, but they are almost lost sight of by the mass of the people. One of his earliest contributions was a work on grasses, sedges and the like, the former of which are of such great value to the farmer. One of his greatest works is "The Flora of North America," begun in 1838. The first two volumes were prepared jointly with the late Dr. Torrey. They extended through the *Compositæ*. Dr. Gray has lately renewed the work and has alone printed part first of a third volume. In 1848 appeared the first volume of his "Genera of the Plants of the United States." The object in this work was to describe a prominent species of each genus of plants in North America. These were accompanied by detailed drawings by Isaac Sprague, the best botanical artist in this country. These drawings are marvels of accuracy and have never been excelled in any land, and probably they were never equaled. The text was prepared with great care. The work only passed through two volumes. It is now rare and costly. Dr. Gray was ready to continue the work, but the artist could not be induced to do so. He thought his drawings were not appreciated.

In connection with his other work, Dr. Gray did considerable towards maintaining and increasing the botanic garden, greenhouses, etc., at Cambridge. In the early part of his studies, he was an industrious collector of plants and laid the foundation for the great herbarium at Harvard. He has made valuable contributions to botany in a host of miscellaneous papers and reviews contributed to the American Academy of Arts and Sciences, to the American Journal of Science and Arts, North American Review, Atlantic Monthly, Transactions of the American Pomological Society, and to numerous Journals of Agriculture and Horticulture.

In 1837—42 years ago—appeared the first contribution we find in the American Journal of Science and Arts. This was a paper read before the Lyceum of Natural History in New York, October 24, 1836. The subject was "Vegetable Fecundation." Then soon follow other valuable papers—one on synonymy of several plants of the orchid tribe, notes on European herbaria, and a botanical excursion to the mountains of North Carolina. In 1853 Dr. Gray appears as associate editor of the journal last named, and has held this position up to the present time—a period af 26 years. One of his ablest articles was that in which he points out the relations of the Flora of Japan to that of Eastern North America. Almost every work of any merit on botany, which has appeared in any country within the last twenty-five years, has been ably reviewed by Dr. Gray in the American Journal of Science and Arts. His own works were reviewed by others. He has taken up many knotty problems in botany, and has lived long enough to see most botanists fall in with his conclusions on the subjects investigated.

Asa Gray was born in Paris, Oneida County, New York, November 18, 1810. He graduated as Doctor of Medicine at Fairfield College in 1831; received the degree of LL. D. from Hamilton College in 1861. For some years he was president of the American Academy of Arts and Sciences, and in 1872, president of the American Association for the Advancement of Science. He is honorary or corresponding member of any number of leading foreign scientific societies. His name stands above that of any other American botanist, and ranks with the best of those in Europe. Systematic botany is his forte. He is especially intimate with Charles Darwin and Sir J. D. Hooker.

All this work has required a long life with great industry and perseverance. He has enjoyed almost uninterrupted good health which he has preserved by good regular habits and some relaxation at regular intervals. He does not find it necessary or best to study all night, or for half the night for a part of the time, and then rapidly break down and rest or recruit for a long time. He lives on plain food. His best hour for work is from 9 to 10 P. M. when he is not likely to be interrupted. He retires at 10 or 10½ o'clock, sleeps well and long. Although he has done a vast amount of work, on account of his excellent habits he seems still active, in full vigor, and good for many years yet to come.

DR. ASA GRAY.

The author acknowledges some items from the first volume of the Popular Science Monthly. To some this sketch may seem too much like a eulogy. It is true of Dr. Gray, as of every one, that he has some faults. In this case they are of minor importance. He has done much to help others. He has never sought his own advancement. He is not a schemer in any sense of the word, but rather retiring and avoids notice or promotion. He is strictly honest in every sense of the word, and likes to see fair play and justice done to every one, even the humblest worker. A man with such sterling qualities is so rare that he should be held up as a grand example for young students to follow.

EXPERIENCE WITH BLOUNT CORN.

L. J. TEMPLIN.

THERE seems to be such an interest felt in the above variety of corn that I have thought that a report of my experience with it, might be of interest to the readers of the RURAL. In the spring of 1876, just before leaving Union City, Ind., for this place, I received through the editor of the Union City Eagle, a small packet of the White Prolific corn direct from A. E. Blount, of Cleveland, Tennessee. In the confusion and hurry of moving this long distance and getting started in business, this corn was forgotten till late in June, when it came to light. I planted it in the garden near the house in a rich, friable, loamy soil. It grew well till the locust invasion that began on the 28th of August, and lasted seven days. During all this time the "hoppers" were about us as thick as they could hop, frequently averaging one for every square inch of the ground. The corn had just reached the early stage of the milk state. The locusts "went for" it, and I "went for" them, but they were "too many" for me. I soon found that a retreat was necessary to save a single vestige of the much praised corn. I therefore cut it off at the ground and carried it to the cellar. Here it remained till the destroyers had left us. I then carried it out and set it against the fence till thoroughly dry. I then pulled it off, husk and all, and laid it away in a dry place till spring. It then appeared to be simply chaff, but I determined to give it a chance. To make sure of a stand, I put from six to eight grains in a hill, and, to my surprise, every grain seemed to grow. From this I learned a lesson about seed corn. Of course, I had to pull up over half of it, but I still had enough left to give me two or three bushels of good, sound corn.

In the spring of 1878, on the first day of April, I planted two acres of this corn five feet apart each way, among some young timber just set. The soil was a light sandy loam, the season was very wet, and it was cultivated but twice. I did not measure the corn, but I never saw such a wilderness of corn before. It ran from three to five ears to the stalk, with occasionally seven to nine inferior ones. I thought this was *the* corn. The ears were of good size, plump and sound with small cob, and, what is of importance here, it was but little injured by the corn worm.

I was so well pleased with it that I planted last spring, about 22 acres of it. The soil is good, black loam. It was planted in good season and well cultivated. It grew well till shooting and filling time, when the drought, which had been prevailing to a greater or less extent all the summer, became so severe as to seriously check its growth. The result is about 15 bushels of small ears to the acre. Two other varieties, one white and the other yellow, growing in the same soil and with similar culture, yielded about double as much as the Blount.

Now, what is to be done? Am I to conclude it is a failure and discard it? I do not think so, but I think I have learned something of its nature and requirements. As many of the RURAL readers have doubtless learned this season, this corn is a very rank grower, making a wonderful growth of both stalk and foliage. It is consequently a gross feeder, requiring an abundance of available plant-food to meet its requirements. A rich soil deeply stirred, with plenty of moisture, seems to be demanded by this plant. Another condition required for success with it, is abundance of room. If I were planting for the best results in this part of the country, I should plant at least four feet apart each way; and am not sure but 4½ by 4½ would be still better. I should then never leave more than two stalks in a hill. It grows so tall and has such a wealth of foliage that it requires considerable room for the sunlight and air to pass through it.

This corn has some qualities that recommend it to the attention, among which are its prolific character, the smallness of the cob and its comparative immunity from the ravages of worms. As I have said above, when it does well it yields enormously. Mr. Blount speaks of trying to still farther reduce the size of the cob. This seems to be scarcely needed, as the cob is already so slender that it requires rather careful handling in husking and shelling to prevent breaking the cob near the middle. Besides, a small cob is not considered so desirable a quality in this country as in other places, on account of the fact that corn cobs are generally used for fuel, so a large cob is desirable rather than objectionable. One difficulty we have to contend with in our corn crops in this region is the spindle-worm, which works in the grain on the ear. Frequently almost every ear is more or less injured by this insect. The Blount corn, on account of the closeness of the husk or other cause, is very little damaged by this injurious caterpillar. This enables us to market it at a better price than can be obtained for corn otherwise as good, if not superior.

My experience with this corn leads me to these conclusions:—1, where the conditions are favorable, it is a profitable crop to raise; 2, its liability to failure in the absence of these favorable conditions, at least in this country, renders it unsafe to depend upon it for a principal crop. In conclusion therefore I would say: those who have been charmed with its vigor, prolificacy, etc., this year, should plant with caution next year, while those who have been disappointed in it, should not condemn it without further trial.

Reno Co., Kan.

Farm Topics.

AUTUMN WORK.

OUR object in this article is not to give any definite hints or instructions in regard to particular work to be done at this season of the year, but rather to offer some suggestions on the general principles that should guide us in deciding on the method and order of fall work, and, from the errors of the past season, to point out the mistakes which the careful farmer should avoid next year. Prominently in the mind of every farmer at this season of the year should rest the great fact that

Winter is Coming.

Future rain, wind, snow, frost and steady cold, with frozen ground, are, each and all, important factors in deciding the question, often a puzzling one, what class of work or what particular job of work shall be done first. Roads, markets and varying prices must be considered, too. A general knowledge of the condition of the crops throughout the country will be deemed essential by every intelligent farmer in deciding whether to market or hold any particular crop; and to gain this knowledge he will carefully read two or three good agricultural papers that give reliable information on this point from all parts of our broad land.

These general principles will become clearer by a few illustrations. For instance, take the factor, frost. Thousands of acres of hill corn this year, in the Middle and Eastern States, had the stalks *entirely ruined for fodder* by a September frost. We refer to those parts of the country chiefly east of Indiana, where the fodder of hill corn is deemed an important item—indeed, *the one item* that makes corn-raising pay at all in competition with the "Great West." Now this corn was sufficiently ripe (glazed) to cut up and "shock" before the frost came. But other fall work was pressing, and corn-cutting was deferred, till finally a big September rain cooled the air, and a stinging frost settled the fodder question. The writer chanced to drive 50 miles the day after the frost, and saw scores of farmers eagerly cutting up the corn, *just one day too late*. Almost any other fall work might better have been deferred. Not a day should have been lost after the ears were glazed so as not to shrink by the cutting of the stalks.

Again, suppose that, October 1st, the roads are good, weather fair, late potatoes ripe or the tops killed by frost, and prices high, but the acreage and yield large throughout the country. The shrewd farmer, knowing these facts, and living within a day's drive of a good city market or country shipping station, will strain every nerve to dig, team and market his potatoes before the roads grow heavy or the market breaks. "The early bird catches the worm."

Or, again, suppose the general acreage and yield to be small, or the roads bad and the weather "catching." Now the shrewd farmer will use his best endeavors in fair weather to get his potatoes out of the wet ground and into the dry cellar or store-house. He will let the marketing go, lest old Winter *freeze* his potatoes in before he *gets* them in. All other work will receive the "go-by."

In general, it is well to drive the work and not let the work drive you. Once behind, and it is hard to catch up. We know some farmers who were born two weeks too late, and have never yet made up that fortnight! And a farmer trying to catch up with his onstriding work, is like the belated passenger trying to catch the departing train—both find it "up-hill work" even on level ground. The farm, like the "steam wagon," will always have a passenger aboard that it has "left behind." It is far better, we repeat, to drive or be a little ahead of the work. For example, it is well to have the marketing of early apples, potatoes, etc., as well as all cutting and curing of aftermath, Hungarian grass and fodder corn—including hill corn—well out of the way in the pleasant weather of August or early September, before the late potatoes and the winter fruit are ready to handle. Then these can be promptly finished before the time for husking and other late fall work. When two pieces of work are both ready to be done at the same time, the general rule would be, of course—unless it be possible and wise to increase the working force temporarily—to defer the one that can be postponed *with the least risk*. For example, there is little risk in deferring turf-plowing or tile-draining in October, but great risk in deferring the digging of potatoes, or the pulling, drying and housing of field beans after they are ready. And so

The Lazy Man's Motto,

"Never do to-day what can be done *just as well to-morrow*," is often sound philosophy for the farmer in deciding on the order of fall work. In general, we should say that it is well to get ready for winter before beginning on tile draining, clearing rough pastures, plowing turf and similar work that can be suspended at any time or continued more or less through a mild winter.

SALT AS A PREVENTIVE OF RUST AND AS A FERTILIZER.

H. S. WYSOR.

It is worthy of note that the present fall has brought out many inquiries through the columns of the agricultural press in regard to the virtues of common salt as a manure. In the columns of the RURAL especially, I notice several questions as to when salt should be applied, and how much. As much interest seems to be manifested in the subject, perhaps the following information, collected mainly from Johnson's Encyclopedia of Agriculture, may prove of value.

Salt as a Preventive and Destroyer of Rust.

Salt, if not a complete preventive, is an effectual cure of the mildew. Mr. Chatterton, a Lincolnshire farmer, says, in the 44th vol. of the Annals of Agriculture: "On the seaside wheat is little damaged by the mildew, yet within three miles inland, the crops are as much affected as those still further from the sea. This fact can be supported by the experience of most farmers whose fields skirt our native shores, and unquestionably it is owing, not only to the fact that soil contains a greater proportion of common salt than is found in more inland soils, but because the sea-breeze, which rises almost nightly in the summer season, bathes, as it were, the crops in the immediate vicinity of the coast, and this haze holds in solution a portion of salt." (Has the RURAL any information on this point in regard to the wheat fields bordering on *our* sea-coast?) [We have never raised a crop of wheat without rust, and the Rural Farm is close to a salt-water bay. Spring wheats of last year were sensibly injured by it.—EDS.]

It is well known, as it is an experiment which has been repeatedly tried, that a solution composed of one pound of salt to a gallon of water—a safer solution would be 8 oz. of salt to the gallon of water—laid on with a plasterer's brush, has completely subdued the rust after it had already considerably affected the wheat plant. It is said that two men will get over about four acres a day with this mixture. (It is evident that this application is not practicable except on a very small scale.) The straw recovers its original color and brightness in less than 48 hours after the solution has been applied. The action of the salt is thus explained:—Mildew, being a parasitical plant of the fungus tribe, its principal constituent is water, and when salt is applied to it, the aqueous portions are immediately absorbed and their vitality destroyed.

Salt as a Manure.

It would be, perhaps, difficult to name any other substance in the catalogue of modern fertilizers, whose powers have been so often and so warmly disputed, as common salt. The following conclusions, which I merely summarize, seem, however, to be established:

1. In *small proportions* it promotes the decomposition of animal and vegetable substances.

2. It destroys vermin and kills weeds, which are thus converted into manure.

3. It is a direct food of some plants; and it has been clearly ascertained that if salt is applied to the soil, the vegetables afterwards grown on that land, are found to contain an increased proportion of common salt.

4. Salt acts on vegetable substances as a stimulant.

5. Salt preserves vegetables from injury by sudden transitions in the temperature of the atmosphere. That soils, when salted, do not freeze as readily as usual, is well known. (I have myself observed that in places where cattle are wont to be salted, the ground seldom or never freezes.)

6. Salt renders the earth more capable of absorbing the moisture of the atmosphere. Salt rarely causes the wheat plant to grow larger or taller, but it fills up the ear better, and brings the weaker plants forward. Mr. Sinclair tells us that salt appears to lessen the production of straw and increase the weight of the grain. Salt should be applied some time before sowing the seed, not less than ten or more than twenty bushels per acre. This quantity gives an increased yield of six bushels per acre. The subjoined experiment was conducted by Mr. Johnson himself in 1820.

Produce per Acre.

	bus.	lbs.
No. 1. Soil without manure for 4 years.....	13	26
" 2. Soil manured with stable dung to the previous crop (potatoes).....	26	52
" 3. Soil with 5 bushels of salt per acre, and no other manure for 4 years.....	26	12

As refuse salt can be purchased at comparatively cheap rates, I trust the experiments conducted this coming season, will give us more satisfactory evidence of its value.

Entomological.

VINE-LEAF HOPPER.—(Tettigonia Vitis.)

S. B. PECK.

Except the codling-moth, the above-named insect pest is the most uncontrollable and unconquerable I have ever encountered—and if any one can, through the RURAL, give me and many others any valuable light on the subject, he shall have my most hearty thanks, and can call on me for a basket of grapes, taking his choice of my 25 bearing varieties. By a correspondence with Professor Riley, I learn that there are several generations of the vermin in a season; that the eggs are probably inserted in the veins on the under side of the leaf; that the insect hibernates in the perfect form in any shelter afforded by cracks or loose bark of the trellises or stakes and under the fallen leaves.

I have for the two past seasons raked up all the fallen leaves and prunings and burnt them, and on the appearance of the winged insect the past season, I drenched the vines with a solution of 10 pounds of lime with two ounces of sulphur, and with one drachm of carbolic acid to a gallon of water, and one spoonful of benzine to a pail of water. These two are supposed to mix with water, and are used with a syringe; I also used kerosene poured onto water and skimmed off and applied with a whisk. Moreover, I drenched the pests with tobacco tea; but it was all to no perceptible effect. I have burnt tar and tobacco stems under them; put vinegar on chloride of lime under them; hung sprigs of tanzy, of cedar, tomato vines and stramonium among the vines; burnt torches of fat pine, dipped in kerosene, among them by night and by day, all of which, although the treatment has evidently disturbed them somewhat, has failed to diminish their numbers or ravages.

That they have a choice in the varieties of Grapes, like the rest of us, is quite evident. They seem to prefer, for first choice, the Clinton, next the Taylor and Winslow, leaving the Franklin, which is similar in fruit and leaf, preferring to that the Delaware, Iona and Israella. I find plenty of them also on the ten varieties of Rogers's Hybrids that I have, but the leaves of these being large and thick, their ravages on them are not so plain. They like the Isabella much better than the Catawba or Diana. The Concord alone seems invulnerable to them, though the Hartford and Ives's and a few others having similar leaves, are not much injured. The last remedy tried was firing an old Revolutionary musket under them, hoping to kill them by the concussion, as had been proposed; but it only jarred some to the ground and astonished them, but seemed not to have hurt a hair of their heads.

That many insects have a dislike to certain odors or perfumes and will avoid them, I am well satisfied. The evidence is quite strong that the presence of hogs and sheep keeps away the codling-moth from their immediate neighborhood; but that the destruction of their larvæ by the eating of the unripened fruit by these animals, has any perceptible effect in reducing the number of the pests, I cannot believe; for of the fallen unripe fruit I venture to assert that not one in 50 falls with the worm in it. On my grounds a row of 24 Clinton vines of one year's growth, had tomatoes transplanted between them. Before that there were evidences of these pests; but since a few days after that, not one has been seen there. The conclusion I arrive at is, that though these odors and appliances may keep off the parent insects, they have little effect in destroying their progeny, if applied only after the hatching of the eggs. I resolve therefore that in the event of no further light being thrown on this subject, I shall, before tying up the vines next spring, bespatter the wooden part of the trellises with the solution of lime and sulphur, using a garden syringe, and during summer, supplement this with the other strong-scented washes and sprigs.

The cut-worm, the plum curculio, the pear and cherry slug and the potato-beetle I know how to manage; the cabbage worm I never saw, because I neither raise nor eat cabbages: the lice on trees and plants generally leave of themselves after a year or two, as little Bopeep's sheep came home; but these leaf-hoppers and the apple worms steadily increase on my hands, or rather on my plants, in spite of all my efforts to diminish them.

Floricultural.

EXPERIENCE WITH FLOWERS.

I LOST three Coleuses of different kinds by not being ready for cold weather and Jack Frost. I had brought the plants I intended to keep up-stairs onto a south porch. The weather was so warm that I put off day after day the task of putting them in their winter-quarters—two shelves at a south window in my sitting-room. One night I was up rather late, and stepped on the porch before going to bed. The air seemed a little sharp, as though there was a touch of frost in it. We had had none to harm even the tomato vines, and they, you know, generally give the first sign of Jack Frost's presence. I was tired, it was late, and it would be no little work to carry all of the pots into the house, so I persuaded myself there would be no danger if they were left where they were. But to guard against risk, I picked up a table-cloth lying near, and spread it over the plants. In the morning—well, the ground looked as if snow had been sifted over everything, and my heart grew heavy at the thought of the beloved plants I had been so proud of. I hurried to ascertain how much harm they had suffered. I lifted the cover; all seemed right but one Geranium, which was nearest the front and had been accidentally left uncovered. It was frozen stiff. I set it on one side, supposing, of course, it was killed. No such thing. As the sun gradually came up and rested upon it, and the air grew warmer, it thawed out, and now I do not know which one was frozen. The sun which saved my Geranium showed, as the day advanced, that more serious harm had been done. Three of my finest Coleuses gradually drooped and died. Of over 20 different kinds of plants, they were the only ones which perished. I had been told they were tender, but I supposed no more so than Salvias, Begonias, Achyranthes and others.

Can Smilax be grown luxuriantly in our common sitting-rooms? [Hardly.—EDS.] Mine troubles me considerably. It was sent to me last spring—a fine, large, dry bulb. I potted it and sank it in the ground. It started to grow finely. All at once it stopped growing; the leaves turned yellow. I imagine it was because I did not water it enough. Again it started, and the potato bugs ate every leaf off of it. I cut it back, and now, a third time, it is trying to get a start, but it has not grown six inches in as many weeks. How do florists manage to raise it by yards, as they certainly do? [Florists who grow Smilax largely have greenhouses in which they grow little or nothing else, and the soil, temperature and moisture are made to conform to the requirements of the plants.—EDS.]

I found something queer, or at least it was so to me, on a small Abutilon. It had seemed to droop for several days, I thought perhaps from lack of water, but, as after watering it did not seem to recover, I picked it up one day to examine it. To my surprise the stem of the plant and even the leaf stems were all rough and knotty-like and brown in color. I took a

pin and scraped the stem, and all of the knots or scales fell off. Now what were they? I have heard of such a disease as the brown scale; was this it? [Yes.—EDS.] At any rate, it has killed my Abutilon. I find no trace of the ailment on other plants.

Last winter I had no sign of an insect of any kind on my plants all the winter through, and I attribute it to smoke from the stove. It was a base-burner, and was out of order some way, so that it troubled us a great deal "smoking," and I think the gas and smoke together killed the insects, and they came near killing all my plants, too. One night the stove "smoked" all night and the room was shut up; in the morning we could not see into the room. As a consequence I had rather a sickly lot of plants for a while, nearly every one dropped its leaves, and I felt sure they were all going to die; but they gradually recovered; *perhaps* it did them good.

I have two Geraniums I am very proud of, Master Christine, a pink, and Pride of Mount Hope, a bicolor scarlet. I had a plant of each last winter, which gave bloom incessantly from the first of November till I sank the pots in the ground in the middle of April. I thought they ought to rest then, so I pinched off all buds and left them to take care of themselves. Soon they threw up flower-stalks again, bloomed and ripened seed. I dropped these beside the plants and slightly covered them with earth. Soon they were up. This fall the Pride of Mount Hope seedlings are not over three inches high, but of the Master Christine seedlings, one was larger than the parent plant, and was in bloom by the middle of September; the others were budded when I took them into the house. Who can beat that? The old plants took no vacations, but bloomed all summer, and I believe would all winter, if I had not put them in the cellar.

I raised some Browallia this summer and was much pleased with them. There are so few blue flowers suitable for bouquets, that can be obtained at all times during the summer! This blooms till frost comes. This year is the first I ever raised Sweet Alyssum, to give me satisfaction. Turnip bugs generally ate it up or there was some other trouble; and I used to wonder why people recommended it so highly. I know now. It looked like a bed of Snowflakes this fall.

I tried an experiment with Lilium lancifolium this spring. After other Lilies were a foot high, a friend gave me three dried-up bulbs which had been out of the ground all winter. I planted them, and in due time they budded and bloomed; each bulb gave two blossoms; but the stalks were not over 18 inches high—regular dwarf Lilies. Now the question is, will they *stay* dwarf? [We think not.—EDS.]

Horticultural.

THE HAWTHORN-LEAVED RASPBERRY.
(Rubus cratægifolius)

THIS new Raspberry is a native of northern China and Japan. When we planted it, two years ago, we thought it was a blackberry bush which its stems and leaves much resemble. It did not fruit with us last year, but it did so heavily this one, and lo! it is a true and handsome raspberry bush. Though a sturdy grower, it is not rampant; its stems are upright to arching, short-jointed, and, from near the base upwards, full of little branchlets. It is medium to late in fruiting season, a good cropper and keeps in bearing condition for three weeks. The rasps are very pretty, of a brilliant orange-red color, medium-sized or under, firm-fleshed, and nearly globular in form, but of poor quality as regards flavor and juiciness. The fruits of the other Red Raspberries growing near it, were considerably damaged by grubs, but not even one fruit of this new sort was injured in that or any other way, so far as I could see, and my opportunity to notice it was ample, as I picked all the fruits as they ripened, to save them for their seed. It has been growing here in the open garden for the past two years, and in winter time has received no protection whatever, and so far has proved as hardy as a dandelion. It retains its leaves till late in the fall, when they assume a deep crimson color.

As a garden Raspberry it is useless in its present state, but in the hands of hybridizers I look for exceptionally valuable results. The soil where it is growing in our garden is moderately heavy loam, unmanured, on a stiff bottom—brick-clay with veins of sand; land level and wet in winter. I state these facts because I feel confident better results can be obtained by better treatment. W. FALCONER.

Cambridge, Mass.

Gooseberries.

Of this fruit I have found nothing I like better than Downing. Roe's Seedlings, Ruby and Emerald mildewed so badly with me that they lost their leaves early in the season, and later in the summer they died outright.

Blackberries.

One of the things that small-fruit growers now seem to want is a large Blackberry, with hardy prolific cane. I have tried many and have found them all wanting in some way or other. Among those that have been made more prominent and without special value are Agawan and Western Triumph. Taylor's Prolific, from different reports I had hoped would prove to be the desideratum in the blackberry line. While it was with me, the past winter, perfectly hardy even to the terminal buds, and is of excellent quality and prolific, it is but a slight way in advance of the Snyder in size of berry. The same may be said of the Wallace.

MONMOUTH.

HAWTHORN-LEAVED RASPBERRY.

Miscellaneous.

HANDY THINGS TO KNOW, TO DO, AND TO HAVE.

One needs constant practice and an active, quick mind to be to that degree possessed of these handy things that they will always stand him in good stead. Some persons are unhandy and unpractical by nature, and will never be anything else. Others are the reverse and will always find something at hand to help themselves with. I have known some amusing instances of this. Miles from any habitation on a sharp gravelly road, a friend of mine was riding a horse which only a few days before had grown lame from the loss of a shoe, when to his great distress, the same shoe came loose again. His former experience had led him to provide a few nails, but he had no hammer. He was in great haste, but he dared not go off a walk, and he could not find a stone bigger than a robin's egg, or anything else that he could use to drive a nail with. He was almost in despair, for his errand was a most important one and demanded speed; when an old friend came along and as soon as he understood the situation—what do you think he did, reader? He pulled off his boot, and using the heel for a hammer, had the shoe tacked fast in two minutes.

This faculty may be cultivated; and it ought to be, especially by boys and young farmers. They ought to know the use of tools and the use of ropes, "blocks and tackle," wires, and their uses, rivets and rivet sets, more or less black-smithing, how to file and set a saw, and a hundred other things which I include in my idea of things handy to do, to have and to know.

WHIPPING A ROPE'S END.—Ropes are wonderfully handy on a farm. The first thing to do when you get a rope, is to "whip" the ends to prevent untwisting and fraying out. To do this well, provide some fine, strong linen cord or pack-thread, if the rope be a small one; see that the strands of the rope are twisted hard and placed in order to the very tip. Then the

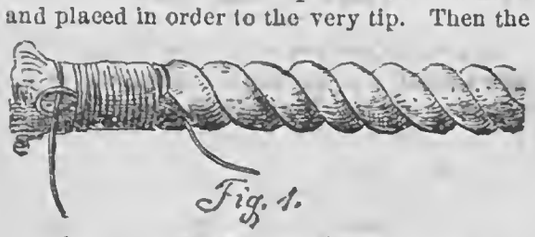

Fig. 1.

b A WHIPPED ROPE'S END.

bit of string to be used to whip with, is laid in a loop lengthwise near the end, as shown in fig. 1, and the end *b* is wound several times around, being drawn tight each time. When near the end of the rope, pass the end *b* through the loop and pull upon the other end which we will designate *a*, until *b* is drawn quite out of sight; then cut both *a* and *b* off as close as possible, and dip the end in the tar bucket.

Every rope about the farm should have its ends whipped—every tie rope, halter rope, garden line, and even every good piece of cord. A whipped rope's end will go through any hole that the rope will go through, and this is a saving of time well worth thinking of. When you get a good rope, after whipping the ends, the next thing is to tar it well. I do this by stirring any common grease and pine tar well together about half and half in proportion, and saturating the rope with the mixture. I presume that seamen may have some other proportion, but this does very well.

THE "TIMBER HITCH."—When this "hitch" can be used, it is perfection in its way. If you want to hoist or haul a stick of timber; a round peeled log, if you please; or if you want to make fast a rope to a tree for a purchase, a stay, or any steady pull, use the timber hitch, Fig. 2. One end of the rope is passed around the object; then under and around the "standing part," as the sailors say; then twice or more times around its own part. As soon as any draft comes, the end jams, holding the loop

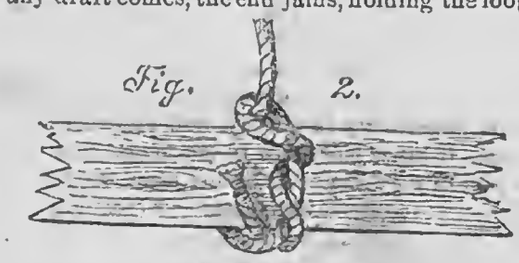

Fig. 2.

THE TIMBER HITCH.

or bight that the standing part draws through very firmly.

THE SQUARE OR OVER-HAND KNOT.—Every child ought to know how to tie a square knot

Fig. 3.

A SQUARE OR OVER-HAND KNOT.

(Fig. 3.), and yet just as often as not, if one examines a knot, he will find it a "granny" knot (Fig. 4.). The former has both the end and the standing part of the same piece in the loop on each side, and when drawn tight, both

Fig. 4.

A "GRANNY" OR FALSE KNOT.

ends jam so as rarely to slip, and yet may be easily untied, while in the other, the ends do not jam or do so very imperfectly, so that the knot is quite untrustworthy.

THE FARMER'S OR STRAP KNOT.—Fig. 5 is a handy knot for a farmer. It is almost the only way to tie two straps together. One rope is formed into a loop, and the other is passed

Fig. 5.

A FARMER'S OR STRAP KNOT.

around it, the end going under its standing part and through the loop first formed, This knot, when well tied, jams so hard that it is hardly possible to untie it without damaging the rope, and the ends may be cut off close to the knot without danger of its slipping.

THE BOWLINE KNOT.—Fig. 6 is one of the most useful of knots, being perfectly secure. It never jams and so may be untied or loosened and cast off in an instant. The best way to learn to tie it, is by imitating the picture of it, and as one becomes familiar with the knot, he will find out easy ways of making it.

The Bowline Knot is one of the safest and best knots which it is possible to make. It is equally good for tying a hawser, a chain or a whip-cord: it never becomes unfastened, however loosely made; never jams so that it cannot be loosened instantly. It seems a little complicated, yet is very simple if studied. It takes a handy man to tie it and make use of it, but any one can learn it. Every sailor must learn it before he learns anything else, except "aye, aye, sir."

Fig. 6.

A BOWLINE KNOT.

This letter is knotty if not abstruse, but if you think it will do any body any good, I will give you another on some other topic, but about handy things. B. ☞ Y.

JOTTINGS AT KIRBY HOMESTEAD.

COL. F. D. CURTIS.

The Millet Question vs. Corn.

THE long and short of Millet is that corn is far preferable. Our Pearl Millet is now all headed out and in blossom, and is six feet high with a stem a half inch in diameter at the base. The German-Golden Millet is four feet and ten inches high with a very large seed bunch in blossom on the top. The common Millet is five feet and one inch high, and a new kind, which tops out like broom corn, on which the seed is nearly ripe, is four and a half feet high. The latter is the nearest like grass of any, and we are favorably impressed with it on account of its earliness, as it is fully two weeks earlier than the others, and on account of the fineness of the stalk. It has one excellence over all other varieties that we know of, in that it will ripen the seed sufficiently for maturity and allow the stalks to be cut while yet green. This fits it for a forage plant without the deteriorated condition which is usual with other similar plants when allowed to mature the seed. Sweet corn, planted the same day as the Millet—the 13th of June—is seven feet high on the same ground, with the stalks more than an inch in diameter and short

ears in every stalk. We have no doubt that there is more saccharine matter in one stalk of this sugar corn than in a half dozen of Pearl Millet. The amount of sugar contained in these plants is the best measure of their value, and in this the corn always excels—hence we have superiority in quality, and superiority in bulk. It takes less labor to put in and cultivate a plot of corn than one of any kind of Millet. It is not any more exhausting to the soil and no more difficult to cure than Pearl Millet. For a hay crop, Hungarian grass would be preferable to either, on account of the rapidity of its growth and from the fact that it may be sowed broadcast, requiring no extra tillage in order to get a full crop. Not so with Pearl Millet. A mistake is made by most farmers by sowing corn too thick in the drill. It should be thin enough so that the stalks will grow up and set for ears; when this is the case a full measure of sweetness is obtained. When too thick in the drill, the stalks are soft and washy, lacking sweetness and substance, and unsatisfactory in feeding value. This is the reason why there is so much controversy on the corn-fodder question. People who grow these soft and washy stalks, contend that corn fodder is worthless, and they are half right, while people who grow the mature stalks on which nubbins are formed full of sweet juice and substance, contend that green corn stalks are valuable fodder, and they are wholly right.

Care of Calves and Lambs.

We have begun already to *winter* our calves and lambs. Our experience teaches us that it does not pay to let these young things run down. The calves are brought in every night and fed a pint of shorts each, with some hay to pick at. In the morning they get another feeding of shorts, when they are allowed to go with the cows to the pasture, unless a cold storm should prevail, when they are kept in. In this way the calves grow all the time, and come to the barn in the winter strong and vigorous, able to withstand the cold and the rigors of winter. The lambs are being weaned in a box stall where they are fed oats, a gill apiece daily, with plenty of clover hay. Two or three old sheep put with them, will teach them to eat the oats and make them more contented, so that they will not get home-sick and lose their appetites. It is an important thing to handle young animals or any animal so that they will not get home-sick, for when in this condition they will not thrive. Like members of the human family, they want company. When alone they are restive, and pine away.

Castrating.

A Victoria boar eight years old, was castrated to-day and the wounds treated with crude coal tar. This will keep out the flies, and cause the parts to heal rapidly. The spermatic cord was scraped apart instead of being cut square off. This causes it to bleed less, as the blood coagulates more quickly and the flow is stopped. A square, clean cut does not allow this. Twisting off with a pair of forceps is also a good way, and will also prevent bleeding. The coal tar keeps the air out and prevents the formation of "proud flesh" as it is antiseptic in its effects. There is no more merciful or healing application after castration than crude coal tar.

Gapes.

Yesterday a chicken was nearly dead with the gapes and to day it is entirely well. An inhalation of tobacco smoke until it was stupified, cured it.

Phosphate on Buckwheat.

A dressing of phosphate last year gave us a superior crop of buckwheat on a poor field. This year there has been no dressing and the buckwheat is a light crop. These fertilizers must be renewed every year to get any benefit from them. Would it not be better to expend the same money for a substantial basis of growth in the shape of barnyard, or stable manure which would last for more than one crop? If this form of manure cannot be obtained, then perhaps it is best to try the others; but we must all the time remember that they stand in the relation to the soil that bread and whiskey do to a hungry stomach—one is food, the other is stimulant.

Best Seed Corn.

Mr. Wm. McConchie is a careful and painstaking farmer. By selecting his seed corn from the earliest and best ears, and where there were two on a stalk, he has so improved his corn that it ripens in less than ninety days and yields a splendid crop. The selected ears are twisted up and hung in the sun to dry. His seed always grows and he always has plenty of it, because it is his yearly practice to gather sufficient as soon as it is ripe enough. Most farmers wait till husking time to secure their seed corn and sometimes do not save it at all, but depend on their more thoughtful and careful neighbors to supply them. Their lamps are not trimmed and burning, and hence they are often put to great trouble for seed, when, by spending a part of a day as Mr. McConchie does, they might be ready and improve their crop. It is not too late yet too save the seed corn, and it should be done as soon as possible. Corn can be improved by selection as well as anything else. Mr. McConchie has got his up to the thoroughbred standard, excellence and uniformity. Nearly every stalk has two ears. The kind he has perfected is the sweet-white. This is an excellent variety for early feeding, as it is softer than the yellow kinds and shells easier. Pigs can eat it on the cob when they cannot the others.

CAUSING PLANTS TO FLOWER OR FRUIT.

There is a principle governing certain stages of a plant's life, which ought to be more generally known. It partakes in fact of the nature of an axiom:—"Anything done to a plant to check its growth or threaten its life, will throw it into flower or fruit." Of course, this has reference to plants of a sufficient hardness of tissue to be able to produce fruit, but which obstinately refuse to do so. Expert gardeners and fruit growers employ this principle to much profit; in fact, so strong is its influence that some plants may be thus forced prematurely. For instance, a fruit tree is of ample age, but does not bear. If we go around the tree with a sharp spade and insert it perpendicularly down among the roots, about a foot to eighteen inches from the trunk, we shall cut off all the small roots in the way, and the next season it will show fruit. If, in addition, we dig a trench around the tree, say eighteen inches deep, and fill it in with good soil or some well rotted old manure, which must be made very fine, we shall check the tree and fruit and also nourish it for succeeding crops, thus keeping up its newly-made vigor. Flowering bushes of most kinds may be similarly treated with good effect. In regard to flowering vines, the treatment is different. As long as a vine can climb and find support, it will refuse to flower, and if the pole or strings are long, will reach the second-story window, without a bud; but train low, or tie to short poles so that the vine has to hang down at the top, and, as if by magic, it flowers profusely. Many modes of applying the principle will suggest themselves, but they must have one aim, that of thwarting the natural habit. Lima beans grown to four-feet poles will produce double the amount of those on eight feet poles.

Dodge Co., Neb. S. Rufus Mason.

Poinciana.—A family relation of the Virgilia lutea or Yellow Wood is that pretty eight-foot shrub the Poinciana Gillesii which has bloomed here as freely as an Oleander by using the same care with it, of lifting and storing it in a cellar. It is not evergreen, nor does it want a continuous soak of water. Its growth resembles that of the Honey-Locust, without thorns and on a smaller scale; and one trial of buds set into a hedge shoot of this nearly related tree, seems to show that it will grow upon it by grafting. A few pods form here from the numerous, unique and very showy blossoms, but the seeds fail to ripen, even when growth is started early in March. It is said to be a native of the Argentine Republic, latitude of Buenos Ayres. The charmingly neat leaflets, of a peculiar bluish green, show to great advantage by contrast with the foliage of other shrubs around, and they fold like those of the Mimosa, when the plant goes to sleep at dusk.

Central, Pa. W.

WHAT OTHERS SAY.

A Potato Contest.—The New England Farmer tells of a potato contest instigated by the members of the Franklin Farmers' Club of Mass. The contest was confined to one square rod of ground, and the competitor who should win was entitled to the product of all the other competing rods. Competitors were required to plant from the same lot of seed, the Early Rose being selected as the sort to be planted. Of the eleven competitors, Mr. A. W. Cheever, the agricultural editor of the good journal from which we make these notes, produced the largest yield. The land on which he grew the trial lot, had been under cultivation several years, chiefly under forage crops. Soil, a heavy loam, quite moist early in the season. It was plowed but once this year, a light coating of stable manure being turned in about seven inches deep. Rows were marked out about 18 inches apart. Before planting, about 800 pounds of guano and 400 pounds of sulphate of potash per acre, were spread broadcast over the furrows. The seed was exposed several days to a strong light to start the sprouts into a short, healthy growth. When ready to plant, single eyes were cut from the potatoes, selecting only those which were well started and of good strong appearance. Most of the eyes were cut from the stem end or middle of the potato where a good bit of the potato could be taken out with each eye. Then they were laid in a basket with plaster dusted over them, to cover the cut surface and give protection to the sprouts while being handled. The pieces were dropped singly about 14 inches apart. The sets were covered not over an inch deep. When the shoots broke through, the plot was dusted over with guano at the rate of 200 pounds per acre, and raked into the soil with a garden rake, killing at the same time all the small weeds which had started. As the potatoes were so near the surface, and so thickly planted, it was found impracticable to hill them in the ordinary way, so the ground was mulched with chopped straw for a protection, not only against weeds, but to keep the new potatoes from being sunburnt as they showed themselves above the surface. The mulch also, in a measure, secured a cool, moist soil during the hot, dry weather of midsummer. The straw was put on some three inches deep, but soon settled to one inch, and was then covered with a second coat of mulch which remained undisturbed till digging time.

To keep the bugs in check, a sprinkling of dry plaster was used three or four times, with just enough Paris-green to shade the plaster, giving it a slight greenish tinge. A very few weeds were pulled by hand during the season of growth, but it was the aim to travel over the patch just as little as possible, as the plants covered nearly the whole surface. The yield per rod was 183 pounds, equal to a yield of 488 bushels per acre. The most important lesson which Mr. Cheever learned by the experiment is that potatoes *must* have room to grow *under* ground, or the yield will be diminished and the quality impaired. He would never plant so near the surface again, and with an equally favorable season should expect to do better another year.

Early Amber Cane.—A correspondent of the New York Tribune says that this variety of cane if planted the 10th of May, is ready to work ordinarily by the middle of August. Recent experiments have satisfied him that one acre of this cane will supply the annual wants of most families, or, to be more explicit, with the rudest implements, such as a $65-mill to express the juice, two seventy-gallon pans of galvanized iron that will cost less than $10, and the common cider-mill or cheese press to express the sirup from the sugar, one acre of average cane, drilled, will yield 500 pounds of sugar, and 700 pounds of fine sirup. This is based upon a yield of 140 gallons of molasses, weighing thirteen pounds per gallon, per acre. A recent experiment of his upon one-fourth of an acre, indicates more than this, although the object was molasses solely. In addition to what he has said of the Amber cane for the farmer, he is satisfied that if a neighborhood will organize a company with a capital of $1,000, the yield of sugar can be raised to seven pounds per gallon, by the use of lime and sulphurous acid, and the process is within the capacity of the most ordinary farmer, but let it be distinctly understood that the Amber cane will yield a fine sugar, in paying quantities, treated exactly as sugar or maple water is treated, save that it must be set aside in proper vessels to granulate.

Profitable Farming.—"The lesson is this—let us grow only *profitable* crops. The truck farmers grow such crops as years of experience have shown them can be produced at a profit: there may be an occasional failure from local causes, but the general result is profitable. If a crop is produced at a loss, they look for the reason, and if it is one which they cannot remedy, they cease to cultivate that crop. Now the same rule, modified somewhat, might be adopted by farmers with the best of results. I can point out scores of farms on which it is a rare thing that a profitable crop is grown, and by a profitable crop I mean one that will pay a moderate rent for the land, and fair wages for the labor expended, and leave a surplus. Now, the remedy is to be found in cultivating less land and doing it better." So writes "Waldo" in the Ohio Practical Farmer.

"Agriculture has always been known as the basis of civilization with all peoples. But it has rarely if ever happened in the world's history that it has wrought out such marked and rapid changes in the credit and prosperity of a Government as those which we now witness in our land. It could never before be said, with even a show of plausibility, as I now say, in full faith that American farmers, beyond lifting up their Government from its low financial condition, beyond giving food to suffering classes in other lands, exert a potent influence in the political affairs of the civilized world."—*Horatio Seymour.*

A Curious Change.—"Formerly an apple tree on the farm of Deacon Paige, Prescott Hill, Mass., bore the even year, but was split in two by a heavy wind some time ago, and the two parts were brought together again with an iron bolt, and have now grown together to all appearances. But the strange thing of it is that this accident caused one of the parts to bear the odd year, while the other continues as was its wont."—[N. E. Homestead. [It is probable that the roots of the tree so split were not equally divided or proportionate to the roots. In this view, one part for the first year after the accident would receive more nourishment than the other, which might account for the change in the bearing year. Eds.]

Apples for Arkansas.—An Arkansas correspondent of the Rural World gives the following list of Apples which have proved valuable in that State:

Summer—Early Harvest, Red Astrachan, Sweet Bough, Summer Queen, Julian and Horse. Astrachan sometimes rots on the tree.

Autumn—Seek-No-Further, Fall Wine, Rome Beauty and Yellow Bellflower. Seek-No-Further is best; Yellow Bellflower poorest.

Winter—Winesap, Ben Davis, Limber-Twig, Shockley, Shannon, Caroline, Winter Queen. Ben Davis rots badly; Shannon is excellent, but a poor bearer.

Where to begin Farming.—Mr. Goessman is credited by the Mobile Register with the sensible remark that "farming operations should begin in the garden, and get out of it only when the household has ample provisions made for its own table. The garden, too, is the best of schools, and it is rarely that the farmer steps from the garden to the poor farm."

PAMPHLETS AND CATALOGUES.

Wattle Bark.—This pamphlet of 27 pages contains the Report of the Board of Inquiry appointed by the Government of the Province of Victoria, Australia, in January, 1878, to investigate the subject of wattle conservation and the concomitant industry of bark stripping. There are three species of Wattles indigenous to Australia—Acacia pycnanthe, the Golden or Broad-leaved; A. decurrens, the Black or Feather-leaved, and A. dealbata, the Silver Wattle—all of which grow very extensively in Victoria, affording in their bark the best kind of astringent for tanning purposes. It is from these the mimosa bark of commerce is derived, and the species are here mentioned in the order of the superior excellence of their bark product for this purpose. Although they grow spontaneously as readily as grass, yet, owing to the extensive and frequent forest fires, to the advancing area of cultivation, and especially to the inconsiderate greed of bark-strippers, who recklessly ruin large areas of Wattles in collecting the product for exportation, there is danger that the supply will soon prove insufficient for home demand. Owing to the proximity of this superior material for tanning, instead of exporting hides, Victoria has for years been manufacturing into leather not only her own hides, but large importations from other countries, and it is the dread of losing this trade that led to the appointment of the Board of Inquiry whose report is here given. The work gives a full account of the above-named Wattles and their uses, together with a statement of the profit to be derived from their systematic cultivation, etc. Sold by Geo. Robertson, Little Collins St., Melbourne, Australia; price three pence—six cents.

Dairy Farming, being the Theory, Practice and Methods of Dairying, by J. P. Sheldon, Assisted by leading Authorities in Various Countries. The publication of this work marks, it is to be hoped, the commencement of a new era in agricultural literature. Judging from the four numbers already given to the public, there certainly has never been published, within our knowledge, a work relating to any department of agriculture so thorough in its information, so lucid in its treatment, so artistic in its illustrations, and so admirable in all its details. The high reputation of its author, until lately Professor of Agriculture at the Royal Agricultural College of Cirencester, England, with whom our readers are already acquainted through his contributions to these columns, is an ample guarantee of the care, caution and erudition employed in its composition. The work is issued in monthly parts, and will be completed probably in twenty-five numbers. It promises to be exhaustive in its treatment of every branch of dairy farming, and to be, in short, a standard encyclopedia of information on dairy matters. As a frontispiece to each number is a fine, full-page, colored illustration of some subject treated of in the body of the work, while numerous smaller engravings embellish the other pages and exemplify clearly to the eye the implement or other object described in the text. The type is large, the paper tinted and of excellent quality, and when completed, the work will form a superb book of reference, which should be found in every farmhouse throughout the land. Each number costs only 40 cents, or the three first will be furnished as specimens for $1; yearly subscriptions in advance, $4.50. The high-standing of the publishers, Messrs. Cassell, Petter, Galpin & Co. of this city, renders it, of course, unnecessary to say anything to our readers as to the confidence with which they may forward their subscriptions. We shall, doubtless, in future issues have to refer frequently to the work, as each succeeding number is published.

How to Select Dairy Cows; or, The Guenon System, simplified, explained and practically applied, by Willis P. Hazard, with nearly 100 illustrations photographed from Guenon's engravings. In 1878 the State of Pennsylvania appointed a Commission to test the above system and report the results. Of this commission Mr. Hazard was appointed

Secretary, and during the subsequent investigations he became firmly convinced of the justice of the claims made by the advocates of the Guenon system. In this work of 84 pages he has given a sketch of M. Guenon and the progress of his discovery; some extracts from his preface explaining his views; an explanation of his system of escutcheon marks; a description of the various escutcheons and their indications of value and quantity, and directions how to practically apply them, together with the report of the Pennsylvania Guenon Commission. Much has been said and written for and against this system, and whatever may be the reader's opinion of it, it is hard to rise from the perusal of this work without a willingness to comply with the author's request, that whoever reads his pages will patiently, book in hand, go into the farm-yard and judge of the value of his stock by the rules here set forth, compare the results with his individual knowledge of his stock, and fairly estimate the value of the system. The book is published by J. M. Stoddart & Co., Philadelphia, Pa.; price 50 cents.

THE Report of Michigan State Board of Agriculture for 1878 is before us. It contains a full report of the condition and work of the several departments at the Agricultural College. The reports of the horticultural and agricultural departments are especially instructive. Prof. Beal here gives the results of his seed tests, which have, for the most part, been published in the RURAL. But perhaps the most valuable portion of the report is that relating to the several Farmers' Institutes that were held in various places of the State during the year. A large number of the able addresses delivered on these occasions, both by members of the faculty and by prominent farmers, are reported in full or in part, and contain, we may say, the most advanced views on agriculture as suited to the climatic conditions of the State. The Secretary of the State Agricultural Society fills over 100 pages with his report, and Dr. R. C. Kedzie's tables of meteorological observations for the year complete the volume.

THE Illustrated Book of the Dog, by Vero Shaw, B. A. Cant., Assisted by the Leading Breeders of the Day; Illustrated with Colored Plates drawn from Life. This work is got up in the same admirable style as Prof. Sheldon's "Dairy Farming." It will be completed probably in 30 numbers, price 40 cents each, or the whole for the same price as "Dairy Farming." Messrs. Cassell, Petter, Galpin & Co., deserve well of the farming world for the superb manner in which they have produced these two works connected with the agricultural interest.

CATALOGUE OF THOROUGHBRED STOCK for sale by Benson, Maule & Co., of Philadelphia, for 1879-1880. This catalogue contains illustrated descriptions, prices, etc., etc., of Jersey, Guernsey, Ayrshires and Short-horn cattle; South-Down, Cotswold and Leicester sheep; Chester White, Berkshire, Small Yorkshire, Poland-China, Jersey Red, and Essex swine, together with a long list of various choice breeds of poultry, including hens, ducks, geese and turkeys. Free to applicants.

FARM DRAINAGE. This useful circular contains an essay on Farm Drainage by our occasional correspondent, Prof. G. E. Morrow, Dean of the School of Agriculture, Illinois University; and Important Results from Drainage, by Geo. E. Waring, C. E., besides statements of practical farmers giving results obtained from tile draining, and a great deal of other useful information on the above subject. Published by the Board of Agriculture of Ill.; S. D. Fisher, Sec., Springfield, Ill.

UNITED STATES PUBLIC LAND LAWS.—This pamphlet of 170 pages is an exhaustive compilation of the laws, rulings, decisions, and late Acts of Congress with reference to the agricultural, mining, and other lands of the United States, with the instructions of the Commissioner of the General Land office regarding them. The work is very useful to all intending emigrants, and interesting to others. It is published by D. H. Talbot, Sioux City, Ia. Price 50 cents.

A. HANCE & SON, of Red Bank, N. J., notify us by postal card that their stock of large and small fruits and ornamental trees and shrubs is superior to that of preceding years; also that they offer Mr. Ricketts's white seedling Grape "El Dorado."

THANKS to Mr. S. Ott, of Aiken, S. C., for a box of beautiful rose buds; to Mr. John B. Moore, of Concord, Mass., for a specimen vine of Moore's Early Grape; to Mrs. Annie L. Jack, for a pair of Muskoka ducks.

AMERICAN POMOLOGICAL SOCIETY, address of Marshall P. Wilder at the Seventeenth Session held at Rochester, N. Y., Sept. 17, 18, 19, 1879.

CATALOGUE of Select Fruit and Ornamental Trees, Shrubs, Roses, etc., for sale by Fred. W. Kelsey, Rochester, New York.

BOTANICAL INDEX, an illustrated quarterly botanical magazine published in Richmond, Ind.

CIRCULAR.—Ricketts's New Grapes. Address James H. Ricketts, Newburgh, N. Y.

Farm Economy.

SPREADING MANURE IN WINTER.

IN looking back over old numbers of the RURAL to find seasonable hints for the early winter months, I have just come upon an article by William J. Fowler in the RURAL for January 25th last, on the subject of spreading manure in winter. Therein he recommends the hauling and spreading of manure in winter on the snow or otherwise, and says that its fertilizing properties cannot evaporate and must leach downward, and that the soluble parts will not wash away. To this doctrine and the practice founded upon it, although they have many advocates, I must enter a strong protest. According to the old adage, "Seeing is believing," with me at least generally it is—and having frequently seen the purple flood running from fields treated in this way, I cannot believe that the practice causes no material loss of the fertilizing ingredients of the manure.

That under some circumstances, on certain kinds of soil and where the lay of the land will not permit undue leaching, the practice may be followed without much loss, I do not deny; but to advocate the method as a rule here in Western New York, where the soil is often frozen from two to three feet, and snow banks often rise to the hight of from five to ten feet and more, while a large proportion of the subsoil is clay, seems to me to be the result of a rash theory rather than of practical experience.

In this connection allow me to relate my first experiment made many years ago. I drew a pile of, say, 50 loads of choice manure in winter on to a level piece of clay land. There was no snow of any consequence on the ground; the land was seeded to grass and was frozen. Now for the result. Spring came, a heavy rain followed, and I had the curiosity to go and see how my experiment worked. On reaching the place a purple flood met my view, running from my land on to neighbor P's., and thence down to Black Creek. I was fully satisfied with one experiment of this kind.

From observation where such a practice has prevailed, I am forced to the conclusion that frozen soils, solid clay subsoils and rolling ground unfrozen, will take up very little of the soluble portion of the best manures during heavy rains, or during the melting of the snows in a winter like the last, when the piled mass rose from three to twenty feet. While most soils in spring or fall will absorb largely, it does not follow that a frozen or a clay soil can do so, as they are both impervious to a very great degree, and every school-boy knows that in case of a heavy rain or freshet the surplus water goes to the brook as quickly as possible, carrying with it much of the soluble substances it may find on the surface of the ground it travels over, and not always avoiding the barnyard as at present constructed.

I, for one, shall oppose the risks of such practices, and would as soon think of purchasing costly commercial fertilizers and casting them upon the snow banks, frozen soils or hill-sides, as of submitting the treasures of the barnyard, pig-pen and the stables to a similar risk of loss. However plausible an agricultural theory, the careful farmer will not largely embody it in his practice until it has been satisfactorily tested by practical experiments under various conditions. D. R. PRINDLE.

Genesee Co., N. Y.

BEET SUGAR MAKING IN CALIFORNIA.

WE have a beet sugar factory here which is doing well. Five years ago it was removed to this place from Alverado, about a hundred miles north of us, not far from San Francisco. The reasons for its removal were two:—first, the land here was better adapted to the growth of beets, and, second, by the change a great saving in the item of fuel was effected. Here wood is used, which can be obtained cheaply; there coal, which was much more high-priced. The factory the past year turned out about 70 centals, or 3½ tons daily. Directly and indirectly, about 160 men obtain employment through the running of this establishment, and about $75,000 are paid out in this county by it. The company has $250,000 invested, which pays a good dividend. The market for the beet sugar this year is as good as the average. The mill is running at full capacity. Five thousand tons of beets were raised in Pajaro Valley for the factory. Pajaro is 15 miles below here; the beets were shipped by rail. The land in that valley seems especially adapted to this culture, in some cases yielding as high as 25 tons to the acre and averaging 20, all round. At $4.75 per ton, the price paid cultivators the past year, the average return from the land in this crop has been $95 per acre. The land is so rich down there that some of the beets grow too large; but that can be obviated by planting more closely. This year the price of beets is $5 per ton. The sugar is very nice, sweet and white, and cannot be distinguished from cane sugar. Only one quality is made—fine crushed. M. P. O.

Soquel, Santa Cruz Co.

EXPERIENCE WITH SORGHUM.

The new variety of sorghum, Amber Liberian, spoken of in my last, published in the RURAL of Oct. 4, has more than fulfilled its promise. When tested by the polariscope, it showed 14½ per cent of sugar, 11 Baume, and when fully ripe it went up to 14 Baume. It granulates readily. I am now working the regular Liberian for sirup, as I am not prepared to make sugar for customers, being forced to grind by steam, having 200 tons of cane in the yard. This sort of cane has been more extensively grown hereabouts for sirup than any other, as it is thought more productive than any of the older kinds. It is not so good for sugar, however, the grains being too fine to swing well; but it might do better, if boiled in a vacuum pan. The Honduras is our latest and largest variety here, and is still standing in the field, but ripe enough to be cut now. As a whole, this has not been a good season for cane. The late rains, coming after a very dry summer, made it sucker badly, which detracts much from its yield, and causes more trouble in defecation.

Madison Co., Ill. C. M. SCHWARZ.

The Herdsman.

LARGE vs. SMALL COWS.

T. H. HOSKINS, M. D.

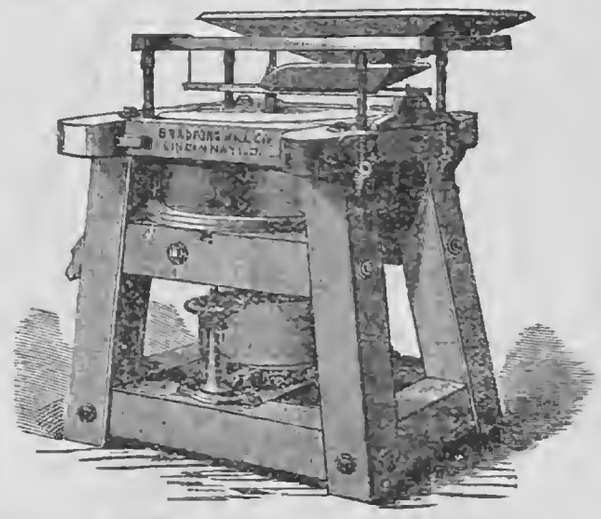
IT is a question worthy of very serious consideration to the dairy farmer, at this time, whether a herd of large or small cows is the most profitable for him to keep, supposing that he can make as much butter from the small ones, per head, as from the large ones. It has been stated, as a general rule, that a quantity of good hay equal to three per cent. of her live-weight, is required by a cow in milk to keep up her condition and maintain her flow—this, irrespective of the size of the animal. On the other hand, a few experiments have been published, tending to show that an equal quantity and quality of feed will yield a more valuable product of milk from large cows than from small ones. Both of these statements appear problematical to me. It seems more probable that a small cow would require more feed, relatively to her weight, than a large one, to produce equally in milk, since a larger surface proportional to weight, is exposed to the atmosphere, and small cows are commonly more active than large ones. On the other hand, more feed must be required to replace waste of tissue in the larger animal than in the smaller one. These points need the elucidation of vastly more numerous and more accurate testings than we yet have record of.

Pending these, I wish to state the result of some actual comparative observations made with the view of solving this problem. Looking over the best butter herds in Vermont, I find Mr. Douglas, of Whiting, reports an annual average of 200 pounds each from 34 Short-horn grades; H. C. Cleveland, of Coventry, 224 pounds each from 20 Short-horns, mostly thoroughbred; Mr. Crampton, of Swanton, gets an average of 275 pounds from 21 selected common cows. Mr. Wood, of North Pomfret, gets 291 pounds each from 13 cows of Jersey blood, and the averages of five other herds of Jerseys, in the same time, range from 250 to 285 pounds per cow.

I have seen all of these herds except that of Mr. Crampton. No two of them are fed exactly alike, though the manner of feeding with all the Pomfret farmers is similar. The Short-horn men claim that they feed little or no meal. They have large and rich farms, which yield an abundance of the best feed, both for hay and pasturage. The Jersey men have smaller, and generally hill farms, where the pasturage is short, but rich, and the hay-crop not usually adequate to winter all the stock which the pastures will carry through most of the grazing season. Consequently they feed a mixture of corn and oatmeal, or of corn meal and shorts, during the winter, with occasionally small quantities of the same where the pastures are short, or where there is not enough green feed grown to eke out in a dry time. It is plain that the elements of an exact comparison do not exist here. Mr. Crampton feeds his herd of natives (averaging but little more than Jerseys in weight) meal and mill-feed the year round, in addition to grass and hay. His pasture, however, is poor. As nearly as I have been able to judge from my own observations and the statements of the parties, the value of feed given to each cow is no greater for the small cows than for the large ones. Few of the owners of the former would agree that it is as great. Certainly all these herds are well-fed, the object being to make as much butter as possible. The product of the small cows in pounds of butter is decidedly the greater, and the price received is also more. The parties all seem to be reasonably satisfied, but Mr. Douglas admits to a growing belief that the Jerseys are the most profitable. I find that all the Jersey men believe that they have the best and most profitable cows in the world for butter. So I leave the question, hoping for more numerous and exact statements and tests hereafter.

Industrial Implements.

THE BRADFORD UNDER-RUNNER MILL, illustrated this week, is a portable mill, with recent (1876) patented improvements that adapt it to the farmer's and miller's use for grinding corn, feed, middlings, wheat, and, in short, anything susceptible of pulverization between buhr-stones. Its claimed advantages are partly comprised in an iron bridge-tree with center-lift step and oil box that are adjustable with set-screws and check-nuts, supported on a wrought-iron lever; a hammered wrought-iron spindle, with an adjustable driver that drives equally on both ends; a cast-iron back on the runner in connection with the eye bush, both being cast in one piece, which overcomes the chance of the driver-box getting loose in the stone. The iron bridge and bush supporting the collar of the spindle, under the running stone, have three adjustable followers, also held in place by set-screws and check-nuts. The buhr-stones used are of the best quality (usually in one block). The upper one is stationary and strongly attached to the frame, which, it will be seen, is of solid timber, well bolted. The upper stone, by a hinged device in the frame, is easily turned over for purposes of dressing, and, in fact, all parts that it is necessary to inspect are conveniently arranged for that purpose. While it is not desirable to run the



mill at too high a rate of speed, yet it will not choke in feeding, no matter what the speed. In short, the mill is constructed of the best materials, after improved patterns, and is claimed to be as good as can be made. The company has had an experience in manufacturing and supplying mills and milling accessories for upwards of 36 years, and to-day it is one of the leading houses in the business. Address the Bradford Mill Co., Cincinnati, O., for particulars.

A NEW FEED CUTTER.

MR. DAVID LAWTON, of Racine, Wis., is making a feed cutter that has excellent points. There are four sizes with a capacity ranging from twenty-five to twelve hundred bushels of cut feed per hour. (The larger quantity is cut by power.) In this machine, which is very strongly and solidly built, the cutting knives are attached to a large wheel which revolves with great rapidity and force at the expense of but little power. The cut is clean, sharp and true, the fodder being severed in four lengths, ranging from one-third of an inch to two inches, at the option of operator. The change in cut is made very easily and quickly, there being no substitutions of parts, extra wheels, etc. A very important feature is a reverse lever and gears that can be made to stop the feed instantly and set the rollers revolving backwards. This is a perfect safeguard in case of accident, or in the event of any foreign substance passing through the cutter with the chaff. While the feed is stopped, the power is not, the momentum continuing ready for application to the work as soon as the cause of the stoppage is removed. The cutting capacity is said to be greater than that of any machine of the same cost. As this cutter is so highly spoken of, it may be to the advantage of our readers to give its merits more careful consideration than we are enabled to do in a brief mention.

Everywhere.

RURAL SPECIAL REPORTS.

CONN., West Haven, New Haven Co., Oct. 24.—We have had a favorable season for the growth of vegetation and all kinds have improved it. There have been frequent rains all through till within a few weeks, with very good haying weather in its season. There are some drawbacks, however. Potatoes have decayed badly, except those planted very early and on dry ground. Then about the middle of August we had heavy winds, which blew the corn down, breaking off many stalks and damaging all more or less. Of the White Prolific I planted 128 kernels in 64 hills, 3½ feet each way; 124 stalks came up, most of which grew vigorously to the hight of 12 feet and more. The stalks are larger and the corn of a later kind than I like. Perhaps I shall be happily disappointed when it is husked and shelled. The Hebron potatoes grew well, but shared the fate of other kinds; I have about 20 sound ones left. The Acme tomatoes are very nice, but did not ripen quite as early as the Trophy. Pearl Millet, planted May 30, grew very slowly at first. It was only two feet high when sweet corn, sowed at the same time, was five feet. Afterwards it grew rapidly. Had it been cut at three feet, it would probably have been ready to cut again. Defiance wheat is much shriveled. But few came up. I shall try the little I have again. The flower seeds did not germinate well, except the Hollyhock; perhaps partly from our own fault. L. A. B.

N. Y., Croton, Delaware Co., Oct. 25.—The season just past has been a very productive one in this locality, with perhaps the exception that the fall product of butter will be very light, owing to a scarcity of fall feed caused by the severe drought of the latter part of the summer and fall. Very little rain has fallen hereabouts since haying, and consequently water is very low. October, until a few days past, has been uncommonly warm, there being two or three days, the second week of the month, when the thermometer stood at about 85 deg. in the shade, but yesterday and to-day have been cold enough to remind us forcibly of the approach of winter, and the ground is covered with snow. A large proportion of the butter in this immediate vicinity has been sold at prices ranging from 15 to 20cts; but within the past week prices have advanced to about 25c. and I hear of some refusing an offer of 26 cts. and even more for their entire dairies. We farmers begin to assume a more cheerful expression of countenance than for a year or two past, and feel that brighter times are in store for us. E. J. B.

NEW YORK, Corning, Steuben Co., Oct. 25.—I am very much pleased with the product from the Beauty of Hebron potato received from the RURAL. The one I planted weighed only about two ounces, and it produced just 16 pounds. Now, if any one can show a better yield, let us hear from him. I have not had any cooked, as I wish to save them all for seed. As to Pearl Millet, I think it is a failure in this locality, judging from my own and my neighbors' crops. I planted a plot in the center of my corn field, which was well manured and cultivated, and it did not produce as much fodder, to a hill, as the corn. However, I shall give it another trial next year. Buckwheat is only about half a crop, owing to the drought, which has been quite severe. Many wells are dry. Corn is generally quite good, though not as good as it would have been if it had not been so dry; and pumkins are quite small. Potatoes are not as good a crop as was anticipated, hence it would seem that the price should be higher. F. H. D.

PA., Derry Church, Dau. Co., Oct. 22.—The weather has been very dry again for the last six weeks, so that the fly has made its appearance in the wheat. Corn turned out to be a better crop than was expected, especially that which was late planted, as it had the benefit of a rain just as it was setting ears. But alas for my Blount corn! About three weeks ago, one night two half-starved, vicious cows—which, by the way, are the pests of the whole neighborhood—got into the patch and broke and trampled it down so that out of a hundred and nineteen, there were only eight plants left standing that did not bear any marks of the beasts' teeth. The day before I had been through it, and counted, with not a little pride, 119 fine growing plants, with few suckered ones, and from two to seven ears on a stalk, which I had raised out of 127 seeds sent me. When I received the seed I looked over it and laid aside seven seeds which I thought were worthless. I planted them, nevertheless, and four of them came up, but three of those I considered good did not sprout, so I had in all 120 fine growing plants until about four weeks after they were up when one of the plants died, so I had 119 left. I must say I had some thoughts of taking a prize, as most of it had ripened finely before frost came. Well, through my misfortune there is one competitor less. I still have a few fine ears left, which I shall carefully preserve for seed next year. From all I could learn of it, I think it is a very healthy and hardy grower, and one of the most, if not the most, prolific sort I ever grew. Wheat has been rising in price—it is now $1.30; corn, 55c., and oats, 32c. per bushel. Butter is worth 12c. per lb.; eggs, 16c. per doz., and potatoes, 55c. per bushel. E. E. B. S.

CENTRAL PENNSYLVANIA, Oct. 23.—The weather has been remarkably hot and dry since we had one snap of frost, Sept. 26. Wheat, turnips, unwatered strawberry beds, etc., are at a forced standstill, and fruit is ripening on the trees and rotting in cellars most alarmingly. The crop was very good and the samples handsome. The favorable side is that all trees and shrubs have ripened their wood unusually well. The forest leaves colored in the first week of October, and are falling fast so dry that fires have been prevailing for two weeks and the air is now thick with smoke. W.

MICH., Bradley, Allegan Co., Oct., 19.—Farming prospects are brightening greatly. Corn, wheat, potatoes, onions, hogs, milk, butter etc., are all coming out much better than I expected, and sell at good prices. Onions cost me 50c. per bushel, I am now selling them at 75c. per bushel. Potatoes cost me 28c. per bushel, the price now is 35c, but I have not sold my crop yet. Everything is correspondingly on the mend. H. F. B.

OHIO, Conneaut, Ashtabula Co., Oct. 22.—My Beauty of Hebron had eight eyes, which I planted in as many hills, on May 10, in sandy loam soil without manure of any kind. I dug them Sept. 30 and got 45 good-sized tubers, which I consider a good yield for the past season which was very dry here. Pearl Millet I planted about the middle of May. It all grew up rapidly and headed out, some of it three times. A part of it that I left to ripen stands from five to seven feet high and is ripe at this date. I have been a subscriber to the RURAL for 30 years, and it has always been a good paper, but now it fills the farmer's bill much better than ever before. Defiance wheat did first-rate. Blount's Prolific I planted, May 15, on a sandy loam in six rows 30 feet long. I manured it once soon after it came up with hen manure, cultivated it the same as field corn and the result has been 221 ears of large size, sound and ripe. Some stalks had as many as five or six ears, while others had none. The tomatoes did splendidly in productiveness and flavor. I think they are hard to beat. P. J. B.

OHIO, Garrettsville, Portage Co., Oct. 26.—My Blount corn was planted too late, so that it did not have a fair show; but it did well for the chance it had, growing from 12 to 14 feet high and setting from two to five ears to a stalk. My Beauty of Hebron had 10 eyes; one eye was planted in each of 10 hills which yielded a peck of nice potatoes in look and shape like the Early Rose, color white, quality, first-rate. The Acme tomato was the best I have ever raised—a valuable variety. The lettuce was splendid and very prolific. Potatoes in this section are reported as rotting badly—price 25@30c. per bushel. This year the RURAL saved me $40 in my potato crop. R. B. C.

ILLINOIS, Kankakee, Oct. 24.—I planted, May 12, 123 grains of the Blount corn. From these 101 stalks came up. Five of these were destroyed after they appeared; the rest grew rapidly till they silked out, when there were from three to seven silks to a stalk. But the weather after this was rather dry, and the result is, 14 stalks had no ears and none of the others had more than three ears to a stalk. So my name can be dropped from the list of competitors for premiums. The Beauty of Hebron potato is good. I had a fair yield, but the quality is not so good as that of the Snowflake. J. M.

WIS., Lavalle, Sauk Co., Oct. 23.—We had quite warm weather from Sept. 27 to Oct. 19, when we had another frost and it is cooler now. A large breadth of wheat has been sown and some of it is quite heavy on the ground. Wheat is selling for $1.05 to $1.16 per bushel; potatoes are a good crop; price, 25c to 30c; corn is late. W. S. H.

IOWA, Red Oak, Montgomery Co., Oct. 22.—We are having a most delightful fall. No frost that has touched the tomato vines in any garden, has yet visited us. We are having nice lettuce from second crop. I am highly pleased with the Acme tomato and the Beauty of Hebron potato, Voorhis watermelon and Pearl Millet, from each of which we have saved seed for next year. Blount's White Prolific has secured very little favor from me. H. L. W.

KANSAS, Hutchinson, Reno Co., Oct. 22.—The season has been quite dry in this region, and still more severe farther west of this. Our crops have been much shortened as a result of the drought. Much of the wheat failed entirely from this cause and owing to a severe hail-storm on the 30th of April. Oats are short, much of the crop having failed entirely. Corn did well and gave promise of an unusually large yield till about the filling time, when it yielded to the influence of the drought and was seriously shortened. Stock of all kinds has done exceedingly well. On account of the low prices that prevailed last winter, farmers became discouraged in the hog business, and the number of these in this county is, I think, far less than last year. There is a growing disposition among farmers to turn their attention mainly to cattle and sheep. The demand for young cattle is so great here that probably not more than one-tenth of it can be met without going out of the county to find a supply. We have as yet very few sheep in this county; but what are here are giving such excellent satisfaction that I think before many years sheep husbandry will be among our leading industries. The fine climate and abundance and excellence of grasses for both hay and grazing, make this a very desirable locality for the sheep raiser. A large amount of prairie hay is being shipped west to Colorado and New Mexico from this place. The highest price paid here is three dollars per ton, and it brings at various points west from $40 to $120 per ton. Dealers and shippers make the profits. Our county is filling up rapidly, but still there is room for thousands more. L. J. T.

NEB., Purple Cane, Dodge Co.—Some twenty odd years ago a party of young men left Omaha on a hunt to the westward. They were in high glee and bent upon a good time. One of the number in his rollicking humor averred that for fun he would shoot the first Indian he saw. Upon the second or third day out, they came upon a small party of Indians mostly women, as at first appeared. The young man, true to his threat, drew his rifle upon a squaw and killed her. The report roused from the tall grass near a sluggish stream a number of Indian braves, who surrounded the young men, and upon learning who the guilty party was and the cause of the wanton act, seized the perpetrator, and while they compelled the rest of the party to look on, absolutely flayed him alive, stripped off his raw hide, and then allowed the rest to pass on. This gave the name of Rawhide to a water-course which starting from Schell Creek in Colfax Co., runs in a S. E. course till it meets the Elkhorn River in Dodge Co. It is about 20 miles long from head to mouth, but is so extremely tortuous as to become at least 40 miles in length finally. In the spring of the year it is impassable for man or beast, but in the fall dries up; and in winter watery spots freeze solid to the bottom, when teams, cattle and people cross anywhere. When a person stands on the bluffs and looks down upon it, it looks as if a string of "hooks and eyes" had been sketched out through the level prairie. Here is the home of the mosquito, and as a wet season produces them in most astonishing abundance, I have often wondered what they lived upon, as I do not believe there is in all Nebraska, among all the men, women, children and animals one feed of blood for each mosquito. Can any RURAL reader tell how they exist? S. R. M.

CALIFORNIA, El Dorado, El Dorado Co., Oct., 20.—Defiance wheat did very well, considering that the birds gave it no peace. I saved five and half pounds of it which I shall test again next spring. Blount's corn was the admiration of all who saw it. It was from 12 to 14 feet high, with from three to seven ears to the stalk. I took two hills, containing three stalks and fifteen ears, to the county fair, and they took the first premium and would have taken the first premium at the State fair, had it been there. My premium will pay for another year's subscription for the RURAL. This is one of the finest fruit-growing counties in the State. Considerable attention is also paid to dairying and sheep raising J. A.

KENTUCKY, Bowling Green, Oct. 13.—The Blount corn came up splendidly and looked finer than anything I ever saw. It was planted in drills 18 inches apart; rows 3½ feet wide, manured with well rotted manure. I think I had a pretty good chance for one of the premiums, but some breachy cattle broke in one night in early September and destroyed all but five stalks and left only two and three ears on those stalks, where they had from four to eight ears before. The Pearl Millet I don't like at all; the stalks are too large, and I don't think it would mature, or at least mine has not. I saved only one vine from the Voorhis watermelon and that had only one melon on it, but it was the sweetest melon I ever ate. The Defiance wheat was drilled and made a little over three quarts of as fine grains as you ever saw. There has been a larger acreage sown to wheat this season than ever before. On account of the drought of June, July and August, the corn will not "turn out" more than half a crop. Everything was cut short about half by the same cause. J. D. S.

N. C., Chapel Hill, Orange Co., Oct. 20.—The weather has been remarkably dry. There has been very little rain-fall during the year—since early spring. The drought was severe, but not so destructive as one would have supposed. Occasional light or brief showers seemed to have wonderful effect. The Equinox failed to bring its expected relief. The streams are very low. Springs and wells have held out surprisingly, but are failing now. Some that have scarcely ever been known to give out, are yielding to the long-continued drought. Still the season has been highly favorable to cotton and tobacco, as to the picking and curing. Sowing wheat is backward, for the want of a fit season. Turnips are a comparative failure. Potatoes, a light yield. No frost here yet. State Fair in full blast, with a very fine exhibition expected. Plenty of horse-racing to make it a success (?) "*O tempora! O mores!*" M.

N. C., Henderson, Granville Co., Oct. 21.—There is plenty of room for improvement hereabouts. We have been here three years, and every year we have kept adding to our cultivated area. This is a fine climate, and especially favorable to flowers and garden vegetables. R. S.

FLORIDA, Rock Ledge, Indian River, Oct. 16.—We are begining to realize the fruits of our labor! Lime trees paid us last season $25 per tree; a neighbor's averaged $26½. At this price 200 trees per acre make a nice thing. The Lime is quite susceptible to frosts, and can only be grown successfully where freezes seldom obtrude. They bear the third year from the seed, and a tree five years old will pay $15 to $25. The juice can be expressed from the fruit and put up in bottles and kept for months for "limeades" and culinary purposes, and is an excellent substitute for cream-of-tartar. Thousands of seeds will be planted this season, and in four years Limes will be one of the leading products of our River. What fine sports we have, sailing our yachts upon old Indian River; bathing and sporting in her waters; angling for her variety of salt-water fish, and hauling in 10 to 40-pound fellows; throwing nets and taking in 20 to 60 fine mullet at a throw; spreading turtle nets and entangling 10 to 60-pound fellows from which we fry the finest steaks, and "gulch the green turtle soup." And, then, too, her oysters! the finest that ever grew, we roast, fry and stew. A. N.

ARKANSAS, Greenwood, Sebastian Co., Oct. 20.—Splendid fall weather. No signs of frost at present. Cotton pickers very busy. Crops abundant. Corn all secured; not an average crop. Prices for produce:—cotton, 8c. per pound; corn, 30c. per bushel; sweet potatoes, 25c.; Irish ditto, 75c.; sorghum, 50c.; cotton seed, 5c.; wheat, $1; oats, 40c,; butter, 12½c.; eggs, 10c.; beef and pork abundant and cheap. This county is fast filling up with northern settlers. Land is plentiful and cheap. Homes for all who are willing to work. Best country for fruit on this side of the Rocky Mountains. R. R.

CANADA, Brantford, Brant Co., Ont., Oct., 21.—My Blount's corn is not yet ripe; I am afraid that it will require a longer season than we have here to mature it. The Beauty of Hebron potatoes are taking a fast hold hereabout. I sent to Thorburn of New York and purchased seven and a half pounds besides the one the RURAL sent. I gave them no particular care; yet I obtained three bushels, good measure. They are spoken of very highly by all who have cultivated them, both in regard to yield and quality. I think the Acme tomato is quite an acquisition. The meat is firm and of good flavor. Most of the flower seeds obtained of the RURAL grew, and I have no doubt all would had I treated them properly. I have Raspberries whose second crop is ripe, and strawberries of a good size, with the vines in full bloom. We have had several weeks of some wonderfully warm weather, although it was very cold in September, when we had some very heavy frosts. J. F.

CANADA, Pelham, Welland Co., Ont., Oct. 20.—The Beauty of Hebron sent us by the RURAL was a small potato weighing three ounces and containing seven eyes, yet we have harvested from it no less than 26 pounds of as fine tubers as one could wish to see, being a yield, as you will see, of nearly 14,000 per cent. We have not noticed such a yield in any of your correspondences, and being Canadians, you know, you will please pardon the national pride we feel in the matter. B. B.

The Querist.

ANSWERS TO CORRESPONDENTS.

Postal Rules for Mailing Packages.

J. G. R. K., Lovettsville, Va., writes, "Please help us out of the postal muddle. We are cautioned not to write on or in any third-class mail matter. Now tell us how to get the editors to know from whom the specimens of fruit or plants etc., are sent, especially the former. Is it allowable to write the name of the article or separate articles on the parcels or the name of the sender on the package?"

ANS.—The law declares that any package containing writing, otherwise than what is

specified as allowable, shall be considered as mail matter of the first class and, as such, be charged with letter postage. According to the classification of mail matter as now arranged, the third class consists of books and other printed matter, while the fourth class comprises all that may be denominated merchandise in a general term, which would include fruits, plants and the like, as mentioned by our correspondent. In regard to the writing that may be conveyed in packages of this class, the law, according to the Act of March 3, 1879, section 231, reads as follows: "Upon any package of matter of the fourth class, the sender may write or print his own name and address preceded by the word "From." and there may also be written or printed the number or names of the articles included; and the sender thereof may write or print upon, or attach to any such articles by tag or label, a mark, number, name or letter for purpose of identification." According to this, then, the sender can *write* the name of, and attach it to, each article in the package, and on the outside of the package he can write his own name and address, preceding it with the word "From," which is all that is necessary. Should he add anything beyond what is here made allowable, it is the duty of the postmaster to charge letter postage.

Wintering Bees.

F. H., South Jefferson, N. Y., asks, 1, at what time bees should be taken into the cellar; 2. also if the hives should be left on the bottom boards and the entrance closed; 3d, if hives are left on the summer stands, should they be closed to keep the bees off the snow.

ANS.—1, The bees should be removed to their winter-quarters on the approach of cold weather, which, of course, will vary with the latitude. For Central New York, the beginning of November will generally be time enough. 2, The hives should remain on their bottom boards at all times, though it is convenient to have the latter loose for purposes of cleaning, transferring, etc. The entrance should be closed against mice and also to keep the bees in, but not so as to exclude the air. A piece of wire-gauze, or a piece of tin perforated with small holes, tacked over the entrance will answer the purpose well. 3d, If the hives are left on the summer stands and well protected against the weather, it is not necessary to close the entrance to prevent the bees from flying out on the snow; on the other hand, it is preferable that they should be permitted to fly when needed, which can be done by letting a wooden tube lead from the entrance to the outside of the covering. Were the hives to be left uncovered, it would be necessary to close the entrance, as the sun might raise the temperature within and excite the bees to fly when it was yet too chilly for them outside; but in hives properly covered, the temperature will not be subject to such fluctuations, and the bees will venture out only on warm days. But though it is desirable in this case to allow a passage for the bees, the entrances should, nevertheless, be closed against mice. To effect this: tack a piece of tin over the opening so that the lower edge of it is one-quarter of an inch from the bottom board; this will allow a passage for the bees and still exclude the mice. For the method of packing the hives, see Apiarian in RURAL for October 25th.

Bone Fertilizers, etc.

J. M. G., Tulahoma, Tenn., asks 1, whether bones simply burned will make a good durable fertilizer; 2, which is the more valuable for fertilizing purposes—bone flour or hen manure; 3, where can he obtain the Gipsy wheat illustrated and described in the RURAL for Oct. 25.

ANS.—Burnt bones retain all their fertilizing ingredients except from two to four per cent of nitrogen they contain in the raw state. As bones are used chiefly for the phosphoric acid they contain, the loss of this small percentage of nitrogen, is counterbalanced by the great ease with which they are reduced to powder, so as to be readily available as plant food. To reduce bones to this condition on a farm, it is doubtful if there is any better means than burning them. If desirable the small loss of nitrogen can be readily made good by supplementing the pulverized bones with a small proportion of guano, blood, or some other nitrogenous fertilizer. 2. Bone dust is for most crops a more valuable fertilizer than hen manure, although the latter will often have a more powerful effect on the first crop, but the former is more lasting in its effects. Hen manure, however, is rich in nitrogen; bone dust, in phosphoric acid, so that where either of these ingredients of a complete fertilizer is deficient in the soil, that form of fertilizer that contains the most of what is lacking, will generally have the best effect. 3. We do not know.

The Paradise Stock.

J. F., Brantford, Canada, wants to know what is the Paradise stock spoken of in a recent RURAL, as a suitable stock on which to graft other Apples.

ANS.—The Paradise Apple is a distinct species of Apple, Pyrus Malus præcox. Its home is in Russia, and from there it has been spread to all parts of the world wherever pomology is recognized as an industry. It is very dwarfed in its growth, and is therefore admirably fitted for stocks on which to graft dwarf apple trees. One American author asserts that the tree never grows more than three or four feet in hight; we have, however, many times picked apples, in Europe, from Paradise trees 10 to 12 feet in hight. The fruit is poor, small, oblong, sweet with a touch of bitter, and ripens very early. We have never known a tree to send up a single straight trunk from the root, but always a number of branches, of which one or two were slightly stronger than the others. From this characteristic it is properly a shrub, and not a tree. In Europe, where dwarf trees are in high favor, it is used extensively as a stock, and its use here for the same purpose is increasing.

Miscellaneous.

A. C. W., no address, asks, 1, for a description of the Hoope Apple; 2, what is the origin of the grub worm; 3, who manufactures self-binding reaping machines; 4, when were they first introduced to the public, and by whom.

ANS.—1, We presume our correspondent means the Hoopes, also called the Hopsey, but more commonly known as Grey House. According to Downing, it is supposed to have originated in New Jersey. It has been long grown and is highly valued for cider-making. Tree, a strong, erect grower, and productive. Fruit medium, oblate, nearly globular, dull-red, with faint stripes. Flesh firm and dry, poor in quality. A long keeper. 2, We are not sure that we know what is meant by the grub-worm. "Grub" is the general term applied to the larva of a beetle, and grub-worm may therefore with equal propriety be applied to thousands of species. If the white, fat pest is meant that is so injurious to potatoes, corn and the roots of other crops, then it is the larva of the June-bug or Dor-bug, Lachnosterna fusca. 3. Self-binding reapers are manufactured by the Walter A. Wood M. & R. Co., Hoosick Falls, N. Y.; by D. M. Osborne & Co., Auburn, N. Y; Johnston Harvester Co. Brockport, N. Y; C. Aultman & Co., Canton Ohio. The self-binding reaper was invented by Mr. Locke, and first made and sold by Walter A. Wood named above, who introduced it in 1876.

E. J. B., Croton, N. Y. inquires what can be the probable cause of the unthriftiness of a variegated Ivy which has only grown four inches in two years. He has noticed, however, that the leaves and stem are covered with a scaly insect similar to the bark louse of the apple tree.

ANS.—The plant is choked with scales. Wash every part of the leaves and stem in strong soap-suds to which has been added a little carbolic acid, and when the scales are all removed, sponge off the plant in clean water. The variegated varieties are not vigorous growers, though they are in good health.

W. E. M., North Branch, Lapeer Co., Mich., asks if we know of any illustrated work on lawn planting.

ANS.—F. J. Scott's Landscape Gardening is a very beautiful work. Downing's Landscape Gardening is also excellent, it costs about $6.50. Kemp's Landscape Gardening is a smaller work, but very good. Any bookseller can supply or procure either work.

B. D. N., Sherburne, N. Y., asks what is Uncle Mark's address.

ANS.—"Uncle Mark" RURAL NEW-YORKER, 78 Duane St.

CONNECTICUT AGRICULTURAL EXPERIMENT STATION.

BULLETIN 34.—OCT. 17, 1879.

Analyses of Hay.

SAMPLES of hay from A. J. Coe, West Meriden, received June 27, 1879:

LXI.—Cut May 30, from dry upland, gravelly loam. Seeded with blue grass, white clover, timothy and red-top and mown three years.

LXII.—Cut June 5, from dry upland. Seeded with red clover and timothy and mown two years.

LIX.—Cut June 17, from dry upland. Seeded with timothy and red-top and mown three years.

LXIII.—Cut June 18, from moderately dry irrigated intervale. Seeded with timothy and red-top and mown four years.

LX.—Timothy. Cut June 23, from meadow never plowed. The growth was very rank, the stalks averaging 4—4½ feet high.

The water contents of these hays when received at the laboratory was as follows:

	Per cent.		Per cent.
LXI	13.42	LXIII	17.91
LXII	16.85	LX	16.77
LIX	14.7[illegible]		

To render the results comparable with other analyses on record, they are all reckoned on a water content of fourteen and three-tenths per cent. For comparison, are given Wolff's averages of German hay from "Menzel & Lengerke's kalendar" for 1879. See also report of this station for 1878, page 57.

	West Meriden, Ct.						Germany and Austria.			
Time of cutting.	LXI.	LXII.	LIX.	LXIII.	LX.	Inferior.	Better.	Very Good.	Extra.
	May 30.	June 5.	June 17.	June 18.	June 23.				
Water	14.30	14.30	14.30	14.30	14.30	14.30	14.30	15.00	16.00
Ash	5.30	6.49	5.57	6.86	3.27	5.00	5.40	7.00	7.70
Albuminoids	14.42	11.62	7.75	8.97	4.83	7.50	9.20	11.70	13.50
Fiber	19.66	26.06	24.72	28.45	22.81	33.50	29.29	21.90	19.39
Non-nitrogenous Extract	43.23	42.07	45.08	39.20	43.29	38.20	39.70	41.60	40.40
Fat	3.09	2.46	2.48	2.22	1.45	1.50	2.00	2.80	3.00

Classified according to the results of German analyses these five samples would rank: LXI as "extra," LXII as "very good," LXIII as "better," and LIX and LX as "inferior." They were sent by Mr. Coe as samples of early-cut hay and it will be observed that, with one exception, the quality deteriorates with age. It is an undoubted fact that early-cut hay is, in general, superior in quality to late-cut, other things being equal, but while some of the variations of the above samples must be attributed to this cause, they are probably also caused in part by differences in soil, manuring, species of grass, etc. Very likely the high percentage of albuminoids in LXI and LXII is to some extent to be attributed to the clover which they contain, though the low percentage of fiber, especially in LXI, shows that the vegetation was still immature.

In comparing the results of these analyses with those previously made at this station (see Bulletin 23), we should consider separately those containing clover, and those free from it. To the former class belong XLVIII, LII, of Bulletin 23, LXI, LXII, and of these the two latter, cut about the first of June, show a decided superiority, both as regards albuminoids and fiber, over the two former cut respectively in July and August. It is to be remarked, however, that coarse and rank grass, like LII, is generally woody and poor in albuminoids, as is well illustrated by LX.

Of those samples containing no clover, viz.: XLIX, L, LI, LIII, LVII, LVIII, LIX, LXIII and LX, the earlier cut ones reported in this Bulletin, show a slight superiority as regards albuminoids over the later cut ones formerly reported, but none of them are equal to the average German hay as given by Wolff. From all the analyses thus far made it would appear that our hays as ordinarily met with are of a coarser and more woody quality than those of Germany and Austria. Whether this difference is due to soil, climate or the kind of grasses grown, would be an interesting point to determine.

In three of the above samples an attempt has been made to separate the true albuminoids from the non-albuminoid nitrogenous matters. The albuminoids were determined by four different methods, with concordant results, as follows:

	Total Nitrogenous Matter. Per cent.	Albuminoids. Per cent.
LXI	14.42	11.41
LIX	7.85	7.13
LX	4.83	3.90

These results show that a not inconsiderable part of the so-called albuminoids in these samples consists, in fact, of substances whose nutritive value is much less. At the same time the differences are not nearly as large as those which have been obtained by various German observers and may possibly indicate that our apparently poorer hays contain relatively as much true albuminoids as the seemingly better German ones. The nature of the non-albuminoid nitrogenous matter is still under investigation.

This bulletin has been prepared at my request by Dr. Armsby, chemist to the station.

S. W. JOHNSON, Director.

Sheep Husbandry.

A PROFITABLE SHEEP ACCOUNT.

IN view of the increasing interest felt in sheep, we send the following to remove, if possible, the doubts of some who may not believe sheep raising to be a profitable business. In the first place, we wish it understood that the flock from which the account was taken were not fancy sheep; for they are nothing more than what any intelligent farmer might possess; that is, good cross-breeds. Secondly, we do not write this as an advertisement, for we say plainly that we have no sheep to sell, and we contemplate purchasing instead. The lambs from the flock were from a pure South-Down buck. The buck lambs were sold to butchers by the pound, the ewe lambs were *kept* and are valued at five dollars each, which is less than the price for which they could be bought. The following is the account.

Dr.	
18 Ewes, @$5	$90.00
One South-Down buck	25.00
	$115.00

Cr.	
18 Ewes, @$5 each	$90.00
One South-Down buck	25.00
14 Buck lambs, 1,006 pounds @5 cts. per lb.	50.30
10 Ewe lambs, @$5 each	50.00
85 pounds of wool, 33 cents per pound	28.05
	$243.35
	115.00
	$128.35

The ewe lambs are worth the same as their dams, as we used a thoroughbred buck, which improved them. The 18 ewes consisted of five yearlings (two of which were barren) and the remaining 13 were two, three and four-year-old breeding ewes. There were 25 lambs—nine pairs of twins. We lost one by accident, some of the buck lambs were sold at the age of three and a half months. They simply had good care—no petting. The 18 sheep could be kept on the same feed that would be required for two cows, and they would not require more than a quarter as much care. By the way, we think it worth mentioning that we had the curiosity to weigh one of the lambs in the spring, and it weighed 55 pounds when 52 days old. Can you beat that?

Saratoga Co., N. Y. ABEL HOYT & SON.

SHELTERING SHEEP.

I think that Col. Curtis in his article on the proper care of long-wooled sheep in the RURAL of Oct., 25, has exaggerated a trifle with regard to the necessity for sheltering them, etc. I was raised on the Cotswold Hills; my father had a flock of about 450 sheep. After I left him and started on my own account, I had a flock of about 700, and farmers in all that part of Gloucestershire had flocks ranging from 300 to 800, in a few instances to as many as 1,000. I have helped the shepherd in his care of his charge, generally getting wet once or twice a week and sometimes it would rain for days together, yet none of those sheep was ever sheltered, except the ewes for one month and then only in a yard. The wool of the tegs etc., however, was so long and dense that I don't believe it often got wet through, and the animals were so thriving that they never seemed to mind the exposure. They would eat about 20 to 25 pounds of cut swedes per day along with their hay and would weigh 80 to 100 pounds, dressed, and cut from eight to ten pounds of wool. Those having barley, peas or oil-cake would weigh from 100 to 120 pounds and cut from 12 to 14 pounds of wool. These would be about 14 months old. It is the keeping of sheep too warm and dry that makes them tender. In the Northern States, however, I concede that sheep require shelter in winter.

By the way, I allow that the RURAL was right in its remarks on my communication published in the issue of Aug. 23. with reference to the depressed condition of English agriculture. Later information convinces me that the plight of the Bristish farmer is much worse than I was then aware of. G. G.

Orange Co., N. Y.

THE BLACK-FACED SCOTCH SHEEP, the oldest breed in Scotland, are very muscular, active and extremely hardy, able to endure the privations incident to a life of continual exposure upon the bleak and storm-beaten mountains. In storms they instinctively herd together, and, although completely buried in a snow-drift, will manage to push the snow from their bodies and form a cave over them, in which they will live on what scanty herbage may be within their reach, until help comes. Thus buried, they have managed to live two or three weeks before they have been found and extricated.

"GOOD RESULTS" IN FARMING.

SOME weeks ago we quoted on this page a few words on "Good Results" from one of our correspondents. We did so because they agreed so exactly with our own observation and experience. Scarcely any expression is so often used in agricultural circles. We see it in all the agricultural papers, and hear it at all the farmers' clubs and grangers' debates, but always used in a very loose and indefinite way. "Good results" follow on the use of this, that or the other fertilizer, implement or mode of culture. But we fail to be informed *just what* results, just how much or even *about* how much money a certain sum expended in a certain way, has returned to the pocket of the farmer.

We were particularly struck with this a few weeks ago at an "open meeting" of a certain Grange, which we were invited to attend. This man had used the Buffalo pure bone dust "with good results"; that one, the New York Excelsior superphosphate, "with good results"; another the Chicago, or Albany, or Baugh & Son's, or the Stockbridge specials, or land plaster, or salt, and always "*with good results.*" One had used the fertilizer broadcast; another in drill or hill, and both "with good results." Some had used the Thomas harrow, or the Shares's or spring-toothed, or the Syracuse cultivator, or the disc cultivator "with good results." But when we asked in our bewilderment just how much money a given sum, expended on this, that or the other fertilizer, returned in actual, definite increase in wheat-yield or corn-yield, or even which of the various ones yielded the most, we failed to be enlightened. Or, when we asked just what effect a given implement produced, whether to stir the soil deeply and coarsely, or to make the *surface* fine and mellow, and compact the soil below, as is required for wheat; whether the given implement could be used as a broadcast weeder on growing crops of wheat, corn, potatoes, etc., or whether it would "root up the wheat also with the tares;" or which implement would do the most different kinds of work on the farm, and do them well, we again failed to be informed. And when we finally asked if the Grange as a local body had instituted any *definite experiments* through careful farmers belonging to it, who could be relied on for candor and accuracy, the Grange Master replied that he had often thought it would be a good plan, but it had not been done.

This brings us to the point we had in mind to insist on, viz: the great value of accurate, definite, protracted experiments in agriculture, and of absolute candor and fairness in reporting them, and the worthlessness and often harmfulness of all others.

For instance, on the question of summer-fallowing, the 28 years' careful experiment made by Dr. J. B. Lawes, of England, and lately published by him in our columns, is of great value. But for the first five or six years it proved absolutely nothing, and might have happened to prove the reverse of the truth. And just so, any experiments on home-made manures and commercial fertilizers, with a view to ascertaining the comparative value of the two, would need to be continued for several years, and to be made with great care each year, to be really conclusive. But on an ordinary farm it is perhaps impossible to have either the time or accuracy requisite to make the experiments conclusive on all points. It is therefore fortunate and greatly promotes the growth of agriculture, both as a science and art, that there are and have been such men as Lawes, Gilbert and others in England, who have means, time, taste and capacity to carry on many and extended experiments in field and laboratory, and thus discover both the facts and the causes. In our own way, too, both at the Farm and the Grounds, we are conducting many experiments patiently, carefully, fairly we think, and enthusiastically. Some of our contributors, too, at the Agricultural Colleges and elsewhere, are conducting experiments on various subjects. The results or outcome of such experiments we shall endeavor to publish fairly, so far as they may be of general interest and profit, whether they seem to prove or disprove any of our theories or doctrines. If these are wrong, they ought to be corrected.

But while accurate experiments are often costly and tedious, there is a class that may be made with sufficient accuracy on any good farm. For instance, in regard to many of the common brands of superphosphate, bone-dust, etc., an experiment for four or five years on a ten-acre field, say, treated in ten plats, one with stable manure, one with no fertilizer, one with clover plowed under, and the rest, each one with a different commercial fertilizer, might *practically* settle several questions:—1st, which, if any, of the commercial fertilizers pay for themselves the first year in actual increase of wheat or corn; 2d, which, if any, serve merely as stimulants, and leave no permanent benefit, or perhaps even an injury; 3d, which is, on the whole, *worth the most* on a given soil. These and similar questions might be settled to the great advantage of the locality where they were made, and at no very great expense. And any expense incurred might fairly be borne by a farmers' club or Grange.

We shall be glad to report any such or similar experiments, provided they seem to have been made with candor and fairness, and with sufficient accuracy to make them trustworthy. We predict that all who experiment fairly on fertilizers and modes of cultivation, will be convinced of two things: 1st, that *good* farming pays, if any kind does; and 2d, that no one can afford to buy commercial fertilizers till he has carefully made and saved, and properly used all the stable and green manure the farm is capable of producing. We do not agree with an enthusiastic friend of ours, who lately said to us, "Why, phosphate is cheaper than stable manure a mile off, to be had for the drawing."

A FINAL WORD.

"PAY AS YOU GO" and the "ABOLITION OF HORSE-RACING AT AGRICULTURAL FAIRS" are two subjects which for a long time the RURAL NEW-YORKER has endeavored to keep before its readers. Many journals throughout the country have joined us in our advocacy of both. As to the first, we believe, as a rule, there is no other precept the observance of which will tend in a greater degree to promote general happiness and prosperity. As to the second, we had rather the agricultural fair itself should be abolished than that horse-racing with its evil associations and tendencies should be tolerated as one of its chief attractions. Horse-racing has in no fair sense anything whatever to do with agriculture. Beyond what is required of a horse to perform in the way of useful service, speed has no intrinsic value. All other things being equal, a horse that can trot a mile in four minutes is worth just as much as another that can trot a mile in two minutes and a half. The great difference in price that the two horses will bring in the market, is owing to the conventional value which is placed upon *speed* by men who keep horses for *other* than useful purposes. If agricultural fairs are of so little real value that they cannot be maintained without the race-course, we say "Give them up, and recognize the fact." It were better to have it known that agricultural fairs are failures than that horse-trots should thrive under a false name, and furnish a plausible excuse for the attendance of thousands of people that are too sneaking to support them openly. Agriculture is a child too noble and thrifty to be obliged to lead by the hand annually, in order to appear herself, a bastard that was conceived by gamblers and that has ever since been the especial champion of loafers, pickpockets and thieves.

THE PRICE OF INDIFFERENCE.

WE wish we could awaken village, town and city people to a sense of how much they lose by accepting, uncomplainingly, the many sorts of inferior fruits known as good "market" varieties. It is not fair to blame the market-men. It is their business to supply the demand with the least cost to themselves. It is the consumer that alone has to do with quality, and if he is satisfied with the Wilson strawberry, the producer can have no interest in cultivating and sending to market for the same price better kinds which are less prolific and which cost him more to produce. If "Sheepnose" and Crab apples could be sold for the same price as Northern Spy, Spitzenberg, Baldwin, etc., the latter would rarely, if ever, be offered for sale. But people have learnt to discriminate so far between different kinds of apples and pears that the better varieties are demanded, and the supply is therefore regulated accordingly. It is not so, however, with small fruits, more especially with raspberries, strawberries, and grapes. In these, productiveness and firmness are first considerations with the producer and middlemen. To the consumer a strawberry is as yet a strawberry—and raspberries are all alike. Some prefer light-colored grapes; some, black. It matters little otherwise. And yet there is just as much difference between the different varieties of raspberries, strawberries and grapes as there is between different varieties of pears and apples.

People who depend upon markets for their small fruits must content themselves with the poorest sorts so long as they are satisfied to permit sellers to make their selections.

THE ORGANIZATION OF A NATIONAL AGRICULTURAL SOCIETY.

IN our last issue we mentioned briefly that a convention had been held in this city with a view to organize a National Agricultural Society. This movement was first started by Mr. J. H. Reall, of New York, who early in the fall issued circulars to a number of the most prominent agriculturists all over the country, inviting them to meet in convention to consider what should be done towards effecting such an organization. The proposition created at once a lively interest, and on the 22d ult., a convention was held, in which all the Eastern and Middle States were well represented. All present considered the scheme a feasible one, and enthusiastic speeches were made in its favor. A committee of thirteen was appointed on organization, with power to add five members more from each State of the Union. Before adjourning, it was decided that a second meeting should be held on December 10, next, at which time a report is to be given by the committee appointed, and the organization effected, if possible. The committee of thirteen appointed a sub-committee of five, mentioned here last week, to act as the executive committee in completing the work of organization.

The idea appears to us to be one that deserves the commendation of all who have the great agricultural interest of our country at heart. Much can undoubtedly be done by a powerful far-reaching Society in the way of leveling the general path for agricultural progress. But an outburst of passing enthusiasm will be of no value. To be of service to the country and deserve the name of National, the Society must be subject to the most thorough organization and must be composed of earnest, thorough-going, hard-working men, representing every section of the country, and including all the prominent men connected with all branches of agriculture throughout the land. Let such men everywhere join in the movement; the object is worthy of sublime success, and if the work is rightly conducted, success must attend the effort.

ASA GRAY.

WE are pleased to be able to place before our readers in this issue an excellent portrait of that worthy and justly distinguished man, Asa Gray, and a sketch of his life and works by one fully competent to write it in fitting terms, Professor W. J. Beal. The portrait is engraved from a photograph sent to us by Dr. Gray at our request.

BREVITIES.

"STATESMANSHIP OF THE PLOW" is good.

"IT becomes evident," says the London Agricultural Gazette, "as thrashing proceeds, that the wheat crop is even worse than was anticipated."

IN Scribner, E. P. Roe says that to people who live in the country, small fruits are like heaven, objects of universal desire and very general neglect—which is putting it strong.

NEW YORK newspapers, all of which have suffered, more or less, from the recent run of "hard times," are rejoicing at the prospect of a large increase in their circulation on account of the advent of the present reign of prosperity throughout the country. In many cases this increase has already begun.

"WHEN we take into account," says Horatio Seymour," the values and tenures of European lands and compare them with the low prices and free titles of our own fertile soils, it is clear that they cannot be brought into such close practical proximity without making great changes upon both continents."

THE present is probably as good a time as any in the year to cut out the canes of Raspberries and Blackberries that have borne fruit. The canes of Raspberries of doubtful hardiness, like Brinckle's Orange, Thwack, Pride of the Hudson, should be laid down, a stone or block resting upon the tips, and then lightly covered with earth or straw.

MR. DOUGLAS writes us that he has traveled several thousand miles to convince himself of the value of Catalpa speciosa, and he believes it to be of incalculable value to this country as a forest tree and a much finer ornamental tree than C. bignonioides or syringæfolia, as it is much hardier—a more upright grower and produces much more beautiful flowers.

"Go and get your leaf-mold from the woods." And yet the woods are crowded with trees, shrubs, weeds and grass. Year after year they grow and thrive. The falling leaves and decaying twigs and branches are their only fertilizers. Let some enterprising "fertilizer man" analyze this leaf-mold and manufacture his "complete manure" accordingly.

THE Cincinnati Gazette says: "THE RURAL NEW-YORKER gives reports from 13 States very favorable to the growth of its protégé, the Beauty of Hebron potato. In many places, it was considered better than Early Rose. The yield was various—the highest seems to be about 50-fold—50 pounds for one." The highest report made gives 50 pounds from about four ounces, obtained by sprouting.

MR. J. G. Burrow, of Fishkill, N. Y., answers an inquiry of ours as follows: "As regards ripening grapes in bags, my opinion is decidedly against the plan, if paper is to be used. If they must be ripened in bags, I would by all means, recommend mosquito bars, millinet or gauze. I have ripened them very nicely with mosquito netting made into bags, but paper does not let sufficient light through to give them their natural color or flavor."

A RURAL friend from Livingston Co., N. Y., who has fruited 35 varieties of Strawberries the past season, among which were the Sharpless, Pres. Lincoln, Cumberland Triumph, Crescent Seedling, Duchess, Monarch of the West, Duncan, Prouty's Seedling, Springdale and Miner's Prolific, writes us that he assigns the premium for general excellence to the last-named. With him it has been very hardy, healthy, and exceedingly prolific of large, firm and delicious berries. In his experience it stands at the head of its class.

GOOD cats are unquestionably very useful if not indispensable upon the farm. Emasculated cats are growing more and more in favor everywhere. They generally grow to twice the ordinary size;—they are more healthy because more quiet and less dissipated; they are more amiable and display a warmer sense of gratitude; they are more cleanly and, as a rule, better rat-catchers. We recognize the value of cats in general. But we would be glad if the race could be kept up as well and yet consist only of impotent males!

ONE of the simplest ways of propagating the Grape-vine is simply to make cuttings of the prunings, about a foot long always, including one or two joints, and bury them so that the upper end is an inch above the soil. Cover them with straw, hay or any other coarse material at hand. A large proportion will grow next spring. The same may be said of currant and gooseberry cuttings. The roots of Raspberries may be cut up into bits three inches long, and placed in boxes, alternating a layer of soil and a layer of root cuttings. The boxes may be buried in a dry place out-of-doors, or kept in the cellar until spring.

SIGNS of the growing prosperity of the country multiply. The number of failures for the first nine months of the present year is only a little over half that for last year, while the sum of the aggregate liabilities in 1879 is considerably less than half that for 1878—failures in the first nine months of 1878, 8,678; liabilities, $197,211,129; failures in same period in 1879, 5,320; liabilities, $81,054,940. Moreover, for the three months ending Nov. 30, the failures are only half those for the same period last year and the liabilities only a fourth of the amount of those in 1878. In Canada, on the other hand, the failures and liabilities this year are from a third to a half greater than those of last year.

WATER is an excellent protector for half-hardy plants against frost. In southern Europe where the winters are light, many tender plants remain safely out-of-doors all winter without being covered, by twisting straw into heavy ropes which, on cold nights, are made wet and then wound in zig-zag lines around plants and among the branches of trees and shrubs, each end being submerged in a pail of water. The water will rise by capillary attraction and keep the rope wet the whole length, and in the act of freezing enough heat is liberated from this water to raise the temperature of the atmosphere surrounding the plants, and thus save them from the cold. It is for the same reason that trees on a moist ground can withstand a severe frost better than trees on a dry soil.

DISEASES of trees come and go the same as diseases in animals. It is the same with insects. Conditions favorable to their increase, of which we know nothing, occur and they threaten the very extermination of certain species of plants upon which they live, or for long periods render valueless, over extensive districts of country, certain fruits previously of great value to the inhabitants. All at once they nearly or entirely disappear—we know not why. But in general the last or popular remedy for their destruction receives the credit. The history of medical practice through ages gives convincing proofs of the credulity of human nature and of the utter worthlessness of medicines which for years at a time were supposed to possess remarkable specific curative powers.

WE have ourselves neither praised nor condemned Com. Le Duc. But we have felt like praising him for his energy and for his manifest *desire* to benefit the agricultural interests of our country. Whether his energy has been and is being wisely expended or not, is not yet fully apparent. In either case we know of no reason or excuse for the hasty and violent denunciations of many journals, and we note with satisfaction that a strong counter-current is setting in from many different quarters. It is not to be supposed that any man filling a government office, how earnest or pure soever his motives may be, can hope to escape the sneers of those pests of the land, that can see nothing to praise that reflects no credit on their political or personal preferences.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

POEMS OF HOME.

A CRADLE IN THE HOUSE.

We have got a cradle in the house,
And we have something in it,
A freakish, wayward, winsome bairn,
Not bigger than a minute.

Although no diadem he wears
But his ringlets soft and brown,
His every smile and frown we heed,
As if he wore a crown.

No scoptre in his hands he holds,
But then his pinky fist, so small,
He, like a royal monarch wields,
And we are humble subjects all.

And when his tiny foot he stamps
If aught, caprice, or whim displease,
The brightest gift in babydom
We bring, him to appease.

And when he wills to close his eyes,
We on tip-toe through the house:
Even papa's heavy-booted foot
Falls softly as a mouse.

We have got a despot on a throne,
Reclining like a kinglet,
For we have a cradle in our house,
And we have something in it. [*Household.*

A MOTHER'S DIARY.

Ah! Baby on the floor,
Making for the fender;
Sunlight seems to make it sneeze;
Baby "on a bender?"
All the spools upset and gone,
Chairs drawn into file,
Harnessed strings all strung across,
Ought to make one smile.
Apron clean, curls smooth, eyes blue,
(How these charms will dwindle,)
For I rather think—don't you—
Baby "is a swindle?"

Noon! A tangled, silken floss
Getting in blue eyes;
Apron that will not keep clean,
If a baby tries!
One blue shoe untied, and one
Underneath the table;
Chairs gone mad, and block and toys,
Well as they are able;
Baby in a high chair, too,
Yelling for his dinner.
Spoon in mouth; I think—don't you—
Baby "is a sinner?"

Night! Chairs all set back again,
Blocks and spools in order;
One blue shoe beneath the mat
Tells of a marauder;
Apron folded on a chair,
Plaid dress torn and wrinkled,
Two pink feet kicked pretty bare,
Little fat knees crinkled;
In his crib, and conquered, too,
By sleep, blessed evangel.
Now I surely think—don't you—
Baby "is an angel?" [*Baltimore Sun.*

BABY HAS GONE TO SCHOOL.

The baby has gone to school; ah, me!
What will the mother do,
With never a call to button or pin,
Or tie a little shoe?
How can she keep herself busy all day,
With the little "hindering thing" away?

Another basket to fill with lunch,
Another "good-bye" to say,
And the mother stands at the door to see
Her baby march away;
And turns with a sigh that is half relief,
And half a something akin to grief.

She thinks of a possible future morn,
When the children, one by one,
Will go from their home out in the world
To battle with life alone,
And not even the baby be left to cheer
The desolate home of that future year.

She picks up garments here and there,
Thrown down in careless haste,
And tries to think how it would seem
If nothing were displaced.
If the house were always still as this,
How could she bear the loneliness?

MY LITTLE WIFE.

She isn't very pretty
(So say my lady friends);
She's neither wise nor witty
With verbal odds and ends.

No fleeting freaks of fashion
Across her fancy run,
She's never in a passion—
Except a tender one.

Her voice is low and cooing;
She listens more than speaks:
While others talk of doing,
The duty near she seeks.

It may be but to burnish
The sideboard's scanty plate,
Or but with bread to furnish
The beggar at the gate.

So I, who see what graces
She sheds on lowly life,
To fashion's fairest faces
Prefer my little wife.

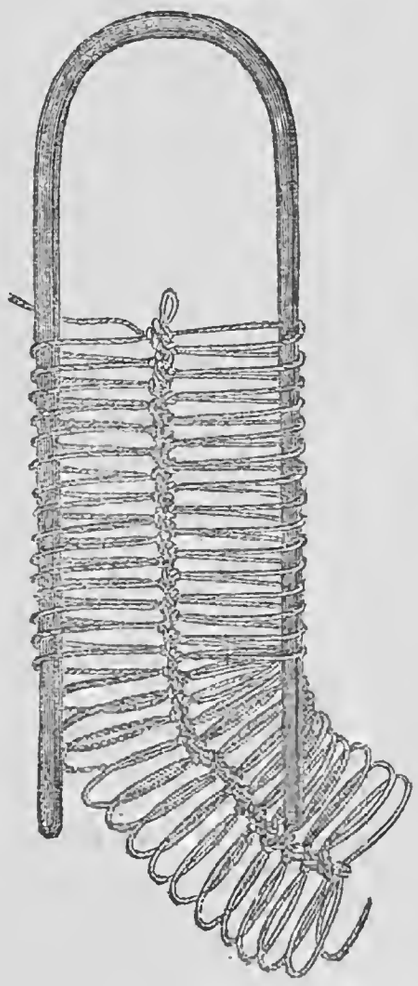
And though at her with pity
The city dames may smile,
Who deem her hardly pretty
And sadly out of style:

To me she seems a creature
So musically sweet,
I would not change one feature—
One curve from crown to feet.

And if I could be never
Her lover and her mate,
I think I'd be forever
The beggar at the gate. [*Chicago Times.*

DESCRIPTION OF ENGRAVINGS.

HAIR-PIN WORK.

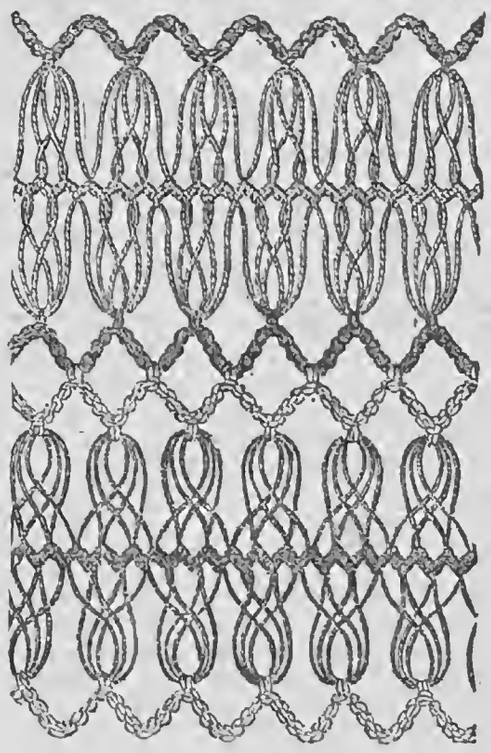


No. 1.

The *Modus operandi* is given at No. 1. and the completed pattern at No. 2. This is a very pretty substitute for ordinary styles of crochet work.

PIN TRAY.

For the bottom of the tray eight pieces of cardboard are used cut "diamond shape." Four of the pieces are covered with pale pink silk and ornamented with embroidery in light blue floss as



No. 2.

shown at No. 5. The remaining pieces are plainly covered with blue silk as per No. 4. The rim of the tray is crocheted after pattern at No. 6. and the whole is finished with bows of mixed pink and blue satin ribbon.

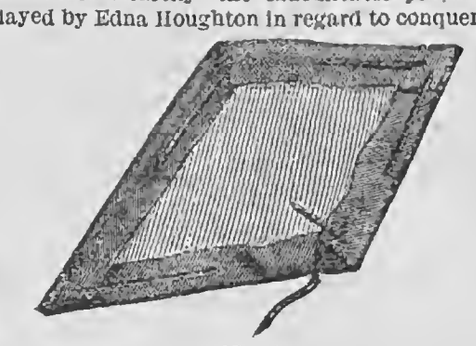
FLOWER MAT.

The foundation is of wine-colored cloth and the dahlias are of silk, alternately pink and wine-colored. The embroidery may be confined to these two colors, or the vine may be shaded green and the flowers pink. A plaiting of wine-colored satin ribbon around the edge completes the mat.

THE WOMAN'S CLUB.

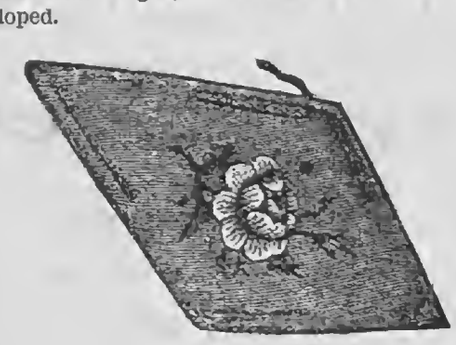
A REVIEW OF THE OCTOBER CLUB.

Dear Miss Ripley: I read with pleasure today, in our Rural, some letters from ladies to your department; they were so natural in expression, I cannot forbear adding a few lines myself in regard to the subjects treated of. I admire most heartily the indomitable pluck displayed by Edna Houghton in regard to conquering



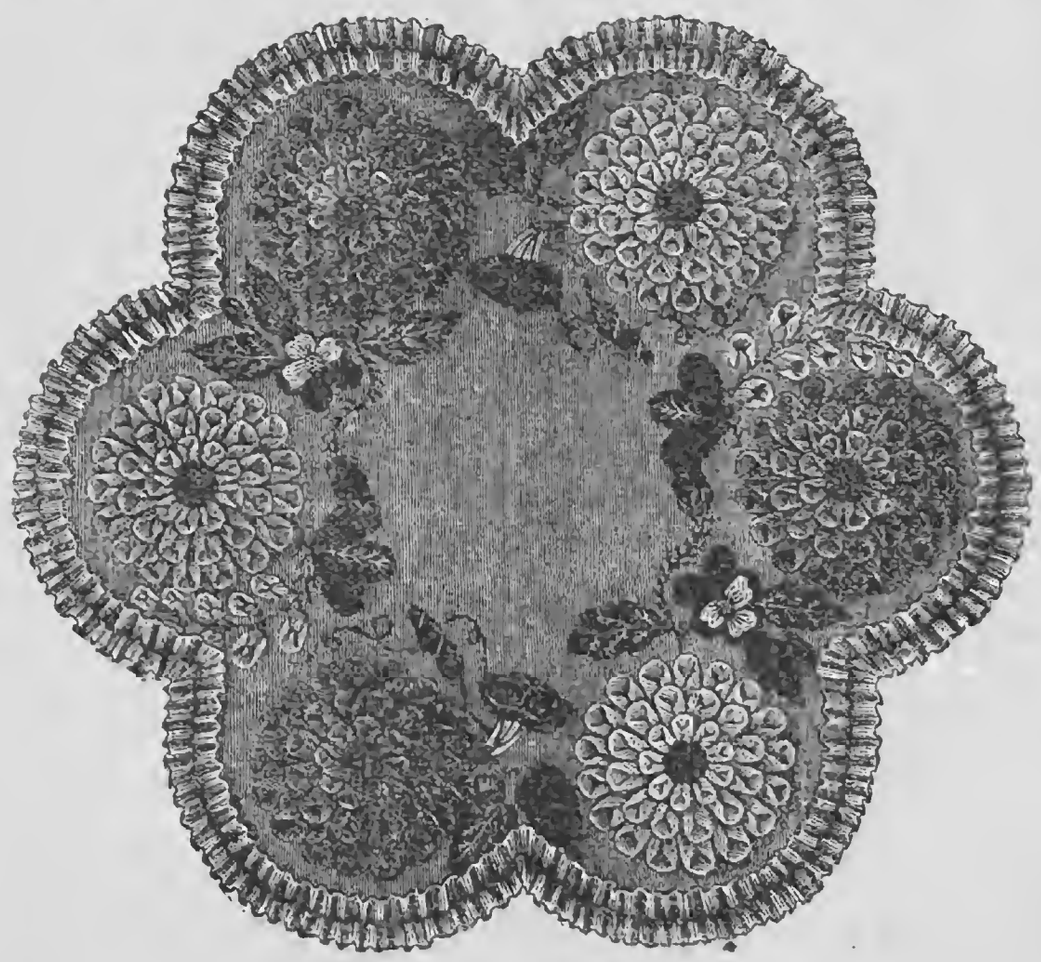
No. 4.

her difficulties in music. I have been a music teacher for the last 15 years and right here let me say that most of the trouble in this music business, lies with the parents of the pupils. Not one parent in fifty is willing that the child shall progress by regular system. They see no use in scales, exercises etc., "*there's no tune in them.*" A pupil has hardly mastered the notes when presto! the "Little Brown Jug" is far more acceptable, and of course more readily understood, than the finest sonata of Beethoven. There was a circus in our town last spring, the usual rush was on hand, every one of course came to see the "Elephant." Among other attractions (?) in music they had a steam piano, (which is nothing more nor less than the Calliope used by southern steamers) Well, I should call it an "Infernal Machine" from its noise. It was perfectly deafening when near it. But you just ought to have seen the crowd with open eyes and mouth, listening to the "delightful music" while I felt a wicked wish to choke the performer or blow him up in his own concern. There is a general knowledge of music here but with some few exceptions it is of a low grade, I don't mean vulgar, but uncultivated and undeveloped.



No. 5.

I have a warm fellow feeling for the ladies on the servant girl question. I have lately had some experience in that line and I'm truly glad its over. My baby boy is now nearly six weeks old, but when I did need a girl what a dance they led my husband! They thought I was in their power and they acted accordingly; they would come and stay a few days and then "dust" while my "better half" in a very irreligious frame of mind set out to seek another. Thus they acted till nearly worried to death, we determined to get along without such "help." I have three little ones the oldest only seven years of age, but I would endure

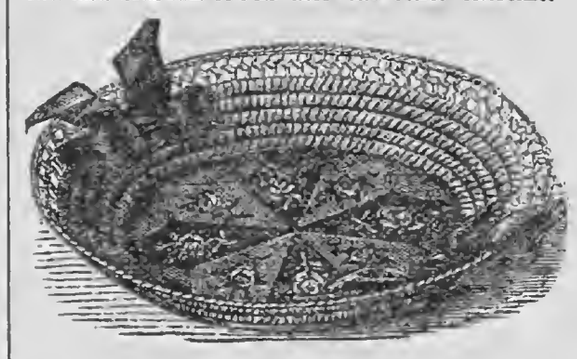


FLOWER MAT.

WATCH STAND.

The frame is of ebony, covered with canvas embroidered in crewels. Cording and tassels of blue are the ornamentations used, as shown at No. 7. almost any amount of labor or discomfort before I would; or could live in "hot water" all the while with a lot of vain shiftless girls. I never have a hired girl except as a matter of "dire necessity," and never intend to endure them again.

I think "Avenger" has come with a vengeance to the rescue of the poor unfortunate mother-in-law and bids fair to run into the other extreme.



No. 3.

If those afflicted mortals would stop and think awhile they would see that all this mother-in-law business arises from "jealousy." You see mankind loves to be "number one" and the mother very naturally doesn't care to give up "her rights" and so the ball is set rolling. I fully agree with the person who said there never was a house big enough to hold two families. "That's what's the matter," I would rather live in a shanty than in the finest mansion on earth with *any* people-in-law, on whatever side. When two people marry they are supposed to "branch off" and form new ties, but the idea of "tacking on" our relations, is the veriest nonsense. We can love them just as well and still not be obliged to live with them in daily intercourse, I think "Avenger's" daughter will bid fair to be an "old maid," if her mother intends to visit the sins of all the defunct sons-in-law on his devoted head. There are two sides two every question and I think the best plan to settle this is to live apart. I expect I have overrun the bounds, but if I am in the way, throw me in the waste paper basket, and I'll not trespass again with such a lengthy document; but those ladies' letters rather "stirred me up," and while the inspiration was on me, I thought I would write as the spirit moved me. Ladies' departments are becoming fashionable in newspapers. I'm glad the "lords of creation," are coming to see that even "weak woman" has some brains that are worthy of recognition. Mrs. Arthur Galpin.

Waterville, Kan.

WHIFFS FROM OILDOM.

I have often thought I would like to be personally acquainted with some of the "clubites" of the Rural, and I believe I come pretty near it when *one of them bears the same name* as myself, and another is the sister of my girl's former employer. Living in the country far from town, where literature is hardly thought of by many, it is really a luxury to become acquainted with those of congenial tastes.

The falling leaves remind me that the Winter's blast will soon compel us to close the doors and windows, and to find employment and amusement in the house, and how much more pleasantly the time will pass if the rooms are cheerful and bright. I wish to tell the sisters of some improvements we made in our living rooms last Spring, and of some others we have in contemplation. The mirror hung between two windows, without any support; the clock—an old family one—was also fastened

No. 6.

against the wall without any shelf. One day, when Hubby was not busy, I asked him to put a plain shelf under the mirror and another under the clock. He did as desired, but how rough they looked without paint or finish of any sort. I speedily devised a plan for their embellishment. The shelves *must* have lambrequins, but what was I to make them of? Eva and I racked our brains, and the house, (the store was not to be thought of). At last an old, plain grenadine overskirt, trimmed with lace was found; later, some worn out red flannel under-clothing was brought to light. Laying the grenadine over the red flannel produced a pretty effect, so we cut scallops for the drape of the lambrequin, sewed on lace headed with dainty, red braid, tacked this to the shelves, headed with strips of flannel, pinked at both edges. Some

No. 7.

pieces of marbled oil cloth were found to marble-"ize" the top and our shelves were complete, the one under the mirror for receiving combs, brush

&c., the other could hold a vase of flowers or any small ornament beside the clock. A newspaper portfolio was also improvised out of a large piece of pasteboard, which was covered with the same material as the lambrequins, then folded portfolio-wise and black silk cord sewed at the ends to represent lacing. It was edged all around with pinked strips of flannel, and finished in the center with a medallion made of an oval shaped piece of red flannel pinked around the edge, with a decalcomania bunch of flowers in the center. This made a very pretty wall-pocket, and was hung under my clock shelf. C. E. J.

"Olldom," Pa.

NEWSPAPER HYGIENE!

An article on "Rest as a Medicine" which appeared in a late issue of a widely circulated and much quoted fashion journal contained the following:

"Here is a capital tonic in the form of a bath. Well lather the body with soap and water, from head to foot, by means of a bathing glove. Then immediately after take a cold sponge-bath, which should be ready at hand.

* * * * * *

The bath should be taken the very first thing after getting out of bed, and if afterward a short walk be taken before breakfast, the sense of exhilaration will be very great."

It is hardly possible to conceive of advice better calculated to inflict misery on any one foolish enough to follow it. If a person in robust health should pursue such a course for any length of time the result would be an increased susceptibility to atmospheric changes and a lowering of the tone of the system, but for invalids—the class especially addressed in the article—a bath and walk before breakfast would be slow murder. It seems to me about time to warn the public against acting on the hygienic recommendations published from time to time by the press. The regular staff of a newspaper does not usually include a physician and the average editor is not especially wise about health matters, then why regard the journal as a trustworthy medical adviser? Why not find out the truth of the matter for yourselves? Years ago such information was buried in large volumes of materia medica, full of technicalities and perplexities to the uninitiated, but now when two or three houses are publishing "health primers" at 50 cents per volume, written by physicians—who are specialists in the subjects on which they treat—with a view to instructing the laity on such important topics as diet, bathing, ventilation and the diseases of different bodily organs why remain ignorant or trust to chance newspaper articles for information?

If celery is recommended for rheumatism or sage tea for promoting the growth of the hair, no harm will result from following these suggestions even though the desired result may not be attained, but when it comes to advocating the indiscriminate use of Turkish baths, or baths generally, the press is no longer a safe guide.

We are not amphibious animals and yet one might infer we were from the persistency with which we are urged to bathe, bathe, bathe. The morning plunge, the morning sponge and the shower are the form of bath torture, usually recommended.

The majority of the physicians are agreed that as a rule people bathe too much. A daily cleansing of some sort is undeniably a necessity, but making a practice of spending 15 or 20 minutes in the water or sponging in cold water before breakfast so far from being conducive to health, depresses the vital energies, and develops latent tendencies to various forms of disease.

In a series of "toilette" papers published in a popular journal about three years ago, great emphasis was laid on the exhilarating effects of the Turkish bath. It was claimed that this form of bath, beautified the complexion, improved the general health, and gave tone to the system. To my subsequent sorrow I read, believed and acted. A course of Turkish baths left me with so little vitality that I could hardly drag myself across a room. I was not an invalid to start with and I took the baths only twice a week (I have seen them advised for daily use.) Turkish and Russian baths are undoubtedly useful but they should be taken only by the advice of a competent physician.

The writer of these same papers advises the frequent taking of warm baths, and the lying in them for many minutes so as to thoroughly open and cleanse the pores. Cleansing the pores is certainly most necessary but the method here prescribed is altogether too expensive. No one—especially a woman or child—can afford to waste her energies and weaken her vitality by any such exhaustive process. And yet we must bathe, how and when is it best to do so?

I can not consistently answer these questions, for has not this whole article been devoted to condemning anonymous contributions on health subjects? Those who are interested in these matters can very easily supply themselves with authentic information if they care to do so. Jacquelina.

A COMBINATION CONSERVATORY AND REFRIGERATOR.

Dear Miss Ripley:—Though somewhat tardy in acknowledging the pleasure it afforded me, yet now let me assure my young friend "Marian" that I am truly glad to form her acquaintance, and feel that we shall be firm friends.

I approve of Marian's mode of protecting vines from the chills of Winter—as described in Woman's Department, August 30—and if it were necessary, I should adopt it. But, fortunately, I have just had a conservatory completed, and as all of my rare vines are on movable frames, I shall keep them in the conservatory with my Geraniums and other plants.

Allow me to say a few words in regard to this conservatory, which is built on rather a novel plan. Three sides are entirely exposed, while at the back it is dug down ten feet below the surface, and a large room walled in, for keeping ice. There are steps extending through the center of the conservatory down into this ice apartment. So you see that I have a "cold"-house and a "hot"-house combined.

I notice a great deal in your columns about training our daughters to work, every word of which I heartily endorse. Although, before the late war, I lived on a farm and had some sixty servants, yet all of my daughters were taught to perform the necessary duties of housekeeping. I told them that if they never had it to do themselves, yet they ought to know when it was properly done by others. And now (when servants are so untrustworthy) they are all good housekeepers and thankful for their early training. But some of your lady correspondents have a "cross to bear" which I am happily spared, that is, the trouble of *keeping* servants. Some of the faithful ones of "old times" are still with me, have always been, and say they will always be, so long as I am willing. But to those housekeepers who are not so situated I offer my sincere sympathy, and if I could suggest any remedy for the great evil, I should be more than happy to do so. Cannot some of the lady friends offer some suggestions for curing this prevalent source of domestic discomfort? Mrs. T. J. B.

AUTUMN LEAVES, HOUSE PLANTS AND STOCKINGS.

Dear Miss Ripley:—Now that fall is here, and there are so many autumn leaves to be had for the picking, one can make a great many pretty things in the fancy line without incurring any expense. Picture frames of autumn leaves made in the following manner are extremely pretty: Make a frame of pasteboard, and sew on it leaves that have been pressed, covering the stem of one leaf with the next leaf. When hung upon the walls, these frames look very well. Fern and maple leaf decorations, bouquets of dried and crystalized grasses, wax flowers arranged in wreaths or clusters, all tend to make home bright and attractive. A few house plants are very pleasing to the eye when Winter has stripped the foliage from every bush and tree, and the presence of these in-door plants reconciles one in a measure to the dreariness of winter.

When one gets new stockings, she will find a great advantage in taking them, before they are worn, and running the heels and toes with No. 21 knitting yarn; they will wear much longer.

D. A. Rea.

Note.—The fashion article announced for this issue has been postponed for one week to make room for the regular meeting of the Woman's Club.—Eds.

Literary Miscellany.

THE FARMER'S WOOING.

The daisies nodded in the grass, the buttercups were sleeping,
And just across the river sang the farmers at their reaping;
Upon the hills, so blue and far, the maple leaves were showing
Their soft white beauty in the breeze that from the sea was blowing.
A little maid came through the land with song and rippling laughter;
The buttercups made way for her, the daisies nodded after.
A strong young farmer saw her pause beside the parting river;
She drew a lily from its depth with golden heart a-quiver.
"Thou art more fair than lilies are," said he, with head uplifted,
And threw a poppy, as the stream toward the maiden drifted.
She set the flowers in her hair—the red and white together;
A cloud grew black before the sun, and rainy was the weather.

He came across the river then, this farmer, from his mowing;
He minded not the water's depth, he cared not for its flowing.
"O love!" said he, "if gleaming sun and cloudless skies o'erlean us;
The river's barring width may roll unpassed, untried between us;
But when loud thunder fills the air, and clouds and rain come over,
I'd cross the ocean to your side—I am no fair-day lover!"

And so one noon the village bells rang out across the river,
Their music set the buttercups and daisies all a-quiver,
While some one drew a lily from the stream so blithely flowing,
And plucked a blood-red poppy that amid the wheat was growing;
The maiden set them in her hair—the red and white together—
With many a smile, a tear or two, and glances at the weather.
They passed beneath the chapel's shade—the farmer and the maiden—
Where arches crossed above their heads, with snowy blossoms laden,
And in that place of holy calm, the binding words were spoken;
He in his heart bore out the truth, she on her hand the token.
The years went by, and some were bright and some were clouded over,
But ever stood he at her side—he was no fair-day lover.

[*Boston Transcript.*

IN FOLLY'S NET

CHAPTER XV.

(Continued from page 712.)

"Young lady," said Sir David, gravely, "I can only repeat that, as far as I understand the law of this land, you are the wife of the man with whom you went to the inn. I can repeat, also, that a court might, but it is improbable, decide otherwise, and your only chance of that consists in the fact that there is no writing to prove your intentions or his."

"But my oath," faltered Jean.

"His would contradict yours," said Sir David Cairnes, calmly.

"But," Jean then began, trying to speak very quietly: but her composure gave way, and she stretched out her hands to Sir David, and in a voice of agonized entreaty, she continued: "Oh! sir, have pity on me. Think, for the sake of every one dear to you, and in very mercy recall your words. Oh! consider I was the promised wife of a man whom I love with my whole heart, and who loved me. Is it likely that, such being the case, I would marry another? For pity's sake—" she sank on her knees by the table, her long, soft draperies falling around her, her arms thrown on the dark velvet cover—"do not ruin my life and his! It is not true. I cannot—I cannot be that man's wife!"

As she spoke her eyes turned to Andrew Blair's face with an expression of contempt and disdain.

He himself, still standing by the table, looked at her compassionately.

"I cannot recall my words," said Sir David, more gently. "If this gentleman claims you as his wife, I believe that you are legally married to him."

"If he claims me," she repeated, faintly. "But will he? Oh! Mr. Blair, you hear?" she went on excitedly. "It lies in your hands. For Heaven's sake retract your claim, and——"

"Jean—Jean!" said Lord Ivor, hoarsely. "Not to him—not to him!"

Jean staggered to her feet once more, and stood looking in pitiable despair from Sir David to Mr. Blair; while the Earl's heaving chest and flashing eyes showed how terrible his agitation was.

Mr. Blair glanced significantly at his lawyer, and with a little embarassed cough Mr. Cantire spoke.

"It would be as impossible for this gentleman to deny the marriage as it is for you to do so, madam," he said. "It is impossible to foresee what circumstances may arise which would in the future urge you to plead this very marriage, which you now deny. Am I not right, Sir David?"

"Quite right," said Sir David, rather sadly, for Jean's terrible anguish and the Earl's haggard, despairing face touched him, lawyer though he was.

"Besides," continued Mr. Cantire, "proof of this marriage exists in writing."

An exclamation of surprise broke from Lord Sholto. In her confession Jean had forgotten the notes exchanged between her and Mr. Blair, and as the lawyer produced them the Earl leant forward eagerly.

The little lawyer opened and smoothed them with his hand, then passed them over to Sir David, who took them and read them in silence.

"Are you aware of the contents of these letters, my lord?" he said, when he had perused them.

"No," stammered Lord Sholto. "Jean—Miss McLeod—mentioned no letters."

"Ah!" exclaimed Sir David, with a severe glance at Jean, which spoke volumes of reproof and some disdain. "Then, when I do so, you will see that no court, in the present state of Scotch law, could deny the marriage. Listen. This is the note written by the man to the woman he has married:

"'My Dear Little Wife:—I hope you have partly recovered your fatigue. When you are ready to receive me let me know, as I am anxious to see how you are. Will you forgive me for having taken such a liberty with your sketch-book? Your affectionate husband, Andrew Blair.'"

"And this," continued Sir David, putting down one note and taking up the other, "is her reply:"

"'My Dear Husband:—I am quite ready to receive you, and I am anxious that you should see me in my charming toilet. Don't apologise for using my paper. I thought that a wife's property was less hers than her husband's. You see I have a proper notion of what my prospective duties are. Your affectionate wife, Jean.'"

"Jean wrote that!" said Lady Sholto, in surprise.

"She does not deny it," said Sir David, coldly. "And, whatever your ladyship's opinion may be I can hold but one. She may have repented for what she has done, but she was a willing agent throughout."

Jean lifted her brown eyes with a touch of hauteur, which faded almost immediately.

"The note was written in jest," she said, feebly.

Sir David shrugged his shoulders incredulously.

"I am sorry to appear discourteous to a lady," he said, quietly, "but I cannot alter my opinion, and I am certain that any judge trying the case would hold the same."

"Archie," cried Jean, suddenly turning to him for the first time, and stretching out her hands in an agony, "surely you do not doubt me?"

Greatly as his faith was tried, deeply as he was suffering from her folly, his trust in her and his love for her shone undimmed still.

"No, love—no," he said, instantly. Then he went a step forward. "Will not ignorance of the law affect the question, Sir David?"

"No, it has been decided otherwise," said Sir David.

"Then all is hopeless," said Lady Sholto, bursting into a passion of tears. "Oh! Archie—Archie, my brother!"

"Hush!" said her husband, imperatively, seeing that the Earl's anguish was almost unbearable.

Mr. Blair came slowly round the room towards Jean, who was standing perfectly still and motionless, with a dull, calm despair, dreadful to see, settling over her face.

Lord Sholto pushed open one of the glass doors leading on to the lawn, and led the Earl out, dumb, passive, unresisting; stricken to the earth by the blow which had fallen upon him.

Sir David and Mr. Cantire looked very much distressed and uncomfortable. Lady Sholto sobbed passionately; but Jean stood as if turned to stone, with the same stupefied, submissive despair on her face.

Mr. Blair moved forward, and put his hand gently on her arm; and at his touch the life came suddenly into the still, carven face, which woke into an expression of the most intense horror and bitterest contempt.

"Do not touch me!" she said passionately, in a voice very unlike Jean McLeod's—"do not touch me! I loathe you! I hate you!"

Mr. Blair sighed a patient sigh, which enlisted all Sir David's sympathy.

"You are speaking to your husband, madam," he said, in a grave reproof; and the anger died out of Jean's face, and she turned her eyes to him with a dumb anguish in their depths.

"I forgot," she said, slowly, "Must I go with him?"

"He has a right to compel you," was the quiet answer.

Jean shuddered.

"Sir David," spoke Mr. Blair, in a quick, aggrieved tone, "this is inexpressibly trying to me."

"I can well believe it," said Sir David; and again Mr. Blair turned to his wife, for she was that, poor Jean!

This time she suffered his hand to rest upon her arm, but for a moment only; for he had barely touched her when, like a woman shot through the heart, she fell, like a log, at his feet.

CHAPTER XVI.

THE MORNING AFTER.

"It is altogether a most unfortunate business," said Sir David Cairnes, a few hours later. "But your ladyship must excuse me for holding to my first opinion. Mr. Blair is an unusually fascinating and excessively handsome man; and you yourself own that Miss McLeod was attracted to him on their first acquaintance. Indeed, her husband tells me that he himself overheard her say to Lord Ivor that 'she would marry Mr. Blair if she chose.'"

"Yes, but she had been quarrelling with Archie," said Lady Sholto, quickly.

"About some remonstrances he had made about her conduct with Mr. Blair," said Sir David coolly.

"No, no, Lady Sholto, I am an old man, and my judgment is calm and impartial, my knowledge of human nature tolerably extensive, and I believe firmly that Miss McLeod married Mr. Blair, knowing she married him; and if she afterward repented, it was seeing your brother's suffering and at the thought that she had lost a title."

"You are prejudiced against poor Jeanie," said Lady Sholto, sorrowfully.

Sir David smiled, glancing down at the little lady with a kind glance in his cold blue eyes.

"Prejudiced," he repeated. "My dear child, is that possible? I never saw her until to-day, I never heard of her except as a very charming young lady to whom Lord Ivor was betrothed. How, then, could I be prejudiced against her? I look at things as they are, dear Lady Florence," he went on, gently. "Your kind heart and your affection for your brother and your friend are likely to lead you astray in your judgment. Mr. Blair is all that is kind and considerate, also, in his dealing with his wife, and, for my part, I think he is greatly to be pitied."

"Oh! Sir David!"

"I do, indeed, Lady Sholto. His wife is a woman of strong feelings, a woman who will hate well; and I foresee many a cloud on the sky of their domestic life."

"Poor Jeanie!" sighed Lady Sholto.

"And poor Mr. Blair," smiled Sir David. "Has Mrs. Blair decided on leaving Sholto Hall?" asked Sir David, after a pause.

"Yes, she prefers going; she says she cannot stay here without her brain giving way," said Lady Sholto, sadly. "And it is better for Archie's sake that they should go."

"Poor fellow, where is he?"

"With my husband," said her ladyship, with a stifled sob. "They are in his study."

"How does he bear it?" said the advocate, in a tone of sympathy.

"He says nothing, or very little," said Lady Sholto; "but he looks unutterably wretched. Arthur says he dares not leave him. Oh! Sir David, he loved her so passionately."

"Poor laddie," said Sir David, softly. "It is hard for him; she has deserved her share."

"Oh, hush!" said Lady Sholto, passionately. "If you could see her, Sir David, you would think more gently of her."

And Lady Sholto's thoughts flew to poor Jean, lying white and still on the couch in her dressing-room, tearless and motionless, with no sign of life save the awful sadness and pathos in the great brown eyes.

"They will not meet again," said Sir David, in a moment.

"Yes; Jean begged it, and Mr. Blair acceded to her request. To-morrow they are to say good-bye."

"When do the Blairs leave?"

"To-morrow, as soon as the shooting party have started," said Lady Sholto, wearily, as she went back to the drawing-room to her duties as hostess, duties terribly irksome just now, in her heaviness of heart, and the visitors, who had not failed to notice that something unusual must have occurred to occasion the absence of the Earl and their host, and Miss McLeod's indisposition, were on the *qui vive* of curiosity and expectation.

"Thank goodness that this party breaks up in a day or two," said Lady Sholto to herself, escaping from the drawing-room for a moment, and going swiftly along the passages to a small room Lord Sholto reserved exclusively for himself.

In answer to Lady Sholto's knock, her husband opened the door, and, seeing who it was, put out his hand and drawing her to him kissed her in silence, closing the door carefully after her; and

Lady Sholto went forward to her brother's side as silently. The Earl was leaning back in a deep, low chair, in an attitude of extreme fatigue or depression, his handsome fair head thrown back, his face worn with suffering, the beautiful proud face usually so kind and so gay.

"Archie, dear," said his sister, softly; and turning towards her with the faintest, saddest smile, he put out his hand and took hers. His palm was dry and burning with fever, and held her fingers in a close almost convulsive clasp. There was no light in the room but that given by a shaded lamp on the table; but that sufficed to show the young nobleman the tears in his sister's eyes, the tender pity on her fair young face, and drawing her to him he rested his head on her shoulder while Lady Sholto put her arms round his neck and stooped her cheek to his curly fair hair as tenderly and as gently as she nursed the sturdy two year old youngster in the nursery upstairs.

"Archie, dear Archie," she repeated, softly.

"Don't pity me, Florie," he said, hoarsely; "I cannot bear that."

For some minutes they continued thus, and looking over at her husband, Lady Florence saw that his eyes were dim with tears.

"How is she?" said the Earl, then, and his sister told him softly that Jean was better and wanted to see him in the morning, if he would see her once more.

"Does she think I am angry with her, Florie?" he said, looking up for a moment. "Foolish child, tell her, there is no room for any feeling but love in my heart for her. Tell her that if I could hope she would be happy I could bear my share of suffering—my poor Jeanie—my poor little love, *his* wife."

He turned away abruptly to hide the quiver of his lip, and fell upon the table, covering his face with his arms, and Lady Sholto went back to her guests with a feeling of pain which was new and strange in her heart, for she, like Jean, had lived in the sunshine hitherto, and knew not how to bear the storm.

As Sir David had said, Mr. Blair had been to all appearance exceedingly kind and considerate in his dealings with his wife. He had said that if she chose to remain longer at Sholto Hall, she was welcome to do so; but Jean, in her unselfish thought for her friends' feelings, knew that Mr. Blair's presence could not be but distasteful to them, and decided on going immediately to Blair Gates, which, her husband said quietly, had been some time in readiness to receive his bride. He acceded without hesitation to her wish to have a last interview with the Earl, for having attained his end he could afford to be generous, and the look which he had seen on Lord Ivor's face as his brother-in-law led him from the library, showed him plainly that his revenge had been complete, that not only had he won the wife whose person and whose fortune he coveted, but he had caused the man he hated the keenest, bitterest suffering it was possible to endure.

Cleverly his measures had been taken, he knew perfectly well that Sir David Cairnes would come to no other decision than the one arrived at, and that Jean was his wife legally and indisputably he was certain before the lawyer's inquiry had been made. He cared but little for her sorrow; he had been prepared for tears and fainting fits, he knew Jean well, and he knew that once installed at Blair Gates she would take her place as his wife in a way which would do him honor; while he knew that the Sholto's affection for her would not allow them to break off their acquaintanceship with her husband.

He knew that their pride, as well as Jean's would keep the chief facts of the marriage a secret, and that he would have the *eclat* of having carried off not only a beauty and an heiress, but the promised wife of an Earl; so it was in a very well pleased and self-satisfied state of mind that he betook himself to his slumbers on the night before his departure from Sholto Hall, a night which was to three or four of its inmates as wretched, nay, a great deal more so, than the previous one.

"I wonder how Emily likes it?" he said to himself, with a smile, as he put the finishing touches to his hair the next morning, "I'll be bound that she is in a fearful rage; but she'll keep outwardly within bounds for fear of my anger, and this little wife of mine has plenty of pluck and will stand her ground against her housekeeper. Brett is a very valuable woman though," he added, "and I should never get such another housekeeper, if she is obliged to go; for, of course, go she must, if she cannot keep the peace. Fortunately Jean is not likely to be jealous of her beauty, for she *is* beautiful and not one of the women here, not even Jean, is to be compared with her. It was lucky though, "was his conclusive thought, "that we were in Australia when I made her a certain promise, or I should find myself in the wrong box now, for she is a vindictive, clever woman, and would have soon found out a way of making me keep it."

And Mr. Blair, looking very handsome and *debonnaire*, went downstairs to breakfast, always an informal meal at Sholto Hall, and his first glance round the table showed him that both Lord and Lady Sholto were in their places, Lord Ivor was not present.

Lady Sholto's greeting was of the coldest, and her husband was too much absorbed in the *Times* to hear his guest's salutation. Andrew Blair smiled grimly to himself under his moustache, and, dropping into a seat by Sir David Cairnes, prepared to enjoy his breakfast with his usual appetite.—[To be continued.

RECENT LITERATURE.

Past Thirty. By Mrs. H. E. Monroe. Price 50 cents.

While this story lacks the symmetry and finish which characterize the writings of experienced novelists, there are abundant traces in it of earnest thought, careful study and original views of life.

The main drift of the story is that the chief passion of life comes after thirty. Love in all its phases, even the slow crucifixion of it after marriage, is portrayed with startling fidelity. To those wives who love their husbands too much—and there be many such—we commend the cure for love recorded in the twelfth chapter of the story. The advice given is practicable and wholesome.

Room for One More. By Mary Thatcher Higginson. Boston: Lee & Shepard. Price $1.25.

In this story the reader is introduced to some very charming little folks. To be sure, the conventional good boy is conspicuous by his absence, but the genuine "humanness" of the Rand children is infinitely more delightful than the abnormal righteousness of the much-extolled good boy; and while there are no very startling climaxes, the incidents are sufficiently varied and entertaining to make a most attractive story. This is reported to be the author's first venture in juvenile literature; if this is so, she has reason to congratulate herself on the success she has "scored."

MAGAZINES.

Demorest's Monthly—Contents for November.—Fashions—(Illustrated). Review of Fashions; Description of Plate; Illustrations Described; Fall and Winter Costumes; Fall Wraps and Winter Cloaks; Children's Costumes; Illustrations Described; Various Dresses and Hints on Children's Fashions; Seasonable Fabrics; Trimmings; Gloves, Shoes, and Hosiery; Coiffures; Millinery; Lingerie; Domestic Art. Miss Melinda's Black Bonnet, by Mrs. Annie E. Preston; Gentle Words (Poem); Mediæval and Louis Quinze Rooms, by Mrs. C. A. Merighi; Set Free (Poem), by Eben E. Rexford; Miss Harrington's Prediction (Concluded); Too Late (Poem); Flower Talks, New Series, No. 10, by Eben E. Rexford; Little Things (Poem); Nellie's Hermit, by "Chris;" Miscellany; M. Worth's Show Figures; A London Interior; High Art in a Western Court; The Art Students' League; Æsthetics; A Lost Continent; False Education; Red Canaries; French Collectors; The Little Sisters of the Poor; Wishes (Poem); Small Talk; Household Department; Recent Literature; Mosaics; Answers to Correspondents; Publishers' Department.

Fancy Costumes for Children.—As the season approaches when the little folks must find much of their amusement in-doors and may indulge in fancy costumes, impromptu or otherwise, the following descriptions of a few classical dresses from Mother Goose may be found acceptable:

"Mistress Mary, quite contrary."—Pink quilted skirt, with pictures of pretty girls all around, framed in silver cord; blue bodice and tunic, the latter cut in vandykes, with silvered bells and shells between each; hat of blue satin, and carries a small rake, hoe, and watering-pot.

"Little Miss Muffet."—Blue quilted skirt, overdress of pink opera in front, with square bodice and elbow sleeves; powdered hair, red roses in the hair, straw hat with blue ribbons.

"Humpty Dumpty."—Yellow-pointed shoes and yellow stockings. Short blue breeches vandyked round; loose sack belted in, blue hood, both vandyked round, and a basket of artificial eggs in his hand.

"Jack."—Shoes and silk stockings, black velvet breeches, long-skirted black velvet coat opening at the waist to show a cambric shirt; short cape of black velvet trimmed with gold braid, red rosettes on each cuff and each corner of the skirt of the coat, ruff round the throat, red velvet hat, a pail in his hand.

"Jill."—Striped red and white short skirt, looped-up tunic of blue, low bodice to match, with white pointed girdle laced with red. A Dorothy hat, with red and blue ribbons; pail in her hand.

"Polly, put the kettle on."—Pink skirt touching the ground, white and blue-striped tunic and bodice, muslin cap; little tea-kettles as ear-rings and locket, a tea-kettle hanging at her side and a kettle-holder worked with her name.

"Jack the Giant-killer."—Blue trunk hose, close-fitting red coat with short basque, confined by belt at the wait; sleeves tight to the waist, a puff at the top; slashed helmet on the head, and carries a shield and sword.—*Demorest's Monthly.*

The November Atlantic has several important articles. Perhaps the one which will attract most attention among thoughtful people is "The Prospect of a Moral Interregnum," by Goldwin Smith, who predicts a period of laxity and license in consequence of the alienation between religion and the scientific thought of the time. Col. Geo. E Waring, Jr., writes a curiously interesting account of "The Waldenses of To-Day." A skillful writer, whose name is withheld, discusses with great force and interest "Our Military Past and Future." The author of "Massy Sprague's Daughter" contributes "Sister Mary's Story," which is easily one of the best magazine stories recently printed. Jennie Young writes of "The Ceramic Art in America;" "Irene the Missionary" is concluded. "Englishwomen in Recent Literature," "Mysterious Disappearances," and "Late Books of Travel," though anonymous, are thoroughly interesting. Richard Grant White discusses "Assorted Americanisms" as heartily and freshly as if it were a wholly new topic. The Contributors' Club abounds in bright things, and a chapter of "Recent Literature" concludes a very good Atlantic. Scores of thousands will be delighted to learn that Mr. Howells will begin a new serial story in the January Atlantic.

The Prospect of a Moral Interregnum.—A collapse of religious belief, of the most complete and tremendous kind, is apparently now at hand. At the time of the Reformation the question was, after all, only about the form of Christianity; and even the skeptics of the last century, while they rejected Christ, remained firm theists; not only so, but they mechanically retained the main principles of Christian morality, as we see very plainly in Rousseau's Vicaire Savoyard and Voltaire's letters on the Quakers. Very different is the crisis at which we have now arrived. No one who has watched the progress of discussion and the indications of opinions in literature and in social intercourse can doubt that, in the minds of those whose views are likely to become—and in an age when all thought is rapidly popularized soon to become the views of society at large, belief in Christianity as a revealed and supernatural religion has given away. Science and criticism combined have destroyed the faith of free inquirers in the Mosaic cosmogony, in the inspiration of the Bible and the genuineness of many books of it, in large portions of the history of the Old Testament, and in the history of the New Testament so far as it is miraculous or inseparably connected with miracles. The mortal blow has been given by criticism in disproving or rendering uncertain the authenticity of the historical books of the New Testament.

Not supernatural religion alone, but the existence of a Deity itself, has for many minds, and those the minds of good, able, and highly instructed men, ceased to be an object of distinct belief, if it has not become an object of distinct disbelief. The emancipated and emboldened lips of science have met the theist's argument of Design with the apparent evidences of the absence of design, waste and miscarriage in the heavens and the earth, seemingly purposeless havoc and extinction of races; while philosophy has breathed doubt upon the logical validity of the reasonings which satisfied the apologists of former days. The argument of Beneficence is encountered by the perplexing array of the cruelties—often apparently gratuitous cruelties—of nature. Above all, creation is supposed to have been supplanted by evolution, which, in spite of partial objections, lingering doubts, and the imperfections sure to be found in any newborn theory, is to all appearances destined soon to be the creed of the world. With the belief in a Deity perishes that in the immortality of the soul, which, apart from animistic superstitions and special fancies about the other world, is a belief in the connection of the human soul with the Eternal. Nothing apparently is left but the secular consequences of conduct, human law, which the strong may make or unmake, and reputation, which success, even criminal success, may to a great extent command. That which prevails as Agnosticism among philosophers and the highly educated prevails as secularism among mechanics, and in that form is likely soon to breed mutinous questionings about the present social order among those who get the poorer share, and who can no longer be appeased by promises of compensation in another world.—*By Goldwin Smith in November Atlantic.*

St. Nicholas For November opens the seventh volume of that magazine, with wider margins, thicker paper, twenty-eight additional pages, two frontispieces, a red-line title-page for the volume, sixty or more pictures, and fourteen short stories. Among the chief features of the number are: a lively home story by Mary Mapes Dodge, the editor; a story by Sarah Winter Kellogg of How some Dolls Broke the Law; an indescribable story, The Gudra's Daughter, written by Frank R. Stockton in his peculiarly funny style; a description of the Centaur Boys of Thrace and their games, and "go-as-you-please" matches, with three illustrations by the humorous artist, F. S. Church; an ice-raft story of a boy who saved Mrs. McGlinty's Pigs from an icy death; an account, by a boy, of how he hunted Jack-rabbits in Kansas; a short story of the Life of the Lost Dauphin, with a frontispiece portrait of the little prince, engraved from a painting by Greuse; and a thrilling historical story of the Black Prince and Philip the Bold, telling how when boys they fought like heroes at Crecy and Poitiers. This last paper is illustrated with two striking full-page battle-pictures.

A new serial story of boy-pranks, fun, and out-door life, written by William O. Stoddard, author of Dab Kinzer, and entitled Among the Lakes, is begun with a lively installment; and there is an exciting account by Frank H. Converse of a lad who was left Adrift on the Ocean, visited a wonderful volcanic Island, and had many strange adventures.

An Article by Olivo Thorne, illustrated with eleven pictures by Jessie Curtis, describes the Playthings of all times and climes; and a clearly written paper with carefully prepared diagrams, tells how to make A Few Pretty Things in Fancy Work.

The Very Little Folk have four pages of large type and four pictures to themselves; and the departments, Jack-in-the-Pulpit, Letter Box and Riddle Box, are crammed with funny items, the boys' and girls' letters, and riddles of all sorts.

VARIETIES.

A PETITION TO TIME.

Touch us gently, Time!
Let us glide adown thy stream
Gently—as we sometimes glide
Through a quiet dream!
Humble voyagers are we,
Husband, wife and children three—
(One is lost—an angel fled
To the azure overhead!)

Touch us gently, Time!
We've not proud nor soaring wings;
Our ambition, our content,
Lies in simple things.
Humble voyagers are we,
O'er Life's dim unsounded sea,
Seeking only some calm clime:—
Touch us gently, gentle Time!

Barry Cornwall.

The Responsive Chord.—In the early spring of 1863, when the Confederate and Federal armies were confronting each other on the opposite hills of Stafford and Spottsylvania, two bands chanced one evening, at the same hour, to begin to discourse sweet music upon either bank of the river. A large crowd of the soldiers of both armies gathered to listen to the music, the friendly pickets not interfering, and soon the bands began to answer each other. First the band on the Northern bank would play "Star Spangled Banner," "Hail Columbia," or some other national air, and at its conclusion the "boys in blue" would cheer most lustily. And then the band on the Southern bank would respond with "Dixie," or "Bonnie Blue Flag," or some other Southern melody, and the "boys in gray" would attest their approbation with an "old Confederate yell." But presently one of the bands struck up in sweet and plaintive notes, which were wafted across the Rappahannock and caught up at once by the other band and swelled into a grand anthem which touched every heart, "Home, Sweet Home?" At the conclusion of this piece there went up a simultaneous shout from both sides of the river. Cheer followed cheer, and those hills, which had so recently resounded with hostile guns, echoed and re-echoed the grand acclaim. A chord had been struck, responsive to which the hearts of enemies—enemies then—could beat in unison, and on both sides of the river,

Something down the soldier's cheek
Washed off the stains of powder.

THE SAME CANTEEN.

There are bonds of all sorts in this world of ours;
Fetters of friendship and ties of flowers,
And true-lover's knots, I ween;
The girl and the boy are bound by a kiss,
But there's never a bond, old friend, like this—
We have drunk from the same canteen!

It was sometimes water and sometimes milk,
And sometimes applejack, fine as silk:
But whatever the tipple has been
We shared it together, in bane or bliss,
And I warm to you, my friend, when I think of this—
We have drunk from the same canteen!

The rich and the great sit down to dine,
And they quaff to each other in sparkling wine,
From glasses of crystal and green;
But I guess in their golden potations they miss
The warmth of regard to be found in this—
We have drunk from the same canteen!

We have shared our blankets and tents together,
We have marched and fought in all kinds of weather,
And hungry and full we have been;
Had the days of battle and days of rest,
But this memory I cling to and love the best—
We have drunk from the same canteen!

For when wounded I lay on the outer slope,
With my blood flowing fast and but little hope
Upon which my faint spirit could lean,
Oh, then I remember you crawled to my side,
And bleeding so fast it seemed both must have died,
We drank from the same canteen!

[*Charles G. Halpine.*

The following stanza contains every letter in the alphabet:

Except with zeal we strive to win
God's just and holy love,
We cannot conquer strife and sin,
Nor walk with Him above.

A Chinese proverb says:

When sabers are rusty, and spades are bright;
When prisons are empty, and granaries full;
When the steps of temples are worn, and of tribunals are grass-grown;
When the doctors go on foot and the bakers on horseback;
The Empire is well governed.

The Latest English Idiocy.—An entirely new pastime has been invented in England for country houses in the shape of tea-tray tobogganing. The way of it is thus described by a correspondent of Vanity Fair; "You take a tea-tray to the top of a good flight of stairs, sit in it, hold on to the sides of the tray with both hands—and let yourself go. If you manage well you slide down the whole flight of stairs quickly and easily, and bring up on the landing at the bottom; if you don't manage it properly, you turn round when part of the way down, and get a good crumpler. The advantage of this game is that ladies can play at it, and in the house where I saw it played they tobogganed far better than the men, who generally lost their tray and themselves half way down the stairs."

A Baby Socrates.—He is a very small boy, just beyond the limits of babyhood. His precociousness is well recognized by those that know him—and sometimes people try to corner him in a logical way. The other day some one took him up and asked him if he was papa's boy. He answered yes. "Are you mamma's boy, too?" "Yes," replied Charley. "Well, how can you be papa's boy and mamma's boy both at the same time?" was asked him. "Oh," replied Charley, indifferently, "can't a wagon have two horses?" That settled his questioner.

"ONLY."

From "only" one word many quarrels begin.
And "only this once" leads to many a sin.
"Only a penny" wastes many a pound,
"Only once more" and the diver was drowned.
"Only one drop" many drunkards have made;
"Only a play" many gamblers have said.
"Only a cold" opens many a grave;
"Only resist" many evils will save.

Poor Grammar Betrayed Him.—Prof. Thomas, recently connected with Butler University, was noted chiefly for his exactness in the use of vernacular. One night he was awakened at an unseemly hour by discordant sounds of midnight revelry from the direction of a student's bedroom. Dressing himself hastily, he hurried down the hall, and, after a few knocks on the bolted door to enforce silence, he called out, "Hi, you fellows in there! Can't you make less noise?"

"Who's out there?" was the response.

"It's me."

"Who are you?"

"Professor Thomas."

"You're a liar. You can't fool us. Thomas would have said, 'It is I.' Come on boys, just once more." And the strains of "Landlord, fill the flowing bowl!" resounded through the house till daylight. The affair was never alluded to by the Professor.—*Evening Argonaut.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

MRS. ENDICOT'S JOURNAL.

Apple jelly; how to make and flavor; to put away; delicate cakes.

Oct. 11.—Betsy's brother brought a load of apples to market this morning and as he called to see if I wanted any, I bought half a bushel, thinking they would make nice jelly. They were a tart apple—Maiden's Blush, he called them. Betsy first washed and wiped them, then we cut them into quarters and filled a good-sized porcelain kettle, adding only enough water to keep them from burning. When soft we strained them through a coarse muslin bag, then through a finer one, and put back on the stove with three-quarters of a pound of sugar to every pound of juice. In about twenty minutes the first kettleful was ready to come off. I always take out a little into a cup and set it in cold water, and if it commences to thicken at once, I know the jelly is done and that there is no danger of its having to be boiled over. When the next was done, I stirred into it extract of vanilla, until it tasted strongly of it—one has always to remember that food flavored while hot, tastes stronger of the extract then than it will when the mixture has become cold. The last kettleful was flavored with strawberry. Apple jelly made in this way is very nice, and as it is liked by almost every one it is very handy for the table. While Betsy prepared tea I cut rounds out of the finer kinds of brown paper that comes around tea and dry-goods. These I wet in cold flour and water, mixed as for starch, and put over my glasses, bowls and cups of jelly, pressing down smoothly around the sides.

Oct. 12.—The first thing I did this morning, so as to get it out of the way, was to mark my jelly. The paper covers were dry and as tight as drum heads. On each of them I wrote with pencil the kind, naming them by the flavoring. I have found that the best place I have to keep anything of the kind, is in the dining-room closet. They should be where it is cool, dry and dark.

After the children had started to school and when Katy was sleeping, I went into the kitchen and finding the cake box entirely empty, concluded to try a recipe given me by Miss C—, called

Delicate Cake.

One and a quarter cup of sugar, half a cup butter, half a cup of milk, three eggs, two cups flour, into which has been thoroughly mixed one and a half teaspoonful of baking powder. The eggs should be beaten in last. Flavor with nutmeg and bake in little tins—I used my gem irons. When cold, frost. Two eggs will be sufficient for the frosting. These proportions made in my pans two dozen and one cakes. Think next time I will double the quantity, for, if put away in stone jars, they will keep moist for a week, or longer.

HYGIENIC FOOD.

Being somewhat interested in hygienic cooking, and not seeing very much on the subject in the RURAL, I thought a few words would stir up the contributors on the subject. We are a nation of dyspeptics; and would it not be well to try and make our dishes more easy of digestion? It is well known that hard-boiled or baked eggs are very indigestible. Can any one tell us whether they are as indigestible when baked in custards, cakes and pies? Let us have some receipes for puddings, pies, etc., that will be palatable and *healthful*. E. H.

DOMESTIC RECIPES.

To Cure Hams.

Cover the bottom of the cask or barrel with coarse salt; put in the hams with the skin side down and sprinkle over fine salt. Place in another layer of hams and so on until all are in. Make a brine according to the following proportions: Nine pounds of salt, four pounds of brown sugar, three ounces of saltpetre and one ounce of saleratus to six gallons of water. Boil, skim and when cold pour into the cask until the hams are entirely covered. Let remain in this pickle three months.

MRS. A. M.

Cranberry Sauce.

Look over and wash a quart of berries, put on to cook with a coffee-cupful of water. Stew slowly, stirring often, for an hour or even longer. Take from the fire, sweeten liberally with white sugar, put through a fine colander and let form in a wet mold.

Chocolate Tartlets.

Grate one half cake Baker's chocolate; rub smooth in four tablespoonsful of milk. Heat over the fire, add four tablespoonsful of white sugar and a tablespoonful of vanilla. Stir constantly. Then whip in the beaten yelk of four eggs and a tablespoonful of melted butter. Make and bake some rich tartshells, put a small spoonful into each, cover with a meringue made of the whites and a little powdered sugar, and put into the oven until delicately browned. MARY B.

Chocolate Drops.

Two and one-half cups of granulated sugar and a half cup of water boiled for four minutes. Flavor with vanilla. Then beat with a fork until cool enough to make into little balls. Have half a cake of Baker's chocolate melted and roll the balls in to the chocolate.

Roast Goose.

Stuff with a dressing of finely mashed potatoes, seasoned with minced onion, pinch of sage, butter, pepper and salt. Before making the gravy skim off a good deal of the fat in the pan. MRS. A. E. B

Roast Turkey with Oyster Dressing.

Take a loaf of stale bread, cut off crust, crumble fine, add butter, pepper and salt. Strain the liquor from off a quart of oysters, bring to a boil and pour over the crumbs, adding the crusts previously soaked. Fill a well dressed turkey first with a spoonful of dressing then three or four oysters and so on until all are in. Draw together, rub butter, pepper and salt over the turkey, place in a dripping pan, pour in half a pint of hot water, and roast in a well-heated oven from two and a half to three hours. Baste frequently with a little water, butter, pepper and salt, kept in a cup on the back of the stove. Half an hour before it is done baste and dredge with flour. When making the gravy if there is much fat in the pan pour off most of it, add the chopped giblets with the water in which they were boiled. Thicken with flour—browned—made smooth in a little cream. Season. MRS. BRAYTON.

THE NOVEMBER SCRIBNER (of which 100,000 copies are printed) opens with two frontispiece portraits of Bayard Taylor, one engraved by Cole from the large photograph by Gutekunst, the other by Juengling from a replica of the bronze bass-relief by the sculptor O'Donovan, which was executed for Cornell University.

An interesting feature of this number is the first installment of The Grandissimes, Mr. Cable's new story (and first novel) of Creole Life, which succeeds Mrs. Burnett's Haworth's, and is to be one of the principal attractions of the magazine for the next twelve months. The opening scene is at a masked ball at the old Theatre St. Philippe, New Orleans, at which there is some lively coquetry on the part of two of the characters, ending in their unmasking to each other; later chapters describe the approach of immigrants up the Mississippi, and relate the ancestry of the great Creole families of the Grandissimes and De Graplons, the feuds of which are the basis of the story. It is a field combining fresh and diverse elements of interest, and one that Mr. Cable has made his own.

Ably supplementing the part of The Grandissimes relating to the river, is the paper on the Mississippi Jetties, by Mr. E. L. Corthell, the resident engineer at Port Eads. There is a portrait of Captain Eads, and the work is made clear by plans. A timely paper on The Agricultural Distress in Great Britain is contributed by Mr. P. T. Quinn, of the New Jersey State Agricultural Association, who concludes from personal observation of English farming during the past year, that it has irretrievably lost its prominence as an industry of the kingdom. This effect is attributed partly to the system of renting, partly to the conservatism of the farmers themselves, but chiefly to American competition. A strong contrast to this state of affairs is presented by Mr. Henry King's Picturesque Features of Kansas Farming, which incidentally shows an unexampled state of prosperity; Illustrated papers of an interest somewhat allied to these are on Rare Lawn-Trees, by Mr. Samuel Parsons, Jr., of Flushing, L. I., and on Success with Small Fruits, by Rev. E. P. Roe, of Cornwall, N. Y. Both of these papers are by experts, and contain much information for the planting season.

Nine other papers give variety to the number, viz.: an account by Clarence Cook of Mr. Morris Moore and his Old Masters, with three engravings, including one by Cole of the celebrated Apollo and Marsyas of Raphael, discovered and owned by Mr. Moore, a painting which it is hoped may be purchased for America; the first part of Mr. E. C. Stedman's critique of Bayard Taylor's poetry and literary career, involving the consideration of other American literature before the war; a curious study of How Animals get Home, by Mr. Ernest Ingersoll, whose conclusion is against any special "homing instinct;" a picturesque illustrated article by Mr. W. H. Rideing on The French Quarter of New York; Extracts from the Journal of Henry J. Raymond, edited by his son, Mr. H. W. Raymond, and principally devoted to reminiscences of Webster and the campaign of 1848, including Webster's opinion of Clay; a paper on the habitat and game qualities of The Michigan Grayling, by the late Thaddeus Norris; the fourth installment of Mr. Henry James's Confidence, in which the scene changes to America, and two clever pieces of romance—one a story of Americans in Europe by Mrs. Elizabeth A. Read, entitled A Sigh and the other of the Schleswig-Holstein war, by Mr. H. H. Boyesen, entitled Ilka on the Hill-top, and introducing a Swiss yodeling song.

The poetry of the number is contributed by Austin Dobson, Mary Mapes Dodge, Charles G. D. Roberts (a young poet of promise), William C. Bonaparte Wyse (three sonnets on his cousin, the Prince Imperial), Mary J. Jacques, and Eliza O. Hall.

In his department of Topics of the Time, Dr. Holland writes of Peter the Great—apropos of Mr. Schuyler's history, to be published in Scribner, and discusses The Nation's Doctors and Is Life Worth Living? The Home and Society department contains practical advice on Weaning the Baby by Catherine Owen, and a paper from Charles Barnard on Light, Heat and Power for the Householder, considering "what has been done and what is likely to be done in these fields of domestic economy." Culture and Progress includes a long review of Haeckel's Evolution of Man and other notices. The World's Work treats of Important Advance in Metallurgy, Improved Builder's Platform, Novel Application of the Pendulum to Useful Work, etc. Bric-a-Brac, which is principally taken up with light satire, is especially bright.

GOOD COMPANY NUMBER TWO.—The opening sketch by Octave Thanet, is at once vigorous and pathetic, in which all the characters have been drawn from life. The central figure is a western Methodist minister who against his will drifted in his belief toward Schopenhauer's ideas. Other characters are a brother clergyman, a noble illustration of Methodist warm-heartedness, and a lady from Pittsfield, Mass., with her husband.

Another vivid portraiture is Mr. W. M. F. Round's description of an experiment he made in smoking opium in a Chinese opium den in Boston.

The Men of Lake Tahoe graphically pictures the hardy lumbermen of that wonderful and beautiful California lake, six thousand feet above the sea in the Sierra Nevadas, and some experience on its shores.

Around St. Paul's describes some of the endless and interesting peculiarities of London.

The stories are A Fragant Vase, by Mr. Horace E. Scudder, A Kid of the Goats, by Mrs. Lizzie W. Champney; and the Cornet Solo, by Miss Elizabeth W. Denison.

The verses include one of Miss Elaine Goodale's charming flower poems, Fringed Gentian; and others by Mrs. Celeste M. A. Winslow, Mrs. Mary Bradley, and Mrs. Helen Ekin Starrett.

Rev. Dr. James M. Whiton has Bible Bygones; there is a *resume* of the various Sunday laws of the different New England States, given apropos of the recent Sunday discussion in Norwich, Conn. an article on the charities for children in New York; an article by Mr. Arthur Dilman entitled The Gospel Doctor, timely in view of the five hundredth Wiclif anniversary which occurs next year; The District Attorney and crime by Rev. Charles Caverno; and a sketch, Nooktown Gossip.

WHERE THE BEEF COMES FROM.

THE November Lippincott's contains a timely and interesting article on "Where the Beef Comes From." The following extract shows from what small beginnings our present and ever-increasing beef traffic sprang:

It was during the last days of the war that the Texan cattle-trade first assumed large proportions. At that time Northwestern Texas was swarming with cattle, which possessed little or no value on their native ranches. They were not a choice breed. Large, raw-boned, with wild eyes and long outspread horns, fierce in temper and forbidding of aspect, they were about as low a grade of the bovine race as could be found. The cows were never milked and the oxen never yoked. Still, their flesh was meat, though dark in color and rather coarse in flavor and texture, and meat was at that time in active demand at the North. Some large government contractors tried the experiment of importing them. They found that they could buy two-and three-year-old steers in Texas at six to eight dollars per head, and sell them in Missouri at thirty to thirty-five dollars per head. This paid very well. At first only small droves—or "bunches," as they are called in the West—of from three hundred to five hundred head each were bought; and so careless were the Texan stock-raisers, and so high was Northern credit, that the bunch was usually paid for by note at twelve months. The cattle were driven North through "the Territory" (Indian Reservation) to the Neosho Valley, and thence along the boundary-line between Missouri and Kansas. Coffeeville was one of the favorite markets of the day. Old cowboys still speak of it with oaths. It seems that it produces the largest and most blood-thirsty herds of musquitoes in the West, and on hot nights the cattle, driven to frenzy by their insect tormentors would stampede and scatter over the country.

In the course of a year or two the profits of the business became an open secret, and capital was embarked in it by several dealers in St. Louis and Chicago. From a few hundred head the bunches swelled to a thousand or more and the price of three-year-olds rose in Texas to ten and fifteen dollars. Simultaneously, settlements began to thicken on the Kansas border, and, the settlers naturally objecting to periodical invasions of wild cattle, the Northern rendezvous was moved to the vicinity of Topeka. It did not stay long there, for many reasons, and after a general consultation among dealers, Abilene, a new town on the Kansas Pacific, some twenty-five miles farther west, was selected as the future cattle market of the Western country. It was surrounded by rolling prairies still covered with buffalo-grass, well supplied with water, easily reached from the South and connected with the East by a line of railway.

News of the Week.

MISCELLANEOUS.

MONDAY, November 1st, 1879.

Before this shall have reached most of our readers, the November elections, which now engross the greatest share of public interest, will have been decided by the votes of the people, so that any thing that could now be said in reference to that matter, would be useless. In this State all parties seem to be working hard, and each expresses itself confident of effecting the object it has in view. The Robinsonites say they will gain enough of dissatisfied Republicans, mostly "Scratchers" to compensate for the handful of John Kelley's followers who have bolted the regular Democratic nomination. John Kelley, while bitterly denouncing all newspapers that fail to support him, is still confident of a sufficient "backing" to enable him to defeat Robinson or rather Tilden whom he is really fighting; Cornell's or rather Conkling's followers, express a quiet confidence of success, and that the "Scratchers" are not equal to even a very small fly on a very big wheel, especially as they call themselves Administrationists, yet Secretaries Evarts and Sherman have spoken here against their movement. The "Scatchers," on the other hand, say that if they cannot defeat the Republican candidates whom they are fighting, they will at any rate so reduce the majority for Cornell and Soule below that of the ticket, that their strength will be apparent to everybody, and that scratching nominations which one disapproves is the best way to secure good ones. Well, to-morrow will settle all these questions.

Senator Zach Chandler is dead. He was found dead in his bed at the Grand Pacific Hotel, Chicago, early on Saturday morning, after having delivered one of the most powerful speeches of his life before an audience of 5,000 persons the previous evening. The coroner decides that he died of an inrush of blood upon the brain—apoplexy. The dead statesman was born at Bedford, N. H., Dec. 10, 1813. He received an academic education; but when quite young moved West and settled in Detroit, Mich., then a mere trading post but lately surrendered by the English. He started in the dry goods business, which he followed successfully until 1850, when he first took part in politics in opposition to Gen Cass, who at that day domineered political matters in Michigan as head of the local Democratic party. The desperate struggle which followed between the old Democratic party under the veteran leader Cass, and the young Republicans under Chandler resulted in the election of the latter to the Senate in the winter of 1857. There he took a prominent part in the violent discussions that preceded the outbreak of the late war, being always one of the boldest and most out-spoken of the Republican leaders. During the war he was the author of the Committe on the Conduct of the War which contributed greatly towards the ultimate triumph of the Union arms. He was re-elected to the Senate at the end of this first term, in 1863, and again in 1869; but at the close of his third term in 1875, he was defeated by Christiancy during the anti-republican flurry of that time. In October 1875 he was made Secretary of the Interior by Grant, which position he held to the end of the latter's administration on March 4, 1877, gaining the reputation of being the very best official who had ever held the position. He was always noted for his radical Republicanism, and his hatred of Great Britain; but not even his bitterest enemy has ever ventured to reflect on his personal integrity, which won him the sobriquet of "Honest Zach Chandler." In his business and real estate transactions he acquired a large fortune—several millions—and had the reputation of being very liberal. His loss is deeply mourned by a host of friends everywhere.

During the past week death also claimed Gen. Joseph Hooker—Fighting Joe Hooker—who died at Garden City, Long Island, where he had for some time made his home. He was born at Hadley, Mass., in 1815; graduated at West Point in 1837; served in the Florida and Mexican wars with distinction and was gazetted captain, major and lieutenant-colonel for gallant services in the battles of Montery, National Bridge and Chapultepec. In 1853 he resigned his commission, and become a farmer in California. At the beginning of the civil war he re-entered the service and was appointed brigadier-general of volunteers in March, 1861, and served in the neighborhood of Washington until March, 1862, when he took command of a division of the army of the Potomac. He was made major general in the following May and took an active part in McClellan's peninsular campaign. He was made brigadier general of the United States army in September of the same year and commanded a grand division under Burnside at the battle of Fredericksburg. He succeeded the latter in command of the army of the Potomac on January 26, 1863, and fought the battle of Chancellorsville at the beginning of May. On June 27 he resigned the command on account of a "difficulty" with Halleck, and was succeeded by Meade. In September he was placed in command of the 12th and 13th army corps, which were concentrated at Chattanooga, and took an active part in the series of battles fought there under Grant in November, and was made brevet major general for his services on Lookout Mountain in his "Battle above the Clouds," on which some discredit has lately been thrown by Gen. Grant. While in command of the Army of the Cumberland—the 20th army corps—he was prominent in the operations about Atlanta. He resigned his command in 1864 in consequence of a dispute about rank. In September he was placed in command of the Northern Department; in 1865 in that of the East, and in 1866 in that of the Lakes. He was mustered out of the volunteer service on September 1, 1866, and on October 15, 1868, was made brevet major general of the United States Army, and retired from the service. Since then his time has been chiefly passed in elegant leisure.

Dakota is the next candidate for Statehip, and is being put forward as a proper community to be admitted to the Union, especially by Republican newspapers. The late Dr. Francis J. Lemoyne, the American apostle of cremation, was of French descent, and so ardent an abolitionist in his younger years that he was nominated as vice-president on the ticket with James G. Birney in 1839. He was also the first abolition candidate for Governor in Pennsylvania, and founded a college for colored people at Nashville, Tenn., to which he gave $30,000. He was so economical that he burned candles instead of gas, and is said to have piled up $300,000. Though full of eccentricities and whims, the old man was charitable in his way, and had a native shrewdness and acquired fund of information that made him a good companion. Sir Fran-

cis Hincks, president of the Consolidated Bank of Montreal, has been convicted of signing false returns of the bank's condition. This is the fall of a distinguished man, for Sir Francis was instrumental in negotiating the reciprocity treaty with the United States in 1854; promoted the construction of the Grand Trunk railroad; was Canadian Minister of Finance from 1859 till 1872, and his reputation as an able financier made his name a tower of strength in the commercial world.

The Ohio river is lower than it has been for 20 years, and navigation between Pittsburgh and Cincinnati is suspended. This has doubled the price of coal at Cincinnati and accumulated 18,000,000 bushels at Pittsburg awaiting a heavy rainfall. The continued drought has damaged wheat in Ohio and Indiana. Robert Bonner sold a number of his trotting horses at New York Wednesday, about 5,000 persons, including prominent breeders and sporting men, being present, but the prices brought were generally low. "Keene Jim," a four-year-old, with a record of 2.18¾, went for $4,000 to Charles A. Dana of the New York Sun; and "Prince Imperial," dam the celebrated "Flora Temple," record 2.23¾, for $1,425 to W. F. Osborn of Ansonia, Ct. The congressional investigations of this recess will cost $20,000,—much less than was expected. Wright's labor committee has used up $7,000, the Ingalls investigation $4,000, the Cheyenne $5,000, and the Civil-Service researches in New England about $3,500.

According to latest reports, the trouble with the Ute Indians is in a fair way to be peacefully adjusted. The head chief, Ouray, and Gen. Adams are now negotiating for the surrender to the United States of the hostiles who were engaged in the late outbreak; Mrs. and Miss Josephine Meeker, together with Mrs. Price and her two children, the only known survivors of the White River agency, have been surrendered, and have arrived among their friends at Denver and Greely, Col. Gov. Pitkin, of the latter State, however, urges the extermination of all the hostiles and the removal of the other Utes to another reservation, together with the forfeiture of their present possessions, including some of the finest farming and supposably the richest mining lands in the State. Gen. Merritt's command is in winter-quarters, two miles from the destroyed agency, where winter has already set in, in snow and bitter cold.

FOREIGN.

The south of Ireland has applied to the British government for the inauguration of public works to be paid for by the national government to relieve the threatened famine during the coming winter. The petitioners have been referred to the Lord-Lieutenant at Dublin. There is little prospect now that Parliament will be dissolved this year. It must be next, as the term of the present House of Commons then expires, and the Conservatives hope by that time to be in a better position to face the country in a general election. There is a growing coolness between England and France, owing to the latter's jealousy of the former's increasing friendliness with Germany. It is now said that the agreement between Bismarck and Andrassy stopped short of a definite treaty by which each was to guarantee the integrity of the other's possessions, and that it is limited to a pledge of friendship whose object is to secure the peace of Europe, so that other countries also can join in.

Great Britain and Russia are still watching each other with no friendly eyes. The former insists that Turkey shall begin the promised reforms in Asia Minor; Turkey says she can't, and, it is said, she is supported by Russia in her refusal. The British fleet has been ordered into Turkish waters. England and France are not going to have it all their own way with regard to the settlement of Egyptian matters. Italy, some time since, claimed a voice in the matter, and was pooh-poohed; now Austria puts her finger in the pie, and as there is a heavy hand behind it, the other parties respect it. This new move of the Kaiser is considered a result of his recent alliance with the Emperor William. The inundations in Spain are still devastating the southeastern part of the country. Upwards of 3,000 deaths are known to have resulted from the floods, besides enormous losses in property.

In Afghanistan, the English have hung eleven of the highest dignitaries in the country for the part they took in treacherously killing Cavagnari and his attendants. The Ameer, too, if not actually guilty of instigating the murder, was certainly grossly careless in permitting it as it has been pretty clearly proved that he could have prevented it. had he tried; but although urged to do so by one of the principal native priests, he remained calmly passive while the handful of British were assailed. He has just offered his resignation to Gen. Brown, the English commander and the latter has accepted it, and issued a proclamation assuming control of the government of the country and urging the native chiefs to peace. It appears the present intention to portion the country among petty chiefs subject to Great Britain. The Ameer is doubly guarded, as he has just manifested a desire to escape.

Iceland is progressing famously under the liberal constitution granted by King Christian five years ago, and elects its new Parliament, the second, next year. Though taxation is light; there is a growing surplus in the treasury; compulsory education has been introduced and receives popular support, and convenient roads are building throughout the island.

It is a generation of old men which troubles the peace of Europe to-day. Prince Gortchakoff is 82, Lord Beaconsfield 74, Prince Bismarck 65, Count Von Moltke 79, and the Emperor William 83. The youngest of the leading figures in diplomacy are old—Count Andrassy 56, and Count Schouvaloff 52.

THE season for contracting that disagreeable and really serious disease, Catarrh, is at hand. Dr. Sykes, of Chicago, has a remedy that he offers this week, in which he has the greatest confidence. He has the most positive assurance of those who have tried it that it will do all that is claimed for it.

Consumers desiring the very best Chocolate or Cocoa should purchase that prepared by Walter Baker & Co. Established in 1780. Walter Baker's Chocolate has no superior, and its standard is always maintained. All grocers sell it.

NO SAFER REMEDY can be had for Coughs and Colds or any trouble of the throat, than "*Brown's Bronchial Troches.*" Imitations are offered for sale, many of which are injurious. The genuine Bronchial Troches are sold *only in boxes.*

Kidney and urinary trouble is universal, and the only safe and sure cure is Hop Bitters—rely on it.

Get Lyon's Patent Heel Stiffeners applied to those new boots or shoes before you run them over.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Nov. 1, 1879.

BEANS AND PEAS.—Receipts of beans for week 6,864 bush.; exports, 1,365 pkgs. All grades of beans show an important advance, the chief change occurring during the last three days. Some of the strength is derived from speculation, but there is a good business for use even at the decided advance. Green peas firm at $1.95@2; Southern B. E. peas weak at $2.35@2.40 per 2 bush. bag; Canadian peas nominal. Most of the arrivals go abroad direct. Mich. field peas, 75@80; marrow beans, new, $2; old, $1.70@1.85; medium, $1.80@1.85; pea, $1.90@1.95; white kidneys, $1.95@2; red do., $1.70@1.90; black, $2. Exports of peas for week, 10,500 bush

BEESWAX—Shows a small business and 21½@22½c. quoted for Western and Southern.

BUTTER.—Receipts for the week, 41,601 pkgs.; do., last week, 33,377. Exports, 1,143 do. The week has developed that State butter is largely controlled by New York merchants, and a general marking up of prices has followed an active demand to hand and abroad. The new rates have not been sprung upon buyers, but are consequent upon the reduced fall receipts of choice. Farmers may feel a little sore at having parted with their dairies so early, since the market has taken such a favorable turn for owners, but there is this consolation; it is a long time since capitalists have had confidence enough to warrant them in taking a winter chance with long lines, and the events of this season indicate that butter in future will hold a legitimate speculative position. Most of the larger lots have been secured at figures which will permit sellers to humor the demand for consumption; that is, any good buying tendency will not be checked by extravagant ideas. The cause of light supplies this fall is owing to so much butter having been sent in fresh. This had to be done in many instances, as the season was a peculiar one and lent a risk to holding. Western butter is doing comparatively as well as State.

State, pails and tubs, single dairy marks, fresh ends, 3 @ 30c.; best invoices, 28c.; good to prime, 25@27c.; fair to good, 23@25c. firkin and tub single dairies, choice, 28c.; do., dairies good to prime, 24@26c; do., firkins, choice dairies, 26@27c.; do., good to prime, 24@26c.; do., fair to good, 22@24c. Welsh tubs, best invoices, 26@27c; do., good to prime, 24@26c.; do., fair to good 22@24c.; State, tubs, poor, 19@21c.; State creamery, best invoices, 34c; do., good to prime, 30@33c.; do., sweet cream, best, 31@32c.; do., fair to good, 28@30c.; Creamery, poor to fair, 27@28c.; Western imitation creamery, 25@25c. do., dairy, fresh, extra, 24@25c.; do., dairy, good to prime, 21@23c.; do., fair to good, 18@21c., poor to fair, 16@18c. do., June, 18@22c.; factory, best invoices, June, 19@20c.; do., fair to good, June, 17@18c.; do., best invoices late made, 20c.; do., fair to good, 18@19c.; do., poor to fair, 16@18c.

CHEESE.—The export movement has been very slack all through the week, but holders have been unwilling to recede and have held firmly 13@13½c. for fancy factories. Stocks have steadily accumulated, but they are carried along with confidence under expectations of an early revival of export trade. The shipments for the week are 28,700 boxes. Fancy, 13@13½c.; good to prime, 12@12½c.; fair to good, 11@12½c.; half-skimmed at 10@10c.; skimmed at 6@7½c. State farm dairy: Fine at 12@12½c.; good to prime at 10½@.2c.; fair to good at 9@10½c.; skimmed at 6@8c. Wis. factory: Fine at 12½@13; good to prime at 11½@12½c. Ohio factory: Cheddar, fine, at 12½@12½c.; do., fair to good, 10½@11½c: flat, fine, 12½@13c.; flat, good to prime, 11½@12½c.; flat, fair to good, 10@11½c.; half-skimmed, 8@10c.; skimmed, 3@7c.

Receipts for week, 69,520 boxes; exports, 27,539 do.

Liverpool cable, 62s.; steam, 40s.

COTTON.—There has been an active market, and closing firm at for November, 11.14@11.15c.; December, 11.10c.; January, 11.22@11.23c.; February, 11.37@11.38c. March, 11.54@11.55c.; April, 11.68@11.70c; May, 11.84@11.85c.; June, 11.97@11.99c.; July, 12.07@12.09c.

DRIED FRUITS.—Apples have a fair demand partly on export account, and prices ruling firm. Peaches are quiet and unchanged. Small fruits are also quiet.

New North Carolina apples, quoted at 6¼@8c. for fair, 8½@9c for choice; 10@10½c. for fancy sliced. Patent evaporated apples, choice, in cases, 13c.; do. fair to good, 10@12c.; N. Y. State sliced good, old, 5@5½c.; and choice held higher, in small lots up to 8@9c; quarters, choice, 5@6½c.; western quarters, common and old, 3½@4½c.; new southern quarters at 4@4½c. new N. C. peeled peaches at 14@17c, do. Georgia, 12@13c. Peaches, Delaware evaporated, peeled at 25@27c.; do. unpeeled at 10@11c.; new halves at 7c. Blackberries at 9@9½c. for new. Raspberries at 28@28½c. Pitted cherries at 18@19c.

EGGS.—Receipts for week, 7,681 bbls.; do. last week, 5,709 do. Sales continue moderate, though the demand is steady. Quality must have a better reputation before a large business springs up. For prime fresh lots the market is doing better. Limed quoted at good figures, considering they have lost most of an ordinary selling worth.

Near points, 23@24c.; State and Penna., 21@22c.; Western and Canadian, fresh, 20½@21c.; poor, 18½@19½c.; limed, 16@17½c.

FLOUR.—After rather a lull in the early part of the week, there is a more active trading, and prices have recovered and closed firm.

Latest prices: Ia 25@5.75 for inferior to very choice superfine state; $5.50@5.85 for inferior to good extra do., odd lots and lines; $5.85@6.10 for good to choice do.; $5.25@5.75 for inferior to fancy superfine Ind., Iowa, Michigan &c.; $5.50@5.85 for inferior to good shipping extra do., and $5.85@6.10 for good to choice shipping extra do.; common to about choice white wheat extras, $6.10@7.00; choice to fancy do. at $7.00@8.25; red and amber winter wheat, inferior to very choice trade and family at $6.10@7.65; round hoop Ohio at $5.65@6.25, and trade and family brands of do. at $6.30@7.75, the latter rate for very choice; St. Louis, $6.10@7 for inferior to very good extra; $7.00@8.50 for very good to very fancy; Minnesota clear, inferior to fancy $5.60@7.00; Minnesota "straight," very inferior to fancy, $6.25@8.00 (fancy held higher), and patent poor to very fancy at $6.35@9.00; unsound stock at from $4.50@6.50 city mill extra at 16.25@6.60, ordinary to fancy, for West Indies; do. for England, $5.50 5.85 for poor to choice; do. trade and family extras, $4.35@6.75; do. for South America No. 2 at $4.35@4.85 for poor to very choice (an extreme).

FRESH FRUITS.—Exports of apples past week, 12,654 bbls. Apples look stronger than before this season. English advices are good for good stock, and in the home trade fewer other items now conflict with apples. Pears not much of a feature.

Apples—King of T. C., per bbl., $2.57@3; Baldwin, $2.25@2.50; Greening, $2@2.25; winter mixed, $ @2.25; common, $ @1.75 Cranberries—Cape Cod, good to fancy, bbl., 80@1.50; other, Eastern $5@6.75; N. J., crates, $1.50@1.87. Pears—Vicar per bbl., $2.50@3; Lawrence, $4 5; Seckel, $2@4; cooking, $1.50 2.50; Boston boxes—Beurre Clairgeau, Duchess, Beurre Bosc, Beurre d'Anjou, $2.25@3.50. Quinces, per bbl., choice $2@3; $1@2. Grapes easy again. Catawba, cases, 18 3 lb. boxes, $3.50. loose, 4@4½c.; Isabella, cases, $1.50@1.75; loose, 2@3c. New peanuts, per lb., 3½@5½c.; old, 85c.@$1.05 per bush.; chestnuts, $2.25@3; hickory, thin shells, $1@1.50 per bush.; B. walnuts, 50@63c.; Pecans, 9@10c. per lb.

FURS AND SKINS.—Foreign advices indicate very slight interest in the late offerings. Common American skins, such as muskrat and skunk, very much neglected.

GRAIN.—Wheat has shown sharp fluctuations, but closed somewhat better and more active; latest sales are of No. 1 amber at $1.41½@1.43; No. 2 amber at $1.40½@1.41½; ungraded amber at $1.33@1.41; No. 1 white at $1.40@1.42; do., for November, at $1.41½@@1.42; do., December option, at $1.46@1.47½; No 2 white, at $1.36; ungraded white at $1.30@1.38; No. 2 red at $1.41@1.42½; do., November option, at $1.41½@1.44; do., December option, at $1.46@1.48; do. January option, at $1.50½; No. 3 red at $1.33@1.35; ungraded red at $1.12½@1.41; mixed winter at $1.39; New York No. 2 spring, at $1.50; do., November option, at $1.31; do., December option, at $1.35½@1.36; No. 2 northwest spring, December, at $1.36; No. 3 at $1.24@1.27; ungraded spring at $1.29@1.31. Rye is firm at 58c. for State, and 85@87½c. for No. 2 Western. Corn closed higher and fairly active; latest sales of New York No. 2 at 59½@59½c.; do., Nov. at 59@59½c.; do., Dec at 61½@61¾c.; New York steamer mixed at 57c.; do., Nov. option, at 57c.; ungraded Western mixed at 58@59½c.; round yellow at 64½@66c.; low mixed at 60½c. Oats are more active and closed strong in price; closing prices are for New York No. 1 white at 43½@44c.; do., No. 1 white at 41@41½c; do. No 3 white at 40c.; New York No. 1 at 41c; New York No. 2 at 41½@41c.; New York No. 3 at 39@39½c; New York rejected at 38@38½c.; ungraded white Western at 40@45c.; mixed Western at 40@41c.; white State at 41½@44c; mixed State at 40½@41½c.; No. 2 Chicago at 41c.

HAY AND STRAW.—Receipts are moderate, and prices rule firm.

Shipping hay quoted at 50c.; retail lots at 50@65c. for medium, and 70@90c. for prime; clover at 40@50c. Straw at 65@70c. for long rye, 45@50c. for short rye and 45@50c. for oat.

HOPS.—Emmet Wells in his circular says: "Although the exports to London show a considerable falling off from last week, the market has ruled strong all through the week, with a good demand from brewers, and the price 1 2c. per lb. better on all descriptions of new hops the range now being from 32@45c We hear of one sale to a brewer of about 101 bales as high as 48c, on 60 days' time. Old hops have not changed in value, and seem quite neglected."

	Bales.
Receipts for the week	7,793
Total receipts since September 1, 1879	45,236
Total receipts for same period in 1878	14,048
Export clearances for the week	3,700
Total exports since September 1, 1879	31,933
Total exports for same period in 1878	1,785

Quotations are for New Yorks, new crop, choice, 43@45c; New Yorks, new crop, medium, 37@40c. New Yorks, new crop, low to fair, 32@35c.; Eastern, new crop, 32@42c.; Wisconsin, new crop, 32@42c.; Yearlings, 7@8c Old, all growth, 4@10c; Pacific coast, new, 37@42c.; Pacific coast, olds, 9@14c.

HONEY.—Sales still of a retail character. Crop held to be lighter this year than last; this may help rates when the weather becomes seasonable for use. White clover, single comb, 18c.; larger boxes, 14@15c.; buckwheat, 12@14c.; extracted clover, 11@13c.; strained, 8@10c.

OIL-CAKE.—Western is quoted at $29.50@30 per ton.

POULTRY AND GAME.—Receipts of live poultry are large; shippers are sending a good many rough ends of broods. Prime fowls and chickens are in good demand, but prices are very low as the dressed receipts are drawing a large rate of trade Fowls and chickens range 8@9½c.. turkeys, 8@11c.; ducks, 40@60c.; choice geese, $1.50; other, $1@1.37.

Dressed poultry is in good supply, and the demand is enlarging. Many common cases and barrels are included which sell little better than live. Avoid mixing fowls and chickens in same package when the latter is of a commercial size. The demand for turkeys will improve this month.

N. J. Turkeys, 12@13c., fair to best, other, 10@12c.; Phila., dry-picked, 13@15c.; do., chickens, 13 16c.; good to prime, other, 11@13c; common, 9@.; Phila., dry-picked fowls, 12@13c. good; other, 10@12c.; poor, 8@9c. Ducks, P. d p. 12@14c; other, 10@14c. Geese near by 10@ 2c.; Western, 9@10c. Squabs, white, $2@2.25 per doz; dark, $1@1.50.

This week opens the quail market, a possible rate is $1.5 @2. There is a fair demand for good quality, birds. Southern pigeons not wanted.

Partridges prime, ₱ pair, $1 15 poor to fair, 75c.@ 1. Grouse, $1.50. Woodcock, 45@50c.. Wild pigeons, stall fed, per doz., $1.75; dark, flight, $1.25@1.50. English snipe and plover $1.75@2. Canvas back ducks, per pair, $1.7 @2. Red head Mallard, 70@75c. Teal, 50@60c. common, 30c. Venison saddles, Minn., 18@ 19c. State, 18@19c. Whole deer, 11@13c. Rabbits, per pair, 40@50c.

PROVISIONS.—Hog products have been active and have shown violent fluctuations. Mess pork closed at $10 for Nov.; $10.10 for Dec; $10 20, sellers' option, old or new for Jan. Bacon at 6¾c. for long clear nom 6¾@6¾c. for short clear. Beef at for plain mess at $10. 0@ 1; extra mess at $11@11 50; packet at $12 @13; tierced beef, city extra India mess, at $24@25, and Philadelphia do. at $ 5@24. Beef Hams at $15.50 @16.75. Lard—Western steam at $6.70 for spot lots, $ .65@6.67½ for November, $6.77½@6.80 for December, $6.90 for January and $7 for February. Stearine at 7¾@7¾c. for city and 6¾@7c. for Western.

SEED.—Grass are quiet and easier. Clover quoted at 9@9½c.; timothy at $2.50@2.75; flaxseed at $1.45.

TOBACCO.—Export trade is without improvement, but the home demand is good for seedleaf. Prices are without change.

VEGETABLES.—Exports potatoes past week, 3 800 bbls. The market is a shade stronger. The advance in beans has some effect upon local sales; last prices paid more freely. Early Rose, per double-head bbl., $1.25@1.50; bulk, 1.12@1.37; Peerless, State, $1.12@1.25; N. J., 80c.@$1. Sweets dull; Del., $1.25@2.50; N. J., $1.50@1.75; Va., $1.50@1.75. Onions higher. Green corn, per 100, 25@75c; tom toes, L. I., near-by, per crate, 7 c.@$1; string beans, ₱ bag, $1.25@1.50; potato Lima beans, $1.75@2; Lima beans, flat, $1.50@ 1.75; squash, marrow, ₱ bbl., 50@75c.; do., Hubbard, $1@1.25; cabbage, per 100, $2 50@4.50; onions, white, per bbl., $2 50@2.75; red, Eastern, $2@2.25; do., Chester, $2@2 25 yellow, $2.25@2 50; beets, N. J., 75@87c.; Russia turnips, Jersey, 50@75c.; carrots, 75c.; egg plant, L. I and near-by, ₱ 100, $2@3; pumpkins, per 100, $2@5; cauliflower, ₱ bbl., 1.50@2.50; celery, per doz., $1@1.50

WOOL.—Trading is brisk and supplies are being reduced materially, with prices harder to get. LIVE STOCK MARKETS

NEW YORK, Saturday, Nov. 1.

BEEVES.—Receipts for the week, 14 362 head; do. last week, 13,208 do. Trains arrived late and a more stagnant market followed Buyers appeared not to want cattle at any price, though tempted by concessions, first of $1 per head, afterwards of ¼c. per lb., and in some instances cattle were offered at less than cost in Chicago and not sold. The best 40 cattle in market were from Southern Ohio, weighing close to 1,570 lb average, and sold at 10c. per lb., to dress 57 lbs., with $1 per head on 13 and 50c. per head on 12, and a few other premium cattle reached 10c. per lb., and 10c. per lb. with $1 per head off; but 9¾c., to dress 56 lbs., was about the top figures today, even for extra Ohio and Kentucky steers of 1,500@1,600 lbs., and not a few poor native scrubs went as low as 7@7½c., to dress 56 lbs. Texas, Cherokee and Colorado-Texas steers ranged from 6c., to dress 55 lbs, up to 7c., to dress 55 lbs. About 100 fat steers were purchased for the export trade at 9¼@ 9¾c. per lb., to dress 56 lbs.

COWS AND CALVES.—There is no change to note; former prices are extreme.

VEAL CALVES.—A good demand prevails for good to extra; prices for fed running a good average through. Live calves, Jersey & Buck's Co., choice, 7¼@7½c.; prime, 7@7¼c.; State, choice, 7@7¼c. do., prime, 6¾@6¾c.; fair to good, 5½@6½c.; Mt. Holly, 200 to 250 lbs., 6¾@6¾c., 250 to 300 lbs., 6@6¼c; 300 lbs. up, 5@5¼c.; buttermilk, 3@4c., grass, 2@2½c; hog-dressed, 9@10c.

SHEEP AND LAMBS.—Receipts for the week, 41,405 head; do. last week, 37,705 do. The market has ruled dull and weak. Latest sales show a decline. Sheep, 3½@4½c.; lambs, 4½@5½c.

SWINE.—Receipts for the week, 40,143 head; do last week, 39, 37 do. There is a firm tone for live few unsold.

City-dressed, 5½c.; heavy, 5¾c., pigs. Hogs, Jersey, dressed, 40 to 70 lbs., 6@6½c.; 70 to 100 lb., 6@ 6¼c; 100 to 150 lbs, 5¾@6c.; 150 to 200 lbs., 5¼ 5¾c.; 200 lbs. up, 5@5¼c. Live hogs, State, light, per 100 lbs., $4.12@4 25; medium, heavy, do., $3.75@3.87; Western, $4@4.30; tenderloins, prime, per lb., 8c.

Reading for the Young.

THE NATIONAL SABBATH SCHOOL MEETING.

MRS. W. C. G.

DEAR RURAL YOUNG FOLKS:—I want to tell you something about Chautauqua Lake, and its great Sunday School Assembly. But first let me tell you where Chautauqua Lake is. Most of the Geography scholars in the States of New York, Pennsylvania and Ohio, can point to it readily on their maps, for it has become so famous, that it is a familiar household word; but we must not forget that the dear old RURAL visits children in the far West, in the sunny South, in Canada, and even finds its way to the isles of the ocean. Chautauqua Lake is a lovely sheet of water eighteen miles in length, and from one half to two miles in width, in the western part of the great State of New York. It is the highest water in the world, navigated by steam, (2) being 1300 feet above the level of the sea, and more than 700 feet above Lake Erie, from which it is distant about eight miles. On account of its cool, bracing, and healthy air, it has become a famous summer resort for the tired and heated pleasure seeker from the city. On its shore near the head of the Lake, are located the grounds of the National Sunday School Assembly, and it is of this Assembly I wish to tell my little friends. Happy is the child, whose parents own a cottage, or strike a tent on this delightful camping ground during the three weeks in August, which include the meetings. There are so many things to please the eye, and render the long summer days a constant round of enjoyment aside from the instruction one receives, that it seems almost a fit representation of Paradise. Besides the boating and bathing, there are the rambles in the woods to gather ferns and wild flowers, rustic seats and rustic bridges over ravines, fountains, statuary, and flowers. In addition to the Auditorium, which consists of seats in the open air, where the audiences gather in pleasant weather, and the vast Amphitheatre whose roof covers seats for six thousand people, the good men who love children, and are trying to do all they can to induce them to grow up in the good way, have built a Children's Temple, which is dedicated entirely to the service of the little folks. Here they gather every morning for Sabbath School which is made so entertaining and instructive, that it is always a pleasure for the children to assemble. On the last day but one of the Assembly of 1879, the children marched to the music of the band to the Amphitheater to listen to Dr. Vincent's story about

THE MAGIC BOOK.

I must tell you that Dr. Vincent was the originator of this great Sabbath School enterprise, and is such a wonderful man, that he at once wins the hearts of all the children and, I may add, the hearts of the grown people likewise. I wish I could make you realize with what breathless expectation he held the attention of every child, for his manner was so winning, and his story so fascinating, that I am sure no one of the vast audience either young or old, will ever forget it. I must needs tell you in a few words his story of an hours length, which of course must lack a great deal in interest, but I hope you may glean a useful lesson from it. Dr. Vincent said: "I am going to picture to you this magic book, of which if I had sufficient money I would have a copy printed and presented to every boy and girl in the land. On the first page, beautifully illustrated and surrounded by lovely flowers and vines, is an N., nothing more. On the next page still more beautiful, if possible, than the first, is a C., nothing more. On the third page—in letters of gold beautifully embossed and decorated is another N. nothing more. On the fourth page transcendently bright and lively, is another C, nothing more. Turn the page, and lo! glittering in glory again, appear the magic letters

N. C.—N. C.

Now who can tell me what these magic letters signify?" A few, only of those who had been held spell-bound and mystified, had divined the meaning, and a few voices answered triumphantly, "*No Cross, No Crown!*" "No Cross, no Crown" repeated the Dr. "you have guessed rightly my dear children. These words are the key-note to success all through life, and he or she who is not willing to work, and wait long and patiently, need not expect to win. I will tell you of two girls, Anna and Mary, we will call them. Each had a present of a fine piano from her kind papa, with which of course she was much delighted. Anna, not satisfied with the lesson, and the regular hours of practice assigned by her teacher, begged permission to practice six hours. She was sure she would never tire. Well, the first day she practised four hours, the next three and a half, the next three, the next two, and before a week was gone her mother had to urge her to practice the one hour. Before the end of a month a piano was the 'meanest old thing' she ever saw, and she wished she had never had one. Her teacher wished her to practice only exercises that she might, as it were, become familiar with the alphabet of music, but she soon tired of this and began to tease her mother to let her take a piece, 'just one piece,' and her foolish mother consented, and her teacher much against her will was obliged to comply.

The consequence was she learned to play just four pieces, passably well, which she played on all occasions, whenever asked. The other little girl, Mary, took her lessons and her practice daily, and though sometimes tired, and discouraged with the monotony of the exercises, and in her heart longing to 'take a piece,' yet encouraged by the kind words, and good counsel of her mother, persevered under the instruction of her teacher, till at last the day arrived when a quite difficult piece of music was placed before her—'May, can you play hat.' After looking at it a moment, 'Oh, yes that easy enough.' A still more difficult piece was brought, and still another, she played them readily. And now she reaped the reward of perseverance for the most difficult pieces of music were easily mastered by her, and all who heard her play praised her proficiency. One evening at a party, a group of young people were gathered in the back parlor when the sounds of a piano were heard. 'Who is that,' asked a young man who was a stranger in the place, 'Oh' replied another, that is Anna she can play just four pieces, and those are,—naming them. Surely enough the four pieces were played in the order named, and she arose from the piano, 'I told you so,' said the young man 'she always plays those four pieces, and nothing more.' Then Mary sat down, her skilled fingers ran over the keys, now in tones low, and sweet, as an Æolian harp now in wild bursts of melody like the joyous song of the lark, as he mounts up to meet the sun then in plaintive trills, or merry waltzes, till she showed herself complete mistress of the instrument, and sounds of enthusiastic applause went up from the company. And now she found her crown for her long working and waiting."

Young people, does not this story teach an important lesson? Dr. Vincent also told a story about two boys, which was quite as good, but I must not attempt to repeat it here, or Uncle Mark, will surely throw this in the waste basket, and then you will know nothing about the National Sabbath School Assembly.

A COUSIN IN THE BACK-WOODS.

DEAR UNCLE MARK:—I am a little girl ten years old to-day. I have a little garden planted with flowers. I have one flowering pea. I live in the back-woods twelve miles from any town. There are very few people here but there are plenty of bears and cougers. Uncle Mark, would you please let a little back-woods girl join your club? Now I will close. I hope my letter will not find its way to the waste basket. LAURA MCGEE,

Washington Ter., King Co., Sept. 23.

[It gives me much pleasure to hear from this little cousin, and to think that the influence of the Horticultural Club reaches to the very boarders of civilization. It is a very gratifying thought, that even in the back-woods of Washington Territory where the sound of the wood-man's axe is heralding the advance of the white man, where bears and wolves sneak about in search of prey, and where the log cabin is a palace for comfort, that even there I have a little niece who each week eagerly reads the letters from her many RURAL Cousins, who has her little garden, tends her flowers, enjoys their beauty and is happy. You, of my nieces and nephews who are much more favorably placed, and who are perhaps at times discontented with what you have, should at such moments think of this your cousin and be thankful for the advantages you enjoy.—UNCLE MARK.]

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I would like to join the Horticultural Club, and write you a letter occasionally. We have taken the RURAL for several years, and I am the first to read it. I am the only child and 13 years old. I was born in Galveston, and now live two miles from the city, on the beach, about a hundred yards from the Gulf of Mexico. I have a small garden of my own, and have now growing cauliflower, cabbage, lettuce, beans, mustard, etc. My father has a large garden, and I help to set the plants. We have out 9,000 cabbages, 4,000 cauliflowers and other vegetables. We often grow cauliflower heads measuring 20 inches across, which is very large, considering that we live on an island of sand. I wish the cousins could see our hedges of red and white Oleanders, and our beautiful Orange trees loaded with fruit. We have Roses and flowers both winter and summer. I am afraid this letter is too long, but you will hear from me again, as I have many interesting things to tell you of. Yours truly, LESLIE STRINGFELLOW.

Galveston Co., Texas.

UNCLE MARK: I hope you will give me a welcome to the Horticultural Club. I have read the letters, with much interest, for some time; and finding among the writers some as old as myself, I have concluded to become one of the cousins. I think there is much knowledge to be gained from such a club; and flowers are something in which nearly every one must take an interest. I see, too, that the members do not confine themselves strictly to this subject but discuss books, music, and anything that may prove interesting and profitable. I will make my letter only enough longer this time, to ask one question; how does Gynerium argenteum, Pampas Grass, look when it first comes up? Does it bear any resemblance to grass?

CARNATION.

New Bedford, Mass.

[How can a "Carnation" be otherwise than welcome to any Horticultural Club, particularly when she is in full bloom? Gynerium argenteum is a grass, and looks like one.—U. M.]

DEAR UNCLE MARK: I thought I would write and ask you to accept me as a member of the Horticltural Club. I am much interested in the letters from the cousins. I have a few house plants. Papa took the RURAL before I can remember. I, too, like it very much. He has promised to give me a garden next year. I am ten years old. Your friend. GRACE S. GREEN.

Jefferson Co., N. Y.

[I will enroll you, Grace, when you send me your post office address.—U. M.]

DEAR UNCLE MARK:—I would like to join the Horticultural Club. I have flowers and like to tend them. We have Zinnias, Phlox, Balsams, Asters, Cockscombs, California Poppy, Nasturtium, Pansies, Gladioli, Tuberoses, Four-o'clocks, and various other kinds; they are all doing well. We like the RURAL, and also the letters. I am 13 years old. If I see this in print I may write again. Your friend, SUSIE A. SHISLER.

Erie Co., N. Y.

DEAR UNCLE MARK:—I have a nice patch of Strawberries and Raspberries, also a number of choice house plants. The seeds we received from the RURAL did nicely. The Bronze Ricinus was quite a curiosity. I would like very much to join the Horticultural Club. Yours truly,

Broome Co., N. Y. FRANKIE WEDGE.

The Puzzler.

HIDDEN FEMALE TITLES.

1. Did you count Essie's rings?
2. I pity the lad you saw.
3. He said, "I am Adam."
4. He missed his lesson.
5. At the bar one's spirits raise.
6. I can dip R in cesspools.
7. Last March Ion essayed to study.
8. There is "Ledu," chess champion.
9. To get at the gem, press the string.

☞Answer in two weeks. LITTLE ONE.

ANAGRAM.

Hontlg, lijengero, rroosiwng,
Wonard hhtrugo file eh soge;
Hace romginn eess mose kast gebin,
Chae ecnnigv eess stl coles.

DIAGONAL PUZZLE.

1. A consonant; 2. Duplicate vowels; 3. God's noblest work; 4. The cry of an ass; 5. A city of Nebraska; 6. Choice. Primals and diagonals form two trees of India.

☞Answer in two weeks. L. O.

HALF SQUARE.

A liquor; something we find in the papers; a cave; a girl's nickname; a consonant.

☞Answer in two weeks. UNCLE WILL.

DROP LETTER PUZZLE.

"Th-- sh-lt n-t st--l." Fill with vowels and find one of the Commandments. L. O.

☞Answer in two weeks.

PUZZLER ANSWERS.—Oct. 25.

HIDDEN GRAINS.—1. Wheat; 2. Rye; 3. Oats; 4. Corn; 5. Buckwheat; 6. Rice; 7. Barley; 8. Maize; 9. Flax; 10. Hemp; 11. Hominy; 12. Broom-corn; 13. Millet; 14. Hay; 15. Clover.

ILLUSTRATED REBUS.—POTATOE.

MISCELLANEOUS ENIGMA.—"Very prekoshus children are like very prekoshus fruit,—apt to drop off before they get ripe."

Sabbath Reading.

THE INFLUENCE OF JESUS.*

"THE Influence of Jesus" is the last book sent to us out of the life of Phillips Brooks. We say *life*, because in his words, more than in any words one is almost ever asked to read about religion, there seems to speak and glow the life of the man who writes them. The very atmosphere of life is in his sentences, because it is in his thought. The present work is remarkable. It is the best study of Christ's character and work we have ever read. Without aiming to write a life, he has done so, if a life may be written not so much by the orderly treatment of events, as by a disclosure of the heart which made events possible.

There are four lectures in the volume. They were delivered on the Foundation of John Bohlen of the Church of the Holy Trinity, Philadelphia. They discuss the influence of Jesus (1) on the Moral, (2) on the Social, (3) on the Emotional, (4) on the Intellectual Life of Man. The great question is, "What is the power of Christianity over man—its source, its character, its issue?"

The underlying idea which runs through all the lectures is, "The Fatherhood of God and the childhood of every man to Him." This is the *idea* of Jesus. The aim of His whole life is to redeem men into this Fatherhood of God. "His power is His idea multiplied by and projected through His personality."

With this conception of the life of Jesus, it is easy to see how these lectures become a familiar and loving study of Christ and His work. This is one of the charms of Phillips Brooks. Very many men take the incidents of the Incarnate life and treat them so that you feel them to belong foremost to a great theological being. Here, the first impression is of a man moving in and out among His neighbors. Coming into this man's life first, you then feel His power. The order is natural—first the man, and then, by acquaintance, the Son of God.

(1). His Influence on man's Moral life is to lift it up into the atmosphere of a Sonhood passing in and out before the Fatherhood. That relation is one of love, and so of obedience, and is therefore constantly deepening the Father's nature in the Son.

This makes Christian morality different from all other. "First, in the complete combination of pattern and power in the source from which the morality proceeds; second, in the combination of reason and authority in the basis upon which the morality is constantly recognized as resting."

The Father is the *pattern*—"Even as your Father which is in heaven is perfect"—and *power*—"that ye may glorify your Father which is in heaven." The *motive* is love, which consists of admiration and affection. Admiration for what Christ is doing, and then love because He is doing that for us, this is the way we come into the fullness of His moral life. Thus we realize in our sonship the Sonship of the Son of God. "The model and impulse of all duty He carried in His own filial heart, which was forever bearing witness to Him of His Father's perfectness." "Duty must have been its own revealer and its own reward." "The doing right and the being right must have been like the sunshine and the sun."

(2). His Influence on the Social life is founded on the same great idea. In the family, in social relations, in friendship, as teacher and citizen, always He and all men are foremost the sons of God. It is the power of all His relations with men, to redeem into this consciousness of sonship. It underlies the church which is a family of God's Sons; it gives meaning to Reform and Education. As this idea is realized in each man, his life becomes exalted and inspired. "It makes all history divine."

(3). His Influence on the Emotional life is a study of Christ living in His great idea and finding how "His life was ever coming out through His evident suffering or happiness, and entering into other men through the happiness and suffering that He awoke in them." Not because He was sad or happy, but because of what He did. Life first, and then what that *life* brought Him. That life is the idea of sonship which He is living out daily that He may make these men know that they are also the sons of God. "When that is touched behold the miracle! See how the dry roots of obedience fill themselves with love; see how the hard stalk of experience grows soft and pliable with purpose; and then see how the flower of pain utters a life profoundly deeper than itself, and tells the world that story which it is the struggle of all pain and pleasure in the career of Christ to tell, which all healthy pain or pleasure in the career of man is tempting him to learn,—of man's unbroken sonship to his Father, of the belonging of his soul to the soul of God." So there are two questions. 1. What is the position and meaning of enjoyment and sorrow in the life of Jesus? 2. In the life of His disciples? The discussion of these questions runs through (1) Physical joy and pain, to show His complete human life, to register the disorder of the world, and to develop His spiritual consciousness.

(2). Through His social life to show how perfectly He entered into men's relationships. (3). Through His moral life to show how acute was His perception of right and wrong. Moral emotions, enthusiasms, pains must be in his life. But they are always connected with the actual personal life of men. Whatever is right or wrong is viewed in its relation to men's honor or degradation. So also it is the Father who is insulted or honored. Enthusiasms are not with Him abstract, but living, real.

(4). His Influence on the Intellectual life of man is seen in the use Jesus makes of the word *Truth*. It is a word not of the intellect alone, but of the intellect together with the affections and the will. This comes out in the use He makes of it. "A man of the truth, is a man into all whose life the truth has been pressed until he is full of it." He is "always a complete being whose unity is in that total of moral, intellectual and spiritual life which makes what we call character." "He never simply knows, but loves and resolves always at the same time, with the same action."

We see constantly knowledge divorced from life, but in Him knowledge passes into life, and thus He speaks of His life as truth. So "the greatest men that have ever lived are those in whom you cannot separate the mental and the moral lives." "What God knows is the same with the love with which He loves, and the resolve with which He wills."

Here, then, comes into play the Idea of Jesus. He is the Son of God, and the Son of God is the repetition and manifestation of the life of God, and hence all the methods of that life must be found in the Son. Now to develop this in Him we see the deep significance of the Temptation and the Garden, where the question is not one of intelligence, but of will. This profound harmony in which He lived with the Father is seen in the many words strewn through St. John's Gospel like "As my Father hath taught me, I speak these things."

This completeness of *His* inspiration is the secret of His influence on men. "Not from simple brain to simple brain, as the reasoning of Euclid comes to the students; but from total character to total character."

In one word the eternal distinction between Socrates and Christ is found in this, that Socrates reasons and argues, *e. g.*, when he talked with his followers then in the prison before his death; while on the other hand Jesus is divinely certain. There is no shadow, because He is in the very sun-center of light. The Disciples gained certain characteristics of intellectual life from Jesus: "A poetic conception of the world combined with a willing acceptance of mystery; an expectation of progress by development; an absence of fastidiousness that comes from the sense of the possibilities of all humanity; and the enlargement of thought from the arbitrary into the essential."

Or, in other words, He the Son reproducing the Father's life; all men the sons to reproduce that same life. The world is sacred and full of God, progress is coming by natural development, sympathies are broadened to embrace all men, and special laws are doors which open into universal principles.

Everywhere the Fatherhood is over the earth like the heavens, and we are to move beneath it as the sons of God, doing His will and rejoicing in His life.

This is the brief outline of a most suggestive and noble book. It is the natural conclusion of premise. Accept the *idea*, and every page is its reiteration and every event of His life its disclosure

* The Influence of Jesus. By Phillips Brooks. New York; E. P. Dutton & Co.

PERSONAL ITEMS.

It is reported that Jefferson Davis is growing blind.

A missionary who returned from Zululand before the late war gives the pronunciation of Cetywayo as "Tsewayo."

Cabinet-size photographs of the late Gen. Hood's children are offered for sale in New Orleans, the proceeds to go to swell the $5,000 already contributed for the orphans.

It has been discovered that the sermon plagiarzed from the Rev. Dr. Parker of London by the Rev. Dr. Lorimer of Chicago, was also used by a Canandaigua clergyman as an original dedication discourse.

Mrs. C. M. Williams, who was elected president of the State National Bank, at Raleigh, N. C., in place of her husband, lately deceased, is the first woman to hold such an office in the history of this country.

Mary Dean, who made her entry into Indiana six years ago in a Bloomer costume, with a revolver displayed at her belt, and became a public speaker on woman's rights, now retires to a prison as a thief.

It is a matter of some interest at Washington to know who will take Thurman's place in the long winter evenings when he formed one of a whist quartet, the other three being Edmunds, Bayard and Conkling.

Orson Pratt, a leading Mormon, goes in for roasting every Gentile who says anything against his institution. More than that, he offers to furnish the wood and light the fire. Orson is a very liberal man.

Sir Garnet Wolseley is a little more than 40 years old, and after the Ashantee campaign he might have had a baronetcy that he refused. He did not, however, decline the $100,000 which were offered to him. He was badly wounded in the Crimean war.

Charles P. Edison, the inventor's nephew who died in Paris the other day, closely resembled his uncle in face, manners and intellectual promise. He readily became expert in handling the most intricate inventions and was looked to by his uncle for many points.

Robert P. Crockett, the only surviving son of "Davy" Crockett, has a farm near Granbury, Texas, and is the keeper of the bridge across the Brazos river at that place. Ashley Crockett, one of Robert Crockett's sons, is one of the two editors and proprietors of a flourishing newspaper of that region.

Ex-Governor Hubbard, of Texas, has gathered statistics to prove that there is less crime in Texas in proportion to the population than in one-half the other States. He thinks the next census will open the eyes of the world to the fact that before the end of the century Texas will have passed up to the head, the foremost State of the Union.

David Dixon and Mary Swinton were to have been married at 2 o'clock in the afternoon, at Embarrass, Wis. An hour earlier, he and others were in her room, where the finishing touches were being put on her toilet. An old pistol lay on her bureau. He supposed it unloaded, playfully snapped it at her, and shot her dead.

Henry Smart, the English musician, and composer of the music, "Hark, Hark, my Soul," "From Greenland's Icy Mountains," and of hundreds of anthems and sacred songs, was recently offered by the British Government the choice between a knighthood, or a pension of $500 a year. He chose the pension. Smart fellow!

Henry Bessemer, the English inventor, has taken out 160 patents. One of them, his process for making steel, ranks as one of the most brilliant inventions of the century. It converts pig-iron into steel in a few minutes, and has reduced the price of steel rails per ton from $200 to $30. Ten times as much steel is used in the world now as was used prior to 1856.

Sir Rowland Hill, widely known as the originator of the system of cheap postage in England, died in London, August 27th. His life was a long one, dating back to 1795; but until within six or seven years he was full of activity, and continued to render the English Government valuable service in many ways, and took a prominent part in bringing his admirable system before the American public.

Mme. Nilsson is to sing twelve times in opera at Madrid during the festivities in connection with the royal marriage. She will be paid eighteen thousand dollars. For singing in a single concert at Cologne on Dec. 6 Patti and Nicolini will receive twenty-two hundred and fifty dollars. Great singers are scarce nowadays, but they know the value of their voices and make the public pay accordingly.

Parnell, the Irish Home Ruler, has a slim and almost effeminate exterior, but an iron will. He has a harsh, monotonous voice and his manner is stiff, calm, cool, bloodless—he is a man nothing can move. O'Connor Power grows savage under the exasperating treatment of the House, and O'Donnell hisses his words through his teeth with ill-disguised resentment, but Parnell remains invariably imperturbable.

A new anecdote is told of Bishop Peck, of Syracuse. The Bishop's weight is between three hundred and fifty and four hundred pounds, and when, recently in the middle of the silent night his bed crushed under him, the gentleman at whose house he was visiting ran upstairs in great alarm. "What's the matter, Bishop?" anxiously inquired the host. "Nothing at all," groaned the clergyman, "just tell your wife if I'm not here in the morning to look for me in the cellar."

Antole Menloe is the name of a pretty but rather plump Indian girl who serves as a chambermaid in a hotel in Virginia City, Nevada. A number of ladies were expressing their admiration at its honey-sweet mellifluence the other day, when one of them bethought her to inquire the meaning of such delightful words. "Me heap big 'round," replied Antole in broken English, musically gurgled; "me heap big, and the squaws called me 'Antole Menloe' for 'fat goose.'"

Four Scotchmen, one of whom was Lord Dunmore, have been indulging in real heroism. A pleasure yacht was wrecked in the Hebrides, leaving four men, three women and two children on a desolate storm-swept rock, eleven miles from the coast. They clung there, with nothing to eat, and suffering intensely from cold, for a day and a half. No boat would attempt the perilous voyage necessary for their rescue, until Dunmore and his companions put out in an open fishing smack. The lives of all the nearly exhausted party were saved.

George H. Pendleton's entrance into public life was, he declares, an accident, "I really loved the profession of the law," he says, "and desired to practice it, and if I was to meet with any distinction, desired it to be there. It got into the head of my law preceptor, the late George H. Pugh, to want to be United States Senator, and he asked me to run for the Legislature, so as to be a vote there in his favor. I ran and was elected, and Mr. Pugh reached the Senate. I attributed my political career to nothing beyond the desire to gratify Mr. Pugh."

Haynes set himself up for a religious leader in Texas, even claiming to be a divinity, sent to earth to take charge of all spiritual affairs. He said that he was physically invulnerable, and that it was impossible for anybody or anything to hurt him. His converts, of whom there were hundreds believed his pretentions, and it was said that a bullet fired at his breast had dropped harmlessly at his feet. But there were scoffers at Corsicana, and they rode Haynes on a rail. His miraculous power failed him in this emergency.

Walt Whitman, who is resting at the home of his brother in St. Louis, gives his opinions of the American literary men: "Our greatest man is Emerson. Bryant, I think, has a few pulsations. Whittier is a Puritan poet, without unction—without juice. I hardly know what to say about Longfellow. Our living Bancroft and our dead Ticknor I think first-class men. Bret Harte is smart, facile and witty. But the best promise in America is in certain young men who are coming on the stage, though yet voiceless. They cannot speak because the magazines are in the hands of old fogies like Holland or fops like Howells. Yet they will burst forth some day."

Hop Bitters does not exhaust and destroy, but restores, cures, and makes new.

New Publications.

New Operas!

Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.

Fatinitza. Opera by Suppe.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.

Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15.

Bells of Corneville. By Planquette, (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling well, for 50 cents) and who are looking out for new and easy operas.

Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple**, each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record**, published weekly. It keeps you well posted as to musical matters, gives 6 or 7 pages of music per week and costs but $2.00 per year!

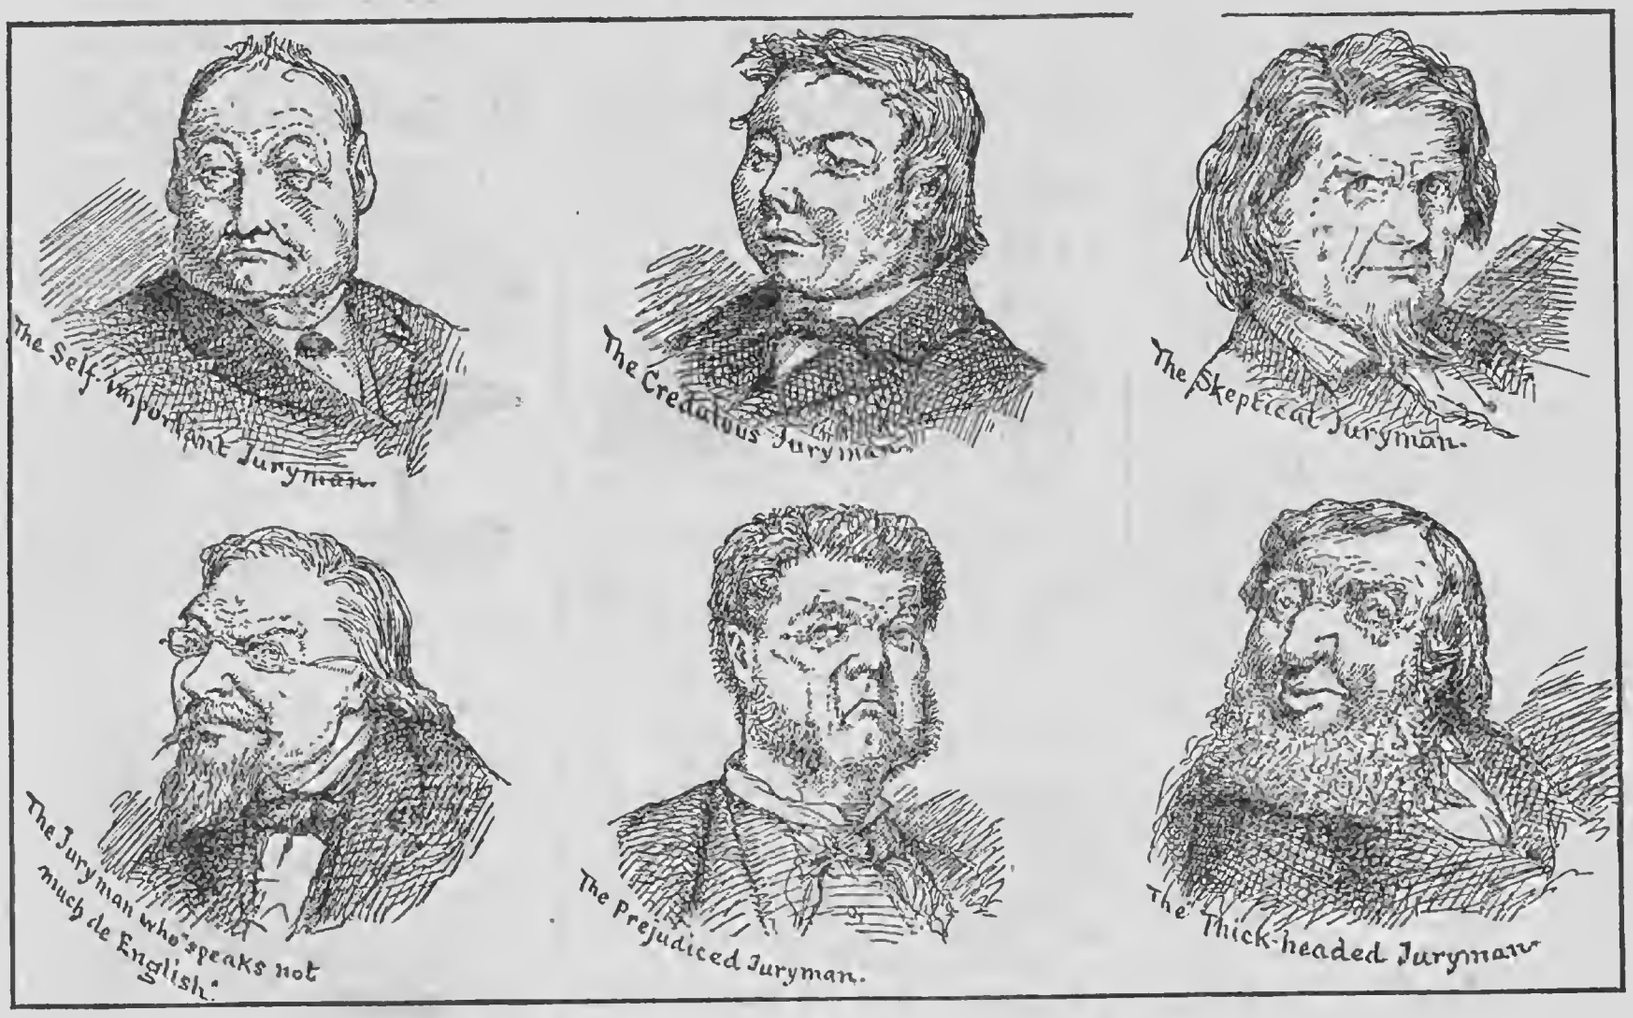
LIVINGSTON & CO.,
Pittsburgh, Pa.



CHARACTER SKETCHES.--JURYMEN.

BRIEFLETS.

D. D. Simmons stated to the Farmers' Club, as reported in the American Rural Home, that he grafted the Pear on the Crab Apple last spring. The cions grew well till summer, when they died. . . Mr. Allis had met with success in grafting Apples on Crab and Pears on Thorn Apples (Cratægus). Had also grafted Pears on common Apples and "they did well". . . Mr. Smith knows of an instance in the eastern part of the State (N. Y.) where the Pear does well on the Mountain Ash. . . Mr. Reynolds asked if any one in his experience had ever known wheat destroyed by making too much growth in the fall? . . Mr. Fowler thought that if wheat grows till it makes a joint, it would be lost. . . Pres. Clark had tried the experiment of sowing one piece of wheat on the 25th of August and another on the 12th of September. The first now looks much the better. . . Mr. Allis thinks the best way to keep apples is to barrel and put them in a cool cellar. Mr. Reed picks and puts in barrels, unsorted, taking to fruit-house, emptying out, and leaving till cool weather before assorting and barreling. What are then sound will keep, and buyers will pay a shilling more for apples thus treated. . . Pres. Clark advises keeping till winter, when barrels will be cheaper and apples higher. "Put them in the cellar; keep them cool through winter. They will bring nearly twice as much in spring." . . Mr. Goshorn says it would be about as wise to plant corn in sod, with the view to grow both corn and hay together, as to expect good growth for a tree in sod. . . It is said that very fine coal ashes mixed with linseed oil, make a very fair cheap paint. . .

THE ROYAL COMMISSION.

When the M. P.'s arrived out West,
Across a Yankee wag they fell;
Said he "First lessons you suggest,
For one is *Read*, the other's *Pell*."

London Journal.

. . . Chloride of lime is recommended as an insect deterrent for plants, trees and even for the soil. . . Keep sweet potatoes *dry* and in a uniform temperature above freezing. . . "Many remedies have been tried for the pear blight," says the Country Gentleman, "and with superficial observers those which happened to be applied just before the disease passes off, have the credit of being a certain cure." . . Mr. Meehan remarks that if the seed of cabbage be sown as soon as ripe or at that time of year when it naturally ripens, instead of plants making solid heads, they will "bolt" and run to seed. . . Major Freas says that the American Aloe which adorns hundreds of the fronts of private residences, is "an ugly-looking plant and not one in a thousand will bloom during a natural lifetime." We should not think much more of the Century Plant if it bloomed every year. . . Wheat is king. . . W. A. Armstrong says: "I have used a fence of three wires as a line fence between two pastures, cattle and horses running on each side, with great satisfaction and with the least possible amount of trouble and repairs. The barbed wire has solved the question of fence for the West." . . The French Minister of Agriculture calls attention to the gross adulteration of olive oil carried on in the south of France. . . . It is going the rounds of the French agricultural journals that anise-seed has the power to attract and destroy weevils in grain. . . The American Miller says: "There is no such thing as the shifting of the *wheat belt*, only in so far as the exhaustion of the soil renders such a shifting a necessity. Any acre of land will raise wheat forever if its capabilities are not taxed too much." . . . "As agriculture is the most powerful of interests, all great political movements rest more or less upon it." Do you realize that, readers? . . The Fuchsia is here known as a small pot plant, but in New Zealand one species, Fuchsia excorticata, grows as a tree of imposing dimensions, attaining a hight of fifty or sixty feet, with a trunk three feet in diameter. . . . Asparagus can still be planted in the Southern States; Conover's Colossal is one of the best, if not the best variety. . . 70,000 baskets of peaches were the past season raised on one farm in Maryland. The crop sold for about $42,000. . . . The Mississippi Valley Cane Growers' Association will hold their first annual meeting in St. Louis, Mo., commencing the first Wednesday in December. . . . Now is the time to prepare the trenches in which to winter celery. They should not be over 18 inches wide or deeper than the plants are high. Cover the plants gradually as the cold increases. . . . Oliver Chapin, of East Bloomfield, N. Y., is reported to have this year gathered 10,000 barrels of apples from his 100-acre orchard.

The old canes of Raspberries and Blackberries can now be cut out . . . . Root-cuttings can now be taken from both of the last-named small fruits, and may either be planted at once or kept in moist earth till spring. . . . . All the hardy bulbs may yet be planted in the open ground. Nothing is more charming in early spring than a gay bed of handsome Tulips, Crocuses, Snowdrops and lovely sweet-scented Hyacinths. . . . Now is the time to make alterations and improvements in the garden, to lay drains, remove old trees, lay out walks, cut away or fill in etc. . . . . Dahlia roots should now be in the cellar. . . . . Rake the fallen leaves in between shrubbery that receives clean culture, and let them remain there till spring. . . . Mr. W. Crozier has lately sold six Ayrshires to the Hon. H. B. Hyde, President of the Equitable Insurance Co., of this city, for $1,000, all calves but two. He has also sold the Ayrshire Bull, Dairy Boy, to Rob. McElroy, Charleston, S. C. . . . Mr. C. has also lately added to his herd the young bull, Brookdale Chief, full brother to the celebrated Jersey cow Filbert, which was lately sold for $1,500. . . . Mr. C. remarks that if the cow is worth so much, a bull equally good is worth at least double as much, as his descendants may be at least 40 times as numerous as hers. . . . Messrs. Smiths and Powell, of Syracuse, N. Y., sold last week to J. D. Guthrie, of Shelbyville, Ky., the following Holsteins, to replace the Shorthorns they sold some time since. . . . Imported two-year-old heifer, Lady Fisher; imported yearling heifers, Callie, Cornelia, Jessie, Carnation, Silvia and Southern Beauty; imported heifer calves, Marcia, Inez, Polly, Kentucky Belle, Sunbeam, Countess, Joan and bull calf, Appollo. These animals are all of superior breeding, and Kentucky may well feel proud of them. Holstein breeders will be pleased to learn that a Short-horn breeder of the standing of Mr. Guthrie has taken hold of the introduction of Holsteins in that State.

A Blockade that Should be Raised.

The egress from the system of waste material through the natural channels should be rendered free, without loss of time, when a blockade is produced by an attack of constipation, a disorder which if it becomes chronic, is productive of serious bodily mischief. Jaundice, severe headaches, nausea, dyspepsia, the usual concomitants of the malady mentioned, all indicate that the bodily functions are materially interfered with. Hostetter's Bitters is particularly efficacious in cases of this sort, and renders the habit of body perfectly regular. It is a medicine greatly to be preferred to drastic cathartics, which are well calculated to drench, but unhappily also to weaken the intestines. We say unhappily, since such medicines are the favorite resource of many ill advised person, who resort to them upon the most trivial occasion, and greatly to their discomfort and injury.

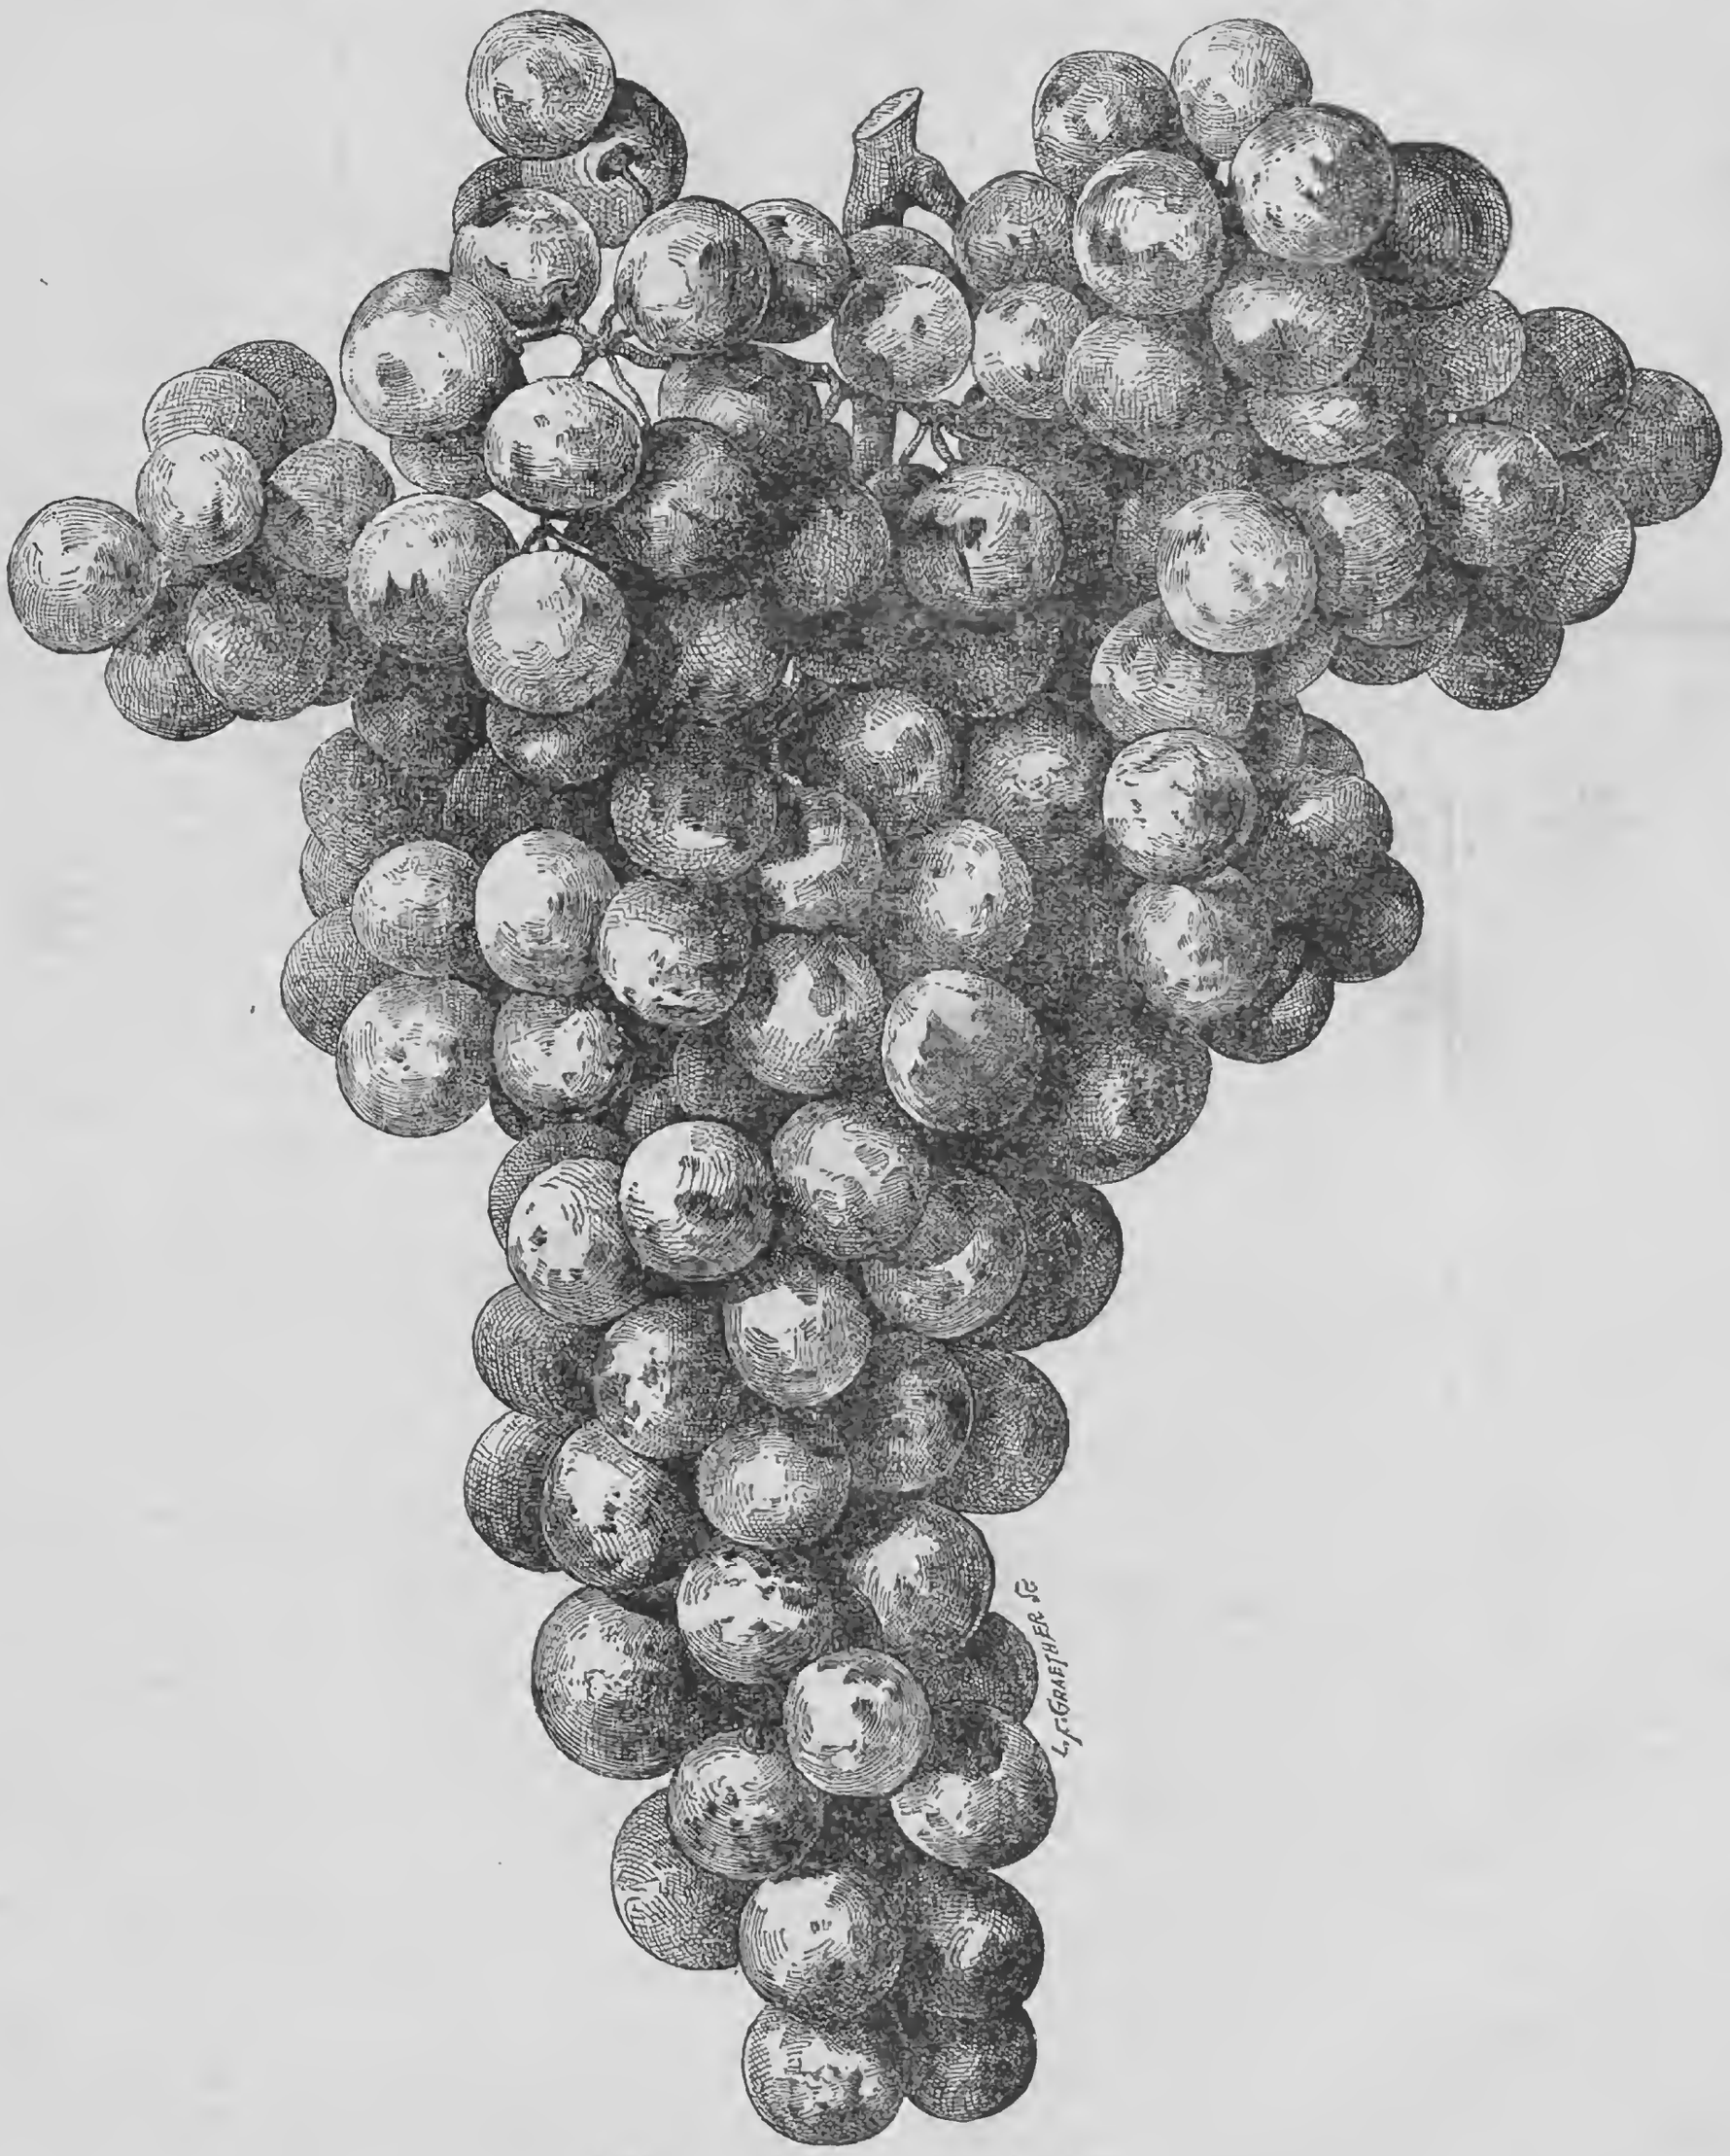
The Vineyard.

THE "WELCOME" GRAPE.

If the introduction of new fruits is indicative of a growing taste for pomology and horticulture among the people at large, a very wonderful advancement has been made in this direction during the past few years. With the exception of the Strawberry, which is so easy of cultivation and of which new varieties can be raised and tested so readily and rapidly, no line of fruit has of late been increased by so many and excellent new varieties as that of the Grape. A desire (and a very commendable one it is) for raising seedling Grapes, seems to have seized upon a number of horticulturists at about the same time, and the results of their efforts are now becoming apparent.

Mr. J. H. Ricketts, who has acquired great fame for his seedling Grapes, is the orginator of the "Welcome," the subject of our present illustration, and a decidedly "welcome" addition it is to the list of hot-house Grapes. It was referred to in these columns last year, but we were not at that time able to procure a good illustration. It is a cross between Pope's Hamburg and Canon Hall Muscat, and, like these, it cannot be ripened out-of-doors in this climate, but it is suited for both the cold and hot grapery. All good judges of fruit pronounce it superior, not only to both of its parents, but to any foreign variety. The vine is a vigorous grower, with foliage resembling that of the Black Hamburg. Bunch large-shouldered, moderately compact; berry large, roundish-oval, black, covered with a grayish,



THE "WELCOME" GRAPE.

blue bloom; flesh tender, juicy and sweet, with a rich aromatic flavor.

Farm Topics.

AUTUMN WORK.

Preparing for Winter.

LAST week we suggested some general principles that might help to decide the method and order of fall work on the farm. We now call attention to certain *minor items* of work apt to be neglected, or put off too long.

Fall work naturally divides itself into three classes: 1, harvesting the crops of the season: 2, putting things to rights before snow and steady cold come, and 3, permanent improvements, or work for the coming year or years. The first of these is of first importance, and should be well finished before the others are begun, unless, indeed, the weather be such as to permit work on *them*, and not on it. The second, as intimated, is of a kind most likely to be deferred or neglected. Much of it is small, "fussy," unpleasant, and apparently not remunerative. You don't seem to be accomplishing anything when at work at it. When you harvest and market the season's crops, and with the proceeds make much-needed purchases, or forever wipe out some annoying debt, you feel as if you were "doing something." Work of the third class, too, brings the same feeling in a slightly different form. If you thoroughly tile-drain a field of stiff clay, you feel that you have doubled the value of the land for tillage, and that *under proper cultivation* the cost of labor and material will be repaid, net, by one or two succeeding crops. If you have cleared a rough and half-productive pasture of its stones, grubbed its useless bushes, trees and stumps, and plowed the whole, your work, except the plowing, will never have to be repeated. Such jobs as this and the draining are permanent improvements. They have a certain fascination about them. They make you feel that you are "getting on," doing something that shall last, and show, and pay every year of your life, and bless others when you are dead. You have a good right to like such work.

But work of the second kind has little fascination about it. It may be necessary to bank cellars, strip bean poles, clear eaves-troughs, repair barn doors, nail loose battens, set broken glass and "fix up" for winter, but it is not inspiring. You dislike to let your horses lie idle while you "potter" over it. And so the strong tendency is to keep at work on the "big" and "important" jobs, and neglect these smaller matters. Hence the need of special reminders in regard to them. And yet we prefer to suggest some general principles, and present some considerations that may help to remove the feeling of dissatisfaction, that comes over one when engaged in this "pottering" work, rather than to give minute and specific hints and exhortations. For "nagging," as Dr. John Hall calls it, is bad both for man and beast. Constant "clucking," twitching of the reins, and small whipping will spoil the freest horse. The best parents suggest rather than command. The best teachers *teach* little. They put their pupils in the way to learn. They make them *think for themselves*. We once heard a wise college president quaintly say that he "never believed in chewing a boy's bread-and-butter for him."

Now farmers feel in the same way. A feeling of disgust comes over them as they glance down three or four columns of minute "Instructions for the Month" for "farm, garden, orchard and nursery," arranged alphabetically, perhaps, and prepared by some city editor who does not know half so much of the *minutiæ* of farm work as the farmers themselves do. And so we prefer to suggest general principles, as already intimated, and illustrate by a few specific examples. And we beg pardon in advance for the somewhat dictatorial tone induced by our effort to secure conciseness. We trust we shall never forget that we are writing for intelligent farmers, some of whom have far greater knowledge of detail than, perhaps, we can ever hope to possess.

First, then:—Be fore-handed. "Fore-armed is well armed." Take pleasant weather, too, if possible, for this kind of work. There is nothing more disheartening than to see the belated farmer rush about in the first snow-storm, mending barn doors, windows and floors ready to stable his shivering cows. Even if the cows are not stabled at milking time all summer—as they should be—the stable should at least be in perfect readiness for them, as feed shortens and winter approaches.

The cellar should be banked, if necessary, and the double windows and storm-doors put up in the dwelling-house, *before they are needed*. A shrewd satire on many farmers, and many other men, too, is the story of the shiftless but witty fiddler. He was playing beneath his leaky cottage roof, and a passer-by who tried to share his shelter (?) said, "Why don't you mend your thatch?" "Why, man, I should get wetter yet in doing that!" "Yes, but I mean why don't you mend it when it doesn't rain?" "Why, man, it *doesn't leak then!*"

Second:—Do such work *yourself*, and don't let it stop the team work, either. Don't trust this "pottering" work to hired man or boy. They will not do it well or expeditiously. Set them at work on steady jobs with teams—plowing, drawing manure, or something of that kind—where they will do as much as if you were there—or if not, you can know it—and yourself do this kind of work. It needs ingenuity and good judgment. A hired man seldom has these—a man fit to be a farmer must have them.

Third:—Aim at permanence, even in such work. Not all of it needs constant or even annual repetition. Avoid make-shifts, patch-work. "Once well done is twice done." Make barns, fences, etc., thoroughly, and they will seldom need repairing. When they do, repair them thoroughly, and it will not soon need to be repeated. Cellars, too, need not be "banked up" every year. Tan-bark and sawdust all around the cellar, held in place by boards and stakes, are unsightly and expensive. They must be taken away in spring and renewed each fall. If the grading is properly done, they are needless. If not properly done, do it this fall. Set men and teams at it, and manage it yourself. Put "dump-boards" on your wagons and draw good dirt and make a slope, or terrace if necessary, up within half a foot of the sill or clapboards all around the house, and turf it firmly and neatly. It will never need to be done again, and the cellar will not freeze if it has double windows and a good double door or hatchway, unless it freezes down from above through a cold house or room.

So, too, if the eaves-troughs get stopped with leaves, cut away the limb or tree that shed the leaves. The roof should not be shaded. A damp house is an unhealthy one. Or again, if the outlets of tile drains tend to stoppage, they should be bricked or stoned up well, and a wide, open ditch, with well-beveled sides, be dug till it shades off at the surface of the ground. It will last for years, if made deep enough and protected from the tramping of animals. Illustrations might be extended indefinitely, and they all say, "work for permanence, or aim at thoroughness."

Fourth:—Do not let such work accumulate. As soon as a thing breaks or gets out of repair, mend it. As soon as you are done with tools or implements or machines, house them, and as soon as you are done with each for the season, store it snugly for the winter. It is easier to keep things in order than to keep putting them in order. Don't let things get into a condition—like Aunt Dinah's kitchen in "Uncle Tom"—to require a grand "cl'ar'n up."

Finally, settle it well in your mind that even this kind of work *pays*. It certainly does, and you can have no heart in it unless you believe it does. It pays in comfort, and in cash, too. In comfort, for any neglected duty brings uneasiness, and its performance brings relief. And the smaller the duty and the less time required for its performance, the greater the folly of its neglect. An unhoused mowing-machine, or a row of bean poles with their dry vines whistling in the winter wind, is a constant "thorn in the flesh," unless your flesh is dead and yourself "lost to sense and hope." Pull out the thorn and take the resulting comfort. Don't endure weeks of torture with an aching tooth when three seconds of "cold iron" will end it.

This kind of work, too, pays in *cash*. Dr. Franklin's Poor Richard said: "A penny saved is a penny earned." This is both true and false; true as he meant it; false as some people understand it. True if the penny is saved from waste or foolish expenditure; false if it be hoarded and kept from wise use. Miserly laziness is not as good as productive industry. The writer's good father used to tell of a rich man who would dismount, in riding, to pick up a nail, because "he could save it quicker than he could make it." But if his time was worth anything, he was a fool for doing so. If *he* couldn't make it quicker, some one else could; and if he couldn't *make* it quicker, he could earn it quicker. The real cost of the nail was its infinitesimal value as iron, plus the click of a machine that turns out about three hundred to the minute. Its cost to him was the labor of a whole minute. If you cannot save a thing, even from waste, quicker than you can "make" or "earn" it, then do not save it. But in the kind of work we are speaking of, *you can*. It pays even under this close test. You can save more by housing implements, and getting—or keeping—things snug and tidy and in repair, and ready for storm or winter, than you can earn in the same time in any other way. The tidy farmers are the ones that make the money. It costs less to house a mower or reaper in the barn or tool-house than in the fence-corner. "Housed" there, it will not last half so long, and will break in harvest and hinder all your hands. It will cost less even to pull and house your bean poles, as soon as they have done their season's work, than to let them rot in storm and mud until next May. You can cut and house your year's stove-wood at the proper time far more cheaply than you can bake your bread with green or wet wood.

We are sure this second class of autumn work pays, both in cash and comfort.

THE TRUTH ABOUT IT.

[THE object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

SHALL HE BE A PRACTICAL OR SCIENTIFIC FARMER?

MUCH good may be done by asking a question. A question fitly put, may set in action a world of thought, and lead to most important results. The question above proposed by the Editors of the RURAL NEW-YORKER, in the issue for August 16, cannot be answered without a great deal of deliberation; and might well serve as a text for an essay. To develop all its points would require many columns, but every reader may study the question with profit, who studies the pages of the RURAL. The remarks upon my former reply, published in the RURAL for October 11, leave the question where it was originally, but still more loaded down with difficulty, for they have used words in an unusual sense.

What is *art*, and what is *science*? Science is either pure science, as mathematics; or it is the basis upon which art is founded. Take a ship-builder, for instance. A practical carpenter can build some kind of a ship, and, in doing so, exercises an art. But a steam-ship or a clipper is scientifically built. The plans are all drawn by the scientific builder, from abstruse calculations of the resistance of fluids to moving bodies; of the proper form to insure stability, capacity and strength. These plans are given piece-meal to different artisans by whose *art* the ship is put together. These work in the dark; they know not if the ship is to sink or swim; but the builder can tell to a minute, how many knots she will sail under given circumstances. The man who makes a sloop from patterns his father constructed, and which he has followed for a lifetime, dare not vary his plan, lest his boat go over when floated. Here are a practical ship-builder and a scientific one. The parallel holds good as to the farmer. There are experimenters in ship-building as well as in farming, who figure out new forms, calculate the lines, resistances, floating capacity and what not, and consult with or suggest to the builder; but the experimenter is purely scientific, and never practices the art of building.

So with agricultural experimenters. I feel sure that Mr. Lawes would not claim to be a farmer. A farmer is one who works a farm for a living or for profit. It is a business with him and not the pursuit of knowledge. Mr. Lawes has spent his time, talents and money in scientific investigation. He is an original investigator. Can no man be a scientific man but an original thinker or worker? If so, our scientific men are few indeed. No. A man may become scientific by studying the works and the results wrought out by others. There is not one scientific man living at this time, otherwise; for is not the bulk of our knowledge inherited? "There is no science in making use of the discoveries of others" you say. Then where are our scientific astronomers, chemists, physicians, physiologists, etc., etc. Why, the larger portion of their knowledge comes down from the discoveries of men who lived centuries ago. One man's life is too short to discover everything, and so one generation inherits the labors of the former ones, and bequeaths all it has to the next one. I do not advocate that every farmer should become a chemist, or use laboratories or a rain gauge; (a rain gauge might usefully be on every farm and would greatly interest a farmer to use it, but there is no science about that), or duplicate or multiplicate what has already been done for him better than he could do it, and of which he may learn by proper study in one hour what it required years of scientific labor to discover. What I advocate is what I try to practice, to study the principles of my art, the basis of science upon which the practice is founded, so that I can work understandingly and profitably, and in addition, find that intense enjoyment in my work and its results, that makes even the cleaning of a stable and the loading and spreading of manure, a work of interest, by reason of the results which I look for from it in addition to the mere value of the crop. I desire that every farmer should do as much, at least, and more.

I would not use names, but as many of the contributors to the RURAL are public property, I will ask if E. W. Stewart is not a scientific farmer, although most of what he knows of feeding stock and the use of feeding stuffs may have been acquired by study and proved by practice. Is not W. I. Chamberlain another scientific farmer? You say he is a scientific man, and he is a farmer—the rest follows of course. We may find *good* farmers who never read a book or a paper. Some of the best-farmed localities in the country are occupied by such. They farm by rote, as their fathers worked and taught them. They plant by the moon, and their wives and daughters work barefoot in the fields and barnyards. They have fine barns, and stock, and crops, and live in hovels, and have bonds and mortgages hid away under the rafters. They are good, practical farmers—I have lived among them and know them—but I want a farmer to be able to answer all the questions put to a student of an agricultural college on his graduation, and then use that knowledge in a good business way; and I will call him a scientific farmer, and his wife and daughters may enjoy all the comforts and ease that culture can afford, and never be called to do more than they wish to do of the farm work.

In all industries whatever, it is the scientific worker alone who can fully succeed; the practical man is the laborer, the scientific man the employer. This is so invariably, and all those industries and arts which depend upon scientific knowledge for the best practical working, employ experts whose sole business it is to experiment and investigate and discover improvements. But these are merely investigators—nothing more. The wonderful aniline dyes have thus been brought into existence in the laboratory, have been tested by the scientific dyer, and have been worked up by his practical artisans. It is so in brewing, working metals, tanning, mining, navigation, milling, and, more than all, in farming. The agricultural colleges, if successful in their purposes, ought to turn out some scientific farmers, and there are some educated business and professional men, who have adopted farming as their employment, who are, or will become, scientific farmers. And hundreds of young farmers whose tastes for knowledge have been quickened and developed by agricultural literature, and who are busy studying the science of their art, will in time become scientific farmers. And the more of this kind there are, the better will be the world for it.

HENRY STEWART.

Pomological.

SELECT LIST OF APPLES AND PEARS.

PRES. T. T. LYON.

WERE we considering the question, "What to plant," our first thought would be to determine definitely the special purpose for which such planting is to be done. A farmer, with ample space for the purpose, will, as a matter of course, be likely to desire a supply of fruit throughout the season; and, if he—as will naturally be the case—aims to provide *the best* of each season, both for dessert and culinary purposes; and if, at the same time, he shall be ambitious to provide the *variety* needful to suit a contrariety of tastes, as well as to meet the multifarious wants of a household, the selection of varieties possessing the requisite qualities in the highest degree, and at the same time equably distributed over the season, becomes a matter of no little moment; and, at the same time, one upon which a very considerable amount of pomological knowledge may be very profitably employed.

The purposes for which market or commercial orchards are planted are so essentially distinct, that I leave them, for the present, out of the case. The accompanying lists, are, therefore, to be considered as having strict reference to the supplying of the home want. The varieties are named as nearly as practicable in the order of their ripening. I confine myself to the Apple and the Pear, as by far the most important fruits, while at the same time, their use is well-nigh universal.

List of Fruits for a Family Orchard.

DESSERT APPLES.—Early Harvest, Primate, Buffington's Early, Early Strawberry, Summer Rose, Early Joe, Garden Royal, American Summer Pearmain, Chenango Strawberry, Porter, Mexico, Hawley, Dyer, Ohio Nonpareil, Melon, Shiawassee Beauty, Jonathan, Peck's Pleasant, Pomme Grise, Northern Spy, Golden Russet, Red Canada.

CULINARY APPLES.—Red Astrachan, Duchess of Oldenburgh, Gravenstein, Lowell, Alexander, Keswick Codlin, Fall Pippin, Yellow Bellflower, Rhode Island Greening, Baldwin, Roxbury Russet.

SWEET APPLES.—Large Yellow Bough, Golden Sweet, Jersey Sweet, Munson's Sweet, English (Ramsdell's) Sweet, Bailey Sweet, Talman Sweet, Lady's Sweet.

Pears.

Madeleine, Doyenné d' Eté, Bloodgood, Tyson, Rostiezer, Sterling, Fondante d'Automne, Clapp's Favorite, Bartlett, Washington, Beurré Bosc, Howell, Sheldon, Seckel, Onondaga, White Doyenné, (where it does not crack), Beurré d'Anjou; Lawrence, Winter Nelis, Columbia.

I doubt the value of culinary pears, and therefore omit them. The above lists are given with reference to *Michigan* more especially,

although they will doubtless apply, with but slight modification, to Ohio and the States farther eastward.

There is an extensive class of mechanics and business-men, having, as a rule, limited grounds. I have adapted these lists to the idea that generally such persons will, of necessity, confine themselves to the earlier varieties of fruits, since such can rarely be procured in good condition and at moderate prices in the markets; while such is not usually the case with late autumn and winter fruits. Such planters have only to commence at the first on the lists and adopt those named, *seriatim*, as far as their limit will permit. I suggest, moreover, that they can secure greater variety, and, at the same time, a more fitting selection for limited grounds, by planting dwarf trees, which will be adapted to much closer planting.

The great objection to dwarf trees—especially Pears—lies in their tendency to early and excessive bearing, from which cause they are not unfrequently hopelessly ruined before they have become well established in the orchard or garden. The remedy for this lies in prevention. No dwarf should be allowed to mature more than a specimen or two during the first season, or even the second season, after having been removed to its final position; and for several years, the fruit should be so thinned as to leave abundant vigor to be expended in wood growth. Finally, it must be always kept in mind that dwarf trees cannot safely be permitted to overbear.

THE CANADA BALDWIN.—(See Cut.)

I CONSIDER this an unfortunate name, because it would lead many to the inference that it is applied simply to Baldwin Apples grown in Canada. The Canada Baldwin is a very distinct sort of the peculiar type of Lower Canada Apples. Its origin is not certain, some reports making it a seedling of an old Canadian Apple the "*Pomme de Fer*"—Iron Apple—while others regard it as one of the innumerable seedlings of the Fameuse. The Abbottsford Fruit Growers' Association's report for 1875, says of this variety:—"The fruit is conic in shape and somewhat like the Fameuse, though lighter in color, and specked with white. It bears carriage well, keeps till June, and is very salable. The trees are heavy croppers, strong in growth and very thrifty. They were thought exceedingly hardy; but during the last five years the old ones, 17 years planted, have shown a tendency to sun-scald." The same Society, in its last, 1878, report, says:—"This seedling of St. Hilaire we wish to call renewed attention to. It was described in our fruit list for the Province of Quebec, in 1875, also in the second report of the Montreal Horticultural Society, p. 28; but experience to date shows us that in both cases we criticised it too harshly. The tree is of undoubted hardiness, but its fault is that on warm, dry soils the sap rises too soon; hence, if the hot suns of early spring are quickly followed by severe freezing, the trunk is apt to become sun-scalded. Should this happen, the tree still holds on to life with great tenacity. In heavier soils, even though in localities less favorable to apple-growing, and in cold and even wettish soils, where Fameuse, planted alongside of it, have died, the Canada Baldwin is a success, both in tree and fruit. In quality it is good; in color mainly red and quite prepossessing in appearance. Its fruitage is heavy and keeps well until April or May. All things considered, we know of no long-keeping apple more worthy of planting in such soils as suit it."

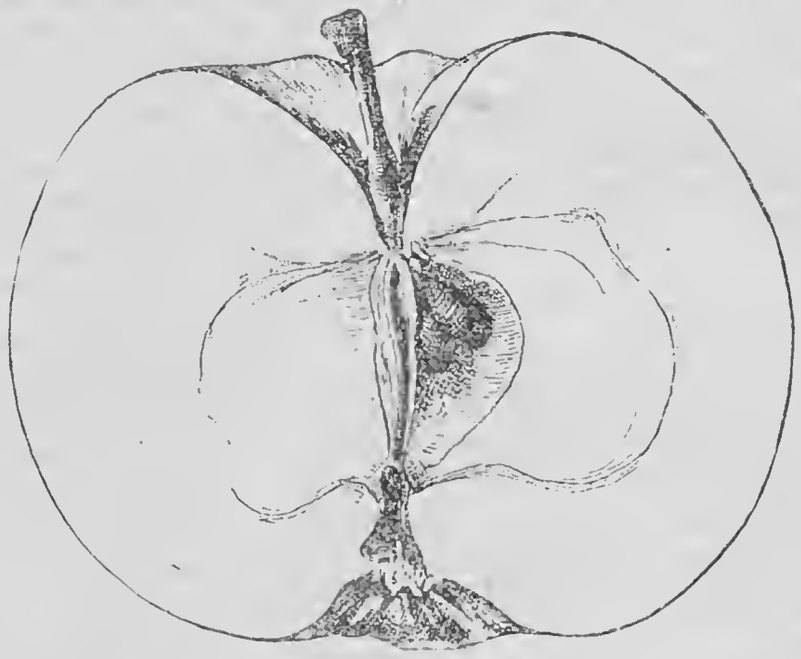
In addition to this, I can say that in the heavy soils around Lake Memphremagog, the Canada Baldwin is regarded as a great success. In quality it is better than "good," deserving to rank with the "very good," if not with the "best" of pomological lists. For light soils, I am sure it may be easily adapted by top-grafting in the limbs upon varieties with a less sensitive bark, such as Duchess of Oldenburgh or Wealthy. I find, by the examination of many old trees, that only upon the trunk is the bark-scald manifest. In size, the Canada Baldwin is above medium.

Orleans Co., Vt. T. H. HOSKINS, M. D.

THE LATE STRAWBERRY APPLE OF CANADA.—(See Cut.)

I make the following extract descriptive of this Apple, from the last report—1878—of the Abbotsford Fruit Growers' Association of the Province of Quebec. "Late Strawberry, Winter Strawberry, has not yet been described in the reports of our Provincial Society. One tree of this variety was brought here by the late Col. O'Dwyer, about 1812, from the Spaulding nurseries on Shefford Mountain, the grafts of which came from New England. It also found its way into Brome, where it has long been known as Wheeler's Lawrence. In nursery, the tree is of slow growth and ungainly form. In orchard, it forms a round, but "bushy" head, and needs much pruning. It bears its fruit on the ends of the twigs, causing the tree to become drooping soon after it attains bearing age. The fruit is above medium to large, roundish, somewhat oblate and conic, often angular and furrowed. Flesh yellowish, yielding, juicy, with a peculiar aromatic and sub-acid flavor. It begins to ripen a few specimens in August, and continues thus to ripen till the last of September. Those then barreled keep till February. This habit of uneven ripening is not against the fruit for family use. The tree is not to say long-lived, yet it bears so young and so regularly and heavily, and the fruit is so salable that we recommend it as a profitable market fruit."

I have, this season, not only seen this Late



CANADA BALDWIN.—FROM LIFE.

Strawberry in market and on the tables at fairs, but have visited orchards where the Apple is extensively grown, and am led to think it is a sort well worth the notice of those attempting fruit culture in the "cold North." I give it very much the preference over the Haas of the West, which it somewhat resembles, but exceeds in size as well as in quality. Careful examination makes it quite certain that this "Late Strawberry of Canada" is distinct from any of the "Strawberry" Apples of the books. T. H. H.

SALT FOR PEAR BLIGHT.

GEN. WM. H. NOBLE, OF BRIDGEPORT, CONN.

IN a late number are queries about salt as a remedy for pear blight. The writer suggests a top-dressing of salt, and asks the experience of sea shore pear tree cultivators. I give my observation as one of that class. My place is directly on the harbor of Bridgeport—the salt water laves my borders. I have never had a case of blight killing more than a limb; and only one instance of that kind. I have seen in this sea-side vicinity an occasional case of this limited character, but nothing like that sweep of ruin which has visited many regions.

But this freedom from limb and wood blight does not extend to the leaf. Some trees more than others, suffer blight of leaf and fruit. I think this is much more marked on the sea-board than in the interior. Certain kinds of fungoid mildew are much more destructive along the salt water, than inland. Army tents, and all canvas covers mildew in the breath of the ocean much more readily than beyond the reach of its saline touch. But the blight of leaf is a very different thing from the blight of wood. The sea air, which exactly suits that fungoid growth that cracks the fruit and drops the leaves, may be death to that other insidious fellow that kills the limb or tree. That is, one fungoid's meat may be the poison of its kin. So, as Captain Cuttle says: "make a note of it." Let some other man, sea-board or inboard, go and do likewise. There is a heap yet to be gold, for centuries, that will be revealed to him who looks and reads while he runneth.

What shore-man speaks next of salt sea breath and blight?—What land-man, far away from the ocean, has strewn salt beneath his trees? And if any one has done so, what came of it?

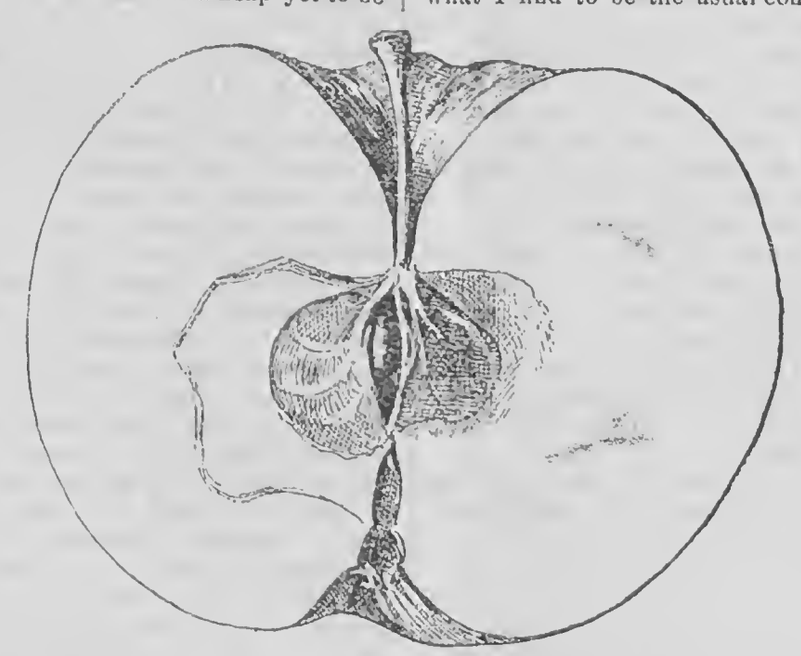
KEEPING APPLES THE YEAR ROUND.

I have seen the following mode of keeping apples frequently recommended in agricultural papers during the past few years, but cannot learn of its having been practiced to any considerable extent. Having given it a test for two seasons past, perhaps the result of my experiment may be of interest to RURAL readers, especially to such as are lovers of fresh fruits, and as this is the proper season for the trial, some may be induced to try it for themselves.

The plan is to wrap each apple by itself in a piece of paper, pack carefully in barrels or boxes, and cover tightly, so as to exclude the air. Some may be deterred from making the trial on account of the amount of time and labor it requires; but if such will give it a trial this year, on a small scale, I think they will find it less troublesome than they suppose, as by taking old newspapers, and folding and cutting them to a proper size for the apples selected, they can be wrapped very rapidly. The variety which I selected was the Northern Spy, which with ordinary care will keep until May, but packed in this way, one need have no fears to leave them without any attention until June 1st or even later, when, if others' experience agrees with mine, they will be found in finer condition for eating than they ever attain to, if kept in the ordinary way, having a crispness and aroma never equaled by any Spys I ever saw, not treated in this manner.

We ate the last of ours this year on Aug 14th., when they were still fresh and crisp, and I have no doubt some of them might have been kept much longer, had not the temptation to test their quality been too strong. By the way, in your notes on the Northern Spy, in the RURAL of Oct., 11th, you say it is a tardy bearer, a statement in which all who have grown it, will concur; but it has one redeeming quality you failed to mention, that is its productiveness after it attains age enough to bear.

Delaware Co., N. Y. E. J. BROWNELL.



WINTER (OR LATE) STRAWBERRY OF MONTREAL.—FROM LIFE.

Arboricultural.

HOW TO PLANT A SHRUB GROUP.

LET me depict to you, as nearly as I can, what I find to be the usual conception of a learnt about the health and ails of all that grows. There is many a golden truth hidden in the mind of some observing fruit lover, that should be placed on the house-top. There are lots more priceless truths that have lain around loose and under foot, like Captain Sutter's well planted shrub group; I mean a shrub group properly planted according to the standard of most gardeners and lawn-planters. It consists simply of an oval or circle of spaded earth, filled to repletion with shrubs planted two to three feet apart. Cultivation and mass planting are evidently here kept in view—laudable objects, certainly, in their way—but how about the arrangement of color and form in foliage and flower? What evidence is shown in such cases of knowledge and adaptation to the various seasons for blooming peculiar to species and varieties? I fear both knowledge and taste here fail lawn-planters and gardeners in very many cases. Must we draw the inference that lawn-planting skill is at low ebb among those who should know it best? If not, how otherwise can we account for the fact that knowledge and taste are so conspicuous by their absence in the construction of most shrub groups? One might fancy that the bedding-out system applied to ribbon gardening, had furnished models for planting many of our deciduous shrub groups. But no, I would not so insult bedding out, oftentimes excellently done, by making it responsible for such slovenly, ignorant work. Here you have generally a fair study of color and form and time of blooming. In deciduous shrub groups, on the other hand, small plants even are frequently huddled where large plants ought to be, and *vice versa*. Perhaps you will say this is mere captious fault-finding. I can do no more, then, in defense of these assertions than tell you briefly what I consider a well-planted shrub group. Assuming first a knowledge of the seasons of blooming and the colors and forms of shrubs, I would look at any hill-side group of wild plants and get what hints I could from their arrangement. In short, I would ordinarily plant my shrubs four feet apart—in rare cases, three—dig only a circle of about one foot in diameter around the plant, and fertilize liberally on top of the ground. Frequent spading for cultivation is as necessary here as ever, and is generally neglected. The grass must, of course, be kept nicely trimmed among the plants, and though the use of a sickle be found necessary at times, the improved and cleanly appearance thereby attained will fully repay all trouble.

And now a word as to arrangement. It is commonly the habit, where any defined system of arrangement is attempted, to place the large plants in the center and the low ones on the outer edges. In a general way this is correct, if the work be not executed in a formal manner. Such grouping is, however, not strictly correct from the standpoint of natural planting. Here and there through the mass, even to the extreme end, taller plants, such as Tamarisks, etc., should be so disposed as to give an irregular, waving sky line. No sharp transitions in hight should be allowed; that is, a shrub adjoining this specially tall one should not be enough smaller to make a sharp contrast. Again, plenty of shrubs of the same variety may be massed in the center of the group, but on the outskirts more numerous varieties may be disposed. This applies, however, only to groups of considerable size. Smaller groups may be planted with shrubs, each of a different variety. Trees of moderate size may be planted in the group instead of the larger shrubs, which ordinarily should form the high points of the sky line. Large shrubs or low trees dotted singly near points of outer curves also increase the natural effect. Due regard should be given to scattering different colors about the mass, so that a number of red flowers, for instance, may not be crowded in one spot, and none at all be seen elsewhere. The same management should apply to the arrangement of the plants which bloom at different seasons of the spring and summer. I doubt not that many will wonder that so much study should be given to a group of shrubs. But it would not be thought much if it were once understood, and the effect is really greatly superior to the common style of nondescript arrangement. In conclusion, I should say what has been already implied, that culture is obtained as well in this way as in any other. It is also in place to call attention here to the yearly necessity of pruning shrubs at the special season when provision is best made for flowers during the coming years. S. PARSONS.

Field Crops.

OUR WHEAT EXPERIMENT.

E. WILLIAMS.

WE have not attempted to grow any wheat for a number of years till the present—it was so unreliable. Rye was more certain, and for a number of years previous to '78, the straw was in such demand at good prices, that of the two it was the more profitable grain to grow; but for a few years past the Clawson wheat has gained such a good reputation for yielding well over a large extent of country, that the success of a neighbor with it, induced us to try our luck once more. We had a small field in potatoes last season, which we concluded to devote to the experiment. We thought there was from an acre and a quarter to an acre and a half in the field, but recent measurement shows that it contains only about an acre and

one-twentieth. On this we sowed 2¼ bushels of Clawson. Fearing the manure applied for potatoes was not sufficient for the success of the experiment, we concluded to make an experiment with fertilizers at the same time; consequently we procured two bags, 400 pounds of Mapes's Wheat Manure, "A" brand, and used 200 pounds on each side of the field, leaving a strip through the center—nearly one-third of the piece—without any.

The wheat came up very evenly and covered the ground nicely before winter set in. The sides of the field showed the effect of the fertilizer from the start. It was plainly visible in spring, and so continued till the wheat headed out, when the difference was not quite so apparent; but we had faith that it would show in the yield of grain. To test this, at harvest we saved five swaths through the middle of the field, and five through both sides, and stored them separately. On September 26th we had it thrashed with the following results:—the five unfertilized swaths from the center, yielded five bushels; the five fertilized swaths from one side gave five bushels, and the five from the other side, five and a half bushels. We confess to disappointment. We do not know how to account for the difference of half a bushel in the product of the two fertilized portions, as the contents of each bag of fertilizer covered about the same area. Had we saved but the portion yielding the five and a half bushels, to be compared with the product of the unfertilized portion, we should have given the fertilizer the credit of the extra half bushel at once, and proceeded to calculate how much its use had increased the crop; but since the yield from the fertilized portion on one side, is no greater than that from the same area unfertilized, we have no data to calculate from, and the query arises:—Where does the profit or benefit appear? We could see no difference in the grain from any portion of the field. The total yield was 30 bushels, to us a very satisfactory one, with or without the fertilizer. Had we not gone quite so far, but accepted the looks of the growing crop as sufficient evidence of the value of the fertilizer, our faith in it would have been stronger. Now it is wavering and uncertain.

We have sown the adjoining field to Clawson this fall, and it is up and looks well. We have used no fertilizer yet, not that we expect or believe we shall have, or ought to have, as good a crop without it, but because of doubts as to what it was best to use. When we decide this point we can apply it as a top-dressing.

The guaranteed analysis of this "A" brand we applied, is as follows:

Ammonia	3	to 4	per cent.
Phos. acid, soluble and available	10	" 12	"
" " insoluble	2	" 4	"
Actual potash	2½	" 3½	"

A total of 17½ to 23½ lbs. per 100, the balance being sulphate of magnesia, soda, lime, sulphuric acid, etc. This is claimed to be a complete manure, containing even a larger than usual percentage of phosphoric acid, the most essential element that the wheat crop is claimed to need.

Now, are we to deduce from this experiment that our soil is already rich in the above ingredients, and needs no addition? If so—and the crop seems to hint that way—it seems a useless expenditure of money to add to it what it does not need, except on the principle of feeding it before it is hungry—generally a safe thing to do. Our theory is that a soil that will give a good crop without manure, ought to give a better one with it, and unless we can see the increased profit from the application, we are apt to be dissatisfied with our investment. We cannot divest our minds of the idea that our new wheat field needs something, but what should it be? This is our dilemma. Who will aid us in its solution?

Montclair, N. J.

WEEVIL-EATEN PEAS.—Professor Henry Comstock, Professor Riley's successor in the Entomological Division of the Department of Agriculture, Washington, D. C., writes us that although his opinion on the above subject cannot be worth very much, as he has never tried any experiments on the germinating power of such peas; yet, were he a farmer, he certainly would not plant peas injured in this way, if sound ones could be procured. For even in those cases in which the embryo is not injured, it is evident that the young plant will suffer from want of the nourishment usually derived from the cotyledons.

When so trustworthy an authority as the editor of the Germantown Telegraph, says that he knows that weevil-eaten peas are *not* worthless for seed, having "seen good crops from such seeds," we need no longer wonder that farmers and gardeners in general hold the same opinion. The tests which we and others have made and printed in these columns, give abundant proof that weevil-eaten peas are worthless or so nearly so that they are not worth sowing, much less paying for. If the editor of the Germantown Telegraph next spring will, himself, select 100 weevil-eaten peas and plant them, we agree to make him a "handsome present," if so many as fifteen of them germinate and mature fruit—provided he will make us a "handsome present", if less than fifteen germinate and bear fruit. Respectfully submitted, Major Freas.

Farm Economy.

HISTORY OF A POOR FARM. No.—19.

The Value of Lime in Composts.

"Are you going to fill up your cellar?" asked Mr. Martin, in a joking manner, as my man was busy unloading swamp muck into it from the wagon.

"Yes, I intend to fill it up. Let us see how much it will hold:—It is 50 feet long by 24 wide, and I will fill it six feet deep. That is 7,200 cubic feet, equal to 240 loads of 30 cubic feet each. I intend to fill it every month during the winter. I am spreading nearly a foot thick of swamp muck from my fish pond, alternately with a layer of manure, and am mixing lime, as you see, with the swamp muck."

"Mixing lime in your manure cellar!" Mr. Martin ejaculated.

"Certainly; why not? what are you afraid of?"

"You will spoil the manure, that's all," remarked my old neighbor.

"I don't know," said William; "we have been putting lime on the wheat fallow, right after we spread the manure, and you have done it ever since I knew anything or can remember, and you never told me that it would hurt the manure."

"But that is different from this," replied his grandfather; "here the lime is put right on the manure, and that will surely spoil it."

"Why does it not spoil the manure in the field?" I asked.

"Because it is in the soil; the good of the manure goes into the soil, and nothing is wasted then."

"Precisely," I replied; "you are right, no doubt, and cannot you see that I am right, too. Look at that swamp muck covering the manure for a foot in depth. Is not that sufficient to hold everything that may escape from the manure, if anything should escape—which I doubt. Besides, the lime is mixed with this muck and will not reach the manure until it is dissolved and is carried up and down by the circulation of moisture. You see that hose; we turn that on to the stable floor and wash it down occasionally, and that keeps the manure below, quite moist."

The old gentleman shook his head. Mr. Martin said, "I don't know how it will turn out, but I have read a hundred times that lime should never be mixed with manure."

"But you know it is done, year in and year out, by good farmers who know their business, and who grow good wheat and raise good crops of clover, by manuring and liming their fields at the same time. Now, I am saving labor and putting the lime and manure together here, in place of making two jobs of it in the field."

Fred had nicely leveled off the top of the heap and was coming out of the cellar when I took from my pocket-book a strip of red litmus paper and asked him to test the heap where it was steaming the most and from which the strongest smell came.

"What is that?" asked the old gentleman.

"That is a strip of litmus paper, which is used to test liquids or vapors for acids or alkalies. Red litmus paper is turned blue by an alkali, and when blue, is turned red again by an acid, and it is so sensitive that a very small trace of ammonia or acid is detected by it."

Fred went all over the heap and at last dipped the paper in a small pool of liquid at the bottom of it; but even there the red color did not change. "You see there is no ammonia about this heap of manure, and the strong smell which now comes from it, must be something else."

"The fact is," remarked Dr. Jones, "it is a great mistake to suppose all the smell that comes from manure is ammonia. The decomposition of organic matter gives off much sulphuretted and carburetted hydrogen, and these are the foul-smelling gases which we notice so much. These gases are acid, and that is the reason why Fred's litmus paper is not changed by the moisture charged with them."

"It is only free ammonia that can escape and waste, and fresh manure has very little free ammonia in it, especially when the stables are sprinkled, as this is, with plaster every time it is cleaned out," said Fred.

"Well said, Fred," replied Dr. Jones, "I suppose you could tell us something about the nitrification of organic matter in such a heap as you have in that cellar."

"Certainly, if you wish; it will explain a good deal about the action of lime in composts," said Fred.

"In former times, when the saltpeter beds of Chili were not discovered," said Dr. Jones, "and the supply of saltpeter was small, it was procured for war purposes for making gunpowder, in precisely the manner in which that heap of manure is made. There were—and are now—what are called saltpeter caves in which the soil impregnated with organic matter and potash and lime, undergoes a process of nitrification, in which the nitrogen of the organic matter unites with oxygen in course of the slow decomposition of the organic matter, and with water or hydrogen, and forms nitric acid. This acid immediately combines with any potash or other alkaline substance, as lime or soda, and forms nitrates. In the old method, the earth of barn-yards and under stables, or manure, leaves, etc., were packed in heaps, mixed with soil, ashes and lime, and were kept wetted; urine and other liquid matters rich in nitrogen were poured on to the heaps and after a time the heap was leached, and the lye evaporated, leaving an impure saltpeter which was purified for use. It was in this rough way that our ancestors found materials for killing each other by means of 'villainous saltpeter,' and now we use the very same method, or may do, to make our soil rich and feed and keep each other alive. But excuse me for interrupting you, Fred."

"I think you have told the whole story," said Fred. "But I might add that it is a question whether ammonia is used by plants until it is changed into nitric acid, and if it is not used in a free state or in combination, as salts of ammonia, then the production of nitric acid and of nitrates is what should be aimed at in making composts and in managing manure, and if any ammonia is formed, we should try to fix it by using plenty of absorbing matter, as earth or muck, or by using plaster or other sulphates to neutralize it. But there is a large portion of carbonic acid given off in such a heap as we have there, and that will combine with any free ammonia and fix it. I don't think all the ammonia that will be lost from that heap, will make us poor; it will be out of the cellar and another one begun before a month. We intend to fill and empty that cellar once a month regularly after this."

"Then you will have corn to sell and to keep, Fred," said Mr. Martin. "But I want to know how much lime you are using."

"One barrel of lime, slaked fine by exposure to air for a few days, just covers the whole heap so as to make it white. There are three barrels in the heap so far, and it is three feet deep," replied Fred.

"The fact is," I remarked, "there is a good deal of error spoken and written about the use of lime with manure. The old Scotch and English farmers, good old *practical* farmers they were, with no science about them—talk of science to them and they would ask if it was a new kind of manure—"

"That they would," said Dr. Jones. "I have heard of one of those old-fashioned farmers who, on being told that some Unitarians had moved into the neighborhood, asked soberly, 'What be they? Be they a new koind o' cattle? If they'll beat the Short-horns, I wants some on 'em, sure!' No science about those fellows, but they grew fine crops."

"Well, I was going to say that those farmers always used lime in their composts with the manure and plenty of ditch scourings, old turf from hedge rows and other general scrapings-up of clearings about the farm and buildings. When visiting in England and Scotland, many years ago, I have seen the limestone hauled, and burned in a kiln, to be used for this sole purpose, and compost heaps on a farm of 100 acres, which, put together end to end, would reach across the farm. That is how eight quarters (64 bushels) of wheat per acre can be grown. But of late, because lime or ashes act to liberate ammonia from its solution in water or from combination with carbonic or sulphuric acids, and set it free, it has been taught that it should *never* be mixed with manure. But *never* is a word I discard altogether. A mere practical farmer who knows nothing of the causes of the effects he produces, or of the laws which govern the behavior of manures, plants, soils, air, water and chemical substances, should perhaps never do it. But a farmer who is educated in the science of his business—a scientific farmer such as Dr. Jones, for instance—may do it when he pleases, because he will know why and for what purpose he does it, and what will be the consequences; and, knowing that the effect of the lime will be to increase the fermentation and to hasten the decomposition of the manure or compost, he will be careful to use such absorbents, and keep the heap in such a moist condition, that if any ammonia is produced, it will be absorbed and held securely. We need to give our crops food that is digestible. Raw food they will not touch. And of all the agents we possess, which will help to prepare—or cook, in fact—the food we offer to our crops, there is none better or cheaper than lime; and I do not know of any method of using it, that is better or more convenient than this that we are practising."

"Don't you think ashes are as good as lime?" asked the old gentleman. "I have used thousands of bushels, and I can show you land that was dressed 25 years ago, that has greener grass on it now than where I have put no ashes. It is a pity ashes are so scarce."

"Ashes are better than lime," I replied; "because while they consist, for the greater part, of lime, they contain some potash. Unleached ashes contain 10 per cent of potash and 20 or 40 per cent of lime; and leached ashes contain scarcely any potash, and, of course, a larger proportion of lime than the unleached ashes. I consider the lime of ashes more useful than the stone lime, because it has once existed as organic matter and probably sooner enters into that condition again than mineral lime. But where can we procure ashes? The supply is exhausted, and therefore we are forced to use lime to help make composts."

MANAGEMENT OF QUACK.

H. IVES.

The foul crop commonly called quack, comes so stealthily on to a man's premises that, often before he is aware of it, his farm will be overrun with it, or it will obtain such a firm root-hold in some fields that the owner, hardly knowing how to manage it, allows it to remain a few years for mowing or pasturage, during which time the ground is so filled with a complete net-work of root-stocks or subterranean stems—not roots properly so called—making horizontal growth about three inches below the surface, that the growth of the stock and leaf above ground is impeded. The extermination of this pest has so often been found an arduous task that many deem it useless to try to eradicate it; but years of experience in killing it have satisfied me that any land, free enough from stones, stumps and trees to allow the proper working of the plow and other implements, can be cleared of quack with an outlay of no more labor or cash than might be profitably expended in the proper management of such crops as the ground may produce while undergoing treatment for clearing it of this foul pest.

There are three ways of managing quack. The first is that followed by the timid man who fears it is impossible to get rid of the nuisance. He works or half works the infested ground with poor tools. This will give the pest just enough tillage to renovate its strength, renew its growth and impart to it sufficient vitality to choke out everything else. The second way is to give the ground good tillage which will check the foul crop enough to prevent it from greatly disturbing the growing crop, and if this method of management is continued with good tools, the good farmer has little inconvenience to fear from having quack on his land. In fact, after having had a good deal to do with it, I have come to the belief that it is not so much of a curse, after all; for if the land gets overrun with it, it will be resting from other crops, and the ground will become so filled with the dense, vegetable growth of the roots as to be really enriched when these are killed by the cultivation necessary for another crop. And if such crop should fail, or if the seeding to grass or clover should not "catch," then the quack—which has been biding its time—will very soon cover the ground and to have the soil covered with something I think so important to agriculture that, when my clover did not catch well on some dry years, I was almost thankful to see quack thicken over it. Then the thorough tillage needed to keep the quack from injuring, say, a hoed crop, was pretty sure to secure a better yield from the latter than if that extra tillage was not required. For this kind of management of quack, it is important that the land should be plowed quite deep in the fall; for as the roots are not very far below the surface, a deep furrow turned pretty flat, will give a layer of clean soil above the roots of the pest, to plant and work in, and then by cultivating once a week to keep the grass from showing itself above ground, it can be kept well under during the whole season, whether the ground is summer-fallowed or planted to corn or potatoes. If intended for the latter purpose, however, it should be cultivated late in the fall, to expose the old roots to the winter's frost.

The third mode of managing quack is to kill it out completely, so as to entirely rid the ground of it. There are two ways of doing this. The first is to summer-fallow the field, thoroughly cultivating it as often as once a week through the season. Plow it late in the fall as deep as it was broken in the spring, and the next year plant for a hoed crop, so that it can be watched for the purpose of destroying any single root of quack that may have survived. This, I know, will prove effectual, for I treated a six-acre lot of heavy quack in this way seven or eight year ago, and have not seen a spear of the pest there for several years. This, however, involves the loss of a year's use of the land, and the expense of working it a year.

The best and cheapest way, however, of clearing any land of quack, no matter how completely it may be over-run by it, is begun by plowing the tough turf in the fall. Then in the spring, drag or cultivate or gang plow the ground to subdue it, as in summer-fallowing, until rather late planting-time, when a hoed crop, preferably corn, should be put in, and it will come up quickly enough to permit the use of the cultivator before the grass gets a start. Continue to cultivate as often as once a week; give the corn one good hoeing, and a second if it needs it; but after the first hoeing, the cultivator will do better work by throwing the earth every time up to the corn, as the implement is run first one way, and the next time

crosswise, so that the first time it will cut the grass down along one row, and the next time it will cut what remained standing between the hills, and cover what was cut by the previous cultivation, making a clean, thorough tillage which can be kept up till the corn is full-grown, or begins to glaze, as I did ten years ago, greatly to the advantage of the crop, besides keeping the quack entirely out of sight. This treatment gives the corn a little more cultivation than it would be likely to get on clean soil, but no more than will prove profitable. The more quack, the more hoeing; the more hoeing, the more corn; the more corn, the greater profit. The corn stubble should be plowed and cultivated before winter, and the next year planted again to a hoed crop, so as to afford an opportunity to watch for and destroy any quack that may perchance have outlived the previous treatment. This time I prefer to plant the ground with potatoes, with rows both ways; for then I can do most of the tilling and hilling with the shovel-plow, seldom having to use the hoe at all, while securing a very clean culture and completely eradicating the pestiferous quack.

Genesee Co., N. Y.

THE HIGHWAY LAWS OF N. Y. STATE.

I DO not think that any State in the Union has better highway laws than New York. We have a very good Act prohibiting cattle occupying the highway, except as they are driven along it. This statute enables farmers to dispense with fences along the roadsides, to grade these and cultivate their lands to the edge of the road-bed, if they wish. They can do this with safety; for, inasmuch as they are obliged to take proper care of their own stock, so they have the means of compelling others to do the same with theirs. Now, if farmers would generally adopt this course with their road fences, their wealth would be materially increased, the appearance of their farms be improved and the roads be much more passable in winter. In St. Lawrence county, for a larger portion of last winter, the roads were through the fields. Why? Simply because the road fences, not more than three rods apart on most of the roads, and five or six rails high, caused the snow to lodge in such quantities that nearly all roads were impassable. I do not think that this would be the case if farmers could see the propriety of dispensing with their road fences. Not the least benefit intended to be conferred by the statute, is that of avoiding the outlay for keeping up these road fences. It is in all cases a useless expense.

Another and later statute has also failed to accomplish the same end of improving the roads in winter. This Act provides that on highways liable to drift, farmers may lay down their fences in fall, and may commute their next season's road work to the extent of the time thus spent. I have never known of a farmer who availed himself of this privilege. In the face of these two statutes, our roads continue to be impassable winter after winter.

Still another statute that aims as strongly at improvement, provides that tax-payers may commute their road tax for the succeeding year by setting out certain varieties of trees along the highway. Few farmers, as near as I can learn, avail themselves of this opportunity of improving their farms.

It is not fair to attribute disregard of the statutes, I have mentioned, to anything but ignorance of their existence. I have discussed the merits of these statutes with farmers who are eminently practical, and the provisions therein contained meet their heartiest approbation. I think it would be well to bring the matter home to the farmers throughout the State, and more especially to road commissioners and overseers. I think a general discussion of the subject *pro* and *con.* would not be without a good effect. There are, of course, arguments, I do not know how strong they may be, against these statutes. I think, however, that the subject will bear thorough discussion, and that the statutes referred to, are fully able to stand on their own merits.

St. Lawrence Co., N. Y. F. K. MORELAND.

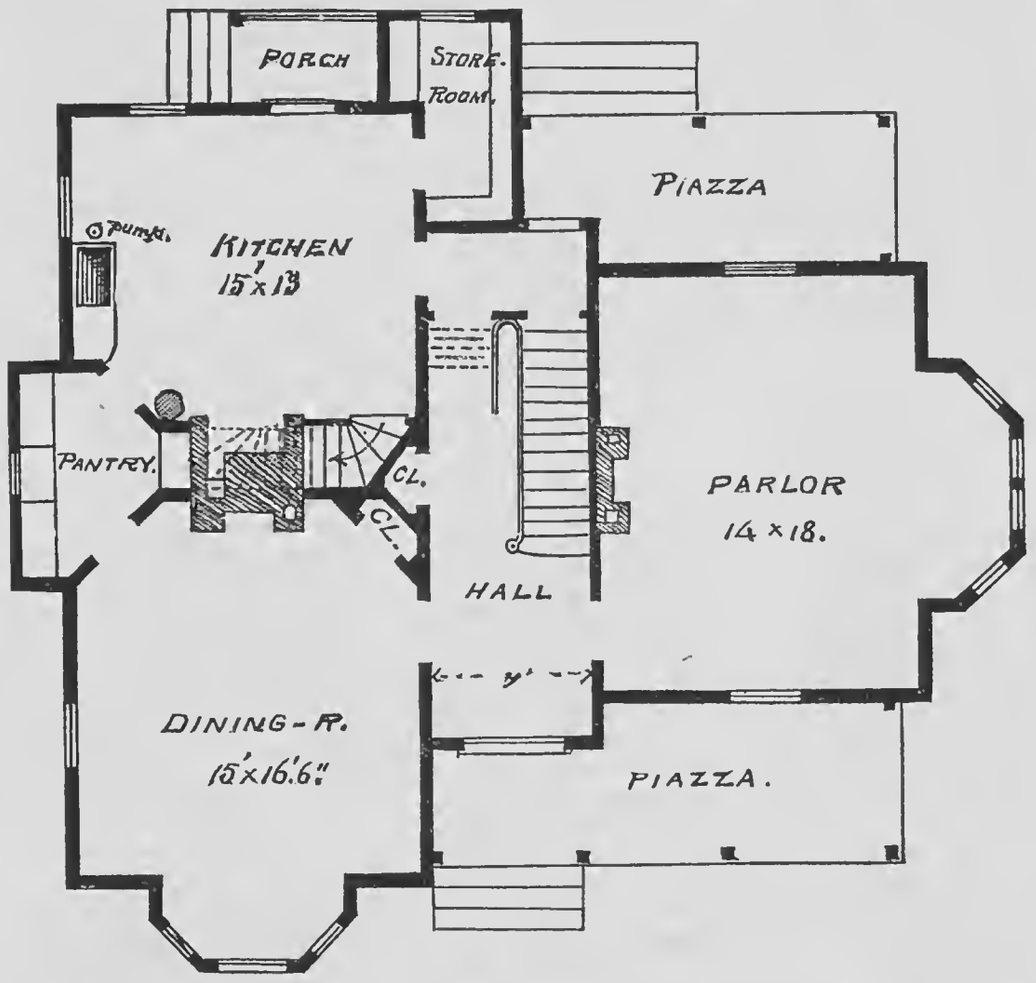
Rural Architecture.

IMPROVED HOUSE PLANS.

A SUBSCRIBER to the RURAL furnishes us the accompanying house plans about which he writes: "In a previous issue you published plans and elevation of a cottage that pleased me very much, but in studying the internal arrangements, I discovered several defects, which a friend and practical builder has undertaken to remedy in the plans herewith presented. The improvement can be made without any increase in the cost.

The kitchen, (see first story) is 15 by 13 feet. The flue from the range is carried over to the chimney in the dining-room, as indicated by the arrow and under the private stairs which are shown by dotted lines over the fire-place, and the breast over the range is carried up to the ceiling.

On the second floor, the chambers are all private and easy of access from the kitchen or main hall. The bath-room is placed over the pantry, making close connection with pump and boiler, and can be reached from any chamber without passing through another. The



FIRST STORY.

situations and proportional dimensions of all rooms and closets, are so plainly indicated on the plans that they will need no further explanation." E. W.

Miscellaneous.

A PRETTY LITTLE WATER PLANT.

IN one of our greenhouses we have a small wash-tub filled with water, and in it are growing half a dozen plants of Aponogeton distachyon—a little aquatic from South Africa—in as many four-inch pots. Since October twelvemonth, until late in summer, these plants bore uninterruptedly their conspicuous white and fragrant blossoms. The leaves are oblong, on long stalks, and float on the surface of the water; the flowers rise an inch or two above it. About the middle of last September, a year ago, we got these plants from Kew, England; their corms were done up in damp moss packed in a small tin box which came by mail Using a compost of chopped sphagnum-moss and fibrous old sod, a little leaf soil and sharp sand, I planted each "root" or corm in a three-inch pot and submerged them a finger-length in the tub of water. Right-away they started to grow—leaves and flowers coming together. This little beauty should be grown in shallow water, and is hardy if the roots are beyond the reach of ice. But, like most African plants, it is essentially a winter-bloomer; and, as a pot plant in a bucket of water, it thrives robustly, and blooms freely as a window plant, requiring no care beyond keeping the bucket full of water. W. F.

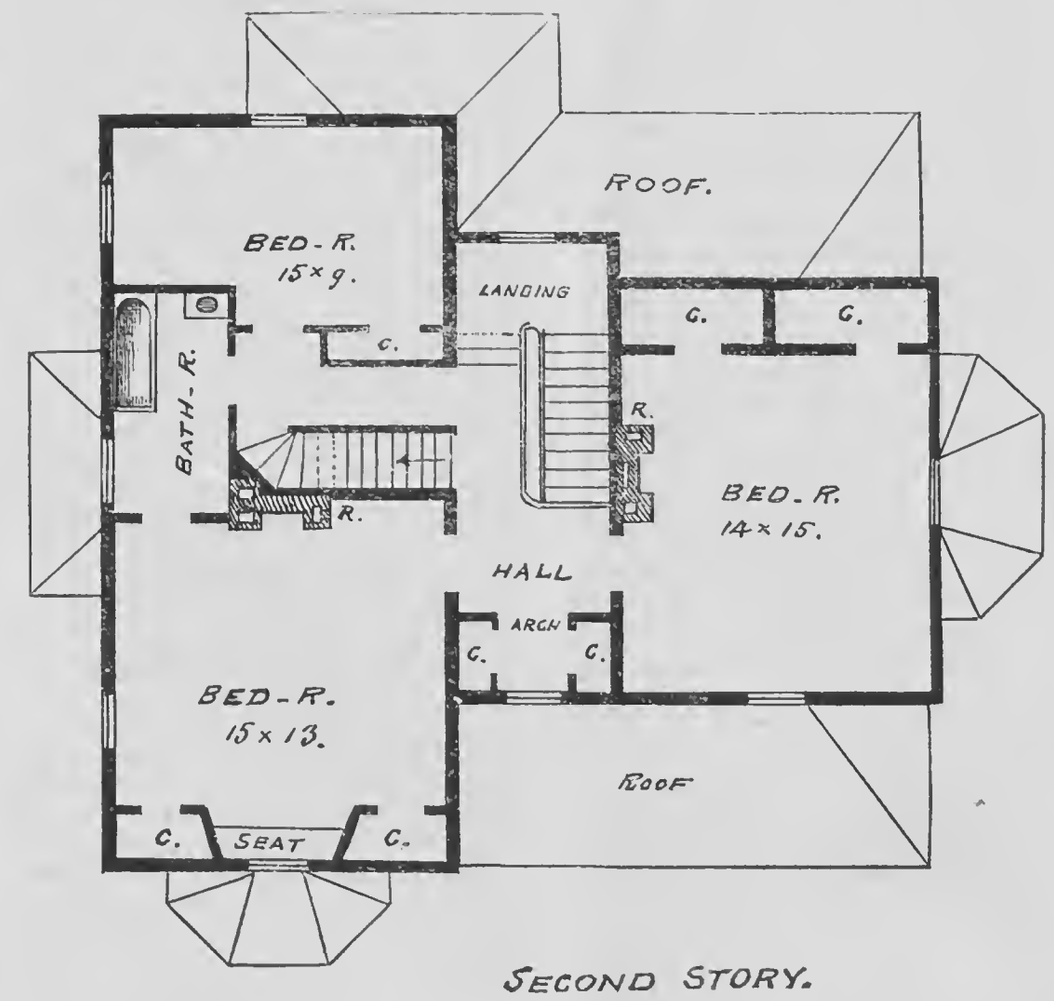
Extirpation of Weeds.

The distribution of weeds by purchasing wheat, rye, oats, barley and corn from weedy sections of country for seeding purposes, is probably far greater than that caused by any neglect to kill weeds at home. As it is estimated that weeds absorb one-half of the fertilizers used, besides smothering the crops, their extermination becomes of paramount importance. Good, clean seed and clean culture will soon put even a poor farm on its feet. Every farmer should grow on a specially prepared field all the seed he wants to sow, and care in weeding and in cleaning the seed, combined with a close cultivation, cannot fail to improve the quality, quantity and price obtained, as well as to reduce the labor of production.

The spending of a few dollars in sieves of meshes suitable to pass weed seeds through, while holding the largest and plumpest crop seeds back, is all that is necessary. S. R. M.

WHAT OTHERS SAY.

FREQUENT MILKING.—In favor of frequent milking *L'Industrie Laitiere* reports that in an an experiment with three milkings a day for eleven days, a cow gave 170 quarts of milk. With two milkings the same cow gave only 146 quarts in the same number of days. Moreover, analysis showed that the milk in the first case was richer in butter globules than that in the second case in the proportion of 4. 1 to 3. 5. Observations with similar results have often been made in this country. The fact is well established that the shorter the time the milk remains in the udder, the greater the quantity and the richer in butter, the wasting away of fats being less and the aggregate secretion more copious. The owner of the Whitestown herd of Holsteins finds it a paying practice to milk three times a day.



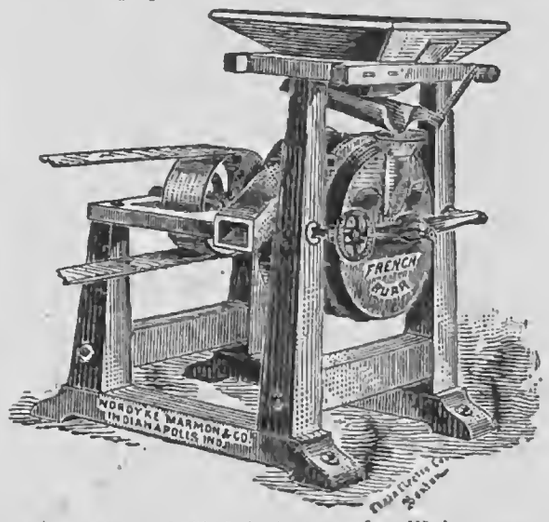
SECOND STORY.

Industrial Implements.

FLOUR, CORN AND FEED MILLS.

THE Nordyke and Marmon Company of Indianapolis, Ind., is one of the largest corporations in the country engaged in the production of milling machinery and appurtenances. We have chosen for illustration two of their mills, showing the horizontal and vertical styles. Without entering into technical details (which will be freely supplied on application to the

company), we may say that these mills are perfectly adapted to the work required of them. Especially is the extremest care used in the selection of buhr-stones with a view to securing evenness of texture and perfect grinding surfaces. The firm have now in operation over two thousand of their mills, which is a satisfactory proof of merit. We have often



expressed our belief that a good mill is a necessity on the farm, and it is a question simply of cost with the farmer. We think he can easily demonstrate the saving and profit to be reaped by grinding feed, if he gives the question careful consideration.

THE Birdsell Manufacturing Company of South Bend, Ind., have just finished their new office. This new building is situated opposite their clover thrasher and huller shops on Columbia street. It is a handsome brick building, 33 feet square, with projections front and rear. The main office is handsomely frescoed and finished off in black-walnut, ash and cherry. The desks are French walnut with ground French glass fronts. It makes one of the finest agricultural implement manufacturing offices in the country. The Birdsell Manufacturing Company have done a very large business this season, finding it hard work to fill the constantly increasing orders for their celebrated "Monitor" clover hullers and thrashers.

IN our report of the Pennsylvania State fair, while mentioning that the firm of Nichols, Shepard & Co. had on exhibition an engine of very superior workmanship, and one of their well-known "Vibrator" separators, we did not add an item equally important, to wit, that the engine was awarded a first premium. Subsequently, at the Delaware State fair, at Dover, both engine and separator were awarded a diploma, which will of course go back to Battle Creek, but the engine and separator will remain in the State, having been sold to enterprising men, who will show the Delawareans splendid results next season.

THE six-days' bicycle race, which took place at Agricultural Hall, Islington, England, during the first week of September, resulted in a victory for the present champion long-distance rider, Mr. Waller, of Newcastle-upon-Tyne, who obtained the lead at midday of Monday, and held it until the close of the contest, winning the belt, valued at £100, and £125 in money. He totally eclipsed all his previous performances, being credited with the remarkable record of 1,404 miles, 6 laps. The attendance was large and enthusiastic, especially on the last day, when 10,000 persons were present.

P. K. DEDERICK & Co. have finished two railway hay-baling establishments for Colorado. These establishments consist of a railroad car forty feet long and containing a steam engine and perpetual hay press. The work is all done in the car, which is moved from station to station, according to requirements. There are also accommodations for the workmen to live and sleep in the car. They have also just finished a handsome cotton ginning and pressing establishment on the same principle.

Everywhere.

NOTES FROM NORTHWESTERN MISSOURI.

While so much attention is called to other parts of the Great West, in the Rural, may I be allowed to say a little of this region which is in the extreme northwest corner of Missouri, embracing Atchison and Holt counties. Although these two counties are so newly settled, yet in the census of 1870 they took a very high rank as producers. Nearly half of them is composed of the very fertile, alluvial soil of the Missouri River bottom lands. From these bottom lands, which are nearly all prairie, the ascent leads up very lofty hills to the upland prairies. On these are some of the loveliest views in the world. As far as the vision can extend, it takes in parts of Kansas, Nebraska and Iowa. On clear days one can plainly see a tree or house 25 miles off, without the aid of any glass. The soil of all this region, on both sides of the Missouri River, is of inexhaustible fertility, and is without that impervious subsoil which is a characteristic of some other parts of the Missouri prairies. Rain may therefore fall for a week without preventing the plows from running. I think this deep porosity of the soil has caused a permanent change in the climate, for when the century-matted sod has been torn loose, the waters no longer run off, but penetrate far down, to be pumped up by the warm rays of the sun in due season. Accordingly, so many millions of new acres having, of late years, been plowed over west and north of this, the air has lost its aridity, and continues very damp during the whole summer. For eight years past this has been noted. If this change has really occurred—and these late years seem to declare that it has—then farewell to the two drawbacks to successful agriculture here—droughts and burning winds; winds so dry and hot that they withered the foliage.

The question of most interest to newcomers with families, is health. To preserve this blessing let those who are not accustomed to the low lands of the West, keep away from the bottoms and margins of streams, no matter how small the latter may be, and also from the neighborhood of ravines. These upland prairies are the healthiest regions in the world. I except no part. Lands are very cheap—as cheap as in Kansas. Unimproved prairies are $10 per acre; improved, from $15 to $22, according to the nature of improvements. The lands are now going up, and will soon be as high as those in the best parts of Illinois. Our winters are milder and shorter than in central Ohio, and the roads, with rare exceptions, are very good and dry all winter and spring. To-day the foliage is as green as in June.

Owing to the superiority of this region for fruit-raising, Holt county is known as "The Orchard County." This term more properly applies to the southern part—about one-third of the county. There are many farmers here who get, every year, from one to five thousand dollars each for their fruit. There are several farmers in Holt county who are very rich, having made all their money here. There are some who are worth from $100,000 and upwards to close on to half a million (!!). Yet the county is not half settled.

The same may be said of Atchison. Those travelers who ride over the Kansas City, St Joseph & C. B. R. R., as they pass through the fat acres that bound the road, will see why these men have become rich. World-wide travelers admit that this globe has no such sight. And I say that the time is rapidly coming when this wonderful Missouri Valley, which stretches so level and so far, beginning just above Forest City Station and extending away beyond Yankton, Dakota, will have an exalted reputation in the world. People talk of this spot as being the Garden of the West, of that as being the Paradise, of another playing the *role* of the Nile Valley, but all must rank far behind this. Bayard Taylor truly declared it to be "the largest body of the most splendid farming land in this world." Of this, to tell the truth, the very central Eden for farmers, because of its superior productiveness, is the valley of the Nishnabotnas about 50 miles above here, extending northeast from the Missouri boundary to Red Oak, Iowa,—a beautiful rolling bottom land, immensly wide, entirely prairie; a very remarkable region. The fruit line does not extend far above this point. In truth, the northern part of this county is ill adapted to its growth, owing to exposure to winds and hard freezings. There is a belt of hill country beginning a little west of this, from five to ten miles wide and extending not over 40 miles southeast, which of all the West is the best adapted to the raising of apples and especial of early peaches. Thousands of teams visit this place every year from Nebraska, Dakota and Kansas, for fruit. This being the the first point they reach in seeking fruits, they pay us the best prices here. Not one-third of this region is occupied, and the lands are very cheap, about four to five dollars per acre. Any young man can get him a few acres, say 10, and by putting them in early Peaches, Blackberries, Raspberries and Apples, he may become a well-to-do man soon. A competence here is certain; but perverse humanity prefers the almost certain poverty and starvation of the mines for the slim chance of striking a bonanza. Here are produced the finest peaches, without exception, and almost with dead certainty, that were ever seen. Any poor, ambitious youth can get his fruit farm in order while working out to keep himself and buy trees.

One more point. Soon good timber will be worth its weight in—well—almost in silver. If a company were to put a half section or so in first-class timber and cultivate it, securing meanwhile a State bounty, by 12 or 14 years what magnificent returns there would be! There is no speculation to compare with it. But men prefer insurance, lotteries, cards etc. Yet here is a certain fortune for one's family in return for a small outlay. Who will make it?

Oregon, Holt Co., Oct. 26. "Holt."

RURAL SPECIAL REPORTS.

O., Mt. Vernon, Knox Co. Oct. 26.—Wheat needs rain badly. Potatoes are all dug and some are rotting. I find it is not a good plan to use any manure for potatoes, unless it is well rotted; for where other sorts have been applied, the tubers have rotted worse than in any other part of the field. Corn turned out a much better crop than was expected. Frost hereabouts has been much earlier and more severe on low lands than on uplands, and as we are on a ridge here, we have about two months more fine weather than our low-land neighbors, escaping late spring and early fall frosts. I have planted a small grapery chiefly of Concords, with some of the White Lady recommended by the Rural. M. W.

Ohio, Atlanta, Pickaway Co., Nov. 2.—In consequence of a drought now prevailing hereabouts, wheat is suffering badly, and some of it also has been nearly destroyed by the Hessian fly and rust. A heavy acreage was sown this fall. Corn is being gathered and brings in market from 35c. to 40c. per bushel; wheat, $1.25@1.30; hogs are dull at $3@3.80 per 100 pounds; cattle are selling for $3 to $4 50; horses $80 to 125 per head. A. L.

Illinois, Baileyville, Ogle Co., Oct. 28.—The first three weeks of October were unusually warm, but since then the weather has been cooler, with occasional hard frosts; no snow here yet, and the weather is highly favorable for gathering autumn crops. Corn-husking is now more than half completed; potatoes are all dug and apples picked. The yield of corn is satisfactory, but not as large as appearances in August indicated. Potatoes are of good quality, but rather scarce, though enough for home consumption and some to ship. Apples are a light crop, and the recent hot weather has prematurely ripened them, so they are not keeping well. The growing grain has a fine appearance, and pasturage is good, but it is now in need of rain. Timely showers have kept vegetation from suffering, but our streams are low. W. B. D.

Ill., Crystal Lake, McHenry Co., Oct. 28.—We have had the worst season for raising sorghum or Early Amber ever experienced in this section. Not more than one-fourth of the cane ripened, and the juice only averaged 7½ degrees Baumé; yet with all these drawbacks we have made about 45,000 pounds of sugar and demonstrated the fact that sugar can be made from the Amber cane in paying quantities on a large scale. With ripe cane and juice testing as strong as it has done in most sections, we would have accomplished astonishing results. As it is, I have no doubt but that the opinion of our Commissioner of Agriculture, Gen. Le Duc, on the feasibility of profitably supplying our entire home demand for sugar by making it from sorghum, will be verified within six years, this county producing all the sugar it will need. A. J. R.

Wis., River Falls, Pierce Co., Oct. 26.—We liked the Beauty of Hebron potato and the Acme tomato very well. From our seed potato we raised a heaping half bushel of good-sized tubers. Although the corn grew to an immense hight, it did not yield well or mature before frost. The Millet grew well, but is no better for fodder than sweet corn. Of the flower seeds only three grew. S. W.

Nebraska, Kearney, Buffalo Co., Oct. 21.—We live in the midst of the country described by Fremont and others as "The Great American Desert"—an arid waste whose only vegetation was Sage-brush, Cactus, Sand-burrs and a stunted growth of Buffalo-grass. But what does the traveler see here now, as he is whirled across the "Great Plains" by the never-tiring "iron horse?" He sees thousands of stacks of straw, from which millions of bushels of grain have been thrashed during the present fall. He sees thousands of acres of corn awaiting the busy hands of the homesteaders to gather the yellow treasure, and a golden one it will be this year. He sees millions of cattle and sheep grazing on fertile prairies. He sees thousands of hay stacks to feed these herds this winter. He sees dozens of thrifty villages and towns along the line of the railroad, and hears the clatter of hammers in the hands of hundreds of carpenters, and the hum of busy workmen as they are transforming these villages and towns into cities. He sees thousands of acres of virgin sod turned over the past season for cropping the coming one. This is only a part of the abundant life and wealth that he sees to-day on the "Great American Desert," and should he return in half-a-dozen years, he will see here the Garden of America, the Granary of the World. A. W. W.

Maryland, Denton, Caroline Co., Oct. 30.—This season has afforded a grand opportunity to those wishing to post themselves as to comparative merits of peaches on our "Shore." In fact, we had a few too many peaches here in the middle of the peach season. Even your huge city exhibited symptoms of surfeit; but to work among them day after day, gathering them fresh and fragrant from the burdened trees, changing from good varieties to better, until *best* is reached, how he who has a *strong* liking for the fruit, or as it is commonly put in Eastern Shore parlance, he that is a *lover* of peaches, sighs for a stomach of larger dimensions! A mere theorist falls far short in these sweet realities. J. W. K.

West Va., Huntington, Cabell Co.—I entered for a premium on the Blount corn; manured highly a good piece of garden soil; planted 3x3 feet, on the 15th of May, one grain in the hill. It came up well, was well cared for, watered during dry weather, and urged along generally. It sent out "lots" of suckers, which I destroyed, except one to the hill, two stalks at three feet each way being enough of any corn, in this country. It set from three to seven ears to the stalk, and I was sure of a premium. But when I read of parties, with their corn only partly grown, having stalks 3½ inches in diameter (10 inches around) and 16½ feet high, I retired—as did my corn. It was ripe by September 28, about twelve feet high, with from two to three small ears (we call them "nubbins" here) on the stalk. I had "popcorn" that beat it two to one, having six to eight full ears to the stalk. It only cost me $5 to raise 50 cents' worth of the Blount. I had also one pound of it from Thorburn, which I planted on rich, virgin soil; but it won't do here. The "Chester Mammoth" is a much better field corn—ears, 15 inches long; stalks, seven feet high. I got also one pound of the Beauty of Hebron, besides what the Rural sent me. *It* is all right—early, productive, large and good. The Acme tomato is the best I have raised,—better even than the Trophy. The Golden Rural is good, but yellow and small. Pearl Millet does tolerably well,—a *good fodder* plant; but the season is too cold for it here to mature seed fully. The Defiance wheat had such a sickly look, that I threw it away—and in doing so, did well. I had an ounce of the Royal Australian prize wheat from Burpee of Phila., Pa., which I sowed for a prize, and expect to get one. It did not have a good chance either, having been sowed on October 26th, a hard winter and an excessively dry spring following, so as to nearly destroy my crop of Fultz wheat, as I got only six bushels per acre, instead of 20 last year. I sowed the ounce in five drills, 12 inches apart; grains dropped by hand, five to six inches in the rows. About a quarter of it froze out; but I got five gallons from the ounce, and some stools have as much as 67 heads, five to six inches long, to the grain of wheat, while most of them had from 25 to 35 heads. The ground had no manuring, was not rich, and no extra care was taken of the wheat, it having been only once hoed out to destroy the weeds. I sowed it on Sept. 29 this year, because I think it is a good wheat. Apples are scarce here—one-tenth of a crop. The wheat crop was poor, on account of dry weather—from six to ten bushels per acre. Late rains redeemed the corn, which we had "given up," and we now have a fair crop. F. D. B.

The Querist.

ANSWERS TO CORRESPONDENTS.

South Carolina Mineral Phosphates.

O. W. F., Blackstone, Mass., asks, 1, what is South Carolina phosphate rock, and where is it found; 2, what is the analysis of it, and also of raw bone; 3, what is the price per ton of the rock, ground and unground; 4, the amount of sulphuric acid required to convert a ton of the rock into superphosphate, unground and ground.

Ans.—1. The mineral phosphates of South Carolina, in the rough state, consist of hard masses of grayish or bluish-white rock, which break readily into fragments, and which have been called nodules. They are irregular in form, water-worn and rounded, often perforated by boring mollusks, though generally only the casts of these remain. Under the microscope they exhibit unmistakable characters of bone, and are easily soluble, even in dilute acids. The chief beds are on the Ashley River, extending from about seven miles above Charleston for ten or fifteen miles. The land rolls in low bluffs, generally 20 to 40 feet high and at right angles to the course of the river. Between the bluffs are swamp lands, once well drained for cotton culture. In these low lands the rich top soil is from four to six inches deep: then follows a light sandy stratum, generally 18 inches deep, underneath which is the stratum of nodular phosphates, varying from four to 18 inches in thickness, rarely increasing to two feet. The nodules are generally buried in adhesive blue clay and sand, though sometimes they are packed close together in continuous beds, or are in the form of large lumps or conglomerates of soft, chalky consistency, as if originally a soft, pasty mass of phosphatic mud that in the course of ages had become semi-consolidated. Associated with the nodules is a wonderful assortment of the remains of marine and terrestrial animals, but chiefly of the former. Under the bed of nodules a phosphatic marl occurs, reaching to the depth of 400 feet, as ascertained by boring, containing as much as 14 per cent. of phosphate of lime, and of vast extent.

2. The composition of the phosphatic rocks varies considerably. Prof. C. W. Shepherd, Jr., of Charleston, gives the following analysis of nodules varying in size from that of a man's fist up to that of a man's head:

Moisture driven off at 212 F.	3 05
Water and organic matter	6.03
Sand and sesquioxide of iron	12.83
Carbonate of lime	8.06
Sulphate of lime	2 20
Phosphate of lime and iron	69.00
	101.17

The phosphate of iron rarely exceeded 5 per cent. The amount of nitrogen did not exceed 0.5 per cent. of ammonia.

According to the analyses of Dr. T. Antisell, the chemist attached to the Department of Agriculture at Washington, in 1868, specimens of the phosphatic rocks sent to him contained:

	No. 1.	No. 2.
Moisture and organic matter	2.50	1.80
Insoluble silicates and sand	19.40	9.20
Phosphate of iron and alumina	12.20	6.00
Phosphate of lime	56.00	64.10
Carbonate of lime	8.00	17.40
Magnesia	Trace.	Trace.
Alkaline salts, chloride and sulphur	1.80	1.10
	99.90	99.90

No. 1 represents the nodules, and No. 2 the fossil bones found associated with them in the beds. According to Fremy, the analysis of the raw bone of an ox, deprived of its organic matter, is as follows:

Per cent. of ash	3.17
Phosphate of lime	62.50
Phosphate of magnesia	2.70
Carbonate of lime	7.90

The following analysis of dry ox bones is by Berzelius:

Phosphate of lime with a little fluoride of calcium	57.35
Bone gelatine (all the organic matter)	33.30
Carbonate of lime	3.85
Phosphate of magnesia	2.05
Soda and a little chloride of sodium	3.45
	100.00

The nitrogen in the organic matter varies from two to about four per cent.

3. Crude rock is sold only by the cargo, and in this way it is worth, per ton of 2,240 pounds, from $5.50 to $6.50, according to its quality. The ground rock is worth, per ton of 2,000 pounds, from $12 to $14, according to its quality also.

4. Before reducing the rocks to a commercial superphosphate, they are always ground, and a large item of expense is incurred in freeing them from clay and other extraneous matter. The quantity of sulphuric acid required to acidulate the ground rock depends somewhat upon the percentage of carbonate of lime it contains. An outside proportion of sulphuric acid—50° in strength—would be equal weights of acid and rock. For preparing good acid phosphate, or superphosphate, from 1,500 to 1,600 pounds of 50°-acid are used to every 2,000 pounds of ground rock; but for the highest grade a larger proportion of acid is required. The retail price of this superphosphate is $25 per ton. Ground rock is seldom or never called for by farmers, and unground rock never.

Sheep on Rich, Moist Land.

E. B., Windham Co., Conn., asks what is the best breed of sheep for rich, moist land.

Ans.—Moist, rich land is unfavorable for sheep; at least for any breed now kept in this country. This kind of land is sure to provoke bilious diseases, which result in what is known as the liver rot; a disease in which the liver becomes clogged and inactive, and unable to free the blood from bile; when the blood is overcharged with this secretion, all the tissues and the fat are colored a deep-yellow, and by-and-by diarrhea or dysentery results, being finally fatal. This is the inevitable consequence of keeping sheep for a long period upon moist lands. But if the sheep are kept only for fattening and are pastured but one season, the condition produced by such a pasture is favorable for rapid fattening, and the yellow-colored fat is even attractive to

the butchers—so that a moist, rich pasture could be very profitably used for fattening a flock for the market. In this case, the kind of sheep known as Canada sheep,—grade Cotswolds, Leicesters and Lincolns—all heavy-bodied, large sheep, would be the best to choose. These can be picked up in the Boston or New York markets in store condition, and by breeding them, raising market lambs, and fattening them off on the pasture as soon as possible, a very profitable business may be done. The sheep may be purchased in the fall, fed in yards over the winter, and fattened after the lamb is sold off, and themselves sent to market by July or August, all within a year, giving a lamb, a fleece and a carcass, and a pile of manure, for the money invested. A breed of sheep is kept in England purposely for feeding on marsh land. It is known as the Romney Marsh sheep, a heavy-bodied, long, coarse-wool sheep, that raises a good lamb and produces excellent mutton. This breed would doubtless be of great value in such localities as that above referred to. They can be procurred cheaply, not being fancy stock, and if some were imported, they would doubtless soon become popular.

Corn Premiums.

W. P. S., Norwich, Ohio, asks us to publish once more the list of premiums offered for the largest yield of Blount's White Prolific corn sent out to the subscribers of the RURAL. 2. He also asks how and when the report of the yield should be made.

ANS.—Having had several inquiries to the same effect, we comply with our correspondent's request, and give below the list of premiums. Comparatively few reports have yet been received. We prefer that all who have registered would report promptly. *All reports must be in on or before December 15th.* After that date we shall proceed to award the premiums. 2. This question is answered on the editorial page of RURAL of November 1.

Prizes.

No. 1. $100 in gold given by the proprietors of THE RURAL NEW-YORKER for the yield that shall have most successfully fulfilled all the conditions, and attained the highest general average of points.

No. 2. A FEED AND MEAL MILL (value $65), given by the CHALLENGE MILL CO., of Batavia, Ill., for the yield that is next in order.

No. 3. The Improved BIG GIANT FEED MILL (value $45), contributed by J. A. FIELD, SON & CO., St. Louis, Mo., for the third best result accruing from the competition.

No. 4. The "VETERAN" CORN-SHELLER (value $35), made by the SANDWICH M'F'G CO., of Sandwich, Ill., and given by them as a prize for the fourth best result.

No. 5. The WHEELER & MELICH CO., of Albany, N. Y., give a choice of their LA DOW'S PULVERIZING HARROW, or a two-horse DISC CORN CULTIVATOR (value $30), for the fifth prize.

No. 6. For the yield of corn sixth in order of merit, MESSRS. RUMSEY & CO., of Seneca Falls, N. Y., offer a choice of anything from their catalogue to the value of $25.

NOS. 7 AND 8. TWO HAND CORN-SHELLERS (value $5 each), donated by LIVINGSTON & CO., of Pittsburgh, Pa., for the seventh and eighth best results from the corn distribution.

Farmers' Publishing Company.

1. For the best weight of Shelled Corn per bushel, to be weighed three months after harvest, 30 vols. of Harper's Half-hour Series.
2. For second best, Dickens's Works, in 19 vols., (D. Appleton & Co.)
3. For third best, books from Scribner's Catalogue to the amount of $5.
4. For fourth best, the Wilson Series of Agricultural Works, in cloth.
5. For fifth best, one year's subscription to RURAL NEW-YORKER.
6. For sixth best, Miles's Stock-breeding.

Total value not less than $30.

About Chinese Yams.

C. & B., Pella, Iowa, ask, 1, whether the RURAL makes any charge for answering questions; 2, which is the best way to grow Chinese Yams, if one wants to raise small tubers on the vines—to brush them or let them run on the ground; 3, what is the best way to preserve the small tubers—to hang them in bags in the cellar, or to place them in boxes, mixed with earth; 4, are they hurt by light frosts before they are gathered; 5, which is the best way to keep one-year roots—in a pit with potatoes or in a cellar with or without an admixture of earth.

ANS.—1. We are always glad to answer, *gratis*, any questions in which our readers may be supposed to take an interest. 2. Our vines are tied to arbors, the same as Grape-vines. Bulblets form in the axils of the leaves very freely. We should prefer brushing. 3. Either way will answer. Keeping them in paper bags is the least troublesome. It is only needful to keep them *dry* and in a temperature above freezing. 4. No. 5. In a cellar, mixed with sand.

Site for a Quince Orchard.

M. W. Mt. Vernon, Ohio, intends to plant a quince orchard in spring, and having for its site a fine, rich, loamy black soil, inclined to be a little wet, but which he intends to drain, as its situation easily permits, he asks whether this would be a good position for it, or whether one on higher and drier ground would be preferable.

ANS.—We should consider this a very good site, if properly drained. The Quince is indigenous to Southern Europe where it grows in the wild state in moist soil along streams and rivulets. This, however, does not warrant the common idea that it will grow nowhere but in a wet and neglected place. The cultivated Quince is like other fruit trees, it thrives best in a rich, well-drained loam, and is as appreciative of care and culture as the Apple and Pear. It should never be planted on very dry, sandy or gravelly land.

Sulphur for Sheep.

W. M. N., Burbank, O., asks whether sulphur is good for sheep, and if so why, and how much of it should be given them, and how often.

ANS.—Sulphur is needed by sheep in moderate quantities. The reason is that the fleece contains a considerable quantity of sulphur, the composition of pure washed wool being as follows:

Carbon	49.25 per cent.
Hydrogen	7.57 "
Nitrogen	15.86 "
Sulphur	3.66 "
Oxygen	23.66 "
	100.00

Besides this, the yolk of the fleece contains sulphur, and when we consider how much of the yolk is washed from the fleece by rains and that this loss of it must be constantly replaced, the need of sulphur becomes still more apparent. A fleece weighing 10 pounds, contains about half a pound of sulphur, including the yolk. The best practice is to mix one quart of salt with half a pint of flowers of sulphur, and give each sheep a small handful once a week.

Miscellaneous.

J. T., Boston, Mass., asks what is the latest and best practical work on sheep, their care and disease; also on buildings and appliances for sheep husbandry on a large scale. He has Randall's Practical Shepherd and also his Sheep Husbandry for the South, and asks whether there is any later and better work on the subject.

ANS.—Randall's works are somewhat out of date at the present day, just as are some of his contributions to the RURAL while editor of its sheep department some years ago. Undoubtedly the best recent work on the subject is The Shepherd's Manual, by our contributor Henry Stewart. The work contains full information with regard to sheep husbandry on a large or small scale, together with designs and descriptions of buildings and other appliances connected with the industry. American News Company. Price $1.50.

S. C., Bonsack's, Va., asks, 1, which of the six ears borne on some of his Blount's corn, should be saved for seed; 2, a cure for bitter rot in fruit trees; 3, where can Hop Bitters, advertised in the RURAL, be obtained.

ANS.—1, Many prefer the topmost ear. Choose invariably the earliest, largest, best formed and best filled for seed; even if found on the lower half or near the middle of the stalk. 2, This peculiar disease which attacks the skin of the apple, causing the appearance of a tiny brown spot, that gradually enlarges as the disease penetrates into the flesh, is not curable, as far as we know. But being no doubt of a fungus origin, it seems that if sulphur could be applied on the first appearance of the malady, it would prove a remedy. High culture, manure, lime in the soil and pruning are the preventives. 3, In any drug store.

E. M., Van C., Seneca Falls, N. Y., asks which is the best cutting box for cutting cornstalks, hay, straw, etc., to be operated by hand, and where he can get it.

ANS.—Baldwin's American Fodder Cutter is the best we know of. It is manufactured in several patterns; the one turned by crank will cut any kind of fodder. Sold by R. H. Allen & Co., 189 & 191 Water St., N. Y.

J. M. G., Tullahoma, Tenn., asks which we think the best potato for general use, and whether there is any better than the Peerless and Early Rose.

ANS.—That depends upon the locality. Early Rose and Beauty of Hebron do well in many different sections. A trial of several of the most popular sorts can alone determine which would be most profitable for the above place. Snowflake (Early and Late) is an excellent sort.

Industrial Topics.

MANUFACTURE OF MENHADEN FISH GUANO.

EDWARD J. BOYD.

OMITTING here an account of the manner in which the Menhaden are caught, let us begin with them when they arrive at the "fish factory," as the place where they are converted into guano, is called. This is generally a two-story building with a "run," which is an inclined plane supported by trestle-work, upon which a dump-car runs to convey the fish from the boat to the "receiving tanks." These are situated outside the factory and from them a sliding door opens to the tanks in which the fish are boiled. These are long, water-tight uncovered boxes, having in the bottom a coil of perforated pipe for the admittance of steam for the purpose of boiling the fish, and a plug-hole through which the water in which they have been boiled, can be drawn off. They will each hold from 50 to 5,000 barrels of fish. In the factories south of Montauk, L. I., the fish are counted by the thousand; in those east of Montauk, by the barrel, which is supposed to contain 250, four barrels thus making a thousand fish. These fish sold during the past season for one dollar per thousand. In a certain sense the business is a monopoly, as the owners of the different factories meet every year and decide upon the price to be paid during the ensuing season.

When a steamer or "sailing gear"—the name given to sailing vessels engaged in Menhaden fishing—is sighted, the preparations at the factory begin. The tanks are filled half-full of salt water; the "hydraulics," or hydraulic presses used to press the fish, are supplied with water, and everything is got into "ship-shape" order. On the arrival of the vessel, the fish are loaded into the dump-cars by means of "tubs." These are the barrels by means of which the fish are counted. The freighted cars are then run up to the receiving tanks and unloaded; the slide is opened, and the cooking tanks are filled; steam is admitted and the process of cooking begins. When the fish have been "cooked," so that they fall readily apart, the water is drawn off; but, instead of being thrown away, it is conducted, by means of gutters, to an oil-room situated on the ground-floor of the factory. When the water has all been drawn off, a slide in the end of the tank is opened, and the pomace—the name given to the cooked fish—is raked into perforated cylinders, fitted with hinged bottoms, called "curbs." When these are full, they are set under the "presses," and hydraulic pressure is applied to them. The water and oil thus forced out through the perforated "curbs," fall on the floor which is water-tight and divided by gutters leading to the oil-room. After having been cooled there, the water, owing to its greater specific gravity, settles at the bottom and the oil floats on top, and is skimmed off, like cream from milk. The oil is then placed in vats and boiled to free it entirely from water, after which it is put into bleaching tanks where it is clarified, and then it is barreled.

The oil and water having been pressed out, the "curbs" are run into the "scrap" house and are emptied of their contents through the hinged bottoms. The fish is now worth $10 per ton as "green scrap." In from 24 to 48 hours a fermentation takes place, which produces a darker shade, caused by the escape of ammonia, and it is then called "old scrap." The next step towards "curing" it for the farmers, now takes place by removing it to the "dry works," as the factory in which the fish is dried, is called. Here, the first process is "pickling" it. This is done by putting it through the "picker," a cylinder armed with teeth revolving against set teeth, like the cylinder of a thrasher. The fish comes from the "curbs" in hard masses that sometimes require considerable exertion to break up; but when it comes out of the picker, it is very fine—completely shredded.

The next step, "drying," now begins. This is effected either by the sun or by artificial heat. In drying by means of the sun, the scrap is spread out, early in the morning, on a platform, made like a floor inclined just enough to allow any rain that may fall on it, to run readily off. During the day the scrap is constantly stirred by means of a wooden harrow drawn by a horse, until four o'clock, when it is gathered by means of a "hoot." This is made exactly like a sled, but with a sliding tail-board which is held down by the driver until the space between the runners is full, when it is lifted and the scrap laid off in windrows, like hay in the field. It is next gathered into the "cure," which is simply piling it into a heap into which perforated pipes are inserted for the purpose of conducting away the latent heat that may be developed. Next day the "cure" is "turned;" that is, merely shoveled over and made into another heap. About four "turnings" generally cool the scrap enough to fit it for shipment. It is now worth from $35 to $40 per ton to manufacturers of fertilizers.

In rainy weather "platform-curing" is, of course, impracticable; so artificial heat is employed. This is a quicker process, but by its use about one-tenth more of the scrap is lost than by sun-curing. The driers are revolving cylinders, like boilers, with shelves running spirally through them. A very hot fire is built in the fire-box at the front end, and the heat passes under each cylinder to the back, and then through the cylinder to the front end where stands the smoke-stack. The drier is fed at the front end, and as it revolves, the scrap is carried up by means of the shelves until it reaches the top, when, the shelves being inverted, their contents fall to the bottom, to be carried up again in the same way. Every time the scrap falls, it falls a little farther on in the cylinder, on account of its being pitched forward a trifle at each revolution of the drier, until, finally, it passes out at the back, and down a chute to be caught up by means of elevators and deposited in the carts placed to receive it.

The length of time it takes a charge of scrap to pass through the drier, depends upon the length of the latter and the number of times it revolves in a minute. In a 25-foot drier, revolving eight times a minute, each charge takes about half an hour to reach the back end, during which time it alternately comes in contact with the hot cylinder and the hot air in it, all its moisture being thus evaporated. Very wet scrap requires from two to five dryings before it is ready for the "cure." The moisture is carried off by means of the natural draft, and with it go the fine particles of the scrap, a loss not incurred in platform drying; although a heavy thunder shower, when the platforms are "charged"—that is, covered with scrap—will wash away many dollars' worth of it. Indeed, I have seen four or five tons of scrap washed away by a heavy rain. After the scrap passes through the driers, it undergoes the "curing" process in the same way as "platform" scrap. Green scrap is mostly used for platform drying, and is very bulky when dried. Old scrap, too, is generally placed on the platform for 12 or 24 hours, if very wet, to dry the excessive moisture, because if it were put into the driers in its soaked state, instead of drying, it would make "pills," or round, hard balls. One "dry works" can dry the scrap from several "fish factories" as the fire is kept up constantly as long as operations last, or there is work to be done.

For export, the scrap is ground and bolted. For this purpose a special mill is used—the only kind of mill that will grind the scrap so that it can be drilled in with grain. It has two cylinders, with cone-shaped bearing faces. One of these makes about 2,500 revolutions per minute; and the other, which is the feeder, about 800. Marvelous is the speed with which one of these mills grinds up the scrap. I have seen two men shoveling it in as fast as they could, while a torrent of ground scrap poured out like a stream of water. Pieces of iron, or anything short of a young anchor, cannot choke its greedy throat. The ground scrap is worth from $45 to $50 per ton.

The scrap will pay for the fish and the cost of working, leaving the oil a clear profit. A thousand fish, costing $1, will yield about five gallons of oil, worth forty cents a gallon. This oil completely fills the place of "boiled oil" in the composition of paints. Nearly all the chemical and prepared paints are mixed with fish oil. Fish guano forms the base, or principal part, of the so-called complete manures, as well as of some sorts of Peruvian guano, etc., one ton of fish guano being "worked up" into six tons of many of the fertilizers sold to farmers. Sand and clay are the chief adulterations of fish guano. These make weight. Nothing, I believe, is so rich in ammonia as fish scrap, certainly, not so far as the odor it emits is an indication. In my experience, on a Sunday when the platforms were being charged with scrap six months old, the windows of a church two miles away, had to be closed. Fancy how persons stand it, who have to work among it! But from my own experience I can say that the odor is never noticed by a person after he has been a week or so in the factory; but so powerful is the perfume he carries about with him, that while he remains there, he is debarred from all social relations with the outside world.

THE Menhaden belong to the herring family and appear on our coast in the latter part of April, and depart in November. The business of catching the fish for oil and guano has increased rapidly within the last 18 years. It is carried on from Maine to New Jersey, and is especially prominent in the northeast portion of Long Island. In 1873 there were 62 factories in operation on the coast of New York and New England, employing 383 "sailing gear" and 20 steamers, with 2,306 men ashore and afloat. Total capital then invested: $2,388,000; total catch, 1,193,100 barrels, yielding 2,214,800 gallons of oil, and 36,299 tons of guano; value of products, about $1,600,000. Since then the business has largely increased, especially in northeastern Long Island.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, NOV. 15, 1879.

SPECIAL NOTICE.

THOSE who are interested in extending the circulation of this journal for 1880 are solicited to send for specimen copies, premium lists and posters—any or all—which will be forwarded promptly without charge. It is our wish and intention to make the RURAL NEW-YORKER for the coming year more attractive, more valuable than ever before, whether its circulation be increased or remain at its present number. We ask of our present subscribers that, for the benefit of agriculture and horticulture, they will state to their friends, at fitting times, the estimation in which they hold this journal, whether such estimation be one of approbation or disapproval. It is a plain duty that rests upon us all to encourage that which seems worthy of success; and the duty is equally plain that we should not countenance any public enterprise which does not strive to promote the welfare of the public it professes to serve. The art and science of agriculture and horticulture have assumed in our country an engrossing magnitude far beyond anything we could have dreamed of a few years ago; and among our most urgent needs are representative journals that, original, conscientious and independent, shall forcibly construe and advance the interests involved.

EXTRAVAGANCE?

THERE is probably no word more often used without a distinct idea of its meaning in the mind of the user, than extravagance. When Mrs. Jones says Mrs. Smith dresses extravagantly, it is doubtful if she could explain, even to her own satisfaction, just what she means, and as the word is used in common conversation, it conveys no definite idea further than that the person to whom it is applied, has not the commendation of the one using it. If we turn to the dictionary for a solution of the question, we find it may be synonymous with wasteful or unreasonable, or it may only mean profuse.

Then again, what might be considered extravagant expenditure for one, would be only a judicious investment when made by another. In *ante bellum* times, the writer heard an old, white-headed planter in Carolina, remark of a young neighbor who had been compelled to sell a slave to raise money:—"I allers knew he would come to nothin'. Extravagant dog! Eating boughten flour and wearing store clothes!" For the rest of the community corn bread was the standard and homespun served to clothe rich and poor alike. These were all that were considered needful, and anything more than these was extravagant. We knew one good old lady in a country town, who remarked upon the extravagance of the minister's wife, because she had a pair of new kid gloves every year.

It would be very difficult to draw a line just beyond which extravagance lies. Much depends on one's condition, habits, means and surroundings. Shall one with a limited income, who denies himself, it may be, some of the more expensive and unnecessary, although very common articles of food, for the purpose of being able to indulge his taste for some fine book or picture, thus gratify his intellectual or æsthetic taste without deserving the epithet. Or shall a lady who chooses to have less ribbons and laces, and applies the money thus saved, to the ornamentation of garden or lawn be considered by society as extravagant?

We labor, and hope to receive a reward for it. It seems only proper that one should use that which is his as best pleases him, provided always no harm is done to others; but society must be considered and Mrs. Grundy conciliated. We can, and do often, to our own discomfort and displeasure, refrain from doing things we would like to do, and in the doing of which there would be no wrong, rather than act against public opinion, or in ways that would be objectionable to our friends.

If one spends beyond his income, as he may perhaps and still spend but little, while his expenditures might not by a majority of people be called extravagant, they certainly would be injudicious, for they would be leading him into debt. On the other hand, one may spend less than his moderate income, and be open to the same charge. How to adapt our expenses so as to harmonize at once with our needs, our wants and our receipts, is a puzzling problem. Some have a faculty for really getting more for a dollar than others—more things of real use, we mean. Given two families with the same numbers and the same income, and we often see the one with apparent abundance; while the other is always in straightened circumstances. This comes from knowing how to spend money to the best advantage.

But we have not yet an answer to the question:—What is extravagance? Does one spend money unnecessarily for the mere gratification of pride? That is foolishness. Is one's expense account high because he takes no care of the things he has, and from this want of care is obliged to renew them often? That is negligence. Does one buy an article at a price, when another for less money and a little planning could be made to answer the same purpose? This is want of frugality. Is the table set with a multitude of dishes, including fruits and vegetables out of season and therefore expensive? That is foolish gratification of the palate, and often to the injury of the stomach as well as the purse. Does one housewife by her attention and skill, provide her table as well as, and at less cost than, another? That is economy. Does one consider what is necessary, and in procuring only that, save from a slender salary means to accumulate against a "rainy day"? That is prudence. Is one with an income beyond his greatest needs extravagant if he rides when others, not so rich in worldly goods, walk, or if he dresses in fine clothes while they are clad in homespun? He is gratifying his desires and spends for the purpose only the money he might otherwise have laid aside to be spent, perhaps, by his heirs in riotous living, or divided among lawyers in a contest over his will. When one pays large prices for pictures or statuary without materially depleting his purse, buys fine horses or cattle which, although done for his own gratification, may be, and usually are, the means of improving the stock of all in his neighborhood; when one builds a house large, commodious, convenient and beautiful, and pays for it with money fairly earned, leaving enough to amply supply all his other wants, these expenses may be profuse and lavish, but because they are so, are they necessarily to be condemned?

When one spends money in a greater degree and for other purposes than is generally done by the people by whom he is surrounded, who are in the same pecuniary circumstances, he is, in their opinion, extravagant, and that is about all the word means.

THE FARMERS' BONANZA.

PROFITS made by one class in a country from other classes, however much they may enrich the fortunate class, add not a dollar to the wealth of the nation—so far as that is concerned, it is like a person changing money from one pocket to another. What is gained by exporting goods to foreign countries, however, increases not only the wealth of the exporting class, but also of their country at large. During the current year our farmers have been eminently successful in enriching themselves both from their fellow citizens and from other nations, and from the latter source they have added so many hundred millions to the aggregate wealth of the country that all other classes can well afford to contribute to the well-being of that which, more than all others combined, has been the means of restoring activity to our workshops, liveliness to all kinds of business and prosperity to the land.

Excellent as was the agricultural outlook early in the season, it has been constantly improving since then. A careful review of foreign and domestic crops, from the best attainable sources of information, enabled us from the first to prophesy an advance in price of grain, and to suggest to our friends the advisability of holding back their crops for higher figures than those that were then offered; but we hardly hoped that the advance would have been so great as it has proved. Taking as a standard the Chicago market, both as a central point and as the largest in the country, we find that in the middle of last August, winter wheat was selling at 90c to 93c; No. 2 spring wheat for 85c; corn for 33½c; and oats for 23½c to 24c. At these prices farmers made a fair profit, nor did they expect that they would get much higher figures for their crops. Whatever, in addition to these prices, they have since obtained for these products, is an unexpected addition to their wealth.. Last week, winter wheat was selling there for $1.25 to $1.27, an advance of 38 per cent over the price in the middle of August; No. 2 spring was quoted at $1.18, a rise of 38 per cent; corn brought 47c, a rise of 40 per cent; while oats were 32½c, a rise of 45 per cent. Quotations in the other large grain markets show a relative advance, and it may be fairly held that, as compared with the figures in August last, at all points in the country, the prices at present have risen in the same proportion.

Of course, a good deal of the crops was marketed before the advance began, and a good deal also during the course of the upward movement; but, taking into account the known receipts of grain at different centers, and the fact that farmers have this year been less precipitate than usual in rushing their harvests to market, it is not unfair to estimate that, as a body, they have got 20 per cent more for their cereals than the prices offered at the middle of August. From the estimated crops of the Northwest alone this would make a total sum of close upon $100,000,000 for the farmers of that section—an enormous aggregate that must be nearly tripled for the farmers of the country at large. Morever, the advance has not been confined solely to cereals—butter and cheese as well as hogs, have also shared in it, and, more or less, nearly every product of the farm.

In view of the fact that, as a class, farmers would hardly have grumbled at the prices offered for their products a couple of months ago, they should now rejoice and be thankful at the unexpected bonanza they have since stricken in the shape of the hundreds of millions they have gained from the late advance in the prices of their wares. Of course, the proportion of the prize pocketed by each, must be comparatively small; but even this will, in most cases, be individually very satisfactory, and, moreover, each can cordially rejoice in the good fortune of his neighbors.

PREPARE FOR THE CENSUS.

ACCURATE statistical information with regard to the agriculture of this country is of prime importance not to our own farmers and citizens alone, but to the world at large. Recognizing this fact, Congress by an Act, approved March 3, 1879, provided that the next census should be completed within the month of June, 1880. By this provision it is expected to avoid most of the errors in former agricultural reports, due to the fact that many of the products returned embraced those of two different crops. As the next enumeration will be completed between June 1st. and the 30th inclusive, nearly all the crops harvested one year can be pretty accurately ascertained. Those for the calendar year 1879 will include the cereals, peas, beans, rice, tobacco, cotton, potatoes, fruits of all kinds, hay, clover, grass seed, hemp, flax, honey, sugar-cane, sorghum, and, in short, everything harvested this fall. The crops of the calendar year 1880 will be few, embracing maple sugar and molasses, and wool clipped chiefly in spring, except in Southern California, Texas and some of the other Southern States where two clippings a year are obtained. For certain agricultural products there is no regular harvest, for they are gathered as they mature, week by week, and day by day. These comprise butter, cheese, milk sold, value of animals slaughtered, yield of market gardens, timber of all kinds, and home manufactures.

It is extremely desirable that the returns on all these topics should be full and accurate, and this end can be best secured by the hearty and intelligent cooperation of our farmers. Accordingly, Francis A. Walker, Superintendent of the Census, strongly recommends them to make notes, from time to time, of the quantities and values of the several crops gathered; of the number of acres planted to each, and of all other particulars that will enable them to make prompt, full and accurate returns when the census canvassers call upon them next June.

ANOTHER CHECK ON OUR LIVE STOCK TRADE.

LAST Thursday's cablegram announced that the English Privy Council had just issued orders that after the fourth of next month live sheep imported into Great Britain from this country must be subjected to the same regulations as imported live cattle. They must therefore be killed at the port of debarkation, and for this purpose increased accommodation must be constructed, while the profits of the trade will be lessened, and consequently the price paid for sheep by the exporters to our farmers. The cause assigned for this additional restriction on our live stock trade is that among the numerous shipments of American sheep, a few cases of scab had been discovered on several occasions.

A few months ago we called attention to the fact that the Government veterinarians who inspect at Liverpool the live stock landed from this country, had declared that sheep infected with this highly contagious disease, were among those landed from several vessels, and at the same time we insisted on the urgent necessity that existed for the appointment of skilled veterinarians as examiners of stock at the ports of Portland, Boston, New York, Philadelphia and Baltimore, whence this branch of trade is carried on, for the purpose of guarding against the exportation of what, if persisted in, must certainly, ere long, close this important outlet for a growing branch of agricultural industry. About the same time Gen. Le Duc appeared before the Senate Committee on Agriculture, and among other measures urged this one also. The matter has been grossly neglected, however, and as a consequence, the sheep husbandry of the country has received as severe a check as Administrative dilatoriness and Congressional neglect could inflict upon it.

From England's action with regard to the importation of live cattle from this country, it could be readily inferred that the Government merely wanted a plausible pretext for putting an embargo on other branches of our live stock trade also, and the strictest precautions should have been taken here to prevent the exportation of any animals not thoroughly sound and in good condition, lest disease should become developed or generated through the hardships of the voyage. Politicians, however, have been appointed examining officers, instead of skilled veterinarians—and a promising branch of agricultural industry consequently suffers a serious check.

BREVITIES.

A PHOTOGRAPH (card) is received of a basket of splendid tomatoes, without name or address of sender.

IF YOU want to turn a *wild* Strawberry into a *Wilder*, give it lots of potash, no soda, plenty of magnesia.

"ROCHESTER, N. H., is excited over matters growing out of their late fair. . . On Sunday before the fair, the trotting men trained their horses all day."

LATE English journals tell us that the present advance in grain, etc., is due to "desperate speculation on the other side of the Atlantic." Say rather to desperate need of food on the European side.

ONWARD.—Mr. Ott, of Aiken, S. C., sends us some tea of his own raising. The leaves were dried without manipulation. The quality we thought about the same as that of "English Breakfast" that sells for 75 cts per pound.

THE papers are now printing a good deal about Teosinte (Reana luxurians) as a new fodder plant. Readers will bear in mind we tested this at the Rural Grounds over a year ago, and found that it needs a warmer climate than ours.

REFERRING to the decay of our Central Park, Mr. Meehan says that he will not join in the crusade against the politicians who control it, but blame the respectable citizens of New York by whose apathy the politicians get such control—which is, no doubt, the proper view to take of the matter.

IF it pays to purchase costly agricultural implements, it certainly pays to take care of them, now that they are to be laid by for a six months. The time to care for all farm tools is *now*. Put them in complete order that they may be ready for use when needed in the spring, and time presses. This is trite advice, readers, but we all stand in need of it.

THE following note from a friend explains itself: "Several of our correspondents agree with Mr. Lovett, in RURAL of Oct. 25th, as to the identity of the Cuthbert and Queen of the Market Raspberries. Did the public ever hear anything of the Queen of the Market before it was advertised for sale? Where, when, and by whom did it originate? Who christened it? Who knows? Is it not about time some one arose to explain?

RURAL READER."

WE hope our nurserymen and, indeed, our readers interested in such matters, will try budding and grafting different varieties of Pears upon the Japan Quince. Mr. W. C. Strong has so budded 10,000, using seedling Japan quince stocks. He has found that the average growth of cions is greater than that of Pears upon the common Quince. There are but half a dozen kinds that do well upon the common Quince. Perhaps the employment of the ornamental Quince for stocks, may increase this number.

WE learn from our respected friend and contributor, Mrs. Annie L. Jack, of the Province of Quebec, that among Apples they prize Fameuse first; Red Astrachan, second; St. Lawrence, third; Alexander, fourth; Tetofsky, Duchess of Oldenburg and Pewaukie, fifth. Among Pears, Flemish Beauty does well. The Hartford Prolific Grape is often mildewed; Concord, never. Eumelan does well, is generally loaded with fruit and free from mildew. The Delaware also does well. All require protection during the cold season. Among Strawberries, the Wilson and Charles Downing do best. Seth Boyden has been discarded. Cap. Jack, Jucunda and Golden Defiance, have done well the past summer.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

THE HOMELY BABE.

A Railway Incident.

BY PARMENAS MIX.

Good nature reigned throughout the car, the day was
cool and bright;
The time was passed in merry song and conversation
light.
Though here and there a veteran of railroad travel
dozed
Or read some lately published work—with book and
eyes half closed.

My journey had been long, and yet my destination lay
Beyond the distant mountains, near a thousand miles
away,
And being wearied with my ride, I neither talked nor
sung,
But kept my teeth well-closed and made a captive of
my tongue.

A well dressed mother looked with pride upon her
laughing child,
A handsome babe with dimpled cheeks and blue eyes
large and mild—
So handsome that at last it drew all strangers' eyes
that way,
And many rose and gathered round where the charm
ing infant lay.

No honest pride can equal hers who heard her baby's
praise
From the lips of those whose thoughts were shown in
their admiring gaze,
And I doubt if great Napoleon e'er felt one-half as
proud
As did that happy mother 'mid that kind, admiring
crowd.

There was still another infant and a mother just as
dear—
She sat alone, unheeded, in a seat far in the rear,
And her scanty garb and thin, pale face on which
care's shadow lay,
Said plainly that the light of hope shone dimly on her
way.

Her child was far from beautiful, and poorly, sparely
dressed,
And she seemed to say as to her heart its form she
closely pressed:
"Poor, slighted child, no kind caress but mine brings
solace here—
My kiss alone falls on your cheek—my praise is all
you hear."

Then for the first time I perceived two brown eyes
quite intent
In watching this poor, lowly pair—the gaze was kindly
meant,
For the eyes were full of sympathy and I could read
therein
That their owner could enact the role of "Good Sa-
maritan."

Producing four fine oranges, the young man crossed
the aisle,
And speaking to the woman with a kind, assuring
smile,
He placed the fruit upon her lap and said in accents
mild,
"Your child is very quiet—I so love a quiet child."

Her face shone with pure gratitude, her sad eyes grew
more bright:—
She felt so proud of what he'd said, and truly well she
might,
For had not her babe received the praise of the no-
blest heart by far—
The truest, tend'rest, bravest heart that beat within
that car? *Detroit Free Press.*

SOME POMPS AND VANITIES.

THE painter rather than the scribbler should assume the task of describing the fashions for the coming winter. A few strokes of the brush and the marvellous designs would shine from the canvas, but the written description, even supposing it to be the best, conveys but a confused idea of the fabrics under discussion.

The unfortunate fashion-writer realizes to her utter despair the abject poverty of language when she sits surrounded by costumes and fabrics, regal in their beauty, which defy the power of description, and bankrupt her of adjectives in the first sentence.

Nothing less brilliant than the pen of an E. de Amicis—who is par excellence, the "word painter of the day"—can do justice to the "fall fashions" in material and style.

Orientalism reigns supreme. *The* costume and bonnet of the day are no longer quiet and elegant; they fairly blaze with magnificence of design and material. Magnificence albeit that is somewhat subdued. No glaring contrasts are allowed, but the brilliant colors are so ingeniously combined as to present only a rich effect.

MILLINERY.

The flaring and very much indented bonnets are no longer to be seen. The "Cottage" shape and variations of it are most popular. Black velvet has, in a great measure, been superseded by black satin for hat material and when trimmed elaborately with jet, makes a most elegant head covering. Flowers are not at all used, but birds, in greater or less quantities, appear on *every* hat. Sometimes it is the head and breast of a large bird, sometimes a head and wing; again, there are clusters of from three to six small humming birds. Whatever else is lacking there must be at least one bird, or a fraction thereof, to give the bonnet *style*.

Turbans are often made to match the costume, and trimmed with plumes and the inevitable delegate from the natural history department. One turban composed wholly of variegated wings and trimmed on one side with a large English starling, was odd and by no means unpretty. Another, with the crown of Persian cashmere, had a rim of old gold satin, with bird and feather to correspond.

A most exquisite hat had a crown composed wholly of Impian feathers,—sometimes twenty birds are used in making one of these crowns, only the most beautifully tinted feathers being used. Satin scarf of old gold and bronze with plumes to correspond, satin Turk strings and rainbow jet completed one of the most *distingue* hats imaginable.

A capote shape in gray felt, with rim of embossed velvet and a soft crown was trimmed with shaded ribbon and a "cashmere" breast. It had a facing of shirred velvet. A novelty was a "jet" hat. The crown was embroidered in jet and a fringe of the same fell over and below the crown forming a sort of cape. The garniture was black plumes, and satin Turk strings and three jet and gold bars. A pretty little dark green felt with a brim rolled back, was faced with green velvet, and a single gold thread was sewn on the extreme edge of the brim all around. Satin ribbon and plumes of green and the inevitable bird finished the bonnet. A number of sapphire bonnets were shown in Terry velvet and satin de Lyon. Most of them were composed almost wholly of the one color. Some, however, were enlivened with brocaded ribbon, or jet or fancy ornaments in gold and jet. One sapphire Terry velvet was made gorgeous by a face trimming of rainbow jet. Very few gray bonnets were to be seen. One in felt was finished with a garnet satin scarf and a gray bird, and another in Terry velvet had a scarf of the same material and a bird, but they looked almost austere in contrast with the brilliancy and sparkle of their companions. A plain brown Terry velvet was made to appear very jaunty by means of two beautifully shaded—pink and brown—plumes placed high on one side. A little "Fanchon" shaped jet hat was decorated with feathers, two clusters of humming birds, and two large gilt pins. Chenille and lace were used for the strings.

For evening wear, flower hats are extensively worn. One composed of lilies-of-the-valley and Duchess lace, had a cluster of humming birds in a rosette of lace just above the face. The most showy "dress" bonnet, however, is the Continental. In shape it bears somewhat of a resemblance to the Revolutionary Continental. Several long ostrich plumes are required to finish this style of hat. White is the color usually selected and what with the stylish shape and the graceful mass of ostrich plumes it would be hard to conceive of a more elegant *chapeau*. An effort is being made to introduce large flaring beaver hats. They are exceedingly becoming to round youthful faces, but they are rather trying to most people. The general taste seems however to have set in the direction of quiet shapes.

Remember that you must have a bird or at least a section of one, if you would escape having your new bonnet pronounced "unstylish."

CLOAKS.

The dolman and variations of it are the most popular styles for outside wraps. Their elegance consists principally in their decorations and linings, the latter in the most fashionable garments being quilted satin of cardinal or old-gold shade. A sumptuous one of *matelasse* made very long, was trimmed with a ruching of narrow satin ribbon, chenille fringe and masses of jet, a deep collar of jet finished the neck. The lining was quilted cardinal satin. Another of *Sicilienne* had three rows of plaited French lace around the bottom, and a jabot of the same down the front. Under the sleeve-portions were rows of chenille fringe six inches deep, while the sleeves were one mass of *passementerie* with jet pendants. This wrap was moderately short.

The more expensive outside garments are made of silk, satin de Lyon, *Sicilienne*, *matelasse* rep-beaver and Armure cloth. Great quantities of *passementerie* embroidered with jet, chenille crimped fringe, jet fringe and fur are used. A brown *Sicilienne* Paletot was finished with bands of seal-skin, the effect was rich and elegant, and one could hardly realize that this "plain" garment was as costly as the bejetted ones until the price ticket was glanced at. It revealed $1,500 as the cost of this not very pretentious garment.

A rep-beaver dolman with a broad band of *passementerie* across the back, between the sleeves was elaborately trimmed with crimped chenille fringe. Trimming a garment of this class across the back is an excellent mode of relieving the extreme plain look of many of the long dolmans. Beside circulars and dolmans, there are the cloaks of jacket form, coat basques, half-fitting, double-breasted demi-long cloaks and the Ulster. Seal-skin sacks are shorter than they were last season, and the circulars so much in vogue last winter are still worn. It is almost impossible to put enough trimming on a "dress" wrap. Fringe in the most elegant designs, *passementerie* loaded with jet, are used in profusion. For every day wear, on the other hand, the extreme of simplicity is reached. Fancy cloth cloaks designed for every day wear are frequently finished merely with machine stitching.

Sometimes the collar and lapels, cuffs and pockets, are faced with seal or some other fur, and while this is far from expensive, the effect is luxuriously elegant.

Those who own camel's-hair shawls will be glad to learn that fashion has decreed that they may again be worn. They are a fitting finish for costumes trimmed with fabrics in the new Persian and Oriental designs. One of these shawls was shown, which had been made into a rather short dolman-shaped garment. The edge was trimmed with black feather ruching, sparkling with jet and rainbow pendants. It was more youthful and richer-looking than when arranged shawl-fashion.

I cannot leave this subject without describing a certain opera wrap, which was—to be artistic—a symphony in white. A modification of the dolman was the shape, the material white *Sicilienne*. Around the lower part of the back portion was a deep row of crimped chenille fringe, the sleeves and lower fronts were finished with crystal fringe and the neck and breast profusely trimmed with crystal and chenille *passementerie*. The lining was of quilted white satin. The effect of the whole was indescribably lovely.

Thanks are due Messrs. Lord & Taylor, of Broadway and Twentieth street, for their courtesy in furnishing information as to fashions, in fabrics and in styles.

The RURAL of November 22 will contain a full description of dress materials, trimmings, hosiery and lingerie.

RESULTS OF ARCHERY.

THE returns from the Female Archery Clubs of America for the season of 1879 are now all in. We gather from them the following interesting statistics which indicate that this branch of industry is in a flourishing condition: The target was hit during the season three times out of a possible score of 84,000,000. The rumor that these three times were accidents is without foundation; 2,874 of the archers have become hopelessly engaged to the young gentlemen who were so kind as to teach them how to aim; 8,940 other girls are sure they would have become engaged had it not been for these 2,874. The 8,940 do not hesitate to assert that the 2,874 took unfair advantages and were unbecomingly forward. The matter is to be brought to the notice of the next National Convention of the Archers. During the year 184,948 barn doors were well hit. Of this number, 92,474 appertained to barns less than a mile to the right of the target; 92,474 to barns situated less than that distance to the left of the target. The casualties of the year are immaterial and considerable less in number and severity than those of the season of 1878. It appears from the returns that only 280 cows, 18 horses, seven goats, five pigs, 82 small boys, and 23,720 peddlers of a new map of Palestine were either killed or wounded during the season, and that in every instance the blame was with the animal hit. The archers to a girl have filed affidavits from which it appears that each one of those cows, horses, goats, pigs, and boys were recklessly exposing their lives by standing within 5,280 feet of the respective targets at the time the accident occurred.—*Albany Journal.*

A LADY'S RESPONSE TO THE TOAST OF "THE MEN."

MRS. DUNIWAY, of the New Northwest, at a literary reunion at Salem, Oregon, "toasted" the gentlemen as follows:

"God bless 'em! They halve our joys, they double our sorrows, they treble our expenses, they quadruple our cares, they excite our magnanimity, they awaken our enthusiasm, they arouse our affections, they control our property, and out-maneuver us in everything. This would be a very dreary world without 'em. In fact I may say, without prospect of successful contradiction, that without 'em it would not be much of a world anyhow. We love 'em, and the dear beings can't help it: we control 'em, and the precious fellows don't know it.

As husbands they are always convenient, though not always on hand. They are most agreeable visitors; they are handy at State Fairs, and indispensable at oyster saloons. As our fathers they are inexpressibly grand. A man may be a failure in business, a wreck in constitution, not enough to boast of as a beauty, nothing as a wit, less than nothing as a legislator for woman's rights, and even not very brilliant as a member of the press; but if he is our own father we overlook his shortcomings and peccadilloes with the divine mantle of charity. Then, as our husbands, how we love to parade them as paragons!"

COLLECTING AND PRESSING SEA-WEED.

FIRST wash the sea-weed in fresh water, then take a plate or dish (the larger the better), cut your paper to the size required, place it in the dish with fresh water and spread out the plant with a good-sized camel's-hair pencil in a natural form; then gently raise the paper with the specimens out of the water, placing it in a slanting position for a few moments, so as to allow the superabundant water to run off, after which place it in the press (not THE FREE PRESS). The press is made with either three pieces of board or paste-board. Lay on the first board two sheets of blotting paper; on that lay your specimens; place straight and smooth over them a piece of old muslin or fine cambric, then some more blotting paper and place another board on the top of that and continue in the same way.

The blotting paper and the muslin should be carefully removed and dried every day and then replaced; at the same time those specimens that are sufficiently dried may be taken away. Nothing now remains but to write on each the name, date and locality. You can either gum them in a scrap-book, or fix them in, as drawings are often fastened, by making four slits in the page and inserting each corner. This is by far the best plan, as it admits of their removal without injury to the page at any future period, if it be required to insert better specimens or intermediate species.

Some of the larger specimens, or "algæ," will not adhere to the paper, and consequently require gumming. The following method of preserving them I have tried, and with perfect success: After well cleaning and dressing, brush the coarser kind of algæ over with spirits of turpentine in which two or three small lumps of gum mastic have been dissolved by shaking in a warm place; two-thirds of a small phial is the proper preparation, and this will make the specimens retain a fresh appearance.—*Detroit Free Press.*

CORRESPONDENTS' CORNER.

IN response to "Reader's" request which appeared in the RURAL of Oct. 11, we have received several copies of the desired poem. Those who have been at the trouble of writing and sending us the verses will please accept our thanks for their courtesy.

A SINGULAR OLD SONG.

This *double entendre* was originally published in a Philadelphia newspaper a hundred years ago. It may be read three different ways. First, let the whole be read in the order in which it is written. Second, read the lines downward on the left of each comma in every line. Third, in the same manner on the right of each comma. In the first reading the Revolutionary cause is condemned and by the others it is encouraged and lauded:—

Hark! hark! the trumpet sounds, the din of war's
alarms,
O'er seas and solid grounds, doth call us all to arms;
Who for King George doth stand, their honors soon
shall shine:
Their ruin is at hand, who with the Congress join.
The acts of Parliament, in them I much delight,
I hate their cursed intent, who for the Congress fight;
The Tories of the day, they are my daily toast,
They soon will sneak away, who Independence boast;
Who non-resistance hold, they have my hand and
heart,
May they for slaves be sold, who act a Whiggish part;
On Mansfield, North, and Bute, may daily blessings
pour,
Confusion and dispute, on Congress evermore;
To North the British lord, may honors still be done.
I wish a block or cord, to General Washington.

WHICH IS IT?

I WILL take the liberty to send another poetical curiosity. Read as written and it gives one view of a certain matter. Read alternate lines, that is, first and third, and second and fourth, and thus to the end; this gives another view:

The man must lead a happy life
Who is directed by his wife;
Who's free from matrimonial chains,
Is sure to suffer for his pains.

Adam (we read) could find no peace,
Until he saw a woman's face;
When Eve was given for a mate,
Adam was in a happy state.

In all the female hearts appear
Truth, darling of a heart sincere
Hypocrisy, deceit and pride,
Ne'er known in woman to reside.

What tongue is able to unfold
The worth in woman we behold?
The falsehood that in women dwell
Is almost imperceptible.

Fooled be the foolish man, I say,
Who will not yield to woman's sway;
Who changes from his singleness,
Is sure of perfect blessedness.

Literary Miscellany.

WITHOUT AND WITHIN.

My coachman in the moonlight there,
Looks through the sidelight of the door;
I hear him with his brethren swear,
As I could do—but only more.

Flattening his nose against the pane,
He envies me my brilliant lot,
Breathes on his aching fists in vain,
And dooms me to a place more hot.

He sees me in to supper go,
A silken wonder by my side,
Bare arms, bare shoulders and a row
Of flounces for the door too wide.

He thinks how happy is my arm,
'Neath its white-gloved and jeweled load,
And wishes me some dreadful harm,
Hearing the merry corks explode.

Meanwhile I only curse the bore,
Of hunting still the same old coon,
And envy him outside the door,
In golden quiets of the moon.

The winter wind is not so cold,
As the bright smile he sees me win,
Nor the host's oldest wine so old
As our poor gabble, sour and thin.

I envy him the ungyved prance,
By which his freezing feet he warms,
And drag my lady's chains and dance
The galley slave of dreary forms.

O could he have my share of din,
And I his quiet—past a doubt,
'Twould still be one man loved within
And just another bored without.

IN FOLLY'S NET

CHAPTER XVII.

PARTING.

LORD SHOLTO excused himself that morning again from accompanying his guests on their shooting expedition, and Captain Murray was enjoined to take his place and see that all went well. The young officer accepted the duty a little reluctantly, for Ida had told him the night before, with her pretty eyelids red with the tears she had shed, of Lord Ivor's trouble, and he would have preferred remaining at home.

"Can't I be of some use at home?" he whispered, as he left the table and went to the sideboard, where Lord Sholto stood asking his sister some questions about Jean. "I hate leaving you in this trouble."

"Thanks, old fellow," said Lord Sholto, while Ida Crawford shot a soft, grateful glance at him from out her pretty blue eyes. "But if you'll get these fellows off as quickly as you can it will be the greatest kindness you can do us."

"All right," said Captain Murray, resignedly, performing his commands so well and with such diligence that before half an hour had elapsed the shooting party were on their way to the moors and Sholto Hall was left in comparative peace.

Breakfast over, and the gentlemen gone, the ladies of the party scattered; some assembled in the drawing-room and talked gossip and dress, others went to their rooms to write letters and hold consultations with their maids, and Lady Sholto and Ida were free to go to Jean and tell her that Lord Ivor was watting for her in Lord Sholto's study.

"The carriage is ordered in half an hour," said Lady Sholto, "so they will not have much time. I hope Jeanie will bear up well. I am so anxious about Archibald, he is looking so dreadfully ill and haggard. You know he has decided on going away almost immediately, Ida."

"Yes," said Miss Crawford, sadly. "It is terrible for him."

"Hush!" said Lady Sholto, "here comes Jean."

She was coming towards them along the passage dressed ready for her departure, and seeing the anxious faces, tried to force a smile to her pallid lips; but the smile was sadder—infinitely sadder than tears, and Ida's blue eyes filled with water.

Jean was looking frightfully pale: but she was calm and composed, and spoke quietly, in almost her usual voice. She was dressed in a dark cashmere dress, and wore over it a long, fur-trimmed mantle, while her face was shaded by a broad-brimmed Spanish hat which Collins had chosen, because it partly concealed Jean's pallor.

"Are you cold, dear," said Ida, in surprise, "that you have on your furs?"

"Yes," said Jean, quietly. "It is a chilly morning, is it not?"

Ida had taken her hand; it was cold as death, and when she released it, it fell heavily at her side.

"I will say good-bye now," said Jean, calmly. "Ida, I shall not see you again. Will you come and see me—not yet, but bye-and-bye? Good-bye, Ida, I hope you will be very happy, dear."

She bent forward and kissed her on the cheek, the girl clung to her, weeping passionately; but no tears dimmed Jean's eyes, which shone with a feverish lustre. "I will not say good-bye to you, Florence," she said, with another pale, sad smile; "you will come and 'speed the parting guests.'"

She passed on quietly down the broad staircase, and without any pause or hesitation, pushed open the door of Lord Sholto's study, and entered.

The Earl was there alone, and waiting for her.

But though he was waiting for her, Jean's slow, noiseless step and the soft unrustling cashmere dress she wore did not betray her presence, for the Earl neither turned, nor looked up.

The air was close and heavy. Jean softly crossed the room and unlatched the window; the autumn sunbeams slanted in at the casement and fell, almost in mockery, as it seemed, on the bowed golden head; the soft air stole in refreshingly, and the Earl, lifting his head, sank back in the arm-chair, shading his eyes as if the light hurt him; while Jean could have cried out with pain at the sight of the change in the beloved face, so white—so haggard—so terribly sad. Jean went back to his side, kneeling down with her head upon the arm of his chair; and then, for the first time, he was conscious of her presence, and putting out his hand felt blindly for the bent head; but Jean caught his fingers and drew them softly to her lips.

"Archie," she said, softly, "can you ever forgive me?"

"There is no such word between you and me, Jeanie," he said, in an almost inarticulate voice, looking down at her, with his face white and quivering, but trying to smile at her with the weary, sad, gray eyes—the eyes which had made all her sunshine in by-gone days—the eyes which, for both their sakes, must not look upon her face again until they had both learnt that hardest of lessons, a lesson which can never—never be thoroughly learnt—to forget.

"There can be no such word between you and me, Jeanie," he repeated, trying to speak more calmly.

"Can you listen to me, Archie?" she said, softly, at length. "We have so little time before us, my dearest, and I have so much to say to you."

"Say on, my darling," he answered, in a hoarse, unsteady voice. "I will not pain you again by my weakness."

But if Jean had so much to say she was strangely silent for some minutes, and she turned her face on his shoulder and hid it there for a moment, struggling for calmness and composure.

"I want you to promise me something, Archie," she went on, then lifted her face a little so that she could look into his eyes.

"What is it, Jeanie?"

"That you will not grieve much, dear," she said, entreatingly. "The blackest spot in my own sorrow is caused by the thought that I have laid such a burden on your shoulders. If I could think, my dearest, that you were conquering your trouble, that you were learning to—to"—her voice failed a moment—"to forget the unhappy girl who has repaid your love so ill, I think I could bear it better."

"Poor child!" he said, with a sad, bitter smile. "Do you think I *can* forget?"

"It will be hard," she said, brokenly—"it will be hard—oh! so hard, my darling; but harder lessons have to be learnt sometimes. You will go away, you will travel, you will see new strange countries, perhaps. Oh! I hope so, dearest. Perhaps you will find some one whom you can love as you loved me in the past, and who will make you as happy as I would have tried to do if—if—if——"

She shivered and drew closer to him; he stooped his lips to her hair. She had removed her hat and thrown it from her as she entered.

"And if you find her, Archie," she went on, bravely—"if you find her and win her heart, you will remember that I told you I hoped it would be so. I will pray that it may be so."

"Do you know what a man's love is, my poor child?" he said, with intense sadness. "Ah! no, you cannot, or you would not tell me to forget. Jeanie, if you had died, if I had buried you under the cold earth, and seen the flowers growing on your grave, I would not have forgotten, but I would have borne my sorrow, and in time resignation would have come; but as it is, knowing that you love me, and that you are that man's wife, how can I forget? How can I? How can I give you to him and forget?"

She shivered again, clinging to him with her little trembling hands; she tried to speak, but no words came.

"Jeanie," he said again, in a moment, "have you thought what it will be to spend our lives asunder? Have you thought what it will be to love as we love when such love is a crime? No, my darling; if you had thought you would not tell me to forget—to marry another woman. There are enough miserable women in the world, Heaven knows, without my adding to the number by marrying an unloved wife."

He paused, with a short, bitter laugh. Jean put up her hand to his mouth to silence him; but he caught it in his, and held it closely.

"Oh! my darling," he said, passionately, "would to Heaven I loved you less—would to Heaven that I loved you with a love that could bear your shame; for if I did, kneeling now at your feet, I would ask you to go with me away, far from that man who has robbed me of you; for it was a theft, Jeanie. Your own words would not make me believe that you were willing to become his wife—willing to break my heart."

"Archie, you are killing me!" she moaned, with her white face upon his breast, and her lips parched with pain.

"Forgive me, Jeanie," he said, in a moment. "Forgive me, love—I am mad, I think."

There was a long silence during which Jean lay white and shivering in his arms, and Lord Ivor tugged fiercely at his moustache, trying to stifle the fierce passions of anger and sorrow which were burning within.

"You have not given me the promise, dear," she said, softly, at length lifting her eyes to his face, and carrying his hand to her lips and to her brow.

"What promise, Jeanie?"

"To go away and forget me."

"I am going away," he said, huskily. "I don't know, nor do I care, where; but I am going—the farther away the better. Ah! my darling, do you guess how hard it must be for me to say, the farther away from you the better?"

"And you will forget, Archie?"

"Forget!" he repeated. "If I can."

She thanked him, softly, trying to shut her ears to the bitterness of his voice.

"Is that all I can do for you, Jeanie?" he said, in a moment. "Is there anything else in which I can help you, my child?"

"No," she said, softly. "Florence will give me news of you. You will do nothing rash and reckless," she added, lifting her head with a gesture of sudden terror, as if the thought had struck her. "You will remember that my life is bound up in yours, Archie, and that if anything hurts you, it will hurt me equally."

He smiled sadly.

"You bid me remember that?" he said, softly. "You bid me remember that, Jean? and in the same breath you tell me to forget you. Ah! foolish lassie, your theory is easier than your practice!"

There was another long pause. The room was very still and silent; outside the servants' steps could be heard as they passed to and fro, then the sound of a carriage driving up to the front entrance, and Mr. Blair's voice in the great hall made Jean start.

"I must go," she said, faintly. "Oh! Archie, I must go."

He held her more closely for a moment, then he unclasped his arms from around her, and Jean rose dizzily to her feet.

The Earl rose also.

For a moment they stood in silence, Lord Ivor looking down with intense passion, scarcely repressed, on the beautiful, wan face, on which he was looking his last; and Jean, with her long lashes resting upon her cheek, dared not meet his glance, but stood erect, pressing her little cold hands against her heart as if to stille its rapid throbs.

At last she held out her hand to him with a pale, wistful smile.

"Good-bye," she said, faintly.

"Good-bye," he repeated. "Are you going to leave me thus, Jeanie?"

The girl lifted her eyes then, eager, startled, imploring, shuddering a little as she read the infinite reproach and love on his face.

"Let me go," she said, faintly, "Archie."

"No," he cried out, passionately, catching her in his strong arms; "I cannot let you go thus—thus as if we were mere friends or acquaintances. Not thus Jean, not thus."

White and passive she stood still in his arms, while he looked down at her, in the fierceness of his pain, with despairing eyes.

"You love me, Jean," he whispered, abruptly.

The girl gave him a wild, helpless look, and shuddered.

"You love me," he repeated.

"Oh! Archie, think. I am—oh! Heaven help me—I am his wife!"

Slowly his arms fell from around her, leaving her free, and he drew back a step.

"His wife!" he repeated, hoarsely. "True, I had forgotten."

They stood and looked at each other in unutterable, heart-breaking pain, and there was a stillness as of death in the room.

As of death! Aye, was not death in the room? Had they not the death of their hopes and love to mourn for?

"You love me," he said, slowly, in a moment. "Let me think of that. You are his wife; he can take you from me—he has taken you; but your love will be mine still wherever you go. He cannot take that from me—it is mine. Oh! great Heaven," he went on, in a moment, "must we part—loving as we do?"

"Archie—Archie, let me go; they are coming for me," the girl said, piteously, trembling in every limb and white as death.

A low knock came to the door at this moment, and the Earl took Jean's hands in his, looking into her face with hungry, yearning, gray eyes.

"I may kiss you once," he said, in the voice of a man in deadly pain. "There can be no sin in that, Jeanie; for you were mine, and your heart is mine still. Heavens, how pale you are, my child!"

He broke into a despairing malediction; then, seeing Jean shudder and shiver, struggled for calmness again.

"One kiss, my darling," he said, brokenly. "It will be the last."

He drew her into his arms again and pressed his lips to hers in one long, last, lingering kiss.

The door opened softly, and Lord Sholto came in, looking pale and agitated.

Lord Ivor started and lifted his lips from the mouth which he had touched with a passionate force in his despairing embrace, and he released Jean.

"Take her away," he said, hoarsely, putting her hand into Lord Sholto's, as she stood passive, while, despairing before him, and then as his brother-in-law drew her slowly towards the door, he flung himself down upon the couch, covering his face with his hands to shut out sight and sound.

At the door Jean paused, and, turning round, stood still a moment, looking with a heart-broken face at the bent figure, then disengaging her hand from Lord Sholto's she went back a few paces, holding out her arms towards her lover. With a quick gesture of pain, she turned away, putting out her hand to Lord Sholto with an appealing gesture which she understood. He put his arm round her, and as the beautiful head fell upon his shoulder, he led her gently from the room out into the hall.

In the great hall Mr. Blair was waiting; the hall door was open, and the carriage was waiting without.

"Jeannie," whispered Lord Sholto, "try and be brave, dear child. Don't let the servants have reason to suspect anything."

The girl trembled a little; but withdrew herself from the support of his arm and went forward alone, calmly and proudly.

Lady Sholto came out of the library, looking white and trembling. Collins was standing on the steps, while the butler, looking a little mystified notwithstanding all his efforts, was holding open the door. Mr. Blair's profuse generosity had made him rather a favorite with the household at Sholto; but they could not quite forgive him for having won Jean's affection from the Earl; for though they had learnt the marriage, they were unaware of its real facts.

Jean paused for a moment. Lady Sholto put her arms round her and kissed her gently.

"Go to Archie," Jean whispered, softly. "Florie, dear help him to bear it; and when you see his suffering, forgive me if you can."

She released herself from Lady Sholto's embrace and went on.

"I am sorry to have detained you," she said to Mr. Blair, quietly, as she took Lord Sholto's arm down the steps.

"Collins, you must go inside," she said, calmly, to the maid. "Get in," she added, as the woman hesitated; but, obeying her mistress's glance more than her words, she entered the carriage.

Jean followed, and then, leaning forward, she held out her hand to Lord Sholto.

"Good-bye," she said, in a rather constrained voice, with a little tremulous smile. "Bring Florence over to Blair Gates soon."

He touched her hand to his lips in silence.

Mr. Blair entered the carriage, the footman closed the door, sprang on the box, and the husband and wife drove away on the first stage of that life journey they had undertaken together, and which promised such little happiness for either.

CHAPTER XVIII.

HUSBAND AND WIFE—EMILY BRETT.

They had been married now for six weeks; the nine days' wonder was over; people had ceased to talk of the romantic marriage, and all the great people in the neighborhood had called on Mrs. Blair. They had some dim idea that she had behaved badly to the Earl of Ivor; but that must be forgotten, they decided, it would never do to slight Mrs. Blair on that account; so they came one and all, and Jean had received them with gracious, if rather cold, politeness; and they had gone away with the impression that she was very lovely, very beautifully-dressed, very cold, and very unlike the Miss McLeod, whom one or two of them had seen the year before at Sholto Hall.

Jean was, perhaps without exception, the most unhappy woman in the shire. Too proud to show her misery, even to the man who had caused it, she opposed a cold, impenetrable dignity to his advances, although no wife, however devoted, could have done her duty more truly and well to the household, few of whom guessed the state of things. But this cold, calm, contemptuous dignity—the icy tones of her voice when she answered him (for she never directly addressed him)—the look in her eyes when they met his—were, of all things, most galling to Andrew Blair. If she had shown sorrow, if she had been angry, if she had stormed, if she had wept, he would have infinitely preferred it; it was this complete indifference which angered him, which roused him sometimes to fury.

On the morning on which we find them again the breakfast had proceeded in almost complete silence. Jean, at her place near the urn, glancing over her letters, and sipping her tea; while Mr. Blair, reading his paper, glanced up at her now and then, with half reluctant admiration. He did not love her; all the attraction she had possessed for him was over; but he would not help admiring her, and admiring in her too what most repelled him, the calm hauteur and haughty indifference.

She wore a rich, dark wine-colored morning-dress, faced and trimmed with velvet of the same shade, and made in a quaint, half-foreign, eminently graceful manner. She had no other color about her, and the rich, dark shade became her fair complexion and delicate coloring admirably.

Suddenly throwing down his paper, Mr. Blair said, coldly:

"There is something here which will interest you."

Jean made no reply, but she lifted her eyes inquiringly.

"Yes," he went on, harshly: "your old lover has not remained long away. He has returned not only to England, but to Scotland. He is to spend Christmas at Sholto Hall."

A slight start from Jean had not passed unnoticed.

"Indeed!" she said, calmly.

"Are you not glad?" he went on, coldly. "You appear to take the tidings very indifferently."

She made no answer.

"Well," he said, angrily, "why don't you say something?"

"About what?" she said, calmly; although he could see that she was trembling, and his face lighted up joyfully.

Her indifference was disturbed at last. As long as the Earl of Ivor had been absent from Scotland, she could be indifferent. Now——

"Are you not glad to hear of his return" said her husband, with a sneer.

"Very glad!" said Jean, tremulously. "Very glad!"

"And you dare say so to me—to your husband?" he said, with a sudden gust of fury.

Jean faced him haughtily.

"Of course I say so," she said. "I shall be yet more glad to be sure that he has returned, having forgotten that the miserable woman who is your wife had ever the supreme happiness——"

But he interrupted her furiously.

"Take care," he said—"take care! You may go too far, Jean!"

She turned from him with a contemptuous glance.

He resumed his seat quietly, for he had risen in his anger, and there was a short silence.

"It was always my father's habit," he said, quietly, "to keep Christmas merrily at Blair Gates. I propose to follow his example."

She made no reply, but he saw that the shadow deepened on her face, and an expression almost of fear crossed it.

"I propose to keep it right merrily," he went on, calmly, watching her face closely the while. "We will fill the whole house with guests, and give them a ball fit for royalty. Blair Gates never had a fairer mistress. I want to see my taste appreciated as it deserves. You do not speak? Really, Jean, at times you make me wonder if I have married that marvellous being, a silent woman."

"What would you have me say?" she said, calmly, but with beating heart, for his proposal had filled her with anxiety.

"Express your approval of my scheme," he answered. "Of course you approve of it. All women like gaiety."

"I do not approve," she said, slowly.

"Not? And wherefore?"

She hesitated a moment.

"I do not approve," she said, earnestly. "Let gaiety alone this Christmas. What heart have I for gaiety? Why—oh! why do you wish to fill this house with guests to show them the misery which exists here? It will be wiser—believe me, it will be wiser not to do so. Let it alone."

"Your request is an extraordinary one," he said, knitting his brows.

"But you will accede to it?" she said, eagerly.

"I see no good reason for doing so."

She rose from her seat, and crossed over to his side, putting her hand on his arm gently and entreatingly.

"Andrew," she said, pleadingly, "it is the first favor I have asked from you. Take me away. Let us go abroad—where you will—for Christmas. Oh! think how short a time you have given me. I am your wife, it is true; but," she clasped her hands in dreary pain—"but because I wear your ring upon my finger, I do not—I cannot forget! If we go away—I will try—believe me, I will—to do my duty as your wife;"

"You must try to do your duty here," he said, coolly.

"Do you mean that you will not take me away?" she said, with a great horror dawning on her face.

"I do, most certainly."

She retreated from his side with a passionate gesture of pain and horror.

"You will ask them here? You will ask Lord Ivor here?" she said, hoarsely.

"Most certainly. If you do not choose to be sociable, I must be so. If you do not choose to issue invitations for a ball, I will do so."

"You are resolute? You are determined?"

"Quite resolute—quite determined. My mind is made up."

"Very well," she said, calmly. "Remember, it is your own wish, your own doing. If ill come of it, let it be on your own head!"

"If ill come of it! My dear Jean, I have too good an opinion of you to think that any ill should come of it."

"You know that I do not love you!" she said, in a tone of concentrated scorn. "You know that I love him still with my whole heart and soul!"

"I must believe it if you say so," he returned, with a sneering laugh.

"You know that not only do I not love you, but that I hate you—I loathe you! that I should rejoice—Heaven forgive me!—if I saw you dead at my feet! that, if I could, I would kill you!"

"Take care!" said her husband, interrupting her with a laugh; "you are overheard!"

Jean turned quickly. During her speech a woman had entered the room and stood at a little distance from the table, in an attitude of respectful waiting, but with an expression in her face which showed that she was not unmindful of Jean's passionate words.

The color faded from Jean's face as she turned.

"Do you want me, Brett?"

"I beg your pardon, ma'am; Barnsby said you desired my attendance."

"Barnsby was mistaken—I do not!" said Mrs. Blair, haughtily. "You may go."

An evil flash lighted up the woman's face for a moment, and she stood motionless, with her head as haughtily erect as Jean's own.

She was a woman of thirty years of age, or thereabout, and superbly handsome. Altogether, the housekeeper at Blair Gates—for the woman was no other than Emily Brett—was a very beautiful and distinguished-looking personage.

"You may go!" repeated Jean, haughtily; and, with a slight inclination of her head, the housekeeper was turning away, when Mr. Blair's voice detained her.

"Wait one moment, Mrs. Brett," he said. "Will you be good enough to give orders to have Blair Gates ready for company? I intend to fill the house from garret to basement for the New Year. I can depend upon you, of course?"

"Certainly, sir," answered the housekeeper, with another slight inclination of the head. "Is there anything else?"

"Not at present. Mrs. Blair will give you any further directions."

With a slight curtsey, Emily Brett turned to leave the room, and when she had reached the hall an expression of the deepest hatred and dislike crossed her beautiful face, and, turning, she shook her finger at the closed door in warning or menace.

"She hates him," she said, slowly. "She hates him even as I hate him. Ah! no, she cannot do that, for she never loved him as I did! But she wishes him dead; I heard her say so, and I shall not forget the words—'I should rejoice to see you dead at my feet! I would kill you if I could!'—These are the words she used, and I shall not forget them."—*To be continued.*

PRAKRAMA.

V.—Varieties of Paper, etc.

To those who have never studied Philately it may seem surprising that the paper on which stamps are printed should be one of the facts about them to be noticed, but some stamps show such interesting peculiarities of this kind, that few branches of the science have more attractions for the attentive Philatelist, and many make a specialty of it. Stamps printed on colored paper are of frequent occurrence among the issues of some countries, and this sometimes enhances the effect by a pleasing contrast. Almost every conceivable shade is found among these varieties, the 3-cents Sarawak receipt stamp which is printed in black on gray paper being a curious though hardly a handsome example. Again: the paper may be printed over with a pattern of some kind before the stamp is impressed. Where this is of the same color as the stamp it may be confounded with the subsequent impression, but it can be distinguished when found to show slight variations in different specimens. In some instances stamps are found with inverted groundwork, caused by the printer's taking up the sheet by the wrong end. The postage stamps issued by the German authorities during their occupation of French provinces (usually called the Alsace and Loraine stamps, although the correctness of the name is very questionable) are the most celebrated instance of this, and command quite fancy prices; but I hardly think they deserve collection, being of course accidental. The groundwork is often of a different color from the stamp, and in such cases the latter is frequently black. The United States Tobacco and Cigar stamps have been printed on mottled paper, and the postage and fiscal stamps of Brazil on chemical paper. A few postage stamps occur on paper crossed by colored silk threads having a definite arrangement, and a large proportion of the revenues of the United States are or have been printed on paper containing fibers of colored silk.

Instances occur in which stamps have been printed on other materials than paper. Goldbeaters' skin was used for this purpose by Prussia; several varieties of United States Tobacco stamps exist on tin foil; and a still more curious instance is the extremely rare Cotton stamp issued in this country in 1870. It consists of a thin arrow-shaped brass strip ten inches long which bears the inscription.

Many of the varieties of paper described have been adopted as safeguards against counterfeiting, and there is still another very effectual method—watermarked paper. The watermark is produced when the paper is being made, and appears nearly transparent when the stamp is held between the eye and a light. Though no very elaborate designs can be produced with sufficient distinctness by this process, some of those which have been used are quite handsome.

A few instances may be mentioned in which the backs of stamps have been impressed either with a single numeral or a more or less elaborate pattern, which being covered with the gum would only appear after the stamp had been used. Many persons might be entirely ignorant of its existence, and the genuine stamps could thus be distinguished by the officials from imitations. The "Contribucion Federal" (Federal Contribution) stamps of Mexico are numbered consecutively like bank notes, the numbering however being on the back. In some instances the gum used on the stamps has been peculiar, and this should of course be noticed.

VI.—The Separation of Stamps.

Various ways have been adopted for facilitating the separation of stamps and sometimes (particularly among old issues) the method has been left entirely to the purchaser. The first advance on an unperforated stamp is one which is issued pierced. Rouletting and hole-perforation exhibit further improvements, and in addition to these a few stamps are found pierced on colored lines or in parallel lines. These varieties may properly be collected by advanced Philatelists, but it would not be advisable for the beginner to attempt the collection of any except perforated and unperforated. In a few instances the stamps have been cut out with a die; the star-shaped 4-cent. Proprietary stamp of J. C. Ayer & Co., being perhaps, the most remarkable example.

VII.—What Varieties Should be Collected.

The tendency among Philatelists seems now to be to collect everything that may be construed into being a variety, but I believe a little moderation in this particular will be advisable, unless the collector has an inexhaustible purse to draw on. I will then state my own views on the subject, observing, however, that if the reader will consult a dozen Philatelists he may expect just one dozen different answers.

The first suggestion I would make is that when the inscriptions on a stamp are type-set errors of spelling, they are undeserving of collection. Many stamps have been re-engraved, and in other instances several varieties occur in the same sheet. As these are presumably accidental, I would not recommend their collection unless very noticeable. The colors of stamps vary somewhat, and if a very light and a very dark specimen can be secured, it will add considerably to the interest of a collection. Where the difference in color is so marked as to be presumably an intentional change, the varieties produced are essential.

Varieties of watermark may interest some Philatelists, but should be disregarded by beginners. Surcharged stamps frequently show varieties of type and color in these inscriptions; and I am inclined to recommend their collection. The revenue stamps of Peru surcharged with the names of the towns in which they are used present another debatable point. Should all of these varieties be collected? The supply of these stamps is so limited, that the collection of all the surcharges is nearly or quite impossible, and for this reason, if for no other, seems to me inexpedient.

The collection of varieties is carried to the greatest extreme by those who make stamped envelopes their specialty, some even accepting the varieties of watermark, quality of paper, size of envelope and shape of flap. To me these seem trivial; their collection is expensive, and they usually divert the Philatelist from more valuable researches. The beginner will find that the design and color of the stamp, and the color of the paper, offer an ample field for study.

VIII.—Essays and Proofs.

Essays and proofs are varieties never issued to the public. Though not without value as aids to a comprehensive study of Philately, they should be regarded by the beginner, if he accepts them at all, merely as curiosities. They never possessed an intrinsic value, and lacking this essential attribute of a stamp, only exemplify the ideas and experiments of engravers and printers. Stamps sometimes occur with the word "specimen" printed on them. The United States official stamps are all sold in this condition to collectors foolish enough to pay face value for them. As they could never be used for postage, they are no more *Postage Stamps* than a collection of counterfeits would be. Stamps which have become rare have often been reprinted, but as the philatelic value of these is very much inferior to that of original impressions, they should not be accepted when the latter are attainable. In a future article, I will make a few practical suggestions relative to the arranging and mounting of stamps, the detection of counterfeits, &c.

SPLITTING PAPER.

It is one of the most remarkable properties of that wonderful product, paper, that it can be split into two or even three parts, however thin the sheet. We have seen a leaf of the Illustrated News thus divided into three parts, or three thin leaves. One consisted of the surface on which the engravings are printed; another was the side containing the letter press, and a perfectly blank piece on each side was the paper that lay between. Many people who have not seen this done might think it impossible; yet it is not only possible but extremely easy, as we shall show.

Get a piece of plate glass and place on it a sheet of paper; then let the latter be thoroughly soaked. With care and a little dexterity the sheet can be split by the top surface being removed. But the best plan is to paste a piece of cloth or strong paper to each side of the sheet to be split. When dry, violently and without hesitation pull the two pieces asunder, when part of the sheet will be found to have adhered to one and part to the other. Soften the paste in water and the pieces can be easily removed from the cloth.

The process is generally demonstrated as a matter of curiosity, yet it can be utilized in various ways. If we want to paste in a scrap book a newspaper article printed on both sides of the paper, and possess only one copy, it is very convenient to know how to detach the one side from the other. The paper when split, as may be imagined, is more transparent than it was before being subjected to the operation, and the printing ink is somewhat duller; otherwise the two pieces present the appearance of the original if again brought together.

Some time ago the information of how to do this splitting was advertised to be sold for a considerable sum. We now impart it to all our readers gratuitously.—*Design and Work.*

THE TRUE STORY OF "ROBIN ADAIR."

The hero of "Robin Adair" was well known in the London fashionable circles of the last century by the sobriquet of the "Fortunate Irishman;" but his parentage and the exact place of his birth are unknown. He was brought up as a surgeon, but "his detection in an early amour drove him precipitately from Dublin," to push his fortunes in England. Scarcely had he crossed the Channel when the chain of lucky events that ultimately led him to fame and fortune commenced. Near Holyhead, perceiving a carriage overturned, he ran to render assistance. The sole occupant of the vehicle was a "lady of fashion, well known in polite circles," who received Adair's attentions with thanks, and, being lightly hurt, and hearing that he was a surgeon, requested him to travel with her in her carriage to London. On their arrival in the metropolis she presented him with a fee of 100 guineas, and gave him a general invitation to her house. In after life Adair used to say that it was not so much the amount of the fee, but the time it was given, that was of service to him, as he was then almost destitute. But the invitation to her house was a still greater service, for there he met the person who decided his fate in life. This was Lady Caroline Keppel, daughter of the second Earl of Albemarle and of Lady Anne Lennox, daughter of the first Duke of Richmond. Forgetting her high lineage, Lady Caroline, at the first sight of the Irish surgeon, fell desperately in love with him, and her emotions were so sudden and violent as to attract the general attention of the company. Adair, seeing his advantage, lost no time in pursuing it; while the Albemarle and Richmond families were dismayed at the prospect of such a terrible *mesalliance*. Every means were tried to induce the young lady to alter her mind, but without effect. Adair's biographer tells us that "amusements," a long journey, an advantageous offer, and other common modes of shaking off what was considered by the family an improper match, were already tried, but in vain. The health of Lady Caroline was evidently impaired, and the family at last confessed, with a good sense that reflects honor on their understanding as well as their hearts, that it was possible to prevent, but never to dissolve an attachment; and that marriage was the honorable and, indeed the only alternative to secure her happiness and life. When Lady Caroline was taken by her friends from London to Bath, that she might be separated from her lover, she wrote, it is said, the song of "Robert Adair," and set it to a plaintive Irish tune that she had heard him sing. Whether written by Lady Caroline or not, the song is simply expressive of her feelings at the time, and as it completely corroborates the circumstances just related, which were the town talk of the period, though now little more than family tradition, there can be no doubt that they were the origin of the song.—*New Castle Courant.*

What's this dull town to me?
Robin's not near,
What was't I wish'd to see?
What wish'd to hear?
Where's all the joy and mirth,
Made this town a heaven on earth?
Oh! they're all fled with thee,
Robin Adair.

What made th' assembly shine?
Robin Adair.
What made the ball so fine?
Robin was there.
What,—when the play was o'er
What made my heart so sore?
Oh! it was parting with
Robin Adair.

But now thou'rt cold to me,
Robin Adair.
But now thou'rt cold to me,
Robin Adair,
Yet he I loved so well
Still in my heart shall dwell.
Oh! I can ne'er forget
Robin Adair.

Fairy Pipes.—It has for some time been a matter of dispute amongst antiquaries whether the custom of tobacco-smoking originated in the Eastern or the Western continent; but of late years America has been generally accepted as the birthplace of the art. The discovery, however, of large numbers of pipes, apparently of considerable age, in Great Britain and various parts of the Continent, has recently given rise to new and extravagant conjectures as to the antiquity of the tobacco-pipe in Europe, and a certain class of archæologists have arrived at the conclusion that the luxury of the pipe was known to the inhabitants of the Old World, long before the discovery of the New. Tobacco-pipes of clay, exceedingly diminutive in size, have been found in great numbers in the British Islands. In England these are popularly termed "Fairy Pipes;" in Scotland they are known as "Keltie" or "Elfin Pipes," whilst in Ireland they are called by the peasantry "Dane's Pipes." They are also designated in different parts of the kingdom by the names of "Mab Pipes," "Old Man's Pipes" and "Carl's Pipes." Irish legends attribute them to the fairy dwarfs, and in certain localities where pipes are particularly abundant, these mischievous little men are believed to have used them in smoking on festive occasions.

The Fairy Pipes of Ireland, illustrate probably, the most ancient form of pipe found in the British Islands. It is difficult to assign positive dates to them, though some of the earliest have the names of their makers stamped upon them. The mode of using tobacco in those days rendered the contents of the smallest of these Fairy Pipes a sufficient dose. This method has been described by an old writer, Oviedo, who visited America shortly after its discovery by Columbus, and who wrote a book which was published in Spain in 1526. He says: "The Caciques and principal men have small hollow sticks about a span long and as thick as the little finger. They are forked but both forks and stalks are of the same piece. The fork ends are inserted in the nostrils and the other end is applied to burning tobacco leaves which are rolled up in the form of pestils. The men then inhale the smoke till they fall down in a state of stupor, in which they remain as if intoxicated, for a considerable time. Such of the Indians as cannot procure a forked stick, use a reed or hollow cane for the purpose of inhaling the smoke.—*American Antiquarian.*

Alum not Allowed in English Bread.—George Allen, baker, of Walsall, was summoned at the instance of Mr. C. W. Stephens, sanitary inspector, for selling an article of food not compounded of the ingredients demanded, and also for selling bread containing alum, so as to be injurious to health. The inspector stated that he purchased a two-pound loaf at the shop of defendant, and forwarded it to Mr. E. W. T. Jones, the borough analyst, whose certificate of analysis he produced. The certificate showed that the loaf was adulterated with alum in the proportion of 36 grains to the four-pound loaf, and that such adulteration would tend to render the bread indigestible. Dr. J. Maclachlar, medical officer of health, gave it as his opinion that the quantity of alum stated would be likely to make bread injurious to health. Addressing the bench for the defence, Mr. Nanson said he did not dispute that there was alum in the loaf, but he urged that none was put in by defendant or at his establishment, and that the flour was used just as it came from the miller. The bench, after hearing the defendant, considered the case proved, and imposed a fine of £5 and costs on the first summons, the other being withdrawn. The fine and costs amounted to £7.14s.

MR. FROUDE ON ARISTOCRACY.

In all nations which have achieved any kind of eminence, particular families have stood out conspicuously for generation after generation as representatives of political principles, as soldiers or statesmen, as ruling in their immediate neighborhoods with delegated authority, and receiving homage voluntarily offered. They have furnished the finer tissues in the corporate body of the national life, and have given to society its unity and coherence.

Hitherto no nation has been able to sustain itself in a front place without an aristocracy of some kind maintained as the hereditary principle. So far the answer of history is uniform. The United States may inaugurate a new experience. With the one exception of the Adamses, the great men who have shown as yet in American history have left no representatives to stand at present in the front political ranks. There are no Washingtons, no Franklins, no Jeffersons, no Clays or Randolphs now governing States or leading debates in Congress. How long this will continue, how long the determination that all men shall start equal in the race of life will prevail against the instinctive tendencies of successful men to perpetuate their names, is the most interesting of political problems. The American nationality is as yet too young for conclusions to be built on what it has done hitherto or has forborne to do. We shall know better two centuries hence whether equality and the ballot-box provide better leaders for a people than the old methods of birth and training.

This is the language of Mr. Froude in an article in the September number of "Fraser." It would be curious to compare with this statement a history in detail of the aristocratic families of the European monarchies. If civilization has advanced; if legislation is wiser to-day than it was in the past; if justice is more uniformly administered; if, as a whole, right ideas of government have superseded wrong ideas of government; if life and property are more secure; if personal liberty is better guaranteed now than formerly; if despotic rule has yielded to the authority of law; if there are rights, privileges, protection, security, legal safeguards, religious liberty, social advancement—if in all these things the nations of to-day are better off than the nations of the past, how much of all these beneficent results do we owe to those aristocratic leaders whom Mr. Froude thinks so indispensable for our prosperity and eminence?

We apprehend that a close examination of history would show that pretty nearly all the modern world has accomplished in political advancement and reform has been won directly in the face of great hereditary families. It is no doubt true that the great families have produced a few statesmen who have struggled to arrest the exercise of despotic power on the part of sovereigns, but as a rule family leaders have not been leaders of the people beyond their own tenantry, have not identified themselves with necessary reforms, have done little to secure for the world those precious boons of religious and political liberty which England now enjoys. The great families have done some good, however. Their conservative influence has at times been useful; they have doubtless checked disorder and prevented unwise haste, and contributed a good deal to the social balance and well being of society; but, when Mr. Froude declares them necessary to the achievement of national eminence, one can but wonder that before writing that sentence he did not cast his eyes backward. The aristocracy has contributed its share to warlike eminence, but everything really great in Mr. Froude's beloved England has come of the commonalty: the grand energy that has carried its ships to every sea, that has peopled vast colonies, that has built up the greatest industries the world has ever seen; the resolute and turbulent spirit that has conquered the right of free government; the righteous forces that have made its jurisprudence respected and studied by all mankind; its superb and copious literature in every department of thought—all these things are products of energies that have found very little support in the hereditary influence of great families. If Mr. Froude argues that an hereditary aristocracy is indispensable to the conservative order and permanent welfare of nations, it may not be easy to gainsay him; but it seems to us obvious that the forces which give eminence to a community in all worthy things are the energies of the people rather than the restrictive tendencies of a cautious aristocracy.—*November Appletons' Journal.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

THANKSGIVING.

MRS. M. G. RAND.

Bills of Fare for Thanksgiving Dinner.

No. 1.

FIRST COURSE.
Oyster soup, crackers and celery.

SECOND COURSE.
Roast turkey, cranberry sauce, mashed potatoes and turnips.

DESSERT.
Coffee, cake, and fruits.

No. 2.

FIRST COURSE.
Beef soup, with bread and celery.

SECOND COURSE.
Fresh fish, baked or boiled, stewed tomatoes and pickles.

THIRD COURSE.
Roast turkey, currant jelly, mashed potatoes, squash.

DESSERT.
Coffee, cake, pumpkin pie, cheese, fruits.

We have just entered upon the month in which, according to a national custom, our annual Thanksgiving occurs.

It is, to most of us, a day that is associated with pleasant family re-unions but for those who have made new homes for themselves in the Far West, and are obliged to keep the "feast" alone, the day is full of sadness. With some families, especially New Englanders, the Thanksgiving dinner is the event of the season. The preparation of the meal calls for an undue amount of anxiety and labor on the part of the housewife. She is so fatigued from working beyond her strength, that it is only with an apparent effort she is able to entertain her guests—surely a more plainly prepared meal would be preferable. The dinner too is generally an extravagant affair. Frequently the fanciful and untasted desserts cost as much as a substantial meal.

The day is set apart as one of thanks to the "Giver of all good for His mercies." Would it not be more in keeping with such an appointment to give less attention to feasting? Even then the family need not be deprived of the usual turkey and its desirable accompaniments. There are poor families in almost every community, who have nothing wherewith to keep the Thanksgiving feast. There are also persons in every neighborhood each of whom might, on such an occasion, spare enough from his own store, to provide, at least *one* meal, for one poor family, or person. The *gratitude* of the recipient, could scarcely equal the *satisfaction* of the donor, showing that "it is more blessed to give than to receive."

Pumpkin Pie for Thanksgiving.

One quart of strained pumpkin (squash will answer); one quart of milk; one tea-cup of cream; one tea-spoonful (scant) of salt; two teaspoonsful of powdered cinnamon; two of ginger; one grated nutmeg; two tablespoonsful of dark molasses; sugar, according to taste; two large spoonsful of flour; five beaten eggs.

TO MAKE:—Put the stewed pumpkin into a large bowl: add the flour, molasses, salt and spices, and beat thoroughly. Then add the eggs, milk, cream and sugar, and beat again. If the mixture seems too thin, add more pumpkin; if too thick, add milk. Bake in pie tins, lined with paste that is not very rich. Bake until solid in the center, and of a rich bronze color.

Thanksgiving Cake.

Three cups of very light bread dough; three cups of sugar; one cup of butter; three eggs; one small nutmeg; raisins; one teaspoonful (scant) of soda, dissolved in a little hot water.

TO MAKE:—Rub the butter and sugar together; add the eggs and spice; then the dough, and mix all thoroughly. Add the soda and beat it well into the dough. Flour must be added to make a rather thick batter—if too thin, it will not bake well. Bake in two loaves. Leave one plain. In the other, put two cups of stoned raisins which have been soaked in brandy over night. The dough for this cake should be raised with *potato* yeast. The cake keeps well, especially if covered with a thin icing. The cake can be baked as soon as mixed, but will be lighter if allowed to stand in a warm place for half an hour before baking.

Clinton Co., Iowa.

THANKSGIVING DESSERTS.

Fruits and Nuts.

A RAISED center-piece of mixed fruits is an appropriate and delicious dessert, as well as an indispensable ornament to an elegant dinner-table.

Apples and Nuts.

Polish the apples and crack the nuts.

Snow Flakes.

Grate the cocoa-nut into a glass dish, and serve with jellies or cream and powdered sugar.

Grapes, Chestnuts and Apples.

Arrange the grapes and apples in fruit dishes. Boil the chestnuts in salted water for ten or fifteen minutes, drain, stir a little butter into them, toss up till dry and serve in a deep dish.

Fried Bananas.

Peel off the skin, slice lengthwise, fry in butter and sprinkle with sugar.

Ambrosia.

One-half dozen sweet oranges peeled and sliced; one large cocoa-nut, grated. Alternate the layers of cocoa-nut and oranges. Sprinkle powdered sugar over each layer.

Nuts and Raisins.

Crack the nuts and select nice bunches of fresh, plump raisins. For dessert use, the "Muscatels," and "London Layer" take the preference.

Orange Pyramid.

Cut the peel into eight different pieces, from the stem downward—careful not to cut through into the juice cells. Peel each piece down to little more than half way, and bend sharply to the right. Pile the oranges in the form of a pyramid on a high fruit dish.

Grape Pyramid.

Build up of Malagas—an imported grape—Delaware and Concords.

CREAMS.

Whipped Cream.

Place the cream where it will become thoroughly chilled, and whip with an egg-beater. Should the cream be difficult to bring to a froth, beat with it the white of an egg. While whipping take off the froth and place on a seive, re-whipping all that passes through. Sweeten and flavor. Fill jelly glasses one-third full of currant jelly, and fill up with the cream.

Spanish Cream.

Dissolve one-half box of Cox's gelatine in half a pint of cold milk. Into one quart of boiling milk stir a small teacupful of sugar and the beaten yelks of four eggs. Pour this upon the dissolved gelatine. Flavor when cool or add a small wine-glass of wine. Turn into cups and cover with a merangue made of the whites, half a cup of powdered sugar and a little extract. Brown in the oven. Eat ice-cold.

Italian Cream

Soak one-third of a box of gelatine in a little cold milk. Bring to a boil one quart of rich milk; then stir in a cup of sugar, the beaten yelks of six eggs and the dissolved gelatine. When it begins to thicken, take from the fire and pour over the beaten whites. Whip together; flavor to taste and pour into a form, Make a few hours before needed.

PUDDINGS.

Frozen Pudding.

Make two quarts of rich, boiled custard; add to it two tablespoonsful of gelatine dissolved in a little milk. Put into an ice-cream freezer, and as soon as it begins to freeze, stir in a grated cocoa-nut and a few blanched almonds. Let it become solid.

Fruit Pudding.

One cup of sweet milk; one cup of molasses; half a cup of melted butter; one beaten egg; one cup of stoned raisins; half a cup of currants; two cups and a half of flour; half a teaspoonful of soda. Mix well together, salt, pour into a mold and steam two hours. Eat with hard and liquid sauce. Pour over a little brandy and light just before sending to the table.

Ribbon Blanc-Mange—A Pretty Dish.

Dissolve one ounce of gelatine (Cooper's) in a small cup of milk. Put a quart of rich, new milk over the fire, and when it boils, sweeten to taste; add the dissolved gelatine, and boil five minutes, being careful not to burn. A "double" kettle or a tin pail placed in a kettle of boiling water should be used. Strain through a salt bag—washed and dried—into four bowls, an equal quantity into each. Into one stir enough grated chocolate, mixed to a paste with a little milk, to make a rich brown color. Into the second stir the beaten yelk of an egg. The third a little cranberry juice. The fourth leave white, and flavor with lemon. Flavorings may be added to suit the maker. The chocolate may be flavored with vanilla; the cranberry with rose, etc. When the blanc-mange begins to cool and congeal, dip a mold into cold water; pour in half of the rose, then the white, next the yellow and brown. Again the rose; the others following as before. Make the day before it is to be eaten.

BRIEFLETS.

"WHAT fools these mortals be." There is some truth in that. . .

Oh, dear, what can the matter be?
Oh, dear, what can the matter be!
Oh, dear, what can the matter be?
Johnny's *so* sick of the Fair!

. . . Rye may still be sown to plow under in spring. . . If you have nothing else to do, gather leaves. . . Cions for grafting in the spring may now be cut and preserved in sand in a cool cellar. Bevel one end, mark the name of variety in pencil. . . Friends of the Brighton Grape are multiplying. . . A report is made to the California Academy of Sciences that sulphate of iron (copperas) is a remedy for mildew and grape-rot. A mixture of four pounds to five of water is applied to the stems of the vine. . . Lard and resin make a good varnish that may be applied to all metal surfaces to prevent rust. . . A regular contributor to the American Agriculturist writes to that paper as follows: "I must say I believe in getting the farmers out to the fairs. If they will not come to the sober matter-of-fact, strictly agricultural show, let us give them something that will draw. A few horse-trots, side-shows and even a rope-dancer are harmless." Oh, oh! what's the use of splitting hairs? Add "a bar-room, a ten-pen alley, a billiard room, a cockpit and a bull-fight." . . "It may appear a little strange," says Mr. Roe in Scribner's Monthly, "that the luxurious Romans who fed on nightingales' tongues and peacocks' brains, and scoured earth and air for delicacies, should have given but little attention to the Strawberry." . . If Mr. Roe were restricted to *one* variety of Strawberry, he would take Triomphe de Gand! . . . . An establishment near Paris works 30 incubators, and up to September of this year has "turned out" 42,000 chicks! . . Our monthly magazines are talking a good deal about agriculture, which, as a straw, shows which way the wind blows. . . Writes a friend of the RURAL, who has, himself, been eminently successful in improving his stock, "The importance of using pure-bred males for the purpose of speedily improving the live stock of the country, and consequently increasing its value, cannot be too strongly impressed upon our farmers and stockmen." . . Under the United States law admitting, free of duty, animals imported for breeding purposes, it has lately been decided by court of law that grade animals might come under the provision of the Act, inasmuch as the *bona fide* intent and purpose for which animals are imported, whether good or inferior stock, must decide the question of their liability to duty. The United States Treasury has appealed the case to the United States Supreme Court, insisting that the exemption applies only to choice stock. . . Prof. J. P. Sheldon, in "Dairy Farming," thinks that the quantity of cheese, if not of butter, made in the British Isles, is yearly diminishing, and that it is not improbable that in the course of time Englishmen may depend almost wholly on foreign supplies of cheese, and to a very great extent, on foreign supplies of butter; their own dairy farming being chiefly devoted to the milk trade. . . The Anglo-American Cattle Company is the name of an English association that expects to realize immense profits from breeding and purchasing cattle on our Western prairies. Their agent says he has already purchased in Kansas 103 thoroughbred bulls and is acquiring 2,000 heifers and as many steers, from which a profit of from $35,000 to $40,000 is expected the first year! . . There's a dispute with regard to success or failure of Percheron horses in Ohio. Wallace's Monthly insists that they have proved failures; the National Live Stock Journal maintains that they have been eminently successful in improving native stock on which they have been crossed, and that though their prices are lower now than a few years ago, when all prices were high, they sell to-day at higher figures than any horses except the speediest on the running or trotting turf. . Chas. Miller, of Ionica, La Salle County, Ill., has just bought of the Messrs. Smiths and Powell, Syracuse, N. Y., the lately imported Clydesdales stallion Donald Dennie, a beautiful dark dappled brown of great size, fine form and action; and also the three-year-old Hambletonian stallion, Power's Hambletonian by Ashbert Bonner, by Rysdyk's Hambletonian, a dark bay of elegant style, with three Hambletonian crosses and 20 crosses of Messenger blood. Both these horses are pretty sure to be heard of, so soon as their foals shall have time to show their mettle.

News of the Week.

MISCELLANEOUS.

MONDAY, November 10, 1879.

In the elections on Tuesday last the Northern States gave solid Republican gains, and the Southern won solid Democratic victories. In this State Cornell, Conkling's nominee, was elected governor by about 40,000 majority. Kelly received about 70,000 Democratic votes, which lessened Robinson's support by at least that figure, thus insuring his defeat. The rest of the State ticket is still in doubt, and it will require the official count to decide who are elected. Both the Senate and the House are overwhelmingly Republican, which will insure the election of a Republican United States Senator, instead of Kernan. In Conn. the Republicans have also elected a majority of both Houses of the Legislature and will send a Republican to the United States Senate instead of Barnum. In Pennsylvania they have carried the State by about 60,000 majority, which entitles them to a U. S. Senator in place of Wallace; while in Ohio, Garfield will probably succeed Thurman, or if he doesn't, some other Republican will. In New Jersey, they have also gained pretty heavily, and swept Kansas and Nebraska. In Virginia they hold the balance of power between the two parts of the Democratic party, one of which insists on paying the State debt in full, while the other wishes to adjust or scale it. Maryland has gone Democratic by a certain but decreased majority, and Mississippi is solidly Democratic.

Special Agent Adams reports that the Government's demands for the surrender of the Ute Indian murderers will be complied with. A commission consisting of Gen Hatch, Chief Ouray and Adams met at Uncanpahgree, Col., on the 8th to investigate the White River Utes to meet there. Gen Adams went to Denver on Tuesday last to take testimony from Mrs. Meeker and the other female captives. Mrs. Meeker is not expected to survive the hardships she has gone through. The Colorado press generally urge that the Indians be killed off, and their reservations confiscated and thrown open to miners and settlers. The crusade assumes a political aspect, and will play an important part in the Presidential campaign and the next Congress. The hostility against the Indians is something unparalleled. "No quarter" is the cry, and the only Utes who have any chance for justice are Ouray, the head chief who interposed in favor of the captives, his wife, Chepeta, and his sister Susan, the wife of Johnson, who tended and greatly protected Mrs. Meeker, her daughter and Mrs Price and children. The mines of the Ute reservation are richer than at first supposed, and the governor will be pressed to call out the militia to quell the war which will follow if the miners crowd, hunt and bush-whack as they threaten. Agent Adams says that he made no pledges to the Utes, at the late meeting, except to promise to stop the troops' advance. At the council some chiefs wanted to continue the fight. Sapa-ranora made a fiery speech announcing that if the Utes did not yield to Adams he would join the white soldiers. Ouray has ordered the hostiles to meet him in ten days. Adams believes that about 25 of the hostiles will be executed.

There will be in the neighborhood of 4,000,000 pounds of grapes shipped from the Keuka lake region, Steuben Co., N. Y., this year. There is likewise a very large crop in the Seneca lake country. It is said after this year new and faster boats will be put on these lakes to transport the crop. An experienced apple buyer estimates that 150,000 barrels will be bought at Lockport this season, and that the crop is about one and a half times larger than usual. The Central Pacific railroad company, under the Thurman act, is required to pay into the sinking fund for the year ending December 31, 1878, about $1,000,000, and for the current year about $900,000. The recent decision of the Supreme Court put a stop to all efforts to resist payment. The Union Pacific company, in consequence of the large amount of business transacted for the government, will not be called upon to pay any cash to the sinking fund during the current year. During the year 1879 closing with August, not less than sixteen million acres of government lands were taken up by homestead entries alone, and fully fourteen million acres of new lands were sold to settlers. It is estimated that half a million people settled upon the new lands in 1878, and the number for the present year promises to be even greater. The drought is causing very serious trouble here and there throughout the country, not only in agricultural districts but also in some manufacturing centers, at Paterson, N. J. Nearly four thousand operatives are out of employment because the mills are unable to run with low water.

Secretary Sherman's estimates for the next fiscal year ask $7,000,000 more than requested last year—three millions for taking the census and two millions for pensions. Edward S. Stokes, the slayer of Jim Fisk, has just returned from San Francisco to this city. He is said to be but the shadow of his former self; his hair and mustache are white, and he looks like a man of 50 years.

FOREIGN.

The cable dispatch that Austria has interfered in the settlement of the Egyptian debt means something more than a grumble, from Vienna; it is the extension of the influence of the double alliance between Germany and Austria over the Levant, and threatens the close corporation management of Eyptian affairs hitherto carried on by France and England, but with what result it is impossible to say. It may end in giving England exclusive control through her relations with the alliance. The precise point at issue arises from the fact that the khedive borrowed freely on account of Egypt, pledging its revenues, and on his own private account, pledging his personal estate. The "international" tribunal decided that, as every piaster the khedive was worth had been made out of Egypt, his private estate was liable in equity to the Egyptian bondholders. The khedive watched his time, kicked out the court of Egypt, and paid neither set of creditors. Since then the policy of France and England toward Egypt has been apparently under the control of the Rothschilds, and directed in favor of the Egyptian bonds, of which the great bankers are large owners.

Private letters from Russia state that immense activity prevails in all the arsenals of the empire. A full force of workmen in all these establishments is employed working on full time. A number of guns and ammunition are being turned out ready for use and deposited in neighboring magazines. It is believed in St. Petersburg and in Moscow that this activity foreshadows some step soon to be taken on the part of Russia which will plunge Europe into a general war. Louis J. Jennings, the World's London correspondent, sent at midnight Saturday this cable dispatch: "It is rumored to-night in well-informed circles that Russia is preparing to declare war against England. No certain information can be obtained on the subject. Official personages are reticent, but the probabilities are that the markets will be disturbed by the

story on Monday. At the municipal elections throughout England, Saturday, wherever political considerations were involved, the Liberals were mostly triumphant. In one or two very important boroughs the balance of power was completely reversed in favor of the Liberals. In Liverpool, where the town council stood 42 Conservatives and 22 Liberals, it now stands 34 Conservatives and 30 Liberals. Representatives in the Spanish cortes from Cuba and Porto-Rico have decided to ask the ministry to present to the legislature, simultaneously with the bill for the abolition of slavery, bills for the reform of the tariffs and commercial relations between Spain and the colonies. If these demands are not conceded, the members talk of withdrawing from the next legislature. The epidemic of typhoid fever and measles at Cape Clear, Ireland, continues to extend. One hundred cases were reported on Saturday. Many of the inhabitants have left.

The peculiar condition of the relations between Germany and Russia is still the subject of much discussion in governmental and diplomatic circles. While the feeling between the two governments is still by no means cordial, there is little doubt that a better understanding has been reached, and the friendly sentiment between the two empires is increasing. The German ambassador at St. Petersburg has recently had an interview with Prince Gortschakoff relative to the formal complaints made by Germany concerning the immense Russian army maintained on the frontier, and particularly the large force of cavalry. Satisfactory explanations were made, and the apprehensions of the German government dispelled. Germany and all the European powers heartily approve the promptness of Great Britain in demanding of the Porte the prompt fulfillment of its agreement concerning reforms in Turkey. The dispatch of the fleet to Beska bay and the vigorous language of Minister Layard have had the desired effect, and the Sultan sullenly submits to the demand that the stipulations of the Berlin treaty be immediately carried into practical effect. The reports of a probable rupture of the relations between Great Britain and the Turkish government are regarded as entirely sensational and unfounded. Prince Hohenlohe, the German ambassador to France, will have an important interview with minister Waddington immediately upon his return to Paris. The Czarowitz is expected to visit Berlin the latter part of the present week, and afterwards Vienna. The emperors of Germany and Russia are also to meet.

In Ireland the land agitation is aggravated by a threatened famine in the Southern part of the country, and an outbreak of contagious maladies here and there. In England business is improving. The farmers are helped by the advanced price of farm products there as well as here; manufacturers are aided by the increased trade with this country which our more prosperous times enable us to sustain; and the outlook generally is considered less gloomy, though hardly bright yet. In France the matter that excites chief interest now in home affairs, is the election to the Senate of Marshall Canrobert, from the Department of Lower Charente, on avowedly Bonapartist principles—which shows that imperialism did not perish in the Zulu country with the son of Napoleon III. In view of the short harvests in some parts of Germany, it is not improbable that Bismarck will delay the imposition of that tax on imported cereals, which the late laws authorized after January 1, next. In Spain public attention is divided between rejoicings over the approaching marriage of the young king, and mourning over the 3,000 or 4,000 deaths, and the enormous losses of property caused by the recent floods in Murcia and a couple of other Southern provinces. In Italy the republican faction, whose life is one of excitement and conspiracy, is hotly agitating the recovery of Trieste from the Austrian yoke; but the latter power, strengthened by its late treaty with Germany, is pretty sure to hold as tight a grip on Trieste as Germany intends to hold on Alsace and Lorraine.

IF SUCCESS be the true test of merit, it is certainly a settled fact that "*Brown's Bronchial Troches*" have no equal for the prompt relief of Coughs, Colds and Throat troubles.

Use Walter Baker & Co.'s CHOCOLATE if you desire the *best* in the market. The verdict of experts, both in Europe and America, has for many years testified to its great excellence.

Boils, Pimples, Freckles, Rough Skin, eruptions, impure blood, Hop Bitters cure.

Prevent crooked boots and blistered heels by wearing Lyon's Patent Metallic Heel Stiffeners.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Nov. 8, 1879.

BEANS AND PEAS.—The speculative movement in beans has not subsided, and buyers are showing strong confidence by purchasing largely to arrive. There is besides enough regular business to help fasten the advanced rates. Green peas are further in sellers' favor with sales at the improvement, quoted, $2; Southern B. E. peas quiet and lower; $2.30@2.35 per 2 bush. bag. For field peas either Ca. or Mich. there is no late quotation. Old marrow beans, $1.85@1.95; new, $2.05@2.10; medium, $1.80@1.85; pea, $2@2.05; white kidney, $1.80@2.10; red do., $1.90@2, primo; poor, $1.80@1.85; black, $2.

BEESWAX.—Has a high inquiry and 21½@22½c. quoted for Western and Southern.
Exports for week, 6,156 lbs.

BROOM CORN.—There is a quick market for the upper grades, and otherwise a fair business.
Brush and short broom, choice, per lb., 5½@6½c.; do., common to good, 4½@5½c.; hurl, good to choice, 4@5c.; do., common to fair, 3½@4c.; red and crooked, 2½@3½c.

BUTTER.—Receipts for the week, 39,862 pkgs. Exports, do. 7,400 do. The delightful prerogative of ruling the market for an indispensible item of food supplies is still enjoyed by butter dealers. Customers use the old threat of "looking further" without disturbing the commercial equanimity of the seller, for the latter knows that concessions are not likely to be met with when fine stock is in treaty. The buyer consequently can be safely counted upon to return, especially if he wants to duplicate a line or parcel of stock required by his retail trade. All grades at the close show some advance, creamery and little special dairies showing most firmness.
State, pails and tubs, single dairy marks, fresh ends, choice, 34@35c.; best luvoloes, 32@33c.; good to prime, 29@31c.; fair to good, 26@29c. firkin and tub single dairies, choice, 31@32c.: do., dairies good to prime, 28@30c.; do., firkins, choice dairies, 28@30c.; do. good to prime, 26@28c.; do., fair to good, 24@26c.: Welsh tubs, best invoices, 29@30c.; do., good to prime, 26@28c.; do., fair to good, 24@26c.: State, tubs, poor, 20@23c.; State creamery, best invoices, 37@38c.; do., good to prime, 34@36c.; do., sweet cream, best, 35@36c.; do., fair to good, 30@34c.: Creamery, poor to fair, 25@30c.; Western, imitation creamery, 28@28c.; do., dairy, fresh, extra, 26@28c.: do., dairy, good to prime, 23@25c.; do., fair to good, 21@23c.; poor to fair, 18@21c.; do., best invoices, June, 21@23c.; do., fair to good June, 18@20c.; do., best invoices, late made, 22@23c.; do., fair to good, 19@21c.; do, poor to fair, 16@19c; Roll butter, prime, 25@26c.: do., fair to good, 22@23c.

CHEESE.—The export trade has been slack, the shipments for the week only 9,741 boxes, but holders have been confident and supplies not released except at steady prices. Supplies steadily accumulate.
Quotations are for State factory: Fancy, 12¾@13c.; good to prime, 12@12¾c; fair to good, 11@12c.; half-skimmed at 9@10c.; skimmed at 5@7c. State farm dairy: Fine at 12@12½c.; good to prime at 10½@12c.; fair to good at 9@10¾c.; skimmed at 4@8c. Wis. factory: Fine at 12¾@13c.; good to prime at 11¾@12¾c. Ohio factory: Cheddar, fine, at 12¾@12¾c.; do., fair to good, 10¾@11¾c.: flat, fine, 12¾@13c.: flat, good to prime, 11¾@12¾c.; flat, fair to good, 10@11¾c.: half-skimmed, 8@10c.; skimmed, 3@7c.
Receipts for week, 29,751 boxes; exports, 10,000 do.
Liverpool cable, 60s.; steam freights, 40@42s.

COTTON—Has been active and closed strong at for November, 11.51@11.52c.; December, 11.51c.; January, 11.62c.; February, 11.78@11.80c; March, 11.97@11.97c.; April, 12.12@12.15c.; May, 12.28@12.30c.; June, 12.43@12.43c.; July, 12.54@12.58c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples have a good inquiry, and prices generally are strong. Peaches have a fair sale and are well sustained in price. Small fruits generally are quiet and steady. Exports for week, 651 bbls. dried apples.
New North Carolina apples, quoted at 6¾@8c. for fair; 8¾@9c. for choice; 10@10½c. for fancy sliced. Patent evaporated apples, choice, in cases, 13½@14c.; do. fair to good, 12@13c.; N. Y. State sliced, new, 8@8½c.; quarters, choice 5@5½c.; western quarters, common and old, 4@4½c.; new southern quarters at 4@4½c.; new N. C. peeled peaches at 14@17c., do. Georgia, 12@16c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 10@11c.; new halves at 7c. Blackberries at 10c. for new. Raspberries at 28@29c. Pitted cherries at 18@19c.

EGGS.—Receipts for week, 10,730 bbls.; do. last week, 7,681 do. There is a good demand for prime stock and not a free supply to meet it. The market will be apt to drag until stale lots are out of the way.
Near points, 24@25c.; State and Penna., 23@24½c.; Canadian and Western, choice, fresh, 21½@22c.; inferior or stale W., 19½@20c.; State limed, 17@18c.; W. do., 16½@17c.

FLOUR.—The market does not show radical changes, prices alternately weak and strong, but the fluctuations within 10 to 15c. per bbl. Activity has not been marked, and the export purchases rather moderate.
Latest prices are: $4.75@5.25 for inferior to fancy superfine State; $5.50@5.85 for inferior to good extra do., odd lots and lines; $5.85@6.10 for good to choice do.; $4.75@5.25 for inferior to fancy superfine Ind., Iowa, Michigan, &c.; $5.50@5.85 for inferior to good shipping extra do., and $5.85@6.10 for good to choice shipping extra do.: common to about choice white wheat extras, $6.10@7.00; choice to fancy do. at $7.00@8.15; red and amber winter wheat, inferior to fancy trade and family, at $6.00@7.75; round hoop Ohio at $5.65@6.15, and trade and family brands of do. at $6.25@7.75, the latter rate for very choice; St. Louis, $6.00@7.00 for inferior to very good extra; $7.00@8.50 for very good to very fancy; Minnesota clear, very inferior to fancy, $5.60@7.00; Minnesota "straight," very inferior to fancy, $6.25@8.00 (fancy held higher), and patent poor to very fancy at $8.35@8.75; unsound stock at from $4.50@6.50; city mill extra at $6.25@6.65, ordinary to fancy, for West Indies; do. for England, $5.50@5.85 for poor to choice; do. trade and family extras, $6.35@6.75; do. for South America, No. 2 at $4.00@4.65 for poor to fancy.

FRESH FRUITS.—Exports of apples past week, 14,717 bbls. Canada is also shipping heavily. Cheap rates early in the fall enabled exporters to make a good trial of tender apples abroad, but it will require a good reception of winter sorts to make up for losses. At the moment foreign advices are favorable for sound carrying varieties. Rates here are steadily advancing and the moderate upward movement is supported.
Apples—Kings, $3@3.25; Baldwin, $2.25@2.50; Greenling, $2@2.12; winter mixed, choice, $2@2.25; poor to fair, $1.50@1.75. Cranberries—Capes, $6.25@7.25; other, Eastern, $5@7; N. J., crates, $1.50@2. Pears—Vicars, per bbl., $2@3; Lawrence, $3.50@4; cooking, $1.75@2.50; Boston boxes, $2@4. Quinces, prime, $5@6.50; other, $3@5. Grapes, cases, Catawba, $2@2.25; loose, 3@4c.; Isabella, cases, $1.25@1.50; loose, 2@2½c. New peanuts, hand-picked, per lb., 5¼c.; other, 3½@4¾c. Chestnuts, per bush., $2.25@2.50. Hickory, shellbark, $1.25@1.50; do., Ohio, $1@1.25. B. walnuts, 50c. Pecan nuts, per lb., 9@10c.

GRAIN.—Wheat has been less active and has shown variableness, closing firm. The exports for the week have been 1,100,000 bushels. Latest sales are of No. 2 amber at $1.36¾@1.37¼; do., November, at $1.37@1.37¼; ungraded amber at $1.30@1.36¾; No. 1 white at $1.39¾@1.39¾; do. for November at $1.36¾@1.39; do., December option, at $1.40@1.43; ungraded white at $1.31½@1.36; No. 2 red at $1.37@1.39½; do., November option, at $1.35¾@1.40; do., December option, at $1.41@1.41; do., January option, at $1.45¾@1.43; ungraded red at $1.20@1.37; mixed winter at $1.34¾@1.35; New York No. 2 spring, at $1.30 asked; do., November option, at $1.29; No. 2 northwest, December, at $1.35; ungraded spring at $1.25@1.27¾; No. 3 at $1.26. Rye at 87@89c. for State. Corn is fairly active and closed strong at for New York No. 2 at 57½@58c.; do., November, at 57¾@57¾c; do., December, at 59¾@60¾c.; New York steamer mixed at at 55@55½c.; do. December at 55¾@56¾c., ungraded Western mixed at 57¾@58c.; round yellow at 58c.; No. 3 white at 57c.; No. 3 at 51@55c. Oats are active and closed strong at for New York No. 1 white at 46c.; do., No. 2 white at 43@43¾c.; do. No. 3 white at 42@42½c.; New York No. 1 at 43¾c; New York No. 2 at 43@43¾c.; New York No. 3 at 42@42½c.; New York rejected at 41c.; ungraded white Western at 43@45c.; mixed Western at 42½@43½c.; white State at 44@45¾c; mixed State at 43@44c.; No. 2 Chicago at 43¾c.

HAY AND STRAW.—The arrivals run moderate and the demand continues good, with prices strong.
Shipping hay quoted at 80c.; retail lots at 60@75c. for medium, and 75@90c. for prime; clover at 40@50c. Straw at 70c. for long rye, 45@50c. for short rye and and 45@50c. for oat.
Exports for week, 377 bales.

HONEY.—Outside figures are for small lots. White clover, single comb, 18@19c.; larger boxes, 14@16c.; buckwheat, 12@14c.; extracted clover, 11@13c.; strained, 8@10c.

HOPS.—Emmet Wells in his circular says: "Notwithstanding the intervention of the election holiday, a large business has been done this week, both with brewers and for export account. England draws upon us for over 3,000 bales again this week, the total shipments since September now reaching 35,000 bales, which, for the period of year is unprecedented. Brewers have been quite free buyers at from 40@45c., and a few sales are reported as high as 48c. and 50c. for extra choice lots, but we hardly feel warranted in quoting at over 47c. for choice State hops."

	Bales.
Receipts for the week.....	8,151
Total receipts since September 1, 1879.....	53,392
Total receipts for same period in 1878.....	16,355
Export clearances for the week.....	3,016
Total exports since September 1, 1879.....	34,943
Total exports for same period in 1878.....	2,525

Quotations are for New Yorks, new crop, choice, 45@47c.; New Yorks, new crop, medium, 40@43c.: New Yorks, new crop, low to fair, 35@37c.; Eastern, new crop, 35@45c.; Wisconsin, new crop, 35@45c.; Yearlings, 7@18c. Olds, all growths, 4@10c.; Pacific coast, new, 40@45c.; Pacific coast, olds, 9@14c.

OIL-CAKE.—Western is in good demand and quoted at $30 per ton.

POULTRY AND GAME.—The supply of dressed is liberal from all sections. Turkeys have had rather more demand, and prime lots have favored the seller, but there are a great many lean, pin feathery lots which are very dull and low. Such turkeys are often packed with better ones and greatly injure their sale. Chickens and fowls are plenty, and most lots are not good enough for outside quotations. Nice ducks are selling very well. There are fully as many geese arriving as can be promptly sold. Squabs not selling so well since the arrival of quails. Thanksgiving occurs on the 27th inst. For that market, choice, small turkeys will be wanted; lots should arrive by the 24th.
Turkeys, Jersey, good to prime, 13@14c.; State, Mich., Northern Ohio and Penn., prime, 12½@13c.; other Western, prime, 11½@12½c.; fair to good, 10½@11½c; poor, 8@9c.; Phila., dry-picked, 16@17c.; do., chickens, 14c.; do., Jersey, per lb., 12@13c; do., State, Mich., Northern Ohio and Penn., prime, 11@12c.; do., fair to good, 9@10c. Fowls, Phila., dry-picked 12@12½c.; Jersey, good to 12c.; State, good to prime, Western, good to prime, 9@10c.; poor to fair, 8@9c. Ducks, Phila., dry-picked, 12@16c; Jersey, 12@14c.; State, 12@13c.; Western, 10@12c.; do., geese, 10@12½c.; Jersey, 10@11c.; Western, 9@10c. Squabs, white per doz., $2@2.50; dark, $1.25@1.50.
Live poultry—Arrivals and demand light. Prices low most of the week. The trade is nearly all using dressed poultry. Only very light shipments of live will be needed henceforward.
Chickens, J'y, State & Pa., per lb., 9c.; western, 9c.; fowls, J'y, State & Pa., per lb. 8c.; western, 7½@8c.; do., roosters, old, 4@5c.; turkeys, J'y, State & Pa., per lb., 9@10c.; western, 8@10c.; ducks, J'y, N. Y. & Pa. per pair, 55@65c.; western, 50@50c.; geese, J'y, $1.25@1.50; do., N. Y & Pa., $1.25@1.37; do., western, $1@1.12; pigeons, do., 25@30c.
Supplies are in better condition and sales begin to be steady; a larger variety calling out more buyers.
Wild ducks selling at $2.50 for prime western Canvasback, 75c.@$1 for Havre de Grace Red head and 75@80c. for western, 65@75c. for Mallard, 40@50c. for Teal, and 30@35c. for common, per pair. Rabbits plenty from Jersey; they generally run small and sell at 30c. per pair; only extra large will reach 40c. Quail, trapped, per doz., $3@3.25; partridges, State, prime, per pair, $1; western, 75@87c.; soft, 50@65c.; grouse, prime, $1.12@1.25; wild pigeons, small red, per doz., $1.75@2; flight, Southern, $1@1.12; woodcock, State, per pair, 70@75c.; western, 60@65c.; English snipe, per doz., $1.75@2; plover, $1.75@2; tame pigeons, shot, $1@1.12; rabbits, per pair, 30@40c.; hares, 50@60c.; Minn. venison, saddles, per lb., 18@19c.; State & western, 16@17c.; whole deer, 12@13c.

PROVISIONS—Have been active and fluctuating, closing firm at, for pork, $10.40 for Nov.; $10.40@10.50 for Dec.; $10.50@10.60, sellers' option, old or new, for Jan.; $11.75@11.80 for new do. for do., and $11.75@11.85 for February. Bacon at $5.10 for long clear and $6.25 for short clear. Lard—Western steam at $6.85 for spot lots, $6.90@6.92½ for December, $7.03½@7.05 for January $7.12½@7.15 for February and $7.22½@7.25 for March. Stearine at 7@7½c. for Western. Tallow at 7¼@7¾c. for prime.

SEED.—Clover is firm and in demand at 9¾@10¼c for choice to fancy. Timothy is strong at $2.60@2.75.

TOBACCO.—Export demand continues very light, but the home trade is good and prices are very steady. Quotations are for.

LIVE STOCK MARKETS.

NEW YORK, Saturday, Nov. 8.

BEEVES.—Receipts for the week, 12,106 head; do. last week, 14,362 do. Cattle dealers have had a rough deal this week; Wednesday's market was quite devoid of profit or interest for that important sales-day. Common cattle were scarcely looked at, and the quotation of 9¾c. for extras is a mournful illustration of the situation in the fore part of the week. Election times are generally attended with a broken trade, but it is doubtful if any of the unsuccessful candidates felt or looked blue the day following the ballot than did our salesmen friends at the drove-yards. The closing market shows little improvement and shippers have in many cases lost $50@100 per car-load. Dealers think that bottom has been reached, and that prices are likely to soon improve. A large number of Texas steers sold at 6@6¾c. per lb., to dress 51@55 lbs. to the gross cwt.; a number of car-loads of Colorado cattle at 6@7c., to dress 55 lbs.; several car-loads of State bulls, dry cows, young heifers and light steers were sold at 2@3½c. per lb., live weight; light Virginia steers at 6¾@7c., to dress 55 lbs.; ordinary to good Western steers at 7¾@8¾c., to dress 55@56 lbs., and prime and extra do. at 9@9¾c., to dress 56 lbs.

COWS AND CALVES.—Notwithstanding the heavy receipts, the trading of the week has been good enough to bring the range of prices up to $35@60. Market dull at the close, but dealers still name the new rates.

VEAL CALVES.—Choice quality live meet ready sale; common and medium stock slow. Many buyers for ordinary market use will soon have the customary offering of hog-dressed to draw from. New Jersey and Buck's Co., choice, 7¾@7¾c.; prime, 7@7¼c.; State, choice, 7@7¾c.; do., fair to good, 5¾@6¾c.; Mt. Holly stock, 5@6¾c.; buttermilk, 3@3¾c.; grassers, 1¾@2¾c.; hog-dressed, 9@10c., good to choice.

SHEEP AND LAMBS.—Receipts for the week, 32,350 head; do. last week, 41,405 do. The market has ruled low; returns have been generally unsatisfactory. Sheep common to good, 3@4¾c.; poor to choice lambs, 4@5¾c.; mixed State, 4@4½c.

SWINE.—Receipts for the week, 14,861 head; do. last week, 10,142 do. The market has had a quiet run.
Hogs, Jersey, dressed, 40 to 70 lbs., 6¾@6¾c.; 70 to 100 lbs., 6@6¾c.; 100 to 150 lbs., 5¾@6c.; 150 to 200 lbs., 5¼@5¾c.; 200 lbs. up, 5@5¼c. Live hogs, State, light, per 100 lbs., $3.88@4.12½; medium, ₩ 100 lbs., $4; heavy, do., $3.75@3.87; Western, $3.87@4.12½; tenderloins, prime, per lb., 9c.

Reading for the Young.

THAT BROTHER OF MINE; OR, HORTICULTURE IN-DOORS—SPICED.

MRS. M. L. S.

WILL—"Sister I do believe everybody knows your hankering after uncommon things! Even Dick Brown has sent you this great clump of pine cones—to remind you of his *nose* I reckon."

BLISS—"His nose? I don't see the resemblance."

WILL—"It's (k)notty."

BLISS—What a horrid pun! "Wit without *modesty* is disgusting."

WILL—"Dis gust or dat gust. 'It's an ill wind that blows nobody good—besides 'Where ignorance is *Bliss*, 'tis folly to be *wise*.'"

BLISS—"Yes, and 'Where there's a *Will* there's a way'—to be very disagreeable."

WILL—"That's why I say we were named wrong; you are the woman with a *Will*, without any right to me either. But our names are significant. You are the first born when *bliss* was the ruling idea and they called you Bliss. By the time I squeaked for a name, Ma showed her *Will*, and then little sister wanted a name, and they called her Minerva."

BLISS—"Do brother, run; get some furniture glue and that cocoanut—I intend to make a vase for Blooming a hyacinth in, this winter. These four cones stand out just like feet. Now split two cones in two, and please cut this stem off just the length of the cones. Now we'll glue a half cone on each of four sides, and the cocoanut on top. The glue is exactly the color of the burs and cocoanut. Now varnish and sprinkle with those brass and copper fillings which we picked up in the shop."

WILL—"Yes I see—a *rustic vase*—a *burlesque*! *blissful* thought! It's a wonder you don't make something of this cow's *horn*."

BLISS—"A cornucopia, I thank you for the idea. It is already bleached by the weather, that will save me the trouble of boiling it in lye. Scrape it for me—now bore two holes for the string by which to suspend it. But no, it would look better fastened with putty to that piece of petrified bone which I brought from Florida, the weight will hold it steady. Now fill with sand and plant Tradescantia and Rose Geranium."

WILL—"Now hadn't you better set your *corn* in a corner?"

BLISS—"Yes, and prop it till the putty dries."

MINERVA—"Sister, see what I found."

BLISS—A goblet with the stem broken off—I'll just fasten this with a ball of putty to that preserve-dish bottom, and stick a row of those rock crystals around on the putty—then little Sis will have a vase for her flowers which she is going to put on the table X'mas morning—those double daisies and pansies. This is deep, but may be filled with moss and ferns first.

WILL—Now, as the vase is finished it must be propped up for several weeks for the putty to harden and dry. All right! These rocks are the *proper* things to prop with. I'll now call on the name of some genius to guard this blissful artisan that her ingenuity may be preserved for future great deeds.—To be continued.

PRINCIPLES, NOT MEN.

This was the political motto of an old and very influential journal sixty years ago, which I used to see for 20 years daily. It impressed me, not in a political sense; for I am no politician, but in a general one. It induced me always to look for the governing principle in any matter which I undertook to investigate. It has become a governing principle of my life, and now sixty years of its uses and teachings induce me to advise every young man to adopt the same general plan.

Since I have become a cultivator of the soil, it has stood me in hand in many cases when it was impossible to make progress otherwise. If I have a new plant or crop to attend to, I first "go to the bottom of it;" nothing stops me till I know what it needs, what it likes, or what it must have to insure success. I then give it all I have at command, being careful to pay due respect to the principles involved. This is really science, but I began to study principles long before science was ever dreamed of being applied to cultivation. If every farmer would adopt the same plan, there need be no "Errors of Judgment," because the judgment would become mature, and then errors could not arise.

The days of swindling tree peddlers will end as soon as the farmer knows that upon principle their representations are false. S. RUFUS MASON.

Purple Cane, Dodge Co., Neb.

LETTERS FROM THE COUSINS.

Jumping Jack Responds to the Call.

RURAL FRIENDS:—Some one makes inquiry about "Jumping Jack," and asks for another "brilliant effusion." I can answer for the former, but feel a timidity in vouching for the latter, particularly the "brilliant" part. Since I wrote you last I've been trying carefully to care for my weakened eyesight, and my pen has lain idle for many months, for, beyond an occasional contribution to our county papers, I could count on the fingers of one hand, all the articles I've written since I wrote the last "effusion." So please do not accuse me of forgetfulness or a non-appreciation of your kindly inquiries.

Week before last our county held one of its annual fairs at Washington, and won't you think it was well attended when I say that the sale of tickets for one day was over ten thousand? The fair continued four days; and at night the halls were lit by gas, presenting quite a novel (I believe it is not customary for county fairs to be opened at night,) as well as beautiful sight.

Many of you have read in different papers of Dr. Lemoyne and his famous cremation furnace, and have also read of his death noticed in a recent RURAL. By his own wish his body was cremated in the crematory on Gallow's Hill, overlooking "little" Washington. Knowing him personally as I did, I shall not mention any eccentricities, but merely state that his was a very great mind in its palmiest days, and that he was a Christian and a gentleman. I cannot forget the satisfaction and pleasure I once derived from a rummage I had among the hundreds of volumes that compose the library which he gave to our town. Each book was then covered with a paper covering, and all the work of his own aged hands. He was much given to works of philanthropy, and spent much of his accumulated fortune that way. A few weeks since the "County Institute" met at this place. Before this year it always was held the week between Christmas and New Year, but the new superintendent changed the time. It was a good time to learn things, also to hear the teachers disagree.

I want to tell you of the seeds I got from the "Rural Experimental Grounds." Year before last I got four bulbs or seeds of the Chinese Yam (Dioscorea Batatas). I planted them, and got four large bulbs or roots. Two of these were lifted, the other two remained in the ground all winter, and came up in the spring, doing better than the ones kept in the house. I had some splendid vines, and they were much admired, but I was disappointed that they bore no blossoms. The Shell Flowers proved to be curious, and grew well. The tropical looking Ricinus gave much satisfaction, as did others. Some of the seeds did not germinate. I gave the best attention I knew how, but something was lacking. I want to accept of the free gift this year, but, being absent from home when the RURAL announced the distribution, I know not the amount of stamps to send. Will some one be kind enough to inform me? [6c.—ED.]

I believe I've "written all the news." And my pen seems to have run as it pleases, and *now* I please that it shall cease. Good-bye to you all.

Washington, Pa. JUMPING JACK.

The Report from Cousin "Nell."

DEAR UNCLE MARK:—I ought to have reported ere this, but like Minnie S. White, have been very busy. I have not had the time to devote to the care of my flowers that I wished for; but have learned some things, and derived a great amount of pleasure from this summer's experience.

I cannot report very good success with the RURAL seeds. Have four plants each, of Rose of Sharon and Amorpha fruticosa, averaging about four inches in hight. Have also, one Pinus edulis, one Yucca filamentosa, and two strong plants of the Hollyhock. I could not induce Aquilegia, Callicarpa, and several others to germinate. I exchanged a part of the seeds with a friend, or I would not have the Hollyhock and Rose of Sharon. I had better success with annuals. Of the charming little trailer Abronia, I planted eight seeds in a four-inch pot, April 6, I think. They all grew, and in May I transplanted them. They grew finely, and filled to overflowing a circular bed four feet in diameter. There are several of the little pink blossoms on the vines now. For a basket plant it would be lovely. I mean to try it next year.

Our Pansies are beautiful. My husband admires them more than other flowers. We have every shade, it seems to me, from White Treasure to King of the Blacks. The Petunias, also, were very nice. There were purple, white, striped, blotched, and several shades of red. My Pinks were a great favorite—they were admired by all who saw them. The Phloxes were very pretty. I had six or eight varieties, and some are still in bloom. There was a little space devoted to the sweet Mignonette. It is very nice for bouquets.

My Balsams were splendid, and as double as could be. I had white, pink, red, purple, flesh-color and several spotted and striped varieties. I had rather poor success with the Verbena—the seeds would not germinate. However, I have a few plants. I had the prettiest Poppies I ever saw; so silky, and such a lovely bottle-green center. There were all shades—from pure white, to dark red—red with white edges, and white with red edges, etc. I will send some seed to Uncle Mark. The plants continue to bloom a long time. Of Gladioli I had only two shades of red, but they were very thrifty, the flower stems averaging three feet in hight. The Asters were beautiful, so very double, and so many shades and colors, but not half the buds had blossomed, when Jack Frost took them. I also had Dahlias, German Stock, and a few other kinds of flowers. Have planted part of the Grape seed. Uncle Mark, please accept my thanks for the seed, and the book you so kindly sent me. I would like to tell you of my trip to the woods after Arbutus, but this letter is now too long, and I will close. Yours, sincerely, NELL.

Sanford, N. Y.

[Please tell us of your trip.—U. M.]

DEAR UNCLE MARK:—I felt so discouraged about my garden, I was almost ashamed to write to you any more about it, until I learned you wished the cousins to write often. Between the bugs, pigs, grubs and dry weather, I did not have anything hardly. My Gladiolus, that I thought so much of, the grubs got at and ate the stock off, down close to the bulb; it did not hurt the bulb, but it did not blossom. I felt so sorry, because I wanted to see what color it would be. My corn grew nicely and had quite a lot of nice ears on, but my brother's little pigs got in one night and destroyed all but four or five ears. I'm going to save those for seed, if nothing happens to them. My radishes were planted in two places. The first ones I planted came up real nice, and I watered them every night; but one day I went to look at them, and something had been eating the leaves, and on the under side of the leaves were little white bugs. I put ashes and Persian powder on them, but neither seemed to do any good, and in two or three days they were all gone, but in the other place I raised some. I saved some seed, and I'm real glad I did, for may be I shall do better next year; I hope I will. I am so pleased with my book, and I wish to thank you. If this letter is too long, you need not print it. From your affectionate niece, BERTHA H.

West Town, N. Y.

[Circumstances will sometimes conspire wonderfully to work unfortunate results; but after all, these lessons of disappointment should only serve to make one more vigilant in one's efforts. Next year, I dare say, Bertha will be careful to look out for grubs around her choice plants, and for insects on their leaves, and see that the gate is shut against pigs and other depredators.—U. M.]

DEAR UNCLE MARK:—As so many of the cousins are writing I thought I would write too. We have taken the RURAL a great many years, and I like it very much; especially the letters from the cousins. I am very fond of flowers and have a very few. Will you please tell me why my Oleander does not blossom? It looks thrifty, but it has never blossomed. Please put me down as a member of the Horticultural Club. As this is my first attempt, I will not tire you with my nonsense; but if this does not find an untimely grave in the waste basket you will probably hear from me again.

POCAHONTAS.

Reynalls Basin, Niagara Co., N. Y.

TWO NEW AUNTS.

BOYS AND GIRLS:—In desiring to become an aunt I assure you I have no designs upon your Uncle Mark. I am already provided for he is the very Nick, (when I am not at home) But I wanted to tell you of the splendid time I had last summer at Roanoke in

That Watermelon Patch.

It was a triangle, perhaps a hundred feet on each side, of sandy loam, covered with vines and a thousand watermelons. The melons near the hills were pinched off, and every shoot near a melon was pinched off. To guard against depredators, invisible wires runing around and through the patch, attached to stakes by means of little rings, communicated the slightest touch to a little bell which hung over the head of the boy with a pistol, who slept in the bunk of straw, in one corner of the patch. He was provided with books to read, and all the small melons out of the twelve which were pulled every evening to cool for the following day. Some weighed twenty-five pounds. He was a proud and happy boy.

* * * * * * *

Grapes.

Company came to-day and interrupted the nice things that I would have said about Uncle Mark's possible good looks, in apology for my beginning. I had grapes for dinner and the conversation turned upon that subject. What a year for grapes! Our bunches were immense. I dipped the stem of each cluster in cement and placed them after drying out, in layers, in paper boxes, with paper and leaves (perfectly dry) between. They will keep till Christmas.

Beauty of Hebron.

As a gift of the RURAL, I received by mail two wee marbles (and much ridicule from Nick) but these "small potatoes" being argus-eyed, planted 17 hills fertilized with stable and hen manure. After a summer of intense heat, and drought and the depredations of moles, we dug a large peck of 36 potatoes weighing 12 pounds. There is now, a good deal of talk at our house about *our* potatoes. I might say a great deal more, but this will do for an introduction. You will no doubt hear from me again sometime in the future, meanwhile I remain your aunt X'MAS.

Reed Island, Va.

[This very original aunt sent also a recipe for making wine from grapes. She, of course, did not know that Uncle Mark is strictly temperate in his habits, and that he desires all his nephews to be the same. For this reason he could not publish it though it may have been a very excellent recipe.]

DEAR UNCLE MARK:—I have read with pleasure to-day some of the articles and letters in your department of the RURAL, I am not, 'tis true, one of the "little folks" (being the mother of three little ones myself), yet, I love to see or hear from children; their thoughts and aims are so pure and innocent. I observed a Biblical question in the RURAL of September 20. It may have been answered, but I now send the answer; the question is titled "How many were there?" The answer is 12 boys in the class, and here is the solution. Jacob had 12 sons, Israelites compassed Jericho seven times, Boaz gave Ruth six measures of barley, Hanan had 10 sons. There were seven of each clean beast entered the Ark; 50 of the sons of the Prophets went to seek Elijah after his translation. Joseph was 30 years old when he stood before Pharaoh; David had five smooth stones in his sling to kill Goliath of Gath; Bethany was 15 furlongs east of Jerusalem. There were four anchors cast at the time of Paul's shipwreck. There were eight people saved in the ark.

I would also like to join the Horticultural Club, if I am not debarred by age. I would love to meet with the little ones every week and enjoy their company. I would like to tell you that I have some seeds of the Southern "China Tree," that I will send you if you wish. I have trees four feet high now, raised from the seed. I left them out-of-doors last winter without any protection except winding with straw, and putting a layer of straw round their bodies over the roots. In their natural state in the South (as I remember them when a girl) they grew to forest size, and every spring were loaded down with clusters of lilac blossoms. I will not write any more at present, but hope to greet the little ones often if I am accepted as a member of your household band. Yours, &c.

Marshall Co., Kans. MRS. M. J. GALPIN.

[Please come in and make yourself at home. We shall be glad to hear from you every week. Whatever seeds you may send we will try at the Rural Grounds. U. M.]

Sabbath Reading.

A POSITIVE CHRISTIANITY.

I ONCE had a conversation with an intelligent infidel, who stared me in the face, while he asked me if I was positive that my Christianity was true; to which I replied that I had not a doubt, and that the evidence was fixed in my heart; to which he replied that it had always been a difficult thing for him to believe a doctrine that was a matter of so much uncertainty to so many who call themselves Christians. "Well," said he, "I am in the habit of asking Christians whether they have the assurance that the Lord is with them, and when they answer in the affirmative their faces betray them, and look as though they had been caught in the act of stealing. And, for my part, I never can be a Christian as long as I find such poor representatives of Christianity. Why, sir, it is the rarest thing that I can find a man that is positive; and, therefore, there must be something wrong. When a business man makes himself known to me as such, he does not say, 'I *think* I am a member of such and such a firm,' 'I *hope* I am thus and so.' I do not question his veracity, and rarely think it necessary to ask him for any papers to prove it, because he is positive about it; but the usual answer to my plain question is, "I hope so;' 'I am trying to be;' I used to be;' 'or would like to be.' Suppose I was appointed prime minister to some foreign State, and my business was to represent the interests of the United States of America, would I leave any room in the mind of the governor as to the genuineness of my mission? If the Bible is true, and you are the representatives of its blessings, why are you ashamed to own it?"

I was not just then prepared for such a sermon from this celebrated infidel. Although he did not seem to doubt my statement, yet he taught me a lesson I will not soon forget, and that lesson was the awful responsibility of professing Christians.—*Advocate of Christian Holiness.*

"ALL THINGS ARE NOW READY."—From age to age the call is still the same. As one generation sweeps another off the stage—some heeding, some despising, some not even hearing the benignant invitation, it is still repeated: "All things are now ready." Yes, at whatever moment the poor, sin-sick, starved, exhausted sinner first begins to feel his want, and turns his dim and haggard eyes toward that scene of splendor and festivity, before unknown or madly disregarded—however untimely the appeal may seem—though the prayer be breathed at midnight, in the dark, from the beggar's hovel, the field of battle, of the dungeon, or the scaffold—the response is still the same: "Come, for all things are now ready." The resort to this supply can never be too early; it should never be too late. It can never be too early; for the soul is never without consciousness of want—a restless craving for enjoyments, better than the best it has experienced. It should never be too late—as it is, alas! too late for thousands—because all things are now ready; and when all things are now ready, and the opportunity afforded of securing them but transient, it is self-destruction to refuse acceptance,—it is folly, it is madness even to postpone it.—*J. A. Alexander.*

THE SECOND COMMANDMENT.—The second commandment not only forbids *worshipping* graven images, but it forbids *making* them. At the time when the commandment was given the tendency to the worship of images was so strong that even the making of them could not be allowed. That danger having passed away *for us*, the prohibition has passed away *for us*, for the Divine precepts are not arbitrary, but reasonable. When a dangerous road had been repaired, the sign, "No passing here," is taken away. So we read the commandment, "Thou shalt not make any graven image;" we respond, "Lord, incline our hearts to keep this law;" and we fill our houses with statuary. The spirit of the law has passed into other forms, prohibiting idols of the imagination, idols of the intellect, especially all religious views, practices, notions and doctrines that are unworthy of God, or dishonorable to him.—*Dr. J. M. Whiton, in Good Company, Number Two.*

RESURRECTION.—We believe that Christ was not only buried, but rose from the dead on the third day. He rose with a material body identical in a true sense with the body as it was before He died, and yet omnipotently changed to incorruptibleness and power, and fitted for the fullness of the Spirit and a state of glory. We believe that Christ will come again the second time in that very resurrection body, and raise up His people with a like literal real body of incorruptibleness and power, controlled by the Spirit and fitted to the final state. "We look for the Saviour, the Lord Jesus Christ, who shall change our vile body that it may be fashioned like unto His glorious body." The fall of man brought ruin to body as well as soul. Salvation is not complete till body, as well as soul, is redeemed.—*Church Helper.*

IT is well to bear in mind that unsound teaching cannot always be condoned for the sake of activity and zeal in an associate body of workers, any more than great soundness of doctrine can justify inactivity and sloth in the Master's work. The unsound teaching and the slothfulness are each to be deplored and condemned, and, so far as possible, done away with.—*Churchman.*

THERE is a great deal of ceramic religion, fine earthenware Christianity, old china church membership. Lay it gently on the shelf, a cracked and faded and useless thing. It certifies to a certain spiritual respectability of the happy possessor, but is of no use on the tables of the church.—*Interior*

PERSONAL ITEMS.

The Crown Prince of Germany has two sons, Prince Frederick Charles one, and on those three lives the Hohenzollerns depend. Prince Bismark is anxious to see one married.

Governor Blackburn, of Kentucky, has been in office about two months and has pardoned two hundred and ten convicts, or four for every week-day that he has been at the head of the State Government.

Captain Carey, who was with the late French Prince Imperial when he lost his life, and who was afterwards condemned by court-martial for abandoning the Prince, but subsequently relieved from blame, in South Africa, will retire from his regiment, it is said, and enter the church.

Daniel McFarland, who shot and killed Albert D. Richardson and was acquitted, and Abbey Sage Richardson recently arrived at Leadville, Col., on the same day. He was a decrepit, ragged old man, evidently in great want, pain and misery; she was in the garb of a well-to-do lecturer. A sorry contrast between the ex-husband and wife!

The Duke of Beaufort, who recently returned to England from this country, has written a letter, in which he warns the English farmers that they must not expect the present competition from America to cease. On the contrary, he anticipates a continually increasing export of American grain and he thinks the English farmers had better give up the unequal struggle and devote themselves to cattle and sheep.

"Dat cullud pussun on de jury, him's de man I objee' to," said a negro when put on trial in the Marion, S. C., Court the other day. The black, good man and true was unseated, and the prisoner given acquittal. After his release, the darkey was asked what he had against a juryman of his own color. "Nuffin at all, boss," said he, "but, ye see, I knowed if I flattered de prejudus ob be odder jurymen dat I get off, an' golly I did."

Squaw Susan, who so heroically bent her energies to save the captive wife and daughter of murdered Agent Meeker, was herself once rescued from death in a romantic manner. Susan was captured by a band of Arapahoes, who put up a stake at the mouth of the Cache La Poudre, intending to burn her to death. The commanding officer at Fort Collins, having heard of the proposed barbarity, by alternate threats and promises obtained Susan's release. It probably was in remembrance of this that the squaw became so devoted to Mrs. and Miss Meeker.

"Mrs. Grant says that the General once lost all his money in a potato speculation. He paid $750 for 150 bushels of potatoes, planted them, expecting to make a large profit, but when they were ripe, potatoes were too cheap to pay for the digging." This is a "Personal" that is now briskly "going the rounds" of the papers. Five dollars a bushel for seed potatoes! Why, they must have been a new variety. How foolish of the future President to invest *all* his savings in such a venture! But, perhaps, after all, it's like many other "Personals," made out of "whole cloth," and very poor cloth at that, filling some reporter's cranium.

General Hooker was fully six feet in hight and weighed in the neighborhood of 300 pounds. Of a florid complexion, his face sometimes wore a hectic flush that gave his round, good-natured face a boyish expression. Since his paralytic attack the General has led a quiet, sequestered life at the hotel in Garden City, Long Island. His manservant, Tom, was constantly at the General's side, to assist him to rise from his chair and walk up and down stairs. When the Queen's county hounds met at Garden City, the General often followed the pack by the country roads in a carriage. He did not look upon the sport with favor, however, and often remarked that it was un-American. General Hooker married, soon after quitting the service, the daughter of the Hon. William S. Groesbeck, of Cincinnati.

Ague, biliousness, drowsiness, jaundice and rheumatism, Hop Bitters remove easily.

QUINCHE & KRUGLER 17 MAIDEN LANE, New York. Sole Agents for the United States.

THE MACKINNON PEN.

An Entirely New Writing Instrument for Desk or Pocket.

SECTIONAL VIEW.

Writes seventy-five pages of foolscap with one filling, on any paper, with any clean writing or copying ink.

THE POINT is as smooth as diamond can be polished, is conical in shape, and glides over the paper as easily as a soft lead pencil.

CLEANLINESS.

It **cannot blot** or soil the hands, because ink cannot escape, except in the act of writing, and when not in use the pen is HERMETICALLY SEALED.

DURABILITY, CHEAPNESS.

Report No. 1135 of the Franklin Institute of Philadelphia reads: "The point of the Pen is ACTUALLY A RING OF IRIDIUM (diamond). . . . . It is at once tasteful and useful, and for the service rendered is NOT COSTLY. We cordially approve of the instrument." The *Scientific American* says: "Our daily use of it demonstrates to us that whoever supplies himself with a MacKinnon Pen possesses a good thing."

NOTHING MORE APPROPRIATE AS A HOLIDAY GIFT TO A LADY OR GENTLEMAN

☞ Be careful our Name is stamped on every Pen, as there is a Cheap Imitation in the Market.

All who wish to avoid the annoyances of the common writing materials should examine the "MACKINNON PEN" at their stationers, or address the manufacturers,

D. MACKINNON & CO., 200 Broadway, N. Y.

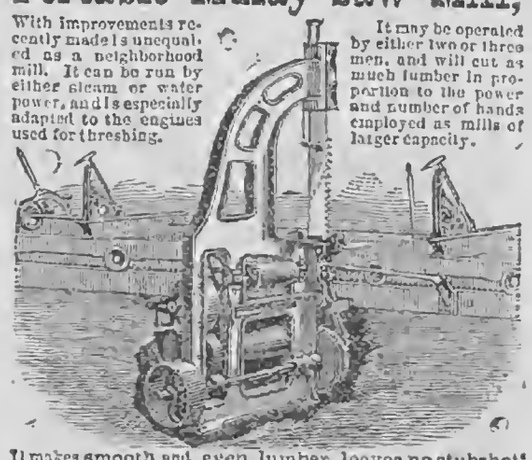
☞ All persons owning one of our Pens of the first manufacture should send it to us by registered mail, to be made over with all the late improvements, which will be done at manufacturers' price, and warranted for three years.

PEN CLOSED.

Implements and Machinery.

Portable Mulay Saw Mill,

With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.



It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.

It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.

Also manufacturers of the **Phoenix Threshing Engine** and the **Eureka Drain Tile Machine.**

New Publications.

New Operas!

Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.

Fatinitza. Opera by Suppe.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.

Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15.

Bells of Corneville. By Planquette. (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling well, for 50 cents) and who are looking out for new and easy operas.

Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple**, each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record**, published weekly. It keeps you well posted as to musical matters, gives 6 or 7 pages of music per week and costs but $2.00 per year!

OLIVER DITSON & CO., Boston.
C. H. Ditson & Co., 843 Broadway, New York. J. E. Ditson & Co., 922 Chestnut St., Phila.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money in *the paper* and in Premiums to All.

PRECEPT AND EXAMPLE.

Great Grandpapa.—"Oh, indeed! you can lick your sisters at Lawn-Tennis, can you? Well done, my boy! but beware of self-conceit, and never brag. Why, I could lick everybody at Lawn-Tennis, when I was your age—or could have done if there'd been any Lawn-Tennis to play! I was the best cricketer, the best fencer, the best boxer, runner, jumper, swimmer, and diver I ever came across, either at school, or college, or after; and in classics and mathematics I beat 'em all clean out of the field! As for riding, no one ever touched me; or dancing either; let alone that I was the handsomest man in the county, and the best-dressed, for that matter; besides being the wittiest and the most popular. Ay, and such a song as I could sing, too! And yet a more modest and unassuming demeanor than mine it's never been my good fortune to set eyes on, man or boy, these fourscore years and ten—for I'm all that, my boy, and more, though you'd never believe it, to look at me!—Beware of self-conceit, my boy, and never, never brag!"

THEY stood all alone and 'twas late,
And deep shadows were cast, by the gate,
When her very bad brother, the scamp,
Climbed the post, and lighted the lamp;
And the meeting adjourned without date,

"You must find that I am very badly dressed," said a gentleman to a Paris tailor who was measuring him for a new suit. "Oh, no," replied the artist, "You are are not dressed at all; you are simply covered.—*New York World.*

The Nerves as a Source of Trial.

Instead of being a vehicle for agreeable sensations some people's nerves are a most distressing endowment. Such sufferers, it will usually be found, are dyspeptic, lack vitality and flesh. What they need is more vigor. There is a means of obtaining it, if they will but avail themselves of that means. It is Hostetter's Bitters, a tonic which experience has shown to be of the utmost service to the debilitated, nervous and dyspeptic. Digestion restored upon a permanent basis by the Bitters, ministers as it should to the wants of the system, and its integral parts, of which the nerves are one of the most important, are properly nourished and invigorated. The various functions are thus more actively discharged, and obstacles to a return to health removed by increasing vitality. Instead of nervous prostration, new strength and vitality will be infused into the whole motive machinery.

The Herdsman.

SHORT-HORNS.

AMONG English-speaking people no breed of cattle is more highly prized than the Short-horn, nor is any more widely diffused. In England, Ireland, Wales and Scotland their influence is almost everywhere; in Canada and the United States they have found a congenial home, and are rapidly improving the native and grade cattle; in Australia and New Zealand they are prized as highly as in their native island. Nor are their praises unsonnded in foreign tongues. They are raising the standard of the vast herds of Russia; the best German breeders profit by their prepotency; France does not prize her own choice strains so highly as to think that her herds cannot be bettered by an admixure of Short-horn blood; even Japan has become Europeanized in its appreciation of Short-horns as well as in other respects.

Yet world-wide as extends the fame of this breed to-day, until just about a century ago what reputation they had, was confined to Durham, York, Westmoreland and Northumberland, the two first-named counties, on either side of the river Tees, having been for a couple of centuries especially appreciative of their beef and milking qualities, whether known as Teeswater or Durham cattle.

It matters little, except to the curious trifler, whether their characteristics of yield, form and color, were due to local development, natural or artificial, or to a just possible admixture in remote times of native blood from the Chillingham, or of alien blood from Scandinavian cattle; what does matter considerably to the intelligent stock-owner, as a proof of what can be done by careful breeding, is an idea of what-like the old-fashioned Durham cattle were before the modern system of breeding developed their present merits. According to the best accounts, then, a hundred years ago, or so, the best specimens of Short-horns were generally wide-backed, well-formed animals, deep in the fore-quarters soft and mellow in the hair and "handling," possessing average milking qualities, but a remarkable aptitude for fattening. Their horns were somewhat longer than those of their descendants, and widened upwards. Their shoulder joints and hips, however, were unduly prominent; they lacked length in the hind-quarters, width in the chest and fullness before and behind the shoulder as well as on the shoulder itself. They were also unduly large-bellied, too long in the legs and deficient in substance, while their failure to take on flesh evenly and firmly gave them an uneven appearance. Here and there an unusually large milker or an uncommonly fine beef animal, or a beast combining to an extraordinary degree both these properties, attracted especial attention, and the progeny of such animals would doubtless fetch a few shillings more than the offsprings of less noted beasts, but no successful attempt was made to perpetuate these qualities, inasmuch as no effort was made to concentrate them by "in-and-in" breeding.

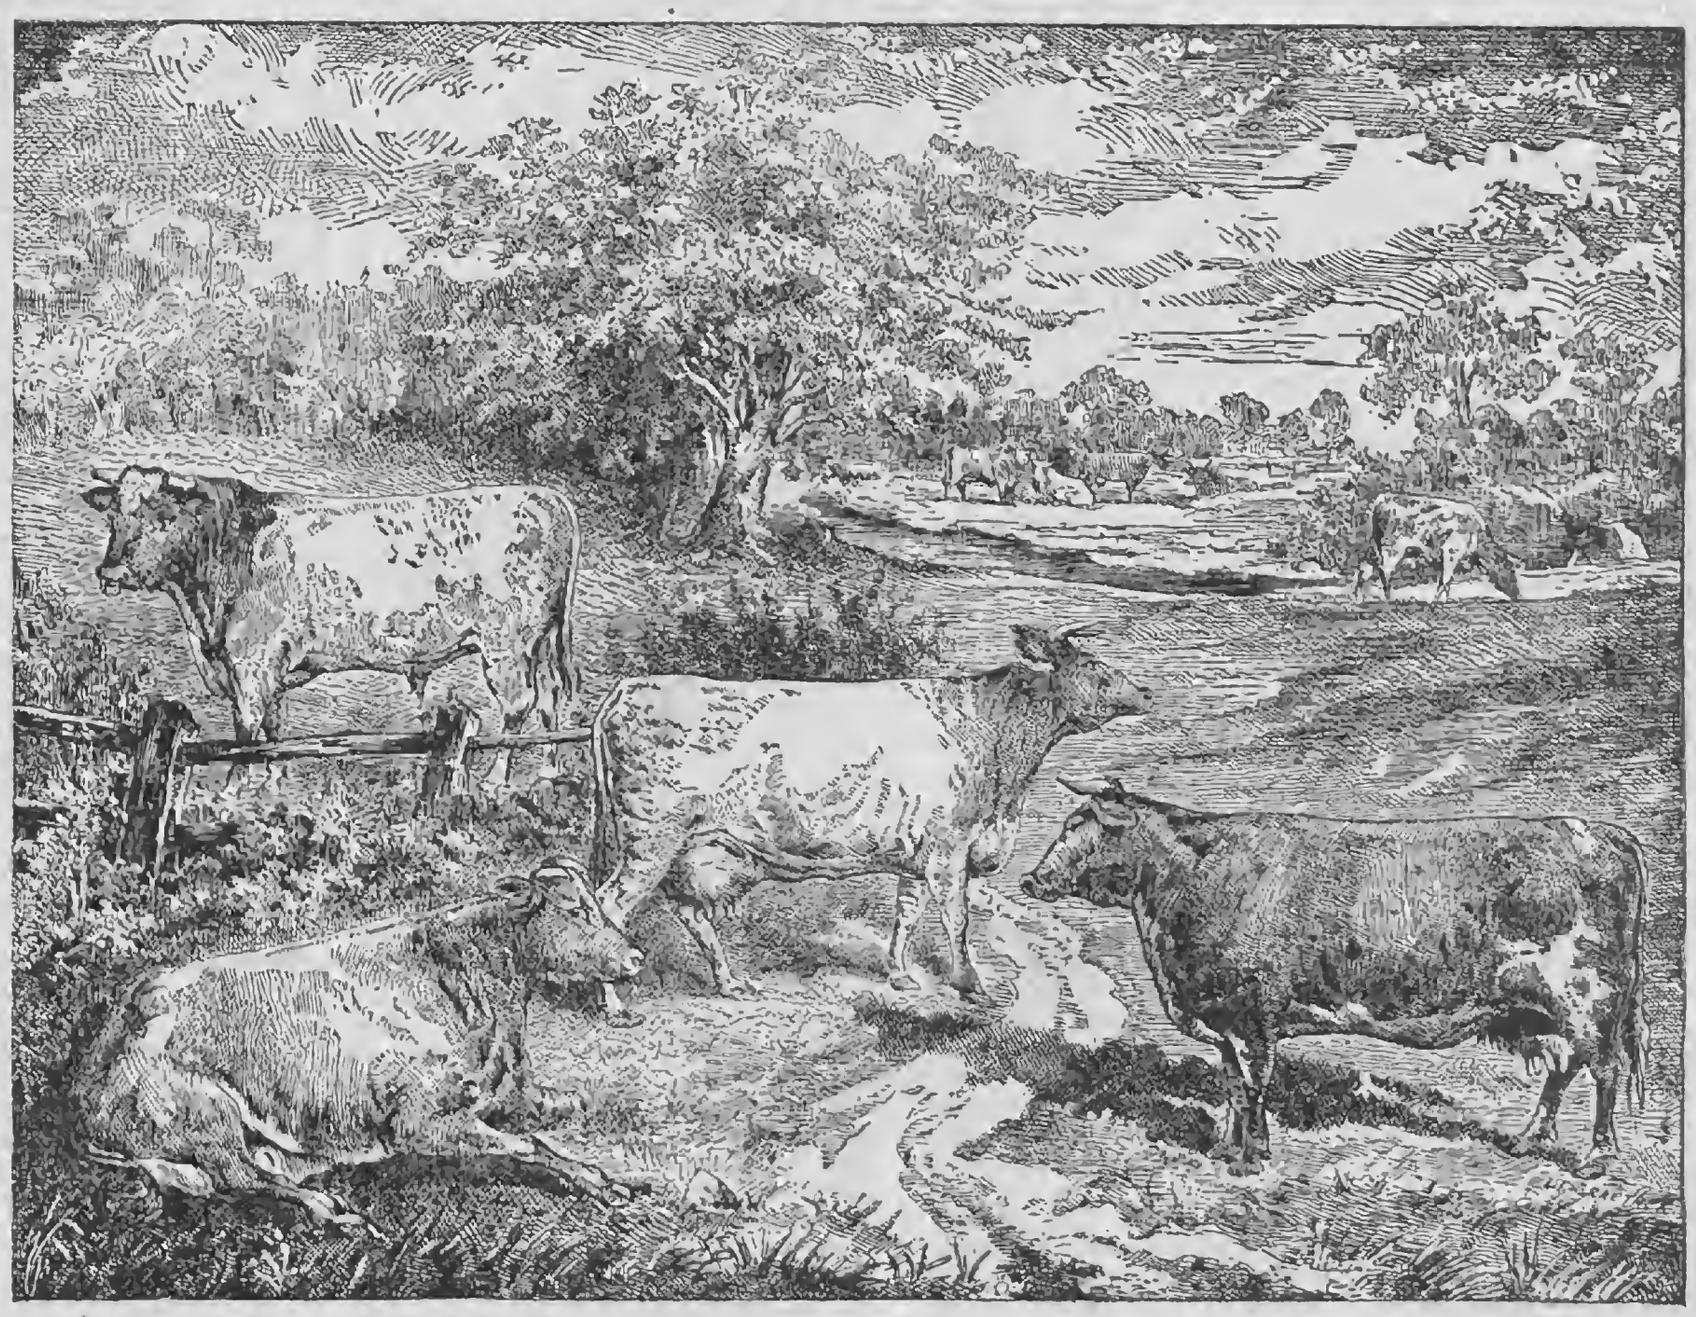
The genius of Robert Bakewell first discovered the paramount advantages of this system in transmitting the properties he wished to perpetuate, and his marvelous success with Leicester sheep, cart-horses and Long-horn cattle attracted widespread attention. Among those whose interest in his results led them to visit Dishley, were two young men, Robert and Charles Colling, the sons of a substantial Teeswater farmer and breeder, who were about to start in business on their own account. During repeated visits they carefully examined his stock, learnt all they could of his system, not from his willing lips, however, for he kept his principles a strict secret; but from his casual remarks and their own close observation. On their return to the north they applied what they had learnt to the breeding of Short-horn cattle, being more fortunate in their selection of a breed to start with than was Bakewell with the Long-horns. Commencing business jointly in 1780, they amicably separated three years later, Robert, about 30 years old and a confirmed bachelor, settling on a farm at Barmpton, and the more wide-awake, interprising Charles, married though a couple of years younger, taking another farm at Ketton. The farms were not so far apart as to prevent the brothers from using the same bull in the same or alternate seasons, as might be most convenient, while each profited by the other's experience. Each, however, had his own cows carefully selected from the surrounding Short-horn herds, the choice of every purchased animal being always determiued by its possession of some particular excellence which the purchaser wished to introduce among his own stock. Thus they labored, Charles for 30 years and Robert for 40, with such marked improvements in the herds they bred, that under their management the Short-horn race attained an unprecedented popularity which has continued to increase until to-day.

The system they pursued was identical with that established by Bakewell, and the same, with a few slight modifications, as that by following which the most celebrated subsequent breeders have accomplished their highest successes. It consisted in breeding "in-and in" as closely as possible—often father to daughter and mother to son—so long as constitution, vigor, quality, health and fecundity remained unimpaired by it. By this means they concentrated in the members of one family all the virtues they sought to perpetuate, so firmly as to induc them with the faculty of transmitting their qualities to a greater extent than had ever before been found possible, or than could have been accomplished by any other system of breeding; for it is the general opinion that uniformity of type and quality can be attained sooner and more certainly by this method than by any other. It has been found, however, that the system, if long persisted in, results more or less disastrously in weakened constitutions, liability to disease and frequent barrenness. Later breeders, therefore, have often found it to their advantage to modify the system somewhat by the introduction into their herds of fresh blood from more or less closely collateral lines of descent.

On the sale of the Ketton herd in 1810 and of the Barmpton herd, in two lots, in 1818 and 1820, the choice results of the labors, skill and experience of the Collings were scattered among a number of the best breeders of the day, who eagerly competed for the famous animals at unprecedentedly high figures. Among these breeders the most celebrated are Thomas Booth, founder of the Booth Short-horn herd, and Thomas Bates, founder of the Bates herd. The former was a neighbor and rival of the Collings, having begun breeding in 1777, on a farm near Sudley Park, although the legitimate foundation of his herd was laid in 1790 at his Killerby and Warlaby estates, near Darlington, Yorkshire, at no great distance from Barmpton and Ketton. His two sons, Richard and John, afterwards joined him in breeding Short-horns, and at his death, in 1835, succeeded him, the former at Warlaby and the latter at Killerby.

On the death of the genial bachelor, Richard, in 1864, his nephew, T. C. Booth, whose untimely end was mourned by the Short-horn world a few months ago, inherited his estate of 310 acres at Warlaby, and also the Short-horn herd the improvement of which had been his chief occupation since he settled at that place in 1835. The new owner possessed all the skill in breeding, which should rightly belong to him through his father. John, his grandfather, Thomas, and his deceased uncle, Richard, all of whom were among the foremost breeders of their time, and under his management the Warlaby herd, surpassing those of Killerby and Studley at their best, grew to be the finest representatives of the "Booth blood." To this blood belong some of the most famous tribes of Short-horns, whose names are known in Short-horn circles every where. What lover of this fine breed has not heard of the Fairholme or Blossom tribe, the Bright Eyes, the Halnaby or Strawberry tribe, the Bracelet, Isabella, Farewell, Boughton, Dairymaid or Moss Rose, tribes, all of which, whether belonging to the Killerby, Studley or Warlaby contingent, have spread the virtues and fame of the "Booth blood" far and wide.

A worthy rival of the Booths was Thomas Bates, crotchety, kind-hearted, acrimonious, and oh! so skillful a breeder. Having started Short-horn breeding in 1800, at the age of 25, he devoted an ample fortune, no mean abilities



CHOICE SPECIMENS OF SHORT-HORNS.—Suggested by a Colored Plate in Professor Sheldon's (London) New Work.

and the remainder of a long life, to the production of a herd of such transcendent merit as should insure his lasting fame. Given time enough, persistent, well-directed effort seldom fails of its object, and at Bates's death, in 1849, no Short-horn herd in the world excelled his, judging by the prizes, prices and renown since won by the tribes he had established. Of these, first in order of time, in his affectionate care, and in world-wide celebrity comes the Duchess, closely followed by its near relative, the Oxford, while the Waterloo, Red Rose, Wild Eyes, and Foggathorpe tribes have each won no small measure of merited reputation.

What, then, have these famous breeders and a multitude of others—some of them only a trifle less renowned—done for the Short-horn in the course of a century? How do the characteristics of the Short-horn of to-day compare with those of the Short-horn with which the Collings began their improvements? The bygone Short-horn is described above; the modern Short-horn—who has not admired, at agricultural fairs or on way-side pastures, its symmetrical proportions, its expressive head, broad across the forehead, tapering gracefully below the eyes to the open nostrils and fine, flesh-colored muzzle; its bright, prominent, placid eyes; its mild expression; its fine, erect and hairy ears; its white, or yellowish, short horns; its moderately thick neck set straight on its wide shoulders; its prominent breast and straight, short legs standing wide apart; its broad, flat back; its—but what need of describing its appearance to farmers, especially as the space at our disposal ends here?

PRINCIPLES IN STOCK FEEDING.

J. W. SANBORN.

No well defined system of stock management resting upon the laws of animal growth and of the relation of foods to each other in animal nutrition, is in practice to any considerable extent in this country. It is a self-evident statement that working in harmony with law is working to the best advantage. As farmers, we are sadly out of harmony with the best methods of stock management, thus coming greatly short of obtaining the possible effective value of our foods. Feeding is not as yet a developed science, but a very hopefully developing one. Closely pressed by having to compete with the low prices of prairie steers, the only hope of Eastern feeders lies in the search for, and observance of, the laws that control in this department of farm husbandry. Allow me then to name a few important points that have come under my observation in experimental feeding for a few years past.

The Steer to Feed.

Every reader at once declares that the matter is clear—it must be a steer that has been well bred, that inherits a large capacity for consumption, digestion and assimilation of food. It is useless to attempt to feed any other for profit in the East, but under the head of "the steer to feed," I wish to make this point, resting upon my own observation and that of others:—this is the only steer that one can afford to feed high; for, when fed an increased ration over an ordinary one, the well-bred steer assimilates a very much heavier percentage of this increase than an average steer, and the poorer steer's capacity for assimilation is so low that it will not give a favorable response to a heavy ration.

Large Breeds.

Our steer must be of the larger breeds; for a rapidly growing, or a large animal, will make more growth on a pound of food than one of a smaller breed. A large beast presents less radiating surface in proportion to weight, than a small one; thus, in case of the latter, more food is required, particularly in winter, to maintain the animal heat. On this head practical experience confirms theoretical considerations. The animal should be early matured. If a steer is sold when four and one-half years of age, weighing 1,600 pounds, then his average weight for his lifetime would have been not far from 800 pounds. Such an 800-pound steer I have found will consume 14 pounds of hay a day as maintenance fodder, making no growth. Now the steer has consumed 14 pounds a day for 4½ years—how many steers require 6 years to weigh 1,600 pounds!—simply to run the machine. It is the hay given over this amount daily that makes the growth. Growing our steer to 1,600 pounds at 2½ years, will save maintenance fodder for two years; or, in round numbers, for two winters, or 360 days, we shall save 2½ tons of hay, as well as two years' pasturing. But again, I find that a young animal will make more gain on a pound of food than an older one, thus making a double gain. Moreover, an animal when small, will make very much more gain than an animal nearly matured. The difference is so great as to become of much importance. This fact should lead us so to breed as to get an animal that will come into shape to command full market prices at a much less weight than that named. Could a market demand be developed for 800-pound calves, these could be furnished at a profit by the side of Texas steers.

Feed for Manure.

Unhappily most farmers consider this heading as a part of another question. It is, however, inseparably connected with the entire system of mixed farming with us. For a generation most of the stock of New England has been kept for the direct purpose of manure-making, and they are yet its cheapest sources. Were it not so, in a comparatively short time there would be but little stock in the East. Yet in feeding, the prime object—the fact that our steers are simply manure manufactories—is lost sight of. The Englishman's first question is:—"What is the manure value of the food?" Then in buying foods—I buy heavily because I find it the cheapest means of obtaining plant-food, and for another object I will name further on—I always consider the amount of the elements of plant-food contained in the proposed purchases. I do not say that that shall be the sole criterion of purchase, but it must have a determining recognition. It not unfrequently happens that a nitrogenous food is nearly, or quite, worth its cost, as a manure. Intending here to call attention only to prominent points in stock management, that are settled but not accepted generally in practice, I will forego details and simply say that in practice I can give corroborative evidence from my records, of the facts here stated.

Combination of Foods.

Chemistry has blundered around badly on the question of the nutritive value of foods, as it has on other questions in agriculture. But the stimulus it has given to practical investigators, pointing to the door, and as an aid to them, will result in an immense saving of food values. Pardon me for referring to personal data again; such data, however, always bear more directly on the point than what one has heard of. As the result of three years' careful weighings of food for several sets of steers, I am thoroughly convinced that an extremely important saving can be made in feeding mixed rations, and that it is not enough that these mixtures be indiscriminately made. In general terms, nitrogenous foods should be mixed with carbonaceous; or bran, peas, cotton-seed, oil-cake, blood, meat and clover should be given in connexion with coarse foods, like straw, corn fodder and swale hay. Happily it is the first-named foods that are rich manure-makers, and, in using them, we accomplish two important purposes.

State Farm, Ag'l College, Hanover, N. H.

Sheep Husbandry.

SHEEP COMPARED WITH COWS—THE RELATIVE PROFITS.

COL. F. D. CURTIS.

According to statistics furnished at a recent Dairymen's Association meeting, the average income per cow in the great dairy district of New York, in the year 1868, was $28. This year it will be no more. Of course, many dairymen realized more than this. In this section of the country mixed husbandry is carried on, and small butter dairies are kept as an important feature; but cows are not made a leading part in the farmer's business, as is the case in a considerable portion of the State of New York. Twenty-eight dollars per cow are not a remunerative income. This includes both cheese and butter dairies, but where milk was all manufactured into butter, the average yield would be greater. In the small dairies, cows make, on an average, not more than 150 pounds of butter. To this as a part of the income, should be added the skim-milk which will make one hundred pounds of pork when fed to a pig, and the price of the calf which might be worth five dollars more. The account in the small butter dairies would stand thus:—

150 pounds of butter @ 20c.	$30
Pork made, and price of fatted calf	10
Total	$40

This estimate is undoubtedly greater than the amount realized by the majority of small dairymen. A cow will consume as much food, if kept in a profitable condition, as five coarse-wooled sheep, and as much as seven South-Down or Merino sheep. Let us look at the comparative income and profits of sheep and cows, not taking into account the difference in the amount of labor which is seventy-five per cent. more with the cows than with the sheep.

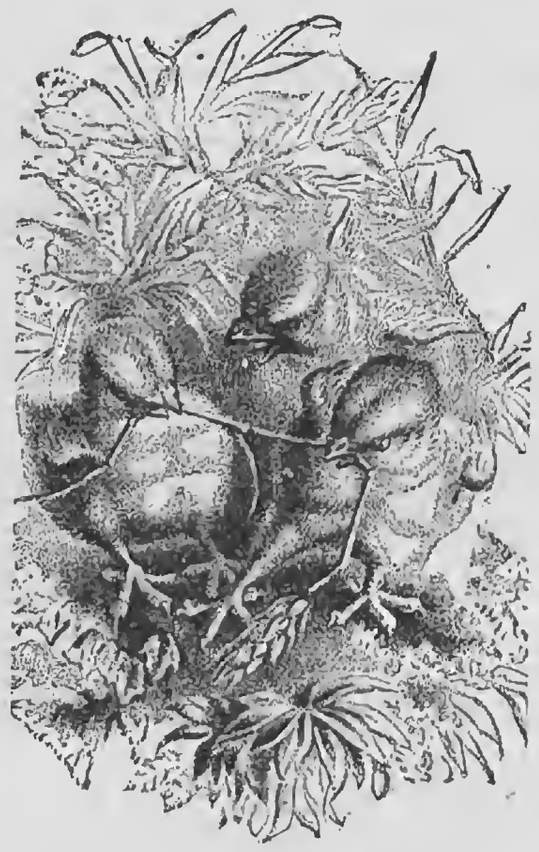
Five coarse-wooled sheep will produce lambs at the rate of one and one-half to a sheep, but quite often they will double their number. Medium-wooled sheep may safely be relied upon to increase their number one and one-half, while fine-wooled sheep will return a lamb for a sheep. The value of the lambs depends upon their quality, when kept for breeding; or on their earliness and condition, when fitted for market. The price of lambs of these various breeds will range from three dollars upwards. Wool was worth the past season from 35 to 45 cents per pound. Six pounds of wool per head are not an extra average for a well kept flock of sheep. They may be made to average more than that by extra care. A flock of combing-wool sheep, with the same care and feeding which a good dairyman would give his cows, will average, per sheep, at least ten dollars. This would afford an income of $50 on a flock of five in the place of one cow. The proportion of income would not be so great in a large flock, as the average yield of wool would be less. The percentage of increase is likewise reduced, owing to the fact that the ewes receive less care and to their increased liability to accidents. If the flock should be separated and kept a few in a place, not exceeding 12, a month before yeaning time, the losses would be very few. In our estimate of the income from cows, we have made no allowance for the cost of the pig.

We will now add, as a practical illustration of the comparative profits of cows and sheep, several statements: Alexander Davidson had, last spring, a flock of 50 grade South-Down sheep, two of which were bucks, and several were last year's lambs. Thirty-five ewes raised 45 lambs. His wool was sold early in the season and brought $65.67. The lambs sold brought $93.50. Twelve were kept at home, which would have brought three dollars each. This would make a total income from the 50 sheep of $195.17. In this case, it must be remembered that there were 15 unproductive sheep and that the wool was sold low, and still the income is $27.28 to a cow, rating seven sheep as equal to one cow. With these returns the sheep would be the most desirable on account of the reduced labor. Fifty breeding ewes would have increased the profit, and made it almost one-third more. These sheep had no extra feed other than hay and corn-stalks in winter, with a little corn.

Another farmer, Mr. Valentine, purchased 17 ewes—grade South-Downs—for which he paid $75. The next season he sold one sheep and his lambs, reserving 12 of the best. The stock sold and the wool, came to $34 35 more than the sheep cost. Here was a gain of $34 35 in cash and 12 lambs worth five dollars each, over the entire cost of the flock.

Mr. Wicks wintered 17 ewes of common blood. One of them did not have a lamb. The 16 ewes brought 22 lambs, which were sold for $3 25 each. Six were reserved, for which he was offered four dollars each. The sheep were light shearers and averaged about four pounds of wool per head, which was sold for 32½ cents per pound. The total income was $38.75, which would be equal to $37.91, estimating at a cow ratio, offsetting three cows against the flock of sheep. In the above statements it must be understood that the lambs were sold to local butchers, and the wool at the lowest price before the market was fairly opened.

The Poultry Yard.



VALUE AND VARIETY OF POULTRY.

HENRY HALES.

Of all the useful creatures domesticated and bred by man, perhaps no one species offers such a wide range of size, color, form, beauty, and utility, as we find in domestic poultry. Added to all this is a language—I know no other term—that expresses a greater variety of meaning than that uttered by any other one species of beings on the globe, except man. It is remarkable to look back and see how little was done by man, for many centuries, in perfecting or bringing out the many peculiarities that lay dormant in the common, natural fowl of our ancestors; but so great is the change brought about during the last thirty years, by selection and careful breeding, that the birds of our poultry exhibitions now, show such perfection of variety as to astonish people who are not familiar with the subject. Even of the imported foreign breeds, many are so improved that only faint traces of the originals remain. No wonder that so many poultry-breeders are infatuated with their pursuit, when they see how fowls can be changed or improved by a little care and judgment in selecting birds to produce the desired effect.

Domestic poultry are generally considered to be all of one species. They are, however, divided into classes, such as the Asiatic class: the Spanish class, which includes Leghorns and Andalusians, the Minorcas, etc., or the Game, or Dorking class. These are again sub-divided into breeds. The term breed is applied to such fowls as have been bred to a certain form, size and color, so as to be distinguished from any other birds, and which have been recognized by fanciers as such breeds. Most of these are described in the "American Standard of Excellence," with their characteristics.

The term variety, as generally understood, means a difference less than is usually implied by the word breed, such as a change in color or comb only, as Pea-combed, and Single-combed among Partridge Cochins; Gray and Silver-Gray among Dorkings, and Silver Duckwing and Yellow Duckwing among Games. The different breeds and varieties form so long a catalogue that the premium list of the National Exhibition of Poultry to be held at Indianapolis, Ind., comprises 71 kinds. Premiums for about the same number are also offered by the New Jersey State Poultry Society, at Newark.

Not the least important peculiarity about all these different breeds is that, with external differences, each one develops some other quality in a different degree from the others, such as that displayed by sitters or non-sitters; greater or less prolificacy as layers, the production of larger or smaller eggs; differences in shades and sizes; flesh of peculiar flavor and color; vivacity, docility, or pugnacity of disposition. As to constitution, too, each class has its weaker or stronger points. In size the difference between full-grown birds varies as much as pounds to ounces, or even as much as from eight ounces to fourteen pounds.

In commencing a new series of articles on poultry, in the RURAL, I shall endeavor to describe as plainly as possible, the peculiarities of most of these different breeds, from a practical knowledge of them, so that the farmer or the amateur fancier can get an idea of what is most likely to suit his purpose. Not that any one can be so thoroughly acquainted with all kinds as to be able to properly judge of their merits; for every fancier knows that each class has its specialists when close judging for exhibitions is required; yet, having kept a great many breeds for many years, I hope to be able to give such general information as will be acceptable to the many readers of the RURAL NEW-YORKER.

Entomological.

LOPHYRUS OR PINE SAW-FLY LARVÆ.

B. PICKMAN MANN.

DR. Asa Fitch says, in his fourth report on the noxious and other insects of the State of New York, p. 59, that all the species of the genus Lophyrus, whose habits had been observed up to the time of that writing—which was in the year 1857—feed upon the Pine or Fir.

Edward Norton, in the Transactions of the American Entomological Society, v. 2, p. 321–330, gives an account of eleven species of this genus, found in the United States up to that time, 1869, and repeats the assertion that the larvæ feed upon the Pine and Fir. These eleven species are the following:

L. Fabricii, L. compar, L. pini-rigidæ, L. Abbotii, L. Akhursti, L. abietis, L. pinetum, L. abdominalis, L. Americana, L. Lecontei, L. Edwardsi.

In 1872, Mr. Norton described the female of another species, L. fulva, from Texas. Only a few of these species have been observed in the larva state, and the following information in regard to these larvæ is all that can be collected at present:

The larvæ are 22-legged; that is, they have sixteen belly-legs besides the usual six jointed breast-legs; they are cylindrical, slightly tapering from before the middle backwards, and occur in dense groups on the trees which they infest, denuding the branches.

The larvæ of L. abietis and L. Lecontei are easy to distinguish. L. abietis is from 12 to 15 mm. long, when full-grown; but L. Lecontei grows to be 25 mm. long. Abietis is dirty-green, or almost yellow; while Lecontei is dirty-white, or yellowish-white, and without any greenish hue. The head of abietis is black; that of Lecontei is shining reddish-brown, with a black eye-spot on each side. Abietis has a light stripe along the top of the back, separating two darker-green stripes, and has two dark-green stripes on each side of the body also, while Lecontei is not striped. Able-

tis has no black spots on the back or sides, but such spots are present on Abbotii and Leconteі, being closer together in the former than in the latter, and, as far as a published figure of Abbotii, by Riley, can be relied upon, there are three rows of these spots on Abbotii, the spots being twice as long as wide, while in Leconteі there are four rows of spots, or even six rows, the spots in the back being somewhat triangular, the upper spots on the sides being nearly square and the lower spots on the sides being smaller black marks; the young larvæ of Leconteі, however, have no black spots.

Another larva, whose parentage is not certain, was described by Asa Fitch in his 4th report, p. 58. It is 25 mm. long, white, with black head; the body is not striped, but has two rows of oblong black spots along its back and a row of broader, square spots along each side. It seems to resemble L. Leconteі in all except the color of the head.

As regards the time of year at which the larvæ may be found, this is various. The parents of L. Leconteі appeared in New Jersey February 15; others were captured in Northern New York in the middle of May, and larvæ were found in New Jersey in October. It seems evident, therefore, that there must be at least two broods in the year. In the absence of further positive proof, we may conjecture that the larvæ could be found in June and July and in September and October.

Asa Fitch says of the undetermined species above referred to, that at least two broods appear annually, the one in July, the other in September and October, the latter often remaining on the trees after frosty nights have occurred.

The parents of L. abietis appear in May, and their larvæ in June and July. Some at least of these larvæ reach the winged condition near the end of July and August, but Harris thinks it probable that the greater part of them remain unchanged till the following spring. Fitch suspects that there are two generations annually, the flies, which come out of their cocoons about the beginning of August, producing another brood of the larvæ in the autumn; but Norton says if there is a second brood in September, the number must be comparatively small, for he has not seen them or any fresh cocoons late in the season.

The parents of L. Abbotii appear early in June, and there is but a single brood of larvæ annually. The larvæ remain on the trees in Illinois until November, and do not change into pupæ until the winter is passed.

The larvæ of L. pinetum were described by J. Kirkpatrick, Nov. 24, 1860. If any inference can be drawn from the date of this publication, the larvæ must occur late in the fall.

As said above, these larvæ, so far as known, feed upon Pines, Firs and Spruces. L. Abbotii and Fitch's undetermined species feed on the White Pine [Pinus Strobus]; L. Leconteі, on the Scotch and Austrian Pines [P. sylvestris and P. Austriaca]; L. pini-rigidæ, on the Pitch Pine [P. rigida], and L. abietis on Firs and Spruces [Abies], and perhaps also on the Pitch Pine. L. abdominalis and L. pinetum feed on Pines, but we are not told on which species they feed. It seems that L. Abbotii, L. abietis and L. Leconteі strip off all the leaves from the branches, as they pass over them; but Fitch's undetermined larva eats only the previous year's growth of leaves, never touching the new leaves at the outer end of the limb.

The larvæ are social, living in considerable swarms, or in clusters. Sometimes two larvæ of L. abietis may be seen feeding together on the same leaf, and sitting opposite to each other. In order to lay hold of the leaf more firmly, they curl the hinder part of the body around it, and, if they are disturbed, they throw up their heads and tails with a jerking motion. The larvæ described by Fitch are so large, when nearly mature, that probably the end of a single leaf of the Pine does not furnish them a sufficient mouthful, hence two larvæ often stand face to face and hold, pressed together in a bundle as they eat them, the five leaves which grow from each sheath of the White Pine, beginning to eat at the tip and gradually stepping backwards as the leaves become shorter.

L. Leconteі and the species Fitch described make their cocoons at or beneath the surface of the ground, under fallen leaves or other shelter. Harris and Fitch say that most of the larvæ of L. abietis do the same, or creep into cracks in fences or into other crevices to make their cocoons, and that it is usually the healthy larvæ which do this, those that make their cocoons among the leaves on the tree usually perishing from the attacks of internal parasites; but Norton says that most of the cocoons of L. abietis, which he has seen, were formed upon the branches of the trees on which the larvæ fed, and that they often adhere to the leaves until the next season.

When L. abietis comes forth from the cocoon, it cuts a circular piece from one end of this, as cleanly as if the cut had been made with a knife. This piece sometimes remains attached by one side, like a lid.

Harris says that it is probable that the eggs are laid in slits which the parent flies make with their saws in the edges of the leaf. This is stated positively to be the case with the eggs of L. pini-rigidæ, the eggs being laid singly in the side of the pine needle, sometimes one on each side of the leaf.

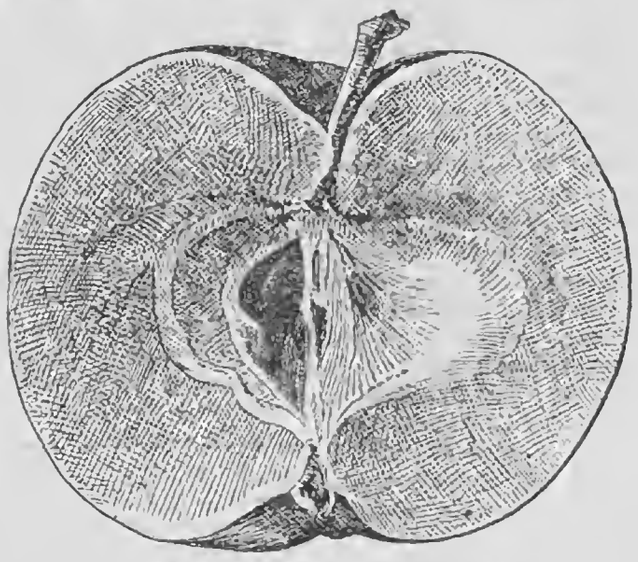
Norton has bred ten parasites from the cocoons of L. abietis. A list of these, and descriptions of some of them, are given in the Transactions of the American Entomological Society (Philadelphia) v. 2. p. 326 327. Most of these parasites burst their way out of the side of the cocoon, cutting with their jaws a rough passage, which may thus be distinguished easily from the clean-cut passage made by the rightful tenant of the cocoon.

L. pini-rigidæ has been observed as yet in Massachusetts only; L. abietis in Massachusetts and Connecticut; L. abdominalis in New York and in the territory northwest of the Mississippi River; L. Leconteі in New York and New Jersey; L. Akhursti in New Jersey; L. Abbotii in Georgia, Indiana and Illinois; L. Americana, L. compar and L. Fabricii in Georgia; L. fulva in Texas, and, L. pinetum in Ohio. Probably most of these species are widely distributed over the Northern or Southern States.

Pomological.

A STRAWBERRY-COLORED APPLE.

We have noticed that several of our exchanges have of late made mention of a red apple sent to them from somebody in Missouri. We, too, have received an apple of which the accompanying cut shows a section. The sender did not favor us with his name, but, on the other hand, to save us "trouble and expense" he sends us quite a lengthy notice of this wonderful apple, written editorially and setting forth its qualities in high colors, which he desires us to publish, and ending with the statement that the supply being limited and the demand quite large, those wanting this curious apple should direct a note to River's Strawberry Apple at some place in Missouri,



STRAWBERRY-COLORED APPLE.

The apple is of medium size: skin straw-colored, and the flesh is of a beautiful red strawberry color all through; rather dry, mealy, with but little flavor; it is of but little value except as a curiosity. It corresponds in size, taste and peculiar color with the Surprise apple, which is an old and well known variety, and the probability is that they are identical.

The peculiar method of sending this apple to editors without giving name of sender, and the fact that nothing at all is said of the origin of the tree, or who named it, hint strongly at fraud. If, therefore, our readers think the apple a desirable curiosity, let them procure it from a reliable nurseryman and not from anonymous peddlars.

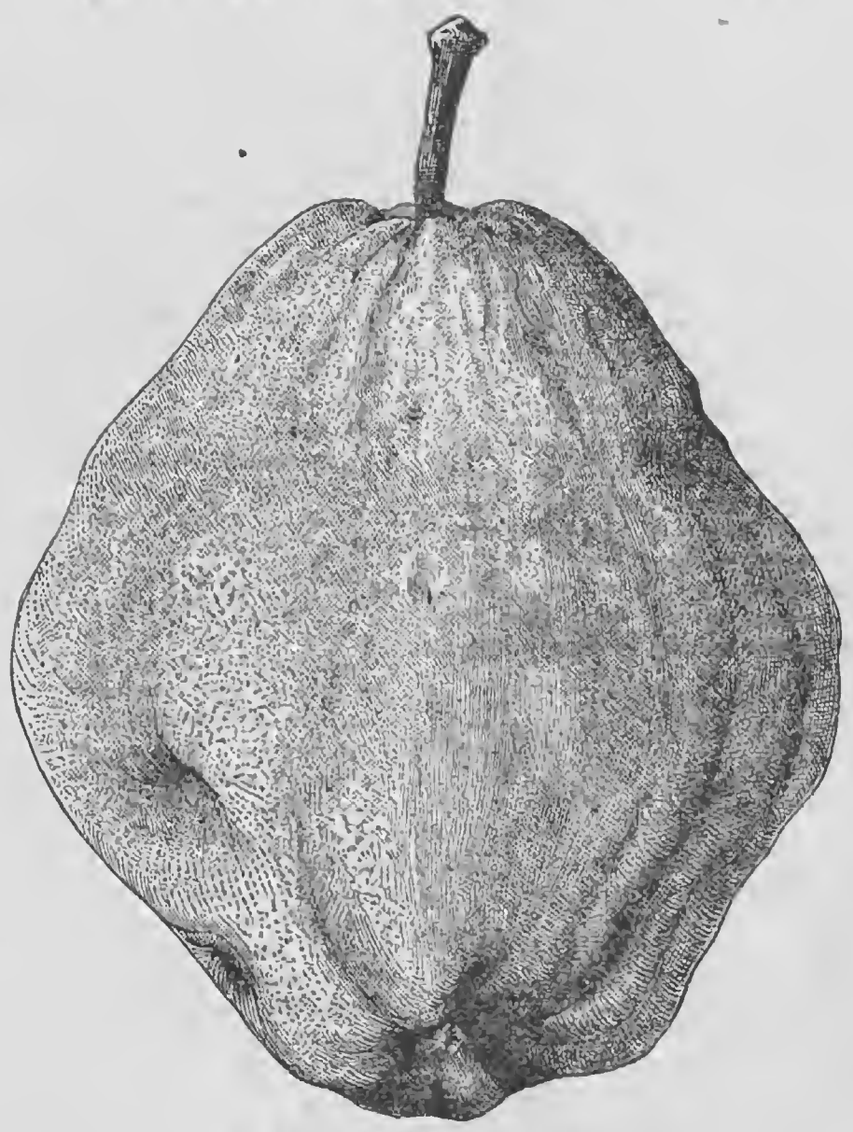
KIEFFER'S SEEDLING PEAR.

Among the valuable new Pears that have recently been produced is the Kieffer "Hybrid" Seedling Pear, an illustration of which we this week present to our readers. We are indebted to Mr. John S. Collins, of Morristown, N. J. for the specimen from which the engraving was made. He writes us that it was rather a poor specimen, having been picked from a small tree that was planted last spring. As the illustration shows, the pear is rather rough, of a handsome yellow color with minute dots, and a slightly ruddy cheek. The flesh is firm, juicy, of fair quality, but we did not think it superior to the Duchesse d'Angouleme which it somewhat resembles. Mr. Collins writes, "I do not claim high quality of fruit, but the tree is vigorous, free from blight, an early bearer and very productive. It retains the foliage late, and the leaf is rather broad and finely serrated. It is a valuable market pear, ripening as it does, from the first to the middle of October. When laid away, it ripens up slowly to a russet-yellow pear-color. I saw one pear on a small tree at Mr. Kieffer's, the originator's place, which he said measured over eleven inches around. The original tree, which is a seedling of the Chinese Sand Pear, is now eleven years old and was the only valuable one of about 2000 seedlings."

A BLIGHT-PROOF PEAR.

WILLIAM PARRY.

Kieffer's Hybrid Seedling Pear is growing in favor wherever known. It originated about the year 1868, from the seed of the Chinese Sand Pear, and is supposed to be crossed with the Bartlett, as the two trees grew near each other. The new seedling commenced to bear fruit in 1873, and has borne about all the tree could sustain every year since, the quantity increasing with the size of the tree, which is now about six inches in diameter, and yielded, in 1877, four bushels; in 1878, five bushels, and in 1879, more than seven bushels of pears, which sold in market each year readily at 50 cents a half peck, or at the rate of $4 per bushel. The fruit ripens in October, is large, 10 to 12 inches around, double-turbinate in shape; flesh white, and remarkably firm, until fully ripe; then rich, juicy, with a pleasant vinous flavor and of excellent quality. It is a good shipper, may be carried for a month, or more, and arrive in better condition—ripening on the way—than when started, having a rich yellow appearance.



KIEFFER'S "HYBRID" SEEDLING PEAR.

The tree is a remarkably vigorous grower. Young trees transplanted last spring, have grown during the summer and fall four feet and more. They are of handsome shape, and make a fine appearance. One fruit grower being satisfied of its great value as a market fruit, planted an orchard of 500 Kieffer's Hybrid Pear trees, and set more than 20 of them in the front lawn for ornament, and, although it is in sod and has been for years, yet the trees have grown more than three feet the first season after transplanting, and have borne some fine specimens of pears. The trees are beautiful in summer while covered with rich, glossy foliage, and not unsightly in the fall, when the limbs are bending in graceful curves, laden with the golden fruit. They grow well in any ordinary soil—heavy clay or light sandy land. The largest growth made by trees planted this year, was on light sandy soil; many branches made a growth of four and a half feet in length.

The great superiority of this variety over other Pears, in addition to the large size of the fruit and the wonderful productiveness of the tree, is its perfect health, partaking in this respect of the characteristics of the parent Chinese Sand Pear, which has been cultivated half a century in America, and has never shown any signs of blight or other diseases, which are so very discouraging to pear growers. Many pear trees of other varieties, partly dead with blight, have been restored by cutting away the blighted limbs and grafting with Kieffer's, which flourish and grow vigorously in the midst of others blighting and dying around them.

In 1876 the Kieffer Hybrid Pears attracted much attention at the Centennial Exposition. The prize medal and certificate of award were given to P. Kieffer for this variety. The Committee's report says:—"He exhibits a hybrid pear of remarkable excellence, between the common pear of cultivation and the Chinese Sand Pear, giving promise of a new race of great excellence."

Wherever exhibited in Pennsylvania or New Jersey, this variety has always taken the highest prize for the best hybrid seedling blight-proof Pear.

Clunaminson, N. J.

PEARS AND PEAR TREES.

I. J. BLACKWELL.

It is supposed in this section that Pears, or rather that pear orchards, are not profitable. I will acknowledge that the profits are small, compared with those of twenty years ago, or when the White Doyenne was the most popular pear. At that time there was not a pear orchard of one hundred trees in our township. A Bartlett or Duchesse d'Angouleme was a curiosity. It was about then that the pear mania commenced. The nurseryman planted trees that sold readily, and what he did not sell were left to fruit. Orchards sprang up on most farms and in most gardens, and if the blight had not put in an appearance, pears would have been so abundant that every man, woman and child could know the virtues of good fruit, and have plenty of it. Every catalogue had a long list of varieties, from earliest to latest, embracing hundreds of different sorts, ninety-nine out of each hundred of which the orchardist, or the man that planted a few trees, did not want.

The amateur plants to please some fancy, and may think that he can afford to have a little pear that costs a good deal of money. The more it costs, the better it tastes. Of several varieties that I have, there are only a few that "pay" for home use. It is proper to have early pears for this purpose, and, maybe, a few for a local market. I would not like to be without Manning's Elizabeth, a tree each of Doyenné d'Eté and Rostiezer for early, and perhaps a tree of Madeleine. Kirtland should have a place, even for market; not many of them would be needed, for the Bartlett comes here from all the South. The Bartlett, Belle Lucrative, Seckel, Duchesse d'Angouleme, Beurré d'Anjou, Onondaga, Lawrence and Vicar of Winkfield will supply a farmer with pears from the middle of July until Christmas, and twenty-five trees will only take a quarter of an acre of land; and if he uses this at the same time as a place for poultry, or for hogs, it will be all the better for the trees. Twenty trees, fifteen years after planting, will average a bushel to a tree, worth, on an average, fifty cents a bushel if sold, and ever so much more

if used at home. If desired, potatoes, corn, Strawberries, etc., can be grown on the same lot until the trees are large. If the orchard is planted with three dwarf pear trees between each standard tree, it will pay in five years, and at ten years give a profit, provided it is set with Duchesse d'Angouleme and Vicar of Winkfield. These kinds do well on the Quince, especially the Vicar; for, if set three inches below the junction of the Vicar and Quince, nine trees out of every ten will strike pear roots, and make the best of trees. All other varieties, so far as I know, are failures on the Quince, either in growing or else they will not sell after they are grown.

The orchardist of the present day must consider before he plants. We have fruit coming from Georgia first, and fruit growers there can make it pay only by sending fruit of good size and appearance. It will not pay to have anything but the best to be had at the season; the cost of transportation eats up all profit from poorer sorts. The ripening of fruit extends gradually north, so that all northern sections have to compete with Bartletts grown to the south of them. As we all know that nothing else brings a price equal to that obtained for this variety, it follows that all parts of the North have to grow pears to compete with Southern Bartletts. Later on in the season, the position changes, and the south and middle section have to compete with Northern Bartletts. To make the matter plain: the Bartlett comes from the south to New York City early in August; New York, Michigan and Massachusetts keep up the supply through September, and for two months of the pear season, the Bartlett fills the market, and no rival has yet appeared to dispute its sway.

We see that if the above be correct, the Bartlett is the earliest Pear worth planting north of Georgia. It is also the latest worth planting south of Washington City. After it comes the Seekel—and a few of them are plenty—Duchesse, d'Angouleme—standard or dwarf—Beurré d'Anjou, Lawrence and Vicar of Winkfield. Most of the others will not pay here. Onondaga is a fine fruit, but blights badly, or has done so here. There is a host of varieties that grow fairly, without a standing in the markets, and so they had better not be grown. It must be a superior fruit that can compete successfully with old standard sorts.

Mercer Co., New Jersey.

Field Crops.

THE PLANTING AND CULTIVATION OF THE CRANBERRY.

There are throughout the country numerous marshes and muck beds that now are productive of only weeds and briers, which could readily be converted into flourishing cranberry beds, and become rich sources of income to the owners. Not only are these places waste land, but they cause, in addition, untold misery by generating malaria that poisons the air for miles around.

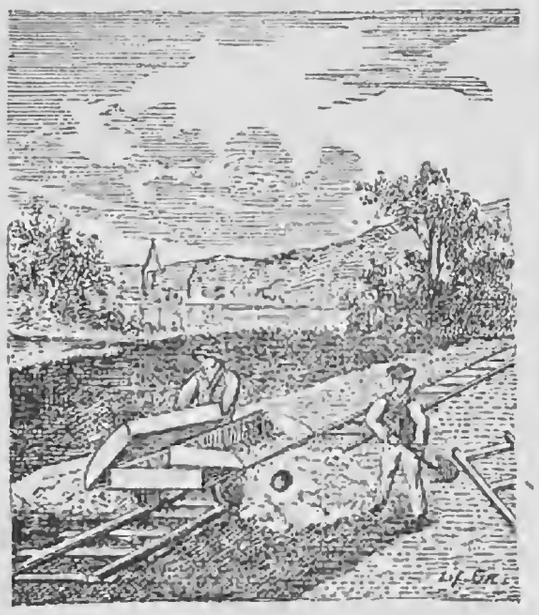


FIG. 1.

We would urge upon every farmer who owns a suitable cranberry bog, to let it remain a waste and a nuisance to the community no longer, but at once to make preparations to cover it with a vigorous vegetation that may absorb the poisonous gases and bring him a comfortable return from the sale of the much-sought berries. The Cranberry may be planted at almost any time of the year when the ground is not frozen; fall and spring, however, are considered the most suitable seasons, and even now it is not too late to plant, if the land needs but little preparation. A few words with reference to the character of the land will here be in place. As to location, it should, if possible, be so situated that it can be flooded at will from a stream or lake. All cranberry growers agree on this point. Especially during winter should the vines be flooded; the water not only protects the stems in severe frosts, but it kills all insects and their larvæ, that may harbor in the soil and on the plants, and also acts as a fer rrying in a quantity of organic matter. A clayey soil is unsuitable, as is also a dry, sandy and gravelly one. A soil formed from the deposits of muddy water, or, in other words, of an alluvial formation, is most suitable for the Cranberry. It should also admit of being drained, so that the water level can be lowered during the growing season to from 12 to 18 inches below the surface. A muck bed to which has been added several inches of coarse sand, will also produce a thrifty growth of vines.

Having such a soil, the preparation should begin by cutting a main ditch through the lowest line of the land; this will give an outlet to the surplus water, and thus make the rest of the work easier. Next, clear off the brush and briers; level the land, if necessary, and drain it, either by laying tile or by a series of open ditches. The whole meadow should next be covered with a couple of inches of coarse sand. This work is greatly facilitated by laying down a rude movable track, as shown in figure 1. It is best made of 4x4-inch pieces, securely bound together by cross-bars, and it should be in lengths of 12 to 15 feet, so that it can be extended at pleasure. The illustration shows how readily the sand can be dumped and spread. Where the meadow is flooded during the winter, this coat of sand may be spread on the ice in like manner.

The plants are really cuttings, the vines being cut in pieces, as shown in Fig. 2, and these set in the ground. They may be sown broadcast over the land and afterward pressed into the ground with a forked stick; or each piece can be more advantageously but also more laboriously, planted with a dibble; but the best method, one by which the work can be done both efficiently and quickly, is perhaps the one illustrated in fig. 3. In this case, furrows are made with a small plow and a single horse, three feet apart and four or five inches deep. In these the plants are set one foot apart, one man going ahead, who drops the plants,

FIG. 2.

and another following with a hoe to cover them up, two-thirds of their lengths. If this method is employed, the sand should not be put on till the vines are planted, it being put on not only to improve the soil physically, but also to act as a mulch and to suppress the weeds, and it will mix quite enough with a loose soil in the course of a year by the necessary use of the hoe and cultivator. Should the vines be ordered from a distance and be received apparently dry, they will recover by soaking them in water for 24 hours; or should they arrive too late to be planted, they can be packed in layers, with moist earth in a box, and kept in a cellar till used.

A substantial dam should be built across the lowest border of the meadow, to hold the water when flooded. If this is built of brush and muck carelessly thrown together, it will soon leak and wash away. The best way is to dig through the muck for five or six feet, and fill up with firm earth to the required hight, giving the embankment a slope of about 30 degrees, and covering the slope with turf. The flood-gate should be in the lowest place, and securely constructed. The water should cover the vines between one and two feet, and can remain on till the middle of May.

During the summer, until time arrives for gathering the fruit, there is but little to be done in the meadow. It is, however, well to destroy the most persistent weeds for the first couple of years until the vines cover the ground.

VARIETIES.—Cape Cod Bell, an early berry of medium size, dark red. The Bugle, early, medium to large, medium bearer, dark scarlet, a good keeper. Cherry, of which there are several sub-varieties that differ but little, medium size, bright red, good bearer, late. Two new varieties, Eaton's Early Black Bell and Mansfield Creeper, are being introduced.

FIG. 3.

The first is of medium size, dark-red, good bearer and keeper, early; the second is of a creeping habit, large, scarlet on one side, whitish on the other, a good keeper.

Industrial Societies.

VIRGINIA STATE FAIR.

[Special Correspondence.]

THE Virginia State fair, for cogent reasons, ought to be a full and complete exposition of the resources of the State. Impoverished and depopulated by the war, the State is in pressing need of immigration, and, indeed, as may be seen by a reference to our advertising columns, colonists are urged to settle there. The annual fair affords a good opportunity—if rightly managed—for those interested, to see and talk with the people, and to judge of the resources and products of the land by the samples shown. From this point of view, the fair was a dismal failure, and that it was so seems to be due, in large measure, to inefficient management on the part of the officers of the Society. The premiums were injudiciously apportioned, the bulk of them being devoted to purses for horse-racing and a bench-show of dogs, not to mention a prize military drill—all good enough in their appropriate places, but it will hardly be assumed that those places were within the boundaries of an agricultural fair.

The show of stock was not an average one. There were a few good Short-horns and a good lot of fat sheep and fat cattle. In the sheep-pens were a few superior Downs of each kind—some of them imported stock—and a few head of superior Angora goats. In swine the Berkshires were the most noteworthy, and it was pleasant to see them, as the native pig is susceptible of a world of improvement. A long struggle for daily existence has been productive of too much length of snout and body. Specimens, seen roaming at large, looked as if they might have the fleetness of deers, and certainly the most prominent characteristic was spare-rib.

The poultry display was fairly large and various, but there were too many Game varieties to make it of much use to the farmer. M. B. & A. P. Rowe were the largest exhibitors, and they had, on the whole, the best birds. The horses—the best of them—were racers, roadsters and saddle animals; the draft horses were a poor lot.

In the departments devoted to farm products the display was beneath the level of criticism. Some very good plates of fall and winter apples, contributed mainly by Bedford and Augusta counties, were the chief pomological feature. A prominent railroad company sent fine samples of coal and iron, and, in fact, the mineral resources of the State were energetically represented.

By far the largest and best display was the implements and machinery. The local dealers, acting as agents, had samples of the manufactures of leading firms. H. M. Smith & Co., whose exhibit was the largest, most complete and representative, included in their space the Oliver plow, Tompkins Co. rake, Clark's root cutter, Excelsior lawn mower, the drill, rake and clover huller of the Hagerstown Mfg. Co.; the Geiser separator, Gill's separator and power, as also Heebner's, the Mitchell, Studebaker and Cortland wagons, etc. As manufacturers, they also exhibited a very complete thrashing machine and their Virginia Jack power which took first premiums. Walter A. Wood had his new string binder in operation, and it carried off the honors as against the McCormick. The Eureka mower took first premium. P. H. Stark represented the Gale & Dixie plows, Philadelphia seeder, Giles's riding saw and the Empire drill and rake. The Silver and Deming Mfg. Co. had their power feed cutter on the grounds, while C. T. Palmer, in addition to his plow, showed the Richardson rake and a reaper and mower of his own. The Cooley creamer and Davis churn—Vt. Farm Mch. Co.—attracted a large share of attention and took first premiums.

Among the new things was the Bates harvester, a light single-wheel reaper weighing about 750 pounds. The machine is so perfectly balanced that the guards can be tilted with one finger. The outer end is raised and lowered by simply turning a screw—a very neat, strong device. The novel features—besides the screw—are driving the rake without a chain or flexible connection, making the revolutions at a uniform speed, without that jerk attendant on chain rakes when delivering the sheaf. The inside end of the grain-bar may be raised or lowered without the driver leaving his seat. The Central Mfg. Co., of Lewisburg, Pa., the makers, also showed a mower which is a modification of the Buckeye. Both implements are characteristic of simplicity, strength and completeness.

The exhibit of grain drills was very large, comprising some of the best-known in the country, so that the two first premiums taken by Bickford and Hufman, of Macedon, N. Y., on their Farmer's Favorite grain drill, and grain and fertilizer drill, with grass seeder attachment, were very gratifying marks of approval. It is a curious and interesting fact that Bickford and Hufman exhibited the first fertilizer drill ever shown, and it was at the Virginia State fair in 1854. Since that time—even including the period of the war—their drills have been in constant use and demand in Virginia, and are to-day probably the Farmer's Favorites. Their drill, as improved for this season, has strong points. The Bessemer-steel axle combines lightness with strength and the new spring tube is so arranged that rubber is discarded, and if broken, it may be repaired at home, thus saving expense. The Bonanza grass seeder can be placed at back or front of drill, and will sow large, small or mixed seeds equally well. The fertilizer attachment will distribute fertilizers in any condition, and, altogether, the drill is a captivating piece of machinery for style, finish and effectiveness.

Roberts, Throp & Co., Three Rivers, Mich., had in operation one of their 32½-inch "Invincible" vibrator separators, which attracted a large share of attention on account of its comparative noiselessness in operation, its simplicity, strength and handsome finish. Mr. Cyrus Roberts, the head of the establishment, was the inventor of the vibrating principle (1848), and since 1856 has been established at Three Rivers and steadily employed in manufacturing and perfecting this justly popular separator. The strong point of the "Invincible," is its ability to thrash grain well, no matter what its condition, and in flax and timothy it has accomplished the most satisfactory results.

Altogether, the handsome and full display of machinery saved the fair from utter failure as an agricultural show, and it is to be hoped that next year the new managers will profit by the lesson.

C. H. E. R.

LIVE-STOCK AT THE QUEEN'S COUNTY FAIR.

IN the account of the Queen's County fair, published in the RURAL of Oct. 4, Mr. William Crozier, of Northport, Long Island, is credited with having taken the first premium for Jersey bull three years old or over; the first for Guernsey bull one year old, and the second premium for Jersey heifer. The number of prizes actually awarded Mr. Crozier, however, is as follows:

First premium of $15, on all Jersey bulls three years old and over, won by his imported bull, Rival, A. J. C. C. H. R. No. 3,762. He is considered the un-Rivaled Jersey bull of this continent by the best judges. He is of a golden orange color, without any white. He has a large body, on fine, well-set limbs, full black points, and, besides the premium, won the admiration of all lovers of fine stock at the Queen's County fair. In the Island of Jersey he is entered as Foundation stock No. 143. His sire, Jolly, Foundation stock No. 230, and his dam, Daisy, was also registered as Foundation stock No. 884. Next to him stood Crozier's two-year-old bull Cassock 7th, A. J. C. C. H. R No. 3,745, a long, solid-colored bull of dappled fawn, dark around the head and neck. His dam, Josephine Beacon, was awarded second premium at the Centennial in 1876, as the best two-year-old, and was one of the herd that won the gold medal at the New York State fair for two seasons, as well as the herd prize of $100 at the Queen's County fair. Cassock 7th was awarded the first premium as the best two-year-old bull at the late show. Mr. Crozier was also awarded first premium on young Jersey bull Long Island Starr, A. J. C. C. H. R. No. 3,605. Bertram 2d, belonging to the same owner, was awarded second premium on yearlings. In the class for Jersey bull calves, first prize and gold cup were awarded to Crozier's A. J. C. C. H. R. No. 3,983. He is by Victor, the first-prize bull on the Island of Jersey for three years in succession. He also took the first prize over all Jerseys in 1878, and again in 1879. This calf is a solid orange fawn, with the exception of one white spot on his shoulder, with full black points, except the tongue, which is neither white nor black, but between the two. It is intended that this bull shall appear at the World's Fair in 1883.

On Jersey cows Mr. Crozier was awarded the sweepstakes or herd prize for bull and five cows. Of these the above-named Rival was the bull, while Belle Hinman, Jessamine, Eugenie 2d, Nellie of St. Peters and Lucy Simont were the cows in this prize herd. In single prizes the same owner was awarded first prize on Belle Hinman for the best three-year-old cow; second prize for Jessamine as best in the two-year-old class; first for Nellie Le Brocq in one-year-olds; first for Carrie Cass, and second on Princess Eugenie, making, in all, 11 prizes for Jerseys.

Mr. Crozier was also awarded first prize on his Ayrshire bull, Robert Mars, a two-year-old, which took seven first prizes last year when only a trifle over one year old. The same owner also got first prize on Laird Craigie in the one-year-old bull class. The same animal also got first prize in the same class at the late N. Y. State fair at Utica. Besides taking the first prize on bull calves, Mr. Crozier also obtained the first prize in cows, for imported Brown Lady, whose sire, Pollsher,

took over 20 prizes in open shows in Scotland, where her dam also won several first premit nms. The second prize was awarded to the same owner's Nellie Riddle, bred by W. Wiley, winner of two first prizes in Scotland. She was also one of the herd of Ayrshires that won the gold medal and diploma at the Centenuial Exhibition in 1876. Mr. C's Lillie was awarded first prize as the best two-year-old, and his Dew Drop 6th also took a first prize. He likewise received the herd prize of $25 on Ayrshires, and, altogether, bore away nine premiums on his herd of this breed.

In Guernseys Mr. Crozier's imported Venus took first prize in the three-year-old cow class. The same owner also took first prize in the two-year-old and also in the one-year-old cow class, and also the first prize for Guernsey bulls. In fact, he took every prize that was offered in all cases where he made entries for premiums, winning, in all, $250.

Many excellent judges of live stock, from South Carolina to California, attended the fair and were well rewarded for their trouble. Besides the Jerseys, Ayrshires and Guernseys above mentioned, there were on exhibition there the best specimens of Holsteins the owner could find in the native land of the breed. No better Devons could be anywhere found than those shown at this fair; and on all hands the Short-horns were acknowledged to be excellent. As for the half-bred and grades exhibited there, they have not been equaled at any show I have seen this year. The Holsteins were purchased shortly before in their native country regardless of expense, and, although they had no competitors, they certainly deserved all the premiums they obtained. In short, all the neat cattle shown at this fair were worthy of attention, both on account of their remarkable merits, and of the high honors many of them had won in Europe, before their importation into this country.

South Down sheep were exhibited by John Taylor of Bayside, Long Island, that could not have been surpassed in England, as they were bred direct from the first-prize ram of the Royal Agricultural Society's Show. In swine it would be no easy task to excel the beautiful Berkshires, that deservedly won a great deal of attention there. Though the poultry exhibit was small, the birds were of fine quality and the highest strains of blood. On the whole, I must protest that there was at the Queens' County show a great deal worthy of notice. W. C.

Scientific and Useful.

CONNECTICUT AGRICULTURAL EXPERIMENT STATION.

BULLETIN 35.—NOV. 8, 1879.

Analyses of Maize Kernel.

XXXIX.—Coe's Prolific, crop of 1878. From W. W. Fowler, Guilford.

XL.—Old-fashioned Yellow, crop of 1878. From Bethuel Brockett, North Haven.

XLI.—Benton, crop of 1878. From G. W. Benton, Guilford.

XLII.—Mammoth Sweet, crop of 1878. From S. D. Woodruff, Orange.

XLIII.—Scioto, crop of 1878. From Rufus Leete, Guilford.

XLIV.—White Ohio, crop of 1878. From F. Johnson, Branford.

XLV.—Wisconsin, crop of 1878. From Rufus Leete, Guilford.

LXX.—White Prolific, crop of 1878. From G. W. Bradley, Hamden.

LXXI.—Extra Early Adams, crop of 1878. From E. B. Clark, Milford.

The impression appears to prevail that there are considerable differences in the quality of different varieties of Indian corn. Some of the popnlar ideas are certainly erroneous, as will appear from the examination of seventeen analyses recently made in the laboratory of the Station, thirteen analyses executed at the Agricultural College of Michigan under the direction of Prof. Kedsie, and eight analyses made by Dr. Atwater of Middletown.

So far as can be judged from these analyses, the following conclusions are correct, viz.:

1. From the point of view of chemical composition, there are, broadly speaking, two kinds of Indian corn, the common and the sweet.

2. The average composition of these two kinds in the water-free condition, is as follows:

AVERAGE COMPOSITION OF AMERICAN MAIZE.

	Sweet.	Common.
Ash	3.2	1.7
Albuminoids	14.0	11.9
Fiber	2.7	2.1
Carbhydrates (starch, sugar, gum)	72.1	79.0
Fat	9.0	5.3
	100.0	100.0

The sweet corn contained, on the average, 9.9 per cent. of water and the common contained 11.7 per cent., but the samples were unequally dried, and the analyses probably do not show the proportions of water that exist in corn in bulk, as found in the crib or in market.

The figures above given for *Common corn* are the average of 28 analyses, and may be considered as substantially correct; those given for *sweet corn*, are the average of only three analyses and will need revision, as analyses accumulate, but the greater richness of sweet corn in albuminoids and fat is very decided, and indicates a higher nutritive value than that of common corn.

3. The range of variation in the several ingredients is shown by the following statement of the lowest and highest percentages as found in these analyses:

RANGE OF COMPOSITION OF AMERICAN MAIZE.

	Sweet.	Common.
Ash	3.1 — 2.3	1.4 — 2.0
Albuminoids	12.5 — 15.9	10.2 — 13.9
Fiber	2.1 — 3.0	0.9 — 3.0
Carbhydrates	69.6 — 73.9	76.2 — 82.3
Fat	8.3 — 10.1	4.4 — 6.3

Sweet corn in all the analyses contains more ash, more fat and less carbhydrates than common corn.

4. Flint and Dent Corns have practically the same composition, as will be seen from the average of 11 Flints and 14 Dents.

AVERAGE COMPOSITION OF FLINT AND DENT CORN.

	Flint.	Dent.
Ash	1.7	1.7
Albuminoids	11.7	12.0
Fiber	2.0	2.3
Carbhydrates	79.4	78.8
Fat	5.2	5.3
	100.0	100.0

The average water content of Flint corn was found to be 11.7 per cent., that of Dent corn 11.4 per cent.

5. Western corn has about the same nutritive value as Eastern corn. Below is the average composition of 15 samples of corn raised at the East, and 10 samples of corn raised at the West.

AVERAGE COMPOSITION OF EASTERN AND WESTERN CORN.

	Eastern.	Western.
Ash	1.7	1.6
Albuminoids	11.8	12.3
Fiber	1.9	2.5
Carbhydrates	79.4	78.2
Fat	5.2	5.4
	100.0	100.0

The Eastern corn averaged 10.7 per cent. of water and the Western 13 per cent. To institute a strict comparison, any constant difference in water content should be taken into the account. It is not certain that the differences shown by the analyses are true of corn in bulk, but if they do represent a real difference, 100 pounds of shelled corn contain:

	Eastern.	Western.
Water	10.7	13.0
Ash	1.5	1.4
Albuminoids	10.5	10.7
Fiber	1.7	2.2
Carbhydrates	71.0	67.9
Fat	4.6	4.8
	100.0	100.0

The slightly higher content of albuminoids and fat in the corn raised at the West, if it should be shown by further analyses to be constant, is due either to difference in climatic conditions and the methods of cultivation, or to difference in the chemical composition of the varieties most commonly cultivated in the two sections.

We have no analyses of varieties known to be identical, raised in the East and also at the West, except of Tuscarora, which makes a third kind, intermediate in composition between common and sweet corn. The analysis by Prof. Kedzie, and that made at the Station are fairly accordant. Among those analyzed in this laboratory are three:—Ohio Dent, White Ohio, and Wisconsin, which were raised in Connecticut, whose names suggest a Western origin, though the history of the seed is unknown.

The average of these is as follows:

Water	10.1
Ash	1.6
Albuminoids	11.0
Fiber	1.7
Carbhydrates	70.9
Fat	4.7
	100.0

It results that these corns, pound for pound, are worth fully as much or slightly more than corn raised at the West.

It should be said here, that the popnlar idea that Western corn is inferior to Eastern corn, is probably correct, if by "Western corn" is meant the corn as it comes in bulk from the West to be ground for feed.

The samples of Western corn whose average composition is given above, were, no doubt, taken from the field or barn to the laboratory, and had been properly cured and stored. But when corn is raised on a large scale for market, at the West, it cannot be as carefully cured as with us. Many times it cannot be put under cover at all, but is stacked in the field, and necessarily deteriorates, from exposure to the weather. A single analysis of such corn, made by Dr. Atwater of Middletown, gave the following result—calculated on a water-free basis:

Ash	1.5
Albuminoids	10.3
Fiber	1.8
Carbhydrates	81.8
Fat	4.6
	100

It will be seen that it has one and a half per cent. less albuminoids, and six-tenths per cent. less fat than the average of Eastern corn, and two and four-tenths per cent. more of carbhydrates, while the ash and fiber are approximately the same. Dr. Atwater says the sample contained unsound kernels, bits of cobs, fine prairie soil, and other refuse.

6. Unripe maize, so far as its composition is illustrated by three analyses of the same kind of sweet corn, is richest in albuminoids—the rarest and most costly element of food.

These samples of sweet corn, harvested by Mr. Gold Aug. 9, Aug. 25 and Sept. 25, 1877, respectively, had the subjoined composition:

	Aug. 9.	Aug. 25.	Sept. 25.
Water	10.1	10.1	9.5
Ash	2.3	2.1	2.1
Albuminoids	14.5	15.3	14.4
Fiber	2.6	2.5	1.9
Carbhydrates, starch, etc.	62.7	61.8	63.0
Fat	7.9	8.2	9.1
	100.0	100.0	100.0

The albuminoids found in the earliest are indeed scarcely more than those of the latest corn. But the earliest-cut sample was very small and immature, and was shelled from a cob that contained 8.6 per cent. of albuminoids, while the others were from cobs of 3.0 and 2.7 per cent. albuminoids, respectively. The comparison is therefore properly between the corn of Aug. 25 and that of Sept. 25.

The mature corn contains a less percentage of albuminoids than the immature because, in the latter stages of growth, starch and sugar, as well as fat (oil), are formed in the seed at a more rapid rate than albuminoids. The percentage of fat increases from 7.9 to 9.1.

7. The ripe grain, as a crop, contains absolutely more of every ingredient than the unripe. The yield of vegetable matter per acre in the three crops, is not known; but the relative yield of the two later crops is as follows per 1,000 pounds of total harvest, reckoned water-free:

	Corn.	Cob.	Fodder.	Total.
August 25	304	88	608	1,000
September 25	356	94	550	1,000

Doubtless 1,000 pounds of the dry matter of the standing crop on Aug. 25, would have increased to 1,250 pounds, more or less, by Sept. 25, so that the acreage yield of total vegetable substance, as well as the relative proportion of grain, would increase to the time of full ripeness, while the cob and stover would increase absolutely, but not so rapidly as the grain, and relatively to grain would appear to diminish. In fact the grain increases at the expense of stover and cob as well as of roots, while the entire plant gains by growth as long as the leaves are green and unshriveled.

S. W. JOHNSON, Director.

Farm Economy.

SOME REMARKS ABOUT HARROWS.

H. L. WYSOR.

SEVERAL years ago, I bought one of Colton's all-iron-and-steel coulter harrows. This harrow, as is perhaps known to many readers of the RURAL, is made in sections two feet in width, the bars of which are curved somewhat in the form of the letter S, and the teeth bolted in the bends of the curves. There are eight teeth in a section, all having the shape of a common coulter, except that they are on a much smaller scale, and the harrow is generally composed of three sections hinged together. I found, on using this implement, that on account of the shape of the teeth, it clogged badly, even in ground comparatively free of weeds and trash. Briers, roots, and everything which came in its path, caught across the broad foot-pieces of the coulters, so that the harrow could not be cleaned except by taking the sections apart, and tearing out the accumulations with the hands. I bethought me of a plan to remedy this defect, which I here present for the benefit of any RURAL readers who may have been troubled in like manner.

I had the teeth turned round in the frame till the foot-pieces, instead of pointing forward as before, pointed backward. I then had a blacksmith to flatten them and give them a curved front edge, somewhat in the shape of a butcher's-knife, keeping them wedge-shaped from back to front, so that they would always wear themselves sharp. They now stand nearly perpendicularly on the point, while the curved front edge gives all the advantages which are claimed for harrows in which the teeth are inclined backward, and at the same time the work is better done. In all ordinary cases, the teeth clean themselves, as they draw over all trash that may lie in the way. In firm soils, the harrow may now be used to cultivate corn without regard to the rows, but in very loose or sandy soils, it will tear up too large a proportion of the plants. The only fault which can be urged, is that the teeth, having been originally set in the frame to allow for the width of the coulter, are now, after their change of form, rather too far apart. I have also had hooks put on both ends of the harrow, so that, if desired, it may be used with the teeth pointing forward in the manner of a bull-tongue.

A great deal has of late been claimed for hinged or jointed harrows, it being said that they adapt themselves to the inequalities of the land. This, in my opinion, is no advantage whatever, since the ridges and holes are simply smoothed over and left as before, while the stiff-framed implement will reduce the inequalities by filling up the hollows and leveling down the ridges. On steep hill-sides the sections are particularly troublesome, as they frequently come apart, or keep the harrows slipping down hill. In point of form, there is no harrow so convenient for passing obstructions, such as stumps or large stones, as the A-shaped, which passes easily and works sufficiently close to them.

I think the wheel harrow now coming into use, will be found to answer all the purposes for which the harrow is designed, better than any other implement of the kind. The draft on the horses is greater in this sort of work than in anything which is done on the farm. The use of wheels will greatly diminish this draft, while the weight of the harrow can be greatly increased. Some of these implements are made to weigh 500 pounds, a weight which on teeth could not be drawn by two horses. They penetrate the soil from five to six inches, and yet it is impossible for them to get clogged.

Pulaski Co., Va.

Wind-Mills for Farmers.

FEW farmers who have never had experience with wind mills, know their real value when used as a power upon the farm. Doubtless, they are most useful for pumping water for stock, for which purpose they are not only very convenient, but almost perfectly reliable, if properly managed. But pumping water is not the only use to which they can be put. They may be geared so as to propel a corn sheller, saw wood, turn a grind-stone, etc. All good farmers know the advantage gained in having plenty of pure water in their barnyards and stables in winter. When stock of any kind are obliged to go a considerable distance for water in cold, stormy weather, they become chilled by the large draughts of ice water which they drink and the exposure while going and returning, so that more feed is required to keep them in good condition than would be needed were they confined in a sheltered yard. The late improved mills are so constructed as to combine strength, durability and beauty. They are self-governing and will not blow away. In the fall of 1876 we erected a 10-foot Halladay's standard wind mill on our barn. So far, it has given perfect satisfaction as a light power. We have used it for pumping water, sawing wood, shelling corn, turning a grind-stone, and washing wagons. It has stood the most severe storm of wind that our oldest inhabitants have ever witnessed, without injury, and although a large tobacco shed but a short distance from it, was moved from its foundations, the wind-mill stood firm and was not in the least harmed. G. G.

Everywhere.

RURAL SPECIAL REPORTS.

N. Y., Ithaca, Nov. 8.—We have had a few days of winter weather. The mercury was down to two degrees above zero on Nov. 4th. Four inches of snow fell on the 4th and 6th, but it has since disappeared. We have had a smaller rain-fall this season than on any in the remembrance of the oldest settler. The first snow fell in the dust. Crops generally were not a good yield, except potatoes and oats. Cattle are plentiful and cheap, owing to the high price of fodder. Wheat is worth $1.30 to 1.45; oats, 35 cts.; buckwheat, 52 cts.; corn, 55 to 60 cts; butter 25 to 30 cts; eggs, 20 cts., potatoes, 30 to 35 cts; apples, 40 to 50 cts per bushel; hay, $12 to $15 per ton.

There seem to be a great many farmers that have never learned to be careful in their farming operations, or, in other words, to reap the largest benefits from their labors. In fact, people of that class, I think, are in the majority, in this locality as least. Look over the young orchards in spring, and see the young trees that have been ruined by mice or rabbits; while a few strips of lath carefully tied about them in the fall, would have saved all these. Strawberry or other small plants will seldom fail to grow, if they are carefully puddled when set out, be it ever so dry; but how many do it? And so I might continue to give examples of neglect with regard to operations whose importance is from time to time fully explained in the RURAL and other agricultural journals. As times become more prosperous, farmers, as a rule, become more slack in the details of farm-work, that are seemingly small, but which, in the end, amount to a great deal. One of the greatest evils is the annual waste of manure, an indispensable article for the success of the farm. I think that the fertility of the soil could, by the judicious use of all accessible substances for manure, be so increased as to yield a product one-fourth greater than at present—through the East at least. FARMER.

N. Y., Cuba, Allegany Co., Nov. 2.—I planted my Beauty of Hebron potatoes beside the Early Vermont. They both ripened about the same time, but the Beauties yielded most from the amount of seed planted. I had two small tubers which I cut to one eye in each piece, making 20 hills, and dug 17¾ pounds, or 79 potatoes, most of them good-sized and beauties. I think them rightly named. Pearl Millet was a failure; there came a cold rain soon after planting and it did not come up. I have a few seeds left which I shall plant next spring. Defiance wheat was a good yield. I shall sow it again in the spring; then try it as a winter variety. The watermelon did not do well; my soil is not suitable for it. The Golden Rural tomato ripened several days before the Acme. They are both very nice. W. W. D.

PA., Wallsville, Lacawanna Co., Nov. 6.—I sowed two packets of the Defiance wheat in drills on rather poor wheat ground, and got about one quart of small-sized but plump grains. I shall try it again. Pearl Millet was a failure in this section; of the Beauty of Hebron I received two small tubers and cut them to one eye in a piece, and put one piece to the hill. I dug 26½ pounds of very fine potatoes. I think very highly of them. The Blount's corn proved too late for this section. I planted it on May 17, on ground prepared as follows: I took a plot that bore a good crop of Stowell's Sweet corn last year; put on a light coat of stable manure; plowed and harrowed and marked it out in rows 3½ feet apart. In the hill I used the following fertilizers: I made a large hill of cobs; covered them with good road-wash dirt, like a charcoal pit; gave air enough so the cobs would all burn to ashes; then mixed the dirt and ashes all together—a good way to use cobs, I think. When ready to plant, I mixed half as much hen manure with the burned dirt and ashes, put about four quarts in a hill and dug it in thoroughly; hills two feet apart two grains in each hill. The stalks grew to an average hight, I should say, of 12½ feet, some stalks reaching 14 feet. I cut it up on September 24. It was then just good "green corn." That night there was a very hard frost. With me the corn did not prove as prolific as many report—one or two stalks had four ears; several had three; most of them but two, and some but one. I think this, however, was owing to the season, as common corn has cared very poorly. We have had plenty of rain during the season. Corn has made a large growth of stalks, but some pieces where the ground is very rich, do not yield more than a fourth of a crop. Although the Blount corn, on account of its late maturing, has proved a failure in many sections, yet I think if we take a right view of it, we all may be benefited by the experiment. Wherever it was planted, it has borne unmistakable evidence that corn may be greatly improved by judicious management. What Professor Blount has done for the White Prolific may be done by the same management with any of our native varieties that will mature in any given section. I think the Professor says he has been 14 years in bringing this even to its present state of perfection; now we can accomplish the same in a much shorter time by adopting what I would call the seed-plot plan; that is, to plant a small plot on purpose to raise seed. By this plan we may select the very best ear or two to commence with; plant on good ground; and give good cultivation; again select the best top ears of the most prolific stalks, taking the next best for field planting. By this plan we can also easily cut out all false or barren stalks—as recommended in the Corn Number of the RURAL—which I think would tend greatly to increase its prolific qualities. W. E. M.

MICH., Otsego Co., Nov 5.—An abundant harvest rewards the toilers in this newly settled place, only five years ago a wilderness. Cereals and vegetables have been grown, which cannot be excelled either in quantity or quality, while fruit trees show cheering promise for the near future. We have already good schools, churches and a live newspaper, which, with two railroads running through the county, give us all the advantages of civilization. Land is cheap and the climate remarkably healthful. To all honest, industrious people, who are searching for a good locality, to build up a home, we say: "Come and abide with us." B. G. M.

UTAH, Glenwood, Sevier Co., Nov. 3.—Farming here is different from what it is in the Eastern or even in the Western States, as every crop has to be irrigated from two to six times. In the northern part of this Territory small grains have to be flooded by means of double furrows run on the highest portions of each field, generally on the "bi-furrows"; but in this, the southern part, every crop is "furrowed out" from one to two feet apart, according to the condition of the land for "soaking." Sometimes the grain has to be "watered up," but this is more or less injurious to the crop, and it can generally be avoided by watering the land before the crop is put in. Fall wheat, is always a better crop here than spring wheat under favorable circumstances, but the fields are usually "thrown open" after the harvest is gathered and the crops put in, in the fall. For this purpose the ground has to be carefully furrowed, and then these furrows are so trampled down by the stock that water cannot run along them properly. Great efforts, however, are being made to "fence in" the land and keep the stock off the fall grain and Lucern. The latter is becoming quite a favorite crop here, and most people contrive to sow a portion of their "city" or town lots with it. It is cut about four times during the summer, and produces about four tons of dry hay to the acre.

The varieties of wheat principally grown here are Club Head and Toas or Touse, a name derived from the Mexican town, from the neighborhood of which it originally came. On rich ground they are generally mixed, the Club Head standing about two-thirds as high as the Toas, which forms a second story, head and shoulders above the other; the Club Head preventing the Toas from falling down, which it is liable to do when the crop is watered at the time the heads are full.

Corn is not a sure crop in this Territory, except in the neighborhood of Salt Lake. The higher valleys are so subject to frost as to make it somewhat risky to grow this crop, and the late and tall-growing varieties never mature. Here, in the Sevier Valley, we have a semi-tropical climate, but even here we are liable to frost on any night after a "blow." The wind generally comes up from the Gulf of Mexico, and in passing over the barren wastes of Arizona and New Mexico it is so robbed of its moisture, that on its arrival here, it is as dry as if it had passed through a red-hot furnace. This state of the air causes such sudden evaporation as to bring down the mercury to freezing point in July and August. Tender vegetation, such as beans, squashes, tomatoes, melons, etc., consequently very often get nipped before bearing.

Some of the potatoes illustrated in the RURAL Potato Number have found their way to this Territory, and are supplanting the old-fashioned "Mechanic." The Early Rose and Snowflake are common. Wheat brings about $1 per bushel here in the southern part of the Territory, while in the north—Cache county—it sells for about 55c. The potato crop is almost a failure; I hear that $1.50 per bushel has been offered by farmers for seed for next season, though probably $1 is an average. Oats and barley, sacked, bring $2 per 100 pounds. Most of the surplus grain from this section is freighted to Pioche and other mining towns in Nevada, and costs about $2 per cwt. for freight. Poultry, eggs, pork, fruit, etc., are shipped thither in considerable quantities. Good apples bring about $4 per bushel; chickens from $5 to $7 per dozen. Now that the railroad is crawling towards the mines, freighting is getting the "dumps," as its days are numbered. W. M. C.

TEXAS, McKinney, Colin Co., Nov. 3.—We are having an extremely dry fall after a droughty summer, causing stock water to be scarce and considerable inconvenience to the stock-men who have not tanks and good water facilities. Wheat is now spreading, and would be fine if a good rain would fall on it before the freezing weather comes; rolling and packing the ground now will prevent it from "heaving." The acreage sown is 25 per cent. larger than has been sown here on any previous year. The late frost cut off the top or second crop of cotton. Fencing and fall plowing are now the rage—as farmers generally are preparing for large crops another year. W. N. W.

The Querist.

ANSWERS TO CORRESPONDENTS.

Bacilli Suis and Hog Cholera; Rust on Wheat, Etc.

A. L., Atlanta, Ohio, asks, 1, what is the nature of *bacilli suis;* are they possessed of animal life; and how do they produce hog cholera; 2, what is the nature of rust on wheat, and how is it produced; 3, at what time in the year should Alfalfa or Lucern be sown, and should it receive any special treatment afterwards.

ANS.—The word *bacilli* is simply the plural of *bacillus*, a form of bacterium which is an exceedingly minute and low vegetable form of monad, a monad being the simplest, indivisable form of life; *suis* is the genitive or possessive case of the Latin word *sus*, a pig; the *bacilli suis*, therefore, are merely the bacilli of the pig, many other forms of bacillus being found in other animals as well as in vegetables. The term was first employed the other day by Dr. Detmer, in the report he made to the Department of Agriculture on the Diseases of Swine. He describes these bacilli as small, almost straight, cylindrical bodies of about 0.003 to 0.005 millimeter in length, and 0.0007 to 0.0008 millimeter in thickness; sometimes moving and sometimes not; in certain stages of development slightly moniliform, or connected like a necklace. They multiply by first lengthening out and then dividing into pieces, each one of which becomes a distinct bacillus. Dr. Law also speaks of them in his report on the same subject, but under the name of bacilli, bacteria or micrococci, the name given them by Dr. Klein.

While it is highly probable, indeed almost certain, that these bacilli and their germs, which are found with them in affected animals, in the form of round, microscopic granules, are the medium by which the contagium of swine plague is propagated, it has not yet been demonstrated that this is the case, or that other causes also may not exist which produce the same effect. As to the mode in which they might spread the malady:—the excretions of diseased animals are full of them, and it is supposed that these rise in the air in day-time, are carried off to a certain distance by the winds, and come down again during the night with the dew, as dew collected from the grass of a pasture adjoining a lot in which diseased pigs were confined, was found, on microscopic examination, to contain both the bacilli and their germs abundantly. It can therefore be readily seen that they could be easily introduced into the organism of animals feeding on such herbage, or upon old straw, or, indeed, on any substance on which the infected dew had collected. It has also been found that animals whose bodies are wounded in any way, are peculiarly liable to the contagion, and it has therefore been inferred that the infectious principle, coming in contact with the raw surfaces, is absorbed by the veins and lymphatics. It has also been observed that hogs having access to water—such as creeks and streamlets—running from the quarters of diseased animals, are themselves soon infected, while those having access to such streams higher up, are exempt from the malady, unless infected by other means. Although the infectious principle must be floating about abundantly in the air in the neighborhood of diseased herds, it is thought hardly probable that sound animals are affected by breathing such air.

2. The red dust or mildew, commonly called rust, that infests the wheat plant and often proves so destructive to the crop, is a minute parasitic fungus, or flowerless plant, known to botanists as Puccinia graminis. It has been known to exist as a scourge to the wheat crop from very ancient times; but it was not until the invention of the microscope that it was ascertained to be a vegetable growth, and not until recent years has its real nature been studied out. The best authorities on the subject contend that this fungus passes through a cycle of changes, each year appearing in different forms and even on different plants. Strange as this arrangement seems, it is not at all unlikely; there are striking parallels among insects and the lower marine animals. Thus, in the fall the wheat rust forms spores—spores of flowerless plants answer to seeds of the flowering ones—that remain over winter in a dormant state and are scattered far and wide by the winds, or which adhere to the straw, stubble and other objects. In the ensuing spring stimulated by warmth and moisture, these germinate when placed in a favorable condition, but this time they infest, not the wheat, but the Barberry, and doubtless also other plants, as this shrub is sometimes entirely absent from localities where the rust prevails. Here, in germinating, they penetrate the epidermis, or covering, of the leaves, fill the tissues with *mycelium*—which is the name given to the fine net-work of threads that may be compared to roots—and shortly appear on the surface in the form of yellow spots. On examination with a microscope, these spots are found to be clusters of small, open cups that slightly protrude through the epidermis. These cups are filled with millions of minute spores which, as they ripen, are scattered through the atmosphere. It is these that now attach themselves to the stem and leaf of the wheat plant where they germinate and appear as rust; this time, however, not in the form of cups, but as tiny filaments crowned with two enlarged cells, one above the other, and crowded together in blotches and streaks all over the plant. This is the rust so familiar to the harvester. It again produces the spores that remain over winter, ready to begin life on the Barberry the coming spring.

3. It is generally sown early in spring, and in the South, where the ground is in a fit condition to receive the seed sooner, it has been successfully sown in January and February, as shown by reports in back issues of the RURAL. It may also be sown in fall. Lucern needs a rich soil, with a permeable subsoil, and great care should be taken to thoroughly clear the ground of weeds; otherwise success with it is doubtful. To facilitate thorough weeding for the first year after planting, it should be sown in drills 15 to 18 inches apart, and hoed whenever weeds make their appearance. A top-dressing of gypsum, lime, ashes or barnyard manure is also beneficial. After the first year it will need little attention and bear abundant crops for an indefinite period.

The Hessian Fly.

W. S., Hoyleton, Ill., sends two wheat plants in which were imbedded a great number of what he thinks must be eggs of an insect that this fall has been very destructive to the wheat crops in that region, having destroyed nearly all the early-sown wheat, but the late sown, he states, has not suffered so much. The same pest was in the wheat before harvest. He asks us to name it, and, if possible, suggest a remedy.

ANS.—The plants sent contained a great abundance of the pupæ (not the eggs) of the Hessian fly. When the larvæ pupate, they are commonly spoken of as being in the flax-seed state, from the resemblance the pupa has to a flax-seed. In the RURAL of July 13, 1878, will be found an article with illustrations describing this destructive insect. This fly deposits her eggs on the leaves of the young wheat plant. The eggs soon hatch, when the larvæ crawl down to the base of the leaf and there live by absorbing the juice of the plant. Half a dozen such larvæ will in a few days completely destroy the plant which turns yellow and falls to the ground. Ordinarily there are two broods in a season, but when the spring begins early and warm weather continues late in the fall, there may be three broods. The pupæ which our friend had observed in the wheat before harvest, were doubtless of the second brood, and the flies which emerged from them, again deposited their eggs on the wheat sown this fall, of which we received the two plants containing the pupæ. There are no artificial remedies for this pest. All that can be done is to sow the wheat late, and thus give time for the multitudes of the second brood to pass away before the wheat appears above ground. In some seasons even late-sown wheat suffers much; but in spite of all that may be said to the contrary, the experience and observation of entomologists and practical farmers prove that generally early-sown wheat suffers most, and late sown, least. In seasons, therefore, when the flies are abundant, it is prudent to delay the sowing as late as the season will permit, and better still to sow a strip around the outskirts of the wheat field early, which will then serve as a trap for the swarms of flies that are waiting for a chance to deposit their eggs. Later, when the whole field is sown, this strip should be plowed under and seeded down anew. The Clawson has been found to withstand the ravages of the fly better than almost any other variety of wheat. There are numerous parasites that prey upon the eggs and larvæ of the fly. It has been estimated that nine-tenths of the latter were destroyed by parasites. For this reason the flies appear periodically in great numbers. When they increase rapidly the parasites also increase rapidly, and finally overpower their supporters which then for years may almost entirely disappear.

"Horn-Ail"

M. M. W., Pittsfield, asks for a remedy for "horn-ail" in a cow. A new milch cow of hers was troubled with garget, and subsequently become afflicted with "horn-ail" and she asks

whether the latter caused the former, or *vice versa*.

ANS.—"Horn-ail" or "hollow-horn" is one of the imaginary diseases of cattle. What is commonly called by these names, is not a distinct ailment, but merely a symptom of some more deeply seated malady. In all serious troubles of animals there are times when the extremeties—the ears, horns, and limbs—grow cold or alternately hot and cold, hence the error of supposing that the ail is there. The base of the horn is very thin and covers one of the most vascular parts of the whole body. If that place is cold, therefore, it shows that the blood is no longer circulating through the small vessels, but congesting around some important organ, which is the seat of inflammation. The symptoms sometimes accompany catarrh, and are also caused by exposure, indigestion, constipation, and want of proper attention; in fact, by any thing that causes an unnatural distribution of the blood. Both the garget and the symptons designated "horn-ail" may be due to the same derangement of the system, in this case produced perhaps by taking cold. For the treatment of garget, see RURAL of Sept. 14. In the absence of further information as to the real cause of the "horn-ail" symptoms, we would advise our correspondent to stimulate the digestive organs, to use aperients, if the animal is constipated, and to apply stimulating liniments to the roots of the horn.

Kidney Inflammation in a horse.

B. G. I., Decatur, Ill., has a poor, weak mare that began to fall away about the first of last December. She has been worked only very moderately since then. She foaled in April while in poor condition, and has been failing steadily since. At times she is so weak across the loins that she gives down while drawing an empty wagon a few miles. This faintness is first shown by a dragging of the hind legs; then she reels like a hog affected in the kidneys. Her urine is varnish-colored, and very ropy or as thick as the white of an egg, with a scum on the top of it, after it has settled, and he asks what ails the animal and what should be the treatment.

ANS.—The horse is suffering from inflammation of the kidneys. The treatment is to give a pint of linseed oil and repeat in two days; to foment the loins with hot water and apply a hot bran poultice for an hour; after the poultice has softened the skin and opened the pores, a mustard plaster is to be applied. Warm drinks of slippery elm bark decoction or linseed gruel are useful, but no diuretic should be given; saltpeter and resin which are popularly supposed to be proper in such cases, are seriously injurious. After this treatment has been applied for a few days, a course of bitter tonics should be given, viz: half an ounce of powdered gentian root and one drachm of sulphate of copper, which may be given in the food. No corn should be given, but bran mashes or boiled oats. Musty hay or grain is a frequent cause of this disease.

Weakness of the Loins in Rams.

G. S. H., Warthen, Ga., has a fine ram that is weak in the loins, and he asks whether there is any remedy.

ANS.—The weakness is caused by disease of the spinal marrow or its covering membrane. The nerves which control the motion of the hind-quarters and the action of the digestive organs, proceed from the spinal cord near the loins, and disorder there affects not only muscular action but the digestion as well. The usual treatment is to apply a counter-irritant to the loins, such as turpentine or a mustard plaster, and wrap a warm rug about the animal; also give a good warm, soft bed, and bran slops slightly warm, with one drachm of saltpeter dissolved in each morning's feed. Sometimes the paralysis is caused by disease of the kidneys, in which case the above treatment is appropriate.

Miscellaneous.

A Farmer, Ithaca, N. Y., says that from the two small seed potatoes sent him by the RURAL as Beauties of Hebron, he has obtained two distinct varieties of tubers: one, much like what the Beauty would be according to the description of it, but mottled, though a good table potato; the other, a large, white very prolific potato, but not a first-class cooking one. Of this he sends a specimen; and asks how the difference could have occurred.

ANS.—In some way or other the seed potatoes are "mixed." We have never seen Beauty o Hebron "mottled." The potato sent us resembles more a Snowflake than any other kind we are familiar with. But the quality of the Snowflake is excellent. It is barely possible it is a "sport" of the Beauty. Such "sports" not unfrequently occur. Late Snowflake is a "sport" of Early Snowflake; Late Rose a "sport" of Early Rose, etc.

H. G., Peterborough, Ontario, asks where he can obtain a bone-grinding machine, and what would be its probable cost; and also if we can give him the name of any publication that offers information on the crushing of bones. He will also be glad to know if the bones undergo any treatment before they are ground. It is proposed to crush the bones small for agricultural purposes.

ANS.—The United States Wind, Engine and Pump Co., Batavia, Ill., and L. J. Miller, Cincinnati, Ohio, make mills that are adapted to the above purpose; the price will vary with the size, and can best be ascertained from the manufacturers. We know of no publication especially devoted to the treatment of bones for this purpose. Manufacturers of fertilizers ordinarily clean the bones of any meat or fat that may adhere to them, but this is not necessary. We know of no manufacturer of ground bones situated near enough to the above place, to whom we could refer our friend for practical information.

J. A. B., Quantico, Md., having seen the Japan Quince recommended as a hedge plant in the RURAL, asks, 1, if it will do well in that climate; 2, how many years will it take to make a good hedge; 3, will it turn stock as well as the Osage Orange; 4, where can he get seeds or plants.

ANS.—1, Yes. We see no reason why it should not do well in Maryland. 2. That depends very much upon the treatment of the hedge. If judiciously pruned, it will form an efficient fence in four years. 3. It will turn stock as well as the Osage Orange, but it cannot do it so soon as the latter, since it does not grow so fast. 4, Seeds and plants can be obtained from any large nursery firm, like Parsons Sons' Co. Flushing, L. I., Ellwanger & Barry, Rochester, N. Y., and others. We would recommend to set plants one year old from cuttings rather than raise them from seed.

J. A. P., Conn., asks, 1, what will prevent a cow from milking herself; 2, whether hens can be kept too well, so as to prevent them from laying freely. He has 48 hens and doesn't get over an egg a day from the whole four dozen, though corn is always at their disposal.

ANS.—There are various mechanical devices for this purpose, one of which was illustrated and described in the RURAL for July 26.

2. Yes. Hens are often fattened so much as to impair their prolificacy, and sometimes to almost entirely prevent their laying. Corn all the time is not a good food to promote egg-production. Hens, like humans, are fond and in need of variety. Give these plethoric birds less corn and more of other kinds of food; do not allow them to gorge themselves, except from the results of their own industrious hunting, and there should be eggs enough for the whole family for breakfast, with plenty for custards besides.

Mrs. A. C. H., Roanoke, Ind., wants to know what she shall do with her salsify roots. Mr. Vick has told her to treat them like parsnips, but these she leaves in the ground all winter, and if she also left the salsify out, the roots would not be available when wanted most.

ANS.—Dig up all that are wanted for winter use, and pile them snugly with alternate layers of moist sand on the floor in the cellar or in a box and put this under shelter in an out-of-the-way place. The roots should be kept moist to prevent their withering. What are not wanted for use can be left in the ground, being perfectly hardy.

J. H. L., Shelby, N. Y., asks, 1, what is the value for manure of one ton of night soil as it is taken from the privy vault; 2, does it deteriorate by lying in the vault for a few years?

ANS.—1. The value of night soil is much less than is generally supposed. It is worth very little more than good barnyard manure. One ton contains 16 pounds of nitrogen, 12½ pounds of phosphoric acid, and 4½ pounds of potash, being poorer in nitrogen and potash, and richer only in phosphoric acid than mixed barnyard manure. 2. After lying in a vault a year, the nitrogen will have been lost by dissipation.

A *Subscriber, Newark, N. J.*, has a sod lot on which he intends to plant potatoes next spring and he asks, 1, which is the better plan—to plow it now or wait until then. 2. He inquires whether the Japanese Persimmon would prove hardy, if grafted on a native hardy tree.

ANS.—1. We should plow as soon as time and suitable weather and condition of the soil permitted. 2, Grafting it upon our Persimmon (Diospyros Virginiana) would not help it much. What other stock is there to graft it on?

G. M., Houston, Texas, sends a leaf and a part of a flower taken from a herbaceous, tuberous-rooted, climbing plant, and asks the name of the plant. He also wants to know where he can obtain *Le bon Jardinier*, a French work of over 1000 pages, edited by some of the best French horticulturists, botanists and nurserymen, and treating exhaustively of the whole horticultural art.

ANS.—1. Antigonum leptopus. 2. From F. W. Christern, 77 University Place, this city.

O. M. T., Orland, Ind., asks where he can obtain seed of Pearl Millet and Beauty of Hebron, and at what price.

ANS.—These can now be had in any well appointed seed store. We do not know the price of Millet; Beauty, $4 per bbl.

W. H., Norwich (one of the seven in the U. S.) wants the address of a firm in New York that he can buy groceries of in small quantities, and get good goods.

ANS.—H. K. & F. B. Thurber, New York city; F. W. Legget & Co., Reade St., N. Y.

G. W. M., Leesburg, Florida., asks if there is any barbed wire manufactured with the barbs one inch apart.

ANS.—No, so far as we know.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, NOV. 15.

Miscellaneous.

PLANT RESISTANCE TO COLD.

THERE are more opportunities of noting the powers and idiosyncrasies of plants in districts where they are exposed to severe climatic trials than where they have an even temperature. Just where the writer lives, the frost of May 12, last, cut off the blossoms from all fruit trees and Grape-vines: only a few sorts of Pears and Grapes saved, here and there, a sample of their fruits. The season up to that date, had been the most favorable and promising, all through autumn, winter and spring, that could be remembered. There had been an exuberance of congratulation and delight over the mildness, the geniality, and the prospects of abundant food for all the faculties of enjoyment possessed by man as a tenant of the earth.

A singular effect of this cruel sweep of untimely cold was the fact that the more tender sorts of Grapes, such as the Iona and Enmelan, suffered less than the ones that resist, as to their wood, the utmost severity of our winter's cold, such as the Clinton, Hartford and Concord. These lost all their fruit, excepting, here and there, a bunch sheltered under eaves; while the sorts more tender as to wood, retained and perfected a number of bunches, although they were in free air, quite unprotected. But we see a similar phenomenon in the behavior of half-hardy trees and shrubs, such as the Peach, the Fig, the Orange, Oleander, etc which retain their leaves and seem unhurt by October frosts, while the leaves of our native Grapes and trees generally are curled and killed by the first hard snap. Among herbaceous plants I have noticed that the Egg-Plant, which cannot bear even a single chill when it is young and growing, has not succumbed quite to the three or four frosts that we have had up to the end of October.

In this connection I will mention that, happening to have covered a favorite young Geranium with a newspaper to protect it from a frost in early October, the paper was drenched with red stains, like blood, next day. This came from an Achyranthes which had been left to its fate as too large for the house, and which leaned over the Geranium. The frost, light as it was, had burst the cells and even the outer integument, and thus the unfortunate plant had literally bled its life out. In the ability which some tender plants show to resist severe trials by frost, there seems to be some analogy with the behavior of women, apparently weak, yielding, and ready to faint and drop, who yet, on the occurrence of distress or trial, show even more capability of resistance and endurance than sturdier man. They seem to bend, like the reed, and recover themselves from a storm that lays Oaks prostrate.

I may add to this that the grape bunches that escaped, have kept unusually well and excel in flavor. They were formed early, had little competition, and so had fully matured. It is a lesson as to the policy of thinning out the bunches well, if we would improve the quality and keeping properties of grapes. The kinds that had then 12 to 18 inches of strong growth entirely frozen dead to the base, made very much less than the usual quantity of wood, but what they made, ripened very well, thanks to the dry and protracted autumnal weather. W.

WHAT OTHERS SAY.

LIGHT AND HEAVY OATS.—The N. Y. Tribune gives a summary of good evidence to show that light oats are not always the best. A short time ago Grandeau published, in the *Journal d'Agriculture Pratique*, a very interesting paper showing that there is no relation between the weight of oats per bushel and their feeding value, as measured by their nutritive ratio. Mr. Ottenheimer, seeing this, wrote to inform Grandeau that his own experience corresponded with his results, and he gave the following account of an interesting experiment of his own:—He had under his care two sets of horses driven by the same postillion over the same post route, for the same distance and at the same speed, and in every respect made to do the same work. The horses were of the same breed, and of the same age and size, and numbered 12 in each lot. One set was supplied for six months with the lightest oats that he could get in the market, weighing 28 pounds to the bushel; the other set was supplied with the heaviest oats he could procure, weighing 40 pounds. During the whole period of the experiment the two sets of horses appeared equally strong and hearty, and both were in equally good condition at the end of the six months. In conclusion, Grandeau says that a chemical analysis of the stock of oats on hand for the season, furnishes the only safe basis for deciding on the proper quantity to be put into the ration. The General Carriage and Omnibus Company of Paris now has such analyses made for this purpose.

THE FALL IN THE VALUE OF LAND.—The following suggestive note is from London Truth. "If you can buy land in America as good as land in Berkshire for a few dollars an acre, land in Berkshire cannot be worth a rent of £1 per acre for agricultural purposes. The sole difference, assuming land in America and Berkshire to be equally fertile, between the two values, must be the difference in the cost of the carriage to market. Taking four quarters as the yield of an acre, the rent that can be paid for an acre of land in Berkshire over and above what an acre is worth in a Western State of America, is the excess of the cost of the carriage of the produce of an acre in a Western State to London over the cost of the transport of the produce of a Berkshire acre to London. The reduction in the value of land in England is, therefore, not only permanent, but the decrease in value will augment in proportion as more and more land is devoted to agricultural purposes out of England, and as the means of transportation are facilitated. We are only at the commencement of the equalizing effect on value of land produced by cheap intercommunication. Why, in Hungary and Transylvania, fowls, fattened on maize, may be bought for three pence in any number, and they might be brought to England in refrigerating wagons for about one penny apiece. To sell them, therefore, for sixpence each in London would return a handsome profit. And it is merely a question of time when these fowls will be seen in our markets, competing with the produce of our own farm-yards."

HORSE SHOEING.—Dr. Fleming says that the face of the hoof should on no account be rasped or scraped, so as to remove or destroy the beautifully-smooth, polished surface which an unshod hoof always exhibits, and which every hoof would show if the farrier did not attempt to make "fine work," and waste his time and tools. No oil or rubbish, designated hoof-ointments, should be applied to the horn. They are not only useless, but positively injurious. To the unrasped wall of the hoof, nothing is better than water applied by means of a sponge or soft water-brush when necessary.

ANOTHER COMPLAINT.—A peculiar complaint about the hardness of the times has just reached us. It is from the bacon-curers. Hitherto these gentlemen have done very well, and in Waterford many of them have amassed princely fortunes. But the process of accumulation has not lately been going on so rapidly. The bacon-curers have been losing money, and the old cause is assigned—American competition. It seems that in this respect, as in so many others, we cannot now successfully compete with our enterprising Yankee cousins.—The Farmers' Gazette.

PRESERVING PUMPKINS.—The editor of the Germantown Telegraph preserves his pumpkins on a scaffolding put up in the cellar, allowing them to lie side by side, but only in a single layer. He uses them as needed through the winter, and finds that from a dozen to a dozen and a half are ample to supply the family as long as they care for them. On two occasions he kept one or two over to discover how long they *would* keep, and found them in good condition *in August*, but that was about the end of their time.

TO BE FOLLOWED.—The London Farmer says: "We have adopted the factory system of cheese-making from America. Our Dairy Farmers' Association is an imitation of the Dairymen's Societies of the United States. There is yet another Transatlantic Society which may be followed with advantage. This is the new Dairy Record Association which is about to be formally inaugurated in response to a 'call.'"

PAMPHLETS AND CATALOGUES.

Descriptive Price-list of Grape-vines and small fruits; also of high-class poultry bred and for sale by Geo. S. Josselyn, Fredonia, N. Y.

Catalogue of Bulbs for Autumn Planting offered by Wm. H. Carson, No. 125 Chambers St., N. Y. All sorts of Hyacinths, Tulips, Lilies, etc. Free to applicants.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, NOV. 22, 1879.

AN APOLOGY.

We have often stated that the Rural New-Yorker admits no deceptive or untrustworthy advertisements and we have made such statements with all sincerity. Nov. 8th an advertisement of an establishment which professes to cure Cancer *was* admitted, and for this we apologize to our readers. It was an oversight due to the absence of the superintendent of the advertising department. The institution referred to may be perfectly respectable. We know nothing against it. As, however, we do not believe that cancer can be cured "with little pain" or, indeed, at all, we are unwilling to be instrumental in influencing our readers against our own very decided convictions.

THANKSGIVING.

A New England historian, many years ago, wrote of this annual festival as follows:—

"The corn is garnered, the crop is gathered, the work done. The Earth has begun her rest, and the husbandman is in harmony with her. Again are heard the notes of preparation; on Sunday the sounding proclamation is listened to with attentive ears—how the year has been crowned with goodness; how peace is upon our borders and plenteousness in our palaces; how the clouds drop fatness, and how servile labor and vain recreation are on this day by law forbidden. The week is full of bustle, consecrated to the mystic rites of the kitchen, the body becomes great—almost god-like. For it is elaborated the great chicken pie; tarts and custards and seed cakes, are adorned with unintelligible characters, clearly not Hebrew. Fires are burning; the hearth is swept and all is expectation. Fathers and mothers and sisters and cousins, children and grandchildren and even dogs are ready to welcome to the old New England homes the crowd of returning children. Thursday is well spent, even with some excesses, for all good and kindly feelings are called into fervid action. Hatred, malice, and uncharitableness are banished. The day is a holy day, and as such is to be cherished and preserved."

To this he adds a prediction that this institution, begun in New England and there so firmly rooted, will follow the children of New England and become established throughout the Union. We have lived to see the prediction verified, and never do we remember a year when the whole country could with one accord better unite in fervent thanksgiving for unbounded prosperity, than on the one now near its close. The harvests of the various crops in the various sections have been abundant, the surplus above what is needed for home use finding ready market abroad. There is not one of the agricultural products of our whole country that is not readily salable at a good price. Our manufactories, also, many of which have lain idle during a season of business stagnation, are now in successful operation, giving employment to thousands who depend upon them as a means of earning a subsistence. To dispose of the products of the soil and the manufactured goods has given a much-needed revival to business, and there is not a class in the whole community that is not feeling the effect of brisk trade.

We have, furthermore, reason to rejoice and be glad in the general healthfulness that has prevailed. With the single exception of a limited area, there has been no fatal epidemic, and we think the death rate for the year will be found considerably below that of the average of many years. Droughts and floods have been confined to restricted limits; insect pests have not been so destructive as in former years, and in whatever way we review the year, we find cause for rejoicing and giving thanks.

In this world there is much theory and sentiment; more than of practice and fact. How many who gather round the festive board on Thanksgiving Day will do it with a spirit of thankfulness; and even when the words of "grace" are said, in how many cases will they be only as a cold formality. In how many families will thought be given to those who would seem in the eyes of the prosperous to have little to be thankful for, and who would make a feast from that which could be spared without notice from the overabundance of their neighbors' tables. Charity is not necessarily an adjunct to thankfulness, and one who is in a grateful spirit may forget the necessities of those about him; but it would seem that even a slight modicum of the love for our fellowmen, merely as a portion of the human race, should at such a time be sufficient to awaken our sensibilities and induce us to do at least a little to awaken thankfulness on the part of a less prosperous neighbor, and not merely thankfulness toward us, as individuals, but a feeling that he is a portion of the great mass of humanity over which a constant care is exercised by that Power without whose notice even no sparrow falls.

With Thanksgiving Day comes a great temptation to sin. The savory odors of the nicely prepared food; the number of courses and variety of dishes; the company of relatives and friends, all join in keeping us long at the table, giving more time for the indulgence of appetites and urging on to excesses.

We rejoice at the annual return of the day for the pleasures it gives to ourselves and others—the pleasures of social communion, of family reunions, of good dinners and hearty cheer, of dances and games and general merry-making. Of all these we hope our readers will have plenty; but, while wishing them the most enjoyable of days, we cannot refrain from this bit of advice: *Don't eat, and, above all,* Don't drink, *too much.*

CULTURE ON THE FARM.

It has truly been said that culture is the acquisition of no single effort. It is rather the resultant of constant progress, the improvement of every advantage bestowed on the otherwise crude and uncouth mind. Our cosmopolitan nation, while affording an ample field for mental and physical culture, embodies an ample fund of inventive genius which is subject to mental discipline and refinement. Yankee ingenuity and Western enterprise are two of the chief forces that give zest to American life. Each, to insure success, implies efficient work and deep-fathomed schemes. To a certain degree manual labor always precedes mental, after which, to preserve our individuality, they should be rivals; for neither is adequate to sustain its colleague. Undivided attention to one is positively fatal to the other, while both are essential. Our literary circles sparkle with the wit and wisdom of former times, and the lore of the present day; our laborers hammer at the forge and guide the plow-share. Neither knows the pleasures of the other, but if the former are brilliant in letters, the latter need not be ignorant. A prevalent idea is that mistaken one so often assumed—the idea that culture cannot attend a farmer's life. It is, however, true that no being with self-regard, can afford to sacrifice self-improvement for worldly devotions, and totally disregard the refining influences of his associates, but every person does owe a first duty to himself, and that duty is to make himself a *man.*

The rural districts may be deprived of many cultivating sources familiar to the city, but country homes need not be gloomy and unattractive. On the contrary, each home is a little world in itself. The reliable medium of books and papers should provide for every kind of life. Our best authors and educators should find their way into every rural home, and, beyond developing a taste for facts or serving as an amusement, they should furnish the choicest language, and suggest the best ideas; for language, written or spoken, is undisputably the highest deputy to culture. Rural people unavoidably associate with the illiterate, and for that reason encounter difficulty in preserving intact their purest ideas. Regardless of this, the farm has fostered our best statesmen, orators and poets. It has nourished the strongest bodies and clearest intellects; it has filled the chief offices and served the highest honors. Men are not born great. They may breathe almost the first breath with ambition for great achievements, but the record of success is the indelible record of old age. It is the little parts that compose the great whole. No generation should retrogress. The past can be reachieved and the present improved. If books, as silent companions, do not produce the required result, one's own resources must submit to one's will, or society supply the deficiency. Our subject then incurs the query: How shall rural customs contribute the best advantages? The innate feelings of each person require various modes to deduce the greatest benefit. Some individuals are brilliant only in conversation; others in writing, and many only in tact or executive ability. Separately, however, they are susceptible to their surroundings, and he who cannot grow amid books, can cull sermons and inspiration from nature, and can profit by conversation. It is impossible to be familiar with anything without catching something of its inspiration. Our rural homes can be surrounded by richest luxuries, and it requires only a little care and diligence to secure the aids to self-improvement, but it requires constant attention to appropriate the benefits of our resources and imbibe the highest culture.

ROOTS AND TUBERS.

We often see sweet potatoes, "Irish" potatoes, Dahlias, Jerusalem artichokes, beets, carrots, etc., referred to indiscriminately as *roots* and *tubers.* It is well that the distinction should be observed. A potato is a *tuber*; so is an artichoke. A sweet potato is not a tuber. Neither is a Dahlia nor a Pæony. A tuber is an underground branch or thickened rootstock. The so-called eyes of potatoes are really buds, as much as those which occur in the axils of the leaves of stems above ground, and the rudimentary leaves beneath may be seen in the form of little scales. Sweet potatoes, Dahlias, Pæonies, etc., are swollen roots, though the sweet potato does produce buds, particularly at the upper end, and it is for this reason that it has been mistaken for a tuber. He who will take the pains to examine the underground growth of each will see that the difference is very marked. Often the roots of sweet potatoes swell to the size of one's little finger, and so remain, while, beyond, another swelling upon the same root may so enlarge as to make a potato fit for eating. The Irish potato forms at the end of the stem, and forms no fibrous roots of its own. The eyes may be compared to the nodes or joints of the rootstocks of the well-known couch, or quick-grass (Triticum repens), so troublesome to farmers all over the country, each one of which will grow more quickly for being detached from the rest of the stem. Beets, turnips, carrots and parsnips are roots. The seed is planted one season and an accumulation of nutrition is stored in the root which, if planted again, produces flowers, fruit and seeds while it is itself consumed. The tomato and potato are closely-allied plants. The former produces fruit freely, but never tubers—the latter fruits sparsely, but produces tubers freely.

TIMELY WARNING.

Readers of periodicals should be particularly careful in regard to trusting their money to strangers who ask for it through the medium of an advertisement. This caution is undoubtedly a trite one, but it is peculiarly pertinent at this season. The unscrupulous men who concoct alluring announcements in which a great deal of value is apparently exchanged for a very trifling consideration, choose this season in preference to any other, and their advertisements will be found in a great many papers. Indeed, a publisher must not only edit his advertisements with extreme care, but must, in addition, have a running knowledge of the individuals themselves in order not to be deceived. In our own office, very recently, we rejected an advertisement that, to all appearances, was unexceptionable, because we knew the advertiser, and felt certain that any of our readers who dealt with him would have good cause for dissatisfaction, to put it no stronger. The latest rank swindle is that advertised as the North Denver Land Co. The corporation was one man—S. A. Grant—and he was, at last accounts, in the hands of the sheriff. Grant is an old offender and very clever at concocting plausible swindles. We trust none of our readers were induced to send him a dollar to secure a tax-free title to a lot in the Utopian North Denver, as they will certainly never again see their dollar. It is unnecessary to add, perhaps, that "North Denver" was a waste place, and every promise made in the advertisement a delusion.

It would be a wise course to pursue to write to your papers for information regarding any advertisement or solicitation of which you had the slightest reason to be suspicious. It would save you many dollars probably.

BUD "HYBRIDS."

A bud is an undeveloped stem. To unite two buds is really the same as uniting two stems. If we were to split two buds of different varieties of Apples in two, and then, taking a half of each, cause them to unite by grafting them upon an apple stock, we should suppose the result would be precisely the same as if entire stems—cions—from different varieties were grafted upon the same stock, viz., each bud or cion alike would bear the fruit of the tree from which it was taken. If it were possible to cut a bud into 100 pieces and cause them to unite to 100 other pieces, we should suppose that each of the 100 pieces would bear the fruit of its kind. Uniting the halves of two buds or of two stems merely forms a compound or aggregate cion or bud. The individuals remain as distinct as ever. A blending of the qualities of different plants so as to form what are popularly called "hybrids," can, as we believe, be effected only through the reproductive organs.

BREVITIES.

Mrs. Jack, of the Province of Quebec, Canada, tells us that Alfalfa is *hardy* there.

Does anybody know that "Kieffer's Hybrid Pear" *is* a "hybrid"—by which we mean a *cross-breed.* Is it a guess, or what?

Those who are prone to eat too much of the Thanksgiving dinner, will do well to return thanks before commencing the feast. There is such a thing as being too full for utterance.

Soot from a chimney where wood is used for fuel, is an excellent fertilizer for pot-plants. Put into a pail and pour hot water upon it; then water the plants with this every few days.

Cap. Jack may conduct himself admirably West, but he *is* a "gay deceiver" with us, and we hazard the prediction that having served a full term, our Western friends will not re-elect him. They would again vote for Wilson rather.

We shall send out the raspberry plants to applicants so long as the ground remains open. The seeds will be distributed during the winter and the rest—the great bulk, of course—of the raspberry plants in the spring.

One of the finest plants for forcing is the Bleeding Heart—Dicentra spectabilis. The roots of old plants may be taken up even now. Place in a cool window or greenhouse and it will bloom by the 1st of February and continue to bloom until May.

Last year a contributor to this journal asked us to state several plants which could not be subjugated by repeatedly cutting off the foliage and stems. We mentioned several, but not the Nut-grass of South Carolina, which did not at the time occur to us. Probably no other pest is more tenacious of life.

By a decree of November 3rd, 1877, permission was given to import cows intended for breeding purposes into Cuba, duty free. The term for which this concession was made, having just expired, the Cuban Treasury has ordered the Custom House to resume the collection of duties on such cattle.

A friend shows us a specimen of a new seedling potato which is said to be *perfect* as regards quality, and an abundant yielder. We may say that in appearance it is as shapely as the Snowflake which it somewhat resembles. It has been tested by Dr. Hexamer who pronounces it the best potato he has ever seen, which is *very* high praise. It has thus far been designated only as B.4. We suggest the name when this variety shall be offered for sale. "Before."

Mr. C. W. Garfield, Secretary of the Michigan State Pomological Society, writes us the following of Kieffer's Hybrid Seedling Pear, and what he says we heartily indorse. "Without having as yet fruited it, I have one objection to it, and that concerns its name. There is no use in trying to exhaust the description of a fruit by giving it a long name. "Kieffer" is enough without having to run twice across a written page with the rest of the name. Our Society will try and give short names to the fruits which it "dubs." For instance: two Strawberries we have named this year, the "Marvin" and the "Shirts," are models in brevity of nomenclature.

The Thwack.—A friend from La Porte, Ind., writes us that in view of our derogatory estimate of the Thwack Raspberry, he is of opinion that we have not the genuine sort, or else that the kind he cultivates under that name, is not the Simon-Pure article, as he and others in his neighborhood think their Thwack fully equal in quality to the Herstine, while some deem it superior to that excellent variety. We have no doubt as to the genuineness of *our* Thwacks, and the opinion we have expressed as to their merits, like all our opinions with regard to the various plants we have tested, is the unbiased result of our experience with them. It *may* be that our correspondent and his neighbors have not the real Thwack. There is, of course, no doubt that nearly all varieties of fruits give more satisfaction in some soils and climates than in others.

Mr. E. H. Libby, several years ago founded the Scientific Farmer, a Monthly published in Boston. Several months ago he relinquished his interest in that journal to his partner, Dr. E. L. Sturtevant, to manage a new weekly which was to have been called the Country Home. It was advertised widely, but did not appear, because just at that time Mr. Libby preferred to accept the position of Editor-in-Chief of the American Agriculturist, and the "Country Home" was abandoned. For reasons not known to us, he soon retired from that position and, after a brief visit to England, has now returned, and the first number of Land and Home, an agricultural weekly of which he is the manager, is now before us. It seems to be about two-thirds the size of the Rural New-Yorker, and proposes to work in essentially the same field of labor. This enterprise could not have been started at a more auspicious time. We heartily wish it and all other agricultural enterprises, the full measure of success which they deserve.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

A POOR MOTHER.

"I wish you joy." Her lips put on a smile
To mock the woeful shadow in her eyes.
"Nay. I have no mind to blame you—tears and sighs
Won't make a word, but only the surprise—
So sudden! Let me breathe a little while.

"See, dear,—'twas only yesterday I thought,
Looking abroad, the world seemed green and glad.
I thought, God's given me this—the kindest lad,
The dearest child that woman ever had—
And health and hands, I envied no one aught.

"My life was full; my heart went beating fast
With pride, with hope, with mother's happiness.
I held both hands above it, to repress
Great thrills of joy. O God! I could not guess
How brief a time my counted wealth would last.

"I knew you loved her? Child, I never knew,
I saw you walk and talk, and dance, and jest,
It seemed but foolish pastime at best,—
You were both so young, I made no test
Nor question of the future for you two.

"But marriage is not death! you'll love me still?
A little—yes—with such love as may spread
In overflow beyond your child's bright head,
Your wife's fair eyes. Ah no—the past lies dead—
And time goes on, and Nature has her will.

"Hush—hush; forgive me. I must weep or die!
Still, dear, I bless you! Through these blinding tears,
I greet you bravely, beyond doubts and fears.
For all the happiness of coming years,
I greet the man; but oh, my boy, good-bye!"

DESCRIPTION OF CUTS.

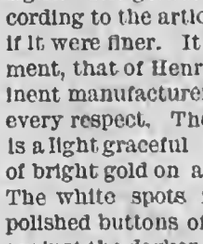
The premium list issued by the Rural New-Yorker this year contains a number of pieces of handsome jewelry selected mainly for its suitableness for presents. Great care has been taken

that it should be of the best quality, superior in finish, and of the latest and most fashionable designs. The gold is from 14 to 18 karats fine, according to the article, it would not be serviceable if it were finer. It all comes from one establishment, that of Henry C. Haskell, one of our prominent manufacturers, and it is fully guaranteed in every respect. The lady's cross, (premium No. 15) is a light graceful design, with a delicate tracery of bright gold on a back ground of Roman gold. The white spots in the illustration are highly polished buttons of gold that stand out in relief against the darker colored gold. Any one sending the Rural a club of twenty-three subscribers will receive this cross.

The lace pin shown in the accompanying engrav-

ing is premium No. 10 and is given for a club of sixteen. The artistic effect of the chasing is enhanced by using gold of two colors, light and dark. These lace pins are extremely popular because they can be used in an ornamental way for various parts of a lady's toilet, and in selecting one we think we have secured the prettiest design shown this season.

We have also chosen several kinds of rings, one of which, premium No. 7, is here shown. The ring



is a band of gold tied in a true love knot, and depending from it is a horse shoe, (typical of good luck). These bangle rings, as they are called, are very fashionable in New York, and we have here presented one of the latest and most popular styles. This ring is presented for a club of seven subscribers.

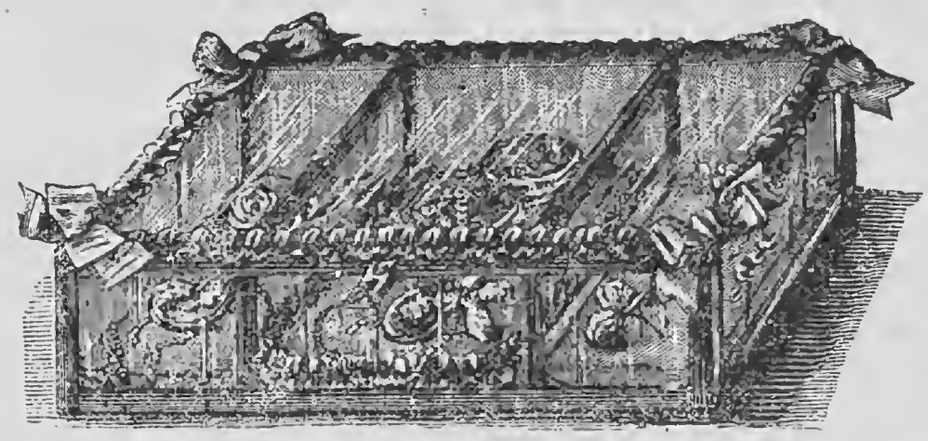
Nothing prettier or more suitable for presents could be found than these premiums, and it requires so slight an effort in proportion to the reward given, that we should suppose Rural ladies would be quite willing to make it, and secure at least one Christmas gift practically without any expenditure of money.

No. 1.—JEWEL-CASE.

The case is made of a plain deal box. Any old box will do for the purpose. It is padded and lined with purple velvet. The covering is purple cloth, embroidered with rose-colored marking floss in cross-stitch. To keep the design even, canvas must be tacked over the cloth and the stitches worked over it. The threads of the canvas may be drawn when the work is finished.

No. 2.—JARDINIERE.

The framework is of bamboo. These frames are sold at most fancy-work shops, with a tin tray to put the flower-pots into. To hide the tray, drapes of embroidered cloth are placed in each division; these are pinked or cut in points at the edges, and ornamented round with simple designs in embroi-



No. 4.

dery. A scroll in braid or embroidery ornaments the middle of each drape.

No. 3.—BOOK-MARKER.

The foundation is of dove-colored ribbon, the cross is worked in fine silver thread, and the forget-me-not flowers and foliage in their natural

No. 3.

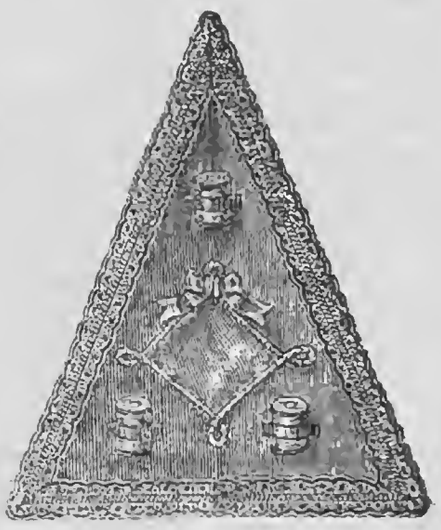
colors. The marker is lined when the work is finished, and a silver fringe completes it.

No. 4.—CRYSTAL BOX FOR TRINKETS.

Materials: Pieces of window-glass; glue; white paper; ribbon ¾ inch broad; sewing silk of the same color. Have the glass cut by a glazier to the size you desire the box to be. When cut, bind the separate parts with white paper firmly glued on; next cover the paper with ribbon, which must be glued on. When it has become firmly fixed, sew the separate parts together. Finish with a ruche of ribbon and bows at the corners. The back bows form the hinges; the front the fastenings of the box. Boxes of this kind are often prettily ornamented with leaves, grasses, sea-weed and decalcomanie pictures.

NOS. 5 TO 7 WORK-TABLE STAND.

The frame for the pretty little stand must be purchased. The foundation may be of cloth, velvet, silk, or satin. The hight of the frame must, of course, rule the size of the triangular pieces, which are cut and fitted to it. No. 7 shows an embroidered border for the edges; and No. 6 the mode of fitting one of the sides with elastic straps to hold



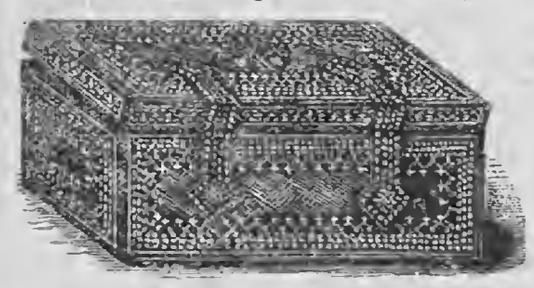
No. 6.

of cotton is placed at the top. The sections are sewn at the top to the stand, and are tied at the bottom with bows of ribbon.

STUDYING EXERCISES BY METHOD.

I am glad to see that the question of music-lesson taking is being discussed in the Rural. Mrs. Galpin, I think, offers the true explanation when she says that the parents are at fault in the matter of pupils neglecting exercise practice.

If parents could only be brought to see the folly of hurrying children through pieces before they are conversant with the rudimentary parts of piano playing, there would be fewer indifferent performers. Children who have been at school three or four quarters are not expected



No. 1.

to interpret Shakespeare or Longfellow and yet it would be no more unreasonable to expect them to do so than it is to require a music pupil of a quarter or two to properly play a "piece." The school pupil has the advantage too, of being able from the start to use her voice with very much more ease than the piano scholar can her fingers.

Edna Houghton has very properly decided to begin with scales and arpeggios and I would like to ask her if she ever met with or heard of Mason's Pianoforte Technics? I have myself studied music for many years, and gone through scores of exercise books, but in my estimation Mr. Mason's Technics are incomparably the best and most systematic arrangement of scale and arpeggio exercises I ever saw. There are in all about two hundred different exercises, which can be multiplied into thousands by the pupil. They (the exercises) are to be *learned* slowly, then played rapidly, and lastly "in velocity" or very fast. The different kinds of touch "plain legato," "mild staccato" and "elastic" are fully described and illustrated. In the book there are practical exercises, consisting altogether, of the scale of C. played in forty-five varieties of time, and with forty-five ways of applying the accent; a treatise on the relation of the mind to playing; one hundred varieties of Rhythm in which music may be written. Seventy two-finger exercises which furnish a tremendous amount of hard work for those who are willing to encounter it. Scales in all varieties of motion and arrangement and an exhaustive study of arpeggios. These last are served up in all approved styles.

A thoroughly drilled player may, in fact, acquire the ability to play a piece of fair difficulty never before seen, with ease, and by Mr. Mason's method the pupil is "thoroughly drilled." One peculiarity of this system is that the scholar is taught to play even scales and arpeggio exercises *with expression;* a something of incalculable benefit in training the fingers to follow the impulses of the mind or the taste. Of course, all this is the barest outline of the "Technics." A circular giving full particulars may be obtained of Oliver Ditson & Co. of Boston, who publish the book.

No. 5.

I would like to have Mrs. Galpin write an article on music, if she will, and I would also like her to express her opinion of Mason's Technics. Having been a teacher for fifteen years, she can, of course, write most intelligently about this system, and I know of no subject more likely to interest Rural New Yorker ladies than that of musical methods, for many of them are piano performers. JICKS.

THE BEE.

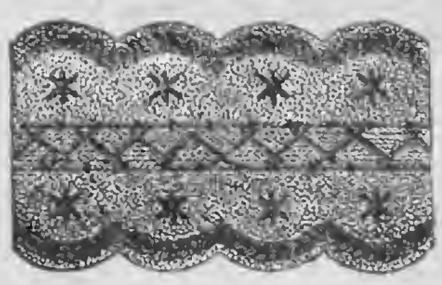
L. S. HAGNER.

Lancer of the golden belt!
Errant knight in ladies' bower!
I have caught thee fairly now,
Hid within this lotus flower.

Ivory palace meet for thee
Boon companion of the light!
Drowned in nectar thou shalt be
Tiny Clarence of delight!

Golden youth, beware! beware!
Touch not, taste not, lest ye die—
From this wanderer of air
Learn forbidden sweets to fly.

A New Coffee-Pot.—I think there are not quite so many kinds of Coffee-Pots as of Washing-Machines, but the number is increasing. The last presented to my notice is called the "Blanchard Improved Coffee-Pot," and is sold by the Blanchard Food Cure Co. of this city. In this pot the coffee is cooked by the passage of steam through it, boiling water being placed immediately beneath a vessel containing cold water. The cold water condenses the steam containing the aromatic part of the coffee, and returns it to the water below. This admits of boiling the coffee eight or ten minutes—thus setting free all the caffering, while it is claimed

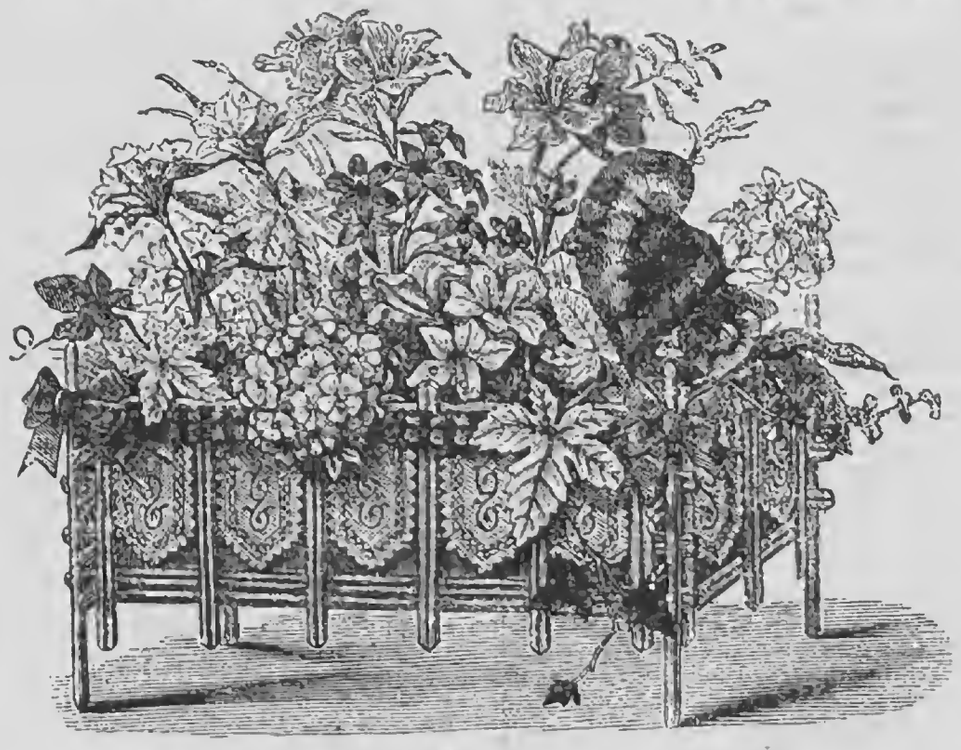


No. 7.

the tannic acid so injurious to the digestive organs, is retained in the grounds. It is claimed further that there is a saving of at least one-third of the coffee, an absence of the bitter, tannic acid flavor, perfect freedom from grounds or settlings, and the production of a decoction, invigorating and tonic in its effects, and of a delicious flavor.

To this last I bear willing testimony, and I may, with further experience, be able to certify to all that is claimed for the pot. I am now glad to recommend it to Rural readers, confident that it has sufficient merit to be worthy of their attention. L. A. E.

New York.



No. 2.

SUMMER AND WINTER.

Just a boquet of roses, faint pink and deep red;
Just a note from him, saying—you guess what it said.
Just a heart for her keeping, a crown for her life;
Just a girl whose sweet eyes read through tears the word "wife."

Just a handful of rose leaves, brown, scentless and dead;
Just a few shaded skeels filled with pale, silken thread;
Just a memory left her, a thorn in her breast;
Just a woman who's waiting, just waiting for rest.

CORRESPONDENTS' CORNER.

I cannot tell how much I have been indebted to the Rural for its valuable articles on every subject pertaining to agriculture and kindred branches. Its beautiful tales thrill me with delight. "In Folly's Net" is now drawing me so strongly, that although the sun is low I am going to the Post Office (a mile distant) to get this week's Rural, to see how matters stand with poor Jean. I trust that she gets off from Blair, that charming scoundrel. I have to read the story to my daughters, married ladies, who live nearer the Post Office, every night the Rural comes before I bring it home.

Very respectfully, Wm. S. F.
Reidsville, N. C.

Dear Miss Ripley:—Please state what are the "Seven Wonders of the World."

1. The Pyramids of Egypt, begun 1500 B. C. and completed 1082 B. C.

2. The Mausoleum, erected 350 B. C. over the tomb of Mausolus, King of Caria, by Artemisia, his Queen.

3. The Temple of Diana at Ephesus, built 552 B. C.

4. The walls and hanging gardens of the City of Babylon, which were constructed by Nebuchadnezzar, between 600 and 606 B. C.

5. The Colossus of Rhodes, which was a brazen statue standing over the entrance to the harbor of Rhodes, so large that the vessels sailed between its legs.

6. The ivory and gold statue of Jupiter Olympus, made by Phidias, 440 B. C.

7. The Pharos or watch-tower built by Ptolemy Philadelphus, King of Egypt, 280 B. C. It was a tower built of white marble, on the top of which fires were kept constantly burning. It stood at Alexandria and served as a beacon to sailors entering the bay.

Miss Faith Ripley.—Will you or some of the lady readers of the Rural please give a recipe for dyeing carpet rags a bright red?

Hallock Mills, N. Y. Mrs. G. J. G.

Ans.—Use Leamon's Aniline dye.

Dear Editor.—Will you please give me the name of a reliable fur house or of a dealer in furs, and oblige A. Reader.

Belfast, N. Y.

Ans.—Messrs. C. G. Gunther's Sons, 184 Fifth Avenue, New York.

Dear Miss Ripley.—Will you please give directions for making air castles and card receivers of cardboard and zephyr? I would also like a recipe for making apple butter. Everlasting cookies: One cup cream, two cups sugar, one-half cup butter, two teaspoons cream-of-tartar, one teaspoon soda, two eggs, these will keep one year. Yours truly,

Troy, Pa. Minnie E. W.

Literary Miscellany.

HER LOVERS.

My first, my very first, his name was Will—
A handsome fellow, fair, with curling hair,
And lovely eyes. I have his locket still.
He went to Galveston, and settled there,
At least I heard so. Ah, dear me—dear me!
How terribly in love he used to be!

The second, Robert Hill, he told his love
The first night that we met. 'Twas at a ball—
A foolish boy! He carried off my glove.
We sat out half the dancers in the hall,
And flirted in the most outrageous way.
Ah me! how mother scolded all next day.

The third woke up my heart. From night till morn,
From morn till night again I dreamed of him;
I treasured up a rose bud he had worn;
My tears and kisses made his picture dim.
Strange that I cannot feel the old, old flame,
When I remember Paul—that was his name.

The fourth and fifth were brothers—twins at that;
Good fellows, kind, devoted, clever, too.
'Twas rather shabby to refuse them flat—
Both in one day; but what else could I do?
My heart was still with Paul, and he had gone
Yacht sailing with the Misses Garretson!

He never cared for me—I found that out—
Despite the foolish clingings of my hope;
A few months proved it clear beyond a doubt.
I steeled my heart; I would not pine or mope,
But masked myself in gayety and went
To grace his wedding when the cards were sent.

So those were all my loves. My husband? Oh,
I met him down in Florida one fall—
Rich, middle-aged, and prosy, as you know;
He asked me—I accepted; that is all.
A kind, good soul, he worships me; but then
I never count him in with other men!

CHAPTER XIX.

CHRISTMAS AT BLAIR GATES.

The invitations to the Christmas festivities at Blair Gates had been issued, and almost all had been accepted. A great number of the "nobility and gentry" in the neighborhood were spending their Christmas holidays on their estates, and there was no good reason for them to refuse the invitation to Blair Gates. Those at a distance accepted the invitation for the three days for which they were asked, for the "rest day, the drest day, and the prest day" of Sir Walter Scott's time, those nearer at hand accepted for the ball only, some to pass the night at Blair Gates, others to return to their homes.

Blair Gates was in a state of activity and bustle very unusual to it, for Mr. Blair was evidently desirous that nothing should be wanting to make the festivities a great success, and to attain his end he spent money lavishly. Decorators, cooks, servants, and upholsterers were sent for to London itself, as if Edinburgh could not furnish anything sufficiently *recherche*. Mr. Blair's own *chef* was already well-known in the county as admirable, but he would have his hands more than full.

Jean, herself feverishly anxious though she was that all should pass off well, that the skeleton in the Blair Gates cupboard should not be discovered, that no one should suspect her misery, for her sensitive pride was all in arms at the thought that her domestic miseries should be county gossip, had but little to do. She had given all necessary orders, and the housekeeper carried them out in a manner which left nothing to be desired, and although Jean felt a strange, unaccountable dislike for Emily Brett, she could not help feeling that she took a great deal of trouble from her shoulders. She noticed also, it was impossible not to do so, that Emily had a certain influence over her husband, that he never seemed quite at ease under the glance of her dark, lustrous eyes, and that her manner, outwardly perfectly respectful and suited to her station, had occasionally a shade of contempt which she did not attempt to disguise.

Three or four times Lady Sholto and Miss Crawford had driven over to Blair Gates, and though they could not but remark the splendor with which Jean was surrounded, the beauty of her house, the number and excellence of her servants, the apparent devotion of her husband, they had not failed to notice also the change in Jean, which, though less apparent to others, was but too plainly visible to those who had known and loved her in former days. The stately calm which had replaced her former bright grace of manner, the absence of the once so frequent smile, the complete disappearance of the *espieglerie* and brilliance which had been so charming, the hectic flush on the fair cheek, the hollow circles round the sweet eyes, the firmly set curves of the beautiful lips, all these things spoke loudly to those who cared for Jean, and who saw the suffering she so successfully hid from others. On several occasions when Lady Sholto called, Mr. Blair had been present during her interview with his wife, and though Jean had been sweetly cordial and affectionate, they had not exchanged one word of confidential intercourse; but once, when Mr. Blair had been obliged to go to Glossin for a political meeting, from which he could not absent himself, Lady Sholto had driven over alone in her pony carriage, and had found Jean in her boudoir for once in solitude.

The boudoir was a beautiful room. Lady Florence saw at a glance that no room at Sholto Hall or at Glen Ivor itself could compare with it. The hangings were of the palest cream-colored satin, dotted here and there with bunches of blue convolvuli, borders of the same were embroidered on the curtains and carpet. *Plaques* of blue Sevres were let into the wood of the piano; the chairs were of the softest, most luxurious description, and on a couch amid all this splendor lay Jean huddled up in an attitude of misery, from which she started up with a little cry on perceiving her visitor.

"Don't move, dear," said Florence, coming forward; and kneeling down beside her, she took the poor aching head upon her bosom, and for once Jean let her grief have full sway.

"You will not tell Archie?" were her first words, when she was calm enough to speak. "It would make him so wretched. And now, oh! Florence, tell me what I have wanted to know so long—how is he?"

"He is well," Lady Sholto said, softly, smoothing back the bright hair with pitying fingers. "He is quite well again, he tells me, and Jeanie, will you be glad or sorry, dear? he is coming back to us for Christmas."

"I am glad he is to be with you," Jean said, softly. "Do not let him think of me as miserable, Florence, it would make him so unhappy, and it would prevent him forgetting, and I want him to forget."

And during Lady Sholto's visit, Jean sat with her head resting on her shoulder, speaking a few words now and then, once or twice breaking into sobs, which she repressed, and holding her friend's hand in a clasp—a close, feverish clasp, which said more than words.

"Oh! think," she said once, in an accent of heart-broken despair—"think all my life has to be lived yet, Florence, and I am married to that man."

And Lady Sholto went from her with tears in her eyes and sorrow at her heart; the words had said much; the tone in which they were spoken had said much more.

The day fixed for the ball at Blair Gates was the 28th of December, and the guests were to arrive on the 26th and 27th. Mr. Blair had fixed the day wisely, for on Christmas day people rarely leave their own homes, and for the first day of the year the Duchess of Glossin had issued invitations for a ball and amateur theatricals, to which, of course, the Blairs had received invitations, and on Christmas day they were to dine at a great house in the neighborhood, which enabled Jean to refuse a loving little note of invitation from his wife which Lord Sholto had brought her himself for that day. She had not been once to Sholto Hall since the day she had left it as Mr. Blair's wife; she was not strong enough for that yet. And during all that stately, dreamy ceremony at Merlyn Castle, her thoughts were with the party at Sholto Hall, the happy little family party on which her folly and imprudence had cast such a heavy shadow.

On the 26th and 27th December, Blair Gates was pervaded by a very pleasant bustle and animation, and many arrivals had broken in upon the usual stately decorum reigning there. Guests from a distance were arriving in rapid succession, and having been courteously received by the "laird" and his young wife, were shown up to their rooms, while their equipages were taken round to the stables and coach-houses, which presented a scene of crowd and bustle which soon extended to the hospitable mansion itself, and to the bedrooms, and dressing-rooms where lady's-maids were unpacking boxes and dress-baskets, and valets were laying out dress clothes and opening dressing-cases.

The party from Sholto Hall, which included Captain Murray, who, as Ida's *fiance*, was spending Christmas at the Hall, were only to arrive on the morning of the 28th, and spend one night at Blair Gates, and as the time for their arrival drew near, Jean's nervous anxiety was almost overwhelming. Would the Earl come? was the question which she had been asking herself for the last few hours incessantly. He had accepted the invitation; but Jean half hoped, half feared that he would at the last moment devise some good excuse for changing his mind.

Fortunately for her she was kept fully occupied by the claims of her guests upon her time and attention, their admiration for Blair Gates seen for the first time since the complete renovation which Mr. Blair had effected on his return there was outspoken and sincere, and several of her lady guests complimented Jean smilingly on her beautiful home, all of which admiration and compliments Mrs. Blair accepted with a cold, smiling grace, which matched the smiling hauteur on her face, the languid indifference in the weary, brown eyes. And at night in their dressing-rooms, over the hair-brushing operations, young ladies discussed that "beautiful, proud Mrs. Blair," and said, enviously, what a happy woman she was to possess such a home, and such a handsome, delightful husband, who was everything that was perfect. How could they guess, those girls, who from the nurseries were brought up to think that riches, position, and an eligible establishment were the chief end and aim of existence, that the woman who possessed all these things was more miserable than the most miserable collier's wife in the district?

How could they guess from that cold, smiling, impenetrable face that her heart was dead within her, dead to all hope and joy, alive only to grief and suffering? How could they tell that in those calm night hours, when they lay smiling in their sleep, dreaming of a time when they, too, should have a husband and a home, that alone in her chamber Jean Blair was struggling against a despair which grew hourly more terrible—more awful? Many and many a morning when Collins entered her mistress's room, she would find her lying where she had fallen in the exhaustion succeeding her terrible passion and long night of tears, stretched white and shivering on her bed or on the floor, half disrobed, with her hair falling about her, and her wild eyes dry and glittering as they had been when she faced her own sorrow, until the light of the breaking day had crept in at the casement, and found her hushed at last by exhaustion. Many and many a morning had Collins lifted up the slender form, cold and shivering from the long exposure, and laid it on the bed, with tears in her own honest eyes and tender, pitying words, her heart bleeding for her mistress's awful sorrow; and once, when the maid had come into her room in the night, hearing the rapid, restless pacing to and fro, Jean had turned to her and flung herself into her arms in such a passion of heart-breaking tears that any sympathy was gratifying.

"Oh! hush, Miss Jeanie, dear," the woman had said, tenderly. "If the master were to come in, what would he think?"

"Do you think that he does not know that my heart is broken?" Jean moaned through her white lips. "He knows—oh! Collins, if I could die!"

"Hush! Miss Jeanie," Collins repeated—"hush, my dear, my poor dear! Happier days will come by-and-by."

"Happier days!" said Jean, bitterly. "Happier days can only come to me when he dies!"

And neither of the two women knew that in the dressing-room within, quick ears were drinking in poor Jean's despairing words, and that she would have to pay a terrible price for them.

Yes, that was the happy, blessed Mrs. Blair these girls envied, seeing her in her diamonds and laces at the head of her table, cold, smiling, serene! Ah! we all live two lives, some one says. It was true, at least, of Andrew Blair's wife—one life was calm, passionless, cloudless; the other, the real inner life, racked with misery, tortured by pain, until Jean wondered that her brain did not give way.

It was impossible but that her suffering should leave outward marks. The fever of her mind kept her eyes bright, glittering with fever, and her cheeks bright with one vivid red spot, which made her look well; but she grew daily thinner, the circles deepened her eyes, lines came into the fair, smooth brow, and the dry, burning lips had a sad droop pitiful to see.

Daily Collins remarked how rapid the alteration was, how slender and frail the small white hands were becoming, how languid each movement; and sometimes the maid thought, with tears, that the death for which she craved would not be long in coming, that the suffering which never gave her one moment's respite—even her sleep was troubled and haunted now with dreams of the past and visions of the present—would wear her to her grave.

It was just before luncheon that the Sholtos came—Lady Sholto, Ida, and Captain Murray in the barouche, his lordship driving over in his mail phae on Lord Ivor.

"Give me some water," she said, hoarsely, to Collins, who was watching her anxiously. "I am faint."

But the faintness was quickly conquered, and Jean went calmly down stairs to receive her guests, with the feverish lustre in her eyes, the hectic flush on her hollow cheek.

Mr. Blair was waiting in the hall, and a number of his guests had followed him, ostensibly to see the Sholtos, really to see how Mrs. Blair would meet her old love. In her heart Jean blessed their curiosity. It roused all her pride, and neither step nor voice faltered as she went forward to meet them.

"Ah! Florence—ah! Ida," she said, with her quiet smile. "Did you find it very cold driving? Your lordship is heartily welcome," she went on, giving her hand to Lord Sholto, and then passing on to the Earl.

His hand was unsteady as it touched hers; but though her fingers were cold as death they neither shook nor trembled.

The greeting was a very brief one. Lord Ivor turned quickly away to shake hands with some friends, while Jean went forward to Captain Murray, and gave him her hand, saying a few gentle words of congratulation in her soft, sad tones—not cold when she spoke to him—which made his own voice rather husky as he answered, and they all went in to luncheon together.

The meal was a gay one, informal as luncheon should be everywhere, especially at a country house; but gay, although the mistress of the house said little. Still she smiled often, and a pair of sad gray eyes, which often went to her face from their station, at the other end of the table, saw that the smile was utterly sad and forced.

Ida was by her side, looking very bright and pretty in the new found happiness of her lover and her engagement, and Jean spoke to her once or twice in a low, gentle tone, saying something which made her smile and give a happy glance down to Captain Murray's end of the table.

After luncheon the men went to the billiard room to pass the long afternoon, for it was snowing heavily; the women scattered to various occupations; books, work, gossip, music, and periodicals were brought into play, one or two went to their rooms to have a nap between whiles, and wake up fresh for afternoon tea and flirtation in the grand old hall, where it was generally served, and where the men would come dropping in from the billiard-room, and *tabagie* by-and-by. Jean sat in the drawing-room, with her calm, proud face, not making even a pretence of work; but talking as much as was necessary, and holding Lady Sholto's hand closely in her own. Twice she was disturbed by the arrival of more guests, and once when the Duchess of Glossin had concluded a panygeric on Blair Gates and its master, which she thought highly pleasing to her hearer, and to which Jean listened with her cold smile and the weary indifference in her eyes, Lady Sholto saw her rise, clutching at her throat as if something stifled her, and leave the room. In a few moments she returned, calm, smiling, indifferent as ever.

None of the gentlemen, save Capt. Murray, who was still too much in love to voluntarily exile himself for a whole afternoon from his divinity's side, came into the drawing-room during the afternoon; but when afternoon tea was served on the oaken table, drawn up close to the blazing log fire on the hearth in the great hall, with its antique armor and china, and great bear-skin and tiger-skin rugs, they sauntered in, and the ladies woke up from their sleepiness and brightened and sparkled. The stimulant of male society is wanted by many women to make them brilliant.

It was a pleasant scene, Lord Ivor coming in from the smoking room with his host, and Captain Murray thought how pleasant it was in the strange, dusky, half-lights, for the firelight alone illumined the groups gathered round the table. The graceful forms of the women in their pretty warm-colored winter dresses, with jewels on their slender fingers and white wrists; the men, bending with facile compliment and often unmeaning flattery over their chairs, handing tea in the delicate Sevres cups, and bread and butter, and macaroons. Pretty girls were smiling and blushing, Ida and Captain Murray in a settle near the chimney corner were talking in under tones, secure as they imagined, in their dusky corner, the fire was blazing up royally, casting old shadows and playing fantastic tricks with the armor on the walls and the deep stained glass windows, and Jean, in her long, simple, falling velvet dress, with soft laces at her throat and wrists, was standing, a tall, slight figure by the table, listening to the Duke of Glossin's rather stupid conversation, with her abstracted smile, and the firelight falling full on her face.

How beautiful she was; beautiful—more beautiful now than she had been in the days of her happiness. The fair face looked as if carven in stone, save for the fire in the great, somber, wistful eyes, her white hands were loosely clasped before her, on one of them she wore her wedding ring, her only one; she had ornaments of dead gold in her hair, at her throat and wrists, and a girdle of the same round her waist.

The Earl's eyes went to her with longing, pitying admiration, Mr. Blair's with some pride and triumph. If Jean were less beautiful than Emily Brett, she possessed that natural distinction and that proud grace of high breeding which can never be attained by any amount of study or patience.

"Does your lordship go in for tea?" said his host, carelessly to the Earl. "I never do, except at breakfast, and even then I must have my own particular brew made in a separate teapot. Go to Jean if you do, she will be pleased to give you a cup. She may think your example will convert me."

He sauntered away as he spoke, and Lord Ivor went slowly across the room to Jean's side, many admiring glances followed him as he went, and the Duke gave him his place with a slight bow, and took himself off. The Earl was looking pale and worn; but there was a smile upon his lips as he bent his handsome, fair head and asked if he might have some tea.

Jean gave him some, holding out the little fragile cup with rather trembling hands. As she tendered it to him their fingers met for one instant, and taking it from her the Earl turned away with an

abrupt gesture of pain, while Jean, her lips pale with emotion, bent down to answer some trivial remark from a lady seated at the table.

"What madness it was to come," said Lord Ivor to himself, as he went to his room to dress for dinner. "I only increase her wretchedness and rend my own heart without doing any good. That message she sent me that she was happy was not true one. Happy! my poor Jeanie. How could she be happy—here!"

CHAPTER XX.

DURING THE BALL.

THE ball was at its hight; strains of the softest, dreamiest dance music issued from the ball-rooms, light forms floated by in the airest and gayest of ball costumes, ices were being discussed, and champagne and *parfait amour*. Flirtations reigned supreme, vows were exchanged, vows professing to be eternal and lasting until "next time" only, flowers drooped their graceful heads in the heated air, soft voices rose and fell, deeper tones softened and grew tender under the magic influences of the hour, silver laughter rippled from coral lips, flowers were exchanged, little gloves given, tiny hands pressed, in this hour sacred to youth and happiness, where all was bright, and gay, and glad.

The ball was a success; no one could dispute that fact for a moment looking round at the flushed, happy faces and bright smiles. Her grace the Duchess of Glossin, moving through the room in her purple velvet dress, and diamonds on her bare, white shoulders, devoutly hoped that the entertainment at Glossin Castle would prove as successful. There were eligible men and pretty girls in plenty; the latter are seldom rare in an English ball-room, it is the former who are generally conspicuous by their absence; the dresses were all fresh and charming, the refreshments of a description which was full of promise for the supper by-and-by, the wine, perfection, the ices, Gunter's. What more could you have? Nothing; for the music was just what dance music should be, gay, bright, soft, inspiriting, and the floor had a delightful, elastic spring.

"A most delightful ball," said the Marchioness of Belwether, as she saw how much her daughters, Ladies Fannie and Margaretta, were enjoying themselves. "A most delightful ball, my dear Lady Melvil."

"Delightful indeed, dear Lady Belwether. No expense spared, nor trouble. I am sure we owe Mr. Blair many thanks for such a charming entertainment!" simpered Lady Melvil.

"It is a very good *debut*," said the Marchioness, coolly, fanning herself languidly. "I daresay, Mrs. Blair originated it, she was always fond of balls before her marriage. Where is she, by the way?"

"She was here a minute ago. Ah! there she is, talking to his Grace."

And Lady Melvil made a slight movement of her fan to the place where Jean was standing, talking to the Duke of Glossin, and looking as if her powers of endurance were near their end. She was dressed in sapphire blue velvet, high to the throat, where it was finished off by soft, filmy lace and a collar of diamond stars; on her arms, bare to the elbow, glittered the same precious stones, and in her hair was one creamy tea-rose.

"She looks well! What diamonds!" said the Marchioness, critically, and wished in her heart that Jean McLeod had left Mr. Blair free for one of her own daughters, for though by marrying him she had left one prize in the matrimonial market unclaimed, Lord Ivor did not seem inclined to profit by his liberty, not though Ladies Fannie and Margaretta, with their aristocratic outlines and cold blue eyes, would, either of them, have been charmed to surrender at discretion.

"Yes, she is a most fortunate woman," said Lady Melvil.

A fortunate woman!

Lady Melvil could not follow her as, a few minutes after, she left the ball-room, and went away swiftly and silently to her own boudoir, to drop for a few moments the mask she was forced to wear. Lady Melvil could not see her, as bowed upon the soft cushions, she covered her face with her frail, little fingers, to hide the tears which fell slowly but heavily on to the blue velvet of her dress. If she could she might have changed her opinion.

But if Lady Melvil did not follow her another did, and it was thus he found her.

Lord Ivor had watched her, unnoticed himself, closely; he had seen through the artificial smiles, and sounded the hollowness of her gaiety. He had seen how, at length, the forced smile faded, the graceful head drooped, and the little hands clasped themselves together in pain; then he saw her leave the ball-room, and, with an irresistible impulse, he had followed her, and, entering the boudoir after her, softly closed the door before she was aware of his presence. Standing there, pale and silent in the shadow of the dimly-lighted room, he watched her with an aching heart; he watched her as she fell, with an air of lassitude and exhaustion, on the cushions of her sofa; he saw how her hands went to her face, and how the tears fell through the frail, slender fingers, and he thought, with an aching heart, that he had no right to comfort her, no right to show her any sympathy, or offer any help.

No right, although he loved her with a love which would have held it a light sacrifice to lay down his life for her sake.

It was hard—it was bitterly hard.

Faintly the distant music came to his ears; there was a fragrance of roses on the air—roses in in the blue Sevres vases in the boudoir.

At length she rose, staggering a little, as if faint and dizzy; then, crossing the room, she threw open a window, and as the cold wind blew into the room, bringing with it a thick rush of snow, she leant out into the dark night.

But she was softly drawn back, the window was closed by a firm, gentle hand, and, white, giddy, half-stupefied as she was, she felt two tender arms enfold her, and a tender voice chided her softly for her imprudence.

"Archie!" she said, faintly, pushing her hair from her brow dizzily—"Archie, is it you?"

"Yes," he said, softly. "Yes, my darling!"

She lifted her eyes to his, and saw him through the mist which obscured her sight—saw that he was pallid as death, worn and sad; and she forgot everything save that he was with her again, and that she loved him.

"Oh! my love—my love!" she said, and fell on his neck, and clung to him like a tired child, with her head upon his breast.

There was a long silence then, broken only by the moaning of the wind without and the sound of the distant music. His arms were still around her as they stood, her face still buried on his breast.

Then suddenly she remembered; a burning flush colored her white face, then fading, left her whiter than before, she strove with her little feeble hands to unloose his clasp, and put his arms from around her: there was a dull, confused singing in her ears, something which seemed to tell her that he ought not to be near her, to hold her thus—to hold her, another—another man's wife; and at the thought she shrank away from him with a little cry of shame.

Lord Ivor guessed her thoughts; he loosened his arms from around her, suddenly and completely, and moved away from her a few paces.

"Forgive me," he said, in a low tone of pain—"forgive me!"

The tone of sincere contrition and humility struck home to the aching, suffering heart. His sin had been but slight after all, the forgetfulness had been momentary.

"I saw you leave the ball-room," he said, in a moment, speaking more calmly, but in a tone still low; "I ventured to follow you. I was wrong, perhaps; but I feared you were ill. Do you forgive me?"

"Oh! yes," she said, faintly, and facing him, with one hand raised to her throat as if the diamond collar choked her,

"I could not resist the temptation," he said, hurriedly. "I wanted to see you one moment alone, and there are so many calls upon your attention."

The tone of ceremony, of distant politeness was hard to maintain; he paused abruptly. Jean, looking up, met his

"Eyes of dangerous gray,"

and her own dropped.

"You sent me a message by Florence," he went on, less calmly. "You said you were well and happy. I came here, Jean, to see with my own eyes the truth of your assertion. Your falsehood was kindly meant," he added, with a weary sigh; "but it was a falsehood, Jeanie. One glance at you undeceived me. You are neither well nor happy!"

"You look ill," she said, hurriedly. "Do not talk of me. Tell me of yourself. Are you keeping your promise to me? It was not wise—it was hardly kind—to come, Archie; and yet I so longed to see you."

"Hush! dear," he said, softly. "Do not drive me from you at once—do not make it harder for me! My poor Jean, do you know what it has cost me to see you suffer thus and to know that I am powerless? It is hard," he went on, brokenly—"it is bitterly hard!"

He turned from her and walked the length of the room in silence; then coming back to her side,

"This man, your husband, he is kind to you?" he asked.

She bowed her head in silence.

"Yes, he is kind to me," she repeated, slowly.

"Jean," he exclaimed, with quick pain—"Jean, are you learning to love him?"

"I must first learn not to hate," she said, bitterly. "Oh! Archie."

"My child, I did not mean to hurt you," he said, softly. "Sometimes I wish you could love him."

"Love him!" she cried, bitterly. "Love him! I hate him with the bitterest hatred."

She drew herself up, clenching her slender hands in her earnestness.

"Oh! my child, hush; you have your life to pass with him," he forced himself to say, although the words were half suffocating him.

"Do you think I can forget that?" she said, passionately. "I do not need reminding."

"Would to Heaven I could help you," he said, pacing up and down. "It is maddening to see you—to see your face with its terrible sorrow, which you try to hide by smiles more terrible still; to see your strength fading; to know how you are suffering and not to be able to help you—not to be able to win back your peace."

"You think I am looking ill, then?" she said eagerly. "Oh! thank Heaven, life used to look so short when I was going to spend it with you; but now, however short, it will be too long. Look at my hand, it is almost transparent. Oh! Archie, don't, dear, it makes me so happy to think that perhaps it may soon be all over, and that I shall be at rest."

"Dear, you are breaking my heart," he said, sadly and brokenly.

"And yet if you love me you should be glad," she answered, sorrowfully. "To think that from this life, from which you cannot save me, death, more powerful than you, Archie, will release me."

"Jean, hush, you are tempting me horribly!" he exclaimed, hiding his face in his hands.

"Tempting you!" she repeated, faintly. "Tempting you! How?"

"Do you not understand?" he said, passionately, taking her hands in his, and almost bruising them in the closeness of his grasp. "You are tempting me to forget manhood and honor; you are tempting me to soil your purity by a thought unworthy of you and of myself. Jean, in pity, let me think you happy—let me think you happy, or the temptation will be beyond my strength."

"What temptation?" she said, faintly, hardly able to bear the passion of feeling at her heart, while the room went round and round her, and a mist came between her eyes and his beloved face, blotting it out from her gaze.

"The temptation to steal you from him, as he stole you from me," he said, with fierce sorrow. "To bring you, Heaven forgive me, to yet greater unhappiness."

She smiled at him as she scanned her face, smiled sweetly and sadly into his passionate eyes.

"You love too well," she said, brokenly; "and I love you too well to go with you, Archie."

He dropped her hands with a murmured "Pardon;" and Jean sank on the couch, white and strengthless, now that her passion had died away.

"You must leave me now," she said, feebly. "You will be missed. Do not look so anxious," she added, forcing a smile. "Dear, it is only what I deserve. Do you remember how I used to tease you by my flirtations in those old happy days, which seem so long ago—oh! so long ago? Do you remember how I vexed you by that drive with him, and how I threatened to marry him if I liked? How naughty I was, and how good you were!"

"Jean, you are torturing me!" he said, hoarsely.

"Am I?" she said, dreamily. "Forgive me, dear—forgive me, and leave me now."

He hesitated a moment. Her voice had been growing fainter, and her breath was coming in quick gasps. He was afraid to leave her thus; but there was no resisting the soft, mute prayer in the eyes lifted to his. He lifted her hand—the little, death-cold hand—which hung helplessly by her side, as she drooped upon the sofa, and touched it to his lips, turning from her with a face as white as her own, and, leaving the room with an uneven step; and as the door closed after him a charitable oblivion blotted out all Jean's sorrow for a few moments, as she fell back, fainting on the cushions.

The chill, reviving air from an open window brought back her consciousness a few minutes after. There was a cool sprinkle of some strong scent on her brow; and as she raised herself from her cushions, she saw that Emily Brett was standing beside her.

"You are better, ma'am," she said, quietly.

"Yes, I am better. I don't know what made me faint. I am tired, I suppose."

"The scent of the flowers was too much, perhaps, ma'am," suggested Emily, offering the *vinaigrette* she held; but her mistress pushed it away impatiently.

"I do not need it. I am better now. You need say nothing to—to—Mr. Blair about this, Brett."

"No, ma'am," was the quiet answer; and Jean rose feebly, and went back to the ball-room, to the lights and the laughter, and the glitter and the mirth, and forced her pale lips into smiles, and tried to seem as if she had her part in the bright pageant, and as if all the brightness had not faded out of her life.

"I cannot suffer much more," Jean thought to herself, wearily, when the visitors had departed and Blair Gates was quiet again. "I have drained the cup of misery to its dregs; it cannot contain much more bitterness."

But there was more to suffer yet. The cup was not yet empty. Almost the bitterest draught was to come—almost the bitterest for Jean, but quite the bitterest for those who loved her.—*To be continued.*

THIRTY REASONS FOR THE PROHIBITION OF THE TRAFFIC OF INTOXICATING LIQUORS.

1. They deprive men of their reason for the time being.
2. They destroy men of the greatest intellectual strength.
3. They foster and encourage every species of immorality.
4. They bar the progress of civilization and religion.
5. They destroy the peace and happiness of tens of thousands of families.
6. They reduce many virtuous wives and children to beggary.
7. They cause many thousands of murders.
8. They prevent all reformation of character.
9. They render abortive the strongest resolutions.
10. The millions of property expended in them are lost.
11. They cause the majority of cases of insanity.
12. They destroy both the body and the soul.
13. They burden sober people with millions for the support of paupers.
14. They cause immense expenditures to prevent crime.
15. They cost sober people immense sums in charity.
16. They burden the country with enormous taxes.
17. Because moderate drinkers want the temptation removed.
18. Drunkards want the opportunity removed.
19. Sober people want the nuisance removed.
20. Tax-payers want the burden removed.
21. The prohibition would save thousands now falling.
22. The sale exposes our families to destruction.
23. The sale exposes our persons to insult.
24. The sale upholds the vicious and idle at the expense of the industrious and virtuous.
25. The sale subjects the sober to great oppression.
26. It takes the sober man's earnings to support the drunkard.
27. It subjects numberless wives to untold sufferings.
28. It is contrary to the Bible.
29. It is contrary to common sense.
30. We have a right to rid ourselves of the burden.—*National Temperance Society Tract.*

RECENT LITERATURE.

Mr. Phillips' Goneness. By the Danbury News Man. Boston: Lee & Shepard. Price 50 cents.

THIS is one of the books for an idle hour. It describes characters in a country printing-office, and portrays several amusing incidents from the experiences of the editor of an out-of-town newspaper. The chief character is Mr. Phillips, who makes several futile attempts to declare his admiration for certain young ladies, who reciprocate his regard and cause him unprecedented embarrassment. The book savors of wit and descriptive power peculiar to its author, and in general tone is like earlier publications by the same writer.

MAGAZINES.

THE ATLANTIC MONTHLY for December completes an excellent volume and year of this standard magazine. Like the previous numbers, it comprises a judicious mingling of admirable stories, papers on practical subjects, essays of biographical and historic interest, criticism, and poetry. It opens with "Thirty-Seven Hundred and Fifty-Eight," a paper full of curious conjectures in regard to civilization, science, and religion when the Christian era is twice as old as now. "Kansas Farmers and Illinois Dairymen" presents some plain facts which will interest all who think of migrating to Kansas or Illinois. "Some of Us: A Southwestern Sketch" is a capital description of some typical Southern characters. Col. Waring contributes a useful paper on "The National Board of Health," stating what powers it has, what it has done and aims to do, and pointing out the injustice of sundry criticisms it has received. Hon. W. A. Phillips, of Kansas, describes "Three Interviews with John Brown." Clara Barnes Martin, under the title "The Greatest Novelist's Work for Freedom," shows Turgenef's noble record as a lover and champion of liberty. George Washington Greene gives "Reminiscences of George Grote," the great historian of Greece. Richard Grant White treats of "English Manners." An anonymous paper of no little interest is "The Man who was to have Assassinated Napoleon." The Contributors' Club is even brighter than usual, having a short essay on "The Burden of Charity Fair Journals," evidently by Mark Twain; and the reviews of new books are full, as usual.

THE ATLANTIC MONTHLY for 1880 promises to be better than ever,—having serial stories by Mr. Howells, Mr. James, and Mr. Aldrich, three of the brightest and most attractive American story writers now living, and all its other departments equally well filled.

ENGLISH MANNERS.—English people impress you first of all by a sense of the genuineness of their actions and of their speech. Warm or cold they may be, gracious or ungracious, arrogant or considerate, but you feel that they are real. Englishmen adulterate their goods, but not their conduct. If an Englishman makes you welcome, you feel at home; and you know that, within reason, and often out of reason, he will look after your comfort—that for your well-being while you are under his roof he considers himself responsible. And yet he does not thrust himself upon you, and you may do almost what you choose, and go almost whither you will. If he wants you to come to him, he will take more trouble to bring you than you will to go, and yet make no fuss about it any more than he does about the sun's rising, without which he would be in darkness. If he meets you and gives you two fingers, it means only two fingers; if his whole hand grasps yours, you have his hand, and you have it most warmly at your parting. His speech is like his action. His social word is his social bond; you may trust him for all that it promises, and commonly for more. If you do not understand him well, you may suppose at first that he is indifferent and careless, until something is done for you, or suggested to you, that shows you that his friend and his friend's welfare has been upon his mind.

The god of English social life next in dignity to mammon is propriety. Now propriety, rightly worshiped, is a very good god; his very rites are sweetness, order, decency, and in their practice they involve that consideration for others which is the highest form of morality, and even of piety. But the British Philistine (and all England is more or less given over to Philistinism, which invades the very social regions in which it is most dreaded and decried) makes propriety a Moloch, before whom he prostrates himself, and before whom he often makes his very children sacrifice some of the beauty of their youthful lives. The highest social aim, the greatest social Law, to this sort of Englishman is to do the correct thing. Having attained this, he feels that he has absolved himself of every social duty, and clothed his soul in panoply of proof. Whether the correct thing be really the right thing, he does not know, does not seek to know. That so it has been and that so it is, are for him both logic and religion. In his mouth the greatest reproach is "unprecedented;" the mere statement of the fact that an act has not been done before, that a word has not been spoken before, being to him its condemnation. Wherein re he lives his life surrounded by dead, shriveled forms, eyeless, brainless, bloodless, whose only voice is from the grave of a dead past. If he breaks away from this oppression, he is likely to run into extremes which violate all decency, all decorum, all propriety. Freed from his accustomed restraint, he is apt to add a grossness to vice which makes it more hideous, if not more harmful.—*Richard Grant White, in Dec. Atlantic.*

THE ELECTRIC REVIEW, published by the Pulvermacher Galvanic Co., of Cincinnati, Ohio is a large, handsomely illustrated publication, devoted generally to a popular exposition of the benefits of electricity as a remedial agent, and particularly to an explanation of the uses of the Pulvermacher galvanic belts, giving scientific reasons, (advanced by such men as Dr. Mott, Prof. Henry, Sir Henry Holland and others) why they should prove so efficacious in the treatment of most stubborn diseases. The review (sample copy) is sent to applicants free.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

LITTLE REPAIRS.

MRS. M. G. RAND.

Now is the time, before cold weather comes upon us, to make little repairs about the house and premises. If neglected until winter, when the short days are crowded with work, they will be imperfectly made, if made at all. If the gentlemen of the household have no mechanical skill, the services of a carpenter will be necessary. Before he comes, however, some member of the family should go through the house on a visit of inspection, and a memorandum should be made of whatever defects are discovered. Then, when the carpenter comes, he can commence work at once, and as soon as he completes one piece of work, he can, without useless delay, begin another, as the employer dictates. Having the work planned previously, will prevent a loss of time and patience on the part of the carpenter. It is a saving of time and money also to those who employ workmen, to furnish them *always* with some systematic plan for work.

The proper time for making small repairs, is just before the fall house cleaning. Every door and window, and the fastenings of each, should be examined, and if found out of order, "make a note of it." There are many houses in which the doors and windows have settled, so that they can be opened and closed only with difficulty. And they are allowed to remain in that condition year after year, because the owners lack order and perseverance. The best-built house will sometimes settle, but it will not, as a rule, regulate itself. Persons stopping at hotels will see cards of "Regulations" fastened to the inside of the doors of sleeping apartments. One of the rules is that the occupant of the room shall "*bolt* the door," to insure safety. But even in hotels, the bolt does not always strike right. The writer has seen a trunk rolled to the door to do duty in place of an imperfect bolt that might have been put in working order in five minutes' time.

If the front gate is out of order, *now* is the time to "fix" it. It is common to see a gate-latch so useless that a piece of rope must be used in place of the latch. Other gates have to be lifted bodily, because the hinges have given out, while others are down entirely, so that where cattle have free range, they find pasturage in front yards. The gate tells its own story. The surroundings of a home—gates and fences included—give an insight into the character of the possessor.

DISAGREEABLE AND AGREEABLE HOUSEKEEPING.

LORETTA E. K. TURNER.

I BELIEVE I have as much liking and admiration for neatness and cleanliness as any housekeeper; but there is an unpleasant style of neat housekeeping I neither like nor admire, where everything is put away and considered too good to be used, and where one is pursued with broom and dusting brush, from morning until night, while the housewife's high-pitched voice is incessantly bemoaning the awful amount of work she has to do. Now, if any one can be comfortable in such an establishment, she must be very insensible to the words of its mistress. I never knew one of these excessively neat housekeepers that was not a scold and a fault-finder—usually a thoroughbred virago.

I heard a lady once say that she liked to visit people who were extremely neat, for she went home inspired to do her own work more thoroughly. But I always feel uncomfortable for a month afterwards for fear I had set a chair out of its place, or left an unnecessary crease when folding my napkin. Then, imagine my horror when such people visit me, and poke around into corners and closets and out-of-the-way places to discover something amiss, and woe to me if a spider has spun his web since my last visit with the broom!

Pray do not think that I am an enemy to order and neatness; for I truly admire both, and believe in keeping everything as clean as possible in a quiet, unobtrusive way, and letting well enough alone. Have home pleasant enough for one to rest in without continually thinking of the labor it takes to keep it in order, so that one can relish his food without swallowing with each mouthful a protest that it has been prepared at the expense of so much strength. I have thought sometimes I would rather go with one meal a day—and that a crust.

These extra-nice housekeepers so seldom get their work done, and sit down for a quiet, restful time! With an old, faded-out calico dress on—their dresses are always faded—sleeves rolled up and a distressingly homely apron on, they work from morning until night, cleaning where it is clean.

The other extreme in housekeeping is far more disgusting, where the breakfast table stands uncleared in the middle of an untidy, unswept room until the middle of the forenoon, and the one whose business it is to look after things stands or lounges around, looking out of the window or reading cheap novels, while she is adorned with a greasy, soiled dress, slippers down at the heels, and *bangs* done up in papers. While idling away the time, she knows she will have to do the work when it must be done, and suffers more in dreading it than in performing it, for it is harder to look forward to than to do.

If work is done when it ought to be, and done properly, a woman of ordinary abilities, with reasonable health, ought to keep house for a small family and have many hours of rest, ease and comfort.

DOMESTIC RECIPES.

Beef Steak.

I think there is no way of cooking beef-steak like the following: Pound it, if you choose, but it is not necessary. Place it in a frying pan over not too hot a fire, and let it steam, having it covered closely. Do not add any water. After half an hour, or more, remove the cover, salt; add a good lump of butter, and fry until done. Care must be taken not to burn it while frying.

Soup.

The richness of soups, should depend upon the stock, that is, the jelly obtained by boiling the meat, and not at all upon the fat, which should be carefully removed. Many people would as soon think of eating a tallow candle, as soup with grease floating on top. It seems fully as palatable to a civilized palate. All sorts of vegetables may be added to the soup, according to the taste of those who are to eat of it. Onions are extremely disagreeable to many people, and turnips are to others. The vegetables are chopped fine and boiled till well done. Soups may be thickened with rice, barley or vermicelli.

Force Meat Balls.

Chop lean veal fine, together with a little raw pork; season the meat with salt, pepper, curry powder or cloves. Make it up into balls the size of half an egg. Boil part in the soup fifteen minutes, and fry the remainder and serve up in a separate dish.

Quick Cake.

A favorite cake of ours is made in the following way: One cup of sugar; one egg; one half cup of sour milk; a little over one cup of flour; one teaspoonful of soda and one of cream-of-tartar. Bake in a quick oven. This is nice for jelly-cake, when baked in thin cakes and excellent when chopped raisins are mixed with the jelly. Or, it may be put together with a rich custard, but I often bake in one loaf. Raisins may be added to the loaf if desired.

Scalloped Oysters.

One quart of oysters to two quarts of rolled crackers; a good quantity of butter, and salt and pepper. Enough oyster juice to moisten them well. Bake until brown. L. E. K. T.

Flat Jacks. (Griddle Cakes.)

For many years I tried in vain to get some "Flat Jacks" that would taste like my mother's did some fifty years ago; but never felt that I succeeded till a week ago.

I think the secret is this: I now put in the mixing milk about one third of good cream, and for a small dishful I add one egg. One should be careful not to get too much flour in them, as that will impair the nice flavor. There is such a difference in flour, that I would not dare to give the measure for a certain measure of milk, as some flour does not swell as other varieties do. A cook must have some experience as well as common sense in order to make good cakes. The best of flour, too, makes the best cakes—not the finest by any means. AUNT FLORA.

QUESTIONS ANSWERED.

A subscriber wishes recipes for polishing a rosewood piano and walnut furniture.

ANS.—To *polish the piano:*—Saturate a piece of chamois skin in sweet oil and apply faithfully to every part. Then, with a dry skin rub well, renewing the pieces as they become greased with the oil. It will require one hour, or even longer, of constant rubbing to give it the gloss desired.

Polish for Walnut Furniture:—Take three parts of linseed oil to one part of spirits of turpentine. Put on with a woolen cloth and when dry, rub with woolen. The polish not only covers the disfigured surface, but restores the wood to its original color and leaves a lustre upon the surface.

Cement for Lamps.

Mrs. M. L. wishes a recipe for a cement for kerosene lamps.

ANS.—Three parts resin, one of caustic soda and five of water. Mix this composition with half its weight of plaster-of-Paris. It will set firmly in about three-quarters of an hour,

The cement commonly used is simply plaster-of-Paris, which is porous and quickly penetrated by the kerosene. The above mixture is said not to have this defect.

BRIEFLETS.

The Western Rural thinks that a pair of rapid walkers (horses) will pay the farmer far better than a pair of fast trotters, so far as his own work goes. . . The farmer will find more profit in breeding carriage horses than he will in breeding trotters. . . It will not pay once in a hundred times to breed trotters. . . "It is significant of much," says the London Gazette, "that the two greatest novelties in dairying—the deep-setting of milk and the patent separation of cream by machinery—should be foreign and not English discoveries." . . Why do we not hear more of the Beurré Coit Pear? . . Give us, foremost, agriculture and horticulture; then we will talk of politics and all lesser topics, if we have time. . . Our "Monitor" churn was thought well of at Islington. . . Prof. Caldwell states, in the N. Y. Tribune, that parsnips appear to rank first in value for horses. In some parts of France this root is substituted for oats, 40 pounds being given in a daily ration. The horses maintain a good condition and the parsnips cost only a fourth as much as oats. . . Middlemen—Prof. Sheldon calls them vampires between producer and consumer. . . As seen on the grounds of Mr. Cobleigh (Geneva, N. Y.), Mr. Thomas Meehan would put the Brighton at the head of table Grapes. . . Poor Abies Menziesii! We had grown to prize its steel-colored leaves and peculiar looks in connection with *Menzies*. Dr. Englemann says we must drop it. If Colorado Menziesii, then we must call it Picea pungens; if Pacific Menziesii, then we must call it Picea Sichtensis. The worst of it all is that Abies are Piceas, and *vice versa*. How scientists do keep things in an uproar! . . Mr. Talbot says: "Graft a pleasant Apple upon a very sour apple tree, and the wood will be different from either stock or scion." . . Mr. Wood says: "The plan of ennobling fruit trees proceeds on the principle of grafting on superior stocks." . . The Germantown Telegraph says that there is no bird we have among us that destroys more insects infesting farms and gardens than the English sparrow. . . Notwithstanding all the modern improvements of husbandry, the matrimonial harvest is still gathered with the cradle and thrashed by hand—Toronto Graphic. . . By the way, why should not a circus have a chaplain just as well as Congress? Modern Argo. Or the Agricultural Fair? . . A Dutchman makes use of electricity instead of tobacco smoke with his swarms of bees from which he wishes to take honey. The bees, choked by the electricity, revive in from ten minutes to eight hours. But none are killed. . . FIFTY *patent cow-milkers* and yet milking done by hand! . . The Cal. Farmer recommends one-stroy dwellings for the delightful climate of California. These will save a deal of time, trouble and strength in running up and down stairs. "Besides, *one-story dwellings don't shake down* in an earthquake as easily as the lofty ones." . . Marshall P. Wilder thinks the Beurré d'Anjou the best and most profitable very late pear with which he is acquainted. . . According to the American Rural Home, Mr. Hayden, of Middlebury, N. Y. took from ten hives this season 1,100 pounds of box-honey. . . Many a politician who resembles a sturdy Oak in his native town, when he is telling his constituents what policy he proposes to pursue, becomes a mere Willow when he reaches Washington and mingles with our great American statesmen—Herald . . . It is one of the hardest things to make these BRIEFLETS fresh and interesting. . . It is not feathers of a standard color we want from poultry, but eggs and tender, juicy meat. . . The best way of getting a milking sire is to go to any good herd and bespeak the bull calf of their best dairy cow—London Gazette. . . Every farmer who owns a "sugar bush," should not neglect to tap his Maples the coming spring and make sugar and molasses; it is thought that the supply is less than one-tenth of the demand. . . Be sure that your bees have a liberal supply of good sealed honey for winter. . . Leave no more combs in the hive than the bees can cover. . . With due protection a hive may winter as well outside as in-doors. . . Use honey wherever you can in place of sugar and sirup. . . Equal parts of borax and salicylic acid, dissolved in 25 times their weight of distilled water, are a cure for foul brood. . . The price of fruit is rising, procure your winter supply at once. . . M. Waromin, a European microscopist, is reported to assert that club-foot in cabbages is caused by a fungus, which he calls Plasmodiophora brassicæ. . . We overheard one of two traveling agents (who had just returned from a "drumming" trip) say to the other: "The 'boom' extends all over the country. If you have anything to sell, you can sell it now." . . The Country Gentleman says that the exportation of dried fruit will not improbably exceed in future all other departments of the trade. . . Soot has been used to prevent the depredations of wire-worms with success. . . E. L. S. says, in Land and Home, that cooked food *and care* are better than uncooked food and *no care*. He finds no evidence worthy of the name, that *cooking* increases the digestibilty of cattle food. . . Pres. Abbott, says the last-quoted journal, is trying to find the best man for Professor of Agriculture in place of Prof. Ingersoll who was recently captured by Purdue University. We think Pres. Abbott has found him, and we hope he will not let him escape. . Mayor Freas considers the Dana's Hovey a superb fruit, possessing an aroma he has never found in any other pear. . . The Housekeeper asks, "What shall we do with our daughters? . . Professor Bessey of the Agricultural College of Iowa, has met with success in growing Lima beans without poles. He made them bush by the pinching process. . . There is nothing better than milk for fowls. . . The Weeping Willow (Salix Babylonica) is probably a native of China or Japan. The trees upon which the captives of Israel hung their harps were probably Poplars of some kind. . . Land and Home truly says that it is a lamentable fact that too many rural homes, too many farmers' houses lack many adornments, make the kitchen the center of all things, almost the only room for the waking hours, while their occupants not merely work to live, but apparently live to work.

News of the Week.

MISCELLANEOUS.

MONDAY, November 17, 1879.

Speculation is raging here beyond all recent precedent. The misfortune is that when the reaction comes, as come it must, it will not only affect these reckless gamblers, but will also fall upon the productive industries. For although the latter are in no way engaged in the madness when disaster follows, the money market will be everywhere disturbed, and general credit be damaged. Prudent men will keep clear of the maelstrom which almost inevitably destroys the majority of those who ever enter into its wild current. The cry for water goes up from many and various parts of the country. In some farming regions cattle are driven long distances to drink, or water is hauled in barrels for all purposes indoors and out. In many cities and villages active measures are being taken to relieve present want and guard against future drought.

Four persons formerly United States senators, ran for local offices in the West this fall. Ex-Senators Jones and Dodge, democrats, were defeated in Iowa. In Minnesota ex-United States Senator Wilkinson (rep.) was elected county attorney and ex-United States Senator Rice county treasurer, on the Republican ticket. The Postmaster General says lottery companies may expect no mercy, as it is the settled policy of the government to prosecute them to the extent of the law. The following is the condition of cotton, wheat, tobacco, and corn, as issued by the Department of Agriculture on Saturday last, the 15th inst.:

Cotton.—There was a decided increase in the condition of cotton during the month of October. Unfavorable weather was reported in Georgia and Alabama; in all the other States it was favorable. The returns indicate a yield per acre of 176 pounds lint, against 131 last year. This yield, estimating the area planted at 2 per cent. more than last year, would make a deficit in this year's crop of 290,000 bales of 450 pounds each. All the South Atlantic States show some decline. Texas falls off 35 per cent. All the States bordering on the Mississippi River show decided gains.

Wheat.—The returns of Nov. 1 to this department show an increase in wheat of 26,000,000 bushels over that of last year. This great increase is the result of the very large yield in all the States bordering on the Ohio River and Missouri. The North-western States show little variation from last year. Kansas and California both decline in yield. Texas, of all the Southern States, is the only one that falls off in yield this year.

Tobacco.—The indicated produce for the entire country is 98 per cent. of that of 1878. The gain has been greatest in Tennessee, Connecticut, and New-York, the loss greatest in Ohio, Missouri, and West Virginia, with a material decrease also, in Maryland, Illinois, and Indiana. In general, the quality is better than that of the previous crop, though damage to some extent from "house-burn" is reported from Kentucky and Virginia, and from frost in Ohio.

Corn.—According to the returns of Nov. 1 the corn crop promises an increase of over 200,000,000 bushels, or nearly 15 per cent over last year. The Atlantic and Gulf coast States notes some decrease, but the other portions of the Union have greatly increased their yields. The Southern Inland States increased nearly 30 per cent, and the other parts of the Mississippi Valley nearly 20. The Pacific States report about the same yield as last year.

The New York grain trade board has decided not to carry into effect the cental system of measuring grain. With the advent of good times, prices of goods are going up. A table covering the prices of all the staples January 1, 1879, and October 18, published by the New York Commercial Bulletin, shows an average increase of 23 per cent. Textiles are omitted from the list, as the fluctuations have been small during the last nine months, or for a longer period. During the year ending November 1, the national bank circulation increased $15,000,000, one-half of which was in the last two months. The increased demand was almost entirely from the East. From January 1, 1874, to January 1, 1878, the bank circulation decreased $50,000,000, then it was stationary for awhile, now it is rising again on account of the demand for money.

New Orleans is considering a thorough system of sewerage, which will cost, according to the plans,

$1,500,000. A good system of sewerage would be as repellant to Yellow Jack as was Ben Butler. Kearney is organizing a secret society in San Francisco, whose alleged object is the hanging of all merchants who employ Chinese. Any attempts in that direction would put Kearney in the predicament in which he would have found himself, had he burned General Grant in effigy. Major Reno has been getting drunk again, insulting a married woman and fighting with brother officers, who in both cases whipped the sot. Only the clemency of the President prevented him from being dismissed from the service for a similar offense some time ago. He is again to be court-martialed, and whatever sentence may be imposed will this time, it is likely, be executed.

The total product from gold and silver mines in this country since mining began in California is estimated at $1,617,000,000. The value of staple agricultural products harvested this year alone is $100,000,000 larger. Alaskan explorers report one of the largest rivers in the world, the Yukon, as navigable for steamers 2500 miles, and at 500 miles from its mouth it receives a very large navigable tributary. The basin formed by the confluence is 24 miles wide. The Yukon is nearly as large as our Mississippi. Indians are everywhere, and war between tribes is a fixed institution. There is snow for six months, and without roads dog sledges find good traveling. Game abounds and the Indians have an easy life. The grand aggregate of the army roll is 2187 officers and 24,262 men in service and 388 officers retired. The Treasury's monthly statement shows the extraordinary decrease of $10,352,906 in the United States debt in October. Wonder if it is altogether accidental that so good a showing was made just before the elections.

A new association has just been inaugurated in this city for the sale of horses. The board of directors includes the names of some of the wealthiest and most noted lovers of horse-flesh in the city. Such as W. H. Vanderbilt, Leonard Jerome, etc., its object is to form a perfectly trustworthy medium for the sale of all kinds of equine stock here and abroad. Farmers and others throughout the country can become associate members by the payment of a small fee, and to all such members veterinary advice will be furnished *gratis*. By next week we shall be able to give our readers full particulars of the movement, which we believe to be a good one, tending greatly to their interest.

FOREIGN.

An alliance, it is reported, has been concluded between the Balkan Principalities, ostensibly against foreign intervention, but really against Austria. The treaty stipulates that, in the event of Austria extending her operations beyond Novi Bazar, Servia will furnish 120,000 men, Montenegro 20,000 and Bulgaria 90,000 to form an allied army, and that Servia will advance Montenegro 75,000 ducats for military expenses. The appointment of a commander-in-chief is left open for the present. It is believed that the appointment of a Russian general was originally contemplated. The war in South America between Chili, on one side, and Peru and Bolivia on the other, seems drawing to a close. At the Chilian legation in New York city Tuesday, the news of the capture of the Peruvian town Pesagua was confirmed. It is claimed that the capture was attended with important strategic results. The Chilians thus place themselves between the Peruvian forces at Arica, Tacara and Iquique and the sea, and cut off their supplies, thus forcing Iquique to surrender. Don Abelardo Menez, of the Chilian legation, says that Peru is greatly crippled. He expects that the recent Chilian successes will compel Peru to sue for peace.

The details of the capture of the Peruvian ironclad Huascar are given by a Lima letter. The Huascar carried 240 men, two 200-pounds rifled Armstrong guns in her turrets and two 40-pounders on deck, while her plating was four inches of iron. The Chilian iron-clads Encalada and Cochrane had each six 300-pounds rifled guns and nine inches of iron plating. They, with the gunboats O'Higgins and Loa, overhauled the Huascar and the gunboat Union, October 8, but the latter escaped by her superior speed. A terrific fight ensued in the harbor of Mejillones, and the Huascar was crushed, captured and towed away, after badly damaging her adversaries. The loss of life was great. Peruvian Admiral Grau was killed early in the action, and his executive officer, Capt. Aguirre, was fatally wounded, while only four other Peruvian officers are reported as surviving. Admiral Grau's wife died from the shock of hearing of her husband's death. The loss of the Huascar is severely felt in Peru, but the war enthusiasm is increased, and a commission has been sent to Europe to purchase new vessels and armaments. In Lima 200,000 solos have been subscribed for a new iron-clad, to be called the Admiral Grau.

In Europe the German-Austrian alliance is still the subject of most interest. To counterbalance it, there is a good deal of talk of a coalition of the Latin nations—France, Italy, Spain and Portugal. Reports vary greatly as to the health of Bismarck—some say he is much prostrated and in poor condition; others that he is as well as ever. England seems to be drawing closer than usual to the new Teutonic alliance, and receding just so much from her late friendship with France. The floods in Spain still divide attention with the approaching marriage of the King. The destruction of life and property was even more widespread and disastrous than was at first imagined.

Yakub Khan is now on his trial for complicity in the massacre of the British in Cabool, and evidence is fast accumulating against him. It seems it was not the original intention to murder Cavagnari and his followers; but merely to so frighten them—killing perhaps a few—that they might consider their lives insecure at Cabool, and retire to India. The soldiery, however, having been urged on to assault the residence of the British were exasperated by the vigorous fusilade opened upon them, and in their wrath at the death of upwards of 200 of their number by the handful of English, they went further than was intended, and finally the Khan in his alarm, permitted the destruction of the entire party, on the ground that dead men tell no tales. At present he is a close prisoner and if convicted will probably remain so for his lifetime.

A Favorite Youth's Paper.

The *Youth's Companion*, of Boston, has steadily grown in public favor for more than fifty years, and is now one of the most admirably conducted papers in the country. It has recently been increased in size, and is illustrated by our best artists.

SUDDEN CHANGES OF THE WEATHER often cause Pulmonary, Bronchial and Asthmatic troubles. "*Brown's Bronchial Troches*" will allay irritation, which induces coughing, oftentimes giving immediate relief.

Nervous people should avoid the temporary relief of tea and coffee. A cup of pure Cocoa will be found nutritive as well as sedative. Insist upon your grocer's furnishing Walter Baker & Co.'s preparation.

Inaction of the Kidneys and Urinary organs causes the worst of diseases which Hop Bitters cure.

Correct your habits of crooked walking by using Lyon's Metallic Heel Stiffeners.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Nov. 15, 1879.

BEANS AND PEAS.—Receipts of beans have arrived liberally and though the market is not actually weak, prices have not the loud outside snap that has prevailed. Many holders of special marks of standards are asking last week's prices regardless of the enlarged offering. After all the lull is a natural one and might be expected after the recent prompt wholesale outlet. Green peas have a fair demand at $2 strong; Southern B. E. peas quiet at $2.30@2.25. Old marrow peans, $1.50@1.55; new, $2; medium, $1.00@1.80; pea, $1.80@2.10; white kidney, $1.95@2.20; red do., prime, $1.95@2; poor, $1.50@1.85; black, $2.

Receipts of beans for week, 12,156 bush. exports 1,100 pkgs.

BROOM CORN.—There is a quick sale and a strong market. Quotations are for brush and short broom, choice, per lb., 5½@6½c.; do., common to good, 4½@5c.

BUTTER.—Receipts for the week, 36,791 pkgs. Exports, do. 4,630 do. The strong holding rates of all stock of table merit has checked consumption to some degree, and there has been latterly some yielding in under grade State. This feature, however, is not a prevailing one and is hardly noticeable in finest creamery and fresh ends or tops of dairies. Several very warm days have given buyers some advantage where receivers were well stored up. Parcels on the floor or sidewalk have not shown well on the tryer, and when such lots were in treaty concessions have been made. Dealers look for an active demand from the East this month, though prices are in ranges not attractive to thrifty New England buyers. Firkins have a good movement for Southern use. Western dairy and factory have worked up to points that ought to draw forward better grades than the stock exhibits. Shippers are using some Western, but will have to wait for orders before they handle State at present hint prices. Rolls open with a good inquiry. The demand for this old-fashioned style of stock need never have fallen off if so many bogus lots had not been intruded upon the market. Genuine, clean wrapped rolls should always find a sale. Packing them without cloth is always detrimental. Use new, undressed muslin, and pack in half-bbls. when practicable. We repeat quotations:

State, pails and tubs, single dairy marks, fresh ends, choice, 34@35c.; best invoices, 32@33c.; good to prime, 29@31c.; fair to good, 26@28c. firkin and tub single dairies, choice, 31@32c.; do., dairies good to prime, 28@30c.; do., firkins, choice dairies, 28@30c.; do. good to prime, 26@28c.; do., fair to good, 24@26c.; Welsh tubs, best invoices, 29@30c.; do., good to prime, 26@28c.; do., fair to good 24@26c.; State, tubs, poor, 20@23c.; State creamery, best invoices, 37@38c.; do., good to prime, 34@36c.; do., sweet cream, best, 35@36c.; do., fair to good, 30@34c.; Creamery, poor to fair, 28@30c.; Western, imitation creamery, 29@33c.; do., dairy, fresh, extra, 26@28c.; do., dairy, good to prime, 24@25c.; do., fair to good, 21@24c.; poor to fair, 18@21c.; do., best invoices, June, 21@23c.; do., fair to good June, 18@20c.; do., best invoices, late made, 22@23c.; do., fair to good, 19@21c.; do., poor to fair, 16@19c; Roll butter, prime, 25@26c.; do., fair to good, 22@23c.

CHEESE.—Shipments for the week are only 23,600 boxes. This very moderate movement has failed to disturb prices of really fancy lots, but otherwise there has been more of a disposition to meet buyers. Choice stock is generally 12¼@12½c.; but an occasional lot reaching 13c.

Quotations are for State factory: Fancy, 12¼@13c.; good to prime, at 11¼@12¼c; fair to good, at 10¼@11¼c.; half-skimmed at 9@10c.; skimmed at 5@7c. State farm dairy: Fine at 12@12½c.; good to prime at 10¼@12c.; fair to good at 9@10¼c.; skimmed at 4@8c. Wis. factory: Fine at 12½@12¾c.; good to prime at 11¼@12¼c. Ohio factory: Cheddar, fine, at 12¼@12¾c.; do., fair to good, 10¾@11¼c.; flat, fine, 12½@13c.; flat, good to prime, 11¼@12¼c.; flat, fair to good, 10@11¼c.; half-skimmed, 8@10c.; skimmed, 3@7c.

Receipts for week, 38,948 boxes; exports, 24,415 do.

Cable quotations advanced to 63s.

COTTON—Has been unusually active and as a rule advancing, closing at for Nov. 12.33@12.34c.; Dec. 12.36@12.37c.; January, 12.41c.; February, 12.55c.; March, 12.68@12.70c.; April, 12.81@12.82c.; May, 12.99@13.01c.; June, 13.12@13.15c.; July, 13.21@13.24c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

	Uplands.	*N. Orleans and Gulf.*	*Texas.*

DRIED FRUITS.—Apples have an active demand and rule very strong in price. Peaches are in freer demand, and favor sellers. Small fruits meet with a good sale.

New North Carolina apples, quoted at 6½@8c. for fair; 8½@9c for choice; 10@10½c. for fancy sliced. Patent evaporated apples, choice, in cases, 13½@14c.; do. fair to good, 12@13c.; N. Y. State sliced, new, 8@8¼c.; quarters, choice, 6½@7c.; western quarters, common and old, 4@4½c.; new southern quarters at 4@4½c.; new N. C. peeled peaches at 15@17c.. do. Georgia, 13@16c. Peaches, Delaware evaporated, peeled at 25@28c.; do. unpeeled at 12@14c.; new halves at 8c. Blackberries at 10c. for new. Raspberries at 28@29c. Pitted cherries at 19c.

Exports for week, 125 bbls. apples.

EGGS.—Receipts for the week, 13,068 bbls.; do. last week, 10,750 do. A continuance of mild weather has had a detrimental effect upon general sales; a few receivers of extra fresh or marks high in repute quote the extreme stiffly. The bulk of supplies, however, indicates holding, and buyers will not take hold freely. Limed quoted as before, but as high as they can stand.

Near points, 25@26c.; State and Penna., 22@23c.; Canadian and Western, choice 20@21½c.; off grades, 19@20c. Southern begin to show; prime quoted, 20@20½c.; limed, State, 17½@18c.; Western, 16½@17c.

FLOUR.—There has been less life to the market and prices have ruled easier, but closed more active and stronger.

Latest prices are: $4.70@5.15 for inferior to fancy superfine State; $5.50@5.90 for inferior to good extra do., odd lots and lines; $5.50@5.90 for good to very choice do.; $4.65@5.15 for inferior to very choice superfine ind., Iowa, Michigan &c.; $5.25@5.60 for inferior to good shipping extra do., and $5.60@5.85 for good to very choice shipping extra do.; inferior to about choice white wheat extras, $5.65@6.65; choice to fancy do. at $6.65@7.85; red and amber winter wheat, inferior to fancy trade and family, at $5.65@7.60; round hoop Ohio, $5.40@5.85, and trade and family brands of do. at $5.90@7.65, the latter rate for fancy; St. Louis at $5.65@6.65 for inferior to very good extra; $6.65@7.85 for very good to very choice; Minnesota clear, very inferior to fancy, $5.25@7.40; Minnesota "straight," very inferior to fancy, $5.85@7.50, and patent poor to very fancy at $6.10@8.50; unsound stock at from $3.65@5.75; city mill extra at $6.25@6.65 for common to very choice for West Indies (fancy do. quoted at higher figures); do. for England, $5.25@5.75 for poor to choice; do. trade and family extras, $6.25@7.25; do. for South America, $6.40@6.75; No. 2 at $4.00@4.60 for poor to fancy.

FRESH FRUITS.—Prime apples of solid keeping quality are not pressed for sale, now that receipts are falling off. Kings are very scarce; they have obtained a valuable reputation as a fine fall apple. Lady apples are in very early; no steady quotation. For stock fruit the market will have to depend mainly upon Greenings and Baldwins. Spitzenburgs and Fameuse are scarce, and will be held for holiday use. Cranberries quiet, but firm; warm weather curtails wants. Pears of not much commercial importance. Rochester is sending some fine Duchess. Quinces dull; high sugar has checked demand for ordinary preserving. Grapes low as before. Fla. oranges quoted, but they are of poor, irregular quality, thus early. Peanuts in good demand; other nuts dull.

Apples—Kings, State, good to choice, per bbl., $3; Baldwin, $2@2.50; Greening, $1.87@2.12; winter mixed, good to choice, $2@2.25; poor to fair, $1.25@1.75; Jersey, fair to good, $1.25@2. Cranberries—Cape Cod, fancy, per bbl., $7@7.25; good to choice, $6.25@6.75; fair to good, $6@6.25; Eastern, large round hoop bbls., fancy, $6.50@7; do., fair to choice, $5@6; Jersey, fancy, per crate, $1.87@2; good to choice, per crate, $1.50@1.75. Pears—Vicar of Winkfield, per bbl., $2.50@3.50; Lawrence, $4@4.50; Boston, choice varieties, per box, $2.00@4.50; cooking $1.75@2. Quinces—State, choice, per bbl., $5@6; poor to fair, $3@4.50. Grapes—Catawba, State, 18 3-lb. boxes, $1.50@2.25; do., loose, per lb., 3@5c.; Isabella, State, 18 3-lb boxes, $1.25@1.75; bulk, per lb., 2@3½c. Oranges—Florida, choice, per ½ bbl. crate, $3.50@4; fair, $2@3; choice, per bush. crate, $2.50@3; fair, $1.25@2. Peanuts, Va., new, hand-picked, per lb., 5@5½c.; new, extra prime to fancy, 4@4½c.; do., good to prime, 3½@3¾c.; shelled - new, 4¾@5½c.; old, 5¼@5¾c.; Chestnuts, per bush., $2@2.25.; Hickory, shellbark, $1; do., Ohio, 87c.@$1; B. walnuts, 40@50c.; Pecan nuts, per lb., 9@9½c.

Exports for week, 15,439 bbls. apples.

FURS AND SKINS.—Dullness abroad and large stocks carried over will tend to start a low market here this season.

GRAIN.—Wheat closed active and higher: latest sales are of No. 2 amber at $1.40@1.40¼; ungraded amber at $1.34@1.41; No. 1 white at $1.39½@1.40; do. for November at $1.39½@1.40; do., December option, at $1.42¼@1.43¼; do., January, at $1.46¾@1.47; ungraded white at $1.33@1.38; No. 2 red at $1.40¼@1.42¾; do., November option, at $1.41@1.42; do., December option, at $1.43@1.45; do., January option, at $1.47½@1.48; No. 3 red at $1.33; ungraded red at $1.24@1.31; No. 2 Milwaukee at $1.32@1.33; No. 2 Chicago at $1.21; New York No. 2 spring, at $1.29@1.30; do., November option, at $1.31; do., December option, at $1.34; No. 2 northwest spring, November, at $1.32; do., December, at $1.35; No. 3 spring, at $1.25@1.27; ungraded spring at $1.20@1.33. Rye is quiet at 86c. for Canada. Corn has a better inquiry, and prices are higher and closed strong; sales of New York No. 2 at 58¾@59¼c.; do., November, at 59c.; do., December, at 60¾@60½c.; New York steamer mixed at 57½@57¾c.; do., December, at 56¾@57c. ungraded Western mixed at 58¾@59¼c. Oats have a good demand and prices firm; latest sales are of New York No. 2 white at 45¾@45½c.; New York No. 3 white at 44¾45c; New York No. 1 at 44@45¼c; New York No. 2 at 45@45¼c.; do., do., December, at 35½c.; New York No. 3 at 44@44¼c.; New York rejected at 41@42c.; ungraded white Western at 46c.; mixed Western at 41@44½c.; white State at 45@49c; mixed State at 47c.; No. 2 Chicago at 45c.

HAY AND STRAW.—Trade is quiet and prices are firm throughout

Shipping hay quoted at 50@55c.; retail lots at 60@75c. for medium, and 75@85c. for prime; clover at 40@50c. Straw at 75@80c. for long rye, 50@55c. for short rye and 45@50c. for oat.

Exports for week, 1,100 bales.

HONEY—In fair demand; prices somewhat firm. White clover, single comb, 18@19c.; larger pkgs., 14@15c.; buckwheat, 12@14c.; extracted clover, 11@13c.; strained, 8@10c.

HOPS.—Emmet Wells in his circular says: "The activity which has characterized the market for several weeks past has almost entirely subsided. The late advance in values is the direct cause for the present lull, shippers now claiming there is no margin of profit for them, prices now being higher here than in London, and until there is a corresponding advance in that market no fresh orders can be executed. The hops now coming into market are mostly those of last month's purchase, and the same goods will be forwarded on to London to complete old orders: that done, the export traffic will cease until it again shows a profit to the operators. Brewers are taking a few new hops right along, and without grumbling at the price: and a characteristic feature of the trade with them is that the higher the price the less fault do they find with the quality. We hear of no concessions or giving away in price; on the contrary, the market shows as much firmness as ever, and it is the belief of many that the present lull is only temporary, and that before the new year we will see higher prices."

Quotations are for New Yorks, new crop, choice, 45@47c.; New Yorks, new crop, medium, 40@43c.; New Yorks, new crop, low to fair, 35@37c.; Eastern, new crop, 35@45c.; Wisconsin, new crop, 35@45c.; Yearlings, 7@18c. Olds, all growths, 4@10c.; Pacific coast, new, 40@45c.; Pacific coast, olds, 9@14c.

OIL-CAKE.—Western is quoted at $32.50@33.

POULTRY AND GAME.—Live poultry has merely the passive market incident to date. Fowls and chickens range at 7@8c.; turkeys, 8@10c.; roosters, 4c; ducks, 10@70c. ₱ pair. Geese, $1@1.50; the latter for N. J.

Dressed poultry has met several unfortunate warm days that has spoiled both stock and demand. Quotations are very low, but are full for doing business. Many stale lots of Western have been condemned. We repeat for the benefit of new shippers whom this paper will reach, have Thanksgiving stock here by the 25th at latest.

Turkeys, Jersey, good to prime, 11@12c; State, Mich., Northern Ohio and Penn., prime, 10@11c.; other Western, prime, 10@11c.; fair to good, 6@9c.; poor, 3@5c.; Phila., dry-picked, 12c.; do., chickens, 11@12c.; do., Jersey, per lb., 9@10c; do., State, Mich., Northern Ohio and Penn., prime, 8@9c., do., poor to fair, 3@7c. Fowls, Phila., dry-picked 10c.; Jersey, good to prime, 7@8c.; poor to fair, 4@7c. Ducks, Phila., dry-picked, 11@12c.; Jersey, 11c.; State, 9@11c.; Western, 9@11c.; do., geese, spring, 9@10c.; Jersey, 9@10c.; Western, 5@8c.

Game is all more or less badly weather-blemished, and prices have ruled irregularly.

Quail, prime, ₱ doz. $1.50@2; do., soft, 60c.; Partridges, State, prime, ₱ pair, 70@75c.; do., soft, 25@50c.; Western, 25@60c.; Grouse, undrawn, prime, $1@1.12; prime, drawn, 65@80c; Wild pigeons, ₱ doz., 25@75c.; Tame squabs, light, $1.50@1.75; dark, $1@1.25; Pigeons, live, ₱ pair, 20@25; shot pigeons, ₱ doz., 75c@1; woodcock, State, ₱ pair, 20@30c.; English snipe, ₱ doz., $1.25@1.50; plover snipe, $1.25@1.50; large yellow leg snipe, $1.25@1.50; small, 50c.; Sand snipe, 40c. Wild ducks, Havre de Grace canvas, $1.25@1.50; Red heads, 40@50c.; black heads, 20@30c.; Western canvas backs, $1@1.25; do., red heads, 30@40c.; do., Mallards, 30@40c.; Teal, 25@35c.; wood and common, 15@20c. Venison, Minn., saddles, 10@11c.; other, 8@10c.; Venison, carcasses, 4@6c.; Hares, per pair, 25@35c. Rabbits, 20@25c.

PROVISIONS—Have tended higher on more active dealings. Mess pork quoted, $10.90@10.95 for Nov.; $10.90@11 for Dec.; $10 97½@11.05 asked for sellers' option, old or new, for Jan.; $12.35@12.45 for new do. for do., and $12.45@12.50 for February. Bacon at 6@6.20 for long clear and $6.37½ for short clear. Beef—Plain mess at $10.50@11; extra mess at $11@11.50; packet at $13@13.50; tierced beef, city extra India mess, at $24@26; and Philadelphia do. at $23@24. Beef hams at $15.75@16. Tallow at 7¾c. for prime. Lard—Western steam at $7.35 for spot lots, $7.30@7.32½ for Nov. and Dec. $7.47½ for January. Stearine at 7½c. for prime Western.

SEED.—Clover is strong at 8¾@9¾c. for good and prime and 10@10¼ for fancy. Timothy is quiet at $2.60@2.75.

TOBACCO.—Trade continues slack in Western, and prices are unsettled; Seedleaf sells well.

VEGETABLES.—Exports of potatoes for the week, 7,162 bbls. The market for potatoes is gradually improving, though perhaps the higher rates is to some respect due to some higher grade quality now offering. Onions came forward freely after the late advance, and have declined. Early Rose, Maine, per dish bbl., $1.87@2; State, $1.50@1.75; in bulk, per bbl., 1.37@1.50; Snowflake, per dish. bbl., $1.37@1.62; Peerless, $1.25@1.50; bulk, per bbl., $1.12@1.25; Jersey, 87c.@$1; Sweet potatoes, State N. J. and Del., per bbl., $2@2.25; Va. and Jersey, $1.25@1.50; squash, marrow, ₱ bbl., 50@75c.; do., Hubbard, $1@1.50; cabbage, per 100, $2@5.00; red cabbage, $3@6; onions, white, per bbl., $2.50@3; do., yellow, $2.25@2.50; red, Eastern, $2@2.25; do., Chester, $2@2.25 beets, Jersey, 75c.@$1; Russia turnips, $1; carrots, 75c.@$1; pumpkins, per 100, $2@5; cauliflower, ₱ bbl., $1@4; celery, per doz., $1.25@1.50.

WOOL.—There is a hardening market and a liberal demand; latest sales are of XX Ohio at 48½c.; X, XX, XXX, and No. 1 do. at 44@50c.; X State at 44@45c; tub washed at 53c.; fine washed at 44c.; spring California at 31c.; scoured do. at 62@68c.; fall and lambs' California at 21@34c.; spring Texas at 30c.; fall do. at 24½@32c.; scoured Territory and Texas at 64@71c.; Territory at 29@31c.; Oregon at 29½@36c.; Colorado at 22c.; black do. at 18@20c.; super pulled at 42½50c.; Cape at 25c.; Smyrna at 17@18c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Nov. 15.

BEEVES.—Receipts for the week, 9,518 head; do. last week, 12,105 do. Lighter supplies have restored some steadiness to the market, but the advance is small over Wednesday's prices. The weather has been against meats of all kinds. This will prove a bad month for cattle in the aggregate, as another dull week must be counted upon for Thanksgiving, when poultry rules so much demand. Cherokee cattle sold at 7c.; medium to good native steers, 7¾@8¼c.; prime, 9@9¼c., to dress 56 lbs; a fine drove of 119 Illinois steers sold at nearly 9¼c. right through.

MILCH COWS.—Heavy receipts have broken the market, and an easier range of 35@55 is now quoted.

VEAL CALVES.—Butchers' wants are moderate for small meats with bad selling weather, and calves must be in fine order to bring the extreme. Hog-dressed very unsettled, fair to prime, 7¾@8¼c.; grassers, 3@4c. Live Calves, N. J., and Bucks choice, 6¼@7c.; fair to good, 6@6¼c.; State, prime, ₱ lb., 6¾@6¾c.; fair to good, 5¾@6c; extra fed, light, 5@5½c. Buttermilk, 2@2½c.; grassers, 1¾@2.

HOGS.—Receipts for the week, 41,736 head; do. last week, 44,861 head. Kentucky hogs sold at 4c. State and Western, $3.62@4

New Jersey pork, light, 6@6¼c.; medium, 5¾@5¾c.; heavy, 4¾@5c. Pork tenderloin, 8c.

SHEEP AND LAMBS.—Receipts for the week, 27,693 head; do. last week, 32,380 do. Trade has been poor. Western sheep in some cases received a bid no higher than home cost. The selling range was $3.85@4.75. Lambs, $4@5 31¾ per 100 lbs.

Reading for the Young.

OUR PREMIUM NO. 91

is peculiarly adapted for the boys. Of late these saws have grown into the widest popularity, and justly, as their use supplies no end of healthful amusement and gives scope to the mechanical instincts with which every boy is, to a greater or less extent, endowed. We think every boy will like this premium, and for this reason select it from among our long list for a brief description. All of the working parts are of iron and steel including the strong, compact frame. The table on which the work is done tilts at various angles,

giving greater scope for manipulating to advantage delicate or intricate designs. The treadles work very freely and smoothly, giving a very rapid motion to the saw-arm. Everything requisite to operate it is sent with the saw, and it will be found on inspection to be a very fine tool. Its price is $3, but we shall be pleased to send it as a present to any young Ruralist who sends us five subscriptions at $2 each. One of the pleasant facts incidental to the possession of a scroll saw is, that in addition to its being a means of amusement, it is also susceptible of being turned to profit—a lad skillful at sawing out ornamental designs for brackets, etc., can always turn his labor into money.

LETTERS FROM THE COUSINS.

Letter from Hawaii Nei.

THE real, original Hawaii Nei has written a letter to her RURAL uncles and cousins. So long had she been silent that her existence had almost become a myth, and conjectures were freely made on all sides that there was no such person; but now that doubt is forever banished. Hawaii Nei is a real person, and is as sprightly a little niece as any uncle can wish for. In a private letter to Uncle Mark she expresses her desire to become a member of the Horticultural Club, to which privilege she, of course, is very welcome. But he confidentially asserts that he experienced just the least little touch of jealousy when he found inclosed the autographs of the King and Queen of the Hawaiian Islands, which she requested him to deliver to Uncle True, with her compliments. Uncle True was delighted, and felt highly pleased at this assurance that his little niece, from whom he had heard nothing in a long time, still so kindly remembered him. Uncle Mark's jealousy soon disappeared, however, on reading that she also would try to procure him the autographs (for which favor he would be truly grateful), and furthermore, finding a map of the Hawaiian Islands and a number of very pretty fern leaves for himself, objects which he shall henceforth class among his most precious keepsakes. In the same letter she says: "In one of the back numbers of the RURAL some one speaks of preserving the paper. I have preserved mine ever since we first took it, in 1874, and now have it bound up to 1878. I would not part with the RURAL, for there is so much good reading in it. Of all the papers and magazines I have read, the RURAL is my favorite."

Here is her letter to the cousins:

DEAR UNCLES AND COUSINS:—How do you do, one and all! I am happy to meet you once more. Do not think, because neglected so long, that I have forgotten you; far from it. As soon as a mail arrives, after the perusal of my letters, I look for the RURAL, and Uncles True and Mark, as well as the cousins' letters, are all of great interest to me; nor must I omit the stories—these, too, I enjoy exceedingly.

Do not look so astonished at my laughing—I cannot help it—to think that some have expressed doubts as to my being a Sandwich Islander; and yet I sigh to think it is the way of the world. People are like Thomas, who disbelieved that the Savior had risen from the dead (some people, I should say). Seeing is believing.

Cousin Lenora, I am, in very truth, a native of "Hawaii Nei," born in Honolulu, the capital; my parents are foreigners. As to my being a "missionary's daughter," I reply in the negative, at least not in the sense you put it, but I hope and believe that I am a "missionary of Christ," "a soldier of the Cross."

Thank you, Cousin Ivy, for speaking in my favor, and for your nice, long letter. I hope to hear from you again soon. In speaking of rowing, I would like you to be with us some moonlight night, when, in a little sail-boat, the "Pumpkin Seed," we sail out of the harbor, some three miles along the coral reef. It is just splendid!

Hush! Perhaps I can tell you something that will interest you, namely, a visit to the King's palace. A friend of mine was desirous to procure his Majesty's autograph. At Emma Square, one Saturday afternoon, listening to the band, I saw the King. Being well acquainted with him, I asked if he would grant me a favor, said favor being permission for a friend and myself to visit his Majesty, in order to procure his autograph. The answer I received was, "Certainly, I will grant you any favor you ask."

Monday, Sept. 15, at noon, we would be received. At the time appointed we were at the palace gates, which were opened by a soldier; another showed us to the King's private parlor; a servant announced our coming; his Majesty came forward. After presenting my friend, he shook hands with us and asked us to be seated. After the weather, etc., had been discussed, the King wrote on our albums, also on slips of paper; these latter were for us to send to relatives and friends. We were pleasantly entertained for an hour, talking upon various subjects—one was his (the King's) visit to the States. He made the remark that every little village they passed through, before refreshments could be partaken of, he was besieged for his autograph. My friend asked if it did not become monotonous, to which he answered, "No; it was rather amusing." Soon after we took our leave, thanking his Majesty for his kindness.

Uncle Mark, will you put my name to the already long list of the members of the Horticultural Club? Since last I wrote, we have moved to a new home of our own, pleasantly situated on the outskirts of the city; attached to it is an acre of ground. Being very fond of gardening, I am trying to make a pretty garden. Roses are my favorites; I have quite a number planted. My Stephanotis, as well as my fernery, are in a flourishing condition; besides, I have planted Heliotrope, Pinks, Sweet William, Mint, Myrtle, Geranium, several kinds of Lilies, English Ivy, two kinds of Ginger (native and foreign), both having sweet and pretty flowers. Here we have perpetual summer all the year round; no frost or snow to kill or hide the pretty flowers. As for fruit trees, we have the Mango, Guava, Rose-apple, Breadfruit, Banana, and several others, names unknown to me.

Mamma started a vegetable garden. The pumpkins, cucumbers and sweet potatoes do nicely, but the peas and beans are a failure. There seems to be something, close to the ground, eating the stalks; we think it is a cut-worm; perhaps Uncle Mark can tell of something to kill this insect.

My! but I must draw to a close, and leave what else I have to say for another time. Hoping that the blessing of health is enjoyed by you all, uncles and cousins, I bid you "Adieu" with "Aloha nui."

Honolulu, Sept. 29. HAWAII NEI.

A New Cousin Who Knows How to Raise Big Radishes.

DEAR UNCLE MARK:—I guess I am not too old to join your Horticultural Club. I know I am not too old to be interested in it, and the letters from the cousins, and so would request you to put my name on your list.

I am a young farmer of the "Great Plains," and am going to pay considerable attention to gardening the coming season. Did not do much at it the past season, but I must tell you of some radishes I raised. They were of the California Winter variety, and were planted on the 7th day of July, on new ground, without any manure or cultivation whatever; and on the 23rd. of October I pulled a couple. One weighed three and a half pounds, and measured one foot in length and 15 inches around, and was crisp and tender throughout; the other weighed three and three-quarter pounds and measured 14 inches in length and 15 inches around. I saved it for seed and so cannot say whether it is crisp or not. Next season I am going to try and raise a ten pounder and still be tender.

I have heard of planting watermelons on pieces of sod in the house, early in the spring, and transplanting them to the open ground when danger from frost is over; do you think this would forward the melons enough to have ripe melons a week or two earlier than planted in the ordinary way. [Yes, if judiously managed.—U. M.] Oh dear, I have so many things to tell you about and questions to ask but there that boy comes with the empty waste basket, and it is hungry, so with best wishes to you and the cousins, I bid you good-bye for the present. Your nephew.

Kearney, Neb. PRAIRIE RAMBLER.

Letter from a Veteran Horticulturist.

UNCLE MARK:—Good morning. Here I am again to chat with your Horticultural Club and tell how I have done with our fall work in the flower garden. I have just finished planting out hardy bulbs, such as Tulips, Snowdrops, Crocuses, Hyacinths, Lilies, and many others too numerous to mention. All do well, but Hyacinths and Crocuses to use the common phrase "run out" in a year or two. Tulips are so pretty that every cousin should plant at least one dozen to get acquainted with them. My Lilies increase in size and number very fast. One bulb two years old weighed two pounds. It is *Lancifolium rubrum*. I have given my *tender Roses* some protection until severe cold weather comes, then I intend to bend them down to the ground and cover with earth. Most failures attending this method are caused by taking them up too soon. To-day I re-set our "Rural," *Yucca filamentosa* which I received two years ago. It has increased two-fold. Such success is the desire of the RURAL's Managing Editor, to whom I am under many obligations. Dear Uncle, you will find inclosed seeds of Celosia cristata variegata for you to distribute to your young relatives of the club, as you think best. I know that all who give them a trial will be pleased with them, as the combs were really beautifully variegated. I received some variegated seed from E. S. C., a few years ago, which he said was not very reliable, but I have succeeded in getting good variegated plants and have improved them to some extent. Fearing that I may be intruding upon your valuable time, I will close for the present. J. W. MAPLE.

Holt Co., Mo.

UNCLE MARK:—I was quite delighted to see my letter in the RURAL, and I will write again telling you how nicely my plants are growing. Nearly all of them are potted for the winter, and my grandpapa made me a nice window garden, which takes nearly all of my small plants. I would like to see Eva M. Dawson's collection of Coleus and all of her plants, too. Uncle Mark, I thank you ever so much for those seeds you sent. The Acme tomato seeds you sent papa grew and were splendid, a great deal better than our old kind. The Hollyhock were all that came up. How do you start Pansy and Verbena seeds for the garden? I never could have any luck in raising them. I think all the cousins should join with me in wishing that you would send us your photograph for a Christmas present. I won't write any more or you will never want to hear from me again. Yours, CLARA.

Whitestown, Oneida Co., N. Y.

[Pansy seed will grow very nicely in the open ground. Verbena seed will do best if sown in a pot or box early in the spring in-doors.—U. M.]

DEAR UNCLE MARK:—Good morning. I come again. Not having written in some time, I thought I would write a few lines to you. Please enter my name on your Horticultural Club list if you have not done so. I wrote and said I would like to join it. I never received anything and mamma says you did not accept me as a member. We have not very many flowers and but few vegetables. I like flowers real well, but don't care much about vegetables. I think the cousins ought to write something funny sometimes, and I do want to ask where all our old cousins are, if anyone knows I want them to say so. Perhaps some have quit taking the RURAL, and some have married and got other things to tend to, and oh, perhaps some are dead; that is not funny. I hope this letter will interest the cousins, I never thought yet that I interested them and if there is anything they don't like I want them to criticise me good. LUDIE FLEMING.

Griffin, Spalding Co., Ga.

DEAR UNCLE MARK:—I wish to become a member of the Horticultural Club. I have two flower beds in the yard which have been a great pleasure to me and my little sisters all summer, and when I think that the frost will soon kill them it makes me feel sad. My papa has bought a farm in Nodaway Co., and we expect to move there in a few months. The morning the Post Master brought us the Beauty of Hebron potato we took a hearty laugh at the idea of raising anything from a single potato, but papa cut it in five pieces and sent it to the farm, and we have eight quarts which we shall keep for seed. Papa says he expects to raise a quite a crop from them next year. He did not get any of the Blount corn he reads so much about, but hopes to get some next spring. I am ten years of age. Yours respectfully,

St. Joseph, Mo. LULU POOLER NICHOL.

The Puzzler.

HIDDEN FRUITS.

1. Miss Loella is married.
2. Rema z arduously labored.
3. Tell me how Hort Leber! R yelled.
4. Do call nurse, Della.
5. On Tampa bay, Berr Yorston lives.
6. Has haddock a pleasant taste?
7. Let cousin Annie be Pie—Rye crop is in, so let her stay.
8. My dear Herman, Gus Teener called to see you.
9. As to the check erberr, you'll have to give it to me.
10. A bottle of musk me longs to smell.
11. Help the cidar mull, Berry, please.
12. Dear Seguin, cedar is an evergreen.
13. Remau meets his fate.
14. This wine is sour, Sophia!
15. While getting more sap, Adil ladled off the the sugar.
16. He held Erber R yesterday.
17. Adam's on the jury.
18. With ex-president Polk berryl gems were a hobby.
19. You must have the pip.—Pine-gum is a remedy.

```
      B
    A A
  M a N
  B r a Y
  O m a h A
  O p t i o N
```

Primals form "Bambo."
Diagonals form "Banyan."

HALF SQUARE:

```
C I D E R
I T E M
D E N
E M
R
```

DROP LETTER PUZZLE.—"Thou shalt not steal."

Sabbath Reading.

WHAT I LIVE FOR.

I LIVE for those who love me,
For those whose hearts are true,
For the Heaven that smiles above me,
And awaits my spirits, too;
For all human ties that bind me,
For the task my God assigned me
For the bright hopes left behind me,
And the good that I can do.

I live to learn their story,
Who've suffered for my sake,
To emulate their glory,
And follow in their wake;
Bards, martyrs, patriots, sages,
The noble of all ages,
Whose deeds crown history's pages,
And time's great volume make.

I live to hold communion
With all that is divine,
To feel that there is union
'Twixt Nature's heart and mine,
To profit by affliction,
Reap truth from fields of fiction,
Grow wiser from conviction—
Fulfilling God's design.

I live for those that love me,
For those whose hearts are true,
For the heaven that smiles above me
And awaits my spirit, too:
For the wrongs that need resistance,
For the cause that needs assistance,
For the future in the distance,
And the good that I can do.

DR. ADAMS'S REMARKS

At The Funeral of Gen. Hooker.

"How rapid the passage of events in the grand drama of human history! It seems but yesterday that the whole nation was convulsed in strange and terrible strife. Now the war has ended. The thunder of cannon has been exchanged for the hum of industry and the arts of peace. How many in those days of tumult, clamor and bloodshed have passed away from the sight of man! Soldiers who survived the shock of arms, as they hurled their columns hither and thither, have, one after another, in rapid succession, fallen before the common enemy—Death.

"The lesson of these facts is briefly summed. Men die, but the Kingdom of God in the world survives and advances. One generation passeth away, and another cometh; but the eternal purposes of God are forever unfolding in more of design, order and harmony. Citizens, public and private, follow each other to the tomb, but the country never dies; and that kingdom which is righteousness, joy and peace will continue to flourish so long as the sun and the moon endure. More than two hundred years ago, John Hampden, in a charge of cavalry, fell on the neck of his faithful horse, and was borne from the field to die. But the 'good old cause' for which he prayed and shed his blood has never receded, but advanced, and is advancing more and more throughout the world.

"Is it not a timely question, in this presence, what is *the true value of life?* We attach great importance to life, and it is the Christian believer who values it most highly. And why? To attain *fame?* But what is fame, if it be not the echo of personal *worth?* To acquire great *wealth?* But what is wealth, since the rich man and the poor can take nothing with them out of the world. Greatness? What *is* greatness? Jesus Christ has answered the question, correcting the false conceptions of all mankind, in all ages. Not to covet authority, not self-aggrandisement, but a disposition like His own, to serve, to minister to the welfare of others, to do our duty faithfully as His servants and disciples—in short, to be personally attached to His kingdom, and so share in its blessedness, and glory and immortality. It is the arcanum of Divine Providence to make even the wrath of man to praise him, causing the involuntary agony of man to contribute to his own designs.

"But this is the true value, the dignity, the honor of human life, of our own choice and purpose to be identified with that kingdom of the Redeemer which gives to time all its importance and to eternity all its glory. Two kinds of life enter into our present personality. Two births, which are contrasted in the Holy Scriptures. By the one we enter into this present life, and this life is transient. 'For all flesh is grass and all the glory of man as the flower of grass. The grass withereth and the flower thereof falleth away.' But there is another life contrasted with this. Being born again, not of corruptible seed, but of incorruptible, by the Word of God, which liveth and abideth *forever*. And this is the Word which by the gospel is preached unto us.

"We have our excitements and agitations now, and such there will be for a long time. In the midst of such violent agitations, death intrudes upon the scene, waves his skeleton arm, and the statesman, the politician, the soldier, disappears, as if to teach us all of how little importance is the individual man when compared with the destiny of nations and the ascending and brightening changes of the world.

"Leaving it for his comrades in arms and his associates at other times and in other places to rehearse the exploits of the soldier now lying on this bier wrapped in the flag of his country, it is for me in this presence and at this hour only to preach that Gospel which insures to us all honor, glory and immortality. Could those lips that once shouted commands on the field of battle break the silence to which they are now sealed, and address us words of counsel, what wiser thing could they utter than that we should be well and wisely prepared for the great event which befalls all?

"Soldiers, brave and true, honored of your country, honored beyond all which can be expressed by funeral signs, the flags at half-mast, the minute gun, the muffled drum, the monumental urn, hear, hear this word, not of man but of God, ringing out clearer and louder than any bugle blast—'The sting of death is sin. Behold the Lamb of God which taketh away the sin of the world.' 'Thanks be unto God which giveth us the victory through our Lord Jesus Christ.'"

PERSONAL ITEMS.

The widow of James Fisk. Jr., boards at South Deerfield, Mass, with a couple who were formerly her cook and coachman. She has a handsome competence.

A "Mecker Testimonial Fund" has been started in Denver, with the purpose of erecting a monument to the heroic services of the late N. C. Meeker, the murdered Indian agent.

Mrs. Charlotte Letcher, the widow of ex-Governor Letcher, of Virginia, died at Frankfort, Ky., on the 29th of October, from a dose of arsenic which she took by mistake, supposing it to be burnt alum. She was eighty-seven years old.

General J. W. Whitfield died in Lavaca, Texas, a few days ago. Had his death occurred twenty years ago it would have caused a national sensation, for he was the recognized leader of the Southern party in Kansas during the trouble that led up to the war.

General Fitzhugh Lee made himself very unpopular with the Repudiators in Virginia The other night a crowd of the Repudiators at Falmouth made an effigy of him and rode it around on a rail. They were about to burn the figure when some more sober-minded men interferred.

Young Seward placed a pistol at his head, in the presence of the girl who had rejected his suit, at Houstin, Minn., and said he was going to commit suicide. He counted, "One, two——," and she covered her eyes with her hands. "Look at me," he said; she obeyed; "three!" and into his brain went the fatal bullet.

Bride and bridesmaids were ready, the church was lighted and the clergyman stood waiting, in Galveston, last Wednesday, but no bridegroom appeared. August Hummorder, a German youth, had dressed for the ceremony, and then, in sheer despair at the thought of facing the matrimonial music, had shot himself through the head.

Signor Dario Mazzei, stenographer to the Italian Senate, has invented a machine which claims to reproduce a speech in the ordinary printed characters as rapidly as it is spoken, a word of several syllables being recorded by a single touch of the keys. There is hope for the deaf in modern inventiveness. Few need the aid of inventive genius more.

Miss Nora Griffing, of Logansport, Ind., was to have been married on Tuesday evening to Mr. Lute J. Smith. The guests had assembled and the minister was waiting to perform the ceremony when a messenger handed the would-be groom an incoherent letter from Miss Griffing, which was soon followed by the news that she had eloped with a young lawyer.

General Hooker is said to have left a handsome fortune, which will probably go to his sisters, Mrs. Brainard and Mrs. Wood, of Watertown, New York. Among his effects is a large picture of the battle of Lookout Mountain, for which he paid $25,000. He had prepared a book on the battle of Chancellorsville, which is now in the publisher's hands, and was about to begin a book on the famous engagement on Lookout Mountain.

Rev. Dr. Budington, the well-known Congregational clergyman of Brooklyn, is slowly dying of cancer. The whole lower part of his face is now covered with a cancerous growth, and the poison of the disease has eaten through the lower jaw-bone. A council of physicians was recently held to consider the feasibility of removing the lower jaw-bone to arrest the disease; but as the cancer had doubtless poisoned his blood, so that its reappearance was but a question of time, it was determined not to add to the patient's agony and to the mutilation of his face.

At the last October meeting at New Market the Duchess of Montrose had a thoroughbred Alderney cow conveyed there to give milk during the race week. On being informed of its safe arrival, she sent word to Alec Taylor, her husband the Duke's trainer, to have the cow milked at once; but neither Taylor nor his head lad was *au fait* at the business. Thereupon the Duchess, who was in the midst of her toilet, slipped on a *peignoir*, and going out to the loose horse box in which the cow was lodged, performed the operation with the skill of the most experienced milkmaid.

By all accounts Marshal and Gov. Manteuffel's first impressions of Metz cannot have been very agreeable. On the day of his formal entry, the streets were almost deserted. The few persons out of doors turned their backs on the procession and studied the shop-windows. The silence was broken only by an occasional cry of "Vive la France!" At his hotel, the Marshal found a great pile of letters, that were anything but pleasant reading. He invited the municipal authorities to dinner; only one man, a banker, presented himself. No wonder the Marshal lost his temper, tapped his sword, and warned the Metz officials that he would not tolerate any intriguing with the foreigner against Germany.

The audiphone is a newly-invented fan-shaped device by which the deaf can hear, by placing the end of it against the teeth when the vibrations of the air caused by the human voice or any other sound, impinge on the sensitive "drum" of the contrivance, and convey the sounds distinctly through the auditory nerves. R. S. Rhodes, the inventor, says that the first man to use the fan-shaped instrument was Joseph Medill, the veteran editor of the Chicago Tribune. "I warned him that my patents were not yet complete," said Mr. Rhodes, "and enjoined upon him not to tell anybody what it was for. He said he wouldn't. He carried it to California and back, using it as a fan and lending it to anybody who wished to take it, for nobody would suspect it had any use except to agitate the air. He attended the Editorial Convention with it, merely holding it 'accidentally' against his upper teeth when anybody was speaking."

More health, sunshine and joy in Hop Bitters, than in all other remedies.

New Publications.

"THE PRINCE AMONG MAGAZINES."—*N. Y. Observer.*

THE GREATEST LIVING Authors, such as Prof. Max Muller, Rt. Hon. W. E. Gladstone, Jas. A. Froude, Prof. Huxley, R. A. Proctor, Edw. A. Freeman, Prof. Tyndall, Dr. W. B. Carpenter, Frances Power Cobbe, The Duke of Argyll, Wm. Black, Miss Thackeray, Mrs. Mulock-Craik, Geo. MacDonald, Mrs. Oliphant, Jean Ingelow, Thos. Hardy, Matthew Arnold, Henry Kingsley, W. W. Story, Turgenieff, Ruskin, Tennyson, Browning, and many others are represented in the pages of
LITTELL'S LIVING AGE.
In 1880, THE LIVING AGE enters upon its *thirty-seventh* year, admittedly unrivaled and continuously successful. During the year it will furnish to its readers the productions of the most eminent authors, **above-named and many others;** embracing the choicest Serial and short Stories by the **Leading Foreign Novelists,** and an amount
Unapproached by any other Periodical
in the world, of the most valuable Literary and Scientific matter of the day, from the pens of the **foremost Essayists, Scientists, Critics, Discoverers and Editors,** representing every department of Knowledge and Progress.
THE LIVING AGE is a *weekly magazine* giving more than
THREE AND A QUARTER THOUSAND
double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness attempted by no other publication*, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical and Political Information, from the entire body of Foreign Periodical Literature.
The importance of THE LIVING AGE to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature,—*indispensable* because it embraces the productions of
THE ABLEST LIVING WRITERS,
is sufficiently indicated by the following
OPINIONS.
"The last volume of THE LIVING AGE presents a fresh example of the judgment in selection and adaptation to the demands of the best popular literature, which have secured so wide a circulation to that periodical."—*N. Y. Tribune*
"It covers the whole field of literature, and covers it completely, thoroughly and impartially."—*Times, Cincinnati.*
"It affords the best, the cheapest and most convenient means of keeping abreast with the progress of thought in all its phases."—*North American, Phila.*
"It is, by all odds, the best eclectic published."—*Southern Churchman, Richmond.*
"It is the embodiment of the truest and purest literature of the age."—*Am. Ch'n Review, Cincinnati.*
"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics and science of the day.—*The Methodist, New York.*
"To read it weekly is a liberal education."—*Zion's Herald, Boston.*
"There is no magazine published that gives so general a knowledge of what is going on in the literary world."—*Presbyterian Weekly, Baltimore.*
"Gives the best of all at the price of one."—*New York Independent.*
"It holds the palm against all rivals."—*Commercial, Louisville.*
"There is no other way of procuring the same amount of excellent litetature for anything like the same price."—*Boston Advertiser.*
"It supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading-matter, which it is well worth while to read, than any other publication. . . It is simply indispensable."—*Boston Journal.*
"Ought to find a place in every American home."—*New York Times.*
"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Register.*
Published WEEKLY at $8.00 a year, *free of postage.*
EXTRA OFFER FOR 1880.
To all new subscribers for 1880 will be sent gratis the numbers of 1879 which contain, besides other interesting matter, the first chapters of "HE WHO WILL NOT WHEN HE MAY," a new story by MRS. OLIPHANT, now appearing in THE LIVING AGE from advance sheets.
Club-Prices for the best Home and Foreign Literature.
["Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Phila. Even'g Bulletin.*]
For $10.50 THE LIVING AGE and *either one* of the American $4 Monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, *both post-paid*; or, for $9.50 THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal.*
Address LITTELL & CO., Boston.

New Operas!
Carmen. Opera by Bizet.....$2.00
Carmen is an Opera that has gradually and surely won its way to a great popularity. Although the book is large, in fact what one might call a "four dollar book" it is got up in elegant style, with music and all the words, English and foreign, for $2.00.
Fatinitza. Opera by Suppe.....$2.00
Splendid new Opera that is a decided success. A large, fine book, with English and foreign words, and the opera in every way complete, for a low price.
Doctor of Alcantara. By Eichberg.....$1.50
A famous opera, now brought, by the popular price, within the reach of all. Orchestral parts $15
Bells of Corneville. By Planquette, (nearly ready).....$1.50
A great success. This, with the "Doctor" and the "Sorcerer" ($1.00) are well worth adopting by companies who have finished Pinafore, (still selling well, for 50 cents) and who are looking out for new and easy operas.
Remember our first-class Singing School and Choir Books, **Voice of Worship** and **The Temple**, each $9.00 per dozen or $1.00 each. Send for copies. Also always remember the **Musical Record**, published weekly. It keeps you well posted as to musical matters, gives 6 or 7 pages of music per week and costs but $2.00 per year!

BARN-YARD STUDY.—THE REVENGE OF A DUCK.

Wit and Humor.

A TAKING MAN.

He took her fancy when he came;
He took her hand, he took a kiss;
He took no notice of the shame
That glowed her happy cheek at this

He took to coming afternoons;
He took an oath he'd ne'er deceive;
He took her father's silver spoons,
And after that he took his leave.

[*Mrs. Hemans.*

"ESQ."

A YOUNG man, whose money didn't hold out so long as the State Fair, dropped into the telegraph office yesterday and sent a dispatch to his father in an interior town to forward him cash to reach home with. When the receiving clerk saw that the dispatch read, "To John Blank Esq.," he suggested that a saving could be made by erasing the "Esq."

"Well, mebbe you think you so, but I don't." replied the sender. "When I am home I can call him 'dad' all day long, but when it comes down to black and white you have got to 'Esquire' him right up to the nines, or walk home by the dirt road. Don't you dare leave that off—not with the roads as dirty as they are now!"

In about an hour the following answer was received:

To——

"John Blank, Esq.," forwards you $10, and you can have more if you want it.

JOHN BLANK, ESQ.

"Didn't I tell ye," chuckled the young man as he read it. "Dad's common enough when we're all at home and rushed to get fall wheat in, but the minute his back gets rested and a stranger comes along he weighs more to the ton than any "Esquire" on legs. I tell ye, you don't know a man till ye've hoed corn with him!"—*Detroit Free Press.*

THE MIND READER.

WITH sudden burst of pent-up ire,
Cries Dick, no longer cool,
"You either think I am a liar
Or most consummate fool."

Says Harry, "Since you force me, Dick,
A fool I was inclined
To reckon you until so quick
And true you read my mind."

Boston Transcript.

RATHER AWKWARD.

Young Rattleton Bragge, (affably to middle-aged stranger whom he finds alone in Brown's studio:) "Good picture, ain't it? Old Stilton's bought it. The Duke, you know. Brown's going down to Stilton to shoot. Wish I could go with him, but I'm booked in London till Christmas. Just my luck! Capital old boy, Stilton! Looks like an old clothesman. Gets tight after dinner; tells rummy stories; makes you roar. Fine old place, capital shooting! Awf'ly jolly girls, the Ladies Cammembert. Nearly a dozen of them, all freckled. Duchess tremendous matchmaker. Bag you before you can say Jack Robinson if you don't look out! Awful fun the old Duchess! D'you happen to know her by sight? Shiny red nose, and as underhung as a bulldog. Ah! here's Brown at last." (Enter Brown, suddenly.) "Ah, Bragge, how are you? Let me introduce you to the Duke of Stilton?"

JOINT STOCK IN A KITTEN.

A lady contributor tells this story: "I had been out in Westchester county on a visit, and while there I found a kitten which I brought home as a plaything for my two children. To prevent any dispute about the ownership of the puss, I proposed, and it was agreed, that the head should be mine, the body should be the baby's, and Eddy the eldest, but three years, should be the sole proprietor of the long and beautiful tail. Eddy rather objected at first to this division, as putting him off with an extremely small share of the animal, but soon became reconciled to the division, and quite proud of the ownership in the graceful terminus of the kitten. One day soon after I heard poor puss making a dreadful mewing, and called out to Eddy, 'There, my son, you are hurting my part of the kitten; I heard her cry.' 'No, I didn't mother; I trod on my part and your part hollered.'"—*Wayne Press.*

A LAY

OH, those memories all flow inward,
On my tired heart to-day.
And I almost smell the clover,
While I list the robins lay.

LATER.

Sweet the summer breezes gently
Sweep along the cottage thatch,
And I almost smell the clover,
While I list the robins hatch.

LATEST.

And while autumn winds are sighing,
Echoing my heart's sad throbbin's,
Yesterday we shot and made a
Bully pot-pie of the robins.

A LETTER, addressed as below, was sent to the New Haven post-office, one of the localities where Postmaster-General Key's "misdirection order" was a peculiar injustice:

Mr. Enos A. Hale,
Assistant Postmaster,
240 Orchard street,
New Haven,
City of New Haven,
Town of New Haven,
County of New Haven,
State of Connectient,
United States of America,
Western Continent,
Planet Earth,
Solar System,
Universe.

SQUASH.

Ah, there you lie in beauty manifold;
Though graceful less than phlox or mignonette,
You move the soul with thought divinely set
To loveliest music. As I watch your gold-
En face I long, indeed, I long to hold
You in my hand in the shape of a piece of pie.

MEETING a newsboy whose face was scarred with scratches, and looked like a map of some great railroad center, a Register reporter asked the youngster what the matter was. "Feller spoke disrespectful of my sister; said he'd bet she was cross-eyed, and I sailed in." "Is your sister cross-eyed?" asked the reporter. "Hain't got no sister," was the reply. "It was 'the prineiple of the thing what I got licked for."

SQUAWS of big chiefs oft remind us,
We should pick our squaws with care;
So we may not leave behind us
Half our natural crop of hair.

"YOU see, massa," said the old colored washerwoman, "since dey's got dese here big crayvats, we don't hab so much to do. De gemmen puts on a big crayvat now-a-days, instead ob a clean shirt. You don't know much about dese matters, but if you take off all the cravats in this town, and make the gemmen show up, landsakes! you'd see de worst lookin' white men you ebber laid yo' blessed eyes on."—*Syracuse Herald.*

Tossing upon a Bed of Agony,
Tortured in every joint with inflammatory rheumatism, is a prospect which may become a melancholy fact if the twinges of the dread disorder are not checked at the outset. Persons of a rheumatic tendency find Hostetter's Stomach Bitters a useful remedy, nor do they encounter the risk in using it they do from resorting to that active poison Colchicum, which is often employed to arrest the malady. The use of the Bitters is equally as effective in its results, and is attended with no risk. There is ample testimony to prove that the medicine possesses blood depurating qualities of no common order, besides those of a tonic and general alterative. It stimulates the action of the kidneys and promotes the removal from the system of impurities which develop disease, and are fraught with serious danger. Fever and ague, dyspepsia, debility, nervousness, constipation, &c., are remedied by it.

The New Voyage of the Paper Canoeist.
FOUR MONTHS IN A SNEAK-BOX.
A Boat Voyage of 2,600 miles down the Ohio and Mississippi Rivers, and along the Gulf of Mexico, by NATHANIEL H. BISHOP, author of "A Thousand Miles Walk Across South America," "Voyage of a Paper Canoe," etc. With numerous letter-press and full-page illustrations and maps of the route, specially prepared for this work. Cr. 8vo., $2.50.

In the "Voyage of a Paper Canoe,"
The author visited "the oysterman and fishermen living along the lonely beaches of the eastern shore of Maryland and Virginia; the surfmen and lighthouse-keepers of Albermarle, Pamplico, and Core Sounds, in North Carolina; the ground-nut planters who inhabit the uplands that skirt the network of creeks, marshes, ponds and sounds from Bogue Inlet to Cape Fear; the piny-woods people, lumbermen, and turpentine distillers on the little bluffs that jut into the fastnesses of the great swamps of the crooked Waccamaw River; the representatives of the once powerful rice-planting aristocracy of the Santee and Pedee Rivers; the colored men of the beautiful sea-islands along the coast of Georgia; the Floridians living between St. Mary's River and the Suwanee, the wild river of song; the islanders on the Gulf of Mexico, where he terminated his long journey;—all have contributed to make the 'Voyage of the Paper Canoe' a success."

In "Four Months in a Sneak-Box,"
The author procured one of the smallest and most comfortable of boats,—a purely American model, developed by the bay-men of the New Jersey Coast of the United States, and recently introduced to the gunning fraternity as the "Barnegat Sneak-Box." This curious and staunch little craft, though only twelve feet in length, proved a most comfortable and serviceable home while the author rowed in it more than 2,600 miles down the Ohio and Mississippi rivers, and along the coast of the Gulf of Mexico, until he reached the goal of his voyage,—the mouth of the wild Suwanee River,—which was the terminus of his "Voyage of the Paper Canoe."
The kind reception by the American people of the author's first journey to the great southern sea, and its republication in Great Britain and in France within so short a time of its appearance in the United States, have encouraged him to give the public a companion volume.

Sold by all Booksellers and Newsdealers, and sent by Mail, post-paid, on receipt of Price. Libraries Supplied. Our illustrated Holiday Catalogue mailed free to any address on application.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XXXVIII. No. 48.
WHOLE No. 1557.

NEW YORK, NOV. 29. 1879.

PRICE FIVE CENTS.
$2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1879, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington. — Entered at the Post-Office at New York City, N. Y., as second-class matter.]

Rural Architecture.

DESIGN FOR BRICK COUNTRY HOUSE.

PALLISER, PALLISER & CO., ARCHITECTS, BRIDGEPORT, CONN.

THIS cottage was designed for erection in a rural part of Michigan, where brick cost $5 per thousand and lumber is very low-priced—to be had for the working, almost. The columns of verandas, frame-work of gables, etc., are of oak, oiled, with panels painted white, and the brick-work is ornamented by the introduction of black brick in the frieze, etc., and is all laid in red mortar, making a very picturesque and effective exterior produced solely by the merits of the design and the proper use of color—the two important things which mar or make the effect of any building.

The interior, which is fully explained by the floor plans, is very convenient in arrangement, though, of course, it will not suit everyone, as individual wants and ideas differ. In fact, it is seldom that two persons want the same arrangement of rooms, etc. All the wood-work and finish in the interior correspond with the exterior, being finished in natural colors and beauty, polished, with chamfers and cut-work picked out with raw sienna stain, through which the grain of the wood shows.

We trust this design will be appreciated by readers of the RURAL, as it is very rarely that one sees a brick cottage or a wood one, for that matter, in the country, with any real artistic merit, which should always be aimed at, without gewgaw and gingerbread work plastered on to buildings, to decay and drop off after a year or two's exposure to the weather. Of frippery of this sort too much is seen, instead of good solid work rightly designed, and which costs less to execute, being plain and useful in its position rather than tawdry and stuck on for mere ornamentation.

To build and construct honestly, the style of construction must be ornamental; that is, the work must be so constructed as to make it ornamental without additions of filigree, scroll-work and such-like, planted on for decoration, and which are obnoxious to the cultivated taste. Yet, with few exceptions, our rural architecture has not deserved or gained an enviable reputation. On the contrary, there has been an artistic, æsthetic, and sanitary deficiency here, in which pretension has overcome grace and the fitness of things

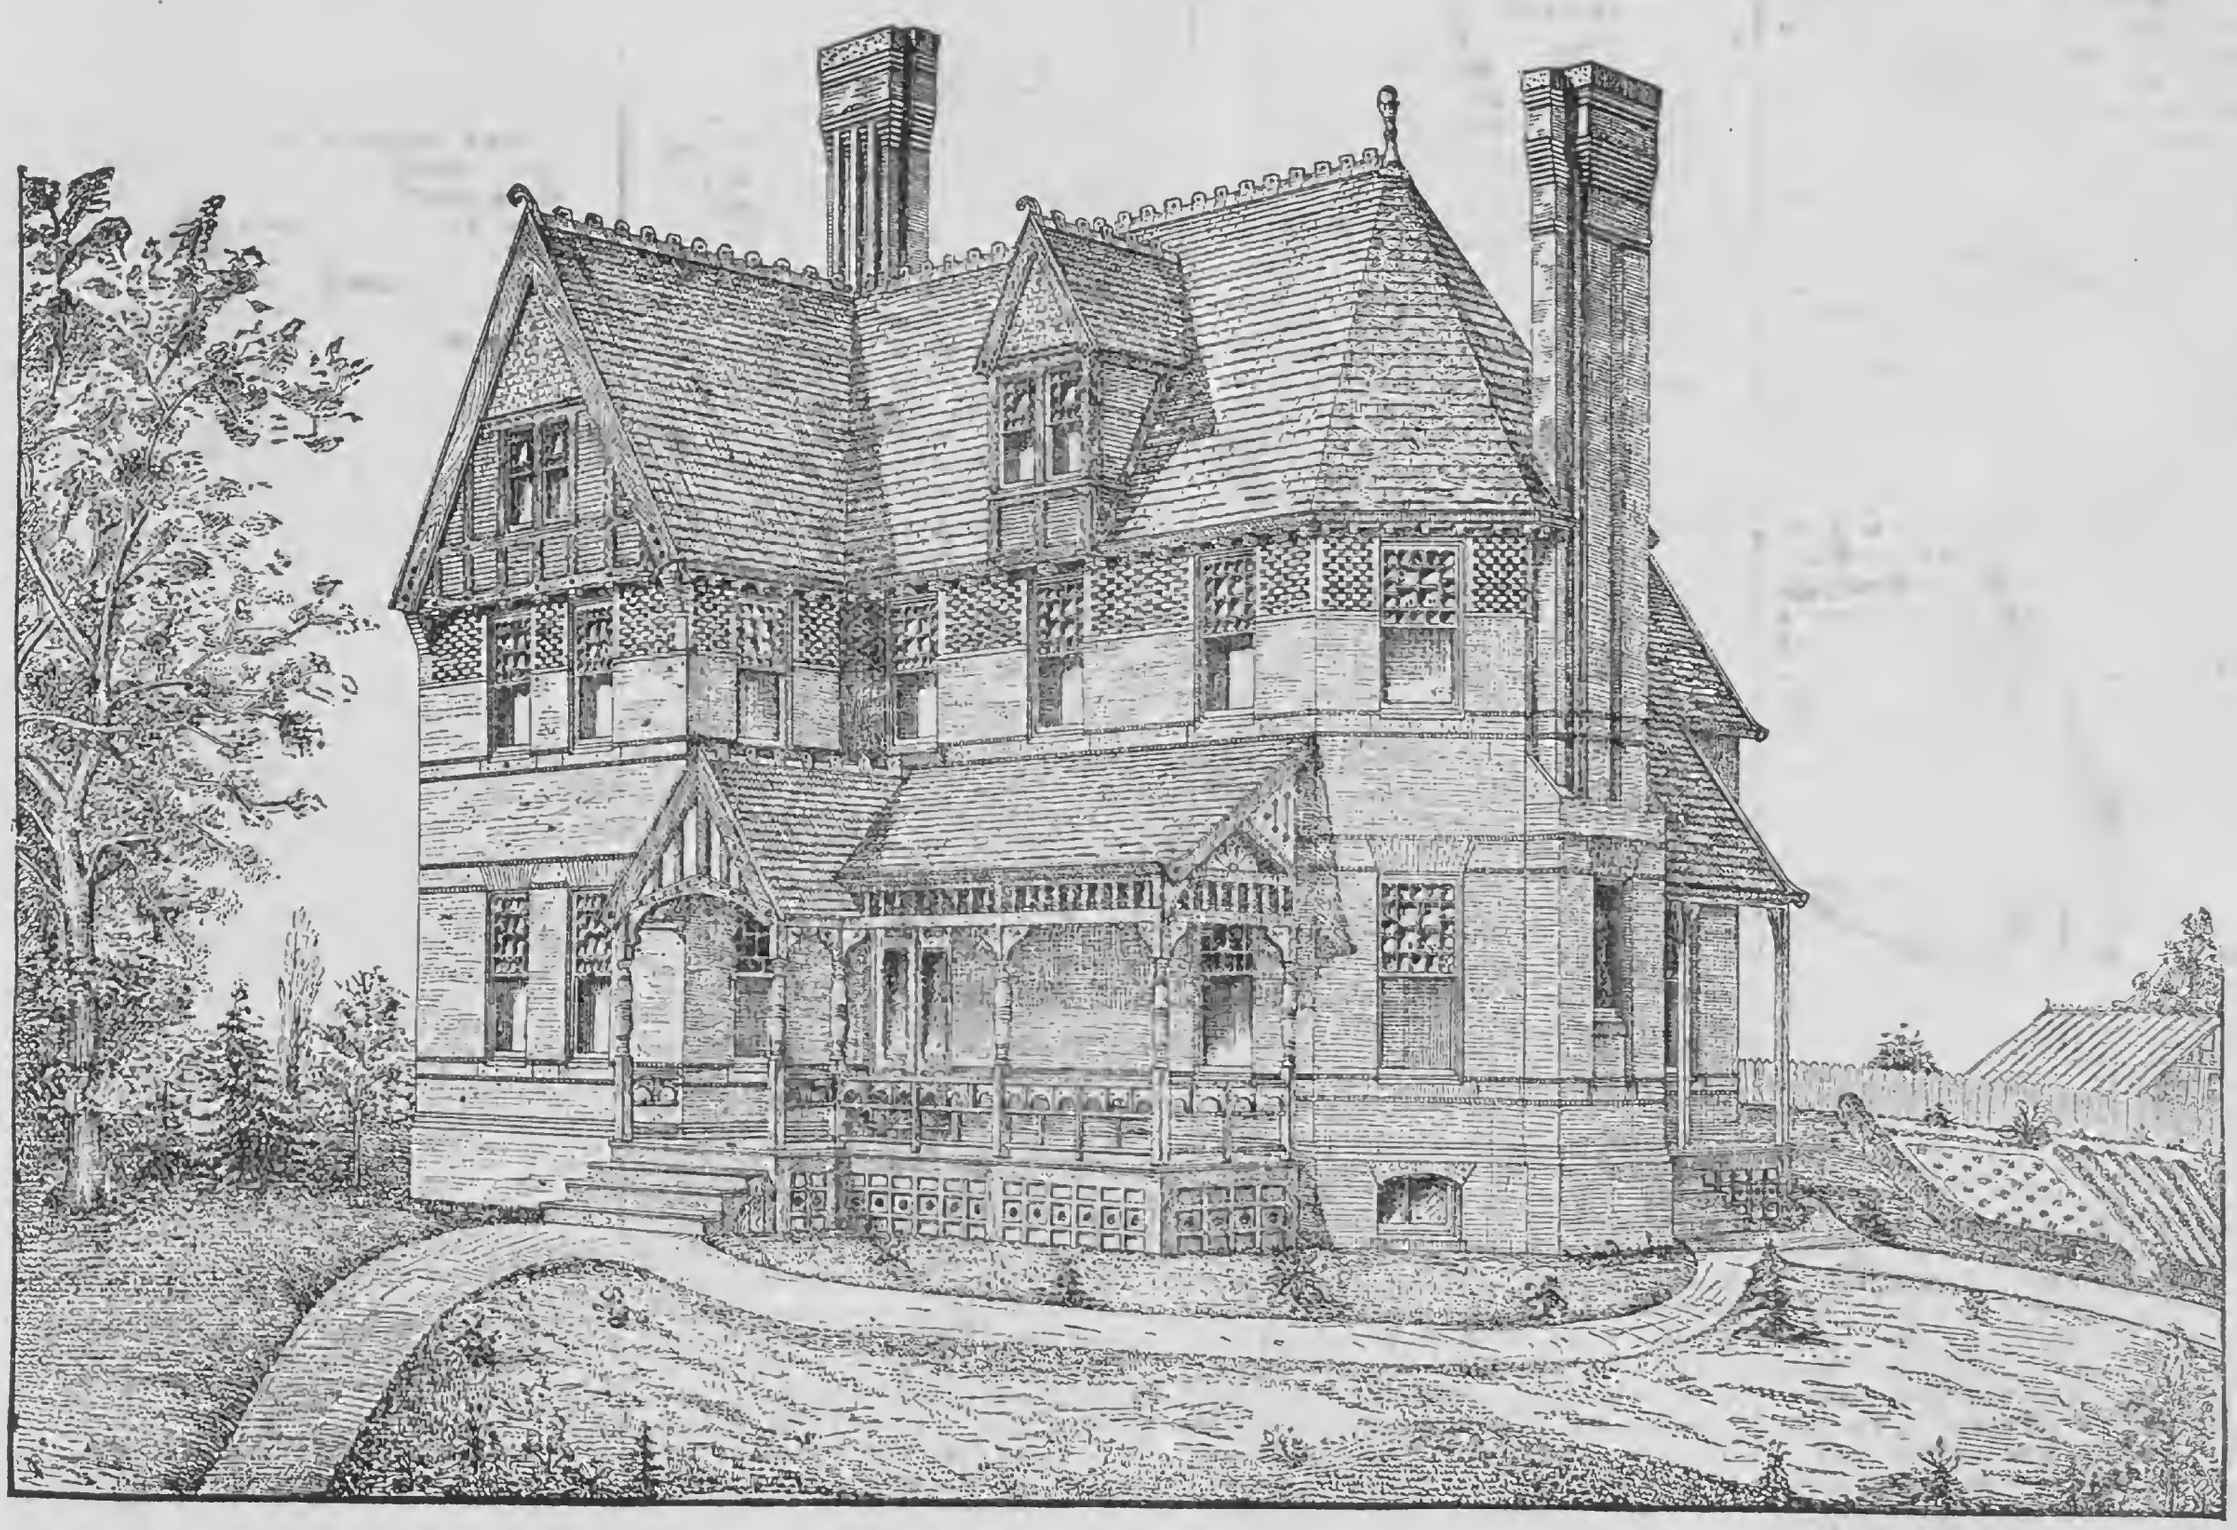
Now let us look into this and see if we can discover the reasons for these defects. In the first place, architects are not employed to design nine-tenths of the buildings erected in the rural districts, simply because people are penny-wise and pound-foolish. It certainly is not because there are not able architects enough in the United States who can render necessary service and await employment by the public.

In the second place, half of the people who employ professional skill in building, think they know more about building than the architect, and he is made a mere draughtsman in the client's eyes, employed merely to carry out the latter's views, and not to thwart him with suggestions of his own; but if he has sickness in his family, he does not presume to advise his physician as to the proper mode of treatment; nor would he feel warranted in suggesting to his lawyer how to carry on an important suit, but, when it comes to house building, that is wholly a different thing. There he feels at home, and will have everything his own way. He seems blinded to the fact that the health of himself and family are at stake, and that the investment of a considerable sum of money, perhaps only once in a lifetime, ought to have due and careful consideration as to whether it will be judiciously and properly expended or wasted.

What does a man know about building affairs unless he has given the matter especial study? Some people will say that for an ordinary dwelling, it is only necessary to employ a builder, but it must be remembered a builder is not an architect, and knows nothing beyond the mechanical system of his trade; and the public are oft-times very ready to take their education in architecture from the village carpenter, simply because it is cheap and the carpenter, of course, wants work and does not want any one stepping between him and the owner, so that he can have the entire work in a pecuniary light all to himself.

A thoroughly conscientious builder and one who wants to do good work and something new and different from what is usual, will ask when any one calls on him with respect to building: "Where are your plans and specifications and all the details of execution?" Ignorance on such matters will at once exhibit itself; and the builder will inform him: "Without these it is impossible for me to do anything; for as the compass is necessary for the mariner to guide his vessel over the deep, so the plans, specifications and details are necessary for me to properly carry out your wishes in harmony with artistic taste." It is, however, only this class, of which there are but few, who will do this, and the other class are numerous and are a sort of amateur architects, and people seem to lose sight of the fact that a poor article can always be obtained at small price. If you get cinders in your iron, it is because there are cinders in the pay; there is always good iron to be had.

Our advice to every one who contemplates building is: Secure the services of a really well-trained and capable architect; pay him properly and be guided by his judgment and experience. This will also be the advice of any one experienced in such matters, and of others who regret that they built without such aid. Of course, every one has his peculiar wishes to be pro-



DESIGN FOR A COUNTRY HOUSE—(BRICK.)

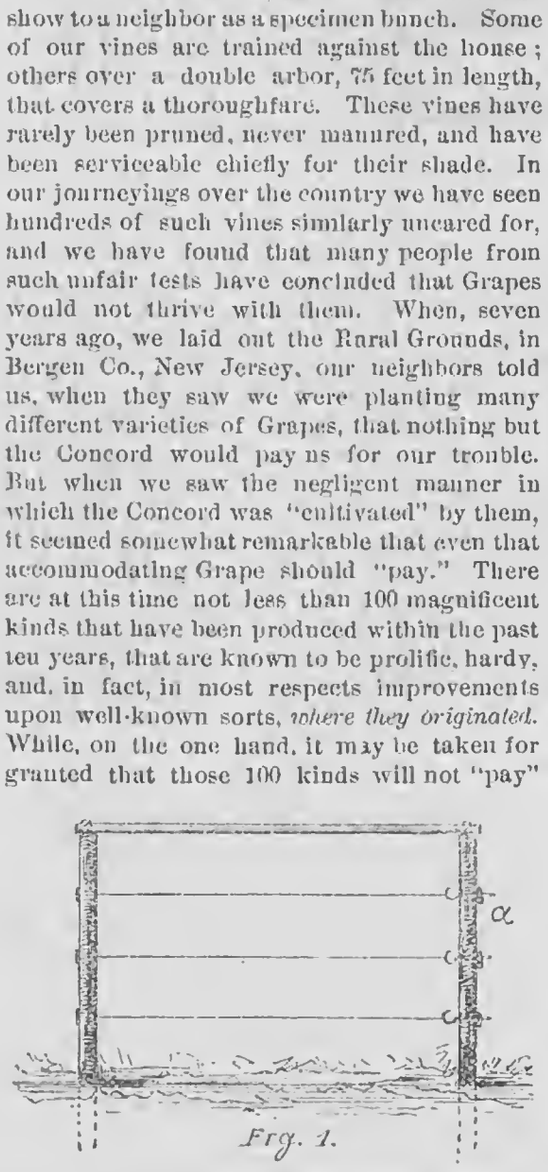
vided for, and all these should be presented to the architect before he commences the design. Architects have their own ideas as to what form the building ought to take, and should be allowed to use their own cultivated taste, which it has taken years of constant study to acquire, and this should not be thrown away for any momentary caprice, which the client would be sorry for in the end.

The Vineyard.

NOTES FROM THE RURAL FARM.

About Grapes.

For the better than twelve years that we have owned this farm, a bunch of grapes has never been raised here, that one would care to show to a neighbor as a specimen bunch. Some of our vines are trained against the house; others over a double arbor, 75 feet in length, that covers a thoroughfare. These vines have rarely been pruned, never manured, and have been serviceable chiefly for their shade. In our journeyings over the country we have seen hundreds of such vines similarly uncared for, and we have found that many people from such unfair tests have concluded that Grapes would not thrive with them. When, seven years ago, we laid out the Rural Grounds, in Bergen Co., New Jersey, our neighbors told us, when they saw we were planting many different varieties of Grapes, that nothing but the Concord would pay us for our trouble. But when we saw the negligent manner in which the Concord was "cultivated" by them, it seemed somewhat remarkable that even that accommodating Grape should "pay." There are at this time not less than 100 magnificent kinds that have been produced within the past ten years, that are known to be prolific, hardy, and, in fact, in most respects improvements upon well-known sorts, *where they originated.* While, on the one hand, it may be taken for granted that those 100 kinds will not "pay"



everywhere, or even under widely different conditions of growth, on the other hand, there can be no doubt that they will, all of them, "pay" in *some* other parts of the country besides those in which they originated. Where these other parts are, is the thing for people to find out. They can never find it out by saying the "Concord is the only kind that will pay with us." They can never find it out by sticking grape-cuttings, or even roots, in the ground, and then leaving them to struggle with weeds and grass. We urge it upon our readers to plant Grape-vines and to give them the little care they need. Let those who can afford to do so, purchase the new varieties and test them. Let those who cannot afford to make such experiments plant those which are known to thrive best in their localities, even though they be but Concords. The Concord itself is too excellent a fruit to justify anybody in not raising grapes at all.

Grape-Arbors.

Several weeks ago we prepared a plot of ground, about 30 feet square, for nine different kinds of vines. The ground was thrown out about 20 inches in depth; the poor earth carted away; the good mixed with ashes, muck and stable manure, and replaced. Three arbors were constructed as shown in fig. 4; set parallel to each other, 10 feet apart, as shown in

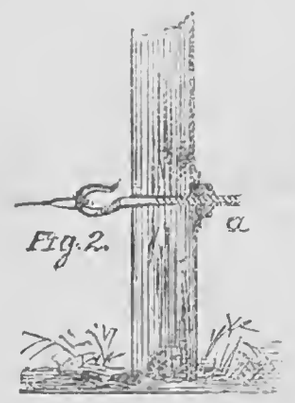


fig. 4a. The wood is red cedar, cut down from hedge-rows in various parts of the farm. Arbors of this sort are very durable, and, as they require little mechanical skill, may be quickly "thrown together" so as to be decidedly ornamental, as well as useful. The bark is left upon the trees and the lateral branches cut off only to within two or three inches of the main stem. These stumps add to the rustic appearance of the arbor, and are handy projections upon which to fasten or tie the growing canes. Arbors are often made as in fig. 3 with wire supports. Or, the braces are sometimes sunk beneath the surface of the ground. A more convenient and less expensive design, however, is shown at fig. 1, in which the wood strip across the top renders bracing quite unnecessary. Fig. 2 merely shows an easy method of tightening or looseuing the vines, as needed.

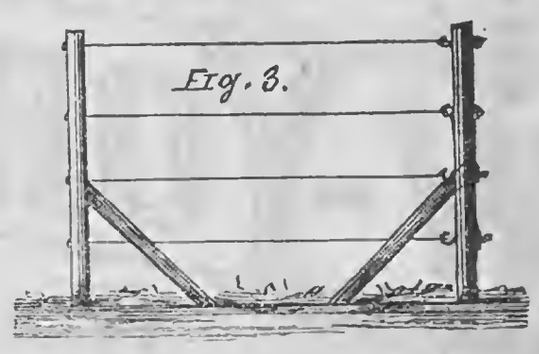
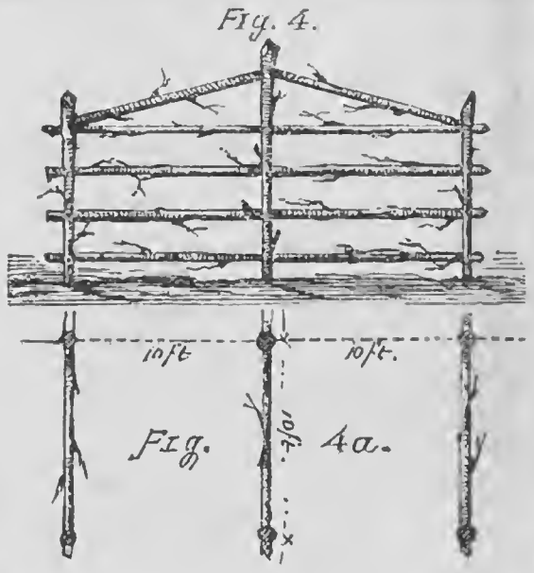


It is unusual for us to speak of horticulture under "Notes from the Rural Farm." As a rule, our tests of different grains and roots are



as much as, indeed, more than, we can well attend to here, so that horticulture in all its branches, has been hitherto entirely neglected. The Rural Grounds, however, are at present so full of experiment things that we are now obliged to send hither plants that can no longer be accommodated there.

GRAPE ROT AND ITS CAUSES.

Discussion at the late Pomological Meeting.

M. B. BATEHAM.

Many readers, and some editors, of agricultural papers, do not appreciate the importance of this topic, or understand what great losses are annually sustained by the people of the country at large, and especially of Western States, from the malady called grape rot. I have noticed that a majority of the writers who have given reports of the discussions at the late meeting of the American Pomological Society at Rochester, have passed over what was said on this subject, as of very little account, or, with the remark that nothing new in relation to it was elicited, and that the speakers disagreed, etc. This, to my mind, only shows that these reporters did not give attention to what was said, or were not present at the time, and only picked up the items for their reports from the city papers.

To correct these impressions, and to afford those who were not at the meeting some idea of what was said, I give the following abstract from my notes; and I am convinced that those who have suffered from grape rot, and are familiar with what has heretofore been published on the subject, will admit that more progress was made at this meeting than ever before towards solving the vexed problem as to the causes of the malady.

Mr. Isidor Bush, a very intelligent grape grower, from Missouri, read an essay giving the results of many years' observations and experience with grape rot, correcting some popular errors in regard to the nature and causes of the mischief and showing that it does not result from any disease of the vine or defect in the soil or cultivation, but that in some way it arises from atmospheric influences—unfavorable states of the weather—that, as a rule, it makes its appearance during hot, sultry and damp weather, such as usually accompanies thunder storms. Mr. Bush did not attempt to explain how such weather might cause the disease, and the manner in which he alluded to an article of mine on this subject, showed that he misapprehended my language, in that he supposed I attributed the rot to debility of the vine. On the contrary, I have found in all my observations that the more luxuriant the vine, the greater the liability of the fruit to rot.

After the close of the essay, I took occasion to say a few words on the subject—first distributing to the audience clusters of Catawba and Iona grapes, cut from my vineyard the day previous, showing the effects of an attack of rot the past summer, three-fourths or more of the berries being black and dried up, while the rest remained sound, though in some cases all are often destroyed by one or more attacks of the disease. I said, in substance, that this malady had been troublesome to grape growers in Ohio for the past thirty years. It first caused the destruction of a thousand acres, or more, of promising Catawba vineyards in the neighborhood of Cincinnati, planted by Nicholas Longworth and other citizens of that place. Afterwards it was thought the Ives's Grape was proof against the disease, and this was planted largely for wine making; but after bearing a few good crops these vineyards also succumbed to the rot, and the wine makers commenced planting on the lake shore and islands as sources of supplies of grapes.

In the mean time it was generally believed that the Concord Grape was proof against all diseases, and although not good for wine, it was "the grape for the million," and its culture for the markets was profitable. Hence many vineyards, of a few acres each, were planted in different parts of the State, making several thousand acres in the aggregate. Within the past four or five years the fatal rot has also attacked these, excepting in a few hilly localities, and also near the lake shore, and after repeated failures of the crops, very many of the vineyards have been grubbed out, and grape growers are, of course, much discouraged throughout a large portion of the State.

For the past six or seven years, we have had, in Ohio, an aggregate of about 10,000 acres of vineyards. About half of these are on the lake shore and islands, and mostly of the Catawba variety, the fruit being chiefly used for wine. The rest of the vineyards are dispersed over the State, and consist mostly of Concord, Delaware and other varieties, chiefly for table or market. But, while it is known that planting has been going on to the extent of not less than 500 acres per year, in the favorable districts, the aggregate of vineyards in the State has decreased fully to the same amount each year for several years past, showing that about a thousand acres per year have been destroyed on account of the rot. In this calculation no account is made of the tens of thousands of home gardens, where once fruitful vines have become worthless from the disease. I say, then, that there is no topic of more timely importance than this, likely to come before this meeting for discussion, or on which more of the people are at this time desirous of gaining information.

As to the causes of grape rot:—my observations of more than twenty years, have led me to the same conclusions, in the main, as those of my friend, Mr. Bush. The difficulty is certainly not in the soil or cultivation, or in the vine, or the effects of insect ravages, though each of these may increase the liability to disease. This is especially true of moist or rich soils and sheltered locations. It has long been observed in Ohio that much rain in June or July is sure to be followed by grape rot, when succeeded by hot and sultry weather; and the greatest exemption from disease is in seasons of least rainfall in these two summer months, especially if there is an absence of close and hot, damp weather, as was the case generally the past summer, though one or two thunder showers passed over portions of the State, and grape rot followed in their tracks. It is also understood that the peculiar exemption from disease, of the island and lake shore vineyards, is mainly owing to the small amount of rainfall and the almost entire absence of dews in that section during the summer months. To this may, no doubt, be added the greater purity of the atmosphere, or its freedom from the spores of fungus which generate the rot—the same being measurably true of a few elevated and hilly localities, which are found favorable for Grapes, in other parts of the State.

With the foregoing facts admitted, I think that a little light from science will enable us to see what are the causes of grape rot; although it may not be so easy to discover the means of its prevention. The conditions, as stated, are: thrifty vines, moisture of the soil from rains, with hot weather, causing an abundant flow of sap; this requiring that evaporation should go on rapidly from the leaves, to carry off the watery portion of the sap, in order that the vital processes of elaboration and assimilation may proceed, and for this there must be sunshine and air. But just now occurs a day or so of sultry, cloudy and damp weather, when clothes will not dry on the line, and fungus spores start into life everywhere, as is seen in mildew on bread and other articles in pantries, and cellars, and the quick fermentation of liquids, like vegetable juices, containing sugar, gum, starch, etc. Of course, evaporation from the grape leaves is stopped, or so greatly checked that little or no elaboration goes on, and a plethora of crude sap exists in every leaf and berry. In the latter, especially, this sap is in just the condition, while thus stagnant, to invite the action of fungus spores, which are vitalized by the heat and moisture outside, and penetrating through the skin, their poisonous work is as rapid as the action of yeast plants in dough—and *rotting is the result.* When the barometer rises, and sunshine or wind causes evaporation to proceed, *presto!* the vital activities are resumed and the rot at once ceases—often to be resumed the next week, or when the "muggy" weather occurs again.

The questions were asked in the meeting: how I would account for the facts that the rot is so much more prevalent of late years than formerly, and why do young vines commonly escape rot until after bearing several crops. I replied, that, while I did not pretend to be able to account for all the facts that had been observed, it was my belief that the spores or seeds of the rot fungus had gradually become more abundant and diffused over the country, especially in districts where old Grape-vines exist; just as the fungus diseases of Apples are found to increase where old orchards abound. Another reason why young vines are less liable to the disease than old ones, may be that their roots, being more superficial, do not find so abundant a supply of sap during the heat of summer.

Col. Colman, of St. Louis, said, in his opinion the pear-tree blight was produced by the same causes as the grape rot, as it made its appearance during the same kind of weather, and when the growth of trees is most rapid. In this opinion I concurred, and added also, the apple twig blight, remarking that these ideas would be found set forth in the recent report of the Ohio State Horticultural Society.

Painesville, Ohio.

Farm Topics.

AUTUMN WORK, COMPLETED.—III.

We have spoken in former articles of the method and order of fall work; of harvesting and marketing the season's crops, and of putting everything in readiness for winter.

Now the prompt and energetic farmer will often have this all fully done before winter even begins to come on; and a feeling of real satisfaction comes to him as he looks over his well cleaned fields, at his warm house and barn, and his well filled cellar, wood-shed, barn, corn crib, meal room and hay mows, and says, "Now come on, Old Winter, we are ready for you!"

But often winter delays, or begins so mildly that a month's work may yet be done on permanent improvements or work for the future. Such work should be previously planned and laid out, so that it may be begun at once when the fall work proper is done.

Tile draining

may be carried on more or less all through a mild winter in latitude of 40, and sometimes even 41 degrees, provided the work is properly laid out beforehand. All surveying, leveling and locating should be done, and the ground should be staked and mapped, if necessary, in dry, pleasant weather. Also a very deep furrow, or dead furrow, should be cut wherever a tile drain is to be sunk. This serves two purposes:—it saves nearly half of the hand-digging, and it makes a place for light snow to lodge and prevent the ground from freezing so hard that it cannot be dug. Even without snow, the loose earth at the bottom of the furrow is a protection, except in quite severe weather. The tiles, too, should be distributed before the ground is too wet, in snug piles of about 30 tiles each, at proper distances along the furrows. Then the tiling can go on whenever the cold is not so severe as to freeze the earth to the tools. This will not be until the thermometer is three or four degrees below the freezing point, since the warm earth constantly warms the spade as it is thrust down through it. But in cold or "catching" weather, we must cut the "gutter" or "groove," lay the tile and fill the ditch as fast as it is dug, or at least before the clay thrown out has time to freeze. Especially at night must we finish up all work begun, put a wad of straw or grass in the upper and unfinished end of the tile, and dam the furrow above, so as to prevent wash in case of rain. If we do this, a hard freeze or a heavy rain will do no harm, and as soon as suitable weather returns, even if not till March, the wad of straw can be removed and the work proceed without delay. In filling, only the part thrown out by the spade need be shoveled in. The bottom half foot, at least, should be thoroughly packed or "tamped." The surface earth thrown out by the plow may be plowed back in the spring, and thus much hand work be avoided.

Tile draining thus done, involves little actual expense, except the cash paid for tile, which will be from $12 to $15 per acre for two-inch laterals and three or four-inch mains, the laterals being 33 feet apart.

Turf Plowing

is another kind of late fall work. The grass protects the ground from freezing, so that this work may be continued till quite severe cold. Clay turf may be safely plowed in the fall or winter, even when quite wet, as subsequent frosts crumble the soil and prevent the packing and lumping that otherwise follow the working of clayey soils when too wet.

Fruit and Ornamental Trees

may be set late in the fall, if the roots are not

exposed to frost. But this work is better and more safely done in October or early November.

Rough Pastures

may be cleared at this season. Many pastures in the dairy regions of Ohio and New York shade off gradually into the woods, there being no dividing fence, and on all the decent farms the best trees along the edge of the woods having been culled out for timber or wood, what are left are gaining nothing by growth, but only growing worse and shading the ground, which might otherwise furnish good pasturage. All over many dairy pastures are scattered worthless trees, such as Beech, Elm, Pig-Hickory, Thorn-Apple, etc., whose roots exhaust the soil, whose branches shade it, and whose whole appearance is unsightly. An occasional handsome Elm or Maple for shade, especially along a fence line where it will not interfere with future tillage, adds beauty to a landscape, but we speak of pastures disfigured by scores of worthless trees and thorn bushes. Such pastures furnish excellent late fall work. Bowlders and cobbles can be pried out and drawn off in dry, warm weather, and when the ground is soaked, men and teams will dig and pull out thorn bushes and quite sizable trees faster than any one unaccustomed to it could believe. Cut the roots opposite to the way the tree leans, hitch a long chain well up in the branches and let your steady team pull and twist, as your man cuts the other roots. Trees that are too large to be handled with the team, may be trenched about deeply, and the roots cut, and the frosts and rains and thaws and winds of winter will capsize or loosen most of them by spring. A part of the pasture may thus be cleared ready to fence and plow in spring. When steady cold comes, the "ragged edge" of the woods can receive attention. Strike a straight line through the edge of the woods, parallel with the highway or with your line fence, and back far enough to take in all the scattering timber, and clear off all that lies outside of this line. Save and use all that is fit for wood or timber, and burn the rest and the brush as soon as they are dry enough. The ground thus cleared will furnish pasturage instead of that you have just converted into plowed land or meadow, and will greatly improve the appearance and real value of the farm.

Such are a few of the jobs of late fall work that may be found on most farms. They will vary much on different farms. We intend to suggest specimens rather than enumerate all. They are chiefly permanent improvements, or work for the future year or years. They bring a feeling of real satisfaction. We can almost imagine that the farmer whose farm is so "snug" and tidy and well cleared and drained and fenced that he can absolutely find *nothing* of this sort to do, nothing to increase *permanently* the beauty or productiveness of his farm,—we can almost imagine that such a one, if such there be, might well sit down, like Alexander the Great, and "weep for other worlds to conquer."

WORK FOR LATE AUTUMN.

MANY farmers think because the crops are all harvested and the general farm work of the year is finished, that there is nothing more to be done. This may be the case on some farms; but in many cases if the farmer will look around him, he will find some things which might be done profitably before winter sets in. There is no time in the whole year which furnishes a better opportunity for farm improvements than these late autumn days, when there is little else to do. Repairing out-buildings and fences, picking stones and making them into walls for fences, or piling them into heaps to be drawn off on sleds in winter, or any kind of work which may suggest itself to the farmer, may be done now with profit.

Fall plowing is very popular in many localities and with many farmers. Farmers who have teams standing idle, may use them profitably in plowing fields where oats or barley are to be sown next spring. This not only saves work in the spring, which is a busy time for farmers, but all clay soils are benefited by being plowed in the fall. It is better that the ground should be left rough after the plow, so that the more surface will be exposed to the action of the frost, which sometimes works wonders in pulverizing lumpy, bakey soils. Especially should gardens, where early vegetables are to be grown, be plowed before the ground freezes.

Stock of all kinds should have some protection from pelting storms of snow and rain. If this is not already provided, it would be well to invest a few dollars in erecting new shelters and repairing old ones. Every good farmer knows that it is a saving of feed to give stock comfortable quarters in the winter. Animals will require much more fodder when exposed to cold pelting storms than when they have a comfortable protection. Therefore, as the drought has shortened the supply of feed over a great extent of country this season, it will be economy to see that stock have good shelter for the coming winter. Domestic animals should have especial attention at this season. There is a period between grass and hay when there is danger of their becoming almost spring-poor before their owners are aware of it.

Farmers who have manure in their barnyard would do well to draw it out and spread it before the stock are turned in for winter.

JOTTINGS AT KIRBY HOMESTEAD.

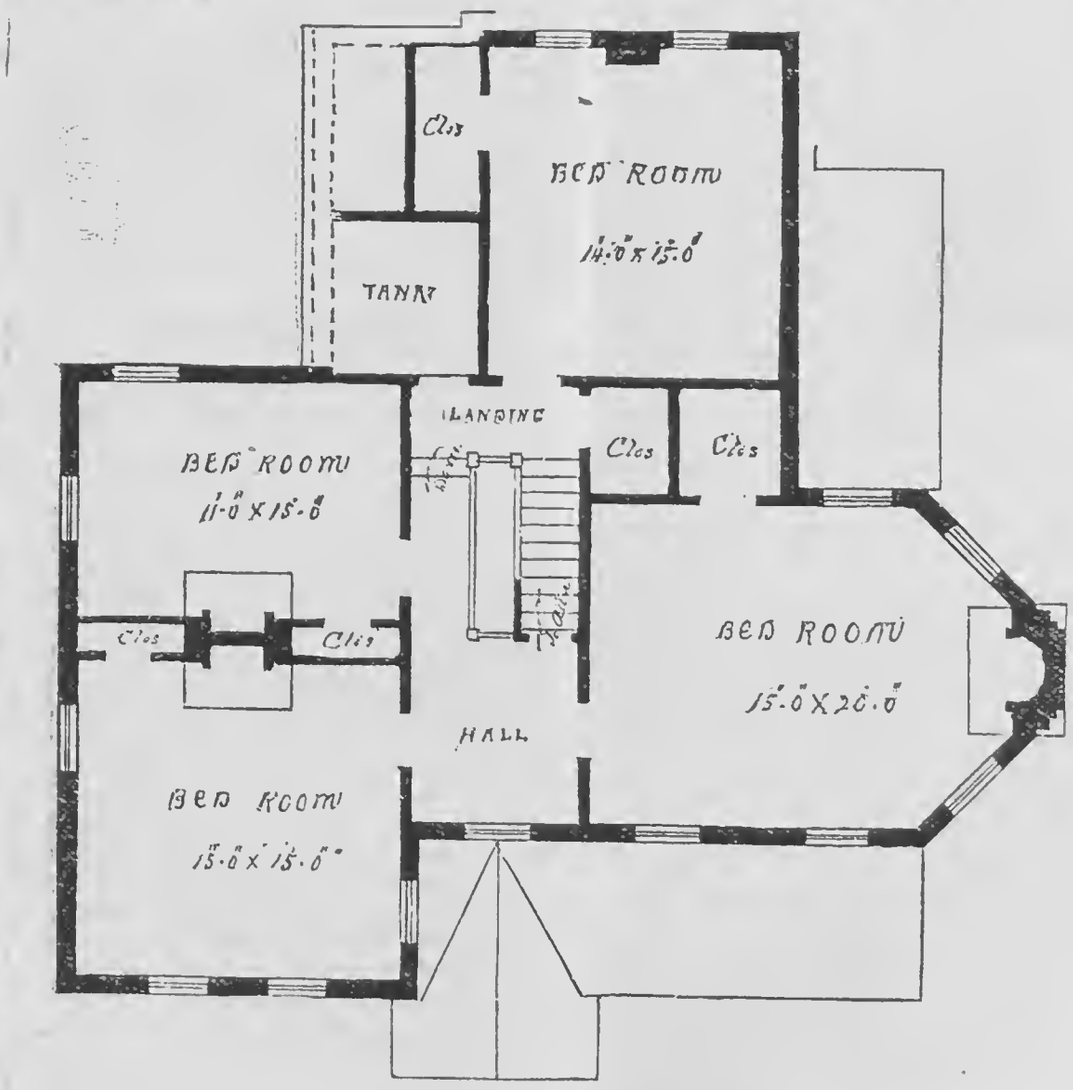
COL. F. D. CURTIS.

How to Grow Good Corn.

THE best piece of corn grown in our neighborhood belongs to Mr. Veeder. It was manured in the hill with well rotted barnyard manure. A small shovelful was thrown into the hill, on which the seed was dropped. This corn came up rank and vigorous, and grew rapidly. It kept ahead of other corn all the season. We are convinced that it is the best plan to apply manure directly to the roots of plants, or, in other words, to so place it that the roots of plants can feed upon it as soon as they begin to grow. An early start is a good start, hence it is advisable in sowed crops to harrow the manure in. Mr. Veeder's corn field was an old meadow not particularly rich. The crop was thoroughly cultivated, which helped largely to make it such a good one. There is no doubt but that it would pay every farmer well to prepare a compost, especially for his corn crop, and put it in the hills. The fine manure could be set apart for this purpose. In it should be mixed the contents of the privies and chamber wastes and soap-suds. A quantity of plaster—sulphate of lime—should be thrown over the pile frequently, and mixed through it from time to time to prevent the escape of the gases. Plenty of plaster will also make the compost dry and in a condition to be handled. The hen manure should be carefully saved, and may be added, mixed with plaster, so that its volatile properties shall not be lost. A little pains-taking on the part of farmers at the beginning of winter and during the season when they have plenty of leisure, will enable them to accumulate a quantity of compost which will cost them but a trifle, and which will insure them a good crop of corn. The same kind of compost will be valuable for a root or any other kind of crop, but particularly for corn, owing to the fact that it grows in hills and requires a good start if a fine crop is expected. We believe that a handful of this compost put into a hill, with frequent and thorough cultivation—and by cultivation we mean with a horse and cultivator—will produce a better crop on ordinary land than plowing under a liberal coat of manure, with a lack of cultivation. The compost pile should be kept in a dry place where it will not be leached by rains, and where it can be turned over occasionally.

Value of Rural Seeds.

Esquire Davidson, one of our best and most thorough farmers, says that the Beauty of Hebron which he received from the RURAL office, will be worth to him several years' subscription. The Golden Rural tomato he thinks is the best variety he knows of. We coincide with him, and like them the best of any to eat raw. They do not cook quite so well as some other kinds.



SECOND FLOOR.—SEE FIRST PAGE.

Shelter Belts.

We realize the benefits this fall of the protection from the cold wind afforded by a belt of trees, when gathering the roots. On the east side of the shelter belt the roots were not frozen and were gathered in nice order, while at the same time on other portions of the farm not thus protected, the ground was frozen and the wind blew so cold that the work could not have been done. We regret that the whole west side of the farm had not been planted years ago with a hedge of evergreen trees.

Tainting Milk and Butter.

Turnips of any kind will taint the milk and butter when fed to the milch cows. Beets and mangels will not do it, but will improve the quality and quantity. We have tested the matter thoroughly this season. Our oxen are plowing every day and doing good service with a feeding three times daily of mangels and hay. We find this to be the cheapest keeping for them. In the spring we intend to give them the same rations, and expect that they will perform a large amount of work, and at the same time be in good condition.

Planting Nuts.

We hope all the RURAL boys and girls have planted nuts this fall. We have put in a bushel of different kinds for the babies, and we had the pleasure of gathering in the nut grove a nice lot of English filberts and some of the native sort. Our Spanish chestnut tree blossomed, but did not bear. Next year we shall look for a crop of chestnuts on it. It is only eight feet high and has been set out only three years. These trees will bear nuts six years from planting, as they do not grow so large as our native kinds. The hickory trees grow slowly. By-and-by we expect to see the nuts on them, but it will not be until the babies get to be young people. This makes it all the more important to start them as soon as possible. The nuts must be planted before they get too dry, and must not be covered up deep. An inch under ground is enough. Pick out good kinds, and there will be lots of fun ahead.

Arboricultural.

AMERICAN TREES FOR AMERICAN LAWNS.

SAMUEL PARSONS.

THERE are two or three questions that present themselves forcibly to every thoughtful lawn planter in America. He makes, in short, as he looks mentally over the best lawns of the country, several pertinent reflections. When he asks himself why it is that the best work in lawn-planting is essentially English work, done after English patterns, he will be apt to ascribe it to the not exclusively American fashion of imitating foreigners. Yet he reflects that very perfect lawn-planting surrounds the homes he has seen or heard of in Great Britain. This being the case, is it surprising that Americans, cultured or otherwise, want to possess similar abiding places? They have seen the thing done abroad: they can obtain veritable British gardeners; why should they not create the same effects here? In fact, the successful American believes, at least as much as his European neighbor, that money is King and will accomplish anything, if used in sufficient quantity. But can money give him an English lawn? I believe it cannot.

Leaving questions of the value of foreign methods, we are met by another query, namely:—why plants popular on English lawns from adaptation to English climate, are almost exclusively used in this country. The answer again suggests itself, that Americans perhaps are too much absorbed by foreign models to recognize their own wealth of lawn plants. I don't believe Americans are naturally snobbish, nor do I believe they would neglect American lawn-planting material, if they realized its value. It is certainly not unreasonable that they should imitate the excellent lawn-planting of Europe. They could scarcely be expected to copy, to any extent, American models of lawn-planting; for such models are few and far between. This is all very true. We are yet in swaddling-clothes, as far as our own lawn-planting goes, and may be readily excused for following the lead of elders and betters.

But must we always remain mere imitators? Can we not originate veritable American lawn-planting founded on the employment of home material. The general principles of lawn-planting are always the same the world over. It is simply a question of judgment and taste in selecting and arranging materials after time-honored methods. By American lawn-planting, furthermore, I mean a system that retains such portions of English landscape-gardening and lawn plants as will suit America, but which, in the main, employs American plants. Just think for a moment what excellent lawn plants we have! Positively we cannot, any of us, realize their qualities or we would not neglect them. The American Oaks alone, with their rich, enduring and wonderful forms, would make any lawn a success on which the

were properly and harmoniously grouped. Where are our Slippery Elms, our Kentucky Coffee Trees, our Liquidambar, our Magnolias, Cypresses, Virgilias, Andromedas and Stuartias? They are almost unrivaled as lawn trees, especially in America, and they are scarcely seen on lawns in either Europe or America. Why not be distinctively American? Do not our chances of success in lawn-planting lie just in that direction? Should the frequent failure of European lawn plants—Deodar Cedars, Mahonias, Hollies, Aucubas and what not, encourage us to use them exclusively on American lawns? Evergreens of most kinds never attain the perfection here they do in Europe. Yet, where we must use the evergreens, we gain by using American evergreens. The White Spruce (Abies alba) and Engelmann's Spruce (Abies pungens) are both more satisfactory plants in America than the universally popular Norway Spruce. These are questions and reflections which deserve serious consideration, if we are to develop anything distinctive or national—anything worthy of being called American lawn-planting.

Do not understand what I say as intended to decry the cultivation of European plants generally; for to Europe we must ever look for some of our best lawn-planting materials. I would even secure, for the sake of variety, somewhat tender European plants in sheltered spots, Mahonias, Chinese Arbor-vitæs and choice evergreens of like tender natures. But these should not make up the major part of the lawn, as often occurs. I would keep, in fact, evergreens of all kinds, both shrubs and trees, in strict abeyance on the lawn to hardy deciduous American plants. Believe me, I do not exaggerate when I say that American lawn-planting would soon enter a higher and more prosperous phase of its existence—for it does exist—if European models were followed soberly and with discrimination.

The Herdsman.

JERSEY CATTLE.

F. K. MORELAND.

It is an axiom in breeding that "like begets like;" and also that a well-bred animal has greater power in stamping his own likeness upon his offspring than is possible with scrub stock. A cow of dung-hill breeding may drop a calf totally opposite to herself in appearance, color and form. A red cow may drop a calf of white, a brindle or black color, according to the color of the animal with which she is coupled. It is almost impossible for a dung-hill animal to produce offspring in its own likeness, even if that likeness is a poor one, and the cause is simple:—there are no marked characteristics which, according to the established principles of breeding, must be impressed upon the progeny of scrub stock. Take any of the pure breeds of dairy animals, and couple a male or female with one of the opposite sex of dung-hill breeding, and, in nine cases out of ten, the progeny will bear the likeness of its thoroughbred ancestor. There may be many marks of the dung-hill ancestor, but the offspring of such a union will possess undeniable distinguishing marks of the existence of good blood in its system. It is only upon this principle that thoroughbred stock becomes valuable for improving scrub stock. There may be native stock as valuable for feeding purposes as the Short-horns, as valuable for dairy purposes as the Ayrshire or the Jersey; but their value for breeding is unimportant. Where a thoroughbred animal, when coupled with its kind, will produce offspring as good as the average of its breed, with the greatest regularity, a dung-hill animal, no matter what good qualities and excellent points may predominate, has a slight chance of producing offspring having the same exceptional qualities, even to a modified extent. The older the breed, and the more permanent and well fixed its distinguishing characteristics, the greater is its value in improving other stock. And it is for this purpose and this reason that the Jersey stands pre-eminent among all other breeds for the improvement of other stock. The breed is an old one; it has been so placed that there was but little danger of the introduction of foreign blood, and, moreover, the authorities on the Island, more than one hundred years ago, prohibited the introduction of foreign stock. The good citizens of Jersey evidently thought that their breed was good enough, and it is to their far-seeing policy that we are indebted for the present valuable race of Jerseys. These may not compete with Short-horns in converting corn and grass into beef; but they will make much more butter from the same amount of corn and grass. They may not give as much milk as the Ayrshire or Holstein; but the Jersey butter is known the world over for its superior excellence.

One word as to the growing importance of the breed in the United States. There are more Jerseys bred in this country to-day than in any other. Our breeders, with an enthusiasm that is commendable, annually import from the Island the best specimens of the breed that can be purchased. This course cannot be continued many years, without its effect being felt here as well as on the Island of Jersey. That our breeders should import the best and only the best that are bred in Jersey, is quite right, as they can breed the inferior grades with but little trouble. But it is not only to the importation of the very best that can be obtained, but also to great success in breeding that the growing importance of the American Jersey interests is due. There are many large herds of Jerseys to-day that in purity and value will compare favorably with anything in any other country, even in the Island of Jersey. The American Jersey Cattle Club takes just as effective precautions to preserve the purity of the breed as is possible for the local authorities of Jersey. And we have other advantages in the breeding of Jerseys, and, among them, one that the Island breeders must soon see:—we breed the cattle throughout the extent of a vast country, through a vast diversity of soil, climate and herbage. All these influences must have their effect, and in less than ten years we shall not only export Jerseys to every country to which the Island exports them, but we shall also export Jerseys to the Island of Jersey. This is not an absurd statement; the Short-horn breeders of England have for several years purchased cattle from our breeders, and why may not the breeders in the Island of Jersey come to us for Jerseys, in the same way. We are making as good progress in breeding Jerseys as we ever did in breeding Short-horns.

But this is the future. We can use this valuable breed for a much better purpose than as the foundation of "castles in the air." The breed is designed to be *the* breed for this country. While occupying an unassailable position in those States that are especially devoted to the production of butter, cheese and milk, the breed is yet to contest for first position in those States that are still devoted to the production of beef. Cheap lands and cheap grain will not always continue at the West, and the farmers will be compelled to try some other branch of husbandry than the production of beef.

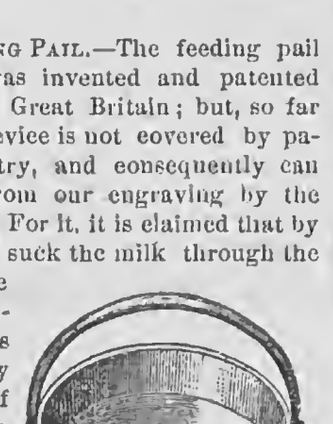
In the Eastern States where any attention has been paid to the production of butter, we find that Jerseys already take a first rank, and we have not only many herds of pure Jerseys, but also many other herds of high-bred grades; and as grades they are excellent in disposition, beauty and value. A three-fourths Jersey is, I think, as pretty an animal as can be found. In St. Lawrence County, we have not only several good herds of pure Jerseys; but numerous dairies possessing a strong infusion of the best of Jersey blood.

St. Lawrence Co., N. Y.

Herdsmen's Conveniences.

Anti-Sucking Device.—The accompanying engraving illustrates a device found very useful in preventing calves from sucking cows and also cows from sucking each other, a fault they sometimes fall into, but it is not very effectual in preventing cows from sucking themselves, an effective contrivance for which purpose we shall give in our next issue. The spikes in the halter are simply wrought-iron nails, with flattened heads, stuck through a stout piece of leather, and the heads protected underneath by another piece of the same material. The engraving sufficiently describes the form, size and method of attaching the halter. Prof. Sheldon says that after trying many devices for the above purpose, he has never found any so effectual as this.

A Calf's Feeding Pail.—The feeding pail here illustrated was invented and patented some years ago in Great Britain; but, so far as we know, the device is not covered by patent in this country, and consequently can safely be made from our engraving by the nearest tin-smith. For it, it is claimed that by causing the calf to suck the milk through the india-rubber tube shown in the engraving, nature's process is closely copied, and the calf cannot gulp down its food, as is too commonly done when drinking from a pail; moreover, the saliva of the mouth mixes freely with the milk, and the digestion is thereby promoted. Then again, it obviates the necessity of putting one's finger into the little thing's mouth, and, furthermore, as the pail stands on a broad base and cannot easily be knocked over, one person can tend a number of calves while they are being fed, and none of the food is wasted. A pail of this kind, 'tis true, requires a little more cleaning than an ordinary pail, but the extra trouble is amply repaid by the extra convenience.



Horticultural.

PITS FOR WINTERING PLANTS.

In every garden, be it large or small, and especially if bedding and pot plants are grown to some extent, nothing is of greater convenience or, in fact, more indispensable than a pit for wintering plants. Many petted plants that are too valuable to throw away or that have become too dear to be parted with, are yet for the want of room, against the inclination of their fair owners, turned out of the pots and abandoned to their fate in the fall, when preparations for winter must be made. Or, if retained, they are stored away in cellar, in sitting-room, bed-rooms and in every available window where Jack Frost can be kept at bay, till their number quite discommodes the occupants.

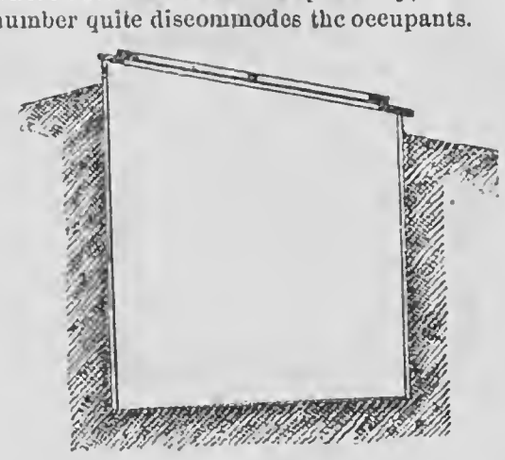


Fig. 1.

In the pits we here illustrate a large number of such plants can be wintered as well as, or better than, anywhere else. In fig. 1 can be kept tall-growing, half-tender shrubs and plants, like Roses, that only require to be sheltered from frost. The pit represented by fig. 2, has two shelves on which can be placed plants like Cenerarias, Pinks, Violets in pots, etc., that must be close to the glass; while the sunken path through the middle can be filled with taller plants.

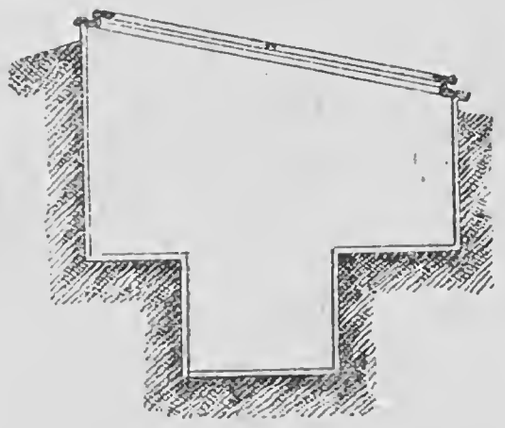

Fig. 2.

Such a pit should be lined inside with boards, and drained if the ground is damp. If made so that the ordinary sashes from the hot-bed or cold-frames can fit it, the expense of building will be very small. For a large part of the winter the sashes alone are sufficient covering, and when the cold increases, frost can readily be kept out by covering with straw mats, hay and the like.

Miscellaneous.

HISTORY OF A POOR FARM. No.—20.

Farming Sixty Years Ago and Now.

My old neighbor is what one might very justly call a good practical farmer. He is one of the old style that are fast disappearing. Beginning his farming experience more than 60 years ago, he has varied his management and his methods very little from that day to this. Born on a farm 87 years ago, and brought up a farm boy, he learned his business under very different circumstances from those of the farm boy of the present time. To hear the old gentleman,—still shrewd, sharp, with all his faculties as bright as ever, but somewhat garrulous as may be expected in so old a man—recite his early experiences is both interesting and amusing. Sitting in his ample kitchen, in his stone house that has withstood the storms of more than a century, with a broad, open fire-place that still holds the long-accustomed wood fire with the enormous back log that, smoldering, gives out a plentiful but not too fervent heat, he relates his past history when his farm was worked by slaves, and a large family of them filled this broad and capacious kitchen. Then he talks of his long experience in farming, and laments the changes and new-fangled ideas which he fears will yet bring trouble to those who come after him. The old gentleman's greatest trouble seems to be the papers and books which his grandson and his great-grandchildren—and more especially the oldest, Fred, who has been to college—read and study so frequently.

"We had no books in those days" said the old gentleman, "and if we got a letter once in three months and heard the news when it was a month old, that was enough for us. We had no time for such things, nor money either. We raised corn and pork, grew our own wool, spun our own yarn, wove our own homespun; my wife and mother cut out the clothes for the slaves, and the wenches sewed them; we were not bothered for shoes, because I had but one pair which I wore to church on Sundays, and they lasted me 10 or 12 years; different shoes they were, too, from what we have now. We were up long before day and went to bed at dark, or sat around this same fire-place and spun wool by the fire-light. We had no lights in those days but rushes dipped in beef tallow, no lamps, no oil, no carpets, no store chairs, only what we made at home; nothing to buy and scarcely anything to sell, and there was but little money to get or to use. Grandmother used to ride to market on horseback, and take some butter and eggs, and I used to go in the cart and carry some flour and bacon and other things, and bring back, sugar and coffee and whatever else we wanted, and maybe a few silver dollars and some shillings for the boys. There were no wages to pay and we needed little money and had nothing about us that could tempt thieves; the latch-string was out all night, and we never kept awake o'nights afraid of burglars. We had good crops; the big barn was always full and so was the cellar. Those were good times—no hurry, no fretting, no worry, no crying out for money to buy this or that every day in the year; we had all we wanted and we wanted very little; we worked hard but we were happy enough, I warrant."

"What crops did you raise when you first began farming here?" asked Mr. Martin.

"Corn mostly, to feed the hogs and make the bread of; a little wheat or rye for bread; barley and oats for the horses; and the cows and sheep ate the straw. We raised flax to spin for our linen, grew potatoes, but never seeded to grass until we began to grow clover about 50 years ago. Then we began to farm pretty much as we do now. I have not changed the work much for fifty years; except that we don't raise as much pork since we have had no slaves to feed."

"How many slaves did you keep?" asked Mr. Martin.

"I had seven men and two women, all raised in the family, and some came to me with the farm when I bought it; and one of the men is working for William now; he was born in this house 70 years ago, and thinks the whole place belongs to him. If any thing should go wrong, he would go crazy, I think."

"How long have you followed your present plan?" I asked.

"A good many years. At first we did not care so much for manure, but soon found we could not get along without it. Now we feed nearly everything we grow, and for a good many years have sold only butter, some sheep and wool, potatoes, a spare fresh cow or some fat ones and fat calves; and William is raising a good many lambs now. William wants to sell hay and straw, and buy bran and oil meal, but I don't see the use of it. We can save two or three hundred dollars every year, and I am satisfied. When I am gone, William will have his own way, he will drain the meadow I suppose, where I have cut hay every year for 40 years or more, and plow it up; he will spend all he makes in buying feed for his cows and fertilizers for the fields; but I don't see the use of making with one hand and spending with the other."

"Grandfather has his own way pretty much," remarked William; "he has his notions and I do as he wants me; but I am sure we could have doubled our corn and wheat this year, if we had used some superphosphate on them. He thinks we are doing well enough, and so we would; but I don't want my wife and girls to go barefoot, and hoe corn along with old Joe, in place of a hired man. We have been growing good crops; we have plenty of manure, and lime a field every year when we seed it down. We get 40 or 50 bushels of corn to the acre; 100 bushels of potatoes; 15 or 20 bushels of wheat; 40 bushels of oats and about a ton and a half of hay; that is as much as, or more, than any of the neighbors; but I am not satisfied with that. We can make ends meet and a little more; but there is nothing to pay interest on the cost of this farm, and if I had rent to pay, I couldn't meet it and keep my family as comfortable as I want them to be, buy a few books and papers and have a carpet on the floor. If we wanted to live in the old style, we could save money now; but there are some things that are worth more than money, I think. I want to get a larger yield than we are now getting, and I think I could, by spending some money for feed and for fertilizers."

"You are right," remarked Dr. Jones. "We cannot farm now on the old plan. Habits are

changed and the very necessities of our lives are different from what they were even 20 or 30 years ago. The railroad, the telegraph and all the modern improvements in business and social matters, have worked a wonderful change which we must conform to or stay behind. We must take advantage of every facility offered to us to improve our methods of working. I believe the owner of a farm, if he is an intelligent man, and knows his business, is worth more than a dollar a day. But if he is working in the field, hoe in hand, with a hired man by his side, he is simply earning a dollar a day or whatever he pays his hired man. But there is more valuable work to be done on the farm by the owner than laboring.

Every farmer should try to find out for himself what this is; it is there, and the intelligent farmer will soon find it, if he looks for it. I would not make radical changes; such, for instance, as trying to farm with chemical fertilizers only, or growing corn continuously, or such risky novelties in farming. But William is on the right track. He needs to make haste slowly. If he has not manure to make his land rich enough to grow 80 bushels of corn or 40 bushels of wheat per acre, he should try to get as near to that as he can with artificial fertilizers, to help out the manure; feed his cows richer food and make more butter; spend five dollars wherever he can see that he can get back ten; keep an extra man in his corn fields killing weeds for two months after planting, and by so doing add two or three times the amount paid, to the value of the crop; grow a few acres of mangels instead of the turnips he raises, and raise a few heifer calves into cows, and keep these on his extra roots, in place of selling veal. There are other ways that will open out as soon as he gets on the broad road, and he can take his choice as to which he will follow; for they will all lead to one end, and that is better crops, richer land, more stock, more manure to keep the land more productive, and more profit. There is a certain yield which the land will give naturally which may be increased by better culture and some judicious expenditure, and this increase may be expected to repay its cost with 100 per cent. profit. That is where good farmers must look for their profits now. The land may return a bare living under certain circumstances, and a handsome profit under others. To discover what are the methods of doing the latter is the business of the farmer of to-day, who cannot live as did our grandfathers 50 years ago."

"You might live worse," remarked the old gentleman. "I don't think the world is a bit better for all these new-fangled ideas, for all the gold and silver there may be flowing into people's pockets. Men are never contented. Where are you going to stop? Get all you can now, and what will you want 20 years to come? Maybe you may hear your grand children talking of things then as you talk now. Why not? Things have changed in the last 20 years as much as in 50 before, and where will you be 20 years from now?"

"Let us wait and see, and not fret about that just now," said Mr. Martin. 'Sufficient for the day is the evil thereof;' and a farmer's business is not so brilliant, after all, to-day as folks are bragging it is. Crops are good no doubt, and prices are good; but the speculators have the cream of the profit from the high prices, and we have the pleasure of seeing the money we worked for falling into the pockets of men who never worked a day in their lives."

"That was not one of our troubles in my day" remarked the old gentleman, "that comes of your new ways, and is one of your modern improvements."

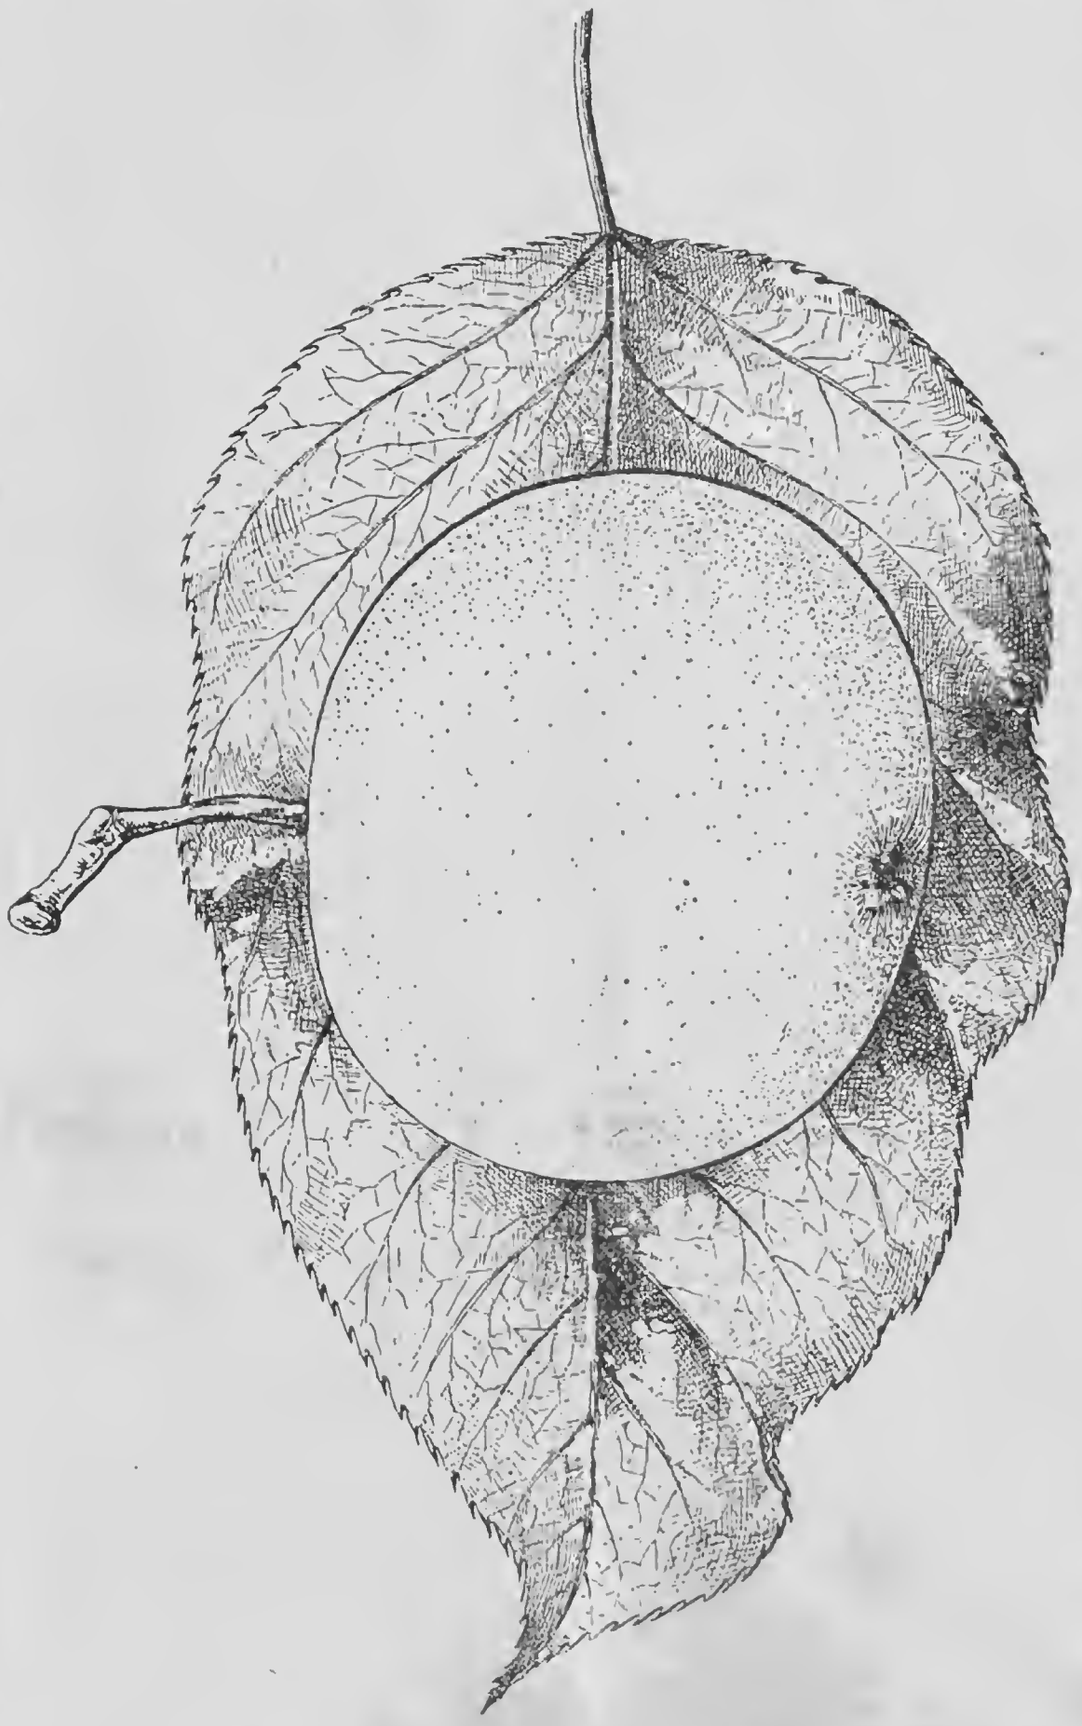
PAMPHLETS AND CATALOGUES.

The Native Flowers and Ferns of the United States; By Thomas Meehan. Published by the American Natural History Publishing Co., Philadelphia. We have now to acknowledge Parts I., II., III., IV., of the second series of Vol. I. Referring to the colored plates with which this work is embellished, Dr. Asa Gray thinks that they compare "not unfavorably" with those of Mr. Sprague who is placed at the head of our botanical draughtsmen. Considering the extremely low price at which this work is offered, this is indeed high praise, as Mr. Meehan remarks. We have recommended this work to all of our readers, without reserve. To the botanist; to the amateur; to the lover of flowers, it is alike a work that can not fail to please and instruct. Each series is complete in itself. Those, however, who purchase one series could scarcely rest content without the others. The colored plates in the Parts now before us are as follows: Part I, Drummond's Pitcher-plant (Sarracenia Drummondii); Cut-leaved Englemann Flower (Engelmannia pinnatifida); Sandpaper Starwort (Diplopappus linarifolius); Sensitive Fern (Onoclea sensibilis). Part II. Parrot-headed Pitcher-plant (Sarracenia psittacina); American Yellow Lily (Lilium Canadense); Torrey's Solanum (Solanum Torreyi); Californian Polypody (Polopodium Californicum). Part. III. Spotted Touch-me-not (Impatiens fulva); Spring Iris (Iris verna); Common Woodsia (Woodsia obtusa); Red-flowered Trumpet Leaf (Sarracenia rubra). Part IV. Bipinnate Phacelia (Phacelia bipinnatifida); Brilliant Cone-flower (Rudbeckia fulgida); Stemless Moccasin Flower (Cypripedium acaule); Walking Leaf (Camptosorus rhizophyllus).

Pomological.

THE JAPAN PEAR.

This remarkable pear tree, Mr. James Hogg informs us, was originally imported into this country from France about forty-five years ago. One of the first specimens that were grown in the vicinity of New York, was planted in the nurseries of Messrs. J. & T. Hogg, in the upper part of the city, near Second Avenue, in 1841 or '42: but the tree is now frequently met with both in nurseries and private grounds all over the country. The tree is a very vigorous grower with long chocolate-colored branches, and bearing large white flowers, and very large, deep-green, shining leaves. It is handsome, and its conspicuous flowers, rich foliage and symmetrical fruit—of which it annually bears an abundant crop—combine to make it one of our most beautiful ornamental trees. It is also very hardy, and is never affected in the least by blight, for which reasons it has sometimes been recommended as a stock on which to graft more tender and sickly varieties; but it is not suited for this purpose; the wood seldom or never unites with the graft, though the bark does, and the graft is therefore easily broken off and the growth impeded.



FRUIT AND LEAF OF THE JAPAN PEAR.—(FROM LIFE.)

The leaf and fruit shown in the illustration, are drawn from specimens sent us by Mr. T. S. Force, of Newburgh, N. Y. As will be observed, the fruit is of a spheroidal form, smooth and regular and marked with numerous minute dots. The color is green, but changes to yellow by keeping. It has a somewhat astringent, slightly acerb taste, which does not improve by keeping, and it is never eatable unless cooked. For cooking purposes, however, it is fully equal to the quince, and when properly preserved, it has the consistency of Canton preserved ginger.

The tree commenced bearing in this country from seedlings, and some pseudo varieties have been advertised as being great acquisitions to our orchards; but none of them is better than the original species.

MICHIGAN STATE POMOLOGICAL SOCIETY.

Annual Meeting in Allegan, Dec. 2, 3, and 4, 1879.

In acceptance of an invitation from the Allegan County Pomological Society, the State Society will hold its annual session in the village of Allegan, December 2d, 3d, and 4th, opening with an evening lecture at seven and one half o'clock, Tuesday the 2d proximo.

The following list comprises the main topics for discussion during the day sessions:

1. Pruning pear trees.
2. Scale of points in judging fruits and orchards.
3. Is the grape rot doing damage in our State?
4. Growing native Ferns.
5. Mutual relations of nurserymen and fruit growers.
6. How to use flowers in the home, the school-room and the church.
7. Culture of the Quince in Michigan.
8. Distances apart for planting fruit trees and plants.
9. Habits of observation a practical assistance to the fruit-grower.
10. Native and introduced climbers.
11. Influence of local horticultural societies upon communities.
12. Practical workings of the yellows' law.
13. Grape-vine thrips and how to battle the pest.
14. Management of young orchards.
15. Horticulture at the Agricultural College.
16. Are we not lowering the pomological standard of merit by too often applying the market test?
17. Describing Apples by their flowers.

Aside from the above topics there are two resolutions laid over from former meetings to be taken up at this session of the society as follows:—

Resolved, That the Michigan State Pomological Society recommends the use of hedges for fencing in Michigan.

Resolved, That the name of our Society be changed to accord with our work, that henceforward it shall be known as the Michigan State Horticultural Society and that the president be instructed to so modify the constitution as to accord with this resolution.

The annual election of officers will occur during the afternoon of Wednesday, December 3d.

The Allegan people will be prepared to entertain all the members from abroad who notify the Secretary of their intention to be there. The hotels will grant reduced rates to others who shall attend, and from the importance of this meeting there is no doubt but the attendance will be large.

It is important that all who are to attend shall notify the Secretary at Grand Rapids at once, that he may if possible secure arrangements for reduced fare on the railroads. Without the names of those who are to be in attendance, no progress can be made in this direction.

Any further information that may be desired will be cheerfully given by the Secretary on application. T. T. Lyon, President.

Chas. W. Garfield, Sec'y.

Industrial Implements.

SHELL YOUR CORN ON THE FARM.

Most Western farmers understand the advantage of shelling corn at home; most Central-Western and Eastern farmers don't comprehend the saving at all. We shall try to demonstrate it by a few figures. Corn on the cob is computed at 70 pounds to the bushel. Shelled corn is sold at 57 pounds to the bushel. Now, suppose it becomes desirable to sell one hundred bushels of corn, we will see if we cannot demonstrate that it is wise and more economical to sell the shelled product.

Hauled to market 100 bushels—or		7,000 lbs.
Cobs and chaff weigh	1,150 lbs.	
Clean corn weighs	5,850 "	Total 7,000 "
100 bushels shelled corn; legal weight	5,600 "	
Total loss on 100 bushels	250 "	or 4½ bushels,

besides which you haul to market (five, six or ten miles, as the case may be,) 1,100 pounds of cobs which you *give away*, and possibly haul back coal at $3.50 to $5 00 per ton. For fuel, 100 pounds of cobs are worth as much as 100 pounds of coal; therefore we figure your loss on this 100 bushels of corn, as follows:

4½ bushels shelled corn at 40 cts. (say)	$1.80
1,100 lbs. cobs at $4.00 per ton (say)	2.20
Hauling 1,100 lbs. cobs to town (say)	1.50
Total loss	$5.50

These figures are worth pondering, as it is by just such savings that farming is made to pay.

One of the best shellers is made by the Sandwich Mfg. Co. There are various sizes made, and there is the chance of making it pay as an investment, if several club together, buy a power sheller, and after shelling their own corn, do the same for their neighbors, applying the profit made on the work to paying for it.

In the long ago it was much cheaper for a farmer to take his grain to the miller, and by paying him one-eight or twelve and one-half per cent., have his grinding done at a fair price. Now, the miller will obligingly exchange from 18 to 35 pounds of flour for a bushel of wheat, so that if the wheat is worth 50 cents a bushel, the farmer pays the miller 16 bushels of wheat for a barrel of flour, or nearly 70 per cent. of his wheat for the grinding. The charge for grinding corn is 10 cents per bushel; that is, the husbandman is permitted to pay the miller one load of corn for grinding another. Such being the case, an agriculturist cannot afford to feed stock ground food, or indulge very liberally in wheat bread, unless he does his own grinding. Good farm mills are now so cheap, that it is real economy to buy one.

Those using wind power will appreciate a little iron oscillating mill made by the Stover Wind-Engine Co., of Freeport, Ills., and Green Castle, Pa. It is a novel and ingeniously arranged grinding mill, made to attach to ten and twelve-foot pumping wind mills, operated by an elbow connected with main pumping rod in such a manner that it can be attached or detached in a minute, so that one can either pump or grind, or do both at the same time. It works with a reciprocating lever, so arranged that it grinds on the up motion of the wind-mill. The grinder consists of a double metal case and three burrs, two remaining stationary and one revolving in the center, producing a double grinding surface, and it will grind more than the ordinary farmer needs. It can be changed from grinding coarse to fine by simply turning one screw. It can be attached to any wind-mill. We would recommend that the four main tower posts be boarded up, say from six to eight feet, and covered with a hipped or pointed roof, in which a bin or hopper can be made to hold as much grain as desired, and which can be filled at leisure, leaving the ground feed to run into a box, or on the floor of the grinding room, as desired.

This convenient little mill grinds constantly, day and night, and it costs, complete, only twenty dollars.

Everywhere.

RURAL SPECIAL REPORTS.

MASS., Chelsea, Suffolk Co., Nov. 10.—We have had some cold weather here, which has about put an end to gardening. It seems fortunate that there is something that suspends the growth of weeds, for otherwise the warfare against them would be tiresomely endless. Yet even with weeds one could get along; but insects are still more pestiferous and abundant, and I believe there isn't a more favorite haunt of the pests than right here. They all visit us in due time, rose bugs, squash bugs, cabbage worms, currant worms—but there is no need of completing the list; everyone who has tried gardening knows from personal experience what some of them are, and the experiences of all seem combined here. Yet, despite these drawbacks, when winter has come, I look back with pleasure at my summer's garden work, ponder where I might have done better and plan for more successful results in future. By the way, one thing I have learnt is that Yucca filamentosa seed should be soaked in warm water before they are planted. Of all places in the country, this is the most delightful for a bug-hunting entomologist. C. A. B.

MASS., Palmer, Hampden Co., Nov. 13—I was much interested in the article "Handy Things to Know, to Do, and to Have" in the RURAL of Nov. 8th, but would like to suggest one improvement:—in whipping the end of a rope, use small-sized copper wire instead of thread. The wire never wears off. The ends should be turned under and driven into the rope. H. D. F.

OHIO., Bethel, Clermont Co., Nov. 8.—The seed of Blount's Prolific, sent by the RURAL to me, to test its merits by experiment, was a miserable-looking specimen of corn. But I determined to do my best with it, and compete for the RURAL corn premiums. I must say that the plat of 33 feet square planted grew such fine-looking corn, that it drew the attention of every person who saw it, and they invariably asked of me an explanation in regard to the kind of corn and my method of planting it. The only wonderment was whether it could ripen. This problem is solved by the harvesting of the corn on my plat, in a perfectly matured and dry state, producing a pretty grain, despite the fact that the season was extremely unfavorable for ripening, being very wet from the middle of August to the middle of September. In ordinary culture this kind of corn should be planted not later than the first of May. As a corn to be raised for all purposes I can't recommend it; but I believe it would be highly profitable for feeding cattle, stalk and corn together, as the ears can be masticated in the husk readily; stock could also consume the greater part of the stalk, as it is soft and light, when cured out. I also believe, from the appearance of the grain, that it will make good meal for table use, and in roasting time it is sweet and good. Next spring I expect to plant one bushel of my seed in rows 3½ feet apart, one grain in a place, 20 inches apart, so as to make proper proportion of grain to the stalk. For this method of planting the ground should be clear from weeds. In our county corn will husk about half a crop. The wheat crop harvested last will not give much more than enough for home consumption. Oats were a half crop; of rye, not much is sown here; barley, good; potatoes, a full crop, and thousands of bushels to sell. The wheat sown this fall has been greatly damaged by the fly. The greater part of October being very warm and dry, was suitable to its work of destruction. Many farmers have resowed. In the last few days we have had some cold weather, the mercury falling to 13 above zero. This is the first warning of winter, as we have not had the snow squalls that usually envelop us before this late date in the season. G. G

WIS., West Salem, La Crosse Co., Nov. 13.—Some of all the flower seeds I received from the RURAL came up and are doing well. Defiance wheat rusted badly, as did all spring wheat here last summer. Pearl Millet grew to be six feet high. I do not think it is suitable for this climate. The seasons here are not long enough for Blount's corn. It grew very tall; had from one to five ears; but frost killed it when in good roasting ears, on September 29th. Winter wheat was good; corn was never a better crop; potatoes were a good crop and sold at from 25 to 35 cts a bushel. M. L. H.

KANS., Atchison Co., Nov. 9.—Our growing season is past, and our harvest is garnered. The RURAL's Beauty of Hebron gave a satisfactory yield, though potatoes generally just here have been a poor crop. I have just dug an acre, and for all my trouble I only got just one bushel and a half. The average in the country, however, is somewhat better—or rather less bad—amounting to about ten bushels per acre. Corn is the principal crop in this county, and this year averages from 15 to 40 bushels per acre. It is a favorite crop here, because it needs no manure. Blount's Prolific will not do for this section, as the ears are too small and it takes too long to mature. Wheat does well here, and an unusually large acreage has been sown this year. In our market wheat sells for 90cts; oats, 35cts; corn, 27 cts; butter, 25cts per pound; chickens, $2 per doz.; hogs, $3.10 per 100 lbs. C. W. B.

NEB., York, York Co., Nov. 10.—We have had a very warm, pleasant fall here, and farmers have taken advantage of the favorable season by getting nearly all their fall plowing done for next spring's crops. Quite a good many pieces of fall wheat were put in this season in our county, and it is looking first-rate. As the chinch bugs have been with us to a limited extent this season, there is quite a demand for flax-seed for next spring. Wheat is quoted at 86c; corn, 15c; oats, 20; hogs, $2.50 to $2.75 per 100 pounds. GRANGER.

The Querist.

ANSWERS TO CORRESPONDENTS.

All About Horse Manure.

A farmer, Long Island, asks for an analysis of horse manure, and all about it as a fertilizer.

ANS.—Horse manure consists of the liquid and solid excrements; the former consists of water 940 parts, urea 7 parts and saline matter 53 parts in 1,000. The urea is not the only nitrogenous portion of the urine, as some of the saline substances contain nitrogen The quantity of urea contained in the urine depends greatly upon the condition of the horse and the nature of its employment. A horse that is constantly worked hard, wastes a large proportion of muscular tissue, which is used up in the exercise of the force exerted, and this waste of fibrous tissue is carried off through the kidneys in the form of urea. So that the urine of a hard-worked horse is richer in nitrogen than that of one whose life is easier. The quantity of nitrogen and saline matter also depends upon the nature and quality of the food; oats, bran and other foods, rich in nitrogen and potash, produce urine which is far richer in these substances, than that produced from corn and straw. The saline or mineral portions of the urine contain 2½ per cent. of hippurate of soda, 0.9 per cent. of carbonate of soda, 0.9 per cent. of chloride of potassium and 1.1 per cent. of carbonate of lime; the rest consists of carbonate of magnesia and chloride of sodium. The solid excrement consists of 75 per cent. of water and 25 per cent. of solid dry matter. The dry matter contains:

Carbon	38.7 per cent.
Hydrogen	5.1 " "
Oxygen	37.7 " "
Nitrogen	2.2 " "
Ash	16.3 " "
	100.00

The ash consists of

Silica	62.4 per cent.
Potash	11.3 " "
Soda	2.0 " "
Lime	4.6 " "
Magnesia	3.8 " "
Oxide of iron	1.2 " "
Oxide of manganese	2.1 " "
Chlorides of sodium and potassium	0.3 " "
Phosphoric acid	10.4 " "
Sulphuric acid	1.9 " "
	100.00

The quality of the solid excrement depends upon the condition and employment of the animal, and the character of the food. A full-grown and fat horse makes richer manure than a young or a thin and ill-conditioned one. A horse that stands idle a great part of the time also produces richer solid manure (but poorer urine) than a hard-worked horse. The effect of the food on the dung may be illustrated by the following example given by Boussingault, viz.:

A horse was fed on a ration of 16½ pounds of hay and five pounds of oats in 24 hours. The food contained:

	Carbon.	Nitrogen.	Saline Matter.
Hay	45,500 grams	1,500 grs.	8,960 grs.
Oats	15,000 "	650 "	1,180 "
Total	60,500	2,150	10,140

There were given off from the lungs and skin in the 24 hours, 37,960 grams,

leaving to be excreted in the dung and urine

22,540 grs.	2,150 grs.	10,140 grs.

There were actually found in the excretions

22,540 grs.	1,770 grs.	10,540 grs.

The missing nitrogen would be used in the repair of the wasted muscular tissue, which reappeared in the saline matter. For 1,000 pounds of dry food and litter may be expected 2,000 to 2,300 pounds of fresh manure, and the whole manure, including litter, will, of course, be modified considerably by the presence of the added material.

A Would-be New Cereal.

M. M., Bryan, Texas, sends us an extract from a Galveston paper describing what it calls a new kind of cereal, and asks our opinion as to what is said of it, and where seeds can be obtained. The correspondent who describes this plant had 40 acres of sod turned over last spring, and having procured several quarts of the seed, with an ordinary seed-planter he deposited two or three grains a foot or two apart in the sod. There had not been a drop of rain for the previous eight months, and it did not rain for five weeks after the planting, yet the seed germinated. The corn came up and grew finely. After it got fairly started, the hot blasts came up from the Llano Estacado (Staked Plains), burning up the grass and every green thing in the gardens, scorching like the blasts from a furnace, and yet it did not affect the new-comer from Egypt a particle. It grew right along, in spite of the heat. Then the rains came on, and the sturdy grain was equally indifferent to that. It grew right on, and ripened about the 1st of September, yielding, Deacon Hollister thought, some 60 bushels to the acre, weighing 60 pounds to the bushel. The stalk for some three feet from the ground is about as large as a man's coat-sleeve, and is a perfect wood. This, in all the treeless region east of the mountains, is a most important fact, as an acre or two will furnish fuel for a family for an entire year. From the top of this woody substance issues a stalk, on the top of which a tuft, something like that of Sorghum, issues; this soon droops over, and the whole bunch is one mass of the grain. The kernel is about the size of a grain of wheat, perhaps a little smaller, and more nearly round. Each one is inclosed in a shuck, or independent capsule. The grain can be ground into an excellent flour, from which bread and other foods can be made; it can be boiled and eaten as rice and cracked wheat, and, in fact, can be used for any purpose for which our ordinary cereals are employed. Thus the article in question goes on.

ANS.—This plant is, no doubt, the Drooping Sorghum. It is far from a *new* plant. We tried, the past summer, half a dozen different sorts of this Sorghum, called by many different names, such as Doura, White and Brown Egyptian Corn, Guinea and China Corn. So far as we can see or ascertain, they are all varieties of the common Sorghum—S. vulgare. Whether the fact of a drooping fruit panicle is enough to justify the specific name of Cernuum, we cannot say. In some of the upright sorts a disposition of the stalk to bend downwards was evident. Some of the drooping seed heads were less drooping than others. In other respects there were no marked differences that we could discover. There was one variety, viz., that which was sent to us as Doura, which produced an average of six or eight stalks from one seed. This will bear cutting at least twice. As a fodder plant, we should much prefer it to Pearl Millet, so much talked of during the past two years. The other sorts from one seed produced but one heavy stalk, rarely throwing up a sucker. When cut off, like corn stalks, there is no further growth. All of the above varieties that we know of do well in Georgia and Florida, and, no doubt, they would thrive with our correspondent. Seeds can be procured of W. B. Jones, of Herndon, Ga., and, indeed, of many prominent Northern seedsmen.

About the next Census.

G. D. S., Le Seur, Minn., asks when, in 1880, will the next census be taken; will the enumeration be made by the old plan of going from house to house; who is the superintendent; what steps would be necessary to secure the appointment of census-taker for a county or city, by one possessing the necessary qualifications.

ANS.—The Act of Congress authorizing the taking of the next census—the tenth national one—provides that the enumeration *must* be completed within the month of June, 1880, commencing on the 1st, and ending on or before the 30th day of said month. The superintendent of the census is Francis A. Walker, Census Bureau, Washington, D. C. In the taking of the last census, the U. S. Marshal of each district had the direct appointment of the enumerators for his district. The law now provides for the appointment of a supervisor for each district by the President. The total number of these shall not be more than 150 for the whole country. By the 1st of next March the Secretary of the Interior must designate the number of supervisors, and these will then be appointed by the President. They will have the appointment of the thousands of enumerators who will canvass from house to house for the census returns throughout the land. To facilitate the taking of the census, blank schedules will be furnished by the enumerators to householders and others for the purpose of having them filled up. The questions to be by this means submitted to the people will be far more numerous than ever before, covering all sorts of statistics concerning the actual population, race, age, sex, nativity, products, commerce, etc., etc., etc. The pay of the enumerators will range from four to six dollars per day, according to the sparseness or density of the population in the sub-division in which they labor. The law provides that each of them shall be a resident of his district and of the sub-division allotted to him, and that they shall be chosen solely with reference to their fitness, and without reference to their political affiliations. Properly supported application to the supervisor of each district—when the appointment shall have been made—will be the best way to obtain the position of enumerator in each sub-district. It is probable that the several districts will be defined, and their supervisors appointed considerably before the first of March.

Sainfoin.

M. M., Bryan, Texas. sends us a few seeds of what is there called the California clover, and asks its real name, as he supposes that by which it is known in his neighborhood, is a mere local name. He thinks it the best green pasture for winter in his latitude, that he ever saw. It comes up as soon as the fall rains set in; stays green all winter; needs no cultivation after it gets a start, and will kill out everything except Bermuda grass. It ripens its seed in June, and lies on the ground until it is ready to start again in the fall. All stock eat it greedily and fatten on it. He has ten acres sown to it, and intends to plant Bermuda grass among it so as to have a good pasture all the year.

ANS.—The imperfect seeds sent are those of Sainfoin (Onobrychis sativa) of the order Leguminosæ. It grows spontaneously in middle and southern Europe and Asia. The roots are perennial and, like those of Alfalfa, penetrate to a considerable depth. It is valuable in England; but is not very well-suited to our agriculture. Bermuda grass belongs to the grass family; that is, it is a grass proper. Its botanical name is Cynodon dactylon. In many parts of the South, especially on sandy soils, it is considered a blessing, as it affords fair pasturage and covers the ground tenaciously, thus preventing the shifting of sands. In other places, it is deemed a pest, owing to the persistency with which it spreads on all sides, and the difficulty of getting rid of it.

Pears for the Eastern Shore of Md., etc.

W. H., Cambridge, Mass., asks, 1, what varieties of Pears would be likely to thrive best and prove most profitable in Dorchester Co., Eastern Shore of Maryland—soil light sandy. 2, which would be the best—dwarf or standard, or should one alternate, now a dwarf, next a standard; 3, what variety of Quince would be the best for the same locality.

ANS.—1, Bartlett. Beurré d'Anjou, Howell, Lawrence. 2, The question: "Which would be the best—dwarf or standard," cannot be answered. As a rule, standards are more valuable than dwarfs. There are not over six varieties of Pears (so far as we are informed) that do better on quince than on pear-stocks. If *yield* is the first consideration, we should always prefer the latter. Dwarfs bear in from two to four years; standards in from four to ten years. If dwarfs are planted deep, so as to cover the jointure three or four inches, the pear-stock will sometimes throw out roots and ultimately make standards of what were originally dwarfs. It is a good plan to alternate. Then, if desirable, the dwarfs may be removed when the standards come in bearing. 3, Rea's Mammoth is as good as any.

Grafting Apple Roots in Winter.

S. E. L., Brevard, N. C., asks, 1, in grafting cions on pieces of apple seedling roots at night, during winter, is it necessary, after tying the connection, to paste grafting wax around the wounds; 2, is sand better than sawdust for packing them in, before putting them away; 3, should they be packed immediately after they have been grafted, or may they remain loose till morning; 4, in planting, do nurserymen bury the top bud below the surface or leave it just above; 5, how many buds should be left on the cion in addition to the one at the junction; 6, what is the usual length of the piece of root used.

ANS.—1. Yes. 2, Moist sand is best; sawdust generates fungus. 3, Don't allow the roots to dry out; immediate packing will best prevent this. 4. Leave a small bit of it projecting above the surface. 5, Two are enough. 6, Six to eight inches.

Blackberry Culture.

J. R. S., Benton Harbor Mich., has several acres of Blackberries which suffered greatly from drought last summer, and he thinks they would have been benefited if the roots struck deeper, and he asks the opinion of those who have had practical experience in the matter, as to the best mode of blackberry culture in spring with the view of causing the roots to penetrate deeper.

ANS.—Loosen the soil to a greater depth and apply a mulch. It is generally thought that Blackberries do not need manure. It is a great mistake. The finest we have ever seen were set six feet apart each way in a loamy sand highly manured. It occurred to us, while looking at the monstrous berries the canes bore, that could all see them they would change their views respecting the culture of Blackberries, as we did.

Wire for Trellises.

S. E. L., Brevard, N. C., asks what is the proper size of wire used for grape trellises, the cost per pound, the difference in price between common and galvanized wire, and a reliable house that manufactures it.

ANS.—Each of the different sizes of wire manufactured is designated by a number. Numbers 12 and 13 are suitable for grape trellises. Number 12 measures 33 feet to the pound; number 13, 42 feet. Number 12 costs

11½ cts. a pound; number 13, 12½ cts. Bought in lots of five bundles, a discount of 50 per cent. is given. Galvanized wire is the same in all respects, except that only a discount of 40 per cent. is given on five bundles. Each bundle of numbers 12 and 13 weighs 63 pounds. Washburn and Moen, 21 Cliff St., N. Y., sell the wire.

Miscellaneous.

J. S. M. W., Whitby., asks 1, are the corn premiums to be awarded according to the number of kernels planted, or from the number that grew; 2, in making out the average number of ears per stalk, should the actual number of stalks be considered or the number of kernels planted?

ANS.—The premiums will be awarded according to the number of kernels planted We announced this last spring when the corn was distributed. Some kernels were unsound, others small and broken, and the number of kernels sent to applicants was not the same in all cases, as this would have necessitated our counting the contents of each package. To obviate any injustice from this inequality in number, and to be fair to all, we stated that each competitor could reject all kernels he considered worthless, and in the report notify us of the number planted, which should then form the basis for awarding the premiums. 2. From the actual number of stalks.

J. M. G., Tullahoma, Tenn., asks, 1, for directions for cultivating the tea plant; 2, are leaves worth anything for fertilizing purposes, and which are best—oak or hickory leaves.

ANS.—2, This question will shortly be answered at length in the RURAL. 2, Dry leaves should not be used as a fertilizer; but when they have been composted for a couple of years and the heap turned three or four times in that period, leaf mold is formed, which, applied in liberal quantities, may be used as a fertilizer. It is an indispensable soil for pot-plants. Practically there is no difference between mold from leaves of Oak and Hickory. Gather either or both, as may be most convenient.

F. McM., Red Bank, N. J., asks 1, where he can obtain Dracæna stocks for propagating; 2, where he can get seeds of Pandanus utilis, Latania Borbonica and similar plants; 3, whether there is a variegated Heliotrope in the market; 4, how late will it do to plant Hyacinths and Tulips, and will they make any growth in the fall, if planted.

ANS.—Apply to Wm. Bennet, Flatbush, L. I., or to W. C. Wilson, Astoria, N. Y., for Dracæna stocks; 2, of J. M. Thorburn, 15 John St., N. Y. 3, We know of but one variegated Heliotrope and it is not a type of excellence. 4, They may be planted as long as the ground is open. They will make no growth above ground in the fall, but they will make a growth downward in formation of roots.

Rose Farm, Red Bank, N. J., referring to Abel, Hoyt & Son's sheep account, published in RURAL of Nov. 8, says he doesn't understand how the expenses for feed and care are got rid of, as no mention is made of that item in the statement of profits given.

ANS.—We presume that the $128.35 with which the flock of 18 ewes and one ram, is credited over and above the price paid for them, must be offset against their keep, which would leave a handsome balance of profit, after deducting the cost of the ordinary care and maintenance which, according to the statement, was all they received. The actual expense of keeping them, we shall be pleased to publish, should the Messrs. Hoyt furnish it to us.

G. R. B., Broken Straw, N. Y., asks, 1, whether grass seed would "eatch" better, if dragged in after sowing winter wheat; 2, if it would injure the wheat to do so in the spring; 3, is there any sure way to get rid of Canada thistles where there are but a few; will repeated cuttings kill them.

ANS.—1. Yes. We drill in our wheat and sow timothy and clover and then roll. But this might not prove advisable if the land is clayey. 2. No. 3. Yes. By repeated cutting. Where there are but few, it is as well to dig them up carefully.

B. A., South Lowell, Ala., sends a part of a plant and asks for its name.

ANS. Eupatorium fœniculaceum.

H. H. L., Selden, L. I., asks where seed of Jerusalem artichoke can be had.

ANS.—From any large seedsman. Peter Henderson, 35 Cortlandt St., N. Y., sells strong tubers for 25 cents per quart.

Various.

WHAT OTHERS SAY.

BUTTER MAKING.—The Earl of Bessborough has issued a letter to his tenants in Ireland, which is full of useful hints. We reproduce the following: "For the information of those who have not yet been able to make good butter I offer the following suggestions: Have a separate room for your milk, well ventilated, but not too light, far away from stable, piggery, or manure heap. The floor should be of flags, tiles, or concrete, very close and evenly made, so that it can be easily washed without leaving any substance behind likely to create a bad smell, as it would be injurious to your milk and butter. Clay floors are very bad. Be sure not to use your milk room for any other purpose than your milk and butter. Wash the cow's udder before milking, and your own hands before commencing with each cow. Use the finest hair strainer you can get. Keep all your milk vessels scrupulously clean; never use soap in cleansing your milk vessels, nor even in washing your hands, when engaged with your milk or butter. Do not keep your milk too long standing before churning. Twenty-four to thirty-six or forty-eight hours, according to the temperature of the weather, will be enough. Avoid all touching of the butter by the hand. Use the best salt, made very fine. Wash and press all the milk out of the butter before salting, using plenty of cold spring water. You cannot be too careful about this. In packing in firkins, get the best you can of well-seasoned oak, beech or ash, clean-looking and smooth on the inside, and bring them clean to market. In preparing your firkins let them be filled the day before wanted with boiling water, let stand until cold, then rinse with clean cold water, into which a couple of handfuls of salt have been put. This will make your firkins sweet and staunch. Pack your butter in the firkin as closely as possible, and send it to market as soon as you can. Let cleanliness be your constant care, from the milking of the cows until you bring your butter to the market."

SEED CORN.—Rarely do farmers question the quality of the seed they use, though oftentimes it would be profitable to discard the seed at hand and purchase anew, even at a high price. In Dr. Sturtevant's experience, as given in Land and Home, he has had crops of 55 bushels and 410 bushels of shelled corn per acre from the same field; one half planted with seed from one source and the other half with seed from another source. He asserts emphatically that the most important, and the most difficult to attain, of all the conditions necessary to secure a yield of 100 bushels of corn to the acre, is this one of good seed. In order to obtain it we must use seed which has come from prolific plants, and whose parents have inherited prolificacy from both sides. Of course, every one knows that the tassel bears the male element, the pollen; while the silk is the female organ, which is to receive the pollen and transmit it to the ovary. As the conditions are such that the plant seldom self-fertilizes, the importance of securing pollen from prolific plants is recognized as being in accordance with correct theory and sound practice.

In order to secure these practical conditions, the good seed must be bred. Just before commencement of the bloom—before the silk is ready to receive pollen—we should pass through the field and cut away every infertile stalk, or every one which does not bear distinct signs of large earing capacity. Thus, the pollen which falls a few days later, will be only from desirable plants—from plants bearing ears—as all others have been removed from the field.

WINTERING GERANIUMS, by those who are not provided with a greenhouse, may be done in a well lighted house cellar which never freezes. Take the plants up carefully, cut them back freely, so as to give a good future shape; place them in a shallow box about two feet square (a size which will hold a large number) and fill in perfectly and compactly among the roots with damp sawdust. Place the box against the largest and lightest window, and wet the sawdust two or three times during winter. If the cellar is cool they will grow but little; if warmer, they will make a small growth. It will be seen that the object is to imitate their condition in a greenhouse; giving light, moderate but sufficient moisture, and a temperature so low that they will remain nearly dormant. Early in spring start them in a hot-bed, and set out in open ground as soon as the season is warm enough. This treatment, after a number of years' trial, has never failed. It requires but little care or skill, and almost no labor except taking up. A brilliant elliptical bed, ten by twenty feet, was densely filled this year with plants wintered in this way. The directions we sometimes see to hang up the denuded roots in a cellar, will apply to those cellars only which happen to possess the right temperature and dampness, and will entirely fail in nearly all cases.—This is from the Country Gentleman. This plan of wintering Geraniums by hanging them up in the cellar, we condemned from the start: first, because it seemed senseless; second, because we tried it and failed. But we see that the plan is still advised by some country journals.

TOP-DRESSING.—"How much manure do you apply to the acre?"

"On an average, twelve loads."

"At what time of the year do you make the application?"

"I make it a point to have my manure evenly spread on my field just before the equinoctial storm. The rains carry into the soil all the ingredients that give growth power. Then comes winter, throwing its warm and fleecy mantle over the earth, which keeps the results of leaching there. When spring returns and the snow melts away, the grass quickly puts forth its blades, bearing a richness of green and thrift that I do not observe when the manure is plowed in, for the reason that in top-dressing, the nutritious elements of the manure are where they ought to be—where the roots can luxuriate in them. I find, too, that the soil holds the productive elements successfully for at least three years. My idea is that when manure is plowed in, a large share of its virtue never enriches that portion of the soil where the grass takes root. Manure leaches more than it evaporates; we want to enrich our soil, not our hard-pan."—Cor. Am. Cultivator.

ENSILAGE.—"I have the impression" says Prof. Arnold in the Home Magazine, of Ontario "that ensilage will not be likely to meet the high anticipations of some of its advocates. . . . When dairymen will adopt the practice of cutting the winter food for their dairies early, while it is in its best condition, instead of leaving it to ripen till it loses in value and digestibility because it will dry quicker, there will be little occasion for ensilage to improve the quality or increase the quantity of milk. For this purpose dried grass and other dried food, with such green roots as can be easily preserved, it is believed will be found cheaper and superior to the same material fermented in silos. Whatever the result may prove when fully tested, it will be the part of wisdom to move cautiously in its adoption."

FEEDING YOUNG CALVES.—"Young calves that are intended for dairy cows eventually," says Prof. Sheldon, in "Dairy Farming," should always be allowed to receive a sufficient quantity of milk for the first three or four weeks; after this period skim milk may be fed to them, but it must be improved by ground linseed, with ground wheat or oatmeal added. And these additions to skim-milk should always be boiled or steamed, and not given raw to the calves—not so much that they may possibly do harm in the raw state as that they are made more effective and more easily digested by having been cooked, and the food when it is given to the calf, should be at a temperature of 95 deg. to 98 deg. which is the temperature of the milk in the cow's udder."

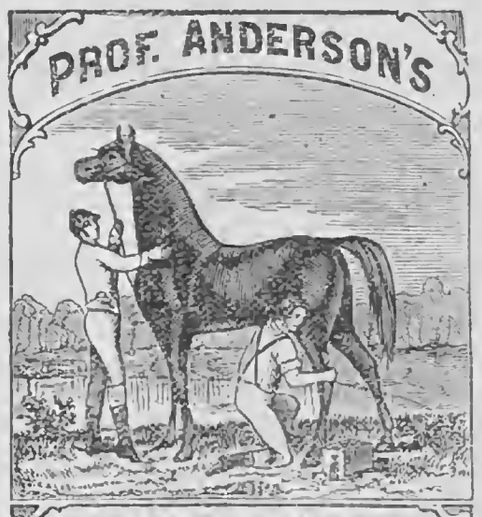
LARGEST YIELD OF WHEAT.—A short time ago, says the Indiana Farmer, Gen. John Gibbon, of St. Paul, made the assertion that one hundred bushels of wheat had been raised on an acre of ground in the Territory of Montana. The statement having been received with incredulity, he wrote to the president of the First National Bank, in Helena, for proof. In reply he received the certificate of the president and secretary of the Territorial Fair Association that one James L. Ray, of Lewis and Clark county, was awarded first premium for the best acre of wheat, being one hundred and two bushels to the acre. This is believed to be the largest yield of wheat on record.

IT IS AN ILL WIND, ETC.—J. J. Mechi, the well-known English farmer, says that farm implements are "dirt cheap," hardly salable at any price. A steam plow and apparatus, complete, £34—$164 56—a good mowing machine, 30s.—$7.26—his man saw them sold. "This is a rare time for a 'going-in' farmer," he says, "for we may reasonably expect some hot, dry, cracking seasons, when grain will thrive, even on undrained clays. Cheap rents, cheaper machinery and impliments, and cheap live stock, are all in favor of going-in tenants or expired leaseholders; so it is an ill wind that blows nobody good, but landowners are in a fix."

TWO AGAINST ONE.—We hear of a small but mean trick that has been practiced by certain grocers upon some of our readers who are marketing potatoes in this city. The dealer and one of his clerks assist in unloading, and both keep tally, as well as the farmer. When the load is measured out, the grocer and his clerk count up their tally marks and find that both accounts are alike and a few half bushels short of the tally kept by the farmer. As there are two against one, the latter has to accept the situation and lose the price of a few bushels of potatoes. This trick has been played so many times that farmers should be put on their guard against it.—Indiana Farmer.

The RURAL NEW-YORKER will be sent from now until January 1st, 1881, for $2.00.

GOOD FOR MAN AND BEAST



DERMADOR.

GOOD FOR MAN.

Inflammation of all kinds, Diphtheria, Wounds, Bruises, Burns, Sprains, Rheumatism, Sore Throat, Swelling of the Glands, Inflammation of the Eyes, Broken Breast, Frost Bites, Chilblains, Piles, Bee Stings and all sores.

GOOD FOR BEAST.

Fresh Wounds, Galls, Sprains, Bruises, Cracked Heel, Ring Bone, Poll Evil, Wind Galls, Spavins, Sweeney, Founder, Lameness, Sand Cracks, Scratches or Grease, Mange, Horse Distempers, Etc., Etc.

Cures Garget, Sore Teats and Bags, and all Sores and Swellings in Cows and Oxen.

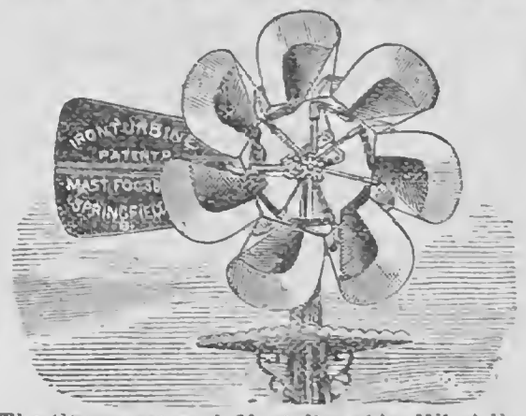
For more extended remarks and for a large number of testimonials voluntarily sent to us by the persons whose signatures are attached, we refer you to our Circular Pamphlet around bottle.

We would say to Livery Stable Keepers, make it a point never to be without this great remedy! It is a cheap, efficient and SURE medicine. With this "Dermador" there is no such word as "FAIL." It never blisters, but cools. Price 25 and 50 cents. Sold by all druggists.

D. RANSOM, SON & CO.,
BUFFALO, N. Y.

Halladay Standard.
VICTORIOUS AT
Phila., 1876—Paris, 1878
25 Years in Use.
GUARANTEED SUPERIOR
To any other Windmill Made.
17 SIZES—1 MAN TO 45 HORSE POWER
Adopted by the leading R. R. Co.'s and by the U. S. Govt. at Forts and Garrisons.
$3,500,000 worth now in Use.
Send for Catalogue "B" and Price List.
U. S. WIND ENG. & PUMP CO.,
Batavia, Ill.

NEW IRON TURBINE
WIND ENGINE



The Strongest and Most Durable Wind Engine in the World. Sold by Dealers in nearly every County. Inquire for it. Every Wind Engine Fully Warranted.
Send for Circulars, Price-List and information to
MAST, FOOS & CO.,
Springfield, Ohio.

WINGER'S IMPROVED
WIND-MILL FEED GRINDER.

Operated by pumping Wind-Mills. A novel and perfect feed mill for grinding all kinds of grain for stock and house use. Cheap, reliable and durable. Agents wanted everywhere. Also the old and reliable Stover, the well tried, strong, durable and self regulating, solid wheel WIND-MILL, which took the Centennial diploma as well as grand medal. Branch office, Greencastle, Pa. Send for catalogue to STOVER WIND ENGINE CO., Freeport, Ill. E. B. WINGER, Gen. Manager.

Eclipse Victorious
at Paris Exposition.
Awarded 1st Prize Medal over all others.
We build 17 sizes Wind Mills for Farm Pumps and Power Purposes
The strongest Wind Mill in the world.
Send for Catalogue No. 4.
ECLIPSE WIND MILL CO. Beloit, Wis.

$3 Printing Press
Prints cards labels &c, (Self-inker $5) 13 larger sizes For business or pleasure, young or old. Do your own advertising and printing. Catalogue of presses, type, cards, &c., for 2 stamps. Kelsey & Co. Meriden, Conn.

ADVERTISING RATES:

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, NOV. 29, 1879.

The RURAL NEW-YORKER will be sent from now until January 1st, 1881, for $2.00.

IF any of our subscribers do not receive the RURAL NEW-YORKER promptly, they will confer a particular favor by advising us of the fact.

WHEN the *size* and *quality* of this journal are considered; its accurate *illustrations* from *nature*; the *standing* of *its* world-renowned *contributors*; its *exclusion* of *untrustworthy* advertisements; its FREE PLANT and SEED Distributions; its *market* and SPECIAL Reports from all parts of our country; its EXPERIMENT GROUNDS; its independence of all merely personal interests, we submit that it is *by far the* CHEAPEST COUNTRY HOME JOURNAL IN THE WORLD. It will be sent from now until Jan., 1881, for TWO DOLLARS.

THE SUGAR INDUSTRY.

THE two main sources from which the world has so far drawn its supply of sugar, are the sugar cane and the sugar beet. A third source, however, and one that for this country promises to be far richer than either, has been fairly opened during the past year; we refer to the manufacture of sugar from sorghum. Never before has a farm industry been developed under more favorable circumstances, or been seized upon with so much enthusiasm.

It is not easy to imagine any industry the development of which would better meet an existing want, by profitably supplying from our domestic resources a product for which enormous sums are now annually paid to foreign countries. During the year 1878 the United States paid $77,537,569 for imported sugar and molasses, and were it not for the certain development of the manufacture of sugar from sorghum cane, this amount would increase rather than diminish with coming years.

The area along the Gulf of Mexico on which the sugar cane may be successfully cultivated is far too limited to produce the needed supply. Careful and intelligent observers have estimated that, even at the best, Southern resources could not furnish more than about one-fifth of the sugar needed. The manufacture of sugar from beets, which has become an extensive industry in France, has not, so far, proven very successful here. The expensive machinery and nicety of manipulation required to reduce the beet juices to sugar, are serious drawbacks to the development of the business in this country.

With regard to sorghum, however, the fact that sugar can be made from it in paying quantities has been established beyond a doubt by the past season's experiments. Crude as have been the operations, still the results have been almost uniformly satisfactory. The most encouraging feature of this cane is, that while the sugar cane proper will thrive in only certain portions of the South, sorghum cane will thrive over the whole country, and is more especially adapted to the North. The variety known as Minnesota Early Amber has so far given the best results; but improvements have already been made, and a cross between the Amber and Liberian varieties is now mentioned as being richer in sugar than either of its parents. Well grown canes, cut and worked up at the proper time, yield as high as ten per cent. of crystallizable sugar, which is equal to the quantity yielded by the average Louisiana sugar cane.

Its cultivation is so similar to that of corn that any farmer who can raise good corn can raise sorghum cane also. Nor is the cultivation expensive. It has been estimated that a crop can be raised at from $17 to $18 per acre, including the cost of drawing the cane to the mill; while an average product of ten tons per acre may be calculated upon, which, when sold to the mill, will realize at least $3 per ton. This is not a large profit, though it will compare favorably with the average of other crops, and if the cane is worked up at home, the profit will, of course, be greatly increased.

But if sugar is to be manufactured in telling quantities and on the most practical and best-paying basis, it must be done in large manufactories. The best machinery and expert sugar-makers must be employed to attain the best success. This point is fully realized by those who are best informed on the business, and more than one company is now being organized for the erection of proper works. The industry is now fairly started, and experience will suggest the improvements in the manufacture, that are needed to produce the highest attainable results.

WASTED TIME.

THAT which grieves the attentive observer most forcibly in regarding the young is the waste of time, the, careless disregard of precious minutes that are so lavishly thrown back into the past, heaping up the store of lost opportunities and making, later in life, that background of bitter reflection whose sorrowful thought finds expression in the wail, "it might have been." Rightly used, time is the most valuable possession of the young. It is the real Archimedian lever that prizes difficulties out of the path of success. System and application are the powerful fulcrums used to accomplish its important results. Aimlessness and lack of motive are the chief obstacles to the best and most profitable use of time. With a goal to attain, an end to accomplish, and force of character sufficient to hold the mind steadfastly to its purpose, the sands of time are easily transmuted into golden rain. Life is made worth the living, and an elation is felt only to be compared to that state of feeling which is described by Mad. de Stael as the gradually successful attainment to the object in view, and which, she says, is the secret of true happiness.

How much wiser, then, would it be if our country youth should earnestly resolve to cultivate their opportunities as sedulously as their fathers cultivate their farms. Instead of dawdling about the thresholds of taverns among associates whose influence is too often corrupting, let them resolve in the future to turn to the best account the wasted moments, and when their opportunity comes to them, as come it does at least once in a lifetime to all of us, be prepared to seize it and extract all of advantage it promises. This can be done only by preparing one's-self in advance. An athlete does not rest supinely until the day he is to make the one supreme effort. He prepares for it weeks in advance. He utilizes the minutes. The men who have most distinguished themselves, have risen to power and fame against the friction of adverse circumstances. Elihu Burritt, "the learned blacksmith," found time during his work at the forge to master several languages, and surprised cultured Europe by addressing its chief learned body in Sanskrit. Hugh Miller learned the secrets of the old Red Sandstone in the capacity of a day laborer. While his fellow workmen idled during their mornings, he was actively at work finding out the *why* of the specimens and fossils his hammer disclosed. Lord Chesterfield relates of one of his friends, that he wrote a book of an abstruse character during the intervals of waiting for his wife to appear at breakfast. He utilized moments that we usually waste, and see the result! Wellington attributed his success to the fact that he knew the value of minutes.

Why not, then, profit by such examples? Consider what might be accomplished in a year, if the time now wasted were devoted to acquiring a knowledge of botany, and if farming is to be your vocation, consider how much better equipped you would be for its intelligent prosecution by thus investing your waste moments.

It is in the power of every one to improve, and it may almost be said that the young hold the future in their hands, to make of it and themselves what they will, if they but appreciate the power of system and application, and the value of a moment.

SUCCESS vs. FAILURE.

IF some one would present an infallible rule for success, it would doubtless be eagerly grasped by everyone. So valuable a thing would supply a universal demand; but, unfortunately, it is among the things not known. This fact, however, does not preclude our giving positive reasons for many of the failures which occur. To begin with primary causes:—not a few parents conceive the idea of educating their sons either in the occupation of the father, or in one of the learned professions, regardless of the capacity of the son. Following such a course strictly is doubtless fatal to the success of many a promising man, and he who is the admired darling of doting parents is frequently among the real unfortunates; for he is left either too weak to develop any abilities he may naturally possess, or too dependent to originate any schemes of his own. Of such a one little can be expected.

There is still another class who never compute the cost of any projects they may be about to enter upon; but rashly enlist in the boldest attempts, trusting blindly to fruitful results. These are generally vacillating in character, and rarely thoroughly test the merits of any single occupation. They seldom display any aptitude for real work, and never attain their ambitious goal. Life is a kind of lottery, in which only few can succeed, the majority living a hopeful but deceptive existence. Were we to consider nothing but results, comparing successes with failures, we should quickly discover some misguided efforts, and our fitting conclusion would be at least a reflection on the education of our subjects. By education we do not mean those vapid methods employed to give every child a few facts, but we comprehend the word in a deeper sense. It is that training which inclines the youth to expand his own resources, to rely on himself, and to adapt himself to circumstances without experiencing those hindrances which surely attend the uninitiated. Our rarest men have not been those bred in the lap of luxury; our poorest men have not all been prospered. The latter, however, can not attribute their difficulty to their associations. The fault exists in the actor himself, and can be referred to one of two classes—lack of energy or incapacity. These are deficiencies which can not be easily supplied. We assume—and our theory is no conjecture—that the proper discipline has not been rightly bestowed. Pages might be written on this neglect, but ill results can not be obviated until the cause is removed, and this we deem the field for home training.

STILL ONWARD.

THE rise in the prices of farm products during the past few months, while adding greatly to the aggregate wealth of the farmers of the country, has put a vast deal of money into the pockets of speculators who never worked a day in their lives, and many of whom look impudently down upon the class by whose toils they profit. A fair knowledge of the prices of farm products in the chief markets of the country, coupled with an acquaintance with the prospective relation of supply and demand, would have saved to our industrious farmers no small proportion of the sums that have thus found their way into the coffers of middlemen and speculators.

It is the duty of those who have the interests of agriculture at heart, not merely to spread abroad a knowledge of the best principles and practices of farming, but also to place before their friends the correctest attainable information by which they may be enabled to market their crops to the best advantage; for there is often as much profit made by selling produce wisely as by raising it well.

It was this motive that led us to secure the multitude of reports of crops and prices that have appeared weekly in the RURAL, and particularly in our special numbers, such as the Corn Number. For the same reason, also, we have from time to time given to our friends the results of our careful reviews of the most trustworthy calculations as to the crops and prices in every country whose products come into competition with our own. More deeply impressed than ever with the importance of this sort of information, by the current season's experience, we have resolved to place weekly before our readers, in future, correct reports of the prices of farm products in the chief markets of the country, as telegraphed down to the latest possible moment before the paper goes to press. In connection with these reports special attention will be given to summarizing all information with regard to the condition and prices of crops in other countries in so far as they may be likely to affect our farmers' profits from their products. Any other circumstances, also, foreign or domestic, that may bear on the same subject, will be duly noted whenever it comes to our knowledge.

By means of the various reports, each of our readers everywhere, or pretty nearly everywhere, will be able to see at a glance the condition of the market at the collecting center to which his district is tributary, and to compare the prices there with those at other centers: while a remembrance of the accompanying week-by-week notes with regard to crops, markets, prospects, etc., elsewhere, will help him materially towards deciding intelligently as to the advisability of holding on to his products or marketing them at once, and sometimes, also, as to what prospective crop is likely to pay best. Thus each of our friends may justly take our own motto, STILL ONWARD.

PEARS UPON ORNAMENTAL QUINCE.

WE have more than once touched upon the question as to whether it was or was not desirable to use the Ornamental Quince a sa stock for dwarfing the Pear, instead of the common Quince, and have advised a trial in an experimental way. One of our first nurserymen writes us a personal letter, from which we are at liberty to print the following:

"I do think this talk of W. C. Strong about Pyrus Japonica as a stock for Pears is much cry about very little wool that is worth anything. The fact is the Pyrus Japonica suckers to a very serious degree. We have grafted choice varieties of P. Japonica on the parent, and have invariably found them almost ruined in a few years (two or three) by suckers. The same fate has attended the growth of grafted Pyrus Japonica imported from Europe. Nurserymen, therefore, grow the Pyrus Japonica almost universally from cuttings. They do not want the suckers of an inferior stock to injure the value of a superior graft. I do not say that nurserymen generally are aware of this difficulty. The cheapness of the system of growing by cuttings is sufficient. But intelligent, experienced growers should recognize the fact that a plant that suckers like the Pyrus Japonica, is unfit for a stock on which to graft Pears. The continual cutting of suckers would be a serious bar to their usefulnesss. At any rate, people should be warned not to make extensive experiments in grafting Pears on Pyrus Japonica with any assurance of success."

IN a week or so we shall present a full first-page engraving of the so-called Southern Cow Pea, drawn from one of the varieties raised at the Rural Farm the past season, and a very interesting account of Cow Peas in general by Dr. A. R. Ledoux, Director of the North Carolina Experiment Station. In the course of this article Dr. L. says: "I trust that some Northern farmers may be induced to make a trial of this crop and prove to be true what I *firmly believe*—that some varieties of this valuable plant will thrive and ripen seeds in the Middle States. If so, then will the agriculture of sandy Long Island, of Connecticut, Central New York and New Jersey receive an impetus that will be surprising. The outlay for commercial manures will be materially lessened, and *once understood*, the Cow Pea will maintain a hold on the intelligent Northern farmer, second only (if at all) to clover."

THE friends of the RURAL NEW-YORKER are respectfully reminded that the present is the *harvest* of rural journals. We hope that they will kindly tell their friends *just what they think of our work during the present year*, and that they will in this way assist in making *our* harvest *just what it ought to be*—neither more nor less.

BREVITIES.

IF this world were only as full of love as it is of beauty!

FARLEY and Anderson have sent us a box of fine Duchess grapes for which they will please accept thanks. We shall notice this Grape more at length in another issue.

PROF. Johnson finds that the greater richness of sweet corn in albuminoids and fat is very decided as compared with other corn, indicating a higher nutritive value. Flint and Dent corns have practically the same composition, and Western corn has about the same nutritive value as Eastern corn.

FROM all parts of the country come reports that wheat has never made a greater growth than during the present fall. Let us bear this important fact in mind and see what the outcome will be. The acreage under it is very considerably larger than ever before, in many sections as much as from 15 to 25 per cent more.

IT pays now above all other times of the year to take care of the poultry. See that the houses are warm. See that their drinking water does not remain frozen over. Pour kerosene over the perches. Clean out the nests and supply them with clean straw. Dust sulphur in the nests. Supply them with sifted coal ashes and sand for dusting baths. Give them green food of *some* kind daily. Give them *sweet* food—it matters less what kind than that they get a variety. This is the way to make "winter layers."

PETTING BULLS.—"I have a thoroughbred Hereford bull" says I. T. S., in the Country Gentleman, "that is as gentle as a lamb, and I always petted him and never thought I was doing wrong. The fact is, animals are like men; some are made to mind through fear, others through kindness." That is our belief, as a rule. We have a young Alderney bull that has been petted from birth until of late months. Now there is not one of us that would feel safe to approach him without something to defend himself. Is not this the rule with Alderney bulls?

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

TOO LATE.

BY ANON.

ONCE your heart was mine, all mine,
Then I turned from you away,
Dreaming not the love you gave me,
I would crave from you to-day.

Weary years have left me, left me,
With a sad and aching heart;
Knowing now, too well, my darling,
I must live from you apart.

Yet I'm weary, still so weary
Longing for your smile once more,
For the old love that you gave me,
And I threw away before.

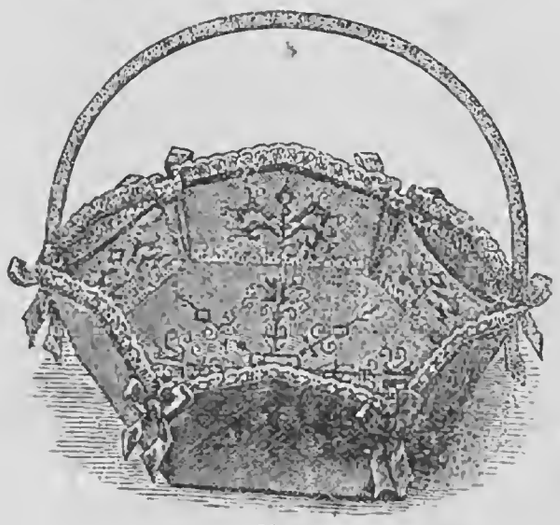
I have lived and waited, waited,
Hoping on from day to day;
Empty arms are reaching to you,
But you never come this way.

Now my heart is yours—all yours—
Ah! you turn from me away,
Wanting not the love I give you;
Loving some one else to-day!

DESCRIPTION OF CUTS.

NOS. 1 AND 2.—LAMP MAT.

THE mat measures nine inches in diameter. It is shown in a reduced size in No. 1, and the border in the full depth in No. 2. The mat is of cloth of two colors; an olive-green center with pale blue border, is pretty, or a dove-colored center with crimson border, looks equally well. The tassels which measure an inch and a half when finished, are of best fleecy wool tied with silk, combed and steamed, so as to give them as fluffy an appearance as possible. The border must be finely pinked, and laid over the center. The lattice pattern is of wool sewn over with silk; the cross and long patterns are of silk of two colors. The mat may be mounted on a foundation of cardboard or not, according to taste.



No. 3.

NOS. 3 AND 4.—WORK-BASKET.

For the foundation of the basket, cut two large hexagons, one of crash and the other of blue cashmere. Embroider the center of the crash with a design in cross stitch. Now cut cardboard to the shape of a smaller hexagon, and place it between the cashmere and crash, to make a firm bottom to the basket, tack the materials together to keep the cardboard in place. Next cut six pockets, embroider each with a cross-stitch design, line with blue silk or cashmere, and bind with ribbon at the top, sew these pockets into the point of the hexagon, fitting the bottom of pocket to one side of center hexagon (see illustrations), bind the edge of the basket with ribbon, and edge with torchon lace. The handle is made of a piece of whalebone, measuring 13 inches in length, covered with crash, embroidered with a narrow cross-stitch stripe; it is fixed to the basket with ribbon bows; lengths of ribbon are also sewn to the side of the basket to tie it in shape; notches are made in the diagram to show where the ribbons are to be placed.

No. 5.

NO. 5.—DOILY: CREWEL-WORK.

The dolly is of art canvas, with border and fringe of drawn threads. A spray of crewel-work ornaments the center.

NO. 6.—FOOTSTOOL.

The top of the footstool is of crimson cloth, embroidered with design in cross-stitch; it is cut in a circle of eight large scallops, measuring altogether in circumference 40 inches. The sides, measuring four inches deep, are of plush of the same color as the top, and are sewn to it, a crimson silk cord being sewn to both edges; a piece of stout black cloth or baize will serve for the bottom. The cushion must be well stuffed with wool or hair, and when finished, a cord like that on the edges is drawn tightly down between the scallops and over the outside, a loop of the same being left in the center by which to raise the cushion.

MOTHERS AS EDUCATORS.

MRS. T. H. GRIFFITH.

EDUCATION is holding the light up higher and higher, every year, saving its millions from the darkness of ignorance and superstition; schools and colleges dot the land North and South, East and West, books and papers flood the country bringing within the reach of all the richest thought from the most cultured minds, while science is continually crying out "Excelsior!"

Home education, however, is becoming a thing of the past, and mothers are forgetting their mission as educators of their children.

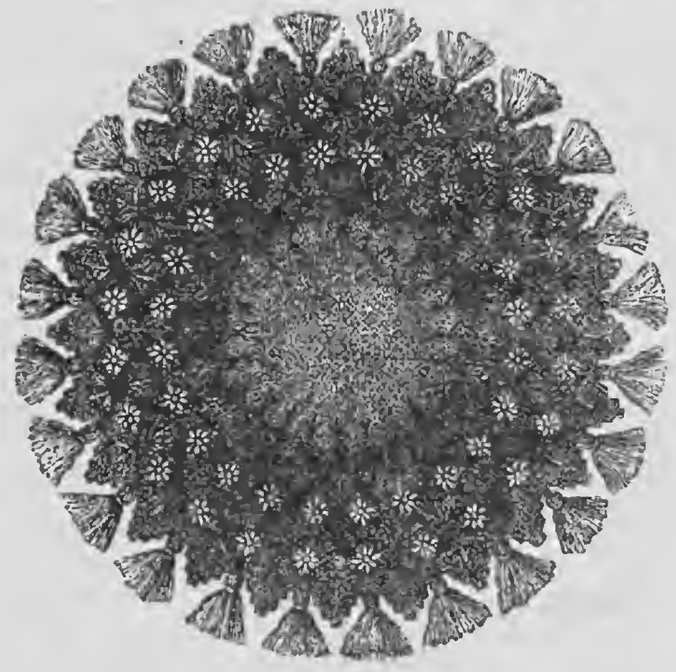
"But, we have so much to do," urges some one of these domestic burden-bearers, "what with keeping a nice table, and fixing the children up so they can look as well as anybody, and entertaining company, we haven't a moment of time to devote to their education. We pay for their tuition, and let them go to good schools where the teachers understand the system much better than we do."

Ah, my dear sisters is this all that is needful? Is there not an educating influence to be brought to bear on the minds and hearts of children, which no one can exert but yourselves? But how to accomplish these things? In the first place we mothers must educate ourselves, for if the instructor knows nothing, how shall she impart instruction to her pupil? It is natural that the child should look to the parent for precept and example, and imitate that which he so closely observes. A little couplet says:

Baby's skies
Are mamma's eyes.

How true! Let mamma get up in the morning with a cloudy temper, and worry and fret over the difficulties besetting her path, and baby lets fall a shower of tears directly, while Johnny and Minnie get behind the door to pout, and make things generally disagreeable. But if mamma rises with a smile on her lip and a song in her heart, what sunshine gilds the day with brightness. Baby sees the blue sky directly, and basks in the genial glow of the sunny smile, while the gentle tone, and brisk light step, make Johnny and Minnie feel like loving each other and all the world.

It is a true saying, that "our children are very much what we make them;" and the power of the mother, as an educator of her offspring, is almost unlimited. She is with them constantly, from the time of their birth to that critical time when they are in such haste to put away childish things and become men and women; and upon her devolves the power, in great measure, of developing them into true men and true women.



No. 1.

No. 2.

It seems to me that our girls should be taught, from the first, to care for their bodies; to regard them as not their own, to trifle with, and render weak and unfit for the sacred duties awaiting them in the years to come. A great lack of judgment is shown by the mother in the yielding to the earnest protestation against wearing overshoes, because "they make their feet look so big." Instead of strength of mind, weakness and pride of their natures, that boys should sow wild oats, and learn the ways of vice and corruption. I believe they are born with as great a spiritual tendency as girls, if it was *nourished*. But instead of providing for their uneasy, restless spirits at home, gaining their confidence and love by a well-directed sympathy, they are thrust out on the street at an early age, to pick up vicious associates, and wallow in the mire of evil inclinations.

course, but that's not the thing. How is Nellie to learn to make bread and cook potatoes unless you teach her. It will take a little time, busy mother, but you will have it back again in the years to come. Most children love to learn, and love to be useful; I have a little girl of eleven years living with me, whom I have taught to cook as well as to wash dishes; and although, sometimes, when she is mixing up bread, I ache to do it myself, I don't! She must learn, and if her pie-crust is a little tough, sometimes, and her bread not as light as it might be, she has learned the first principles, and only needs practice to attain perfection.

There is another scene upon which we must look. The girl enters upon the threshold of womanhood, casts off short dresses and dons trails, does up her hair, and makes ready for beaux and society. This is no doubt the most critical time of her life; the time when she is the most unteachable, and the least confiding, and consequently, the time when the instruction should be skillful and interesting. But instead of keeping her hands and head employed in household work, and good, healthful reading—the mother reading with her—encouraging letter-writing and good correspondents, and insisting on an early bed-going, she is given her time to dress and prepare for evening entertainments, from which she rarely returns until twelve and one o'clock; and is allowed to go with anybody she "takes a fancy to," regardless of the pernicious influence of the many characterless young men she mingles with. No wonder so many of our young women grow up weak and vapid, fretful and diseased. Mothers, realize your responsibilities! In these matters you are their educators.

With boys there is, if possible, a greater deficiency. There is an idea afloat that there is not as much expected of them, so far as morals are concerned, as of their sisters. If *they* go astray, if *they* sin, the world will look over it; society will wink at it, and laughingly say "Oh, Tommy will come out all right. He's a little fast, now, but he'll get married after awhile, and then he'll sober up."

It is considerd almost a thing impossible for boys to grow to manhood without doing things, which, if committed by a girl, would banish her from society, and in very many cases, steel the mother's heart against her. Oh, mothers, is not a sin a *sin*. Does God make a difference? It is not a *necessity*

"Ain't you glad it's a boy," said a woman when my little son was born, "he'll be out of your way so much sooner than a girl." "Out of my way!" Is it not as much my duty to teach my boy to cultivate a vigorous constitution and healthful impulses; to look forward to becoming a husband and father; to lay something by for a home and support; as to instruct my daughters in the like duties? Oh, mothers, awake to a sense of your responsibilities! "The night is far spent, the day is at hand." Let us watch over the souls of our children as those who must give an account of our stewardship, and that we may be enabled to see them grow up strong in the knowledge that shall never fade away; and then, when we are old and well-stricken in years, they will rise up before us, strong men and good women, and call us blessed.

SPECIAL ANNOUNCEMENT.

Rural from date to January 1881 for $2.00.

ARTHUR has just proposed to Clara and has been accepted.—Clara—"Dear Arthur, what pleased me most in your declaration of love, was the fluent eloquence with which you expressed your desires!"

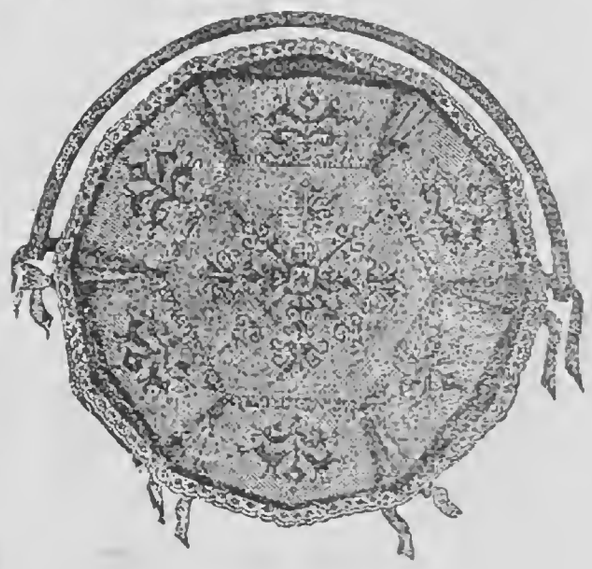
Arthur (forgetting himself)—"Yes, dearest, that is the result of long experience!"

SKETCHES OF GERMAN LIFE.

BERTHA A. WINKLER.

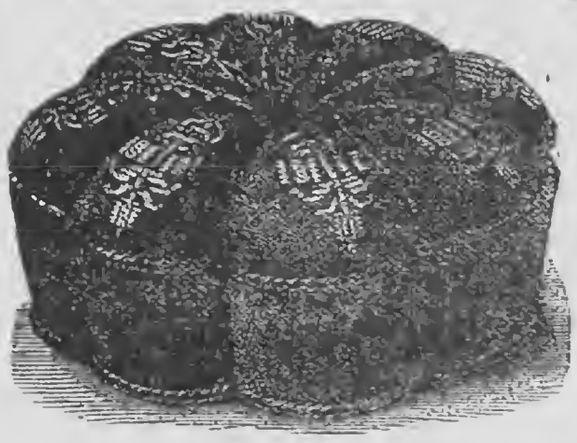
A Village.

WITH German soil beneath our feet, a clear blue sky above our heads, and the cool, bracing air of a lovely October morning sharpening our sensibilities to a keen perception of the new and beautiful around us, we started afoot for one of those numerous little villages which nestle in the bosom of huge, vine-clad hills along the Rhine.



No. 4.

The highways throughout Germany are either bordered with trees, hedges, or low stone banks. Here, the effect was singularly beautiful for stretching far into the blue distance, the white smooth road, lined on either side with fruit trees, looked more like a fashionable promenade than a lonely country road. Apples and pears were thickly scattered beneath the trees, and my companion observing a couple of demure looking children gathering them in baskets, very innocently proceeded to fill her satchel with some choice pears, when the sharp prolonged noise of a rattle reminded her that she was in Germany and liable to arrest and fine if discovered by the Feld Schutz (Field Guard), who is particularly zealous in exercising his authority upon any who may chance ignore or forget the presence of his important self. Many amusing incidents of cunning trickery and hair breadth escapes are related by youthful Teutons, who rather enjoy these dangerous exploits and evince a special relish for fruit captured under the very nose of this dreaded protector and guardian of the fields.



No. 6.

Whether the scattered trees and open unfenced fields and vineyards really require such stringent laws for their protection, or whether these laws are but another evidence of the peoples' subjection to a despotic government which forces its officials into every village and hamlet for the most trifling duties, I have not yet ascertained, the fact, however, that the peasantry are forever waging a secret war of words with these blue coated servants of the law, inclines me to favor the latter supposition.

I have found the German peasant a most liberal and warm hearted character. Whenever we passed a jolly group of apple-pickers their morning salute was invariably followed with an invitation to "help ourselves." Their manners, too, though crude, are far superior to those of Americans of the same station. Every clumsey Bauer (peasant) who came rumbling along in his huge wicker-wagon, piled with bags of potatoes and apples, doffed his triangle-shaped hat with a broad smile and a hearty "Guten Tag!" the very absence of polish revealing more plainly their simple, cordial ways,

their kind noble impulses and their unaffected friendliness toward all

After ascending a somewhat steep eminence, another quaint evidence of German hospitality, or rather thoughtfulness for the tired foot-sore pedestrian, presented itself to us in the sweet word "Ruhe" (Rest), hewn in a long, moss-grown stone seat. It was one of those rough but welcome resting-places which give these provincial highways an air of antique quaintness suggestive of primitive pilgrims and images of saints long since crumbled into dust. Surrounded as this seat was with a group of tall, slender poplars, whose silver-spangled foliage glistened tremulously in the morning sun, we yielded to the mute invitation to "rest," and gazed with silent admiration upon the broad highly cultivated fields, stretching away to the east; the huge, vine-clad hills crowned with some old ruin of historical or traditional interest, and the blue waters of the lovely Neckar rolling through a checkered landscape of luxuriant fields to join the Rhine. Over all this fell the soft October light, so that the entire landscape left upon us an indescribable impression of gentleness and peacefulness, and in the quiet scene around us we almost forgot that we were in a land where sweet Liberty was held imprisoned by the iron grip of Despotism whose galling yoke had long bent the proud neck of poor Germany.

Again the field guard's rattle, reverberating in a thousand echoes among the hills woke us from our revery and hastily resuming our journey we soon arrived in sight of the village churchyard with its white headstones lying in full view of the morning light. Passing the schoolhouse surrounded with shady trees and filled with restless inmates as the shuffling of feet and low hum and murmur from within indicated, we wandered along the village street which, save for a mischievous urchin contesting, with a flock of viciously hissing geese for the possession of a puddle of water in which he was lustily splashing his own brown extremities, was quiet and deserted. Farther on the stately *Rathause* with its massive barred doors, and the gray silent church with the kingly stork sailing around its lofty steeple, alone asserted their importance among the long irregular rows of queer quaint houses which stood directly upon the street, pavements or even narrow footwalks being unknown conveniences in the smaller towns of Germany.

After rambling through a perfect labyrinth of streets, an old weather-beaten sign of a golden ox swinging over the entrance of a barn-like structure arrested our attention. Doubtful, however, whether the sign advertised a slaughterhouse or the long looked for inn, we hesitated to enter, when a portly figure dressed in the well-known garb of a jolly German Wirth viz.: long white apron and round tassled smoking cap, appeared at the door and informing us with bows and smiles that the "Golden Ox" could offer the best of accommodations to his guests, hustled us without further ceremony into a large room full of tobacco smoke and beer drinking *Bauerstente*.

A DEFENSE OF THE C. L. S. C

In an article "For Women"—in the RURAL of October 25—headed, "His Method vs. Her Method," there is, perhaps unintentionally, a wrong impression given of the Chautauqua Literary and Scientific Circle, and its work. I have the good fortune to be one of several thousands who are engaged in that course of reading. The *list* of books given for this year's work looks more formidable to one who knows nothing of them, than the books *themselves* on our tables.

To make the matter clear to those who know nothing of Chautauqua methods, it should be explained that the "*Text Books*," instead of "constituting" other studies, are admirable little books with the most "systematic" arrangement of leading facts, review outlines, etc., which afford the best possible aids to the memory. They are the best representations I have ever seen of "*multum in parvo*" and are arranged especially for the Chautauqua work. Any one who has examined no more than Text Books Nos. 4 and 5, prepared by the honored president of the C. L. S. C., would know that "want of system" could only be attributed to him with the greatest injustice, even though they were ignorant of the great work in which he is engaged and its *system of systems*.

We count *literature* a part of the history of every people, so the first three books named form *one* study. The others are grouped in like manner. Three of the studies are continuations and a review of last year's reading, so there are but *three* new subjects for those who read last year's course. Those who commence this year will later on read what we had *last* year, and those subjects will then only be new in part to them. The "postal cards" comprise but a small part of our "reports," as those of us realize who have filled out last year's "memoranda."

The quotation given from the "official circular," like many a quotation taken apart from its surroundings, and what calls it forth, might produce unfair judgment, while in reality the words were "words fitly spoken" to cheer and encourage many a one unaccustomed to habits of study who would have otherwise been discouraged. I do not wish in the least to reflect upon the Boston Society for the Encouragement of Studies at Home; but if I understand the matter the C. L. S. C. with its broader platform and less rigorous requirements, reaches many thousands in our country who would otherwise not pursue *any* systematic, or even profitable course of reading, and who would not as yet select any one study for a specialty. It is *not* expected that forty minutes per day will enable "the student to perfect himself in the list of studies given," but it is expected it will provide for the careful reading of the books, and those who can give more time can, of course, do more thorough work. The four years course of reading will give a wider range of thought, a taste for better literature, and an incentive to higher attainments, to many a grateful member of the circle.

I need not say "*will*," for already is the leaven working, and although the circle has only begun its second year's work its good influence is far-reaching. After the "superficial" work of the four years, if we are not able to make it more than that, we shall, at least, have spent our time with good reading, and shall have discovered what study we prefer to make a specialty, and many of us no doubt will continue to be students for life, and may hope for some degree of thoroughness.

If any one who has not before known of this circle wishes to learn more about it, address, The President of the C. L. S. C., Plainfield, New Jersey. Hoping many new names may be added to the list of students at home, and wishing the highest possible success to *all* efforts for the encouragement of such work, I am very truly,

Chautauqua Co., N. Y. EUNICE E. TUTTLE.

DEAR MISS RIPLEY;—Thanks for Mrs. T. J. B.'s profession of friendship, which I assure her is duly appreciated, for are not the readers and contributors of the RURAL congenial friends, belonging to the same family circle?

Having rare vines on movable frames is a new and improved way of keeping them in a conservatory, and it would be well always to follow this plan.

In reply to E. H., on Hygienic Food—under Miss Maple's department—I agree with her that it would be well if we paid more attention to a subject that so closely affects our health and comfort. We are a nation of dyspeptics, the result of the over-indulgence of our appetites, of fast living and of our not taking sufficient time to masticate our food. I consider eggs, when baked in custards and pies, as indigestible as when hard boiled or baked I give below some recipes for pies and puddings, which are both healthful and digestible.

I consider the use of saleratus objectionable in all kinds of cookery, while at the Hygiene Institutions they discard the use of salt, and consider it a poison — I claim that it is when used to excess—but I would give the preference to it rather than to saleratus. Cannot some of our RURAL readers give us a substitute for the use of saleratus, and thereby help make our food more healthful and still as palatable?

I consider apple pudding one of the most simple and substantial of puddings, and it may be made in various ways, viz: Pare and core nice, tart apples and put them in a deep dish, make a batter same as for griddle cakes, pour over the apples and bake. This is to be eaten with cream or syrup, according to taste. Or line a deep dish with crust made as for biscuit, fill with apples, place on a top crust same as for pie; or take bread-crumbs soaked in milk as a substitute for a crust; pour this on top of stewed apples and eat with sauce. Next I would place

TAPIOCA, OR SAGO PUDDING.

Put one teacup of taploca or sago in three pints of water, let it stand where it will be quite warm, but not warm enough to cook; slice half a dozen good-sized, tart apples, then take one teacup of sugar, sprinkle in cinnamon and bake until it becomes a jelly.

BAKED INDIAN PUDDING.

Eight tablespoonfuls of Indian meal stirred into three pints of scalding milk; add one pint of cold milk, a large handful of wheat flour; when cold, add one egg, half a cup of molasses, or more if liked, and sliced sweet apples. Bake slowly for three hours.

CORN STARCH PUDDING.

Six tablespoonfuls of corn starch to one quart of milk. scald the milk and add the corn starch dissolved in cold milk; boil a few minutes, stirring briskly. This same may be cooled in molds.

SNOW PUDDING.

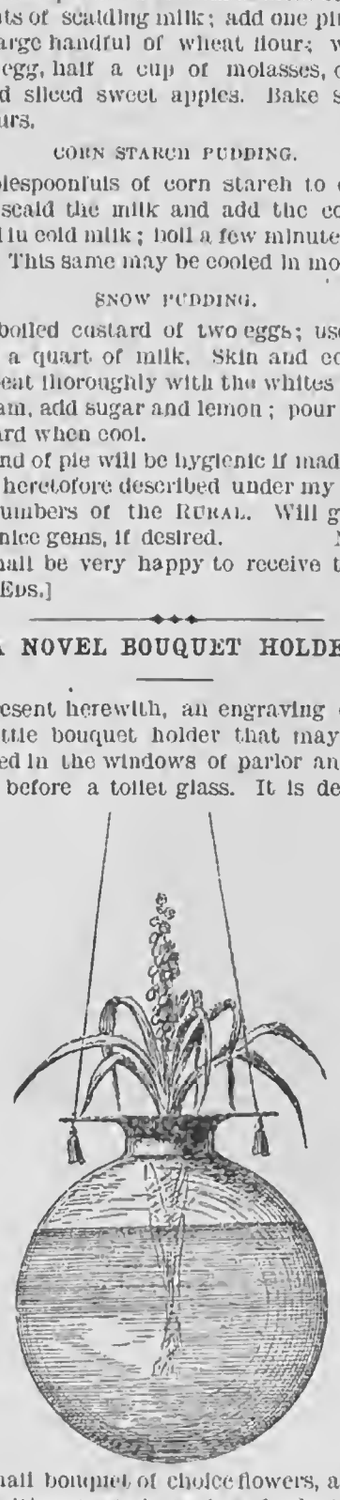
Make boiled custard of two eggs; use only the yolks in a quart of milk. Skin and core baked apples, beat thoroughly with the whites of eggs to a stiff foam, add sugar and lemon; pour this upon the custard when cool.

Any kind of pie will be hygienic if made of plain crust, as heretofore described under my signature in past numbers of the RURAL. Will give recipe for very nice gems, if desired. MARION.

[We shall be very happy to receive the "gem" recipe.—EDS.]

A NOVEL BOUQUET HOLDER.

WE present herewith, an engraving of a very pretty little bouquet holder that may be effectively used in the windows of parlor and sitting-room, or before a toilet glass. It is designed to



hold a small bouquet of choice flowers, and should be filled with water to keep them fresh. It is a ball of brown glass, of the kind used by sportsmen to shoot at for practice, and measures about three inches in diameter. This kind of ball can be obtained of almost any gun dealer at the minimum cost of about two cents a-piece. A tin flange is put around the neck to separate the strings, which gives it a more elegant appearance: but, of course, they can be obtained without this flange, if desired. Mr. C. P. Bauer of Edwardsville, Illinois, sent us the ball from which the drawing was made.

Literary Miscellany.

IN FOLLY'S NET

(Continued from page 759.)

CHAPTER XXI.

DIED FROM THE EFFECTS OF POISON.

THE ball at Glossin Castle on New Year's night took place in due course, and was a brilliant affair, but ungraced by the presence of Mr. or Mrs. Blair. Lady Sholto, who was looking forward anxiously to seeing Jean, was disappointed; and in answer to her inquiries, her Grace said she had received a few lines from Mrs. Blair, excusing their non-attendance on the plea of indisposition on the part of the owner of Blair Gates himself.

"I do not think it is anything serious," said the Duchess, carelessly. "Mrs. Blair speaks of slight indisposition; she would hardly do that if he were seriously ill."

But although at Glossin Castle they could speak so carelessly of Mr. Blair's indisposition, the household at Blair Gates were by no means easy on his account.

He had been taken suddenly ill in the morning, and there was something strange and mysterious in the illness, which made Jean anxious and uneasy in the highest degree.

They had had hard words the night before about a party at Sholto Hall, to which Mrs. Blair refused to go, and which her husband insisted on her attending. One or two of the servants had heard voices raised in violent altercation—his, cold, stern, menacing; hers, at first entreating, then passionate and menacing also. Nay, both Bransby the butler and Mrs. Brett had heard words of the bitterest anger, and, drawn to the door by the unusual discussion, they had both heard the young wife's last words spoken with cold, distinct menace in her tones:

"I am weary of this bondage! I will submit to it no longer! If you will not give me freedom, I will make myself free! I do not care for ignominy! If you will not liberate me, I will liberate myself without your help or any man's! I am not naturally a patient woman—you have made me a desperate one. So beware!"

And she had come out of the room with a strange, fierce glitter in her eyes, passed the frightened servants as if she had not seen them, and had gone up to her room with a slow, proud step, and her cheeks in a blaze of anger; and Mr. Blair had driven over to Sholto Hall alone.

When the carriage had driven away, Jean came down, white and trembling now, her passion gone; and she had gone into a little room where Mr. Blair kept a family medicine-chest, and which he used as a kind of laboratory, for he was fond of chemical pursuits.

"I am faint," she said, quietly, to Emily Brett, who met her at the door. "I am going to get something to take away the faintness."

She was not many minutes in the laboratory, and when she came out the bright, hectic flush was burning again on her face, and she went straight to her own room, locked herself in, and was seen no more until the morning—not even by Collins, who looked anxious and distressed at this unusual proceeding on the part of her mistress.

But the next morning Jean had come down to breakfast with the usual set, still expression on her face—the dull calmness habitual to her—and which did not change until, looking up suddenly at her husband, she saw his face contracted as if with pain, and that the usually bright, dark eyes were heavy and dull.

"Is anything the matter? Are you ill?" she said, hastily.

He made no answer, but rose from the table, growing very pale. Jean rose, too, in alarm, and crossed over to his side.

"Can I get you anything?" she said, gently. She was too much a woman not to be pitiful at the sight of suffering, even though she did not love the sufferer.

He put his hand heavily on her shoulder.

"No!" he said, faintly. "Stay here—by me!"

He sank heavily on a chair again, and his head fell against her shoulder. Jean stood still, supporting him, and in this moment of his weakness and suffering she felt her anger against her husband fade away, and pity stole into her heart.

In a few minutes he lifted his head.

"I am better," he said, slowly; "but I feel faint and stupid still. No, don't ring for Bransby—I hate men about me Can you find me some cognac in the sideboard?"

She brought him some; he drained the glass feverishly, and in a few moments his color came back, and he rose, shaking himself like a huge Newfoundland that has been in the river.

"All right again!" he said, cheerily. "I hope I did not startle you, Jean?"

She forced a smile, but made no answer; and a few minutes after he went away to have an interview with his steward; and Jean, going up to her boudoir, lost herself in one of those day-dreams which are half sad, half happy, and wholly useless and unwholesome.

Believe me, gentle reader, it is far wiser, far better, to make the best of what *is*, than to waste time over regrets for what might have been.

At luncheon-time Collins came up to her.

"If you please, ma'am," she said, "the steward has sent a groom to Glossin for Dr. Mackenzie. Mr. Blair is not well."

Jean started up.

"Where is he? In his room?"

"No, in the library."

"Why did they send for Dr. Mackenzie?" said Jean, angrily, meeting Mrs. Brett on her way to the library. "Mr. Powle is a much abler man."

"The master preferred Dr. Mackenzie," said the housekeeper, defiantly, and Jean was passing on, when she detained her.

"If you please, madam, Mr. Blair gave orders that no one was to disturb him," she said.

"I presume that such orders do not apply to me!" said his wife, haughtily, as she went on.

"Pardon me, madam," said Emily, coldly. "He begged you would not trouble yourself to go to him."

Jean's face flushed; she turned away slowly, and went back to her apartments with the angry feeling in her heart again.

Dr. Mackenzie came and went, without giving the patient any diet, or giving any opinion as to his indisposition; and in the evening Jean's anxiety grew unbearable, and she went to the library, notwithstanding the injunction against her.

To her surprise, she found that not only had Dr. Mackenzie returned, but that Mr. Powle was with him, and the two doctors were standing in the embrasure of the window in grave consultation. Her husband was lying on the sofa, ghastly pale, with his face drawn and shrunken with pain, his hands clenched. The housekeeper was standing beside him, holding a glass, but his head was averted from her. His own servant and the steward were standing near, looking anxious and disturbed.

At Jean's entrance, her husband lifted his heavy eyelids, and looked at her with reproach in his dim eyes.

"Why would you not come to me?" he said, faintly.

"I did not know you wanted me," she answered, kneeling down at his side.

"I told Brett to tell you," he murmured, putting his heavy hand on her trembling fingers.

"The doctors said you were not to be disturbed," spoke up Mrs. Brett.

He turned away with weary indifference.

"Mr. Blair will not drink this, ma'am," went on the housekeeper. "Perhaps you can prevail upon him to do so."

"It is no use," he said, angrily. "It does me no good. You torture me. Jean, tell them to leave me alone."

"It is for your good," Jean said, softly, feeling terribly distressed as she bent over him. "Give me the glass, Brett."

She gave it at once, and as his wife held it to his unwilling lips, he smiled faintly.

"Some wretched poison or other," he muttered; and Jean uttered a little cry of alarm, which brought the doctors to the side of the couch.

"You do not like the word?" said Mrs. Brett, coolly. "How your hand shakes, madam!"

"Shall I send to Edinburgh for further advice?" Jean said, softly, as she saw her husband sink back heavily on his pillow, and a bluish-violet tinge come round his lips through the ghastly pallor of his face.

He lifted his heavy eyelids once more.

"Do you want me to live?" he said, feebly. "Will not my death set you free?"

She shivered.

"Hush!" she said, pitifully, "I cannot bear that now."

"Now, because I am dying," he said, bitterly. "Does your hatred die with me, Jean?"

The doctors glanced at each other with a significant look, which Mrs. Brett caught as it passed from one to the other.

"Oh, hush!" said Jean, with a sob, and, unable to meet the grave, cold displeasure in his glance, she dropped her head on the pillow by his side, and hid her face.

Slowly the night hours wore on. Mr. Powle went away, but Dr. Mackenzie kept watch by the sofa; the breathing of the sick man grew thick and slow—he seemed unconscious of what was going on around him; Jean, white and shivering with terror at the sight before her, crouched by the sofa, her large eyes fixed with horror on the drawn, discolored face. From his chair by her side Dr. Mackenzie watched her closely, and the housekeeper's dark eyes never left her master's face, except to go to his wife's.

Once the heavy eyelids unclosed as if with an effort, and the dark eyes went thirstily to a carafe of water on the table The doctor rose and poured out a glass, giving it to Jean; but Mr. Blair made a feeble movement of impatience

"Not from her—not from her!" he said, in a slow, thick, stifled voice; and his wife shrank back with a faint cry of terror.

Dr. Mackenzie's face changed, and he looked up at the steward with a very meaning glance. He took the glass from Jean's shaking hand, and held it to the dying man's lips.

"Why not from her?" he said, in a low tone.

"She—she hates me!" muttered Mr. Blair; then his eyelids fell again, and the shadow on his face deepened.

"This is terrible!" said Jean, staggering to her feet. "I cannot bear it—let me go!"

"Your place is here, Mrs. Blair," said the doctor, gravely.

"But I cannot bear it!" she said, in irrepressible terror. "Let me go!"

"No, stay!" said her husband's voice, with sudden energy; and she sank on her knees again, with her hands clasped convulsively in her terror and distress.

"It is cruel to keep me here!" she said, passionately. "You will kill me!"

Again the doctor and the steward exchanged significant glances, but said nothing.

The silence grew terribly oppressive; the watchers seemed to hold their breath as they waited, and the awful stillness had such an effect on Jean's nerves that she had a difficulty to keep from screaming aloud.

The long winter night passed on, and just before the day broke, the dying man opened his eyes, staring before him with a look of unutterable hor-

ror, rage, and despair; then it faded slowly; a faint smile softened the rigid curves of his lips, his heavy hand felt feebly for his wife's bowed head, then his eyes closed, a long shudder went through his frame, and all was over.

"He is dead!" said Dr. Mackenzie, raising quietly; and while the housekeeper bent down and closed the staring eyes, a terrible cry broke from Jean as she tottered to her feet.

"It is all over," repeated the doctor, quietly, looking at the young girl with close attention, noting the marble pallor of her face, the awful horror in her dilated eyes. "You are free now, Mrs. Blair."

"Yes, free from her bondage!" cried the housekeeper, bitterly. "Even her hate must be satisfied now."

Jean looked at her vacantly as she moved away; all her senses were confused by the sudden and awful death she had witnessed. She pressed her hands to her brow, and with wild, haggard eyes, shivering and trembling, she went to the door.

"Yes," repeated the doctor, distinctly, "even hate must be satisfied. He has died from the effects of poison."

"No—no—no!" cried out Jean, in a voice of such shrill horror and anguish, that it rang through the room with startling distinctness; and putting her hands before her eyes, as if to shut out some horrible vision, she staggered forward a few steps, then fell heavily to the ground, striking her head violently against a heavy piece of furniture as she fell, and losing all consciousness.

So the New Year's night passed at Blair Gates sadly, wearily, slowly, and the second morning of the year found the master lying cold, silent, still, in the library, "dead from the effects of poison," while in her room above, Jean Blair lay unconscious of all that surrounded her, and never opening her lips, save to utter wild, raving words of delirium and horror.

In the evening, Collins, who had dispatched a messenger to Sholto Hall, was sitting by her mistress's bedside, her heart heavy, with a foreboding of evil which cast a dark shadow upon her. Her attendance on her mistress had prevented her from knowing what terrible suspicions were being entertained in the household below, or what horrible insinuations the housekeeper was letting drop, or her heart would have been yet more heavy, and that little gleam of hope, which would shine through the darkness, would have been extinguished forever. Her young lady was free now, and when her mourning was over, those happier days would come to her, bright with the sunshine of the Earl of Ivor's deep love.

"Collins," said a faint voice from the bed; and the maid hastened to answer.

"Yes, Miss Jean." Whenever her mistress was ill or in trouble, she became "Miss Jean" again to Collins.

Jean put out her hand, and grasped her maid's wrist with her little burning fingers.

"Collins," she said, hurriedly, "do they say there will be an inquest?"

"Yes, Miss Jean."

"Oh, Heavens!" and Jean sank back on her pillows with a cry of anguish so keen that it went to the servant's heart.

She brought her mistress some restorative, but the girl turned away from it impatiently.

"Must it be" she said, fixing her glittering eyes on Collin's face—"must it be Collins?"

"The examination? Yes, Miss Jean," she answered, wondering at the agitation which shook her mistress' frame

"It must be prevented. It is too horrible!" shuddered Jean. "I could not bear it, Collins. I am sure he would not have wished it," said the maid, soothingly.

"Collins," said Jean, after a moment. "go down to Dr. Mackenzie, and ask him to come to me."

"You are too ill, dear Miss Jean," remonstrated Collins.

"No; I must see him?"

Collins left the room, and Jean lifted herself from her pillows with feverish strength. Her horror of a *post-mortem* examination was extreme; she could not quite account for it, but it weighed upon her like an awful nightmare, from which she could not escape.

When the doctor came to her bedside she spoke with feverish rapidity and earnestness.

"Dr. Mackenzie, my maid tells me you think it necessary to hold an inquest," she said hurriedly. "The idea is so very dreadful to me that I am prepared to make any sacrifice to prevent it."

"To prevent it, Mrs Blair!" he exclaimed. "It is impossible!"

"I will give money—anything you like! I will give a thousand pounds," she said, in pitiable entreaty. "Don't you see that the very thought is killing me! Take my whole fortune if you will, only spare me this awful trial!"

"This is most extraordinary," he said, "It is impossible, Mrs. Blair. Do you know to what suspicion such a request will make you liable?"

She did not appear to heed.

"Will you stop it? Oh! Dr. Mackenzie, I have borne so much—this seems so horrible—it fills me with horror. I would sacrifice anything to put a stop to it!"

"It is utterly impossible, Mrs. Blair," said Dr. Mackenzie, rising. "It must be done. Nothing can prevent it. It is but right in the interest of justice," he added, gravely.

"In the interest of justice!" repeated Jean, looking at him with her pale face, and her eyes full of horror, and an undefined dread; and with a terrible cry, which brought Collins to her side, the unhappy girl fell back on her pillows and her senses fled.—To be continued.

ANNOUNCEMENT. — The closing paper on "Philately," will appear in RURAL of December 6. It will treat of the selection of an album; the mounting of stamps, and a description of the materials used for that purpose; how to avoid counterfeits; where to buy genuine stamps, and conclude with general advice to beginners.

A "CRICKET" THAT SHOULD BE NEAR EVERY HEARTH

Is the "RURAL" Cricket Clock (Premium No. 82) which is here illustrated at one-quarter its actual size. This clock has three conspicuous merits, its accuracy, its thorough and durable construction,

and its beauty. The case is a single piece of copper, stamped out in the form as seen. It is then heavily nickel-plated, and the works (which run thirty hours) are securely fastened and covered by a dust-proof metal back, hence it is impossible for any injurious substance to enter them. The winding and setting are done by turning little buttons. This handsome clock is given by THE RURAL for only five subscribers at $2.00 each.

HITTING THE PRINCE OF WALES.

The Sharp Rebuke of Canon Wilberforce.

CANON WILBERFORCE, however, has used an incident which occurred just before the Bernhardt departure to point a moral and adorn a tale, and in a powerful sermon preached at Westminster Abbey he inveighed against the laxity of morals prevailing in the present day, and alluded to the Bernhardt in the following terms:

"It was a strange commentary upon the blending together of the world and the Church * * * to witness during this past season at the Albert Hall that wonderful gathering representing the wealth, the beauty, the high birth of our land, engaged, mark you, professedly in the godlike work of charity for the purpose of aiding the poor foreigners of London; and there, side by side with England's proud nobility, sharing, if not monopolizing, the homage of the representatives of royalty, might be seen a certain talented unmarried foreigner with her son openly by her side. Why, we dare to ask in grief and astonishment, does society tolerate now that which it would not have dared to tolerate in the days when the Consort of England's Queen was living? Why is vice permitted now to flaunt her painted cheeks in open day?"

This is rather plain speaking to H. R. H. the Prince of Wales who attended the Albert Hall Bazar, and brought his wife with him to help him in throwing his £5 notes right and left with a reckless prodigality which called forth from the Comodie Francaise ladies the oft-repeated eulogium, "Oh, qu'il est genereux!" No one can blame the Princess for going—very much against her inclination, I am told—to patronize, or be patronized by a lady who, though possessed of undoubted talents, has no more sense of propriety than to openly bring her illegitimate son into good society.

If the Prince and Princess had not happened to be there, Belgravia would have been shocked long before Canon Wilberforce called attention to the circumstance from the pulpit. I hope the Canon's plain, courageous, outspokenness won't interfere with his chances for a Bishopric; royal personages sometimes have inconveniently long memories.—*London Letter in Philadelphia Telegraph.*

ALL ABOUT ONIONS.

THERE are persons who have stomachs that will digest onions; but their asserted wholesomeness, cooling and tranquillizing qualities, gentle action on the liver, etc., is all nonsense. Some persons make themselves believe that they are wholesome because they like them, but to a man or woman with an average digestion they produce nothing but indigestion, wind in the bowels, and such an unpleasant breath as to be a nuisance to everyone who has not also been eating them. We have always maintained that they are not wholesome. However, a single onion may be eaten at dinner with relish as well as a single pickle; but there is perhaps no vegetable more misused than onions. We know housewives who imagine that they cannot make a good soup without onions, while all the effect is to flavor the kitchen and the house with their odor. In boiling them the very volatile and abominable onion flavor disappears entirely by volatilization in the air. Some people use them as a medicine for all diseases; when any one has a cold they are given fried or boiled onions to eat, and when the cold gets better of itself, as is the case with most all colds, the onions get the credit of it. Then they slice onions and apply them to rheumatic joints—in short, onions are used exteriorly as well as interiorly for most all kinds of common diseases, and it is to be regretted that some other less unsavory and inert article has not attained the reputation that onions have undeservedly reached.—*Manufacturer & Builder.*

RECENT LITERATURE.

The Temple. By W. O. PERKINS, MUS. DOC. For Classes, Conventions and Choirs. Boston: Oliver Ditson & Co.

This well-chosen name belongs to a new book of the composite order, being either a Choir Book or a Singing Class-Book, as you please to look at it It is not so large as full-sized Church Music Books, and larger than those made of late years for classes. It is, however, very well put together, and has the advantage of an *ante-bellum* price; being furnished at $9.00 per dozen.

Considered as a Singing School Book, it at once pleases us by the assertion in the preface, that "work, work, work" is needed in the class, and it provides for that labor most generously. It has 161 numbered exercises, most of them in the form of tunes, with words: about 75 pages of Glees, quite fresh and wide-awake, and 150 pages of Sacred Music, including a large number of Metrical Tunes, of Anthems, Sentences and Chants.

Considered as a Choir Book, we have only to reverse the order. The 150 pages of Sacred Music furnish abundant material for singing on Sunday, and the Anthems will serve as opening pieces at least for an entire year. The Glee collection furnishes just the practice that is wanted in rehearsals and social singing meetings.

In Conventions, the variety of music provided answers an excellent purpose.

CLAXTON, REMSEN & HAFFELFINGER, publishers, 624, 626 and 628 Market street, Philadelphia, will publish, November 25, "The Egotist; Essays of Life; Its Work and Its Fortunes; Its Joys and its Sorrows; Its Success and its Failures." By Henry T. King, member of the Philadelphia Bar. 12mo. Cloth. 270 pp. $1 50. In form, this book stands between Bacon's Essays and his Apothegms. In substance it is, as the author claims, an original book—very original—full of thought, and spicy. In the matter of style, it is written in good English—vigorous and forcible, condensed and to the point. On the whole, the work is manly, practical and well calculated to instruct.

MAGAZINES FOR DECEMBER.

HARPER'S MAGAZINE FOR DECEMBER: The Fortunes of the Bonapartes, with seventeen illustrations; The New York Cooking School, F. E. Fryatt, with six illustrations; The City of Atlanta, Ernest Ingersoll, with fifteen illustrations; The Palestine of To-Day, Dr. J. F. Hurst, with thirteen illustrations; The Iron Pen; A Poem, H. W. Longfellow; Sea-Drift from a New England Port, Lizzie W. Champney, with eleven illustrations; Blossoms; A Poem, Philip O. Sullivan, with one illustration; London's Glory and Whittington's Renown; A Ballad, with five illustrations; White Wings: A Yachting Romance, William Black, with two illustrations; The Connemara Hills; II., J. L. Cloud; Young Mrs. Jardine; A Novel, D. M. Craik, with three illustrations; A New and True Ghost Story; A Poem, James T. Fields; Will's Will, and His Two Thanksgivings, Rose Terry Cooke; Mary Anerly; A Novel, R. D. Blackmore; Editor's Easy Chair; Editor's Literary Record; Editor's Historical Record; Editor's Drawer.

NAPOLEON'S MARRIAGES.—The marriages of the Bonapartes play an important part in the story of their fortunes, and none of them were so significant and important as those of the Emperor. To one who, like him, looked upon the world as made for him, and upon laws merely as something which were good for him to impose upon others, it must have appeared that his two wives were admirably planned for his use. Josephine de Beauharnais was an ideal wife for a young and rising man of genius. She had everything which would appeal to a fancy like his, at once selfish and passionate. She had beauty, rank, the power of pleasing, and a certain indolent grace that promised an obedience reasonably free from jealousy. Up to the time that he mounted the imperial throne and seated her by his side, she was all that his narrow heart and boundless ambition could desire. But after the marvelous victory of Wagram had opened up to his fevered imagination still wider perspectives of dominion, he looked for another style of wife, and found her in Maria Louisa of Austria. Her blonde beauty, formed of pink and white color and roundly curving lines and the golden floss of a child's hair, appealed strongly to his jaded taste. He was not old, but, as he said to the Directory, "one ages fast upon the field of battle," and he wanted some such solace as this soft, unintellectual beauty (somebody has called it the Alderney style of prettiness) in his home, if such a word may be used of the Tuileries. Besides, he doubtless felt that an emperor should have an emperor's daughter to wife, and this was a young girl who had a hundred monarchs for her ancestors, and yet she would be gentle and obedient, and not argue with him or answer him, and would give him heirs. He was genuinely attached to her, and if he knew nothing about her, and had no premonition of Count Neipperg, it was all the better for him. She also was quite taken by storm with him, and for a while the novelty of being loved by an ogre—for such she had always considered him—was agreeable to her. But his tumultuous glory was quite too much for the daily food of such a human small being as the Empress, and she was doubtless relieved when the indignant soul left his body at Longwood, and she was free to follow her ignoble little heart and marry Neipperg.

Josephine would have had her revenge if she could have foreseen the course of history for even a few years. It is she, and not the pretty Austrian, who will be known forever as the wife of Napoleon. It is her statue that rises in marble in the public places of Paris. It is her name and those of her children that mark the great avenues of the metropolis—Avenue Josephine, La Reine Hortense, Boulevard du Prince Eugene. Though she was ousted remorselessly from a throne to make room for Maria Louisa, it was her children—the children of the creole proscript—who should become the tenants of palaces, and not those of her rival. The Duke of Reichstadt was to pass a youth of inglorious pleasure, and was to die before his prime, and leave no son to inherit his claims to empire; while the Beauharnais line was to stretch out like the swarm of kings seen by the Thane of Cawdor in his vision. Eugene, her heroic son, after the fall of the Napoleons, returned to the court of his father-in-law, the King of Bavaria, and became Prince of Eichstadt, Duke of Leuchtenberg, and first nobleman of the kingdom. His daughter, united to the son of Bernadotte, became Queen of Sweden; another became a princess of Hohenzollern, and a third Empress of Brazil. His oldest son won the hand of the Queen of Portugal, and the younger married a daughter of the Czar Nicholas of Russia. And whatever doubt might be thrown on the purity of the Napoleonic descent by which the Emperor Napoleon III. claimed the throne, he was unquestionably the son of Hortense, and was Beauharnais and Teacher-la-Pagarie beyond challenge. The grandson of Josephine, Louis Napoleon, ruled France in peace and with a sort of splendor for the space of twenty-two years, while the period of the first Napoleon's reign, counting Consulate and Empire together, was but fifteen—though so powerful was the personal imprint made by the uncle, and so vague was the individual character of the nephew, that the shorter reign seems like an age, and the longer like an episode.—*Harper's Magazine for December.*

GOOD COMPANY ($3.00 a year. Springfield, Mass.) Number Three. Three of the best known writers of really good short stories are represented in this issue; Mrs. Rose Terry Cooke by Doom and Dan, a characteristic specimen of her work; Miss Sarah O. Jewett, the author of Deephaven, by Good Luck, in her usual finished style; and Mr. Edward Bellamy, whose story is called Jane Hicks. There are also two sketches based upon characters in real life; Saved from Himself, and a Holly Leaf, which last savors of temperance and Christmas Both are written in an intense style. The most important article, perhaps, is An Answer to the Cry for More English, by Prof. A. S. Hill, of Harvard College, which will be of interest to all who are interested in educational matters, particularly such as believe in a more thorough training in English than is generally given. Prof. Hill's opinions should from his position have weight.

Mr. Geo. M. Towle's paper on Gladstone includes personal reminiscences of the great statesman as an orator, such as are always acceptable about distinguished men. Mr. Towle will have several similar papers in Good Company hereafter, including personal reminiscences in each case. The next will be about Gambetta.

Mr. H. P. Goddard has a sketch of the late Rev. Dr. Horace Bushnell, drawn largely from personal acquaintance.

Tales of the Civil Damage Law relates various cases that illustrate how far retail liquor sellers can be held responsible for the doings of persons when intoxicated by liquor they have sold.

Freethinking gets vigorous treatment at the hands of a freethinker.

Assaying in a New Camp is by Ernest Ingersoll, and an article on Opportunities West makes enough remarkable statements to satisfy the most enthusiastic westerner.

The Food of the Poor is by William H. Rideing, and Rev. Charles Caverno contributes The Judges and Crime.

The editorial articles and notices of new books complete the number, in which are included poems by Rebecca N. Hazard, Emily A. Braddock, T. S. Collier and Caroline A Mason.

SOME SPELLING BY CANDIDATES FOR ADMISSION TO HARVARD.—Many, a larger number than usual, spelled as if starting a spelling reform, each for himself. Of these vagaries specimens are subjoined, including vain attempts to reproduce proper names that were printed on the examination paper itself: —duells, jelosie, cheif, opposit, surprising, Collossus, compaired, repetedly, fourth (for forth), to (for too), thrown (for throne), ficle, white-winged angle, beaverage, broak, carrige, champaign (for champagne), insted, hailed (for hailed), endevors, sucess, preasant, and preasance, widly, wailing, differance, supereeeded, prepaired, comand, conspiritors, to finnish, avaritious, undoubtibly, graniather, peice, fashionable bell, writen and writtings, maniger (for manager), untill jovility (for jovialty), fictichous, couard and couardise (for coward), exhisted, origen and origonal (for origin and original), knceded (for needed), genious, marrid, mad (for made), wer (for were), cleaverly, differculty, existance, absent, olier, repare, ennoubling, ugrieved, of (for off), susceptable, proclamed, loose (for lose), principle (for principal), lead (for led), Rip Van Rincle, Adison and Adderson, Queene Ann, Macauley, Thackery, Steel (Sir Richard), Henery, Harries (for Harry's). Of these mistakes some are evidently much graver than others; but some of the worst were found in several books, and not a few are apparently due to an unconscious effort to represent to the eye a vicious pronunciation. Many books were deformed by grossly ungrammatical or profoundly obscure sentences, and some by absolute illiteracy.—[*Prof. A. S. Hill; Good Company, Number Three.*

Every honest voter is bound to take the ticket offered him and scrutinize it carefully, and erase every name of a candidate who is unfit to hold office. The fact that a worse man is running on the other ticket is no reason why he should vote for a bad man. He cannot excuse himself for doing wrong on the ground that if he does not do it, somebody else may do a greater wrong.—*Editor's Table; Good Company, Number Three.*

THE SATURDAY MAGAZINE.—With the number for November 29 this magazine completes its first year. In a notice written when only a few numbers had been issued, we confidently predicted its success, and our prediction has been verified. The magazine has been all it promised to be. The selections have been made with taste and judgment, and have covered a wide field, embracing History, Romance, Science, Biography—in fact, the whole scope of literature. It differs from most magazines in that its articles are, as a rule, complete in one number. There have been improvements in its appearance since the beginning, but we miss the "Amenities" and brisk editorials from the later numbers. The Saturday Magazine is edited by Fred. B. Perkins and published weekly at 11 Bromfield street, Boston, Mass.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

HOUSEHOLD COMFORTS.

L. E. K. T.

I do not know of any more serviceable home-made rugs than braided ones. With the colors well arranged, they may be made to look quite pretty. The strips should be cut coarser than for carpet rags, doubled evenly, and care taken to have the braid lie flat. It is best to sew the braids together as you make them. Make each color just go around, one, two, three or more times, as you choose, but do not let it lap past or fall short of meeting, for that gives it a "botched" appearance. It takes some time to make one, but when done, you have a good, serviceable article.

A pretty work basket may be made of odds and ends, which can be found in almost any household. Take a heavy paste-board box and sew some good stout cloth around it to keep it firm and in its place. Then take a piece of worsted, silk, velvet, or any other material you may have that will go around the box and cover it. This cover may be put on straight or plaited or shirred. I would suggest that dark brown drilling would make a good serviceable one, and look very nice too. The lining, which, by the way, should be in first, may be of any pretty color or stuff, that will go well with the outside. For a handle, use a piece of paste-board one inch wide, supported by an old hoop, sewed to each side and in the middle, these covered with some of the material used for the outside, and sewed to each side of the box. Pockets should be put in each end, and it is very convenient to have a little box for buttons made stationary. There should be a loop for scissors and a pin-cushion and needle-book, and all the other little conveniences which will suggest themselves. Dark-colored drilling is very serviceable for covering lounges for common use.

PLANTS, PICKLES, CARE OF CHILDREN, ETC.

DEAR RURAL SISTERS:—Here at my home in the city of Rochester, this 22d day of October, the Quinces are smiling from over the way, clothed in yellow and looking so tempting in the sunshine; and our Snow-flake potatoes are still to be garnered. We have dug a few for dinner the last few weeks, and how mealy they looked and delicious they did taste!

The Morning-glories are peeping in at me from the sitting-room window, and look as if saying: "We will have a good time while we can; for we feel Jack Frost is not far distant." The Geraniums I potted in September, were plunged into holes made in the ground just deep enough for each pot, taking care to put them in a shady place — being very careful to water them well until they had a vigorous, healthy appearance. They rewarded me for my care, and now everybody, on coming into my sitting-room, exclaims, the very first thing: "Oh! how beautiful your plants look—how did you manage it?"

The bottled fruit is keeping well in the cellar. I have twenty bottles of peaches and ten of plums, and a few of strawberries and other fruits. The pickles are all made. Beside the usual spices, I added some brown sugar which will make the vinegar stronger, and will prevent scum from rising to the top of the vinegar. I find that the only way to be a good housekeeper is to do as the man said when he met his friend, who went into raptures over the way he had tied his cravat: "Why you see, my dear fellow, I give the whole of my mind to it."

Don't imagine, mothers, that close attention to the details of domestic life is a drudgery unworthy of you; for the character of the next generation of citizens depends on how you feed, clothe and care for the young under your charge. Will you send out your children with good, sound, healthy bodies, and well disciplined minds; or by foolish neglect as to what they eat and drink, will you send into the world a puny, enfeebled set of men and women? See that your children do not get into bed with the clothes they have worn during the day. Strip them to the skin, and put good long, clean night dresses on them. Don't let them go unhappy to bed and to sleep; for children are sensitive, and a happy mind is of vital importance to the growth and proper development of the young. M. H. S.

DOMESTIC RECIPES.

To Scour Zinc.

Housekeepers will find that zincs may be scoured with great economy of time and strength by using either glycerine or creosote mixed with a little diluted sulphuric acid.

To Make Boots Water-proof.

Melt together four ounces of beef tallow, one ounce of resin, one ounce of beeswax. When cold add a quantity of neat's-foot oil equal to the mass. Warm the boots or shoes before a fire, and apply with a rag to the soles as well as uppers. Two applications will make them thoroughly water-proof.

To Restore Morocco.

Varnish with the white of an egg. Apply with a sponge.

Wax for Furniture.

Put one ounce each of white and yellow wax in a clean dish over a slow fire. When melted, take from the fire and add four ounces of spirits of turpentine. Stir until cold.

Varnish for Drawings.

Dissolve one ounce of good isinglass in a pint of water over a slow fire. Strain through muslin. Try first on a piece of paper. The mixture should be moderately warm. If the size glistens, it is too thick and should be thinned with water. If it soaks into the paper it requires more isinglass—it should merely dull the surface. Give the drawing two or three coats, letting it dry between each. Apply with a flat, camel's-hair brush, and be careful, particularly in the first coat, to bear very lightly on the brush. Finish by giving three coats with the best mastick varnish.

Glue.

The hotter the glue when applied, the stronger the parts glued together. As glue loses much of its strength by reheating, that newly made is preferable where great strength is required. It is a very good plan to add salt to the water in the outer vessel, for then the water will not boil until heated above the ordinary boiling point, and as a consequence, the heat is retained instead of passing off by evaporation, and when the water boils, the glue will be thoroughly melted. A little glycerine added to glue will prevent its cracking, and a small quantity of muriatic acid added to dissolve glue will keep it in that condition for some time—it will neither dry up nor ferment.

Liquid Glue No. 1.

Of the best white glue 16 ounces, dry, white lead four ounces, rain water one quart, alcohol four ounces. Put all but the alcohol into any kind of a vessel that may be placed within another vessel containing hot water. Stir until the lead and glue are dissolved then add the alcohol and continue the heat for a few minutes longer. Pour into bottles while hot.

Liquid Glue No. 2.

Or, fill a glass jar with bits of broken glue and cover with acetic acid. Set in warm water—gradually raising the temperature until the water is hot—until the glue is all melted.

Very Strong Glue.

Dissolve by application of moderate heat, one ounce of best isinglass in a pint of soft water. Strain through a piece of cloth and add an ounce of glue, previously soaked for a few hours in a small quantity of water, and a gill of vinegar. After the isinglass and glue are brought to a solution, boil up once and strain off the impurities.

Good Mucilage.

Of gum-arabic three ounces, distilled vinegar three ounces, white sugar one ounce. A small quantity of sulphate of quinine added to the solution is a complete protection against mold. Instead of the vinegar one part acetic acid, and five parts water may be substituted.

Paste for Hanging Paper.

Four pounds of good, wheat, flour, sifted, with enough cold water to make a stiff batter free from lumps. Thin it with cold water to the consistency of pan-cake batter and add two ounces of finely powdered alum. Have ready plenty of boiling water. Take from off the fire and pour gradually over the batter, stirring constantly. When it begins to swell and lose the white color of the flour it is cooked enough. This makes about three-fourths of a pailful of solid paste. Let it become cold before using. A pint or so of water over the top will prevent its skinning. Thin with cold water so that it will spread easily and quickly under the brush. Where great adhesiveness is required, such as in papering over a varnished surface, etc., add one ounce of powdered resin to each gallon of paste. Set the pan containing the paste over a slow fire, stirring constantly until the resin has melted. Reduce the paste with thin gum-arabic water.

Paste for Cleaning Brass.

Rotton-stone four ounces, oxalic acid one ounce, sweet oil one and a half ounce, turpentine to make a paste. Apply with woolen and rub with leather. A solution of oxalic acid rubbed over tarnished brass, will make the metal very bright, but it must be washed off at once and the article polished with whitening in powder and soft leather.

News of the Week.

MONDAY, November 22, 1879.

MISCELLANEOUS.

G. F. SEWARD, Minister to China has resigned. Some grave charges were, some time ago, made against him on the ground that he had used his official position to feather his own nest warmly and a trifle unjustly. His resignation has been followed by that of his cousin F. W. Seward, assistant Secretary of State, in Washington—the latter, it is said, having taken place on account of ill-health in the family. Col. J. Hay, formerly Secretary of President Lincoln, and later author of "Little Beeches" and various other popular poems, has been appointed to fill the vacant place.

It is said the Rothschilds will furnish one-third of the capital for the inter-oceanic ship canal down on the Isthmus, on condition that Gen. Grant becomes president of the company. Grant, however, says before moving in the matter he must feel sure that ample subscriptions will be forthcoming. He has had, during the past week, a magnificent ovation at Chicago, and all along the route from Galena, thither and back again. Wherever he goes, the people seem wild with enthusiasm for the silent "man on horseback." There is a good deal of newspaper talk lately about the South making him its candidate for President next year, as the best way to secure peace and restore public confidence by closing up that "bloody chasm." Talk, talk, and little more. A statue to the brave, skillful, patriotic soldier and true gentleman, Gen. G. H. Thomas, was unveiled during the week at Washington, in presence of the President, a large number of distinguished soldiers and civilians and a vast concourse of admirers of the dead hero.

The United States Supreme Court has just decided that there is no Constitutional authority by which the Government can grant to any individual the exclusive right to any special trade-mark. Well, there ought to be a valid authority for such a concession, so that a man or company might reap the legitimate reward of a long period of honest dealings, and to prevent the dishonest from foisting upon the public inferior goods sold under the trade-mark of honorable firms. For the first time in the history of the Government, the Secretary of the Navy has a surplus, and turns into the Treasury $1,500,000 out of the $13,000,000 appropriated for his Department. In the election in this State, Cornell, for Governor, has 40 172 plurality; Hoskins, Lieutenant-Governor, 1,130; Carr, Secretary of State, 4,411; Wadsworth, Controller, 7,659; Ward, Attorney-General, 7,909; Wendell, Treasurer, 4,651; Seymour, Engineer and Surveyor, 9,969. All these are Republicans except Seymour. Kelly's vote is 77,471. It must be borne in mind that Cornell's majority is due to Kelly's bolt from Robinson. Tammany Hall voted for the rest of the Democratic ticket; but although Cornell runs considerably behind his ticket in the number of votes actually cast, Kelly's help gives him a larger plurality than the majority of the remainder of his ticket. Seymour was popular, owing a good deal to his own character and not a little to his father's name; whereas Soulo, his opponent, was unpopular, as a canal trickster, and was bitterly opposed by the "Scratchers." By the way, these are about to maintain their organization, to increase their weight in future elections.

The government commissioners are having trouble out in Colorado in pursuing the Ute investigation. The Indians either lie incorrigibly or won't testify at all; it begins to seem improbable that the White River agency murderers will be given up. Ouray, the head Ute chief, who has hitherto done everything in his power to facilitate matters has suddenly grown morose and uncommunicative, and it now looks as if the war must go on. Gen Sherman says he believes the Utes are talking against time in order to postpone a decisive result until it will be too late in winter for military operations. He thinks the Indians really mean trouble and that the army must eventually be called on. Nothing can probably be done this year, but in the spring he says "We will make quick work of them."

Nothing could better mark hard times in San Francisco than the recent order from there for pennies received at the Philadelphia mint. Time was 20 years ago when a quarter was the least any self-respecting 'Friscan touched; then usage permitted the bit or dime, the hated nickel was admitted after a struggle, and now Californians count their cents in their small change like the rest of us. Three families and other persons numbering 18 in all have just arrived in New York from Liberia and been sent back to the Carolinas. Of 370 negroes who went out to Liberia by the ship Azor, only 60 are now alive in Monrovia, the rest having died or come back to this country. Yet the effort to induce colonization is still kept up. Twenty-four Chinamen were killed and a number of others were fatally hurt by three explosions in tunnel No. 3 on the narrow-gauge railroad between San Jose and Santa Cruz, Cal., this week. The new Washburn, A, flouring-mill, now building at Minneapolis, Minn., will be the biggest thing of the kind in the country, having a milling capacity of 2500 or 3,000 barrels of flour daily and a storage for 100,000 bushels of wheat. Corn is cheaper in Iowa this fall than in any other place on the globe, selling at 18 and 20 cents at the depots, and 10 and 15 cents at places distant from the railroads. It is reported to be very ripe, sound and sweet, and there will be 150,000,000 to 200,000,000 bushels, not one-sixth of which can be shipped out of the State. The commissioner of internal revenue reports that the government has lost $11,000,000 revenue by the reduction of the tax on tobacco and the consumers have gained nothing.

FOREIGN.

The death ratio in England among infants of the "comfortable class" where light, air, heat and food are all provided for the tender life, was recently put by Dr. Drysdale, an English authority, at 80 per 1,000. It is somewhat smaller in the highest classes, where all the resources of great estate are used to keep alive the young heir or possible heiress. Taking all classes, however, in places like Liverpool or Manchester, the rate rises to 240 or 300 per 1,000. King Alfonso's marriage is definitely fixed for the 27th. The Archduchess Marie Christine stopped off at Paris last Wednesday on her way Spainward to call on ex-Queen Isabella. The Spanish papers are announcing in a cold-blooded way that the ceremonial at the marriage will be "precisely similar" to that at the first nuptials of the young king. As the New England woman said, when the parson handed her a marriage certificate uninclosed and folded simply: "I allus has had 'em in an envelop." Meanwhile, the world's large-hearted charity is coming generously to the relief of the wretched survivors of the southeastern Spanish provinces which have lately suffered from inundation, especially Murcia. Crops, houses, vineyards, inhabitants, nay, the very soil down to the bed-rock have been swept away by the on-rushing waters. More generously than all others has France come to the relief of the afflicted, and the Spanish government has specially returned thanks for the god-sent French charity which knows no national frontiers.

There seems a growing *probability* in Europe tha Russia and Great Britain will soon settle their differences by the crucial arbitriment of arms. Russia boasts—whether she thinks so or not—that she can whip England in India; while the latter believes that having had full command of the vast resources of that empire for half a century nearly, she can bid defiance to a hostile world in that quarter; nay, that she can summon the innumerable legions of her Eastern subjects to adjust the balance of European power in favor of her Western children. This she did when, during the Turko-Russian war, there was a probability that she would become embroiled in the trouble. The possibility—probability—of the outbreak of such a war, however, has revived the operations of Russian merchants and citizens, in contributing from their private resources towards the building of a fleet of privateers to prey on English commerce. The committee which has charge of this enterprise had raised $2,500,000 at the close of the Turko-Russian war, and subscriptions since then amount to $900,000. As a hand-book for the officers in command of the five vessels purchased by this committee, a condensed account of the cruises of the Sumpter and Alabama has been published in Russian. An abstract of this publication given in an English paper furnishes very interesting reading to ship-owners under the British flag, although the danger is rather hypothetical. Insurrection has broken out afresh in Cuba. The prospects of a splendid sugar crop and of high prices for it have encouraged all classes to anticipate the speedy recovery of their losses, but the threatening state of political affairs in the interior has caused a general feeling of gloom at Havana. There is a rebellion going on at Hayti and the capital is undergoing siege. There is a local revolution in Chihuahua, Mexico, against the State government, and the pronunciados have occupied the capital, capturing the governor and all the State officials.

The excitement in the British Isles at the Irish anti-rent movement is intense. On Wednesday last the Government arrested a couple of the most violent of the agitators, named Michael Davitt, an ex-Fenian prisoner, and a bitter advocate of the total abolition of landlordism, and James Daly, Editor of the Connaught Telegraph, and a consistent Home Ruler and anti-rent agitator. The whole country at once burst into a flame of excitement. Public meetings, to protest against the "outrage" are being held in all the chief centers of commotion. Parnell, the leader of the movement, and member of Parliament, has deferred his intended visit to this country for the purpose of arousing our Irish fellow-citizens, and with the other leaders, is delivering speeches daily. Tenants willing to pay full rent are threatened with all sorts of horrors by the anti-renters, and in one case, a poor fellow who had paid in full was taken out at night and flogged almost to death besides losing a part of his ear. The tenantry throughout the country are secretly banded together, and though the leaders counsel moderation, there is danger of an outbreak at any time. Meanwhile, the landlords seem ready to combine to exact their rights. The police force is everywhere prepared for emergencies. Troops are being hurried from England to the most violently disaffected districts; other troops are held in instant readiness to move, in the most convenient barracks in England; the officers in command in Ireland have been instructed not to mince matters in case of an outbreak, but to suppress it at once at all hazards. In short, there's trouble ahead, and it may come at any moment.

BUTTER-MAKING IN JULY AND AUGUST.

Butter-making can be carried on in hot weather as successfully as in June by using the Gilt-Edge Butter Maker. It reduces time of churning one-half. Increases production 6 to 10 per cent. Storekeepers pay 3 to 5 cents a pound extra for butter made with it. Sold by druggists, grocers and general storekeepers. Send stamp for "Hints to Butter-Makers." Address Butter Improvement Co., Buffalo, N. Y.

OUAQUAGA DAIRY, SUSQUEHANNA VALLEY, N. Y., May 28th, 1879.

BUTTER IMPROVEMENT CO., Buffalo, N. Y.:

Gentlemen—Please accept a sample of butter made from "hay fed" cows and with the use of your Gilt-Edge Butter Maker, without its use the butter made was almost as white as lard, while with its use (as you will observe from the samples sent you) the butter is of a very beautiful, even golden color leaving nothing to be desired in that direction. Several of my neighbor dairy farmers have tried your powder and are loud in its praise. It passes in mark as "creamery butter" and is worth from 3 to 5 cents per pound more than dairy butter. H. C. BRYANT.

FOR CATARRHAL and Throat Disorders "*Brown's Bronchial Troches*" are renowned and marvellously effective, giving immediate relief in most cases.

Walking made very easy with Lyon's Heel Stiffeners; they keep your boots and shoes straight as new.

A good excuse for sickness of yourself and family is that you don't use Hop Bitters.

The Markets.

THE GIST OF THE MARKETS.

As will be seen by the accompanying reports the prices of the chief farm products have still an upward tendency throughout the country. In each center there have been during the week various slight fluctuations in prices, but the general drift, if any, has been upward. The early closing of canal transportation throughout the Northern States and the approaching impediments to Lake navigation, are the chief domestic causes likely to affect prices by giving a monopoly of transportation to the greedy railroads which are sure then to raise their freight charges still higher. The Erie Canal, the great water route between the Lakes and tide-water, will be closed on Dec. 1st, if ice does not close it sooner. The cold snap on Friday night froze in 586 grain-laden boats between Buffalo and Troy, N. Y. and speculators at once stiffened prices on the ground that 2,776,000 bushels of wheat, 1,612,000 of corn, 60,000 of barley and 25,000 of oats were thus locked up until spring thaws. The ice is being cut, however, and all the boats will get through. It is estimated that at least 25 per cent of the wheat crop is still in the hands of the producers. The visible supply—or that in the markets in various places and *in transitu*—is extremely large, about 25,000,000 bushels—just what the Dept. of Agri. estimates to be the increase of this year's crop over last year's. On the 13th the aggregate visible supply in the U. S. plus the amount on passage to Europe, was put down at about 59,000,000 bush. The amount on passage has lately been reduced, however, by a temporary slackness in orders produced by our high prices, the shipments from this port for the last couple of weeks being in the neighborhood of 3,000,000 bush. per week, instead of about 5,000,000 for a considerable time before that. So rapidly has wheat been rushed on to England and France from this country and Russia, that vast quantities of it are there accumulating in the hands of legitimate buyers and speculators. Mail advices of the 10th state that the quantities of wheat and flour thus held were unprecedentedly large both in France and Great Britain. Russian crop reports just officially published state that the cereals, on the whole, were a fair average. Prices at the Black Sea and Baltic ports, however, are unusually stiff. Anyhow Russia's average surplus is less than a dozen million bushels—a mere trifle to the European need.

In England, according to the Mark Lane Express, of the 19th, all the crops were harvested, but in Scotland the harvest would last for about ten days more. Much of the cereals were harvested in an unripe condition amid the snow. A good area has been sown to wheat under favorable conditions, but as the decrease last year in the wheat area was upwards of 300,000 acres, it is certain that this year it will be still greater owing to hard times, discouragement at the prospect of ruinous American competition, the large number of farms thrown on the hands of landlords, etc., etc. The necessary imports of foreign wheat are agreed to amount to 146,000,000 bushels. In view of the large visible supply, prices had fallen off a trifle; but later advices show that they have recovered. The English crop is short 30 per cent., and millers complain that it is so poor that not more than 30 per cent. of it can be mixed with other wheats to make salable flour. Milled by itself, most of it would be unfit for the market. It is thought that much of it will be used as feed, and that it will take two years to work the crop off. Roots were not much more than half crop.

The shipments of live stock are growing smaller, but those of meat are increasing as stormy weather and cold come on. The prospects for a brisk trade in spring are considered excellent. By the way, mail advices just to hand, show that the cablegram about the restrictions on our sheep importations into the British Isles, referred to editorially, week before last, was wrong. So far as Great Britain is concerned, all restrictions were to be *removed* after Nov. 23. Our strictures on the appointment of stock examiners at the various ports, however, were deserved, although the text for them was a mistake.

SPECIALS FROM ALL CENTERS.

Until Saturday, Nov. 22.

Baltimore.—Wheat, Southern, scarce and firm; red, $1.40@1 45; amber, $1.50@1.56, an advance of 10c. per bushel on the former and from 5c. to 6c. per bushel on the latter since Monday. Hogs, 4¾ per lb. live weight.

Chicago.—During the past week wheat was steady with a slight advance, the market opening on Monday at $1 15@1 15¼ for No. 2 Chicago spring, and closing on Saturday at $1.16¼. Corn fell a cent a bushel during the week, opening on Monday at 41¼ cash, and closing on Saturday at 40¼ cash. Oats dull and lower, Monday 33¼ cash. Saturday 32¾@32¾. Rye steady at 72c. Barley, steady and unchanged during the week at 78@80c. Timothy seed, $2@2 40 per bushel. Flax seed, $1.53@1.55. Eggs; fruit house, 16@18c.; fresh, scarce at 21@22c. per doz. Pork active, $10.25@$10.50. Lard, $6.65@6.70. Hogs, mixed packing at $3.80@3.92½; choice heavy at $3.95@4.15; light bacon at $3.70@3.95. Cattle, good shipping, $3.70@$4.75; stockers and feeders, firm at $2.25@3.75; cows, $2@3.25; Western, strong, at $2@3.75.

Cincinnati.—Wheat firm at $1.28@$1.30 for No. 2. red—an advance of 4c. since Monday. Corn in fair demand No. 2 mixed old shelled 48c; new ear 38@40c. Oats firm, No. 2. mixed 34@35c. steadily all the week. Rye 82@85c—an advance at from 2 to 5c. since Monday. Barley quiet at 92@95c.—an advance of from 2 to 5c. during the week. Butter, prime to choice Western Reserve 22@25c; do. Central Ohio, 20@22. Hogs active and firm, at $3.25@3.75 for common; $3,80@4. for light; $4@4.20 packing, and $4.10@4.20 for butchers'; cotton, middling 11¼; low middling 11¼; good ordinary 11¼.

Indianapolis.—Wheat here has advanced from 1 to 2c. per bushel during the week; No. 2 red is firm at $1.25@1.28. Corn steady, new at 37½@38c. Oats 32½@31½c Hogs strong at $3.90@4.35, a rise of from 25 to 50c. since Monday.

Louisville.—Wheat here has varied little during the past week and is firm at $1.22@1.25. Corn is steady; white at 48c; mixed 46c. Oats dull; white at 37½c; mixed 36c, a rise of 1c. since Monday. Rye 85c; an advance of 5c. during the week. Hogs active and firm; packing, $4.10@4.25 an advance of from 25 to 35c.

Milwaukee.—Wheat had an upward movement during the week; No 1. Milwaukee hard opening on Monday at $1.17¼, soft, $1.17¼, and closing on Saturday at $1.19 and 1,18¼ respectively. No. 2. Milwaukee, $1.16¼ cash, an advance of ¾c. since Monday. Corn, quiet but steady at 40½c. for No. 2. a fall of 1¾ from Monday's quotation. Oats, dull at 33c. for No. 2. a rise of ¾c Rye, quiet at 70¾ for No. 1 a rise of ¾c. during the week. Barley No. 2. spring, at 71¾@71¾, a rise of 2c. per bushel since Monday.

New Orleans.—Corn scarce and firm at 52@58c. for yellow and 60c. for white. Oats in good demand at 44@45c., from 3c. to 4c advance since Monday. Rice, ordinary to choice, 6¾@7¾c. Corn meal firm at $2.85. Hay quiet; choice, $21.50, an advance of $2 50 per ton. Bran, 85c. Cotton in fair demand; middling, 11½c; low middling, 11¾c.; good ordinary, 11¾c.

Philadelphia.—Wheat has a fair demand from millers and for export, and has advanced from ¾c. to 1¾c. during the week, according to the grade; Western rejected, $1.33; No 2 red. on track, $1.42; Southern amber, $1 44. Rye, supplies come forward slowly at 87@88c. for Western and Pennsylvania. Corn fell a shade during the week; Penna. and Southern yellow, 57@58c., chiefly at 57¾c; old Western low mixed, on track, 56c; old high mixed do., 57c.; new Southern yellow, on track, 52@51c. Oats dull; Western rejected, 40c; dark and light mixed, 40½@41c.; stained, 41@42c; good white, 42½@43c.; choice and fancy, 43¾@44¾c; prices varied little during the week, with just a shade of advance in some sorts. Eggs, Penna., 21c.; Western, 22c. Cheese, N. Y. factory, 13½c.; Western full cream, 12½@13c.; do., good, 11@12c.; do., skim, 7@10c. Butter, creamery, 35@36c.; Bradford Co. and N. Y., extra, 32@34c.; West-Western Reserve, extra, 25@28c; do., good to choice, 20@23c. Clover seed dull at 7¾@9¾c.; timothy, $2.25@2.30; flax, $1.48@1.50. Bran, $14.50@14.75 per ton.

St. Louis.—Wheat unsettled at $1.26@1.26¼ for No. 2 red fall. A shade of advance from Monday's price, $1.25@1.26. Corn, $1,37¼, cash. A shade lower than at the opening of the week. Oats steady at 31c. cash. Rye, dull, at 74c. Barley active and firm; choice at 85@90c. Pork, $10 75@10,80¼. Lard, $6.65. Hogs, packing, $3.60@3.85; butchers', $3.85@4. Cattle, firm, the demand exceeding the supply, good to choice heavy shipping, $4.10@4 90; light, $3.25@4. Native cows and heifers, $2.25@3 25; grass, Texans, $2@3; corn-fed, do., $2,75@3 75. Sheep, fair to good muttons, $3,50@3; choice to fancy, $3.25@3 75. Cotton dull, middling, 11¼; low middling, 11¼; good ordinary, 11.

Toledo.—Wheat steady; No. 2 red winter, spot and Dec., $1.30¼; Jan., $1.33¼; Dayton and Mich. red $1.25¼; corn, high mixed at 46c.; No. 2 at 44¾; new, 43¼; oats, 31c. for No. 2, dull, with a slight upward tendency. Clover seed prime, $5 20—an advance of 5c. per bushel during the week.

NEW YORK, Saturday, Nov. 22, 1879.

BEANS AND PEAS.—The moderation in demand is most perceptible in mediums, and for that sort prices are not strong. Marrows are steady in tone, but extreme selling price. Red and other fancy beans hold full last figures. Supplies not oppressive. Green peas have a straggling sale at the moment, but $1.90@1.95 are the asking prices for prime. Southern B. E. peas neglected at $2.30@2 35 ₱ 2-bush. bag. Field, Can, and Mich. without quotable rates. Old marrow beans, $1.80@1.90; new, $1.05; medium, $1.60@1.65; pea, $2 05@2.10; white kidney, $1.85@2.20; red do., prime, $1.95@2; poor, $1.80@1.90; black, $1.80@1.95.

Receipts of beans for week, 13,900 bush.; exports, 1,507 pkgs.

BEESWAX—Small sales reported at 22¾@23½c. Exports for week, 2,404 ₱.

BROOM CORN.—Supplies have been pretty closely taken, and there is a strong market. Brush and short broom, choice, per ₱, 7½@8c.; do., common to good, 5@7c.; hurl, good to choice, 6@7c.; do., common to fair, 5¼@6c.; red and crooked, 4@5c.

BUTTER.—Trade has been quiet enough to have softened rates materially if the market had not the support of firm holders of stock. State butter that has been bought high is not put out when a decline is hinted Stock that gives owners the benefit of the almost doubled early rates is not pushed yet, as the season is young and Western is not a heavy competitor. The local call is at ll light, especially among sellers who retail to ordinary to poor sections of the city. A good many lots have been selling at under figures, owing to bad condition upon arrival during the remarkably warm portion of the month. Under grades of butter will be wanted this coming week for Thanksgiving pastry use, though at present figures hardly anything sounds like under grade. Dealers may take advantage of the baking inquiry to work down remnants of heated stock that cannot be trusted to carry. By closing such parcels out the stand rd of supply would be raised, and a consequent support obtained for the high region of rates than the demand enlivens. Heretofore all fine creamery has rated close, but fresh State is now quoted second to Western, as the latter contains its customary advantage of being grain-fed. In quotations creamery holds up, but other grades of State are fully 1c. lower.

State, pails and tubs, single dairy marks, fresh ends, choice, 31@31c.; best invoices, 30@32c.; good to prime, 28@30c.; fair to good, 26@28c. firkin and tub single dairies, choice, 30@31c.; do., dairies good to prime, 27@ 29c.; do., firkins, choice dairies, 28@29c.; do. good to prime, 26@28c.; do., fair to good, 24@25c.; Welsh tubs, best invoices, 25@30c; do., good to prime, 26@28c.; do., fair to good 24@26c.; State, tubs, poor, 20@23c.; State creamery, best invoices, 37@38c.; do., good to prime, 34@36c.; do., sweet cream, best, 35@36c.; do., fair to good, 30@34c.; Creamery, poor to fair, 28@30c.; Western, imitation creamery, 29@30c.; do., dairy, fresh, extra, 25@28c.; do., dairy, good to prime, 23@25c.; do., fair to good, 21@23c.; poor to fair, 18@21c.; do., best invoices, June, 21@23c.; do ,fair to good June, 18@20c.; do., best invoices, late factory made, 22@23c.; do., fair to good, 19@21c.; do ,poor to fair, 16@19c. Roll butter, prime, 22@25c.; do., fair to good, 22@2 c.

Receipts for week, 32,050 pkgs.; do., exports, 2,900 do.

CHEESE.—Shipments for the week have been only 13,400 boxes The dull market has been without marked effect upon prices, most of the business has been in grades to be had at 12½c down Really fancy factories have brought 12¾@13c.; and special lots have reached 13¼, and in one or two cases 13¾.

Quotations are for State factory: Fancy, 12½@13c; good to prime, at 11¾@12½c; fair to good, at 10¾@11¾c.; half-skimmed at 8¾@9c.; skimmed at 6@8c. State farm dairy: Fine at 12@12½c.; good to prime 10¾@12c.; fair to good at 9@10¾c.; skimmed at 6@8c. Wis. factory: Fine at 12½@12¾c; good to prime at 11½@12½c. Ohio factory: Cheddar, fine, at 12¼@12½c.; do., fair to good, 10@11c.; flat, fine, 12½@13c.; flat, good to prime, 11@ 2c.; flat, fair to good, 10@11c. half-skimmed, 9@10c.; skimmed, 6@8c.

Receipts for week 46,172 boxes; exports do. 15,000; do

Cable quotations 64s. Steam to Liverpool 30s.

COTTON—Has been feverish and fluctuating violently, closing firm at for Nov., 12.10@12.12c.; Dec. 12.11@12.12c.; Jan., 12 21@12.22c.; February, 12 37c.; March, 12.52c.; April, 12.67@12.68c; May, 12.82@12.83c.; June, 12.95@12.98c.; July, 13.01@13 04c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples are in good demand and are the turn dearer. Peaches rule at strong prices with a good demand. Blackberries are firm. Cherries are doing a little better.
